

**EUROPEAN COMMUNITIES AND CERTAIN MEMBER
STATES –MEASURES AFFECTING TRADE IN
LARGE CIVIL AIRCRAFT**

Report of the Panel

BCI DELETED, AS INDICATED
[***]

BCI deleted, as indicated [***]

TABLE OF CONTENTS

	<u>Page</u>
LIST OF ANNEXES	XIV
TABLE OF CASES CITED IN THIS REPORT	XV
I. INTRODUCTION	1
A. COMPLAINT OF THE UNITED STATES	1
B. ESTABLISHMENT AND COMPOSITION OF THE PANEL	1
C. INFORMATION GATHERING PROCEDURE UNDER ANNEX V OF THE SCM AGREEMENT	2
D. PANEL PROCEEDINGS	2
II. FACTUAL ASPECTS.....	3
A. PRODUCT AT ISSUE.....	3
B. MEASURES AT ISSUE	4
III. PARTIES' REQUESTS FOR FINDINGS AND RECOMMENDATIONS	7
A. UNITED STATES.....	7
B. EUROPEAN COMMUNITIES.....	7
IV. ARGUMENTS OF THE PARTIES.....	8
A. PRELIMINARY ISSUES RAISED BY THE EUROPEAN COMMUNITIES	8
1. <i>Arguments of the European Communities</i>	8
(a) Relevance of Other International Aircraft Related Agreements.....	8
(b) Extinction and Extraction of Subsidies	10
(c) Temporal Scope of the SCM Agreement.....	15
2. <i>Arguments of the United States</i>	16
(a) Relevance of Other International Aircraft Related Agreements.....	16
(b) Extinction and Extraction of Subsidies	17
(c) Temporal Scope of the SCM Agreement	20
B. WHETHER LAUNCH AID IS A SUBSIDY WITHIN THE MEANING OF ARTICLE 1 OF THE SCM AGREEMENT .	21
1. <i>Arguments of the United States</i>	21
(a) Launch Aid as a Program.....	21
(b) Launch Aid Constitutes a Financial Contribution to Airbus	23
(c) Launch Aid Confers a Benefit on Airbus.....	23
(d) Launch Aid is Specific.....	25
(e) Other issues.....	25
2. <i>Arguments of the European Communities</i>	26
(a) Member State Financing as a Programme.....	27
(b) US Failure to Prove that A member State Financing "Programme" Constitutes a Financial Contribution to Airbus	28
(c) US Failure to Prove that A member State Financing "Programme" Confers a Benefit on Airbus	28
C. WHETHER EACH GRANT OF LAUNCH AID TO AIRBUS IS A SPECIFIC SUBSIDY TO AIRBUS WITHIN THE MEANING OF ARTICLES 1 AND 2 OF THE SCM AGREEMENT	29
1. <i>Arguments of the United States</i>	29
(a) Benefit	29
(b) A350	34
2. <i>Arguments of the European Communities</i>	35
(a) 1992 Agreement.....	35
(b) Reasonableness of forecasts.....	35
(c) EC risk-sharing supplier benchmark and critique of US benchmark	36
(d) Rates of return.....	39
(e) A350	40
D. WHETHER THE LAUNCH AID THAT AIRBUS HAS RECEIVED FOR THE A380, THE A340-500/600, AND THE A330-200 ARE PROHIBITED EXPORT SUBSIDIES	40
1. <i>Arguments of the United States</i>	40
(a) A380	40
(b) A340-500/600 and A330-200	41

BCI deleted, as indicated [***]

(c)	Export contingency	41
2.	<i>Arguments of the European Communities</i>	45
(a)	Preliminary Observations	46
(b)	No subsidies contingent in law upon export performance	50
(c)	No subsidies contingent in fact upon export performance	50
E.	WHETHER CERTAIN LOANS FROM THE EUROPEAN INVESTMENT BANK SUBSIDIZED THE DEVELOPMENT OF AIRBUS LARGE CIVIL AIRCRAFT	53
1.	<i>Arguments of the United States</i>	53
2.	<i>Arguments of the European Communities</i>	57
F.	WHETHER THE GERMAN, FRENCH, UK, AND SPANISH GOVERNMENTS HAVE SUBSIDIZED AIRBUS THROUGH THE PROVISION OF INFRASTRUCTURE AND INFRASTRUCTURE-RELATED GRANTS	60
1.	<i>Arguments of the United States</i>	60
(a)	Alleged infrastructure subsidies	60
(i)	Hamburg	60
(ii)	Bremen	63
(iii)	Toulouse	63
(b)	Regional Aid	64
(i)	Nordenham	64
(ii)	Broughton	64
(iii)	La Rinconada	64
(iv)	Illescas	65
(v)	La Rinconada	65
(vi)	Puerto de Santa Maria	65
(vii)	Puerto Real	65
(viii)	Puerto de Santa Maria	65
(ix)	Sevilla	66
(x)	Puerto Real	66
(xi)	Illescas	66
(xii)	La Rinconada	66
(c)	General infrastructure	66
(d)	Specificity of regional aid	68
2.	<i>Arguments of the European Communities</i>	69
(a)	General Infrastructure	69
(b)	The challenged measures do not confer a benefit	71
(i)	Hamburg	71
(ii)	Bremen	73
(iii)	Toulouse	73
(iv)	Regional infrastructure measures	73
(c)	Specificity of regional aid	74
G.	WHETHER THE GERMAN GOVERNMENT HAS SUBSIDIZED AIRBUS BY ITS DECISION IN 1998 FORGIVING AT LEAST DM 7.7 BILLION OF DEUTSCHE AIRBUS' GOVERNMENT DEBT	74
1.	<i>Arguments of the United States</i>	74
2.	<i>Arguments of the European Communities</i>	75
H.	WHETHER THE GERMAN GOVERNMENT'S 1989 INVESTMENT IN DEUTSCHE AIRBUS OR THE SUBSEQUENT 1992 TRANSFER OF ITS OWNERSHIP SHARE IN DEUTSCHE AIRBUS TO THE DAIMLER GROUP IS A SPECIFIC SUBSIDY TO AIRBUS	77
1.	<i>Arguments of the United States</i>	77
2.	<i>Arguments of the European Communities</i>	78
I.	WHETHER CERTAIN CAPITAL CONTRIBUTIONS AND 1998 TRANSFER OF DASSAULT SHARES TO AÉROSPATIALE ARE SPECIFIC SUBSIDIES TO AIRBUS SAS	80
1.	<i>Arguments of the United States</i>	80
2.	<i>Arguments of the European Communities</i>	81
J.	WHETHER RESEARCH AND DEVELOPMENT FUNDING THAT THE EUROPEAN COMMISSION AND THE MEMBER STATES PROVIDE TO AIRBUS ARE SPECIFIC SUBSIDIES	83
1.	<i>Arguments of the United States</i>	83
(a)	EC Framework Programs	83
(b)	German funding	84
(c)	French funding	84
(d)	UK funding	85
(e)	Spanish funding	85

BCI deleted, as indicated [***]

(f)	Relevant amounts and specificity	86
2.	<i>Arguments of the European Communities</i>	87
K.	WHETHER THE SUBSIDIES HAVE CAUSED ADVERSE EFFECTS TO THE INTERESTS OF THE UNITED STATES	89
1.	<i>Arguments of the United States</i>	89
(a)	Conditions of Competition in the LCA Market.....	90
(b)	Subsidized and like product.....	92
(c)	Reference period.....	94
(d)	Injury Within the Meaning of Article 5(a).....	95
(e)	Serious Prejudice to the Interests of the US.....	97
(i)	Subsidized Airbus LCA Have Displaced or Impeded Imports of US-Produced LCA in the EC Market....	97
(ii)	Subsidized Airbus LCA Have Displaced or Impeded Exports of US-Produced LCA in Third-Country Markets	98
(iii)	Subsidized Airbus LCA Have Undercut Prices and Taken Sales of Boeing LCA	98
(iv)	Boeing Has Experienced Price Suppression and Price Depression for Its LCA Sales in the World Market	100
(v)	Subsidies Cause These Adverse Market Effects	100
(vi)	Conclusions.....	106
2.	<i>Arguments of the European Communities</i>	107
(a)	1992 Agreement – " <i>Volenti non fit Injuria</i> "	108
(b)	Reference Period.....	109
(c)	Subsidized and like product.....	114
(d)	Material Injury	116
(e)	Causation	120
(i)	Magnitude of the Subsidy	120
(ii)	US Causation Theories.....	122
US historical product launch causation theory.....	123	
US cash-flow price effects causation theory.....	126	
Cumulative US causation arguments.....	128	
(iii)	Serious Prejudice	128
Intervening Events and Non-Attribution Factors.....	128	
EC Responses to US Allegations of Price Undercutting.....	131	
EC Arguments Responding to US Lost Sales Allegations.....	133	
EC Responses to US Allegations of Displacement or Impedance	136	
EC Responses to US Allegations Regarding Price Suppression and Depression.....	141	
(f)	Conclusions	144
V.	ARGUMENTS OF THE THIRD PARTIES	146
A.	AUSTRALIA	147
1.	<i>The 1979 and 1992 Agreements</i>	147
(a)	The 1979 and 1992 Agreements as applicable law	147
(b)	The 1979 and 1992 Agreements as aids to interpretation of the SCM Agreement	147
2.	<i>Applicability of the SCM Agreement to Pre-1995 subsidies</i>	148
3.	<i>In Fact Export Contingency</i>	149
4.	<i>Adverse Effects</i>	151
(a)	Temporal issues regarding the US claim of adverse effects.....	151
(b)	Causation	152
(c)	Magnitude of the subsidy and methodology	152
(d)	Relevance of the concepts of 'subsidized product' and 'like product'	152
(e)	US' characterization of the 'subsidized product' and the 'like product'	153
(f)	Legal considerations in determining the 'subsidized product' and the 'like product'	153
5.	<i>General Infrastructure</i>	154
6.	<i>Regional Specificity</i>	155
7.	<i>Extinguishment of Subsidies</i>	155
8.	<i>Withdrawal of the subsidy</i>	156
B.	BRAZIL.....	156
1.	<i>Introduction</i>	156
2.	<i>The SCM Agreement applies in all respects to the aircraft sector</i>	156
3.	<i>Subsidies provided before 1 January 1995 should be excluded from the scope of this proceeding..</i>	157
4.	<i>The EC failure to cooperate in the Annex V process threatens to undermine the WTO dispute settlement process and should result in the application of inferences, including adverse inferences, where appropriate</i>	158

BCI deleted, as indicated [***]

5.	<i>"Launch aid" severely distorts the markets for aircraft and constitutes a specific subsidy</i>	158
6.	<i>The Panel should avoid a narrow interpretation of de facto export contingency</i>	160
7.	<i>The US has made a prima facie case that the subsidies to Airbus cause adverse effects or the threat thereof</i>	161
C.	CANADA.....	164
1.	<i>Introduction</i>	164
2.	<i>De facto Export Contingency</i>	164
3.	<i>Infrastructure</i>	166
4.	<i>Serious Prejudice</i>	169
(a)	Like Product	169
(b)	Causation and the US Aggregated Analysis	171
(i)	Aggregation of Subsidies.....	171
(ii)	Aggregation of Subsidies Regardless of When Granted and Expended	172
(iii)	Aggregation of Research and Development (R&D) Programs	172
(iv)	The US fails to demonstrate the causal link required under Article 6.3	173
5.	<i>Conclusion</i>	174
D.	CHINA	174
1.	<i>Introduction</i>	174
2.	<i>In fact export contingency under Article 3.1(a) of the SCM Agreement</i>	174
3.	<i>Non attribution analysis in the context of joint claims under Article 5 (a) and (c)</i>	175
4.	<i>Conclusion</i>	176
E.	JAPAN.....	177
1.	<i>Subsidy measures that came into existence prior to January 1, 1995 are subject to the SCM Agreement if they provided a benefit on or after that date</i>	177
2.	<i>The Panel is authorized to take into account evidence of any continuing adverse effects after the date of establishment of the Panel</i>	179
3.	<i>Demonstrating causation requires detailed analysis of relevant facts and economic data</i>	180
4.	<i>The Panel is authorized to examine alleged subsidies whose adverse effects have ceased to exist</i> ..	181
5.	<i>Arm's-length, fair market value transactions extinguish alleged subsidies</i>	182
6.	<i>Mere anticipation of exports is not proof of de facto export contingency</i>	183
F.	KOREA	185
1.	<i>Introduction</i>	185
2.	<i>The standard of proof required to establish a prima facie case in a subsidy dispute</i>	185
(a)	The legal standard to establish a <i>prima facie</i> case	185
(i)	"Evidence sufficient to demonstrate"	185
(ii)	Prima facie evidence sets a higher standard than Article 6.2 of the DSU	186
(b)	Other factors relevant to <i>prima facie</i> evidence	186
(i)	Difficulty of collecting information to prove a case	186
(ii)	The Panel's obligation to investigate under Article 13 of the DSU does not override the party's obligation to establish prima facie evidence	186
(iii)	Summary	186
(c)	Standard of Review by the Panel under Article 11 of the DSU	187
3.	<i>The meaning of general infrastructure under Article 1.1(a)(1)(iii) of the SCM Agreement</i>	187
4.	<i>The interpretation of "Benefit" within the meaning of Article 1.1(b) of the SCM Agreement</i>	187
5.	<i>De facto contingency of export subsidies under Article 3.1(a) of the SCM Agreement</i>	188
VI.	INTERIM REVIEW	189
A.	INTRODUCTION.....	189
B.	GENERAL COMMENTS	189
1.	<i>Use of the term "EC"</i>	189
2.	<i>Specific references to BCI/HSBI exhibits</i>	190
3.	<i>Consistency and accuracy in names</i>	190
4.	<i>Text in French or Spanish</i>	191
C.	PRELIMINARY RULING	192
1.	<i>Paragraph 7.46</i>	192
2.	<i>Paragraph 7.92 and footnote 1613</i>	193
D.	IDENTITY OF THE ALLEGED SUBSIDY RECIPIENT AND PASS-THROUGH, EXTINCTION AND EXTRACTION OF SUBSIDIES.....	193

BCI deleted, as indicated [***]

1. Paragraph 7.248	193
2. Paragraph 7.275 and Footnote 1925	194
3. Section VII.E.1 Attachment: Corporate History of Airbus, paragraph 2	195
4. Section VII.E.1 Attachment: Corporate History of Airbus, paragraph 3	195
5. Section VII.E.1 Attachment: Corporate History of Airbus, paragraph 6	196
E. THE ALLEGED LA/MSF MEASURE FOR THE A350	196
1. Paragraph 7.300	196
2. Paragraph 7.307	197
F. WHETHER EACH OF THE INDIVIDUAL GRANTS OF LA/MSF FOR THE A300, A310, A320, A330/A340, A330-200, A340-500/600 AND A380 MODELS OF LCA CONSTITUTES A SUBSIDY WITHIN THE MEANING OF ARTICLE 1 OF THE SCM AGREEMENT	198
1. Paragraph 7.374 and footnote 2155	198
2. Paragraph 7.375	199
3. Table 1 (following paragraph 7.380) and footnote 2172	199
4. Paragraph 7.407	200
5. Paragraph 7.409	200
6. Paragraph 7.416	201
7. Paragraph 7.426	203
8. Paragraph 7.429	203
9. Paragraphs 7.430 – 7.464	204
10. Paragraph 7.476	204
11. Paragraph 7.483	205
G. WHETHER LA/MSF AS A PROGRAMME IS A SUBSIDY WITHIN THE MEANING OF ARTICLE 1 OF THE SCM AGREEMENT	205
1. Paragraphs 7.495 and 7.508	205
2. Footnote 2469	206
3. Footnote 2473	207
4. Footnote 2478	207
H. WHETHER LA/MSF FOR THE A380, A340-500/600 AND THE A330-200, CONSTITUTES, IN EACH CASE, A PROHIBITED EXPORT SUBSIDY WITHIN THE MEANING OF ARTICLE 3 OF THE SCM AGREEMENT	208
1. Paragraph 7.583, second sentence	208
2. Paragraph 7.625, third, fourth, fifth and final sentences; paragraph 7.626 first sentence; paragraph 7.627; and paragraph 7.628, fourth and fifth sentences	210
3. Paragraph 7.633	213
4. Paragraph 7.645, second bullet point and paragraph 7.655, seventh bullet point	213
5. Paragraph 7.655, fourth bullet point, items (h) and (i)	214
6. Paragraphs 7.674 - 7.682	214
7. Paragraph 7.677	216
8. Paragraph 7.679	216
9. Paragraphs 7.690-7.710	217
I. WHETHER CERTAIN EUROPEAN INVESTMENT BANK LOANS TO AIRBUS ARE SPECIFIC SUBSIDIES WITHIN THE MEANING OF ARTICLES 1 AND 2 OF THE SCM AGREEMENT	218
1. Paragraphs 7.744, 7.747, 7.781, 7.795, 7.814, 7.854, 7.856, 7.857, 7.862 and 7.875	218
2. Paragraph 7.753 and footnote 3041	219
3. Paragraphs 7.760 and 7.779	219
4. Paragraphs 7.783, 7.791 and 7.793	220
5. Paragraphs 7.733-7.833	221
6. Paragraph 7.966	222
7. Paragraphs 7.983-7.984 and 7.987-7.989	222
8. Paragraphs 7.983, 7.987 and 7.998	222
9. Paragraph 7.996	223
J. WHETHER THE GERMAN, FRENCH, UK, AND SPANISH GOVERNMENTS HAVE SUBSIDIZED AIRBUS THROUGH THE PROVISION OF INFRASTRUCTURE AND INFRASTRUCTURE-RELATED GRANTS	223
1. Paragraphs 7.1012 and 7.1035	223
2. Paragraph 7.1036	224
3. Paragraph 7.1044, footnote 3547	224
4. Paragraph 7.1059	225

BCI deleted, as indicated [***]

5.	Paragraph 7.1061	225
6.	Paragraph 7.1080	226
7.	Paragraph 7.1087	226
8.	Paragraph 7.1086, footnote 3652	227
9.	Paragraph 7.1087, footnote 3655	227
10.	Paragraph 7.1120	227
11.	Paragraph 7.1124	228
12.	Paragraph 7.1131	229
13.	Paragraph 7.1167, footnote 3840	230
14.	Paragraph 7.1171	230
15.	Paragraph 7.1193	231
16.	Paragraph 7.1227 and footnote 3920	231
K.	WHETHER THE GERMAN GOVERNMENT'S TRANSFER OF ITS OWNERSHIP SHARE IN DEUTSCHE AIRBUS TO THE DAIMLER GROUP IS A SPECIFIC SUBSIDY TO AIRBUS	234
1.	Paragraph 7.1235	234
L.	WHETHER THE GERMAN GOVERNMENT HAS SUBSIDIZED AIRBUS BY FORGIVING AT LEAST DM 7.7 BILLION OF DEUTSCHE AIRBUS' GOVERNMENT DEBT	235
1.	Paragraph 7.1302 and footnote 4060	235
2.	Paragraph 7.1304	235
3.	Footnote 4074	236
M.	WHETHER THE EQUITY INFUSIONS THAT THE FRENCH GOVERNMENT PROVIDED TO AEROSPATIALE ARE SPECIFIC SUBSIDIES	237
1.	Paragraph 7.1315	237
2.	Paragraph 7.1332 and footnote 4125	238
3.	Paragraph 7.1336	239
4.	Paragraph 7.1364	239
N.	WHETHER RESEARCH AND TECHNOLOGICAL DEVELOPMENT FUNDING THAT THE EUROPEAN COMMISSION AND THE MEMBER STATES PROVIDE TO AIRBUS ARE SPECIFIC SUBSIDIES	240
1.	Paragraph 7.1410	240
2.	Paragraph 7.1413, third sentence and footnote 4292	240
3.	Paragraphs 7.1419, 7.1425, 7.1431, 7.1437 and 7.1443	240
4.	Paragraphs 7.1416-7.1445	241
5.	Paragraphs 7.1425, 7.1427, 7.1430, 7.1431, 7.1433, 7.1442, 7.1443 and 7.1445	242
6.	Paragraphs 7.1436, 7.1437 and 7.1439	243
7.	Paragraph 7.1461	243
8.	Paragraph 7.1481	244
9.	Paragraphs 7.1502, 1551 and 1552	245
O.	ADVERSE EFFECTS	245
1.	Paragraph 7.1610	245
2.	Paragraph 7.1664	245
3.	Paragraph 7.1693, footnote 4785	246

Brazil	388
Canada	391
Korea	392
(iii) Evaluation by the Panel	392
Overview of LCA Development and Key Features of LA/MSF	393
Do the Challenged Measures involve a "Financial Contribution"?	397
Do the Challenged Measures confer a "benefit"?	401
Whether the LA/MSF subsidies are specific within the meaning of Article 2 of the SCM Agreement	442
3. <i>Whether LA/MSF as a Programme is a Subsidy Within the Meaning of Article 1 of the SCM Agreement</i>	443
(a) Arguments of the United States	443
(b) Arguments of the European Communities	445
(c) Evaluation by the Panel	447
(i) Does the alleged LA/MSF Programme exist?	447
The LA/MSF contracts	451
Inter-governmental Institutional Structures	455
National Bureaucracies	466
Statements by EC, EC member State and Airbus officials and employees	467
Perceptions of Credit Rating Agencies	470
(ii) Conclusion	473
4. <i>Whether LA/MSF for the A380, A340-500/600 and the A330-200, constitutes, in each case, a prohibited export subsidy within the meaning of Article 3 of the SCM Agreement</i>	474
(a) Arguments of the United States	474
(b) Arguments of the European Communities	476
(c) Arguments of Third Parties	479
(i) Australia	479
(ii) Brazil	480
(iii) Canada	480
(iv) China	481
(v) Japan	482
(vi) Korea	482
(d) Evaluation by the Panel	483
(i) The European Communities' Request to Dismiss Certain Allegedly New Claims made in the United States' Second Written Submission	483
New claims allegedly not identified in the request for consultations and the panel request	483
United States' alleged failure to identify in its panel request the precise facts relied upon to make out its in fact export contingency claims	485
New facts and arguments allegedly introduced in contravention of the Working Procedures	485
(ii) Whether the LA/MSF Measures Amount to Subsidies that are In Fact Contingent upon Anticipated Export Performance	487
"Granting of a subsidy"	496
Whether the EC member State governments "anticipated exportation or export earnings"	496
Whether the granting of the LA/MSF was "tied to" anticipated exportation or export earnings	503
Whether the sales-dependent repayment provisions of the challenged LA/MSF measures amount to exchanges of commitments that evidence contingency in fact upon anticipated exportation or export earnings	513
Other "additional" evidence	519
Conclusion	522
(iii) Whether the LA/MSF Measures Amount to Subsidies that are Contingent In Law upon Anticipated Export Performance	523
Contingency in law upon anticipated export performance	524
Evidence the United States asserts demonstrates that the LA/MSF subsidies were granted contingent <i>in law</i> upon anticipated export performance	526
Whether the evidence the United States relies upon demonstrates that the LA/MSF subsidies were granted contingent <i>in law</i> upon anticipated export performance	531
5. <i>Whether certain European Investment Bank loans to Airbus are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement</i>	532
(a) Introduction	532
(i) Loans Already Repaid	534
(ii) 1991 Loan to British Aerospace	536
(b) Whether Each of the Challenged EIB Loans Amounts to a Subsidy within the Meaning of Article 1 of the SCM Agreement	537

I. INTRODUCTION

A. COMPLAINT OF THE UNITED STATES

1.1 On 6 October 2004, the United States requested consultations with the European Communities¹ and certain EC member States (Germany, France, the United Kingdom, and Spain) pursuant to Articles 1 and 4 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU"), Article XXIII:1 of the *General Agreement on Tariffs and Trade 1994* ("GATT 1994") and Articles 4, 7 and 30 of the *Agreement on Subsidies and Countervailing Measures* ("SCM Agreement") (to the extent that Article 30 incorporates Article XXIII of the GATT 1994), with regard to measures affecting trade in large civil aircraft.² Consultations were held on 4 November 2004, but the parties failed to resolve the dispute.

1.2 On 31 May 2005, the United States requested the establishment of a panel pursuant to Article 6 of the DSU, Article XXIII:2 of the GATT 1994, and Articles 4, 7 and 30 of the SCM Agreement (to the extent that Article 30 incorporates Article XXIII of the GATT 1994).³ In its request for establishment of a panel, the United States requested that the Dispute Settlement Body (the "DSB") initiate the procedures provided in Annex V of the SCM Agreement pursuant to paragraph 2 of that Annex.⁴

B. ESTABLISHMENT AND COMPOSITION OF THE PANEL

1.3 At its meeting on 20 July 2005, the DSB established a Panel in accordance with Article 6 of the DSU to examine the matter referred to the DSB by the United States in document WT/DS316/2. At that meeting, the parties to the dispute agreed that the Panel should have standard terms of reference. The terms of reference are, therefore, the following:

"To examine, in the light of the relevant provisions of the covered agreements cited by the United States in document WT/DS316/2, the matter referred to the DSB by the United States in that document, and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements."

