

IV. METADATA

This Chapter details methods and sources of the statistics used in *International Trade Statistics 2007*.

1. Composition of geographical and economic groupings

WTO members are frequently referred to as “country”, although some members are not countries in the usual sense of the word but are officially “customs territories”. The definition of geographical and other groupings in this report does not imply an expression of opinion by the Secretariat concerning the status of any country or territory, the delimitation of its frontiers, nor on the rights and obligations of any WTO Member in respect of WTO Agreements. The colours, boundaries, denominations, and classifications in the maps of this publication do not imply, on the part of the WTO, any judgement on the legal or other status of any territory, or any endorsement or acceptance of any boundary.

Throughout this report, South and Central America and the Caribbean is referred to South and Central America; the Bolivarian Republic of Venezuela, Hong Kong Special Administrative Region of China, the Republic of Korea and the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu are referenced as Bolivarian Rep. of Venezuela; Hong Kong, China; Korea, Republic of; and Taipei, Chinese respectively.

2. Definitions and methods

2.1 Merchandise trade

2.1.1 Exports and imports

Two systems of recording merchandise exports and imports are in common use. They are referred to as *general trade* and *special trade* and differ mainly in the way warehoused and re-exported goods are treated. General trade figures are larger than the corresponding special trade figures because the latter exclude certain trade flows, such as goods shipped through bonded warehouses.

To the extent possible, total merchandise trade is defined in this report according to the general trade definition. It covers all types of inward and outward movement of goods through a country or territory including movements through customs warehouses and free zones. Goods include all merchandise that either add to or subtract from the stock of material resources of a country or territory by entering (imports) or leaving (exports) the country's economic territory. For further explanations, see United Nations *International Trade Statistics, Concepts and Definitions*, Series M, N° 52, Revision 2.

Unless otherwise indicated, exports are valued at transaction value, including the cost of transportation and insurance to bring the merchandise to the frontier of the exporting country or territory (f.o.b. valuation). Imports are valued at transaction value plus the cost of transportation and insurance to the frontier of the importing country or territory (c.i.f. valuation).

2.1.2 Products

All product groups are defined according to Revision 3 of the Standard International Trade Classification (SITC).

Table IV.2	
Products	
A. Primary products	
(i) Agricultural Products (SITC sections 0, 1, 2 and 4 minus divisions 27 and 28)	
of which,	
- Food (SITC sections 0, 1, 4 and division 22)	
of which,	
0 - Food and live animals	
1 - Beverages and tobacco	
22 - Oil seeds and oleaginous fruits	
4 - animal and vegetable oils, fats and waxes	
- - Fish (SITC division 03)	
- - Other food products and live animals (SITC sections 0, 1, 4 and division 22 minus division 03)	
- Raw materials (SITC divisions 21, 23, 24, 25, 26, 29)	
of which,	
21 - Hides, skins and furskins, raw	
23 - Crude rubber (including synthetic and reclaimed)	
24 - Cork and wood	
25 - Pulp and waste paper	
26 - Textile fibres (other than wool tops and other combed wool) and their wastes (not manufactured into yarn or fabric)	
29 - Crude animal and vegetable materials, n.e.s	
(ii) Fuels and mining products (SITC sections 3 and divisions 27, 28, 68)	
of which,	
- Ores and other minerals (SITC divisions 27, 28)	
of which,	
27 - Crude fertilizers, other than those of division 56, and crude minerals (excluding coal, petroleum and precious stones)	
28 - Metalliferous ores and metal scrap	
- Fuels (SITC section 3)	
- Non-ferrous metals (SITC division 68)	
B. Manufactures (SITC section 5, 6, 7, 8 minus division 68 and group 891)	
(i) Iron and steel (SITC division 67)	
(ii) Chemicals (SITC section 5)	
of which,	
- Pharmaceuticals (SITC divisions 54)	
- Other chemicals (SITC divisions 51, 52, 53, 55, 56, 57, 58, 59)	
of which,	

Table IV.2 (continued)

