TRADE POLICY REVIEW MECHANISM

EUROPEAN COMMUNITIES

Report by the Secretariat

In pursuance of the CONTRACTING PARTIES' Decision of 12 April 1989 concerning the Trade Policy Review Mechanism (L/6490), the Secretariat submits herewith Volume B (Tables and Appendices) of its report on the European Communities. Volume A (Text) is presented in document C/RM/S/36A.

The report is drawn up by the Secretariat on its own responsibility. It is based on the information available to the Secretariat and that provided by the European Communities. As required by the Decision, in preparing its report the Secretariat has sought clarification from the European Communities on its trade policies and practices.

Document C/RM/G/36 contains the report submitted by the European Communities.

Table II.1
EC preferential trade schemes, December 1992

Type of Agreement/Participants	Main elements
Free Trade Agreements	
EFTA countries (1973/74) Austria, Finland, Iceland, Norway Sweden, Switzerland and Liechenstein	Reciprocal free trade in industrial products; agriculture largely exempted. Regional cumulation of origin status (EC and all EFTA countries).[a]
Israel (1975)	Reciprocal free trade in industrial products since early 1985. Bilateral cumulation of origin status.[a]
Association Agreements	
Turkey (1963), Malta (1970), Cyprus (1972)	Free access to EC markets for industrial products; customs union envisaged (Turkey: 1995; Cyprus: 1998; Malta: 1995).[b] Bilateral cumulation of origin status.
Czech and Slovak Federal Republic, Hungary, Poland (Interim Agreements since March 1992)	Creation of a free trade area over 10 years; limited coverage in agriculture (differences between the individual agreements). Cumulation of origin status among the three countries and between them and the Community.
Cooperation Agreements	
Mediterranean countries (1975/76) Algeria, Egypt, Jordan, Lebanon, Morocco, Syria, Tunisia	Free access for industrial products, raw materials and traditional agricultural exports (by 1995) to the EC; no reciprocal obligations. Full cumulation of origin status between the EC and Morocco, Algeria and Tunisia (treated as one area). Bilateral cumulation with each of the other countries.
Lomé Convention (1990) 69 developing countries (Sub-Saharan Africa, Caribbean and Pacific)	Free access for ACP exports of industrial products and of agricultural products not covered by a common market organization under the CAP. More favourable than m.f.n. treatment for other agricultural products. Guaranteed exports of cane sugar (1.3 million tonnes per year) for signatories to the Sugar Protocol (18 ACP countries); guarantees of continued favourable access under the Protocol on Bananas. Full cumulation of origin status among the EC and the whole of the ACP countries. More flexibility in the application of rules of origin than in other agreements.
General System of Preferences	
About 130 independent developing countries and 20 dependent territories	Autonomous preferences on a temporary basis (annual prolongation). Duty-free treatment for a wide range of manufactured and semi-manufactured products, subject to quantitative ceilings or a safeguard provision. Preferences for MFA textiles are contingent on the conclusion of bilateral agreements under the MFA or similar commitments vis-à-vis the EC (except for least developed countries). Limited preferences in the agricultural area. Cumulation of origin status among members of certain regional economic groupings (Andean, ASEAN, CACM).

Note: The EC preferential rules of origin centre on the criteria of sufficient transformation, measured as a change of tariff heading. Product-specific qualifications are specified in Annexes to the agreements or, for the GSP, in a seperate Commission Regulation (see first TPRM report).

a Inputs from the EC and all EFTA countries are treated, when they satisfy the relevant rules of origin, as if they had been domestically obtained in the country that finally exports to the EC.

b EC inputs are treated as if they had originated in the beneficiary country.

a As noted in Section IV.2(iv)(c), the following list comprises all trade measures known to the Secretariat, other than tariffs, levies, quotas, MFA restrictions, anti-dumping and anti-subsidy measures, affecting exports to or imports by the EC. The Community has stated that measures of prior or retrospective surveillance have no restrictive effects on imports.
Where measures are ascribed only to exporting countries (e.g. export approval), the Secretariat has no information of further measures being maintained by the European Communities or individual member States.

b Terminated on 31 December 1992.