1.4 On 7 October 2005, the United States requested the Director-General to determine the composition of the Panel, pursuant to paragraph 7 of Article 8 of the DSU, which provides:

"If there is no agreement on the panelists within 20 days after the date of the establishment of a Panel, at the request of either party, the Director-General, in consultation with the Chairman of the DSB and the Chairman of the relevant Council or Committee, shall determine the composition of the panel by appointing the panelists whom the Director-General considers most appropriate in accordance with any relevant special or additional rules or procedures of the covered agreement or

¹ On 1 December 2009, the *Treaty of Lisbon amending the Treaty on European Union and the Treaty establishing the European Community* (done at Lisbon, 13 December 2007) entered into force. On 29 November 2009, the WTO received a Verbal Note (WT/L/779) from the Council of the European Union and the Commission of the European Communities stating that, by virtue of the Treaty of Lisbon, as of 1 December 2009, the European Union replaces and succeeds the European Community.

² WT/DS316/1, attached at Annex A.

³ WT/DS316/2, attached at Annex B.

⁴ The United States reiterated its request in this regard at the DSB meetings held on 20 July, on 3 and 31 August and on 23 September 2005. See, documents WT/DSB/M/194, 195, 196 and 197, respectively.

BCI deleted, as indicated [***]

covered agreements which are at issue in the dispute, after consulting with the parties to the dispute. The Chairman of the DSB shall inform the Members of the composition of the panel thus formed no later than 10 days after the date the Chairman receives such a request".

1.5 On 17 October 2005, Deputy Director-General Alejandro Jara, acting in place of the Director-General, composed the Panel as follows:

Chairman: Mr. Carlos Pérez del Castillo
Members: Mr. John Adank
Mr. Thinus Jacobsz.⁵

1.6 Australia, Brazil, Canada, China, Japan and Korea reserved their rights to participate in the Panel proceedings as third parties.

C. INFORMATION GATHERING PROCEDURE UNDER ANNEX V OF THE SCM AGREEMENT

1.7 At its meeting of 23 September 2005, the DSB agreed to initiate the procedures provided for in Annex V of the SCM Agreement ("Annex V Procedures") and designated Mr. Mateo Diego-Fernández as a representative for this purpose ("Designated Representative" or "Facilitator"). On 30 September 2005, the Designated Representative adopted Working Procedures for the Annex V Procedures, after consultation with the United States and the European Communities. On 10 October 2005, pursuant to paragraph 17 of those Working Procedures, the European Communities requested that the Facilitator adopt additional procedures for the protection of business confidential information ("BCI") and highly sensitive business information ("HSBI"). Following consultations with the parties, on 4 November 2005 the Facilitator adopted procedures for the protection of BCI and HSBI for the Annex V Procedures.

1.8 On 24 February 2006, the Designated Representative submitted his report to the Panel. The report of the Designated Representative, and the Working Procedures and additional procedures for the protection of BCI and HSBI adopted by the Designated Representative for the Annex V Procedures are attached at Annex C.

D. PANEL PROCEEDINGS

1.9 Following consultation with the parties, the Panel adopted Working Procedures on 9 November 2005.⁶ On 1 March 2006, before the established dates for submissions by the parties, at the request of both parties, the Panel set aside its timetable.⁷ At the request of the United States, made on 4 September 2006, the Panel recommenced its work.

1.10 At the request of the parties, and following consultations with them, the Panel adopted additional procedures for the protection of BCI and HSBI for the panel proceedings on 19 October 2006 ("the BCI/HSBI procedures").⁸ The Panel issued several rulings over the course of the proceedings with respect to the interpretation and application of the BCI/HSBI procedures,

⁵ WT/DS/316/4.

⁶ These procedures were modified on various occasions, and are attached, in their final form, at Annex D.

⁷ On 28 February 2006, the Panel had received an unsolicited communication from an individual. The communication addressed a question that is not an aspect of the matter within the Panel's terms of reference. The Panel therefore found it inappropriate to consider that communication and has rejected it.

⁸ These procedures were modified on various occasions, and are attached, in their final form, at Annex E.

BCI deleted, as indicated [***]

including regarding the designation of specific information as BCI or HSBI pursuant to those procedures in the parties' submissions and exhibits.⁹

1.11 On 26 October 2005, the European Communities submitted a request for preliminary rulings, which it subsequently updated on 7 November 2006, in which it requested, *inter alia*, that the Panel find that certain of the measures challenged by the United States are not within the temporal scope of this proceeding or are outside its terms of reference. Having carefully considered the views of the parties and third parties, the Panel issued a preliminary ruling concerning certain aspects of the EC request to the parties and third parties on 11 July 2007. The ruling is set forth in the Panel's findings at Section VII.C. The Panel addresses the remaining issues raised by the EC request for preliminary rulings in its findings below.

1.12 On 9 November 2005, Brazil submitted a request for enhanced third party rights in this panel proceeding; similar requests were received from Canada on 23 November 2005 and from Korea on 13 October 2006. After careful consideration of this issue in light of all comments received from parties and third parties, the Panel on 23 October 2006 informed the parties and third parties of its decision declining to grant enhanced third party rights to any third party. The Panel's reasons are set out in its findings at Section VII.D.1.

1.13 The Panel met with the parties on 20 and 21 March 2007 and on 25 and 26 July 2007. At the request of the parties, and following consultations, the Panel adopted procedures for public sessions of its meetings with the parties. Pursuant to those procedures, the Panel held a portion of its meetings with the parties in public session, by means of a subsequent showing of video-recordings of the public sessions. The parties were given an opportunity to review the recordings to ensure no BCI or HSBI had been disclosed, and the recordings were shown in public on 22 March and 27 July 2007, respectively. The Panel met with the third parties on 24 July 2007.

1.14 The Panel submitted its interim report to the parties on 4 September 2009. The Panel submitted its final report to the parties on 23 March 2010.

II. FACTUAL ASPECTS

A. PRODUCT AT ISSUE

2.1 The parties agree that the product at issue in this dispute is large civil aircraft, as distinguished from smaller (regional) aircraft and military aircraft. Large civil aircraft ("LCA") can generally be described as large (weighing over 15,000 kilograms) "tube and wing" aircraft, with turbofan engines carried under low-set wings, designed for subsonic flight. LCA are designed for transporting 100 or more passengers and/or a proportionate amount of cargo across a range of distances serviced by airlines and air freight carriers. LCA are covered by tariff classification heading 8802.40 of the Harmonized System ("Airplanes and other aircraft, of an unladen weight exceeding 15,000 kg").

2.2 The design, testing, certification, production, marketing and after-delivery support of LCA is an enormously complex and expensive undertaking. LCA are presently produced only by Boeing and Airbus, which both sell a range of LCA models world-wide, to serve the range of needs of their customers, principally airlines and airplane leasing companies. Both companies engage in continued development of LCA, which requires significant up-front investments over a period of 3-5 years before any revenues are obtained from customers. Sales of LCA are relatively infrequent, but generally very large in terms of the number of aircraft and dollar amounts involved (LCA sales are made in USD), although deliveries are generally made over a period of years subsequent to the sale.

⁹ Selected rulings in this regard are attached, at Annex F.

BCI deleted, as indicated [***]

Customers choose among the various LCA models available those they conclude are most suitable for their needs, generally considering a broad variety of factors, including the physical and operating characteristics of the available models, operating costs, existing fleet, routes to be served by the aircraft, the structure of the existing fleet, and costs, with a view to minimizing costs and maximizing revenues.

2.3 The parties disagree as to the scope of the subsidized product or products, and the scope of the like product or products, at issue in this dispute. The United States contends that the subsidies at issue in this dispute benefit the production and marketing of the full range of LCA manufactured by Airbus, and that therefore the "subsidized product" is the Airbus LCA family as a whole, and that the corresponding "like product" is the entire family of Boeing LCA. The European Communities, on the other hand, contends there are four "families" of Airbus LCA, each constituting a separate allegedly subsidized product, and that there are three Boeing "like products" corresponding to three of the Airbus families of LCA, and no Boeing "like product" corresponding to the Airbus A380 family.

2.4 These issues are addressed by the Panel in its findings at Section VII.F.4.

B. MEASURES AT ISSUE

2.5 The United States, in its request for establishment, identified the measures at issue in this dispute as including the following:

- (a) The provision by certain member States of the European Communities (Germany, France, the United Kingdom, and Spain ("the member States")) of financing for large civil aircraft design and development to the Airbus companies¹⁰ (referred to by the United States as "Launch Aid").¹¹ This financing is alleged to provide benefits to the recipient companies including financing for projects that would otherwise not be commercially feasible. The non-commercial terms of the financing may include no interest or interest at below-market rates and a repayment obligation that is tied to sales. If the aircraft is not successful, some or all of the financing need not be repaid. Specific examples of the financing at issue include:
 - (i) French financing for the Airbus A300, A310, A320, A330/340, A330-200, A340-500/600, A380, and A350;

¹⁰ The United States defined the "Airbus companies" to include Airbus SAS, its predecessor Airbus GIE and current and predecessor affiliated companies, including each person or entity that directly, or indirectly through one or more intermediaries or relationships, controls or controlled, is or was controlled by, or is or was under common control with Airbus SAS or Airbus GIE, such as parent companies, sibling companies and subsidiaries, including Airbus Deutschland GmbH, Airbus España SL, Airbus France S.A.S., Airbus UK Limited, European Aeronautic Defence and Space Company (hereinafter "EADS"), and BAE Systems. The European Communities disputes that the "Airbus companies", as defined by the United States, are recipients of the alleged subsidies. For purposes of this description of the measures at issue, the Panel has used the terminology of the United States' request for establishment. This should not be taken to have any significance for the Panel's consideration of the substance of the dispute. This question is addressed further in the Panel's findings at Section VII.E.1.

¹¹ The European Communities and the member States concerned use different terms to describe the type of financing at issue, such as member State financing, launch aid, launch investment, avances remboursables, Rückzahlbare Zuwendungen, Entwicklungsbeihilfen, Zuschüsse zur Entwicklung von zivilen Flugzeugen, anticipo reembolsable, and prestamo reembolsable. The European Communities disputes that the term "Launch Aid", as used by the United States, is an appropriate designation of these alleged subsidies. For purposes of this description of the measures at issue, the Panel has used the terminology of the United States' request for establishment. This should not be taken to have any significance for the Panel's consideration of the substance of the dispute. This question is addressed further in the Panel's findings at paragraph 7.291

BCI deleted, as indicated [***]

- (ii) German financing for the Airbus A300, A310, A320, A330/340, A380, and A350;
 - (iii) United Kingdom financing for the Airbus A300, A310, A320, A330/340, A340-500/600, A380, and A350; and
 - (iv) Spanish financing for the Airbus A300, A310, A320, A330/340, A340-500/600, A380, and A350.
- (b) In addition to Launch Aid, the provision by the EC and the member States, through the European Investment Bank ("EIB"), to the Airbus companies, of financing for large civil aircraft design, development, and other purposes. Specific examples of the financing at issue include:¹²
- (i) financing to British Aerospace for the A320 and the A330/A340;
 - (ii) financing to Aérospatiale for the A330/340;
 - (iii) financing to Construcciones Aeronauticas SA ("CASA") for the A320 and the A330/340;
 - (iv) financing to Airbus Industrie for the A321;
 - (v) financing to Aérospatiale Super Transporteurs; and
 - (vi) financing to EADS for the A380.
- (c) The provision by the EC and the member States of financial contributions to develop, expand, and upgrade facilities and other infrastructure for the Airbus companies. Specific instances include public investments by German authorities in Hamburg, Nordenham, Bremen, and Varel, by French authorities in the Toulouse region, by UK authorities at Broughton, Wales and by Spanish authorities at numerous locations in Spain (such as Puerto Real, Illescas, Puerto de Santa Maria, and La Rinconada).
- (d) The assumption and forgiveness by the EC and the member States of debt resulting from Launch Aid and other financing for large civil aircraft development and production, including debt accumulated by Deutsche Airbus that was forgiven by the German government in 1997 and 1998 and debt assumed by the government of Spain on behalf of CASA and not repaid.
- (e) The provision by the EC and the member States of equity infusions and grants, including through government-owned and government-controlled banks. Examples include equity investment by the German government through Kreditanstalt für Wiederaufbau ("KfW") in Deutsche Airbus in 1989 and the return of the shares acquired through this transaction to Deutsche Airbus' parent, the Daimler group, without compensation, in 1992; equity infusions by the French Government into Aérospatiale in 1987 and 1988; an equity infusion by French state-owned Crédit Lyonnais into Aérospatiale in 1992; an equity infusion by the French Government

¹² EIB financing to airline customers for the purchase of new aircraft is not within the scope of the US panel request.

BCI deleted, as indicated [***]

into Aérospatiale in 1994; and the grant by the French Government of its 45.76 per cent share of Dassault Aviation's capital to Aérospatiale in 1998.

- (f) The provision by the EC and the member States of financial contributions for aeronautics-related research, development, and demonstration ("R&D"), undertaken by Airbus, whether alone or with others, or in any other way to the benefit of Airbus, including:
- (i) EC funding for civil aeronautics-related R&D projects under the Second (1987-1991), Third (1990-1994), Fourth (1994-1998), Fifth (1998-2002) and Sixth (2002-2006) EC Framework Programs in which Airbus participated.
 - (ii) Funding from the German federal government and sub-federal entities for civil aeronautics-related R&D projects in which Airbus participated, including:
 - federal government funding as set forth in the most updated version of the government's Förderkatalog database, including funding under the federal aeronautics research programs Luftfahrtforschungsprogramm 1 (1995-1998), Luftfahrtforschungsprogramm 2 (1998-2002), and Luftfahrtforschungsprogramm 3 (2003-2007);
 - the regional Bremen Airbus Materials & System Technology Centre Bremen (AMST) (2000-2002) and the Airbus Materials & System Technology Centre Bremen II (AMST) (2002-2006);
 - the regional Bavaria "Hightechoffensive Bayern" program (1999-2003); and
 - the regional Hamburg Luftfahrtforschungsprogramm (2001-2005).
 - (iii) Funding from the government of the United Kingdom since 1992 for civil aeronautics-related R&D projects in which Airbus participated, including funding under the Civil Aircraft Research and Development Program (CARAD) and the Technology & Strategy Program.
 - (iv) Funding from the Spanish government, including regional and local authorities, since 1993 for civil aeronautics-related R&D projects in which Airbus participated, including loans and other financial support provided under the Plan Tecnológico Aeronáutico I and the Plan Tecnológico Aeronáutico II.
 - (v) Funding from the French government, including regional and local authorities, since 1986 for civil aeronautics-related R&D projects in which Airbus participated.
 - (vi) The provision by government-controlled and financed research institutions of civil aeronautics R&D-related goods or services to Airbus and/or funding for civil aeronautics-related R&D projects in which Airbus participated, including by the German Deutsches Zentrum für Luft- und Raumfahrt ("DLR"), by the UK Defence Evaluation and Research Agency ("DERA") and its successor Qinetiq, and by the French Office National des Études et

BCI deleted, as indicated [***]

des Recherches Aéronautiques ("ONERA"), the Centre National de la Recherche Scientifique ("CNRS"), and the Centre National de la Recherche Technologique ("CNRT").

- (g) Any amendments, revisions, implementing or related measures to the measures described above.
- (h) Any other measures that involve a financial contribution by the EC or any of the member States that benefit the Airbus companies.

III. PARTIES' REQUESTS FOR FINDINGS AND RECOMMENDATIONS

A. UNITED STATES

3.1 The United States requests that the Panel find that:

- (a) Launch Aid provided to Airbus for the A380, the A340-500/600, and the A330-200 aircraft are export subsidies inconsistent with Articles 3.1(a) and 3.2 of the SCM Agreement;
- (b) The Launch Aid Program, individual provisions of Launch Aid, and the other measures at issue in this dispute are specific subsidies that cause or threaten to cause adverse effects to the United States and, thus, are inconsistent with Articles 5(a), 5(c), 6.3(a), 6.3(b), and 6.3(c) of the SCM Agreement;
- (c) The Launch Aid Program, individual provisions of Launch Aid, and the other measures at issue in this dispute are subsidies that are inconsistent with Article XVI:1 of the GATT 1994; and
- (d) the breaches of the SCM Agreement and the GATT 1994 set forth above nullify or impair benefits accruing to the United States.

3.2 The United States further requests that the Panel recommend, pursuant to Article 4.7 of the SCM Agreement, that the European Communities, France, Germany, Spain, and the United Kingdom withdraw their export subsidies without delay. The United States respectfully requests that the Panel specify, pursuant to Article 4.7, that the time period for withdrawal be 90 days after the DSB adopts its recommendations and rulings in this dispute.

3.3 The United States further requests that the Panel recommend, pursuant to Article 7.8 of the SCM Agreement, that the European Communities, France, Germany, Spain, and the United Kingdom take appropriate steps to remove the serious prejudice and the threat of serious prejudice or withdraw their subsidies.

3.4 Finally, the United States asks the Panel to reject all of the European Communities' requests for preliminary rulings.

B. EUROPEAN COMMUNITIES

3.5 The European Communities requests that the Panel reject all claims advanced by the United States in this dispute. As noted above, the European Communities separately requested the Panel to find, as a preliminary matter, that certain of the measures challenged by the United States are not within the temporal scope of this proceeding or are outside its terms of reference.

BCI deleted, as indicated [***]

IV. ARGUMENTS OF THE PARTIES

4.1 The arguments of the parties are set out in their written and oral submissions to the Panel, in their answers to questions and in additional comments submitted pursuant to the Panel's request. The parties' arguments, as summarised by them are presented in this section.¹³ The full non-confidential text of certain EC submissions can be downloaded from the EC web site.¹⁴ The full non-confidential text of certain US submissions can be downloaded from the Government's web site.¹⁵

A. PRELIMINARY ISSUES RAISED BY THE EUROPEAN COMMUNITIES

1. Arguments of the European Communities

4.2 In its first written submission, the EC underlines: (i) the importance in this dispute of other international aircraft related agreements, (ii) the fact that the EC is the proper respondent, (iii) the need to properly identify the alleged recipients of the alleged subsidies and (iv) the fact that the US has failed to make a *prima facie* case in a number of issues relating to subsidization and adverse effects. The EC argues that the Panel should not make the case of the US, but dismiss its claims on these grounds alone. The EC notes that third parties that address this issue, agree.¹⁶ The EC also responds to the US position on the Article 6.2 DSU issue that the EC raised in its Request for Preliminary Rulings.¹⁷

(a) Relevance of Other International Aircraft Related Agreements

4.3 The EC asserts that despite the fact that it relies on historic events, the US chooses to ignore entirely the agreements that it has entered into with the EC concerning Large Civil Aircraft ("LCA") during this period – notably the 1979 *Agreement on Trade in Civil Aircraft* ("the 1979 Agreement") and the 1992 *Agreement concerning the application of the GATT Agreement on Trade in Civil Aircraft on trade in large civil aircraft* ("the 1992 Agreement").¹⁸ The EC seeks to correct the main errors in the US story and in particular explains the importance of the above agreements to this dispute. The EC particularly objects to the fact that the US seeks to impugn measures that it expressly agreed and to apply new agreements retroactively to historical facts.¹⁹

4.4 The EC argues that the 1979 Agreement and the 1992 Agreement are relevant for this dispute for the following reasons.²⁰ First, these agreements provide essential factual background and

¹³ Pursuant to paragraph 13 of the panel's working procedures, the parties and third parties submitted non-confidential executive summaries of their written and oral submissions. The Panel issued its draft descriptive part to the parties on 4 March 2008, informing them that it intended to attach the executive summaries of parties' and third parties' submissions to its report, as has been the practice of a number of panels. Following comments received on 11 March 2008, the Panel drafted a revised descriptive part based on those executive summaries, which it provided to the parties and third parties for comment on 20 October 2008. The Panel received comments from the third parties on 27 October 2008 and from the parties, having granted the EC's request for extension of time, on 4 November 2008.

demonstrate that aircraft production has been treated as a special case in the GATT and the WTO ever since detailed rules on subsidies were first promulgated in 1979 during the Tokyo Round of trade negotiations.²¹

4.5 Second, according to the EC, these Agreements contain applicable law.²² The EC explains that the 1979 Agreement was confirmed and readopted as a plurilateral agreement as part of Annex IV to the WTO Agreement.²³ Although it is not a *covered* agreement, it is an agreement specifically relating to aircraft and it incorporates the subsidy disciplines of the 1979 Agreement and the *Tokyo Round Subsidies Agreement*, which are relevant for assessing the legality of pre-1995 measures, rather than the SCM Agreement.²⁴ Both the US and the EC are parties. The 1992 Agreement is a bilateral agreement between the EC and the US, which expressly refers to and implements the 1979 Agreement.²⁵ Moreover, according to the EC, the 1992 Agreement forms part of the applicable law in this dispute under Article 7.2 of the *DSU* as it is not invoked by the EC to justify a countermeasure against the US in the context of a broader dispute, as was the case in *Mexico – Soft Drinks*.²⁶ The EC points out that the MSF contracts for the A320 and A330/A340 programmes were concluded at the time of the *Tokyo Round Subsidies Code*, and if at all, should be judged according to the standards fixed in that agreement, *i.e.*, the "cost to the government" benchmark.²⁷ The EC further explains that the Tokyo Round Subsidies Code is still applicable law as referenced in the 1979 Agreement which is still in force. Moreover, under general international law, a juridical fact must be assessed against the law contemporaneous to it. Hence, in the EC view, these contracts can only be assessed against the standards of the Tokyo Round Subsidies Code, but not against the disciplines of the SCM Agreement.²⁸

4.6 Third, the EC submits that these Agreements provide essential context for the interpretation of other applicable law, and in particular provisions of the SCM Agreement invoked by the US.²⁹ The 1992 Agreement can serve as an interpretative tool for the SCM Agreement according to Article 31(3)(c) of the *Vienna Convention* since the Appellate Body has, in the past, also applied other non-covered Agreements to interpret notions contained in covered agreements.³⁰

4.7 Last, the EC notes that the 1992 Agreement was not only adopted to implement the 1979 Agreement between the US and the EC, but also constituted a mutually agreed solution to a dispute between these parties. A mutually agreed solution must at least give rise to estoppel preventing a party to such an agreement from reneging on its terms. Having negotiated, concluded, and implemented the 1992 Agreement, the US cannot now challenge as prohibited or actionable subsidies the very same elements of financing to which it acquiesced and, indeed, actively contributed to.³¹

(b) Extinction and Extraction of Subsidies

Relevance of the identity of the recipient or the continuity of benefit under the SCM Agreement

4.8 The EC argues that by failing to demonstrate how the alleged subsidies to other companies provide benefits to Airbus SAS, the US has failed to make a *prima facie* case of violation of the SCM Agreement.³² The EC recalls the Appellate Body's observation that "a 'benefit' can be said to arise only if a person, natural or legal, or a group of persons, has in fact received something."³³ Put simply, subsidies paid to entities that no longer exist, much less manufacture and sell LCA, cannot be assumed to benefit Airbus SAS, which has not, in the Appellate Body's words, "in fact received something". Whether it has "in fact received something" is for the United States to prove.³⁴ The EC explains that identity of recipient, extinction, extraction even 'pass through' are all different ways of expressing the same principle. The US calls it the "continuity of benefit". In reality, the EC explains, it is the requirement that the operator benefiting from the subsidy must be identified.³⁵ The EC adds that in accordance with the jurisprudence, the US bears the burden of proving the "continuity of benefit" from alleged subsidies to entities other than Airbus SAS, the current manufacturer of European LCA, through to Airbus SAS.³⁶ The EC submits that the US – as the complaining party – bears the burden of proving its claims. The fact that the EC advanced certain facts about certain transactions, described below, that the US should have advanced, does not shift the burden of proof.³⁷

4.9 The EC notes that the main US argument seems to be that "{f} or a serious prejudice analysis, it is necessary to establish that the product at issue is subsidized but not that the recipient of the subsidy is one enterprise rather than another." In the EC view, the US logic omits a certain number of essential steps. The EC explains that a product may be considered directly subsidised where an amount is paid on each item produced or sold. But where a subsidy is paid to a person before products are produced or sold, or independently of production or sale, it is necessary to first establish a benefit to the producer or seller of the product in order to establish that goods produced or sold by that person are subsidised. As the Appellate Body made clear in *Canada– Aircraft*, "{a} 'benefit' does not exist in the abstract, but must be received and enjoyed by a beneficiary or a recipient."³⁸

4.10 Taking into account this standard, the EC argues that it is necessary in analyzing the alleged subsidies in this case to identify the precise recipients.³⁹ And according to the EC, the US does not address this issue at all in its first written submission and attempts to disguise the issue by sometimes using the term "Airbus" to cover many different entities.⁴⁰

4.11 The EC considers that the Appellate Body requirements discussed above are all the more important in this dispute, given the US approach to proving adverse effects. The US argues that the principal harm of the challenged measures is that they provide cash flow relief to Airbus SAS, allowing it to price down aircraft today. Under many of the measures challenged by the US, however, entities other than Airbus SAS – entities that no longer exist, much less make or sell LCA – "in fact received" the cash. Thus, while entities other than Airbus SAS received the cash, the US