Products

51 - Organic chemicals
52 - Inorganic chemicals
53 - Dyeing, tanning and colouring materials
55 - Essential oils and resinoids and perfume materials; toilet, polishing and cleaning preparations
56 - Fertilizers (other than those of Group 272, i.e Fertilizers, crude)
57 - Plastics in primary forms
58 - Plastics in non-primary forms
59 - Chemical materials and products, n.e.s.
(iii) Other semi-manufactures (SITC divisions 61, 62, 63, 64, 66, 69)
of which,
61 - Leather, leather manufactures, n.e.s. and dressed furskins
62 - Rubber manufactures, n.e.s.
63 - Cork and wood manufactures (excluding furniture)
64 - Paper, paperboard and articles of paper pulp, of paper or of paperboard
66 - Non-metallic mineral manufactures, n.e.s.
69 - Manufactures of metals, n.e.s.
(iv) Machinery and transport equipment (SITC section 7)
- Office and telecommunication equipment (SITC divisions 75, 76 and group 776)
of which,
- - Electronic data processing and office equipment (SITC division 75)
- - Telecommunications equipment (SITC division 76)
- - Integrated circuits, and electronic components (SITC group 776)
- Transport equipment (SITC group 713, sub-group 7783 and divisions 78, 79)
of which,
78 - Road vehicles (including air-cushion vehicles)
79 - Other transport equipment
- - Automotive products (SITC groups 781, 782, 783, 784 and subgroups 7132, 7783)
of which,
781 - Motor cars and other motor vehicles principally designed for the transport of persons (other than public-transport type vehicles), including station wagons and racing cars
782 - Motor vehicles for the transport of goods and special purpose motor vehicles
783 - Road motor vehicles, n.e.s.
784 - Parts and accessories of the motor vehicles and tractors
7132 - Internal combustion piston engines for propelling vehicles listed above
- - Other transport equipment (SITC division 79, groups 713, 785, 786 minus sub-group 7132)
of which,
713 - Internal combustion piston engines, and parts thereof, n.e.s.
785 - Motorcycles and cycles, motorized and non-motorized
786 - Trailers and semi-trailers, other vehicles (not mechanically propelled), and specially designed and equipped transport containers
79 - Other transport equipment
- Other machinery (SITC divisions 71, 72, 73, 74, 77 minus groups 713, 776 minus sub-group 7783)
of which,
- - Power generating machinery (SITC division 71 minus group 713)
of which,
71 - Power generating machinery and equipment
minus
713 - Internal combustion piston engines, and parts thereof, n.e.s.
- - Non-electrical machinery (SITC divisions 72, 73, 74)
of which,
72 - Machinery specialized for particular industries
73 - Metal working machinery
74 - General industrial machinery and equipment, n.e.s. and machine parts, n.e.s.
- - Electrical machinery (SITC division 77 minus group 776 and subgroup 7783)
of which,
77 - Electrical machinery, apparatus and appliances, n.e.s. and electrical parts thereof
minus
776 - Thermionic, cold cathode or photo-cathode valves and tubes
7783 - Electrical equipment, n.e.s., for internal combustion engines and vehicles; and parts thereof
(v) Textiles (SITC division 65)
(vi) Clothing (SITC division 84)
(vii) Other manufactures (SITC divisions 81, 82, 83, 85, 87, 88, 89 excluding group 891)
of which,
- Personal and household goods (SITC divisions 82, 83 and 85)
of which,
82 - Furniture and parts thereof, bedding, mattresses, mattress supports, cushions and similar stuffed furnishings
83 - Travel goods, handbags and similar containers
85 - Footwear

Table IV.2 (continued)

Products
- Scientific and controlling instruments (SITC division 87)
- Miscellaneous manufactures (SITC divisions 81, 88 and 89 minus group 891)
of which,
81 - Prefabricated buildings, sanitary plumbing, heating and lighting fixtures and fittings, n.e.s.
88 - Photographic apparatus, equipment and supplies and optical goods, n.e.s.; watches and clocks
89 - Miscellaneous manufactured articles, n.e.s.
C. Other products: commodities and transactions not classified elsewhere (including gold); arms and ammunition (SITC section 9 and group 891)
891 - Arms and Ammunition
9- Commodities and transactions not classified elsewhere in SITC

Throughout this report, other food products and live animals; beverages and tobacco; animal and vegetable oils, fats and waxes; oilseeds and oleaginous fruit are referred to as other food products; electronic data processing and office equipment is referred to as EDP and office equipment; and integrated circuits and electronic components is referred to as integrated circuits.