c Arrangement in the context of the association or cooperation agreements with the Mediterranean countries. The Community does not consider it as a restraint arrangement (see GATT (1991), TPR - European Communities (Vol. II), p. 60 ff).

d See GATT (1993), TPR - Japan, p. 119 f.

e The Commission has denied the existence of any Community or national measures on these products and noted, should actions be in place, that these are taken by the exporting countries on their own initiative.

f See Republic of Korea, Export and Import Notice 1991 and GATT (1992), TPR - Republic of Korea, p. 116 ff.

g In the context of a bilateral dispute with Japan, the United States imposed retaliatory tariffs on certain Japanese exports (1987). The EC has enacted surveillance measures in parallel.

h See GATT (1992), TPR - Singapore, p. 103f.

Third Community framework programme	EUREKA	COST
Participation		
EC member States	EC member States, EFTA countries, Turkey, EC Commission	EC member States, Norway, Sweden, Finland, Austria, Switzerland, Yugoslavia, Turkey, further countries on a case-by-case basis.
Principal programme criteria		
Pre-competitive stages of research, involving at least two mutually independant companies from different member States. Total budget: ECU 5.7 billion (1990-94)	Projects are composed by Governments which also decide about support intensity. In general closer to the market stage than Community initiatives.	Applied and basic research at a pre-competitive stage.
Focal areas of interest (sub-programmes)		
(a) ESPRIT (European Strategic Programme for Research and Development in Information Technologies) The Current Information Technologies Programme is endowed with ECU 1.4 billion (1990-94). Focus: Micro-electronics, information processing systems and software; advanced business and home systems; peripherals; integrated business systems; computer integrated manufacturing and engineering; basic research. (b) BRITE/EURAM (Basic Research in Industrial Technology for Europe/Europe Research in Advanced Material) Advanced materials technologies, design methodology and quality assurance, manufacturing technologies and aeronautics. (c) RACE (Research and Development in advanced telecommunications technologies for Europe) R&D in integrated broadband communication (IBC). (d) BRIDGE (Biotechnology Research for Innovation, Development and Growth in Europe) Promotion of cross-border research with a view to accelerating the production of biological data, materials and processes. (e) Controlled thermo-nuclear fusion programme (f) Environment EC funds of ECU 414 million (1990-94). (g) SCIENCE (Stimulation des coopérations internationales et des échanges nécessaires, aux chercheurs en Europe)	(a) JESSI (Joint European Submicron Silicon Initiative) Development of silicon-based micro-electronics and research on their integration into systems. Targets: 16-mega-bit DRAM and 4-mega-bit SRAM by 1993; 64-mega-bit DRAM and 16-mega-bit SRAM by 1996. Core participants: Philips, NOKIA, Siemens, Thomson, CISAE (an Italian consortium). The companies are expected to cover 50 per cent, and the national Governments 25 per cent of the cost. (b) HDTV (High Definition Television project) Development of standards and of technologies for production, transmission and recording of high-definition images. (c) PROMETHEUS (Programme for European Traffic with biggest Efficiency and Unprecedented Safety) Devising new road traffic systems, including driving aids and inter-vehicle communication.	Data processing, telecommunications, transport, oceanography, metallurgy, materials, environmental protection, meteorology, agriculture and biotechnology, food technology, social engineering and industrial safety, medical research.

Tables AV.5(i) - (xii)

Employment, production and trade by sector, 1989/90/91

The following tables give an overview of the sectoral structure of employment, production and trade in the EC as a whole and individual member States. The presentation is based on the International Standard Industrial Classification (ISIC, Rev. 2), complemented by Eurostat data concerning agriculture and services. Trade information, originally recorded on a product basis (SITC), has been allocated to the corresponding sector of economic activity. This necessarily involves certain assumptions and estimates.

Import penetration ratios have been established by relating imports to total domestic consumption (estimated as production plus total imports less total exports). In some smaller member States, the ratios tend to be upward biased depending on the share of transit trade and processing activities for reexports. Similarly, intra-firm trade between member States, for example of aircraft components between Germany and France (Airbus Ind.), may have led to a considerable amount of double-counting in certain sectors.