BCI deleted, as indicated [***]

characterises the harm as consequent cash flow relief enabling subsidy-fuelled pricing behaviour by Airbus SAS. Not only was much of the cash received by entities other than Airbus SAS, but it was received by those entities decades ago.⁴¹

Relevance of arm's length, fair market value transactions under the SCM Agreement

4.12 The EC provides evidence regarding a series of intervening transactions – identified at paragraph 311 of its response to Question 111 – that it argues were conducted at arm's length and for fair market value. The EC argues that these transactions interrupted the flow to Airbus SAS of any monies received by entities other than Airbus SAS.⁴² The EC adds that this position, supported by Japan in its third party submission, is consistent with panel and Appellate Body jurisprudence holding that the existence of a subsidy must be determined by assessing the benefit that it confers on the relevant recipient and that a subsidy conferred on a former owner of assets cannot be assumed to confer a benefit on a subsequent owner.⁴³ In light of the transactions identified by the EC, the EC maintains that the US has not demonstrated a link between cash "in fact received" decades ago by entities other Airbus SAS, and current pricing behaviour by Airbus SAS.⁴⁴

4.13 The EC argues that the failure of the US to do so has implications for US adverse effects claims: the US considers that the Panel may simply presume that cash provided decades ago to entities other than Airbus SAS automatically translates into cash flow relief for Airbus SAS today. This presumption is not permitted by the SCM Agreement. A series of intervening transactions conducted at arm's length and for fair market value interrupted the flow to Airbus SAS of any monies received decades ago by entities other than Airbus SAS.⁴⁵

4.14 The EC considers that the US is wrong to suggest that the prior case law is only relevant to countervailing duty cases. The EC explains that the rationale for these cases lies in the definition of what is a subsidy and the definition of subsidy in the SCM Agreement is common to the whole agreement. The principles recognised in this case law are as relevant to adverse effects cases as they are to countervailing duty cases.⁴⁶

4.15 In regard to the US argument that the various transactions that have occurred in the European LCA industry over the last decade do not qualify as "full privatisations" or sufficient "changes of ownership" and its further assertion that they were not in any event at arm's length or fair market value⁴⁷, the EC argues that there is nothing in the SCM Agreement that provides for special rules for privatisations and changes of control.⁴⁸ The EC further points out that the Appellate Body has held that there was a *rebuttable* presumption that an arm's-length, fair market value privatisation precludes the pass-through of benefit from seller to buyer of a state-owned firm. However, the EC notes, the Appellate Body also reasoned that this presumption would appear to be *irrebuttable* in private-to-private sales.⁴⁹

4.16 The EC adds that WTO case law further recognizes that subsidy benefits are extinguished in cases of the sale of a portion of an enterprise. The Article 21.5 panel in *US – Countervailing*

BCI deleted, as indicated [***]

Measures on Certain EC Products examined the US imposition of countervailing duties on a company that had been sold in tranches, with all but a fraction of the sale admittedly having been at arm's length. In that case, the US investigating authority had found that the sale of 5.16 percent of the company's shares to company employees at less than fair market value "did not extinguish certain allocable, nonrecurring, pre-privatisation subsidies" with regards to that portion of the company. As a result, the US investigating authority found that "the 5.16 percent of the allocated pre-privatisation benefit was not extinguished" while "the remaining 94.84 percent of the allocated benefit was found to be extinguished."⁵⁰ The panel reasoned that a portion or "segment" of subsidies did pass through to the buyers of 5.16 per cent of the company. It also found, consistent with economic reality and common sense, that this approach precluded charging the buyer of that segment with the entire amount of the subsidy. Consequently, the panel concluded that failure to consider the partial nature of a privatisation was untenable, as "benefit" would necessarily be limited to that portion of the original subsidy left unextinguished by the sale. The EC argues that there is no textual or economic basis for limiting this "segmented" approach to cases of partial privatisation, rather than extending it to private-to-private sales. Whether a sale is private-to-private or public-to-private, the arm's-length fair market value sale of a portion of a company precludes the pass through from seller to buyer of a corresponding portion of any benefit the seller may have enjoyed.⁵¹ (The EC notes, however, that while the Appellate Body held that there was a *rebuttable* presumption that an arm's-length, fair market value privatisation precludes the pass-through of benefit from seller to buyer of a state-owned firm, the presumption would appear *irrebuttable* in private-to-private sales.⁵²)

4.17 The EC argues that the series of transactions it has identified extinguish or extract any benefits that could be said to have accrued to Airbus SAS. Under US and international accounting standards, the purchaser of a company is required to adjust the balance of any loan carrying a below market rate to reflect a market interest rate, thereby recognizing that the seller extracted the value of the below market rate loan in the price of the business. In other words, US and international accounting standards recognize that the benefit of a below market rate loan rests with the **seller**, and does not get passed on to the **buyer**.⁵³

4.18 The EC states that the result of the transactions identified in paragraph 311 of the EC response to Question 111 is that any prior subsidies have already been "withdrawn", within the meaning of Articles 4.7 and 7.8 of the SCM Agreement.⁵⁴ According to the EC, even if the US were able to establish violations of Parts II or III of the SCM Agreement with respect to alleged subsidies, the EC would already, through these transactions, have secured the "withdrawal" of such subsidies and thus provided any remedy due the US under Articles 4.7 and 7.8.⁵⁵

Specifics of transactions identified by the EC

4.19 The EC focuses on several significant transactions, listed in paragraph 311 of its response to Question 111. The EC argues that as a result of these transactions, over the past eight years, the EC LCA industry has been consolidated through a series of privatisations, private sales, public offerings, and cash extractions. Today 79.26 percent of EADS and therefore Airbus SAS is in private hands. The process of consolidating EC LCA production has occurred in a series of arm's-length fair market

⁵⁵ EC, FWS, Executive Summary, para. 26.

BCI deleted, as indicated [***]

value transactions that have ensured that no benefits could have been passed through from sellers to new owners.⁵⁶

4.20 The EC explains that the creation of EADS necessarily served to extinguish, extract, or repay any "benefits" held by ASM, CASA, and DASA, as a result of alleged subsidies challenged by the US in this dispute. In France, 50 percent of any subsidies that existed in Aérospatiale were extinguished with the 1999 creation of ASM and the accompanying sale of assets to Lagardère and the general public. In Spain, CASA repaid the government EUR 342.4 million in cash, reducing the company's value by 26 percent. In Germany, at the time it spun-off the Airbus activities, DaimlerChrysler extracted EUR 3,133 million in cash from DASA in 2000 for use in non-LCA activities, an amount equal to 34.5 percent of the company's value. The US has not specifically alleged, nor could it support a claim, that the net present value of the benefit of any subsidies received by CASA or DASA before 2000 would have exceeded those amounts. As such, the upper limit on any subsidies enjoyed by EADS at the time of its creation would have been 50 percent of any subsidy benefits in ASM in 2000.⁵⁷

4.21 The EC adds that since that time, additional alleged subsidy benefits have been extracted through the sale of EADS shares in conjunction with the (i) July 2000 IPO (6.47 percent plus 9.95 percent); (ii) January 2001 sale of additional shares by the French State (0.93 percent) and Lagardère (2.07 percent); and (iii) July 2004 sale of 2.75 percent by DaimlerChrysler. As Airbus SAS was created only in July 2001, and as EADS held 80 percent of Airbus SAS as of the July 2004 sale, this equates to the extraction of a further 21.62 percent of any alleged subsidy benefits still enjoyed by Airbus SAS by June 2004.⁵⁸

4.22 During 2006, founding shareholders Lagardère and DaimlerChrysler each sold 7.5 percent of EADS, and BAe Systems sold its 20 percent stake in Airbus SAS. As EADS held 80 percent of Airbus SAS at the time of the Lagardère and DaimlerChrysler sales, their transactions served to extinguish 12 percent of any alleged subsidy benefits enjoyed by Airbus SAS. Taken together, these three sales served to extract an additional 32 percent of any alleged subsidy benefits still enjoyed by Airbus SAS in 2006.⁵⁹

4.23 With respect to the transactions identified by the EC, the EC considers that the US misrepresents its argument as being that "transactions related to the establishment of Airbus SAS" extinguish or extract any past subsidies. The EC explains that the establishment of Airbus SAS is important background but is not one of the transactions, identified at paragraph 311 of its response to Question 111, as extinguishing alleged subsidies.⁶⁰

4.24 The EC also considers that the US incorrectly asserts that two of the transactions analysed by the EC were not at arm's length and/or for fair market value.⁶¹ First, with respect to the exercise of a put option by BAe Systems, the US argues that it "amounted to the exact opposite of a privatization carried out at arm's-length and for fair market value." The EC offers evidence from the transaction that it argues demonstrates that BAe Systems' exercise of its put option, and the negotiation of the price at which that option was exercised, was entirely at arm's length and for fair market value.⁶² Second, the US argues that the privatisation of Aérospatiale was not at arm's length and for fair

⁵⁶ EC, FWS, Executive Summary, para. 22.

BCI deleted, as indicated [***]

market value, based on a press Article appearing seven years after the transaction was concluded, and comments by two French legislators that the EC argues are taken out of context. The EC considers that the US has ignored the contemporaneous assessments of Aérospatiale's value that were conducted by a variety of investment banks, and the fact that the transaction involved a public offering of Aérospatiale (or, rather, ASM) shares on the Paris Bourse under the watchful eye of the world's most respected financial and accounting advisers.⁶³

4.25 The EC also responds to the US assertion that several of the transactions listed at paragraph 311 of the EC response to Question 111 are not "actual sales of shares". The US arguments concern the July 2004 sale by DaimlerChrysler of a 2.75 percent holding in EADS, as well as the April 2006 sale by DaimlerChrysler and Lagardère of 7.5 percent each of their shareholdings in EADS. With respect to the Lagardère transaction, the EC notes that Lagardère entered into a binding agreement in April 2006 to sell its shares.⁶⁴ With respect to the Daimler transactions, the EC notes that US SEC filings characterize them as reducing the company's "legal ownership percentage" in EADS.⁶⁵

4.26 The EC also rejects the US argument that because some of the transactions listed in paragraph 311 of the EC response to Question 111 occurred after establishment of the Panel, they must be disregarded. The EC notes that in *EC – Selected Customs Matters*, the Appellate Body rejected a similar US argument, explaining that "{e}vidence in support of a claim challenging measures that are within a panel's terms of reference may pre-date or post-date the establishment of the panel." The EC considers that the failure to consider the impact of post-establishment facts regarding the transactions highlighted by the European Communities would be inconsistent with the requirement to conduct an objective assessment of the facts, under Article 11 of the DSU.⁶⁶

4.27 In regard to the US argument that under the EC approach, subsidies to publicly-traded companies "would constantly be in the process of being extinguished" by virtue of daily trading activity, the EC points out that it has not contended in these proceedings that daily trading activity involving EADS' shares extinguishes prior subsidies. The EC explains that it has, instead, faulted the US for its failure to address the significance of the disposition by large institutional shareholders of specifically identified stakes identified in paragraph 311 of the EC responses. According to the EC, those transactions demonstrate that companies other than Airbus SAS enjoy the benefits of any subsidies, and in some cases, that any subsidy amount has been repaid to the government.⁶⁷

4.28 Two of the transactions listed in paragraph 311 of the EC's response to Question 111 are extractions of cash made by the Spanish State and Daimler in advance of the contribution of the LCA assets of CASA and DASA, respectively, to EADS. The EC argues that the WTO treatment of change of ownership is founded on economic common sense – that a company's value reflects the residual value of any subsidies it may have received. Where the residual value of a subsidy is removed from a company, the value of that company is reduced commensurately. Thus, the EC asserts, the cash extractions by the Spanish State and Daimler extracted the residual value of any remaining subsidies, ensuring that CASA's and DASA's balance sheets were no longer enhanced by the alleged subsidisation.⁶⁸

⁶³ EC, SWS, paras. 99, 559-563. *See, also*, EC, SNCOS, paras. 65-75.

⁶⁷ EC, SCCS, Executive Summary, para. 5.

⁶⁸ EC, Answer to Panel Question 112, paras. 317-318.

BCI deleted, as indicated [***]

4.29 The EC notes that the US argues that there is no reason to believe that the amount of any subsidy extinguished by the extractions by the Spanish State and Daimler is equal to the full amount of the extractions and that according to the US, this "inexplicably assumes that every dollar moved from the books of a subsidized entity ... is a dollar of subsidy."⁶⁹ According to the EC, that argument misses the point. For instance, in the formation of EADS, Daimler transferred assets with sufficient value to acquire a 30 percent interest in the company. As DASA had a value that was DM 3.1 billion more than was necessary to acquire the agreed interest, Daimler extracted DM 3.1 billion in cash from the company. If DASA benefited from any past subsidies, the benefit of those subsidies will exist in the form of an enhancement of DASA's balance sheet. By extracting cash from DASA's balance sheet, Daimler necessarily extracted a proportionate part of the value that may have been present as the result of any past subsidies. The US assertion that the EC cannot identify the source of the extraction is specious.⁷⁰

4.30 Simply put, "but for" the alleged subsidy, CASA and DASA would have had a lesser value. But for the extractions, the value of those alleged subsidies would have remained with CASA and DASA, and been available for use and exploitation by the buyers to fuel the adverse effects alleged by the United States. When cash was withdrawn from those entities by their sellers in advance of sale, those payments served necessarily to extract from the company any value it otherwise may have enjoyed, ensuring that any financial contribution at issue assuredly no longer conferred a benefit within the meaning of Article 1.1 of the SCM Agreement, and/or that any subsidies up to the amount of those payments was no longer available to produce the adverse effects alleged by the United States.⁷¹

4.31 The EC argues that it is not required to prove a tie between, *e.g.*, each euro of the Spanish State's cash extraction and each euro of value contributed to CASA by alleged prior subsidies, but that if it is so required, this requirement must also impact the burden placed on the US. In that case, the US must similarly be required to prove (rather than merely to assume) that every euro of alleged subsidy, no matter to whom and for what purpose it was provided, or how long ago it was received, presently enables Airbus SAS to price down every one of the aircraft it offers for sale. In that case, the US would indeed be under an obligation to prove a "continuity of benefit" from decades-old alleged subsidies provided to entities other than Airbus SAS, the current manufacturer of European LCA, through to Airbus SAS, as well as to prove the continuity of those benefits through to Airbus SAS' current pricing behaviour.⁷²

4.32 The EC also argues that it not necessary to characterise the cash extractions as repayments of subsidy in order for them to extinguish any prior subsidies. While repayment of a subsidy to the granting government is one means of withdrawing the subsidy, it is not the only way of doing so. The Appellate Body has interpreted the term "withdraw", within the meaning of Articles 4.7 and 7.8 of the SCM Agreement, to mean "remove" or "take away". Drawing subsidized value away from CASA and DASA amounts to "removing" or "taking away" the incremental contribution of alleged prior subsidies to the value of the company.⁷³

(c) Temporal Scope of the SCM Agreement

4.33 The EC argues that the MSF loans provided in support of the A300, A310, and A320, as well as most MSF loans for the A330/A340 programme, are not within the temporal scope of the

BCI deleted, as indicated [***]

SCM Agreement.⁷⁴ The EC considers that in any event, these contracts do not cause any present adverse effects.⁷⁵

4.34 Finally, the EC notes that the US also neglects to point out that the SCM Agreement only entered into force on 1 January 1995 and does not explain how EC governments were expected to anticipate the existence of its provisions when providing finance during the 1980's.⁷⁶

4.35 According to the EC, pre-1995 measures fall outside the temporal scope of the SCM Agreement due to the prohibition of retroactive application under Article 28 of the *Vienna Convention*. The EC adds that third Parties have confirmed that there is no different intention arising from the SCM Agreement for individual subsidies. Moreover, the measures that are challenged by the US are completed acts. And even if they were not, the US has failed to demonstrate any post-1994 benefits of pre-1995 measures.⁷⁷

2. Arguments of the United States

(a) Relevance of Other International Aircraft Related Agreements

4.36 The US argues that the EC mistakenly attempts to have the Panel analyze the US claims regarding Launch Aid according to rules set out in non-covered agreements.⁷⁸ The US notes that the EC refers to the SCM Agreement almost as an after-thought and asks instead the Panel to focus on agreements, such as the Tokyo Round Subsidy Code and the 1992 Agreement, that are not covered agreements and that are outside the Panel's terms of reference.⁷⁹ The US states that the EC theory that the Panel should review Launch Aid for the A320, A330, and A340 under the Tokyo Round Subsidy Code is baseless because the Tokyo Round Subsidy Code is not a covered agreement. The EC concedes the Airbus governments did not seek a commercial return on the Launch Aid for these aircraft, the relevant standard under the Uruguay Round SCM Agreement.⁸⁰

4.37 The US further points out that by arguing that the Panel should review Launch Aid for the A330-200, the A340-500/600, and the A380 under the 1992 Agreement, the EC is seeking the interpretation and enforcement of the 1992 Agreement, notwithstanding the Appellate Body's clear statement in *Mexico-Soft Drink Taxes* that panels may not adjudicate non-WTO disputes.⁸¹ According to the US, the EC ignores that the covered agreements listed in Appendix 1 to the DSU provide not only the basis for entering the dispute settlement system, but also the basis for resolving disputes under that system.⁸²

4.38 As to the argument of the EC that the 1992 Agreement forms part of the applicable law in this dispute under Article 7.2 of the DSU, the US points out that Article 7.2 of the DSU provides no basis for this approach. The US explains that Article 7.2 requires only that a panel address covered

BCI deleted, as indicated [***]

agreements.⁸³ The US also referred to its arguments on these issues made in the context of the EC's request for preliminary rulings.⁸⁴

4.39 In regard to the EC argument about estoppel, the US argues that WTO Members have not consented to provide for the application of what the EC refers to as "estoppel" in WTO dispute settlement. Not only do the panel and Appellate Body reports on which the EC relies not support its position, they actually undermine that position, inasmuch as they decline to recognize the applicability of "estoppel" to WTO dispute settlement. And, even by its own terms, the EC "estoppel" argument with respect to the 1992 Agreement must fail. Among other facts demonstrating the absence of any basis for arguing "estoppel" is the fifth recital in the 1992 Agreement, which expresses the parties' "intention to act without prejudice to their rights and obligations under the GATT and under other multilateral agreements negotiated under the auspices of the GATT".⁸⁵

4.40 The US explains that it has not engaged the EC argument regarding the merits of the 1992 Agreement because that agreement is not relevant to this dispute.⁸⁶

(b) Extinction and Extraction of Subsidies

4.41 The US notes that as a defense, the EC argues that certain transactions extinguished subsidies to Airbus.⁸⁷ The US observes that the EC has called attention to several transactions which, in its view, had the effect of eliminating subsidies to Airbus. However, the US argues, none of these transactions involved a transfer of "all or substantially all" of the subsidized entity to private interests, and none involved relinquishment of a "controlling interest in the privatized producer." Therefore, the Panel need not and should not reach the question whether privatization could have extinguished the subsidies at issue here. The US considers that the EC arguments about "extinction" and "extraction" are baseless.⁸⁸

4.42 With regard to extinction, the US notes that the EC sought to rely on panel and Appellate Body reports from disputes in the countervailing duty ("CVD") context concerning the effects of a full privatization on pre-privatization subsidies. Those reports stand for the proposition that, in the CVD context, a full privatization may result in the extinction of pre-privatization subsidies where the privatization involves the sale of all or substantially all of the subsidized entity, at arm's length and for fair market value, and where the seller relinquishes control of the entity. Since the transactions cited by the EC do not meet these criteria, the reports do not help the EC argument.⁸⁹

4.43 The US pointed out "while there may be a need for a 'pass-through' analysis in other contexts - such as the CVD context (where there is a need to quantify the subsidy attributable to particular entries of a good from a particular producer), or the context of a claim involving a subsidy provided directly to a company that does not produce, and is not related to a producer of, the product at issue (where there is a need to establish that it is subsidies benefiting the merchandise at issue that are causing adverse effects) - there is no such need in the context of determining whether subsidies

⁸³ US, SNCOS, Executive Summary, para. 7.

⁸⁴ US, SWS, para 25 & n.31 (referencing US Response to Updated EC Preliminary Ruling Request (29 November 2006), paras. 29-51).

⁸⁹ US, SWS, Executive Summary, para. 73.

BCI deleted, as indicated [***]

provided directly to the producers of the merchandise at issue are causing adverse effects to the interest of other Members."⁹⁰

4.44 Moreover, according to the US, the EC ignores the fact that when transactions have been found to extinguish subsidies in past disputes, those transactions were not only at arm's length and for fair market value, but also involved the transfer of all or substantially all of the assets of the subsidized entity and relinquishment of control by the seller. Relatedly, the EC fails to address the logical implications of its argument for subsidies to publicly traded companies. Absent from the EC's second submission is any support for its "extraction" defense.⁹¹

4.45 The US considers that the "extraction" argument is an EC invention. The US points out that the EC has not proven the validity of its concepts of extinguishment or so-called extraction of subsidies, nor has it demonstrated facts that might support its theories.⁹²

4.46 The US first notes that while the EC makes vague references to "{t}he WTO treatment of change of ownership," "the test for cash extraction," and "the established WTO rules," it never states where in the SCM Agreement this "treatment," "test," or "rules" can be found. In the US view, it does not do so because it cannot do so. Second, the US notes that the EC asserts that "the test for cash extraction is a 'but for' test," even though the SCM Agreement contains no such test, and elsewhere the EC has insisted on interpreting and applying the language actually used in the SCM Agreement. Third, the US points out that as there is no treaty text to support its argument, the EC refers instead to what it calls "economic common sense," but provides no citation to a textbook or any other support for this "economic common sense." In effect, the US explains, the EC invents a special accounting rule whereby, when a subsidized entity transfers cash to the account of its owner, the transferred money is first attributed to any subsidies provided to the entity and is attributed to non-subsidized investment only after the amount transferred equals the amount of pre-transfer subsidies.⁹³

4.47 More fundamentally, the US argues, the EC "extraction" theory relies on a supposed separation between a company and its shareholders – the very separation that the EC successfully opposed in *US – Countervailing Measures on Certain EC Products*. If it is the case that money taken out of an owner's pocket amounts to money taken out of the company, potentially eliminating subsidies that reside in the company, then the converse must also be true: money that is simply moved from the company to the owner's pocket has not really left the company-shareholder unit. Indeed, following the EC logic, it would seem that a company "extracts" subsidies every time it buys back stock or pays dividends to its shareholders – both types of transactions that involve a transfer of cash from the company to its owners. Yet, if this were so, then opportunities to circumvent the SCM Agreement would abound.⁹⁴

4.48 With regard to the EC "extinction" argument, the US notes that it is based on four sets of transactions: (i) the 1999 corporate tie-up between Aérospatiale and Matra Hautes Technologies ("Matra"); (ii) the 2000 creation of EADS; (iii) the exercise by BAe of its put option in 2006; and (iv) the offerings of small portions of EADS shares between 2000 and 2007. By the EC Commission's own admission, the transactions resulting in the creation of EADS and Airbus SAS did not "affect the quality or nature of control of Airbus." They represented nothing more than "a restructuring and rationalisation of the existing legal partnership between the parties {that previously had coordinated their Airbus activities through Airbus GIE}." Moreover, it is telling that when asked how it responds

⁹⁰ US, Answer to Panel Question 122, para. 384.

⁹¹ US, SNCOS, Executive Summary, para. 15.

⁹² US, FNCOS, Executive Summary, para. 18.

⁹³ US, SWS, Executive Summary, para. 76.

⁹⁴ US, SWS, Executive Summary, para. 77.