2.1.3 World trade network

The world merchandise trade network by region and product from which Appendix tables A2 and A10 are derived is based on export data. The network is constructed in the following way:

First, total merchandise exports from each of the seven regions are aggregated from the individual country or territory figures published in Appendix table A6.

Next, the total merchandise exports of each region are distributed by destination and then by product. The regional and commodity breakdown is based on UNSD *Comtrade database*, EUROSTAT, national statistics and Secretariat estimates.

During this process, the principal adjustments to the figures are as follows:

- (i) Exports of ships to the open registry countries Panama and Liberia are re-allocated from each region's exports to South and Central America and Africa to "unspecified destinations" (a category not shown separately).
- (ii) China's exports are adjusted to approximate their final destination.
- (iii) Exports of non-monetary gold, where known, are included. When they cannot be broken down by destination, they are allocated to "unspecified destinations".
- (iv) South Africa's trade does not include trade with the former Southern African Customs Union members.

2.1.4 Merchandise trade of selected major traders by product, region and major trading partner (Appendix tables A18 to A28)

These tables are derived from UNSD *Comtrade* and EUROSTAT. For trade by product, world totals include shipments which have not been distinguished by origin or destination. For trade by region and partner, world totals include goods which have not been specified by product.

The following adjustment has been made to the figures:

Exports of ships to the open registry countries Panama and Liberia are reallocated from each economy's exports to South and Central America and Africa to "unspecified destinations" (a category not shown separately).

The selection of each economy's major trading partners is based on a ranking of total trade (exports plus imports) of each economy with their trading partners in 2006 (member States of the EU (25) are counted as one trading partner).

2.1.5 Merchandise trade in balance of payments statistics

Merchandise trade statistics together with other basic statistical systems (such as industrial and transport statistics) provide the foundation for the System of National Accounts (SNA) and the balance of payments (BOP). Merchandise trade statistics are

basic to the compilation of the goods account in the balance of payments as structured and defined in the fifth edition of the International Monetary Fund's Balance of Payments Manual (BPM5).

Goods (merchandise) are defined in the SNA as "physical objects for which a demand exists, over which ownership rights can be established and whose ownership can be transferred from one institutional unit to another by engaging in transactions on markets". Thus, for the SNA and BOP statistics the recording of transactions should be based on the change of ownership principle.

However, the compilation of international merchandise trade statistics (IMTS) is usually based on customs records which essentially reflect the physical movement of goods across borders, and follow international guidelines on concepts and definitions which do not fully conform to the principles of the SNA and the BPM5.

A number of adjustments has to be made to international merchandise trade statistics before they match the specific requirements of national accounts and balance of payments statistics. For aggregate exports and imports these adjustments are mainly related to coverage, the system of trade, and valuation.

With respect to the coverage of IMTS, *transactions in which one or both national boundaries are not crossed* (e.g. trade in vessels and aircraft, exports of bunkers, etc.) are not always included in merchandise trade statistics for practical reasons, whereas they should usually be included in BOP statistics.

Also, under BPM5, certain transactions should be excluded from goods and included, at market value, in services; for example, goods under the *improvement and repair trade* regime should be excluded from IMTS, but they are to be included in the goods account at the value of the repair under the BPM5.

Concerning the system of trade, the IMTS guidelines outline the measurement of trade flows on the basis of (1) the special trade system and (2) the general trade system. Under the special trade system, the customs frontier is regarded as the statistical boundary whereas, under the general system of trade, the national frontier is regarded as the statistical boundary. The BPM5 stresses that measurement for BOP compilation should be based on change of ownership rather than on the general trade system or the special trade system. The general trade system appears however to be a better approximation for measuring change of ownership because it provides broader coverage and the date of change of ownership may be closer to the date goods cross the national frontier than to the date goods clear through customs.

As far as valuation is concerned, the issue that affects most data comparability concerns the point of valuation, namely, whether goods are valued at the importer's border - that is at the c.i.f. value - or at the f.o.b. value at the exporter's border. IMTS guidelines recommend the adoption of the c.i.f. valuation for imports whereas BPM5 requires the f.o.b. valuation. Additional adjustments may be made by BOP compilers to conform to the BPM5 requirement for a market price for valuing trade, processing trade, and with respect to currency conversion.

Once adjusted, merchandise trade is recorded in the goods category of the current account, along with services, income, and current transfers. Therefore, within the balance of payments framework transactions in both goods and services are harmonized and provide for comparable statistical series, as in Table I.24. Strictly speaking, it is not correct to aggregate the figures for commercial services and merchandise shown elsewhere in this report.

It should be noted that some economies still apply the concepts of the fourth edition of the Balance of Payments Manual, and thus do not include goods for processing and goods procured in port carriers in the goods account.

2.2 Trade in commercial services

Depending on the location of the supplier and the consumer, the General Agreement on Trade in Services (GATS) defines four modes of supply. In addition to the cross-border supply (mode 1), where both the supplier and the consumer remain in their respective home territories, GATS also covers cases where consumers are outside their home territory to consume services (mode 2 – consumption abroad), or cases where service suppliers are in the territory of the consumers to provide their services, whether by establishing affiliates through direct investment abroad (mode 3 – commercial presence), or through the presence of natural persons (mode 4).

A country's balance of payments, that is the services account, can be used to derive estimates covering trade in commercial services for modes 1,2 and 4. The Balance of Payments does however not include most of the information on the local deliveries of services through foreign affiliates that is required to estimate the size of mode 3. A framework for collecting these data, the "Foreign Affiliates Trade in Services (FATS) statistics", has been developed and adopted by the international statistical community in 2002. Further information on these "new" statistics is developed below.

2.2.1 Trade in commercial services between residents and non residents of an economy

Exports and imports

Exports (credits or receipts) and imports (debits or payments) of commercial services derived from statistics on international service transactions are included in the balance of payments statistics, in conformity with the concepts, definitions and classification of the fifth (1993) edition of the IMF Balance of Payments Manual.

Definition of commercial services in the balance of payments

In the fifth edition of the Balance of Payments Manual, the current account is subdivided into *goods*, *services* (including *government services, n.i.e.*), *income* (investment income and compensation of employees), and *current transfers*. The *commercial services* category in this report is defined as being equal to *services* minus *government services, n.i.e.* *Commercial services* is further sub-divided into *transportation services*, *travel*, and *other commercial services*.

Transportation services covers sea, air and other including land, internal waterway, space and pipeline transport services that are performed by residents of one economy for those of another, and that involve the carriage of passengers, the movement of goods (freight), rentals (charters) of carriers with crew, and related supporting and auxiliary services.

Travel includes goods and services acquired by personal travellers, for health, education or other purposes, and by business travellers. Unlike other services, travel is not a specific type of service, but an assortment of goods and services consumed by travellers. The most common goods and services covered are lodging, food and beverages, entertainment and transportation (within the economy visited), gifts and souvenirs.

Other commercial services corresponds to the following components defined in BPM5:

- (i) *communications services* includes telecommunications, postal and courier services. Telecommunications services encompasses the transmission of sound, images or other information by telephone, telex, telegram, radio and television cable and broadcasting, satellite, electronic mail, facsimile services etc., including business network services, teleconferencing and support services. It does not include the value of the information transported. Also included are cellular telephone services, Internet backbone services and on-line access services, including provision of access to the Internet;
- (ii) *construction* covers work performed on construction projects and installation by employees of an enterprise in locations outside the territory of the enterprise (the one-year rule to determine residency is to be applied flexibly). In addition goods used by construction companies for their projects are included which implies that the “true” services component tends to be overestimated;
- (iii) *insurance services* covers the provision of various types of insurance to non residents by resident insurance enterprises, and vice versa, for example, freight insurance, direct insurance (e.g. life) and reinsurance;
- (iv) *financial services* covers financial intermediation and auxiliary services provided by banks, stock exchanges, factoring enterprises, credit card enterprises, and other enterprises;
- (v) *computer and information services* is subdivided into computer services (hardware and software related services and data processing services), news agency services (provision of news, photographs, and feature articles to the media), and other information provision services (database services and web search portals);
- (vi) *royalties and licence fees*, covering payments and receipts for the use of intangible non-financial assets and proprietary rights, such as patents, copyrights, trademarks, industrial processes, and franchises;
- (vii) *other business services*, comprising trade-related services, operational leasing (rentals), and miscellaneous business, professional and technical services such as legal, accounting, management consulting, public relations services, advertising, market research and public opinion polling, research and development services, architectural, engineering, and other technical services, agricultural, mining and on-site processing; and
- (viii) *personal, cultural, and recreational services* is subdivided into two categories, (i) audiovisual services and (ii) other cultural and recreational services. The first component includes services and fees related to the production of motion pictures, radio and television programmes, and musical recordings. Other personal, cultural, and recreational services includes services such as those associated with museums, libraries, archives, and other cultural, sporting, and recreational activities.