BCI deleted, as indicated [***]

to the US statement that "{n}one of {the pertinent} transactions involved a transfer of 'all or substantially all' of the subsidized entity to private interests," the EC simply ignored the phrase "all or substantially all."⁹⁵

4.49 The US asserts that in addition to the conceptual flaws in the EC argument, certain of the transactions alleged to result in the extinction of subsidies occurred after Panel establishment⁹⁶ and therefore, have no bearing on the resolution of this dispute.⁹⁷ The US points out that the Appellate Body report in *EC – Selected Customs Matters* does not support the EC reliance on those transactions. In *EC – Selected Customs Matters*, the Appellate Body said that it is permissible to refer to facts post-dating panel establishment as evidence to confirm the existence of facts alleged to exist at the time of panel establishment. Here, the EC cites the transactions at issue not for their evidentiary value, but for the mistaken proposition that they extinguished pre-existing subsidies.⁹⁸

4.50 Moreover, several of the transactions are not even actual sales of shares. The US also points out that all of the post-panel-establishment transactions and all but one of the remaining transactions that the EC argues "extinguished" parts of the subsidies to Airbus concern between 1 percent and at most 9.95 percent of the shares in the entities concerned. In other words, they involved significantly less than "all or substantially all" of the shares of those entities. Furthermore, the US notes that none of the transactions cited by the EC resulted in the seller "no longer {having} any controlling interest" in the company at issue. The US considers that the EC has in no way demonstrated that the transactions it cites occurred at arm's length and for fair market value.⁹⁹

4.51 The US argues that, in the CVD context, the Appellate Body has recognized the possibility of subsidy extinction through an arms-length, fair-market-value transaction involving a transfer of all or substantially all of the assets of the subsidized entity and a relinquishment of control. In the US view, the EC is asking the Panel to alter these principles – not, as the EC asserts, extend them – so that it would be irrelevant whether the transaction at issue involves all or substantially all of the assets of the subsidized entity or a relinquishment of control.¹⁰⁰

4.52 The US also notes that the EC criticized the report of Ms Lauren D. Fox regarding the transaction involving the Aérospatiale-Matra tie-up and subsequent minority flotation. The US explains that the Fox report shows that reports by various investment banks do not demonstrate that the transaction occurred at arms-length and for fair market value. In criticizing Fox, the EC (at paragraph 71 of its SNCOS) quotes misleadingly from her report. The full quote reads: "In situations where insider knowledge of detailed historical financials and access to management for discussions of likely trends are available, the most reliable indicator of long-term underlying economic value to shareholders" is the discounted cash value method. The EC left out the entire first part of the sentence. This intentional omission reflects the EC knowledge that the very reports it relies on were not based on "detailed historical financials and access to management for discussions of likely trends." Thus, as Ms Fox concluded, the reports the EC relies on do not confirm that the transaction was in accordance with the usual investment practice of private investors.¹⁰¹

4.53 The US notes that the EC repeatedly accuses it of failing to show that subsidies given to Airbus predecessor companies passed through to Airbus SAS. In the US view, this argument is just a

⁹⁵ US, SWS, Executive Summary, para. 74.

BCI deleted, as indicated [***]

re-packaging of the EC's faulty "extinguishment" argument. According to the US, the EC pretends that by changing names and re-grouping subsidized entities, the resulting entity – Airbus SAS – emerges subsidy-free.¹⁰²

4.54 In any event, the US argues, the answer to the EC's false argument on pass-through was summed up by the European Commission itself in 2000, in reviewing the creation of EADS. It said:

"Most of the parties' activities in commercial aircraft are already integrated through Airbus. . . . There is no indication that the operation will affect the quality or nature of control of Airbus. . . . Accordingly, there is no indication that the operation will affect the competition position of Airbus."¹⁰³

In short, as the European Commission itself admitted, no economically significant transaction occurred in the regrouping that led to the creation of EADS and, hence, the current-day Airbus SAS. It simply was a matter of bringing together four subsidized producers under "a single unified management." This bringing together under a single unified management did not cause the embedded subsidies to magically disappear, as the EC would have the Panel believe.¹⁰⁴

4.55 The US further notes that the EC seems to argue that the transfers of cash from CASA to the government of Spain and from DASA to DaimlerChrysler were analogous to repayments of subsidies and thus constituted withdrawals of subsidies within the meaning of Articles 4.7 and 7.8 of the SCM Agreement. However, according to the US, the EC ignores an important distinction between these transactions and actual repayments of subsidy. The US explains that when withdrawal of a subsidy is effectuated by repayment, the government that provided the subsidy in the first place receives cash from the subsidized entity and gives up nothing in return. That is not what happened in the CASA and DASA transactions. Both the government of Spain and DaimlerChrysler gave something up in the sense that they received smaller stakes in EADS than they would have received if the cash transfers had not occurred.¹⁰⁵

(c) Temporal Scope of the SCM Agreement

4.56 Finally, in response to the EC arguments on the temporal scope of the SCM Agreement, the US points out that while the EC argues that Launch Aid for the A300, the A310, and the A320 is outside the temporal scope of this dispute, it continues to withhold relevant evidence, such as the A300 and A310 Launch Aid contracts and the disbursement and repayment information for those models. Since the A300/A310 program was expected to end in July 2007, it is likely that the outstanding balances were about to become grants, which may explain the EC tactics.¹⁰⁶

4.57 The US considers that the EC pursues a deeply flawed position that a subsidy is not covered by the SCM Agreement if the subsidy first came into existence prior to January 1, 1995. According to the US, the EC ignores entirely that the relevant question under the SCM Agreement is not when a subsidy first came into existence, but whether the Member providing the subsidy is causing, through the use of the subsidy, adverse effects to the interests of other Members.¹⁰⁷

B. WHETHER LAUNCH AID IS A SUBSIDY WITHIN THE MEANING OF ARTICLE 1 OF THE SCM AGREEMENT

1. Arguments of the United States

(a) Launch Aid as a Program

4.58 The US challenges not only each individual grant of Launch Aid, but also the Launch Aid program as a whole. The US argues that evidence of the Launch Aid program includes, *inter alia*, intergovernmental agreements, the Launch Aid contracts, the intergovernmental institutions, and the dedicated bureaucracies. Further evidence is the "legally binding" commitments of Launch Aid for the A350 XWB, as well as the value that market actors place on Launch Aid. The perception of Launch Aid by rating agencies should leave no doubt that Launch Aid is a program. It "creates expectations among the public and among private actors," demonstrating that it has "normative value" and should be considered as a measure in its own right.¹⁰⁸

4.59 The US submits that the Airbus governments have provided between 33 and 100 percent of the financing that Airbus has needed to develop its LCA family. Every time that Airbus asks for further grants of Launch Aid under the Launch Aid regime, the Airbus governments provide it. As former French Prime Minister Lionel Jospin stated in a March 2000 speech before the French Parliament, their purpose in providing the aid is to "give Airbus the means to win the battle against Boeing."¹⁰⁹

4.60 The US explains that the roots of the Airbus governments' Launch Aid program can be traced to 1969, when the governments of France and Germany entered into an agreement to "reinforce European cooperation in the field of aeronautics." The 1969 agreement was only the first of a number of agreements in which the Airbus governments have memorialized their program to support Airbus with Launch Aid. In addition to the 1969 agreement, there were at least four additional agreements relating to the A300 and A310 and their derivatives, an agreement relating to the A320, an agreement relating to the A330/340, and a joint decision by the Airbus governments to provide Launch Aid for the A380. Most recently, the Airbus governments made legally binding commitments to provide Launch Aid for the A350.¹¹⁰

4.61 The US asserts that the Airbus governments have created and maintain a set of formal intergovernmental institutions that they use to oversee Airbus and to work with it to determine whether and when to launch new Airbus aircraft. The US considers that the core intergovernmental institutions are the Airbus Intergovernmental Committee, the Airbus Executive Committee, and the Airbus Executive Agency, which the governments established in 1969 and which have been in continuous operation ever since. Other institutions include the Airbus Ministers Conference and the Permanent Working Group for Sales Financing.¹¹¹

4.62 The US notes that in addition to the intergovernmental institutions, the Airbus governments also maintain dedicated bureaucracies at the national level. These bureaucracies perform the administrative tasks involved in maintaining the Launch Aid system and coordinating the provision of Launch Aid to Airbus.¹¹² In France, a special unit in the *Direction des Programmes Aéronautiques*

¹¹² US, FWS, Executive Summary, para. 10.

BCI deleted, as indicated [***]

Civils oversees Airbus and the Launch Aid system. The so-called "transport aircraft of more than 100 seats" unit participates in the Airbus intergovernmental institutions and administers the provision of Launch Aid to Airbus for the company's new projects. The UK Launch Aid system is administered by the "aerospace team" located within DTI's Aerospace and Defence Unit, which is "responsible for relations with civil aerospace companies, and launch investment." In Germany, the entity that is responsible for administering the Launch Aid system is the office of the Coordinator for the Aerospace Industry and for Aeronautics Research, an office within the Federal Ministry of Economics and Technology. In Spain, the Ministry of Science and Technology is responsible for administering the "system of reimbursable advances." It also "participates in the Council of Ministers of the four countries, the {Airbus} Executive Committee and the other bodies that manage and coordinate the system."¹¹³

4.63 The national Airbus bureaucracies work with the intergovernmental institutions to "manage and coordinate" the Launch Aid system. The Airbus governments also conclude agreements with Airbus to facilitate their coordination of the system. The US discusses an agreement pertaining to the A380, which is quite revealing of the pattern.¹¹⁴

4.64 The US points out that the European Commission and the Airbus governments have each confirmed the integrated nature of the Launch Aid program that they use to ensure the success of the Airbus enterprise. For example, on the same day that President Chirac described the A380 as a "success of European industrial policy," British Prime Minister Blair described the aircraft as "the result of unprecedented co-operation between the four countries... ." And on the day after the ceremony, the European Commission stated that "for the EU, the A380 represents the fruit of European state-level co-operation." Indeed, the former UK Secretary of Trade and Industry has stated that the provision of Launch Aid:

"reflects our approach to industrial policy. We are not standing to one side and leaving everything to the market... ." ¹¹⁵

4.65 The US argues that it is also clear that the Airbus governments will continue to work together to provide Launch Aid to Airbus. For example, a European Commission report on the future of the European aerospace industry stated in October 2003 that member States will retain the "crucial responsibility" of "providing support in terms of R&D programmes, repayable launch aid and contributions to ESA programmes... ." In May 2005, the European Commission defended the prospect of Launch Aid for the new Airbus A350 because Launch Aid is "part of the commercial landscape of aircraft development" in Europe. That same month, the French Transport Minister stated that "{t}he French state has given its financial support to the A380 programme and we expect to continue in this vein" ¹¹⁶

4.66 Similarly, in June 2006, an EADS spokesman stated that "{1}aunch aid is the only available system right now." In July 2006, the Airbus ministers "reaffirmed their agreement to support Airbus to continue to innovate and to develop programmes in the context of international competition." And on November 14, 2006, the French Prime Minister Dominique de Villepin said the role of the State in EADS (and thus Airbus) is "to defend a strategic long term vision, which is guarantor of jobs and economic dynamism of the company. I can ensure you that the State will fully play its part." The financial market standing of Airbus' parent company EADS hinges on these plans. The Moody's

¹¹³ US, FWS, Executive Summary, para. 11.

¹¹⁵ US, FWS, Executive Summary, para. 13.

¹¹⁶ US, FWS, Executive Summary, para. 14.

BCI deleted, as indicated [***]

commercial rating service, for example, has explained that it takes the continued availability of Launch Aid into account in determining EADS' debt rating.¹¹⁷

4.67 The US argues that in light of the Airbus governments' consistent and systematic approach to their support of Airbus for over three decades, the institutional structures and bureaucracies they have created to maintain and provide this support, and their statements and actions concerning this support, the specific content of their Launch Aid program and the future conduct it will entail is clear. According to the US, the Airbus governments will continue to use Launch Aid to facilitate Airbus' commercial strategy, without regard to their WTO obligations or the effects of the subsidies on the US.¹¹⁸

4.68 The US asserts that Launch Aid is a subsidy within the meaning of Article 1 of the SCM Agreement because it involves a financial contribution within the meaning of Article 1.1(a)(1) of the SCM Agreement that confers a benefit that is specific to Airbus within the meaning of the SCM Agreement.¹¹⁹

(b) Launch Aid Constitutes a Financial Contribution to Airbus

4.69 The US notes that Article 1.1(a)(1)(i) of the SCM Agreement states that "there is a financial contribution" by a government where "a government practice involves a direct transfer of funds (*e.g.*, grants, loans, and equity infusion)" or "potential direct transfers of funds or liabilities (*e.g.*, loan guarantees)." According to the US, the Airbus governments' Launch Aid program is a government practice that involves the direct transfer of funds or potential direct transfer of funds in the sense of Article 1.1(a)(1)(i) – namely, success-dependent loans. Therefore, in the US view, "there is a financial contribution" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.¹²⁰

(c) Launch Aid Confers a Benefit on Airbus

4.70 The US argues that the Airbus governments have designed the Launch Aid system to benefit Airbus by providing the funds it needs to develop new models of LCA, carefully tailored to address the extremely high costs and risks of LCA development, at interest rates that are substantially below what the market would demand for financing with similar characteristics. The US describes the ways in which the Airbus governments have designed Launch Aid to insulate Airbus from those risks and the reasons why the financing confers a benefit within the meaning of the SCM Agreement.¹²¹

4.71 First, the US points out that developing new models of LCA is both extremely risky and extraordinarily expensive. The development programs require huge up-front investments to fund the development work that must be completed before deliveries can begin. Once this investment has been made, very little can be recovered in the event the program fails. There are many uncertainties at the time of commitment to launch an LCA program, and it is difficult to predict the prices that various customers will pay for the aircraft over the life of the program. Since the initial development investment is essentially a sunk cost and is incurred well before revenues are received, the size of these non-recurring costs is a key element affecting an aircraft program's risk and expected profitability. If a program is successful, the up-front investment is eventually recovered with margins earned on each aircraft delivery. Given the typical magnitude of program non-recurring costs, however, hundreds of sales are usually required before a program reaches its break-even point. If a

¹¹⁷ US, FWS, Executive Summary, para. 15.

¹²¹ US, FWS, Executive Summary, para. 19. *See, also*, US, FWS, Executive Summary, para. 5.

BCI deleted, as indicated [***]

program fails to reach break-even sales, the remainder of the non-recurring costs must instead be written off as a loss.¹²²

4.72 Second, the US notes that repayment of Launch Aid is success-dependent. The US explains that one of the principal ways in which the Airbus governments assume Airbus' risks in developing new models of LCA is by allowing Airbus to repay the aid through "levies" on each delivery of the financed product. The Launch Aid is unsecured, and the government has no recourse to obtain repayment if the expected sales fail to materialize. Repayment is therefore "success dependent." A company that receives financing on a "success-dependent" basis enjoys the obvious benefit of no down-side risk. As one UK scholar has observed, "the distinctive risk-sharing feature of Launch Aid confers Airbus with an advantage over a rival who is constrained to debt and equity instruments alone."¹²³

4.73 Third, the US points out that repayment of Launch Aid is back-loaded. The US explains that the Airbus governments further assume Airbus' risks by back-loading the repayment obligations. First, levy-based repayment terms are inherently back-loaded. One inevitable consequence of tying repayment to deliveries is that repayments only begin once deliveries begin. For the ordinary LCA program, this normally means there will be at least a five-year lag between disbursement of the aid to Airbus and the first repayments (in the case of the A380, the lag will be closer to ten years). Second, the Airbus governments further back-load the repayment schedules by allowing Airbus to make relatively small levy payments on early deliveries and progressively larger payments only on later deliveries. Third, in some cases, the Airbus governments allow Airbus to forego levies entirely on an initial tranche of deliveries.¹²⁴

4.74 In addition, the US asserts that Launch Aid carries below-market interest rates. The US explains that the Airbus governments do not require Airbus to pay a commercial rate of interest that reflects the substantial risks that the governments assume on its behalf. In some cases, the Airbus governments have provided Launch Aid to Airbus interest-free. The US further notes that even the Launch Aid contracts that purport to include an interest component do not actually require Airbus to pay interest. Since the financing is success-dependent, the Airbus governments actually provide the aid without requiring any return, even of principal. The "Ellis Report," included as an exhibit to the US submission, compares the "potential returns" on Launch Aid with the actual returns that the commercial market would demand for financing with similarly advantageous characteristics. It concludes that Launch Aid borrowing rates are substantially below the rates that commercial investors would demand for comparable project-specific and success-dependent loans.¹²⁵

4.75 The US also points out that the WTO has already found that Launch Aid-type financing confers a benefit. In the *Canada – Aircraft* subsidy dispute, the panel examined financing that was virtually identical to Launch Aid and concluded that the financing conferred a benefit on the recipient, and thus constituted a subsidy within the meaning of the SCM Agreement. In the US view, for the same reasons that the *Canada – Aircraft* panel found that the financing at issue conferred a benefit on the recipient, the Launch Aid that the Airbus governments provide to Airbus confers a benefit on Airbus.¹²⁶

¹²⁵ US, FWS, Executive Summary, para. 23.

¹²⁶ US, FWS, Executive Summary, para. 24.

BCI deleted, as indicated [***]

(d) Launch Aid is Specific

4.76 Lastly, the US submits that the Launch Aid program is specific to Airbus. According to the US, the Airbus governments conceived and maintain their Launch Aid program for the specific benefit of Airbus. The US argues that they have used the program in a systematic and methodical way since its very inception to provide Airbus the means to develop a full family of LCA to compete against US producers in the LCA market. Accordingly, in the US view, the Launch Aid subsidies that Airbus has received have always been, and remain, specific to Airbus within the meaning of Article 2 of the SCM Agreement.¹²⁷

(e) Other issues

4.77 The US notes that the EC asserted in its submission that the US had not challenged Launch Aid "as a subsidy programme," and therefore declined to engage on that US claim at all. However, the US argues that as it demonstrated in its statement at the first Panel meeting and in its responses to the Panel's questions, that assertion is incorrect.¹²⁸

4.78 The US notes that the EC argues against the use of the term "launch aid," which it called a "loaded term"¹²⁹ and accuses it of using "terminological devices" to advance its argument.¹³⁰ However, the US contends that it is the EC that is using "terminological devices" by inventing a new label – "MSF" – to distract from the unmistakably systemic nature of Launch Aid.¹³¹

4.79 The US also notes that in responding to the US showing that the Launch Aid Program is a distinct measure breaching the EC obligations under Article 5 of the SCM Agreement, the EC conflates two distinct concepts: the concept of "measure" and the concept of an "'as such' claim." The US points out that rather than discuss the question of whether the Launch Aid Program is a measure, the EC argues that the US has not substantiated an "as such" claim. The US has shown that the Launch Aid Program is a measure, even according to the factors the EC says must be shown. The precise content of the Launch Aid Program is the consistent provision of Launch Aid based on the same core terms since 1969. The US argues that the EC attempt to dismiss this fact based on different interest rates and different repayment amounts in different Launch Aid contracts simply goes to the amount of benefit conferred. The EC assertion that "market-based instruments" display the same attributes as the Launch Aid Program is belied by key distinctions between the examples the EC gives and the Launch Aid Program. In addition, the US notes that the EC also ignores the substantial institutional apparatus that supports the Launch Aid Program, and it misconstrues evidence showing rating agencies' understanding that the Program exists.¹³²

4.80 Finally, the US argues that the EC fails to rebut the US showing that the Launch Aid Program has general and prospective applicability. That Airbus has not sought or has not accepted offers of Launch Aid in particular instances does not affect that showing. Indeed, the Airbus governments confirmed the general and prospective nature of the Launch Aid Program when they fulfilled market expectations and made "legally binding" commitments to provide Launch Aid for the A350. The US considers that the EC provides no evidence to show that these commitments are not legally binding.¹³³

¹²⁷ US, FWS, Executive Summary, para. 25.

¹²⁸ US, SWS, Executive Summary, para. 9.

¹²⁹ citing, EC First Oral Statement, para. 40.

¹³⁰ citing, EC First Oral Statement, para. 114.

¹³¹ US, FCCS, Executive Summary, para. 8.

¹³² US, SNCOS, Executive Summary, para. 4.

¹³³ US, SNCOS, Executive Summary, para. 5.

BCI deleted, as indicated [***]

4.81 In any event, "the standard for determining whether the Launch Aid Program is a measure is not the EC's asserted test, but a standard based on the ordinary meaning of the term 'measure' in context and in light of the object and purpose of the WTO Agreement, which standard must be applied based on the facts. Following this standard, even if the Panel disagreed with the US that the Launch Aid Program has general and prospective application, it still should find that the Program constitutes a challengeable measure, based on the totality of the evidence."¹³⁴

2. Arguments of the European Communities

4.82 The EC submits that the US has brought before the Panel a misconceived and grossly exaggerated case that ignores relevant international agreements and that is backed-up by limited and often incorrect facts.¹³⁵ The EC begins its defense by recalling the history of the EC LCA industry and distinguishing its participants over time.¹³⁶ By the mid-to-late 1960s, it became apparent that individual EC LCA manufacturers, in large part because of successful US industrial policy to undermine their separate product offerings, could not succeed on their own. These companies had difficulty recovering the high development costs associated with their separate LCA programmes, in part also because, even if they could successfully build one aircraft product, as many did, none of them could expand their business to build the required separate complementary product offerings that would become the key to success in the LCA business. Unless these companies pooled their resources, they recognized that they stood no chance of competing in the global LCA market. The creation of Airbus GIE allowed the EC LCA industry to transcend these limitations. Airbus GIE was established in 1970 as a consortium of two aerospace companies — Aérospatiale and Deutsche Airbus. Two other aerospace companies, CASA and BAe, joined Airbus GIE in 1971 and 1979, respectively. Each of these "Associated Manufacturers" held an ownership interest in Airbus GIE, which was formed as a *groupement d'intérêt économique*, or "GIE," under French law. The loose collaboration permitted by the GIE structure had several advantages. The development and production of aircraft was allocated between the Associated Manufacturers, enabling Airbus GIE to harness each company's unique engineering talents and resources. This arrangement prevailed from Airbus GIE's inception in 1970 until 2001. During this period, Airbus GIE launched most of its aircraft families, including the A300, A310, A320, A330 and A340 families of LCA.¹³⁷

4.83 Two events led to the creation of Airbus SAS, which heralded a fundamental change in Airbus GIE's corporate structure. *First*, the French State privatized Aérospatiale in 1999. The French defence contractor Matra Haute Technologies ("MHT") merged with Aérospatiale to form Aérospatiale Matra ("ASM"). An initial public offering ("IPO") of shares in the merged entity was conducted simultaneously with the merger transaction. *Second*, the European Aeronautic Defence and Space Company ("EADS") was created shortly thereafter. Through a complex series of transactions, ASM, DaimlerChrysler Aerospace AG ("DASA"), and Construcciones Aeronauticas SA ("CASA") merged to form EADS with effect from July 2000, when shares in the company were sold in an IPO. The merger yielded a company with a broad portfolio of civil aeronautic, military, and space activities. In several steps between 2001 and 2004, the LCA activities of each of the four partners were placed into subsidiaries under the control of a single, integrated company, Airbus SAS. The existing Associated Manufacturers (ASM, DASA, CASA, and BAe) were succeeded by wholly-owned subsidiaries of Airbus SAS (Airbus France, Airbus Germany, Airbus Spain, and Airbus UK) which are sometimes referred to collectively as the Airbus National Companies ("NatCos"). At the

¹³⁴ US, Answer to Panel Question 136, para 8.

¹³⁵ EC, FWS, Executive Summary, para. 92.

¹³⁶ EC, FWS, Executive Summary, para. 10.

¹³⁷ EC, FWS, Executive Summary, para. 11.

BCI deleted, as indicated [***]

time of its creation, 80 percent of Airbus SAS shares were owned by EADS, and 20 percent by BAe Systems.¹³⁸

4.84 Airbus SAS is an entirely different company from the Airbus GIE consortium. In particular Airbus SAS wields broader powers than its predecessor, the GIE, which had no power to bind its members and was a loose association of fully independently cost-centred companies. Airbus SAS is now responsible for managing the Airbus LCA business; conducting sales, marketing, and certain customer support functions; buying aircraft engines and nacelles; coordinating the transportation of aircraft parts and components among its subsidiaries, the NatCos; conducting flight tests; and developing a production plan for Airbus programmes. Airbus SAS also takes or approves most of the company's procurement decisions.¹³⁹

(a) Member State Financing as a Programme

4.85 The EC does not accept the US descriptions of "launch aid programme" as a generic system denoting "long-term unsecured loans at zero or below-market rates of interest, with back-loaded repayment schedules". The EC points out that "rather than using the suggestive and oversimplifying term "launch aid", the EC will refer to each of the member States' measures separately. In the EC view, if a generic term is suitable to cover measures from all the four member States together the EC will denote them as "member State Financing" ("MSF").¹⁴⁰

4.86 The EC refutes the US portrayal of MSF loans as a cross-country "programme" or "system" and explains that the US has not asserted "as such" claims against these loans."¹⁴¹ In this respect, the EC notes that the US has clarified in its oral statement that it does not, after all, assert an "as such" challenge to the so-called "Launch Aid programme." The EC welcomes this clarification.¹⁴²

4.87 In addition, the EC does not agree that the term "launch aid" is in "general usage". The EC notes that this term is used neither in the UK, nor in any of the other three member States (which use terms such as avances remboursables, anticipos reembolsables and Rückzahlbare Zuwendungen). The Article on UK "launch aid" by Mr. Kim Kaivanto and included as Exhibit US-2 to the US first written submission records that the UK House of Commons Trade Committee considered that the term may have been appropriate before the 1992 Agreement but was misleading thereafter and that a preferable term would be "reimbursable launch investment". Since both parties to this dispute accept that footnote 16 of the SCM Agreement describes and applies to what the US terms "launch aid", an appropriately neutral term could be that used in footnote 16, *i.e.*, "royalty based financing". The EC also points out that both parties also accept that Article 4 of the 1992 Agreement describes and applies to what the US calls "launch aid" and the term used in that provision is "development support".¹⁴³

4.88 The EC asserts that each instance of financing is memorialized in an MSF contract. The terms on which MSF is provided are negotiated on a deal-by-deal basis; as a consequence, they vary considerably depending on the Airbus LCA programme at issue, both within and as between member States. In its condensed factual description of MSF, the EC describes some common attributes of MSF. Those common attributes speak solely to the similarity of the type or form of financing provided by the four member States. Each MSF contract is, however, a separate and independent

¹³⁸ EC, FWS, Executive Summary, para. 12.