Coverage and comparability

With the implementation of BPM5, the coverage and comparability of services trade data have improved over time, however, given that these improvements have been made gradually, they also resulted in a number of breaks in series and are subject to significant distortions.

First, some countries do not collect statistics for certain service categories. *Second*, some service transactions are simply not registered. If central bank records are used, situations where no financial intermediaries are employed are not counted. In the case of surveys, the coverage of trading establishments is often incomplete. A particularly serious problem is that services transmitted electronically are frequently unregistered as well as when the transactions take place within multinational corporations. *Third*, statistics may be reported on a net rather than on a gross basis, often as a result of compensation arrangements such as in rail transport or in communication services. *Fourth* some services transactions may be difficult to capture. It is often easier for compilers to collect more complete and reliable information on trade in services exports rather than on imports given the large number and diversity of importers compared to that of exporters, e.g. financial services, computer services. *Fifth*, some particular service transactions may not be classified to the appropriate BPM5 services classification. Methodologies to build estimates for certain service categories may also differ between economies, notably due to the continuing efforts to improve these statistics. Some economies have made progress in the estimation of insurance services to take into account premium supplements and claim volatility (i.e. in the case of catastrophic events). *Sixth*, the alternate sources used for countries which are not members of the IMF do not necessarily comply with the IMF concepts and definitions. *Seventh*, misclassification of transactions may lead to an underestimation of commercial services when service transactions are registered as income, transfers or trade in merchandise rather than trade in services or, conversely, to an overestimation of commercial services when transactions pertaining to income, transfers or official transactions are registered in the private service categories.

These distortions may be particularly significant at the detailed level, i.e., for a detailed service category, and may lead to considerable asymmetries between countries' reported trade flows by origin and destination.

The estimation of world trade by services components has been based on reported economy data as shown in the following table:

Table IV.3

Number of economies reporting Balance of Payments services components for 2005

	Exports	Imports
Total commercial services	161	161
Transportation services	161	161
Travel	161	161
Other commercial services	161	161
Communications services	122	123
Telecommunications services	87	87
Construction	85	100
Insurance services	126	136
Financial services	99	108

Audiovisual and related services	53	58

First, total trade in commercial services from each of the seven regions is aggregated from the individual economy figures published. The breakdown of these data is then applied to missing countries before aggregating regional and world totals. Tables on major traders are based on reported data only.

Intra-trade of the European Union

The principal source for trade in commercial services are the IMF's Balance-of-Payments statistics. Intra-EU trade figures have been estimated from statistics included in the New Cronos database, August 2007.

2.2.2 Foreign affiliates trade in services statistics

The new statistical framework on Foreign Affiliates Trade in Services (FATS) statistics is developed in the Manual on Statistics of International Trade in Services. The acronym FATS is also used for “foreign affiliates statistics”. Both refer to the same statistical framework, the former focusing on services trade. It analyses the universe of foreign affiliates for which foreign investors own more than 50 per cent of the voting power or equity interest. Depending on the compiler’s view, one can distinguish inward FATS, that is, activities of foreign-owned affiliates in the compiling economy, or, outward FATS, that is, foreign affiliates of the compiling economy active abroad. Variables such as sales, value added, number of employees, etc. are used to describe the affiliates’ activities. These variables are broken down by country of origin or destination of investments and also by type of primary activity. Australia and the United States also provide a breakdown of sales into total goods and total services products. FATS statistics are currently available mainly for OECD and a small number of non-OECD economies, however, given the recent development of these statistics, comparability and coverage of individual economy data may not always be complete. Availability of detailed data and long-time series varies considerably between economies. From a GATS perspective, the size of mode 3 in a given country can be approximated through the sales of foreign-owned affiliates.

2.3 Other definitions and methods

2.3.1. Annual changes

Throughout this report, average annual percentage changes are analogous to compound interest rates. In calculating the average annual rate of change between 2000 and 2005, for example, data for calendar year 2000 were taken as the starting point, and data for calendar year 2005 as the end point.

2.3.2 Prices

Commodity price movements are primarily described by indices largely based on spot market prices, and therefore exclude transactions governed by longer-term contracts. Price indices for such commodities as food, beverages, agricultural raw materials, minerals, non-ferrous metals, fertilizers and crude petroleum are obtained from IMF *International Financial Statistics*. Aggregates for all primary commodities and for non-fuel primary commodities are calculated using IMF weights (Appendix table A29).

Export and import prices by commodity group of Germany, Japan and the United States are sourced from national statistics. Aggregates are calculated by weighting the countries’ price indices with the respective export and import values of the previous year (Appendix tables A30 and A31).

2.3.3 World merchandise trade indices

The volume and unit value indices are taken from a range of different international and national sources. The reported volume and unit value indices may not always be available for the most recent years or may differ in product coverage from the corresponding value indices.

Aggregation of the indices to obtain a world total is a two-tier process. *First*, export and import unit values from national and international sources are completed with Secretariat estimates for missing data. They are then aggregated to obtain regional totals. The volume index for each region is obtained by dividing the respective trade value index for each region by the corresponding regional unit value index.

Second, to obtain the total world merchandise volume index, regional unit value indices are aggregated and the world trade value is deflated by the world unit value index. Throughout the aggregation process trade values of the previous year are used as weights.

2.3.4 World production

Production of agriculture (including hunting, forestry and fish), mining and manufacturing is defined according to major Categories A, B, C and D of the International Standard Industrial Classification of all Economic Activities Revision 3 (ISIC). World production in these sectors is estimated by combining production indices published by the FAO, OECD, UNIDO and UNSD. The world index is derived through aggregation of the three sectors by using value added shares in 2000 as weights.

2.3.5 World gross domestic product

World GDP growth is estimated as a weighted average of economies' real GDP growth. The weights used are shares of economies in 2000 world nominal GDP converted to dollars at market exchange rates.

The use of official exchange rates which are not market-based for some major economies, together with the fluctuations of the United States dollar vis-à-vis major currencies can have a significant impact on the weighting pattern. The increasing use of weights based on purchasing power parities (PPP) by other international organizations is meant to attenuate "anomalies" linked to these factors. In a period of widely diverging growth rates among countries and regions, the choice of the weighting pattern can have a marked influence on the global growth estimate. For the 2000-2005 period, global growth estimates based on PPP-weights indicate a significantly faster growth than estimates using weights based on GDP data measured at market exchange rates. This is because of differences in the two weighting patterns. Relative to weights based on GDP at market exchange rates, PPP weights are low for the transition economies - especially the successor States of the former USSR with a poor growth record, and high for major developing countries (in particular China) with above average growth.

2.3.6 Re-exports and reimports

Under the system of general trade adopted in this report, re-exports are included in total merchandise trade (see Section II.1).

However, in the case of Hong Kong, China, the magnitude of its re-exports (amounting in 2006 to \$ 300 billion), if included in regional or world aggregates, would adversely affect the analytical value of the statistics by introducing a significant element of double counting. Therefore, Hong Kong, China's re-exports are excluded from the world and from Asia aggregates (unless otherwise indicated); only Hong Kong, China's domestic exports and retained imports are included in the totals. For this reason, the figures for world exports and for exports of Asia shown in Appendix tables A2 and A10 are smaller than those in Appendix table A6. When retained imports are not published, an approximation is derived by subtracting the value of re-exports from the value of imports. The resulting figure will, however, under-estimate the value of retained imports by the amount of the re-export margin.