¹³⁹ EC, FWS, Executive Summary, para. 13.

¹⁴⁰ EC, FWS, Executive Summary, para. 28.

¹⁴¹ EC, FWS, Executive Summary, para. 32.

¹⁴² EC closing statement, second meeting, Executive Summary, para. 6.

¹⁴³ EC, FCCS, Executive Summary, para. 1.

BCI deleted, as indicated [***]

measure.¹⁴⁴ In its submissions, the EC describes the basic elements of MSF loans as financial instruments, and their role in the development of the A320, the A330/A340 (including the A330/340 basic, the A330-200, and the A340-500/600), and the A380 aircraft programmes.¹⁴⁵

4.89 According to the EC, the US challenge of a "launch aid programme" is without merit. In the EC view, the US has failed to point to the precise content of the alleged measure. It has also not shown that there is a norm of "general and prospective" or "systematic" application. The EC underlines that MSF is not always sought to finance development of Airbus LCA; that when MSF is sought, it is not always provided; that when development financing is sought, it is not always sought in the form of MSF; and that when MSF is provided, it is provided on terms that vary widely, both as between member States, and as between Airbus aircraft programmes.¹⁴⁶

4.90 The EC asserts that it corrects certain factual errors that the US makes with respect to the relevance of the existence of "intergovernmental institutions" and "dedicated bureaucracies".¹⁴⁷ Concerning the "intergovernmental institutions," the EC notes that these do not set the terms of MSF, nor play any role in administering individual MSF loans.¹⁴⁸ Concerning the "dedicated bureaucracies" specifically, the EC clarifies that these entities do not provide MSF loans, nor are they dealing exclusively with "Airbus". Rather, it is the relevant ministry that provides MSF loans to the respective national company. Those ministries adopt procedures that vary from member State to member State and over time. Moreover, MSF loans are available to companies other than the recipients at issue in this dispute.¹⁴⁹ The EC submits that, whatever the relevance of these institutions, they cannot overcome the failure of the US to demonstrate the "precise content" and the "general and prospective application" of the alleged MSF programme.¹⁵⁰

(b) US Failure to Prove that A member State Financing "Programme" Constitutes a Financial Contribution to Airbus

4.91 The EC argues that the US failure to establish the existence of a MSF programme also means that this alleged programme cannot constitute a financial contribution. In any event, the US failed to establish any financial contributions independent of individual applications of MSF loans.¹⁵¹

(c) US Failure to Prove that A member State Financing "Programme" Confers a Benefit on Airbus

4.92 The EC argues that the US failure to establish the existence of a MSF programme also means that this alleged programme cannot confer a benefit.¹⁵²

4.93 Nonetheless, the EC also addresses the assertions on which the US bases its benefit arguments in relation to the alleged MSF programme. In particular, the EC submits that the US erroneously relies on a number of characteristics shared by certain of the MSF loans at issue – *i.e.*, the long-term, unsecured nature of MSF loans and their success-dependent and back-loaded repayment terms – to assert that the alleged measure confers a benefit. According to the EC, none of these characteristics, either individually or collectively, are indicative of benefit.

BCI deleted, as indicated [***]

4.94 First, the tenor of MSF loans is consistent with the tenors of other long-term financing instruments available at market.¹⁵³ Second, unsecured financing instruments are common in the market and do not, for that reason alone confer a benefit.¹⁵⁴ Third, financing with success-dependent repayment terms is available to both Airbus and Boeing from commercial actors, including private banks and risk-sharing suppliers.¹⁵⁵ While the success-dependent nature of the repayment does, indeed, transfer risk from the borrower to the creditor, this is a feature shared by most financing instruments. The degree of risk-sharing will be reflected in the price – *i.e.*, the interest rate – charged by the creditor for the financing instrument. Success-dependent repayment terms are, therefore, not indicative of benefit either.¹⁵⁶ Fourth, back-loaded repayments are common for many financing instruments. Commercial bonds for example are repaid in total at the end of their tenor, *i.e.*, their repayment is entirely back-loaded.¹⁵⁷

4.95 Thus, according to the EC, the only measure against which it can be determined whether individual instances of MSF loans confer a benefit is the interest rate charged for that loan, compared to what a market creditor would have charged.¹⁵⁸ The EC addresses this issue in the context of its "benefit" arguments with respect to individual instances of MSF loans.

C. WHETHER EACH GRANT OF LAUNCH AID TO AIRBUS IS A SPECIFIC SUBSIDY TO AIRBUS WITHIN THE MEANING OF ARTICLES 1 AND 2 OF THE SCM AGREEMENT

1. Arguments of the United States

4.96 The US argues that the Airbus governments have provided or committed to provide Launch Aid for every major model of the Airbus LCA family – the A300, A310, A320, A330, A340, A380, and A350 – and for the three major derivative models of its family, the A330-200, A340-500, and A340-600. In its submissions, the US argues that each grant of Launch Aid constitutes a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement because it involves a financial contribution that confers a benefit on the recipient and is specific.¹⁵⁹

(a) Benefit

4.97 The US notes that the EC concedes that Launch Aid is a subsidy.¹⁶⁰ The US points out that the EC does not dispute that Launch Aid grants confer a benefit; it disputes only the amount.¹⁶¹

4.98 The US notes that the EC openly admits that for the A320 and A330/A340, Launch Aid was provided either interest-free (Germany and Spain), at the rate of inflation (France), or at the government's cost of borrowing (UK). The US points out that the panel in the *Canada – Aircraft* dispute treated a similar admission by Canada with respect to the Technology Partnerships Canada (TPC) program as dispositive with respect to the existence of a benefit and thus a subsidy. The US also notes that the EC does not dispute that Launch Aid for the A300 and A310 was provided interest-free and thus confers a benefit.¹⁶²

4.99 This then leaves the A330-200, the A340-500/600, and the A380. For all of these models as well – whether one uses the benchmark rates calculated by the US or those calculated by the EC – Launch Aid confers a benefit on Airbus. In fact, the US notes that in responding to the Panel's questions, the EC acknowledged that Airbus sought Launch Aid for the A380 to "maximize{} the programme's profitability."¹⁶³

4.100 The US explains that the question in a benefit analysis under Article 1.1(b) of the SCM Agreement is "whether the recipient has received a 'financial contribution' on terms more favorable than those available to the recipient in the market."¹⁶⁴ The US argues that the EC attempted to show that in demonstrating that Launch Aid confers a benefit on Airbus the US had overstated the relevant market benchmark and understated the expected return associated with Launch Aid. The US argues that the EC is wrong on both counts.¹⁶⁵

4.101 The US argues that the EC mischaracterizes its benchmark methodology by pretending that it conceives Launch Aid as a pure debt instrument. In fact, the US asserts that its methodology recognizes that Launch Aid is a hybrid instrument that has characteristics of both debt and equity.¹⁶⁶ In regard to the EC assertion that it underestimates the potential returns on Launch Aid contracts, the US argues that it took the figures directly from the Launch Aid contracts themselves, which clearly state the relevant interest rates. In the US view, the EC's own submission confirms that the rates in the US submission are correct.¹⁶⁷

4.102 The US points out that the EC wrongly contends that Launch Aid should be treated as pure debt, ignoring its equity-like qualities, including the governments' lack of entitlement to repayment with interest over a specified period of time and lack of recourse in the event of non-repayment.¹⁶⁸ The US argues that investment bank reports the EC cites are irrelevant, as they do not purport to evaluate the risk associated with Launch Aid. In the US view, the EC also misleadingly tries to downplay the riskiness of an LCA launch. It makes the irrelevant observation that Airbus has "never failed to certify a launched aircraft," and it ignores substantial delays in the repayment of Launch Aid.¹⁶⁹

4.103 The US argues that the EC also mischaracterizes its benchmark, which relies not on returns to individual venture capital projects, but on the much lower returns to well-diversified portfolios that contain venture capital investments. In addition, the US argues that the EC fails to substantiate its assertion that Launch Aid may entail costs not associated with market-based financing.¹⁷⁰

4.104 The US notes that the EC consultant attempts to suggest that the US experts, Dr. Dorman and Dr. Ellis, were performing comparable analyses, but using different benchmarks. In the US view, that is simply false. The US explains that the Dorman model examined the changes in profitability of a generic LCA program resulting from variations in prices, costs and airplanes sold, and examined the effect on profitability of Launch Aid. The discount rate was ancillary to this analysis, independent of the identity of the manufacturer and how the project was financed, and did not vary between the base case and the various Launch Aid scenarios. In contrast, the Ellis analysis was specifically intended to

BCI deleted, as indicated [***]

determine the interest rate that appropriately reflected the risks borne by a supplier of capital with Launch Aid terms.¹⁷¹

4.105 The US also notes that the EC consultant asserts that Dorman and Ellis were looking at the same data. That too is false. In fact, the basis for the weighted average cost of capital used by Dr. Dorman was data for six US aerospace companies (not Airbus), while Dr. Ellis specifically examined the loans granted to Airbus. Moreover, the EC consultant asserts that Dr. Dorman upwardly adjusts his discount rate, which he claims will be higher than the company's average cost of capital, to reflect individual project risk. In the US view, that statement is factually accurate, but inapposite. It in no way undermines the validity of Dr. Ellis' benchmark. It was Dr. Ellis – not Dr. Dorman – who examined the return that a supplier of capital with Launch Aid terms would expect in return for providing such capital.¹⁷²

4.106 The US notes that the EC asserts that it is inappropriate to add what it calls "a project-specific risk premium derived from equity returns" to Airbus' cost of debt. The US notes that the EC suggests that an equity risk premium should be added only to the corporate cost of equity. However, the US explains that adding the risk premium that Ellis identified to Airbus' corporate cost of debt was done precisely to reflect the hybrid nature of Launch Aid.¹⁷³ In addition, the US notes that the EC alleges that "use of an equity measure {for the risk premium} is at odds with the risk profile and terms of MSF loans." In the US view, that statement ignores Launch Aid's equity-like qualities and assumes incorrectly that the risk premium identified by Ellis is "an equity measure" rather than a hybrid measure.¹⁷⁴

4.107 The US points out that in addition to erring in its criticism of the market benchmark in the Ellis report, the EC errs in criticizing the report's reference to the returns on Launch Aid actually identified in the Launch Aid contracts as the basis for comparison to the benchmarks. The US first notes that the EC calculation of an "internal rate of return" for the governments is based on the governments eventually receiving royalties – a possibility Ellis considered so remote that it "would play a marginal role, at most, in a commercial lender's financing decision." Second, the US notes that although the EC criticizes Ellis for not taking account of tax effects, it fails to provide any evidence to substantiate its assertion of tax effects, and, in any event, tax effects have no bearing on whether a financial contribution confers a benefit under the SCM Agreement. Market-based lenders set interest rates without regard to taxes that the recipients may subsequently pay and, indeed, neither the US nor the EC allows a party to adjust for tax effects when calculating the amount of the benefit under its domestic countervailing duty regime.¹⁷⁵ In the US view, the EC criticism of the market benchmark established in the Ellis Report (Exhibit US-80) is not well founded.¹⁷⁶

4.108 The US asserts that the benchmark established in the Ellis report is confirmed by several alternative cross-checks. Although the EC criticizes each of them, it fails to discredit any of them. In the US view, its criticisms are flawed for reasons including their disregard of Launch Aid's equity-like qualities and their reliance on studies about risk that were unknown at the time that Launch Aid financing was provided and do not represent a consensus view.¹⁷⁷ Nor do the EC's own cross-checks undermine the Ellis benchmark. The first cross-check – a comparison to a contract between an Airbus company and a group of banks for financing development of an aircraft model – ignores important

BCI deleted, as indicated [***]

differences between that contract and government-provided Launch Aid, including, *inter alia*, the relatively small amount pledged by the banks and the fact that the bank contract provided for full repayment over a relatively small number of sales. The second EC cross-check – a comparison between the Launch Aid risk premium established in the Ellis report and a supposed "equity ceiling" – wrongly assumes that the risk of a single project cannot exceed the risk of a company's equity; wrongly relies on a sample of companies whose sensitivity to economy-wide risk factors is likely to be lower than that of LCA projects; and is based largely on very recent research that does not represent a consensus approach to measuring equity risk.¹⁷⁸

4.109 The US considers that the EC's proposed "alternative benchmark rates" for Launch Aid are seriously flawed. And even under the EC's "alternative" approach, there is a substantial spread between the borrowing rates in the Launch Aid contracts and the EC's proposed "commercial" rates. Similarly, the United States notes that the EC criticizes it for allegedly not accounting for the effects of taxation. But even if the EC's alternative interest rate calculations were valid, they are still below the commercial benchmarks proposed by the US and the EC.¹⁷⁹ The US maintains that even under the EC's own flawed analysis, Launch Aid confers a benefit, and the EC does not dispute this.¹⁸⁰

4.110 The US considers that the EC alternative to the US benchmark – based on project-specific returns for certain Airbus "risk-sharing suppliers" is inapposite, because the situation of risk-sharing suppliers is far different from that of an ordinary, market-based provider of Launch Aid-type financing to Airbus. The US explains that investment capital provided by banks and other financial entities is highly mobile, whereas a supplier's capital is relatively immobile in the short and intermediate terms. Further, the return that a risk-sharing supplier demands is likely to be influenced by a variety of factors that would have no relevance to an investor, including anticipated revenue from future business, sales of replacement parts, and servicing of goods supplied. And, a supplier may provide more than one component to Airbus and may adjust the rate it demands under one supply contract according to the rate it demands under a different supply contract. Finally, some suppliers may be shielded from risk by Airbus' commitment to purchase a minimum quantity of supplies regardless of actual aircraft deliveries.¹⁸¹

4.111 The US notes that mistakenly relying on footnote 16 of the SCM Agreement, the EC asserts that "the relevant test for determining whether a {Launch Aid} contract in the large civil aircraft sector constitutes a subsidy is the reasonableness of the forecasts {of aircraft sales}." In that regard, the US argues that whether forecasts are reasonable or not is irrelevant if the return the government demands is lower than what a market creditor would demand.¹⁸² But, even if sales forecasts are reasonable, the US explains, if the interest rates demanded are below the rates that a market player would demand for the same shifting of risk, the Launch Aid would still be a subsidy.¹⁸³

4.112 The US points out that while the EC acknowledges that "{f}ootnote 16 does not . . . discuss under which conditions royalty-based financing constitutes a subsidy," it nevertheless insists that footnote 16 is relevant to that inquiry. In effect, the EC seeks to take footnote 16 out of context and elevate its status to that of a general rule applicable to all inquiries under the SCM Agreement, contrary to customary rules of interpretation of international law.¹⁸⁴ Footnote 16 does not even say what the EC says it says. It does not say that "forecast sales" are "the decisive factor of royalty-based

BCI deleted, as indicated [***]

financing."¹⁸⁵ It says just the opposite. That is, it says that actual sales falling below forecast sales "does not in itself constitute serious prejudice for the purposes of this paragraph."¹⁸⁶

4.113 The US argues that if anything, the existence of footnote 16 is persuasive evidence that Launch Aid does constitute a subsidy. The very fact that the drafters of the SCM Agreement saw a need to clarify that a particular circumstance involving the implementation of Launch Aid contracts "does not in itself" constitute deemed serious prejudice suggests that the drafters presumed that the provision of Launch Aid confers a benefit and thus constitutes a subsidy. Additionally, footnote 16 is evidence that the SCM Agreement applies to the Launch Aid that Airbus received prior to January 1, 1995. At the time the agreement was being negotiated, Airbus was "not fully repaying" the Launch Aid it had received for the A300 and the A310 programs.¹⁸⁷

4.114 In the US view, footnote 16 does not set the test for what constitutes a subsidy. It is attached to Article 6 of the SCM Agreement, not Article 1, which is where the definition of "subsidy" is set forth. If anything, the US contends, footnote 16 corroborates the understanding that Launch Aid is indeed a type of subsidy covered by the SCM Agreement.¹⁸⁸ The EC theory that footnote 16 of the SCM Agreement establishes a special rule for evaluating whether Launch Aid confers a benefit is baseless. The US explains that repaying Launch Aid does not "exclude" a finding of serious prejudice. Sales forecasts are not relevant to determining the existence of a "benefit." The US maintains that if the drafters of the SCM Agreement had wanted to make sales forecasts a relevant factor under Article 1.1(b), they would have said so explicitly.¹⁸⁹

4.115 The US considers that the question of which benchmark rate is used for determining whether Launch Aid is a subsidy is not central to the question of the existence of a subsidy, because both the Ellis benchmark and the Whitelaw benchmark show a substantial subsidy to Airbus.¹⁹⁰

4.116 The US argues that contrary to Professor Whitelaw's claim, Launch Aid differs from typical corporate debt in at least two crucial respects. First, the Airbus governments have no recourse if the repayments Airbus promises to make are never received because the corresponding sales are never made. By contrast, corporate debt-holders do have a claim on the debtor's assets in such a case. Second, Launch Aid is dependent on the success of a single project. By contrast, typical corporate debt is dependent on the success of the company in the aggregate.¹⁹¹

4.117 In the US view, Professor Whitelaw's assessment assumes incorrectly that Launch Aid is clearly less risky than equity in Airbus. The US asserts that one can readily identify scenarios in which the Airbus governments will receive little or no repayment, while the equity shareholders get returns from profits on other aircraft sales or other lines of business.¹⁹²

4.118 Another problem with Professor Whitelaw's assessment alleged by the US is that supplier financing is not comparable to Launch Aid for reasons it described in its statement. Curiously, if financing with Launch Aid features is as typical in the market as Professor Whitelaw asserts, one wonders why he chose to base his analysis on financing provided to Airbus by certain suppliers, whose relationship with Airbus necessarily is influenced by factors other than the straightforward

lending aspect of the transactions at issue.¹⁹³ In any event, repayment to the suppliers examined by Professor Whitelaw is generally contingent on fewer deliveries than repayment to the government providers of Launch Aid. The amounts of financing provided by these suppliers are significantly less than the amounts provided by the Airbus governments. A number of these suppliers receive their own support from the Airbus governments. And, the suppliers must take account of business considerations other than the straightforward concern about return on financing they provide to Airbus. And, according to the US, very little of the Whitelaw analysis of supplier financing is backed up by any evidence the EC has supplied.¹⁹⁴

4.119 In its comments on the EC statement at the second Panel meeting, the US notes that one new concept introduced in the EC statement is its so-called "adequate return" theory for assessing the benefit conferred by Launch Aid. Under this theory, it is a government's "own view" regarding risk that determines whether the Launch Aid rate of return is "adequate" and, therefore, whether Launch Aid confers a benefit. This "adequate return" theory finds no support in the SCM Agreement.¹⁹⁵

4.120 Alternatively, the US notes that the EC continues its attempt to defend a benchmark based on Airbus' contracts with risk-sharing suppliers. It states that this "benchmark is based on returns from the same project undertaken by the same company (Airbus) in the same market (LCA)." The US argues that in addition to numerous other flaws, the latter statement ignores that precisely because Airbus receives Launch Aid, the financing that risk-sharing suppliers provide to Airbus is unreliable as a benchmark. The US explains that Launch Aid makes Airbus less risky, which means that risk-sharing suppliers will demand a lower return on financing to Airbus than they would in the absence of Launch Aid.¹⁹⁶

(b) A350

4.121 In its first written submission, the US argues that in 2006, the Airbus Governments reaffirmed their agreement to support Airbus in the development of new models of LCA. The US asserts that in spite of Airbus' leading global position, the Airbus governments refuse to end their practice of supporting Airbus with grants of Launch Aid. To the contrary, they have already agreed to provide at least \$1,700,000,000 in Launch Aid for Airbus' newest aircraft, the A350. The US notes that recent events suggest that the final amount of the aid will be double or even triple that amount. Publicly available information indicates that the aid is in fact Launch Aid, *i.e.*, back-loaded, success-dependent, preferential financing, just as has been provided since Airbus' inception.¹⁹⁷

4.122 The US notes that Airbus has been quite explicit in stating that it has launched the A350 to take orders that would otherwise go to the 787. The US also notes that Airbus has also made clear that the A350 is intended to target the Boeing 777 as well as the 787. On May 23, 2005, for example, the project manager for the A350 boasted that "{w}e are positioning our program to be a 777-200ER killer." As one industry analyst has observed, the A350 "will threaten the entire Boeing 777 product line, placing Boeing in the awkward predicament of having to figure out what to do at a time when the 787 program is entering production and plans are being made to design a successor to the 737."¹⁹⁸

2. Arguments of the European Communities

4.123 The EC argues that no subsidies have been provided by member States under MSF contracts, and even if such financing were considered to constitute a subsidy (*quod non*), any benefits are very small.¹⁹⁹

(a) 1992 Agreement

4.124 According to the EC, there is no benefit for Airbus within the meaning of Article 1 of the SCM Agreement as the four member States complied with the obligations of the EC under Article 4 of the 1992 Agreement.²⁰⁰ The EC points out that the US has not made any serious attempt to show non-compliance of the EC with Article 4.²⁰¹ The EC contends that it has explicitly demonstrated such compliance in its first written submission.²⁰²

4.125 The EC contends that the US has adopted an inappropriate benchmark for determining whether individual MSF financing agreements confer a "benefit" within the meaning of Article 1.1 of the SCM Agreement.²⁰³ In the EC view, the market benchmark asserted by the US lacks merit.²⁰⁴ The EC considers that the benchmark proposed by the US ignores the terms of the 1992 Agreement between the EC and the US. This bilateral accord fixes the agreed benchmark between the parties for determining whether government support for LCA programmes confers a benefit. The EC maintains that all MSF granted since 1992 complied with the terms of the agreement – terms which the US explicitly agreed to.²⁰⁵ The EC notes that the A330-200, A340-500/600 and A380 contracts were concluded under terms and conditions which complied with its international obligations at the time of granting *i.e.*, the 1992 Agreement. The EC indicates that it is well accepted that the existence of a subsidy has to be established on the information reasonably available to the granting government at the time it took the measure. The EC considers that the US now attempts to revisit this matter many years later and to construct an ex-post benchmark; it is effectively seeking a retrospective remedy.²⁰⁶

(b) Reasonableness of forecasts

4.126 The EC submits that even if the 1992 Agreement and its practical impact on the action of the two parties to this dispute were to be ignored, the benefit analysis of MSF must take account of the reasonableness of forecasts under the SCM Agreement, and that in view of this there is no benefit under the SCM Agreement.²⁰⁷

4.127 The EC explains that any decision to finance a new aircraft model inevitably involves a calculation of the project risk and the relevant economic environment for the LCA industry. Drawing from footnote 16 to the SCM Agreement, the relevant test for determining whether a MSF contract in the large civil aircraft sector constitutes a subsidy is the reasonableness of the forecasts. The EC contends that it has complied with this SCM standard. The EC argues that European Governments lent money in the public interest, subject to close scrutiny and sought to secure an adequate return. Accordingly, they used conservative assumptions for their forecasts, sometimes being even more cautious than the relevant business case from the company itself (which, in turn, has a responsibility

BCI deleted, as indicated [***]

vis-à-vis its shareholders).²⁰⁸ The EC contends that it has demonstrated this in its first written submission.²⁰⁹

4.128 The EC considers that member State governments have adopted conservative repayment provisions based on reasonable forecasts. These result in a high probability of principal repayment and a minimum return for the government at a point in the delivery stream that is *lower* than the consensus number of deliveries forecast by various sources to occur over the life of the particular Airbus LCA programme, including in the Airbus business case. That has allowed the governments to agree to a structure of levies and repayment schedules that removes a great deal of risk and ensures adequate recoupment of its contributions over a reasonable period of time plus a real return at rates that would not be rejected by the market.²¹⁰

4.129 In the EC view, the US misinterprets the SCM Agreement. First, although footnote 16 has nothing to say about whether an individual MSF loan as an instrument is a subsidy, it does demonstrate the key importance of the sales forecast for repayment purposes, a point confirmed by the US' own DDA rules submission. If the repayment target is set for a sufficiently low number of sales, thus removing most of the risk of non-repayment, the government, as a responsible investor, is entitled to take its own view of the remaining risk and to set the interest rate accordingly in order to ensure an adequate return.²¹¹ In this regard, EC governments are not, as the US claims, required by the SCM Agreement to behave like "mobile investors", putting their money where it will fetch the highest return. Governments are not required to "play the markets" ; they are not required to act as market speculators.²¹²

4.130 Second, member States have a proven track record in conservative forecasting. Actual sales of Airbus aircraft are well ahead of those forecast in MSF contracts and member States have consistently secured the returns they have sought over a lower number of deliveries than that forecast for the life of the LCA programme at issue.