China reports imports from China (reimports), a trade flow which accounted for 9.3 per cent (73.3 billion US dollars) of its total merchandise imports in 2006. These imports consist of products which have been produced in China and thereafter temporarily exported. The product structure of China's imports from China indicates that in absolute terms office and telecom equipment is the largest category (\$ 39.2 billion) in this particular trade flow. The share of re-imports is particularly large in the imports of telecommunications equipment (40.8 per cent), EDP and office equipment (32.6 per cent), electrical machinery (23.6 per cent) and in textiles (19.6 per cent). [Further information on these imports is provided in Box xx of the International Trade Statistics 2006].

3. Specific notes for selected economies

3.1 Merchandise trade statistics of the European Union

Beginning with the 2002 report, EU data compiled according to national statistical practices have been replaced, starting 1993, with data compiled by Eurostat in accordance with EU legislation. The concepts and definitions adopted by the EU are in line with the United Nations' *International Trade Statistics, Concepts and Definitions*, Series M, N° 52, Revision 2. As a result, the conceptual differences between EU member states' data have been substantially reduced. Moreover, for the EU as a whole, Eurostat data are more timely than the previous source, thus reducing substantially the amount of estimation included in the EU aggregate.

Since January 1993, statistics on the trade between the member States of the EU have been collected through the "Intrastat" system (see GATT 1994, *International Trade Trends and Statistics*). The coverage of this system, which relies on reports submitted by firms for transactions above a minimum value, is not as wide as the previous one, which was based on customs declarations. This is particularly noticeable on the import side. For example, prior to the adoption of the Intrastat system, reported intra-EU imports (c.i.f.) closely matched reported intra-EU exports (f.o.b.). However, from 1993 onwards, the reported value of intra-EU imports has been on average around 3 per cent lower than the value of intra-EU exports, indicating a substantial under-reporting of intra-EU imports. As a result of this inconsistency, the Secretariat has substituted intra-EU exports data for intra-EU imports at the aggregate EU level when estimating regional and world totals. However, this adjustment is not allocated *between* EU member countries. Hence, the sum of reported imports of individual EU members does not add to the figure for EU imports as a whole. This adjustment is also reflected in the volume estimates for the EU as a whole.

3.2 Egypt's export processing zone

Egypt's merchandise trade statistics are based on the special trade system, and exclude processing zone exchanges with the rest of the world. These have increased markedly in recent years. In 2005, processing zone imports from and exports to the rest of the world amounted to \$ 5.1 billion and \$ 3.8 billion respectively. If Egypt's merchandise trade data were adjusted accordingly, the size of its exports of manufactures (in particular clothing) would be significantly higher.

3.3 Trade of South Africa with SACU (South African Customs Union)

South Africa's merchandise exports (and imports) exclude shipments to (from) other SACU members (Botswana, Lesotho, Namibia and Swaziland). Partner statistics indicate that South African shipments amount to 80 percent of these countries total merchandise imports in 2002. This share -most likely - increased thereafter and represents an important trade flow for the African region. If South Africa's exports would be adjusted for these shipments to SACU members, its total exports would increase by about \$7.5 billion in 2006 and intra-African trade would be one fifth higher with intra-SACU trade being the largest intra trade flow for regional trade agreements in Africa.

3.4 Major breaks in data continuity of merchandise trade

Between 1997 and 1998 for the Russian Federation due to the use of Balance of Payments methodology by GOSKOMSTAT starting 1998.

Beginning 2003, Singapore includes merchandise trade with Indonesia.

Between 1994 and 1995 for Ukraine, due to a change in data collection procedures.

Between 1996 and 1997 for the Slovak Republic, and between 1997 and 1998 for Poland, due to the introduction of new arrangements in customs procedures to harmonize with the standards of the European Union.

With respect to the Russian Federation, considerable uncertainty remains about the accuracy of foreign trade statistics, especially as regards imports. A large proportion of the reported data on imports consists of official estimates of inflows of goods which enter the economy without being registered by the customs authorities. Such adjustments to import data accounted for 16 per cent of the officially reported totals in 2006; and, on the export side, for about 1 per cent of total reported exports.