(c) EC risk-sharing supplier benchmark and critique of US benchmark

4.131 The EC points out that the US proposed benchmark for MSF contracts is fundamentally flawed.²¹³

4.132 First, the EC argues that the US overlooks the fact that government financing may impose costs on the recipient that market instruments do not. This distinction, in the view of the EC, should be taken into account when comparing MSF loans with a market benchmark.²¹⁴

4.133 Second, the EC argues that the US mischaracterizes both the nature of MSF loans and the US "Ellis" model. The EC explains that through the US' consultant, Ellis, the US constructs a market benchmark based on a study of high-risk venture capital returns. Venture capital returns relate to high risk start-ups, but have no nexus to LCA markets, much less Airbus LCA programmes.²¹⁵ Moreover, as the EC's expert, Professor Whitelaw, points out, the Ellis benchmark suffers from severe methodological errors that render it useless.²¹⁶ Among others, the EC submits that Professor

BCI deleted, as indicated [***]

Whitelaw's analysis shows that the US overstates the project-specific risk premium and generates correspondingly inflated benchmark rates,²¹⁷ which are contradicted by another US expert, Dr. Dorman.²¹⁸ In addition, none of the alternative methodologies relied on by the US supports the flawed Ellis model.²¹⁹

4.134 The EC submits that it shows that attempts by the US to infer an exaggerated benchmark from, e.g., an EC state aid decision, are wide of the mark.²²⁰ First, the state aid decision cited by the US applies a legal standard from the standard in the SCM Agreement.²²¹ Second, the state aid decision relates to a different time period than is at issue in the present dispute, and involves a different product market – regional aircraft – that displays different conditions of competition than are at play in the LCA market.²²² Specifically, the decision notes that the regional aircraft manufacturer market in the EC was characterised as particularly "high risk" because of "overcapacity", "low market demand", and the "obvious presence of excess production capacity".²²³ These characteristics are not found in the LCA market, where Airbus SAS stands as one of only two established global competitors, with little suggestion of overcapacity burdening the markets in which the firm operates.²²⁴ The EC's expert, Professor Whitelaw, observes that the combination of low market demand and severe overcapacity significantly increases both general corporate and product risk, such that market lenders will demand a heightened risk premium.²²⁵

4.135 The EC submits that the benchmark proposed by the US fails to reflect financing terms available at market.²²⁶ By contrast, when one looks to the returns obtained by market participants in the LCA industry – Airbus risk-sharing suppliers investing in the same project – the benchmark returns are far lower. These returns provide an ideal market benchmark, as both risk-sharing suppliers and MSF lenders bear risk associated with the same market (LCA), same company (Airbus), and the same project.²²⁷

4.136 Third, the EC submits that the US criticisms of the EC benchmark also fail. The EC considers that the US belated attempt to construe these instruments as a kind of hybrid between debt and equity is groundless. Nor does the Ellis model, which is predicated on venture capital returns, offer a benchmark for a hybrid instrument.²²⁸ Regardless of whether one characterizes MSF loans as debt, equity, or hybrid securities, the risk profile of these instruments closely mirrors that of Airbus risk-sharing supplier contracts. The US criticisms of the EC benchmark reflect a misunderstanding of both the nature of Airbus risk-sharing supplier agreements and the procurement process.²²⁹

4.137 For example, the EC notes that the US asserts that the amount of money involved in the risk-sharing supplier (RSS) contracts somehow renders the returns obtained by these suppliers inapposite. But a rate of return is calculated on a per-dollar basis; the rate of return is decidedly not a function of

BCI deleted, as indicated [***]

the size of the contract at issue. Moreover, the amounts at stake were substantial, as the confidential record shows.²³⁰

4.138 The EC also notes that the US asserts – without support, it argues – that certain RSS received government funding. But even if these suppliers received government financing, and even if that financing conferred a benefit, there is no reason to believe that this benefit would affect the terms that these RSS agreed to with Airbus. Why would these suppliers pass on the alleged benefit to Airbus? The US offers nothing but speculation.²³¹ The EC offers evidence which it asserts shows that even if these suppliers were to pass on 100per cent of any benefit from MSF to Airbus, the change to the EC's benchmark rates would be negligible, and the premium would still be well below that asserted by the US' Ellis.²³² The EC considers that the US also speculates, without a shred of evidence, that the terms of these supply agreements were affected by the prospect of obtaining additional future contracts with Airbus. Yet, the bargaining power could well lie with the suppliers – not Airbus. Many of these suppliers possess unique technology that makes them the only viable source for certain contracts.²³³

4.139 The EC also addresses a new argument asserted (without reasoning or evidentiary support) by the US and Brazil at the second Panel meeting. The EC notes that the US appears to argue that MSF granted to Airbus reduces the risk associated with Airbus itself, and thus distorts the RSS benchmark. In that regard, the EC points out that RSS are exposed to two types of risk – development risk and market risk. There is no reason why MSF provided to Airbus would in any way affect the amount or nature of those risks. More fundamentally, RSS do not know whether or on what terms Airbus will receive MSF loans. On what basis are we asked to conclude that RSS would take lower returns based on the *possibility* that Airbus would receive MSF, and on terms and even amounts of which they are not aware? The EC considers that there is no evidence to support such a speculative hypothesis, and it should be rejected.²³⁴

4.140 Contrary to the US assertions, the EC presented documents associated with a commercial loan to one of the Airbus Associated Manufacturers as evidence that financing similar to MSF is available on the commercial market. Thus, the member States are not the only providers of project financing like MSF. The EC considers that the US is also not correct in arguing that there were sufficient orders on the date of signing of the financing agreement to fully repay the bank. The EC contends that it shows that the commercial lender did incur delivery risk. In addition, the EC does not claim that the risk incurred by the bank offering this commercial loan is comparable to the risk incurred by the member States for the A380. Moreover, the project specific risk premium measured by the EU is 2.5 times higher than the risk premium in the commercial loan agreement. The US would have the Panel believe that it is approximately 6 times the amount.²³⁵

4.141 The EC welcomes the US' belated admission that the government-related issuer ("GRI") enhancement applied by Moody's does not reflect the impact of MSF loans. The 2007 Moody's reports, which the EC considers have been cited by the US in a misleading manner, discuss this enhancement, but, in the US' words, are "not directly relevant to this dispute."²³⁶

4.142 However, the EC notes that the US continues to attempt to distract the Panel's attention from this concession by rehashing its failed argument that EADS receives an enhanced baseline credit

BCI deleted, as indicated [***]

rating as an additional benefit or "indirect effect" of MSF loans. First, the EC notes Professor Whitelaw's statement that an improved credit rating would not be an "additional benefit" from MSF loans; rather, the benchmark fully captures any benefit from these alleged subsidies. The US does not dispute that benchmark return represents the market price of risk transfer associated with these loans, and all associated benefits, direct and indirect, are "bought and paid for."²³⁷

4.143 Second, the EC rejects the US attempt to re-characterize this rating enhancement as an "indirect effect" of MSF loans.²³⁸ Moody's confirms that EADS' improved baseline credit rating flows from the risk-sharing aspect of MSF loans, which is equally present under market alternatives such as risk-sharing supplier financing.²³⁹

4.144 Third, even assuming that (a) EADS experienced a credit rating enhancement because of any under-compensated risk-sharing element of MSF loans, and (b) this higher rating reduced EADS' cost of capital, the EC notes that the US has failed to provide any evidence establishing the *amount* of this reduction.²⁴⁰

4.145 Finally, the EC notes that the US credit rating argument does not enhance its ability to show adverse effects from MSF. A statement provided by the US argues that tied "launch subsidies" are more likely to generate adverse effects than untied subsidies that simply generate additional cash flow. But any cash allegedly generated by a reduction in EADS' cost of capital would *not* be tied to any particular LCA programme, and would thus be unlikely to cause adverse effects.²⁴¹

(d) Rates of return

4.146 The EC argues that the US understates the internal rates of return demanded by European Governments,²⁴² and thus underestimates the expected returns associated with individual MSF loans.²⁴³ First, US expert Ellis ignores the market analysis and forecasts contained in the Airbus GIE or Airbus SAS business case, which inform the terms of individual MSF loan agreements. Consequently, Ellis omits a large number of deliveries that would trigger payments to the Governments and enhance their returns.²⁴⁴

4.147 Second, the US fails to take into account the effect of taxation on expected returns.²⁴⁵ Specifically, the EC notes that MSF receipts are subject to taxation, like any other form of corporate income; when repaid, principal and interest are deducted in computing taxable income.²⁴⁶ The result is that EC member States loaned funds with one hand and took back a portion with the other.²⁴⁷ Since the member States continued to assess interest on the *gross amount* of MSF provided, the effective interest cost of the MSF that was actually left for use by Airbus was significantly higher than the contract interest rate.²⁴⁸

(e) A350

4.148 Finally, the EC rebuts the US allegation that there is an existing measure for the A350. In a nutshell, there was nothing more than a commitment to negotiate: never has an agreement to finance, nor an MSF contract, nor any disbursement of money, ever existed or occurred for the A350. Indeed, there is no A350 project; Airbus SAS has abandoned it in favour of the A350 XWB.²⁴⁹ The EC explains that member States have not provided any MSF loans in connection with the A350 programme. US claims with respect to such loans thus pertain to non-existent measures, and fall outside the Panel's terms of reference.²⁵⁰

D. WHETHER THE LAUNCH AID THAT AIRBUS HAS RECEIVED FOR THE A380, THE A340-500/600, AND THE A330-200 ARE PROHIBITED EXPORT SUBSIDIES

1. Arguments of the United States

4.149 The US argues that the Launch Aid that Airbus has received for the A380, the A340-500/600, and the A330-200 are prohibited export subsidies.²⁵¹ The US observes that a finding of export contingency involves three elements: (1) the "granting" of a subsidy; (2) that is "tied to" (3) "actual or anticipated exportation or export earnings."²⁵²

(a) A380

4.150 The US turns first to its claim that the A380 subsidies are prohibited export subsidies. The US explains that the UK, French, German, and Spanish governments have each granted Launch Aid to their respective Airbus companies to support the development of the Airbus A380. In each case, the Launch Aid is a subsidy within the meaning of Article 1.1 of the SCM Agreement. Therefore, for each provision of A380 Launch Aid, the first element for demonstrating export contingency is met.²⁵³

4.151 According to the US, the second element for demonstrating export contingency is the existence of actual or anticipated exportation or export earnings. The US argues that the evidence surrounding the Airbus governments' decision to provide Launch Aid for the A380 demonstrates not only that the governments anticipated or expected that exportation or export earnings would result from the project, but also that the governments knew Airbus was developing the A380 *primarily* for the export market, and that export sales would be critical to the project's success.²⁵⁴

4.152 First, in 1999-2000, at the time that the Airbus governments were discussing Launch Aid for the A380 with Airbus, Airbus was stating that it was developing the A380 primarily for the export market. Second, the four Launch Aid agreements between the Airbus governments and Airbus each anticipate a level of A380 sales that substantially exceeds the 247 aircraft with more than 400 seats that Airbus was predicting it would sell in Europe, thus demonstrating that the governments anticipated exports. Third, the four governments have specifically referenced the global nature of the A380 project and Airbus' export sales. Fourth, when Airbus was seeking the Launch Aid, it pointed to potential export earnings, and it stressed the importance of export sales to the project's success.

²⁴⁹ EC, SWS, Executive Summary, para. 13.

²⁵⁰ EC, FWS, Executive Summary, para. 33.

²⁵¹ US, FWS, Executive Summary, para. 29.

²⁵² US, FWS, Executive Summary, para. 30.

²⁵³ US, FWS, Executive Summary, para. 31.

²⁵⁴ US, FWS, Executive Summary, para. 32.

BCI deleted, as indicated [***]

Fifth, in addition to the fact that the A380 is an export-oriented project, Airbus itself is a highly export-oriented company.²⁵⁵

4.153 The third and final element for demonstrating that a subsidy is contingent on export performance is that the subsidy must have been "tied to" anticipated or expected exportation or export earnings. The terms of the Launch Aid contracts themselves, as well as the evidence surrounding the grant of the Launch Aid, demonstrates such a tie. First, a key feature of Launch Aid is that the Airbus governments tie repayment of the aid to sales of the particular aircraft model that the Launch Aid is funding. If sales of the aircraft fail to meet expectations, repayment of the aid is forgiven or indefinitely postponed. However, Airbus has stated that total European demand for aircraft with more than 400 seats is only 247 aircraft. This necessarily implies that the Airbus governments tied the grant of the Launch Aid to Airbus making substantial numbers of export sales.²⁵⁶

4.154 The US notes that the facts surrounding the grant of the A380 Launch Aid are quite similar to the facts surrounding the grant contract that the *Australia – Leather* panel found contingent "in fact" upon export performance. On the other hand, the facts that led the *Australia – Leather* panel to conclude that the loan contract at issue in that dispute was not contingent "in fact" upon export performance are entirely absent from the A380 contracts.²⁵⁷

(b) A340-500/600 and A330-200

4.155 The US next turns to its claims that the A340-500/600 and A330-200 subsidies are prohibited export subsidies. In its submission, the US asserts that the same types of facts that demonstrate export contingency for the A380 Launch Aid also demonstrate that the Launch Aid that the French and Spanish governments provided for the A340-500/600 and the Launch Aid the French government provided for the A330-200 is contingent upon export, and thus is prohibited under Articles 3.1(a) and 3.2 of the SCM Agreement.²⁵⁸

(c) Export contingency

4.156 In its opening statement at the first Panel meeting the US argues that the EC has failed to rebut its *prima facie* case that the Launch Aid for the A380, A340-500/600, and A330-200 is contingent upon export performance.²⁵⁹ The US contends that the EC misstates the legal standard for "contingency" and fails to apply the evidence to that standard.²⁶⁰ The US notes that the EC says the UK took Airbus' sales forecasts into account in deciding to provide the Launch Aid, and that the government's decision to tie repayment of the Launch Aid to sales served to allocate risk between the company and the UK. But according to the US, this only proves its point: the Airbus governments provided unsecured, subsidized loans on the condition that Airbus repay the funds through levies on sales. In the US view, the facts demonstrate that, due to the nature of the product and the nature of the market for that product, the governments knew Airbus could only meet that condition by exporting. Therefore, the US argues, the subsidies are tied to export performance.²⁶¹

4.157 The US notes that the EC concedes that the Launch Aid is a subsidy even under its flawed, alternative benchmarks,²⁶² and that the Airbus governments expected Airbus to repay Launch Aid and

BCI deleted, as indicated [***]

therefore anticipated the fulfilment of the conditional payment.²⁶³ In addition, the US notes that the EC apparently concedes that the Airbus governments anticipated exportation or export earnings.²⁶⁴

4.158 The US asserts that the EC portrays it as arguing that the grant of Launch Aid is tied to anticipated exportation or export earnings merely because the Airbus governments expected that there would be exports of the LCA models developed as a result of Launch Aid. But the US explains that it does not argue that the governments' expectations of exportation or export earnings alone make the provision of Launch Aid contingent upon export performance. The US submits that those expectations unquestionably are an important part of the picture. But an equally important part of the picture is the fact that the governments' decision to provide Launch Aid was made in reliance on and in return for a commitment by Airbus to undertake a course of action that necessarily involves exports. The governments' expectations – informed by Airbus' Business Cases, Global Market Forecasts, and Launch Aid applications and by the governments' own critical project appraisals – were an essential precondition to the governments' decisions to provide Launch Aid.²⁶⁵

4.159 The US clarifies that contrary to the EC suggestion, it has never argued that any one of the provisions in the Launch Aid contracts on its own makes the granting of Launch Aid export contingent. The US explains that it has looked at all of the facts collectively and has shown that together they demonstrate that the provision of Launch Aid is contingent upon export performance. Relatedly, the EC notably omits any discussion of representations and warranties in certain of those contracts making the tie to anticipated exportation unmistakable.²⁶⁶

4.160 The US argues that in responding to its showing that certain provisions of Launch Aid are prohibited export subsidies, the EC makes several critical errors. According to the US, the EC adopts the mistaken view that the relationship between export performance and provision of a subsidy must be a condition-consequence or "if-then" relationship in order for the subsidy to be prohibited within the meaning of Article 3 of the SCM Agreement. However, the US argues that, not only is the term "consequence" not used in Article 3.1(a) or footnote 4 of the SCM Agreement, but the express reference to "anticipated exportation or export earnings" in footnote 4 means that a subsidy is contingent upon export performance even if it is granted prior to – rather than as a "consequence" of – "the future factual fulfilment" of exportation. The US adds that this understanding is supported by the findings of the panels in *Canada – Aircraft* and *Australia – Leather*.²⁶⁷ In this regard, the US argues that the EC misstates the findings in *Canada – Aircraft*, *Australia – Leather* and *Canada – Autos*.²⁶⁸

4.161 In the US view, the EC compounds its error by making a series of arguments seeking to show the lack of a tie between the provision of Launch Aid and export performance. Its efforts ultimately fail, as they rely on a combination of mischaracterization of the US argument (for example, falsely accusing the US of confusing anticipation of export performance with a tie to export performance) and insistence on various irrelevant points (such as the possibility of Airbus electing to prepay Launch Aid amounts and the consistency of the governments' forecasts of LCA sales with prudent business practices).²⁶⁹

4.162 The US asserts that its contention that it does not confuse anticipation of export performance with a tie to export performance is demonstrated by the wealth of evidence the US has brought to bear

BCI deleted, as indicated [***]

establishing the existence of such a tie in each of the Launch Aid contracts at issue. According to the US, the contracts consist of a commitment by the government to disburse Launch Aid according to a set schedule, which is undertaken in exchange for a commitment of performance by the company to repay the Launch Aid amounts on the basis of a specified levy per sale over an agreed-to number of sales. The number of sales over which Launch Aid is to be repaid is so large relative to demand in the EC for the LCA model at issue as to necessarily involve exportation in order to be achieved. The repayment provisions of the Launch Aid contracts establish that an essential condition for the provision of Launch Aid is a commitment to export. Other provisions of the Launch Aid contracts reinforce this point.²⁷⁰

4.163 The US notes that the EC concedes that the Airbus governments expected Airbus to repay Launch Aid. Because of the levy-based nature of Launch Aid repayments and the repayment schedules agreed to under the Launch Aid contracts, this would be possible for the A380, A340-500/600, and A330-200 only with substantial exports. Other evidence, including other Launch Aid contract provisions, also support a finding of export contingency. In response, the EC first argues that exportation is anticipated only if it "will occur," thus collapsing the concepts of "actual" exportation and "anticipated" exportation. However, the US argues that as the Appellate Body explained in *Canada – Aircraft*, "anticipated" means "expected."²⁷¹

4.164 According to the US, the EC compounds its error by reading new text into the SCM Agreement, contending, for example, that a subsidy is contingent upon export performance only if "the terms of the measure vary, in law or in fact, depending on whether sales performance is in the domestic or export markets." And, it responds to arguments the US does not make, such as the argument that the mere expectation that a recipient of a subsidy will export renders the provision of that subsidy export contingent.²⁷²

4.165 The US contends that the EC attempt to dismiss evidence demonstrating *de facto* export contingency turns on its flawed premise that the terms of an export contingent subsidy must vary expressly according to the destination of a particular sale.²⁷³ The US argues that in an effort to show that it has somehow confused "export performance" with mere "performance," the EC misconstrues the evidence. The US notes that the EC repeatedly asserts that the repayment terms of the Launch Aid contracts are "origin neutral" and that the evidence does not show that these terms "vary at all by reference to the EC and the rest of the world." But these observations are beside the point. Indeed, they suggest a test that has absolutely no basis in the SCM Agreement. The SCM Agreement does not provide that a subsidy is contingent upon export performance, and thus prohibited, only if the instrument tying the subsidy to actual or anticipated exportation or export earnings makes an express demarcation between domestic sales and export sales. Further, the Launch Aid contract repayment terms are "origin-neutral" only if considered in a vacuum, without any reference to the realities of the market in which the LCA models at issue are sold.²⁷⁴

4.166 The US argues that, related to the EC mischaracterization of the US export contingency argument is the EC assertion of an inconsistency between the US demonstration that Launch Aid confers a benefit on Airbus and the US demonstration that the provision of Launch Aid is contingent upon export performance. However, the fact that the Airbus governments anticipate a return on Launch Aid does not contradict the demonstration that Launch Aid confers a benefit. And the fact

²⁷⁰ US, SWS, Executive Summary, para. 22.

²⁷³ US, SNCOS, Executive Summary, para. 3.

²⁷⁴ US, SWS, Executive Summary, para. 27.

BCI deleted, as indicated [***]

that the governments are not guaranteed a return does not contradict the demonstration that the provision of Launch Aid is tied to anticipated exports.²⁷⁵

4.167 The US also argues that, also related to the EC mischaracterization of the US export contingency argument is the assertion that following that argument "financial contributions that foresee a return (such as loans) are more susceptible to be found to contain a prohibited export contingent subsidy than financial contributions in the form of outright grants." However, it is not the foreseeing of a return that makes Launch Aid export contingent but the conditioning of the provision of Launch Aid on a commitment by Airbus to repay Launch Aid over levels of sales that necessarily involve exportation. An actual refutation of the EC argument is the panel report in *Australia – Leather*, finding a grant contract to be export contingent, but not a loan contract to the same recipient.²⁷⁶

4.168 The US considers that an additional aspect of the EC's futile attempt to show the absence of a tie between the provision of Launch Aid and anticipated exportation is its reference to Airbus' option to prepay Launch Aid amounts. This point is irrelevant because, *inter alia*, unlike repayment over the number of deliveries specified in the Launch Aid contract, prepayment is not an obligation. With respect to the EC contention that Launch Aid is not contingent upon export performance, because Airbus in theory could voluntarily accelerate its repayments of Launch Aid, the US explains that the mere fact that Airbus is allowed to repay Launch Aid at any time does not mean that repayment upon delivery is not an obligation.²⁷⁷ Likewise, the EC reference to the "guarantee" provided by entities related to the company in certain Launch Aid contracts does not help the EC argument, because these guarantees are not guarantees of repayment of Launch Aid. They merely provide that in the event the company fails to make timely payment to the government following delivery of an aircraft, the government may turn to the company's parent for payment.²⁷⁸

4.169 In addition, the US notes that the EC offers certain "countervailing explanations" for the Airbus governments' decision to condition the provision of Launch Aid on Airbus' commitment to repay Launch Aid over levels of sales that necessarily involve exports. However, the US argues that these explanations do not address the existence of a contractual tie between Launch Aid and export performance but, rather, governments' motivations for establishing a tie.²⁷⁹

4.170 The US considers that the EC misrepresents its arguments. For example, on the issue of the relevance of a government's motivation to the determination of export contingency, the EC discussion at paragraph 129 takes excerpts from the US second written submission completely out of context. In the passage at issue, the US was responding to the EC's so-called "countervailing explanations" argument. The US considers that, even if the governments had non-export-related motivations for providing Launch Aid, that would not sever the tie between the provision of Launch Aid and anticipated exportation. That does not mean that the existence of a government motivation to support exports would be irrelevant to a finding that the provision of Launch Aid is export contingent.²⁸⁰

4.171 The US notes that at paragraph 144 of its second oral statement, the EC professes confusion over its use of the words "precondition" and "predicate" in its second written submission; it does likewise, at paragraph 151 of its statement, with respect to the word "commitment." The US notes that the EC states that these words do not appear in Article 3.1(a) or footnote 4 of the

BCI deleted, as indicated [***]

SCM Agreement. According to the US, the EC is rebutting an argument the US has not made. The US points out that the key word that does appear in footnote 4 is the word "tied." The provision of a subsidy must be "tied to" actual or anticipated exportation or export earnings. There may be any number of ways in which that "tied to" relationship can be established. One would be, for example, where anticipated exportation is a precondition or predicate to the provision of a subsidy.²⁸¹ The US considers that in discussing the issue of export contingency, the EC would have the Panel ignore the text of footnote 4 of the SCM Agreement and, in particular, the key terms "tied to" and "anticipated exports."²⁸²

4.172 A further demonstration of the EC attempt to confuse the relevant issues and arguments is its accusation at paragraph 148 of its second oral statement that the US has asserted "new claims" regarding export contingency. What the EC calls "new claims" are nothing more than elaborations on how certain evidence introduced in connection with the US first written submission establishes the tie between the provision of Launch Aid and anticipated exportation.²⁸³

4.173 The US considers that the EC arguments are also tainted by its misreading of the panel report in *Australia – Leather*. Contrary to the EC characterization, the fact that the recipient of the subsidy at issue there was the sole exporter of automotive leather was relevant but not dispositive (as was the recipient's status as a participant in a prior program). And in any event, Airbus is the only EC exporter of LCA. The EC also ignores key facts, including that one of the grant disbursements at issue in *Australia – Leather* was made before any of the anticipated exportation had occurred. The EC ignores the sale-based repayment obligations in the Launch Aid contracts, which make them distinguishable from the loan contract in *Australia – Leather*. And it ignores that the guarantee of repayment referred to by the *Australia – Leather* panel is entirely unlike the "guarantees" provided in certain Launch Aid contracts.²⁸⁴

4.174 Finally, the US argues that the EC recourse to portions of the preparatory work for the SCM Agreement is misplaced. The US considers that the EC assertion that the US approach to Article 3.1(a) would lead to manifestly absurd or unreasonable results is based on arguments the US has not made.²⁸⁵ The US argues that contrary to the EC statement, it is not the case that, following the US view, every loan in a globalized sector would be an export-contingent subsidy. Typical loans are paid out of the debtor's general cash flow, not out of a particular revenue stream that necessarily is tied to exports. The US argues that it is the fact that Launch Aid, under the terms of the Launch Aid contract, is tied to levels of sales which can be met only through export that makes Launch Aid export contingent.²⁸⁶

2. Arguments of the European Communities

4.175 The EC notes that the US claims that seven measures at issue contain subsidies contingent, in law or in fact, upon export performance, within the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement. The EC disagrees both with the US presentation of the legal framework and with the inferences that the US attempts to draw from the facts it asserts and the evidence it adduces.²⁸⁷

²⁸⁶ US, FCCS, Executive Summary, para. 19.