3.5 Trade in insurance services of the United States

In 2003, the United States has revised its methodology for estimating trade in insurance services. The new methodology measures insurance services as premiums less normal claims. Normal claims comprise two components: “regularly occurring claims” that are calculated as an average of all claims paid during the previous 6 years, and a share of “catastrophic claims” that is added-on to “regularly occurring claims” in equal increments over the two decades following their event.

As comprehensive data collection on insurance services started in 1986, the first 6-year average of “regularly occurring claims” could only be calculated for 1992. As a result, time series on U.S. trade in insurance services, and consequently on other commercial services, have been revised back to 1992. To complete the 2003 revision, in 2004 the United States added to insurance services an estimate of premium supplements (or income earned on technical reserves of insurance companies). Insurance companies provide financial protection to policy holders through the pooling of risk and provide financial intermediation services through the investment of reserves. The income is treated as accruing to the policy holders who pay it back to the insurers as supplements to premiums to cover the full cost of insurance. The investment income of insurance companies is not output in and of itself; it is used to impute the value of the implicit component of insurance services attributable to financial intermediation.

3.6 Travel exports and transportation services exports and imports of Japan

In order to enhance the coverage of estimates of travel exports and imports, the Bank of Japan and the Japanese Ministry of Finance reviewed their compilation methodology, notably by including results from a new expenditure survey of foreign travellers as of 2003. This revision had a major impact on the estimates for travel exports. In order to maintain consistent growth rates, data shown in this report for Japanese 1995-2002 travel exports and exports of commercial services include provisional Secretariat estimates referring to the new compilation methodology (i.e. after January 2003) applied by the Japanese authorities and therefore they differ from 1995-2002 figures available elsewhere.

Data shown for transportation services in this report are consistent with revised 1996-2004 data published in 2006 by the Bank of Japan (based on a new methodology for measuring sea freight fares).

3.7 Trade in other commercial services of India

In the course of 2004, the Reserve Bank of India released new data following the introduction of a new reporting system to improve the coverage of Indian trade in services statistics (mainly affecting the item other business services).

3.8 Trade in commercial services of United Arab Emirates

Commercial services trade statistics of United Arab Emirates only cover transportation and travel.

4. Statistical sources

Most frequently used sources for statistics are:

EUROSTAT, *Comext and New Cronos databases*

FAO, *FAOSTAT Agriculture database*

FAO, *Production Yearbook*

IMF, *Balance of Payments Statistics*

IMF, *International Financial Statistics*

IMF, *World Economic Outlook database*

OECD, *Main Economic Indicators*

OECD, *Measuring Globalisation: The Role of Multinationals in OECD Economies*

OECD, *Monthly Statistics of International Trade*

OECD, *National Accounts*

OECD, *Statistics on International Trade in Services*

OECD/IEA, *Energy Prices & Taxes*

UNECE, *Economic Survey of Europe*

UNECLAC, *Overview of the Economies of Latin America and the Caribbean*

UNIDO, *National Accounts Statistics Database*

UNSD, *Comtrade database (for OECD members the UNSD-OECD Joint Trade Data Collection and Processing system)*

UNSD, *International Trade Statistics Yearbook*

UNSD, *Monthly Bulletin of Statistics*

World Bank, *World Development Indicators*

These sources are supplemented by national publications and other international databases such as the Global Trade Atlas of Global Trade Information Services, Inc. and Secretariat estimates.

Figures for total merchandise trade are largely derived from IMF, *International Financial Statistics*. Data on merchandise trade by origin, destination and product are mainly obtained from Eurostat's Comext database and UNSD's *Comtrade database*. Some inconsistencies in the aggregate export and import data for the same country or territory between sources are inevitable. These can be attributed to the use of different systems of recording trade, to the way in which for example IMF and UNSD have converted data expressed in national currencies into dollars, and revisions which can be more readily incorporated in the IMF data.

Statistics on trade in commercial services are mainly drawn from the IMF *Balance of Payments Statistics*. For economies that do not report to the IMF (e.g., Chinese Taipei) data are drawn from national sources. Estimations for missing data are mainly based on national statistics. Statistics on trade in commercial services by origin and destination are also derived from national statistics.

GDP series in current dollars are mainly derived from the World Bank *World Development Indicators*, supplemented in some cases with statistics from the IMF *World Economic Outlook database*.