²⁸⁷ EC, FWS, Executive Summary, para. 42.

BCI deleted, as indicated [***]

4.176 The EC rejects the US assertions that each of the seven measures constitutes an export contingent subsidy. The EC maintains that it sets out the correct legal standard and demonstrates that the US has not produced a single piece of evidence which could lead to the conclusion that any of the seven measures contains an export contingent subsidy.²⁸⁸

(a) Preliminary Observations

4.177 According to the EC, in its prohibited subsidies claims, the US has neither asserted nor demonstrated the existence and precise content of a single or general measure in the nature of a subsidy programme, "as such" or otherwise, whether labelled "Launch Aid" or otherwise,²⁸⁹ and even if the relevant measures at issue would be found to contain subsidies to current EC producers of LCA (quod non), they would not be export contingent subsidies.²⁹⁰ Rather, according to the EC, the US frames its claims by reference to each of the seven distinct and different measures identified by the US,²⁹¹ which the EC refers to by reference to the title of the particular measure.²⁹² The EC contends that this is a consequence of the US decision to frame its claims by reference to alleged facts and evidence particular to each of the seven measures.²⁹³ According to the EC, the Panel must assess each of the US claims individually,²⁹⁴ by reference to the specific evidence adduced by the US with respect to that claim and measure, and weighing the evidence by reference to the specific US assertion the evidence was adduced to support.²⁹⁵

4.178 The EC submits that the US repeatedly confirms and emphasises that it makes its claims on the basis of alleged subsidies allegedly contingent upon "anticipated" exports and makes no claims on the basis of alleged subsidies contingent upon "actual" exports. The EC argues that the Panel must address only the claims made by the US and is not entitled to address any supposed subsidy contingent upon "actual" exports.²⁹⁶

4.179 According to the EC, the US claims against the seven measures are both "in law" and "in fact".²⁹⁷ The EC invites the Panel to approach the US claims (which the EC finds ambiguous and unclear)²⁹⁸ and the legal interpretation of Article 3.1(a) and footnote 4 in a systematic and coherent manner and having regard to the interpretative rules in the Vienna Convention,²⁹⁹ which takes into account the overall design and architecture of the provision, giving meaning to all its terms, both in the case of *ad hoc* subsidies and subsidy programmes.³⁰⁰ The EC argues that, because there is a single

BCI deleted, as indicated [***]

standard,³⁰¹ it is imperative to understand what the "in law" standard is before proceeding to consider any "in fact" claim.³⁰²

4.180 The EC argues that, with respect to both the "in law" claims and the "in fact" claims, the US has not demonstrated for any one of the seven measures any one of the three elements cumulatively required for there to be a subsidy contingent upon export: subsidy; contingency; export performance. Thus, if the Panel finds in favour of the EC with respect to any one of these three requirements, it may exercise judicial economy with respect to the other two.³⁰³

4.181 With respect to subsidy, the EC does not accept that the US has demonstrated that any of the seven measures are subsidies.³⁰⁴ Further, the EC argues that the contingency referred to in Article 3.1 relates to the subsidy, not to the financial contribution alone. The EC argues that given that the US confirms that it attempts to demonstrate contingency with respect to the financial contribution alone, its claims must therefore be dismissed.³⁰⁵

4.182 With respect to contingency, the EC recalls that the terms "contingent upon" and "tied-to" are synonyms,³⁰⁶ and that these terms refer to an "if-then" concept, not a concept based on anticipation or consideration or motivation.³⁰⁷ The EC cites *Black's Law Dictionary* in support of its arguments regarding the proper interpretation of the term "contingent" or "condition".³⁰⁸

4.183 The EC contends that the US is interpreting the term "actual" as if it means "real" – that is, "actually" has taken place in the past or "actually" takes place in the future; and the term "anticipated" (in juxtaposition to the term "actual") as if it means "potential", so that, according to the US, and specifically in the case of an *ad hoc* subsidy, whether or not the "anticipated" export ever "actually" takes place is irrelevant to the question of whether or not there is a subsidy contingent upon export performance. Thus, for the US, the required condition is not export, but "the anticipating of" export; this necessarily involves an enquiry into the hypothetical "state of mind" or "intent" of a natural person whose thoughts are imputable to the defending Member, with mere anticipation or consideration or motivation being sufficient to demonstrate contingency – an approach that the EC considers inherently flawed and legally erroneous.³⁰⁹ The EC contends that the US bases its arguments on terms such as "precondition" and "predicate" that are not found in the text of the SCM Agreement.³¹⁰

4.184 According to the EC, in order to properly appreciate the correct interpretation of the term "actual or anticipated" it is appropriate to make a systematic analysis, distinguishing between the case of an *ad hoc* subsidy and the case of a subsidy programme. For the EC, the term "actual or anticipated" makes it clear that the prohibition in Article 3.1(a) and footnote 4 captures all exports occurring before or after the measure establishing the contingency is enacted, if the fact of export completes or would complete the right to a subsidy. The timing of any export or payment makes no substantive difference.³¹¹ Thus, specifically in the case of an *ad hoc* subsidy, the EC argues that the

BCI deleted, as indicated [***]

correct interpretation is that the term "actual" means an export that exists (that is, has already taken place) at the moment when the subsidy is deemed to exist within the meaning of Article 1 of the SCM Agreement, whilst the term "anticipated" (also juxtaposed to the meaning of the term "actual") means an export that has not yet taken place at the moment when the subsidy is deemed to exist, but will take place in the future.³¹² The EC argues that its position is supported by the context and object and purpose, and confirmed by the preparatory work.³¹³

4.185 The EC submits that if the US interpretation was accepted, then findings of export contingent subsidies would be more likely in the case of small or export dependent economies, or in the case of global markets³¹⁴ because export would appear to loom larger in the set of potential considerations.³¹⁵ It is precisely the concept of contingency that guards against such an outcome. The EC considers that the US pays lip service to this principle; but in practice ignores it for the purpose of its submissions to the Panel.³¹⁶

4.186 The EC emphasises with particular reference to this issue that the US ignores the overall design and architecture of Article 3.1(a) and footnote 4. The term "actual or anticipated" in footnote 4 confirms that the provision captures the whole range of possibilities, *i.e.*, exports that currently exist at the time of the initial grant (actual exports) as well as those that occur in the future (anticipated exports); and the whole range of evidence. Footnote 4 does change the basic legal standard of contingency from "if-then" to "because". "Becauseness" might (or might not) be evidence of contingency, but it is not itself to be confused with contingency, just as "the anticipating of" export is not to be confused with contingency.³¹⁷ In the EC view, the US makes no effort to demonstrate why and how the evidence it adduces about alleged "becauseness" demonstrates the existence and precise content of a subsidy contingent upon export, notably as regards any supposed subsidy programme. By its own terms, therefore, the US makes no *prima facie* case, because it is based on this false premise. The systemic implications of the US interpretation, if accepted, would effectively empty the requirement of contingency of meaning, converting a prohibition based on contingency into one based on some sort of "motivation" or "effects" based test.³¹⁸ This is not what the Members agreed. The EC adds that its interpretation of Article 3.1(a) of the SCM Agreement and footnote 4 is confirmed by the preparatory work.³¹⁹

4.187 The EC considers that the US, confounding different factual and legal issues, refers to certain documents that may speak to the issue of *anticipation* or consideration or motivation and asserts that it has thereby demonstrated the existence of export contingent subsidies. However, the EC submits, it is impossible to discern in the US first written submission how the asserted facts and adduced evidence actually support the alleged legal conclusion, particularly with respect to the required *contingency*. Indeed, what the US case boils down to is the assertion that anticipation of sales plus export orientation in a global market demonstrates an export contingent subsidy, an assertion that has been rejected by panels and the Appellate Body repeatedly in previous cases.³²⁰

4.188 The EC argues that mere anticipation, or even consideration or motivation, does not constitute contingency. The EC contends that the provisions identified by the US in each of the seven measures

³²⁰ EC, FWS, Executive Summary, para. 46.

BCI deleted, as indicated [***]

do not provide for a subsidy upon export, but a *repayment* upon sale, which is the reverse of a subsidy. The EC explains that the repayment provision contains a contingency in the sense of a legally described condition (sale) the future factual fulfilment of which will entail a legal consequence (agreement by the company to make a repayment to the government). However, the EC maintains that this is not the contingency required by Article 3.1(a) and footnote 4 of the SCM Agreement. It is not by combining export orientation (or anticipation in a global market) with an irrelevant contingency that the US is going to generate export contingency.³²¹ The EC considers that the US position is inconsistent with *Australia – Automotive Leather II* and *Canada – Aircraft*.³²²

4.189 In any event, however Article 3.1(a) and footnote 4 of the SCM Agreement are construed, the EC contends that the facts asserted and evidence adduced by the US do not demonstrate that any one of the seven measure is a subsidy contingent upon export.

4.190 With respect to export performance, according to the EC, the US is effectively arguing that a subsidy contingent upon mere performance would be prohibited; whereas it is only subsidies contingent upon *export* performance that are prohibited. The EC explains that the text of Article 3.1(a) and footnote 4 refers repeatedly to export performance, whereas the US argues that there is a condition of performance. The EC finds support for its argument in the context of the Illustrative List of Export Subsidies in Annex I of the SCM Agreement, which refers repeatedly to exports and/or the "favouring" thereof; in Articles XVI:1 and XVI:II of the GATT 1994 (which refer respectively to the effects of neutral subsidies and subsidies on exports); and in Article 3.1(b) of the SCM Agreement, which refers to subsidies contingent upon the use of domestic over imported goods. The EC finds further support for its argument in the object and purpose expressed in the preamble of the GATT 1994 and in the overall design and architecture of the SCM Agreement. According to the EC, export contingent subsidies are prohibited because such measures are a particularly effective method for partitioning markets, allowing Members to create an incentive for companies to export, whilst avoiding that domestic prices are driven down, thus frustrating the basic objective of the WTO Agreements to promote fair international trade. However, as the preparatory work also confirms, it was not the intention of WTO Members that all subsidies to firms with both domestic and export sales should be prohibited, as the final sentence of footnote 4 confirms. Any effects of neutral subsidies to exporting companies remain subject to Parts III and V of the SCM Agreement.³²³

4.191 More generally, the EC also argues that the existence and operation of the 1992 Agreement are facts surrounding the adoption of the measures. In the present case, as the US would have it, the US maintained with the EC for almost a decade an agreement permitting measures that the US knew to be prohibited subsidies. Further, the US view would appear to be that, whilst the support agreed for Boeing has not caused adverse effects to the interests of the EC, the support agreed for Airbus (that is, the essential *quid pro quo* in the 1992 Agreement) is prohibited. The EC submits that these are *facts* that the Panel *must* take into consideration when assessing the *credibility* and *plausibility* of the interpretation of Article 3.1(a) and footnote 4, and the assessment of the facts now advanced by the US.³²⁴

4.192 For these reasons, the EC concludes that the US has failed to demonstrate any of the three requirements of Article 3.1(a) and footnote 4 of the SCM Agreement. The EC emphasises that the Panel should first consider the claims "in law", and then the claims "in fact". The EC also emphasises that the Panel should exercise particular rigour with respect to the existence and precise content of the

BCI deleted, as indicated [***]

measures, especially with respect to the "in fact" claims, and should assess each of the seven measures individually.³²⁵

(b) No subsidies contingent in law upon export performance

4.193 The EC comments on five issues of legal interpretation: the existence of a subsidy within the meaning of Article 1.1 of the SCM Agreement, the condition (export performance), consequence (grant of a subsidy) and contingent relationship (or contingency) required by Article 3.1(a) and footnote 4, and the fact that the burden of proof is on the US to demonstrate its claims.³²⁶ The EC considers that the US has not demonstrated that any of the seven measures at issue contain a subsidy contingent in law upon export performance. In this respect, the EC contends that the provisions cited by the US do not even have the content asserted by the US, but merely contain an agreed schedule.³²⁷ In any event, according to the EC, the US has failed to demonstrate the required condition (export performance), the required consequence (grant of a subsidy), particularly since the consequence of achieving certain LCA sales is to *pay* the member State, and not to receive a grant, or the required contingency. Because these requirements are cumulative, for any one of these reasons considered in isolation the US claims must be rejected.³²⁸

4.194 In the EC view, the US has also failed to demonstrate that an export contingent subsidy can be "necessarily implied from the measure". In *Canada – Autos* the grant of a subsidy in the form of an import duty exemption was contingent upon a Canadian vehicle manufacturer respecting a "ratio" between the value of its production and the value of its domestic sales. For example, the ratio could be fixed at 100:100, which could be respected by selling all production in Canada, without import or export; or by exporting and importing equal value (for example, 100 produced, of which 80 sold in Canada and 20 exported; 20 imported and sold). Thus, a ratio of 95:100 permitted import value to exceed export value without loss of subsidy, but only up to the 5 percent limit fixed by the ratio. The panel and the Appellate Body correctly reasoned that, at the limit of the ratio, the only way for a manufacturer to import (and thus obtain the subsidy) would be to export, thus maintaining the ratio. The measure therefore provided for the grant of a subsidy contingent in law upon export performance. This could be deduced through elementary reasoning from the provisions of the measure itself.³²⁹ The EC points out that in the present case, the US relies upon documents such as the contract, the GMF and the project appraisal. According to the EC, these do not demonstrate a subsidy contingent in law in the manner of the *Canada – Autos* case or otherwise.³³⁰ According to the EC, the US has acknowledged that the seven measures are "origin neutral", and that the US arguments depend upon the supposed "market context", thus confirming that the US "in law" claims are without merit.³³¹

(c) No subsidies contingent in fact upon export performance

4.195 The EC argues that, however Article 3.1(a) and footnote 4 of the SCM Agreement are construed, the US has failed to demonstrate a subsidy contingent in fact upon export performance. The EC first explains that the legal standard is the same (only the relevant evidence is different), that anticipation of (or consideration of or motivation by) (sales, including exports) does not, in itself, demonstrate contingency, and that export-orientation is insufficient (all points with which the US agrees).³³² The EC then shows that a simple review of the facts and evidence reveals that the US has

BCI deleted, as indicated [***]

failed to demonstrate the required condition (export performance), since the documents cited by the US in support of its claim merely demonstrate a concern with profit, wherever it may be earned in a global market, the required consequence (grant of a subsidy), or the required contingency. Indeed, not only are the US claims not supported by the documents, they flatly contradict them, because under the terms of the contracts the funds are advanced and remain with the recipient even if no export or for that matter sale or delivery ever occurs.³³³ The EC argues that once again, because these requirements are cumulative, for any one of these reasons considered in isolation the US claims must be rejected.³³⁴

4.196 The EC contends that a review of the documents adduced and cited to by the US, measure-by-measure, and addressing the document by reference to the asserted fact in support of which it is adduced, reveals that the US has failed to make a *prima facie* case. The EC begins with the UK measure relating to the A380 and the thirteen documents adduced by the US to demonstrate "anticipation", explaining that: the repayment provision of the contract is origin neutral; as are the 1999 and 2000 Global Market Forecasts, a 1999 Airbus briefing that re-iterates the 1999 forecast, the project appraisal and the business case. The EC provides similar explanations with respect to a UK government press release, and press reports from AFX News Limited press report, AviationNow and the Economist, and with respect to a "position paper" entitled Aeronautics for Europe submitted to the European Commission by the External Advisory Group for Aeronautics.³³⁵ The EC provides a similar analysis with respect to the three documents adduced by the US in support of its assertion that there is contingency.³³⁶ The EC provides a comparable analysis, with the same result, for each of the seven measures.³³⁷

4.197 The EC argues that reduced to its essence, the US case is that any royalty based financing (allegedly on terms below a market benchmark) in a global market will always be a subsidy contingent upon export performance, for two reasons. First, because, in the long term, a company doing business in a truly global market is likely to have to sell into that global market (and not just its home market) in order to survive. Second, because achieving a market-based return on royalty based project finance is likely to include global sales, or in other words sales in both domestic and export markets. Thus, the smaller or more export-dependent an economy, or the more global a subsidised product market, the more likely that there will be, according to the US, a subsidy contingent upon exports. The EC submits that this approach is incorrect, and not supported by the facts.³³⁸

4.198 The EC explains that the repayment provisions cannot create contingency in the sense of Article 3.1(a) and footnote 4. The prohibition in Article 3.1(a) is *neutral* as to the *type* of the subsidy, meaning that it applies equally to all types of financial contributions. The EC notes that the US interpretation would create an incentive for Members to make outright subsidy grants, rather than financial contributions that foresee a return.³³⁹ The repayment provision in the contract does not somehow magically convert the loan into an export contingent subsidy, by "necessary implication" or by means of any other obscure assertion, not least in the light of the obvious countervailing explanations as to the commercial rationale for the existence of such a repayment provision. In the EC view, the US attempt to dismiss these explanations with the puff that "the EC is only proving our point" is at once wholly inadequate and incomprehensible. In demonstrating that the reason for the existence of the repayment provision *has nothing to do with export markets* – the neutrality point that

³³⁹ EC, SNCOS, Executive Summary, para. 5.

BCI deleted, as indicated [***]

the US actually admits – the EC considers that it demonstrates that export contingency is not the "necessary implication" of the repayment provision, as the US asserts.³⁴⁰

4.199 For example, with regard to the United Kingdom measure relating to the A380, the US asserts that it has demonstrated the existence of a subsidy contingent in fact upon export performance because "the evidence demonstrates that, from the outset, the A380 was conceived primarily as a product for export markets in Asia". According to the EC, this assertion is entirely without merit. The United Kingdom did not influence Airbus' product design. Rather, demand, as reported in the *Airbus Global Market Forecasts* is what influences Airbus' product design.³⁴¹

4.200 The EC argues that there are perfectly rational countervailing explanations that justify the existence of the repayment provision in each of the contracts, which have nothing to do with exports.³⁴² The EC contends that, in attempting to refute these countervailing explanations with the repeated affirmation that motivations are irrelevant to contingency, the US expressly confirms that its case is entirely without merit.³⁴³

4.201 According to the EC, the US arguments are inconsistent with, and the EC's arguments are consistent with, the panel report in *Australia - Automotive Leather II*. Contrary to what the US asserts, the facts of the present case are diametrically opposed to those surrounding the grant contract in *Australia - Automotive Leather II*; and the panel's reasoning regarding the loan contract in that case supports the EC position and disproves the US position.³⁴⁴ The same is true with respect to the panel and Appellate Body reports in the *Canada – Aircraft* case, in which almost all of the panel's considerations related to a subsidy programme (the US makes no claim regarding a prohibited subsidy programme in the present case³⁴⁵), which exhibited both the required condition (export performance) and the required contingency, and which thus tainted the subsidy measures at issue, which were instances of the application of the programme, irrespective of their form.³⁴⁶

4.202 The EC argues that, faced with the EC rebuttal, the US attempts to impermissibly alter and enlarge the scope of its case with the late introduction of new arguments and new citations to evidence regarding supposed "reciprocal commitments", and that these new arguments should be dismissed for substantially the same reasons. None of the provisions to which the US refers contains any "commitment" to export, nor conditions the right to retain funds on export.³⁴⁷

4.203 In concluding, the EC invites the Panel to approach the US claims in a systematic manner, based on the ordinary meaning, context and object and purpose of the relevant provisions, measure-by-measure. The EC argues that by simply reviewing the facts asserted and evidence adduced by the US, it becomes immediately apparent that the US has failed to even make a *prima facie* case, and that all its claims must be rejected.³⁴⁸

4.204 The EC concludes that one-by-one the various elements of the US case have been challenged, and the US has been forced to concede.³⁴⁹ It is not the global market.³⁵⁰ It is not the fact that Airbus

exports (or is an "export-oriented" company).³⁵¹ It is not the alleged "anticipating (or consideration) of" exports.³⁵² It is not the alleged "motivation".³⁵³ It is not performance that includes export performance.³⁵⁴ It is not the fact that the measure foresees a return.³⁵⁵ And it is not the repayment provision.³⁵⁶ In the EC's view, it is just because the alleged recipient is Airbus. That, the EC contends, is the only reason why the US insists that somehow "altogether" its assertions demonstrate the existence and precise content of a subsidy contingent upon export performance, when manifestly they do not.

E. WHETHER CERTAIN LOANS FROM THE EUROPEAN INVESTMENT BANK SUBSIDIZED THE DEVELOPMENT OF AIRBUS LARGE CIVIL AIRCRAFT

1. Arguments of the United States

4.205 The US argues that the European Investment Bank ("EIB") has repeatedly subsidized the development of Airbus large civil aircraft. The US notes that the EIB has provided significant financial support to Airbus for the development of its new models of large civil aircraft. The US explains that the financial support has taken the form of loans – at least 11 to date – with a total principal value of approximately EUR 1,600,000,000. The EIB provides the loans for the development of specific models of Airbus LCA, usually as a supplement to the Launch Aid that the various Airbus governments provide for the same models. The US submits that each of the EIB loans is a subsidy within the meaning of Article 1.1 of the SCM Agreement that is specific within the meaning of Article 2 of the SCM Agreement.³⁵⁷

4.206 The US sets out the factual background of the European Investment Bank. It explains that the EIB, "the financing institution of the European Union, was created by the Treaty of Rome. The members of the EIB are the member States of the European Union, who have all subscribed to the Bank's capital." According to the US, the EIB describes itself as "the EU's policy-driven Bank." It has "close working relations with the other EU institutions, in particular the European Parliament, the European Council and the European Commission." It provides financing in support of EU policy priorities. The projects it funds must "help achieve EU objectives such as making European industries and small businesses more competitive." For all of these reasons, the EIB is, according to the US, a "public body" within the meaning of Article 1.1(a)(1) of the SCM Agreement.³⁵⁸

4.207 The US contends that the loan that the EIB provided to EADS in 2002 is a specific subsidy under Articles 1 and 2 SCM Agreement. The US states that in 2002, the EIB agreed to provide a EUR 700,000,000 "individual loan" to EADS for R&D related to the Airbus A380. The loan is a subsidy within the meaning of Article 1.1 of the SCM Agreement that is specific within the meaning of Article 2 of the SCM Agreement.³⁵⁹

4.208 First, according to the US, the EIB is a public body, and the EUR 700,000,000 that it agreed to provide to EADS for the A380 – like all of the other EIB measures that the US is challenging in

³⁵⁰ US, SWS, para. 253.

³⁵⁸ US, FWS, Executive Summary, para. 38.

³⁵⁹ US, FWS, Executive Summary para. 39.

BCI deleted, as indicated [***]

this dispute – is in the form of a loan. Accordingly, it is a financial contribution within the meaning of Article 1.1(a)(i) of the SCM Agreement.³⁶⁰

4.209 Second, according to the US, the loan confers a benefit because it is on terms that are more favourable than those available in the market. The US argues that the EIB readily admits that its entire purpose is to support the EU's public policy objectives by providing loans on better terms than the recipients could otherwise obtain, if they could obtain the loans at all. According to the US, the EIB effectuates this benefit by passing on the interest rate it pays on its own (AAA-rated) capital market borrowings to its non-AAA rated borrowers, and by lending the funds at cost. Thus, like the *Technology Partnerships Canada* ("TPC") program at issue in the *Canada – Aircraft* dispute, the EIB "neither seeks nor earns a commercial rate of return" on the loans it provides. The *Canada – Aircraft* panel treated this factor as dispositive in determining the existence of a subsidy in that dispute. It is equally dispositive with respect to the EIB.³⁶¹

4.210 Furthermore, the information that the EC provided during the Annex V process confirms, in the US view, that the EIB loan for the A380 confers a benefit because the interest rate on the loan is below the risk-adjusted commercial borrowing rate that the market would have charged EADS in 2002 on an equivalent long-term loan. The loan is also specific within the meaning of Article 2 of the SCM Agreement. It is disproportionately large both in percentage and in absolute terms. Also, every "individual loan" that the EIB provides is entirely discretionary.³⁶²

4.211 Finally, the US submits that the loans that the EIB provided to Airbus between 1988 and 1993 are specific subsidies. The EUR 700,000,000 that the EIB agreed to provide for the A380 was not its first loan to an Airbus project. Since 1988, the bank has provided at least eleven additional loans for the development of specific Airbus models. The US contends that, like the EUR 700 million loan for the A380, each of these additional loans is a specific subsidy to Airbus within the meaning of Articles 1 and 2 of the SCM Agreement.³⁶³

4.212 In its second written submission, the US points out that the EC responded principally by contesting that the EIB loans are specific and that they confer a benefit. First, with regard to specificity, the US considers that among other flaws, the EC argument relies heavily on an approach to disproportionality for purposes of determining whether a subsidy is *de facto* specific that would measure each loan provided by the EIB against the totality of EIB lending over its entire five-decade-long history.³⁶⁴ The US argues that the EC argument that the Panel should judge the specificity of EIB loans by examining all loans it has provided to all sectors since its founding would, if accepted, enable massive circumvention of the SCM Agreement.³⁶⁵

4.213 The US considers that the EC is mistaken in its view that the EIB loans at issue are not specific within the meaning of Article 2 of the SCM Agreement.³⁶⁶ With almost no discussion, the EC asserts that "{t}he challenged EIB loans... cannot be specific under Article 2.1(a) SCM Agreement," apparently based on the absence of explicit limitations on eligibility for EIB loans. However, the US asserts, if the unique terms and conditions of a given subsidy contract are sufficiently different from the terms and conditions of other contracts granted under the same subsidy program, this can cause the subsidy at issue to fall outside the parameters of the broader program of

³⁶⁰ US, FWS, Executive Summary, para. 40.

³⁶⁶ US, FNCOS, Executive Summary, para. 14.

BCI deleted, as indicated [***]

which it is a part. In that case, the US explains, the subsidy ought to be considered separately from the larger program for purposes of a *de jure* specificity analysis under Article 2.1(a) of the SCM Agreement.³⁶⁷

4.214 The US argues that despite repeated assertions that eligibility for EIB lending is "objective" and "automatic" (and therefore, in the EC view, non-specific as a matter of law), the EC position is belied by its own explanation. In particular, the US notes that the EC describes multiple layers of review that must be completed in order for the EIB to approve a loan application, showing that obtaining an EIB loan is anything but "automatic." Also, the factors considered during that process show that the criteria or conditions governing eligibility – such as "improvement of the efficiency and/or quality of the infrastructure" and "alleviation of social problems or exclusion" – are subjective rather than objective. The US argues that while the EC calls the EIB Eligibility Guidelines "a very good example of criteria which are economic in nature and horizontal in application, and which are not favouring enterprises of any sector (or even any size)," it provides absolutely no demonstration of why this characterization is accurate. And, indeed, it is not.³⁶⁸

4.215 The US considers that in each case, the loans are discretionary, "individual" loans that are disproportionately large.³⁶⁹ The US points out that the EC has refused to provide the information that the Panel would need to evaluate the unique terms and conditions of most of the EIB loans at issue. Moreover, the EC refused to provide information about other EIB lending that might allow for an analysis of the manner in which the EIB exercised its discretion in providing loans to Airbus as compared with other borrowers.³⁷⁰ The US explains that the EC provides no evidence to show that the EIB loans to Airbus are sufficiently similar to other loans granted by the EIB that they cannot be considered subsidies that are specific within the meaning of Article 2.1(a).³⁷¹

4.216 The US submits that the EC has failed to demonstrate that the EIB loans are non-specific within the meaning of Article 2.1(b) of the SCM Agreement. According to the US, the EC's own description of the EIB's loan approval process makes clear that its loans are discretionary, and the facts further demonstrate that the challenged loans were specific to Airbus.³⁷² The US considers that the EC argues without basis that the EIB loans to Airbus must be analyzed in comparison to all the lending activity of the EIB over its entire 50-year history. In contrast, the US looks at *de facto* specificity based on how the EIB itself describes its lending activity, comparing the 2002 loan to EADS, for example, to the EIB's i2i program, which involved a "dedicated" amount of money loaned over a period of time with starting and ending points prescribed by the EIB.³⁷³

4.217 With regard to whether the EIB loans confer a benefit, the US considers that the EC is wrong to suggest that EIB loans do not confer a benefit on Airbus because of supposed (but completely unsubstantiated) "obligations imposed by the EIB" that, according to the EC, a commercial lender does not impose on its borrowers.³⁷⁴ The US has presented evidence showing that the EIB's very purpose is to provide financing on terms more favourable than those available in the market. The EC misleadingly attempts to downplay the unmistakable import of statements about the EIB's mission. For example, the EC asserts that the requirements that EIB interest rates "be set at a level enabling EIB 'to meet its obligations, to cover its expenses and to build up a reserve fund'" and that the EIB

BCI deleted, as indicated [***]

"not grant any reduction in interest rates" mean that "the bank's Statute expressly prohibits the bank from subsidising any borrower." But that is not what these provisions mean. All banks – regardless of whether they are for-profit or (as the EIB) not-for-profit – are required "to meet ... obligations, to cover ... expenses and to build up a reserve fund." What distinguishes a market lender from the EIB is that a market lender, in addition to meeting obligations, covering expenses, and building up a reserve fund, seeks a profit.³⁷⁵

4.218 Further, the US notes that the EC openly admits that the interest on EIB loans provided to Airbus from 1988 to 1993 did not include a risk premium, making them preferential to those available in the market by definition. Even with respect to the 2002 EIB loan to EADS for A380 development, the EC is less than clear as to whether the interest rate actually included a risk premium. The US argues its contention that EIB loans confer a benefit on the recipient is further confirmed by a comparison between the EIB loans to Airbus and market benchmarks established on the basis of the only two EIB loans for which the EC identified the precise terms and conditions.³⁷⁶

4.219 In addition to lower-than-market interest rates, the US argues that the EIB loans confer a benefit by excluding a commitment fee. The EC assertion that uncertainty about date of disbursement and the final interest rate on an EIB loan explain the absence of a commitment fee ignores the purpose of a commitment fee as compensating for providing a borrower the valuable option of drawing on funding at a later date.³⁷⁷ The US considers that the EC's proposed market benchmark for measuring the benefit conferred by EIB loans is flawed for several reasons, including, *inter alia*, its reliance on bonds issued in the US, notwithstanding known yield differences between such bonds and dollar-denominated bonds issued by persons outside the US.³⁷⁸

4.220 At the second Panel meeting the US also asserted that in trying to show that EIB loans do not confer a benefit, the EC mistakenly focuses on the activities of international lending institutions in general (rather than the EIB in particular), inappropriately discounts the fact that the EIB does not seek to maximize profits, and alludes vaguely to hypothetical "other lending conditions" that "can ... outweigh{ }" "{a}n advantageous interest rate" while providing no evidence of such conditions.³⁷⁹

4.221 In the US view, the EC's own words speak for themselves. According to the US, the EC acknowledged that the EIB's decisions are "policy driven," that they are "not determined by purely commercial considerations," and that the EIB has no need to "maximize profits."³⁸⁰ For the US, this acknowledgment confirms that the financing provided by the EIB provides a benefit to Airbus as compared to financing provided by commercial lenders – that is, lenders who do have a need to "maximize profits." Accordingly, this financing constitutes a subsidy.³⁸¹

4.222 Finally, the US asserts that the EC belief that loans for which the face amount has been repaid cease to confer benefits and cause adverse effects ignores that those loans were below market, and so the subsidy element has not been repaid.³⁸²

2. Arguments of the European Communities

4.223 The EC rebuts the US assertions that the EIB repeatedly subsidised the development of Airbus LCA through loans provided to EADS and other companies.³⁸³

4.224 First, the EC asserts that it corrects a number of factual misinterpretations put forward by the US, and provides a corrected description of the EIB's status and functioning.³⁸⁴ The EIB is a *sui generis* multilateral financial institution established in 1957, by the Treaty establishing the European Community (Treaty of Rome of 1957, hereinafter "EC Treaty") and created by sovereign governments, sharing many similarities with the World Bank and other financial institutions that operate at a regional or international level. The task of the bank is set forth in Article 267 of the EC Treaty.³⁸⁵ To achieve the objectives set out in Article 267 of the EC Treaty, the EIB formulates a number of more specific priorities and objectives.³⁸⁶ The US attempts to imply that EIB is controlled by member State governments through the Board of Governors and the Board of Directors are simplistic and misleading. The EIB enjoys legal personality and financial autonomy and is endowed with its own decision-making bodies. The EIB funds its operations by borrowing on the capital markets rather than by drawing on the budget of either the European Communities or the member States, in accordance with its Statute. Interest rates on loans provided by the bank are adjusted to conditions prevailing on capital markets. The EIB is not allowed by its Statute to grant subsidies.³⁸⁷ The EIB enjoys full independence in the conduct of financial operations pursued to further its objectives, as confirmed by the European Court of Justice.³⁸⁸ The EC also explains that the EIB does not promote only "European industries" as the nationality of the borrower is not a relevant criterion when granting a loan.³⁸⁹ Examples of large loans to "non-EC" companies can be found at Exhibit EC-157 (Non-BCI) of the EC's first written submission in which the EC provides a complete list of all EIB loans for the period 1957-2006.³⁹⁰

4.225 The EC explains that the EIB is, together with the World Bank, the European Bank for Reconstruction and Development and others, in a category of international financial institutions which all have the same common feature that they do not seek to maximise profit but rather pursue, through their lending, wider developmental and socio-economic policy objectives. The EC submits that the US argument that the EIB provides subsidies just because it does not focus on profit maximization would mean, if followed by the Panel, that any of these international lending institutions provides subsidies. This would not only be legally incorrect, it would also constitute a major obstacle to developmental policies around the globe.³⁹¹

4.226 The EC argues that the US failed to make a *prima facie* case with respect to those EIB loans that already were repaid³⁹² (ten out of thirteen loans challenged by the US have been fully repaid).³⁹³ The US has not explained how loans that have long been repaid constitute existing measures that the

BCI deleted, as indicated [***]

Panel should examine and determine how they cause present adverse effects to US interests.³⁹⁴ Further, at least one of the challenged loans is not properly before the Panel.³⁹⁵

4.227 Next, the EC asserts that EIB financing is not specific and that the Panel can therefore reject the US claims on that ground alone.³⁹⁶ In the EC view, the US entirely ignores that there are international financial institutions which, although operating on a basis that is actually very similar to that of commercial banks, pursue broader public policy objectives and – by their very founding charters – promote projects of all sizes in all sectors and without any discrimination. Financing by such institutions is, by definition, non-specific and – also under the terms of the US domestic law – does not constitute a subsidy.³⁹⁷

4.228 Furthermore, the EC argues that the US commits a legal error when it argues that EIB financing is specific. As regards specificity *de jure*,³⁹⁸ the EC explains that under its founding statute and the EC Treaty, the EIB provides financing across all economic sectors and promotes projects in all areas of human activity. The facts also do not support the US allegation that EIB financing can be misused to promote the interests of Airbus.³⁹⁹ In accordance with Article 267 of the EC Treaty, the EIB is legally required to extend financing to projects for companies of all sizes and across all sectors of the economy. All the terms of EIB contracts which have any relevance for the finding of subsidy (interest rate, maturity, repayment profile, etc) are set on the grounds of the same underlying criteria and methodology that apply across the board to all projects (and borrowers).⁴⁰⁰ These criteria are neutral and economic in nature.⁴⁰¹ The eligibility determination made on the basis of these criteria is automatic within the sense of Article 2.1(b) SCM Agreement.⁴⁰² The EC has provided copies of all the contracts at issue as well as the template of a standard EIB contract.⁴⁰³

4.229 The EC indicates that the US attempts to overcome these EC arguments by arguing that the challenged loans are specific *de facto*. The EC argues that in doing so, the US commits both legal and factual errors. On law, the US ignores the text of Article 2.1(c) SCM Agreement and tries to artificially narrow the period of time of consideration or the area of EIB lending as much as possible, in order to succeed with its misconceived "disproportionality" analysis. However, neither the existence of the EIB's Innovation 2010 Initiative (i2i) as an individual policy objective, nor the EIB reporting of its activities on a sectoral or on an annual basis can be validly taken as evidence of a separate programme allowing a separate and distinct "disproportionality" analysis. Since the eligibility criteria apply across sectors, and since a single loan may, and routinely does, satisfy a number of policy objectives, any "disproportionality" analysis will always be artificial, unless one would consider the entire portfolio of EIB lending, across all EIB objectives and criteria, as a "programme" in the sense of Article 2.1(c) of the SCM Agreement.⁴⁰⁴ The EC provides ample evidence showing that the US factual assertions in this respect – apart from being based on an erroneous legal theory – are also contrary to the facts.⁴⁰⁵

⁴⁰⁵ EC, SWS, Executive Summary para. 40.

BCI deleted, as indicated [***]

4.230 The EC is of the view that the specificity of the challenged EIB loans is to be examined at the level of the EIB financing as a whole. The individual loans "reflect the normal operation" of the EIB and, further, the substantive terms of these loans, such as interest rate or security and risk pricing, are set on the basis of horizontally applied criteria and methodologies which are not tailored to any individual loans. The EC explains that it would be against the object and purpose of the SCM Agreement, which is to encourage Members providing financing to employ market disciplines, including risk pricing or requiring external security, to renounce on such elements. An interpretation of Article 2 that requires a Member to confer a subsidy to ensure that that subsidy is not specific must be rejected. To determine whether a loan provided under a programme is *de facto* specific, funding offered through the programme has to be considered, not an arbitrarily selected part of it.⁴⁰⁶

4.231 The EC argues that in any event, the challenged EIB loans do not and did not confer "benefits", and are therefore not "subsidies", within the meaning of Article 1 of the SCM Agreement.⁴⁰⁷ The EC considers that the "market" benchmarks proposed by the US are grossly inaccurate and based on simplified assumptions.⁴⁰⁸ The EC provides a detailed calculation of properly-identified benchmarks with regard to all of the remaining loans. The benchmarks show that the rates for the challenged loans are either at or above market terms⁴⁰⁹ and demonstrate that none of these loans actually conferred any benefit. In any event, the EC also highlights that when making a comparison with the market, the US only takes into account one element of the loan – the interest rate – and ignores other tangible as well as less tangible aspects of the EIB lending which are of additional cost to the borrower.⁴¹⁰ Borrowers would not incur such additional costs in the market,⁴¹¹ in particular with respect to market benchmarks based on bonds, as bonds have distinct characteristics from loans.⁴¹² Thus, the additional obligations placed on the EIB borrower have to be taken into account.⁴¹³

4.232 The EC also explains that the US assertion that EIB provides subsidies merely because the EIB does not seek to maximize profits is not relevant for the determination whether a subsidy exists under Article 1 of the SCM Agreement.⁴¹⁴ The EC maintains that the US approach contradicts the well established WTO jurisprudence that a subsidy exists only if it confers a benefit on the recipient (irrespective of whether the granting authority seeks profit or not). Hence, to determine the existence of benefit, one has to compare each of the loans challenged by the US with a market benchmark.⁴¹⁵

4.233 The EC also explains that every one of the challenged EIB loans has been collateralised or, in case of the EADS loan for the A380 project, subject to a risk premium.⁴¹⁶

4.234 The EC further argues that the fact that the EIB does not charge a commitment fee is a reflection of the fact that the EIB does not undertake a commitment comparable to the one available usually on the market.⁴¹⁷

4.235 In addition, the EC asserts that the US arguments that EIB loans "supplement" MSF or other alleged subsidies are fundamentally mistaken and explains at length that the EIB is an independent

BCI deleted, as indicated [***]

institution and the decision of the Board of Directors approving a loan is based solely on business consideration and the EIB Statute.⁴¹⁸

4.236 The EIB financing cannot be said to "shift commercial risk of launch", as the United States asserts, without any justification. Thus, the EC is of the view that the effects of the challenged EIB loans can not be aggregated with other financing mechanisms concerned and that even if the EIB loans were found to be a specific subsidy, they are, as such, not likely to create any adverse effects within the meaning of the SCM Agreement.⁴¹⁹

4.237 Finally, the EC submits that the US failed to make a *prima facie* case as it ignored the fact that the challenged loans had been provided, to a large extent, to companies which no longer manufacture LCA that is alleged to cause adverse effects to US interests and that, in any event, the challenged EIB loans do not provide a benefit in the sense of Article 1.1(b) SCM Agreement.⁴²⁰

F. WHETHER THE GERMAN, FRENCH, UK, AND SPANISH GOVERNMENTS HAVE SUBSIDIZED AIRBUS THROUGH THE PROVISION OF INFRASTRUCTURE AND INFRASTRUCTURE-RELATED GRANTS.

1. Arguments of the United States

4.238 The US argues that the German, French, UK, and Spanish Governments have subsidized Airbus through the provision of infrastructure and infrastructure-related grants

4.239 The US submits that in addition to Launch Aid and EIB loans, the Airbus governments have provided massive subsidies to Airbus to develop, expand, and upgrade infrastructure and other facilities. These subsidies increased markedly in recent years in connection with the development of the Airbus A380. The subsidies at issue were granted by German authorities in Hamburg, Nordenham, and Bremen; by French authorities in Toulouse; by UK authorities in Broughton; and by Spanish authorities in numerous locations in Spain. The US contends that each of the measures is a specific subsidy to Airbus within the meaning of the SCM Agreement.⁴²¹

(a) Alleged infrastructure subsidies

(i) *Hamburg*

4.240 The US contends that when Airbus launched the A380, it decided to establish one of its A380 assembly facilities at its Hamburg-Finkenwerder site. At the time that Airbus made this decision, however, its existing facilities in Hamburg were located on a peninsula, with the river Elbe and wetlands on three sides, leaving no space on which to build the A380 facility. The US explains that Hamburg authorities solved this issue by transforming one of the wetlands – the internationally-protected "Mühlenberger Loch" – into an industrial site, at a cost of approximately EUR 751,000,000. The development of the Hamburg-Finkenwerder site and its provision to Airbus is a specific subsidy to Airbus because the Hamburg authorities created a site that the market would not have created, and because they have provided the site to Airbus for less than adequate remuneration. Hamburg also subsidized Airbus by sharing the costs to construct the A380 assembly facilities.⁴²²

⁴¹⁸ EC, SNCOS, para.370

⁴¹⁹ *Ibid.*

⁴²⁰ EC, FWS, Executive Summary para. 53.

⁴²¹ US, FWS, Executive Summary, para. 44.

⁴²² US, FWS, Executive Summary, para. 45. The United States later withdrew this latter claim, US, Answer to Panel Question 24, para 167.

BCI deleted, as indicated [***]

4.241 The US notes that the EC concedes that Hamburg spent at least EUR 695 million to create an industrial site for Airbus at Mühlenberger Loch.⁴²³ The US also notes that there is no dispute between the EC and the US that the City of Hamburg created the artificial land at the Mühlenberger Loch free of charge and free of risk for Airbus – and thereby allowed Airbus to expand its existing facilities to accommodate A380 production. The US points out that the EC approach to addressing the undisputed facts is to treat the creation of the site, the building of flood protection measures, and the building of special-purpose facilities on the site as three separate transactions, each distinct from one another, as well as being distinct from and unconnected to the lease of the newly created land and special purpose facilities to Airbus.

4.242 The US notes that the EC argues that the creation of the site, in and of itself, did not constitute a financial contribution to Airbus but, rather, the provision of general infrastructure. The EC then treats the lease to Airbus no differently from an ordinary commercial lease in which it was not necessary to first create the artificial land. The US considers that this approach ignores the reality that the City of Hamburg invested EUR 750 million into creating a site to the specifications of Airbus, an amount that Airbus otherwise would have had to spend itself on the expansion of its existing site.⁴²⁴

4.243 The US considers that the EC argument that the creation of the land was "general infrastructure" is based on a misinterpretation of the SCM Agreement and the false premise that Hamburg's "law on the development of the port" required the City to reclaim the land from Mühlenberger Loch. Hamburg spent EUR 751 million to transform a protected wetland area into an industrial site for Airbus, knowing that the project would result in a several hundred million Euro loss. A private investor would not have made such an investment.⁴²⁵

4.244 The US explains that the EC assertion that creation of the Airbus site at the Mühlenberger Loch amounted to the provision of general infrastructure is wrong for the following reasons. First, the EC theory that land for industrial and residential use in Hamburg is limited because Hamburg is "surrounded by water" is factually incorrect. Hamburg is located on the river Elbe, but it is certainly not surrounded by water, and Hamburg's own Minister for the Economy has touted the "abundant supply of office space and commercial real estate" in Hamburg.⁴²⁶

4.245 Second, the EC assertion that the creation of the new, artificial land in the Mühlenberger Loch was motivated by the need for additional land for the harbor and thus undertaken to fulfil a public task – the development of the harbor – is both legally irrelevant and factually wrong. It is legally irrelevant because the test for whether infrastructure is general is not whether it serves some "public policy objective." As for the facts, a closer examination shows that the creation of the site for Airbus does not serve the development of the Port of Hamburg, but was undertaken exclusively for Airbus. As the EC grudgingly admitted in responding to the Panel's questions, the entire site created from wetland and river areas in the Mühlenberger Loch and Rüschanal is located outside the Harbor Area as defined by Hamburg's Port Development Act. The EC also errs in describing plans for expansion of the Harbor Area.⁴²⁷

⁴²³ US, FNCOS, Executive Summary, para. 10.

⁴²⁴ US, SWS, Executive Summary, para. 39.

⁴²⁵ US, FNCOS, Executive Summary, para. 10.

⁴²⁶ US, SWS, Executive Summary, para. 40.

⁴²⁷ US, SWS, Executive Summary, para. 41.

BCI deleted, as indicated [***]

4.246 Third, the EC ignores that the Mühlenberger Loch and the Rüschanal were transformed into artificial land exclusively for Airbus. This fact is confirmed by contemporaneous statements by the European Commission, the Hamburg government, and the Hamburg Court of Appeals.⁴²⁸

4.247 The US considers that equally erroneous is the EC theory that the Airbus site amounts to general infrastructure due to the remote possibility that one day the site might be used by another user, as long as the City of Hamburg retains formal ownership of the site. It would be very easy to circumvent the SCM Agreement if the provision of infrastructure by a WTO Member to specific companies or industries – even on a decades-long basis – were excluded from the agreement by virtue of being "general infrastructure" simply due to the Member's retaining title to the infrastructure. Moreover, the EC portrayal of the relevant facts is incorrect. German planning law prohibits any use of the site other than for aircraft manufacturing and aviation purposes. And with respect to the dyke lane that surrounds the site, the EC ultimately must admit that during the period of Airbus' lease, it is open to use only by "Airbus employees and officials of Hamburg with a responsibility for dyke maintenance and security." Even assuming hypothetically that the restrictions under German planning law did not exist and that Airbus terminated its use of the newly created land, the site still would not be suitable for users other than Airbus given the land's physical and geographical situation.⁴²⁹

4.248 The US considers that the dykes around the Airbus site – built at a cost of EUR 29.3 million (about four percent of the total cost of creating the artificial land) – are not general infrastructure, because it would not have been necessary to build them absent the creation of that land for Airbus in the first place.⁴³⁰

4.249 Given that the site created for Airbus at the Mühlenberger Loch is not general infrastructure, its lease to Airbus on terms that do not include the investment in creating the site confers a benefit on Airbus. And, in addition to ignoring the cost of creating the site, Hamburg assumed the entire risk that the artificial land may subside, conferring an additional benefit on Airbus in the form of a reduced lease price until 2019.⁴³¹

4.250 The US notes that the EC argues that the cost of turning the wetland and water areas in the Mühlenberger Loch and the Rüschanal into a site for Airbus are irrelevant as a benchmark. In the EC view, these costs do not reflect the benefit to Airbus, but the cost to Hamburg. However, in the US view, the EC ignores that Hamburg's actions represent a substantial cost savings to Airbus. The US explains that had it not been for the government's creation of the land, Airbus would have had to make that investment itself.⁴³²

4.251 The US points out that even assuming, for the sake of argument, that the value of pre-existing land is the right basis for determining a market price for Airbus' lease, the actual lease price still falls below a market benchmark, as demonstrated by an analysis provided by local real estate experts Dr. Ing. Keunecke and Dipl.-Ing. Stoehr.⁴³³ The opinion to the contrary by the Hamburg Committee of Experts for Property Values is flawed in part because it accepts the proposition that the risk that the land will settle should be accounted for through a rent reduction, and in part because it uses the wrong basis under German law for calculating a market interest rate. Finally, even assuming that the land leased by the City of Hamburg had already existed (and that a market-based lease price would not,

⁴²⁸ US, SWS, Executive Summary, para. 42.

BCI deleted, as indicated [***]

therefore, have reflected the cost of creating the land in the first place), a private landowner certainly would have demanded a premium from Airbus over the lease price it would have charged any other lessee, given that this site is adjacent to Airbus' existing facilities and is the only site that Airbus could use to locate its A380 production in Germany.⁴³⁴

(ii) *Bremen*

4.252 The US argues that Germany provided DM 50 million in infrastructure subsidies to Airbus in Bremen by agreeing to extend the main runway at Bremen airport to accommodate transport flights for Airbus wings manufactured in Bremen. The governing SPD in the Bremen Parliament has explicitly described the runway as a "Werksbahn" (or "company runway") for Airbus. Airbus paid nothing for this benefit.⁴³⁵

4.253 The US notes that the EC argues that Airbus does not receive a benefit "because it is landing heavier aircraft, and is in turn paying a higher user fee." The US considers that the EC misunderstands the fee regulation adopted by the City of Bremen. The US explains that under that regulation, fees are based on maximum take-off weight, not actual take-off weight. And in any event, regardless of the maximum take-off weight, users other than Airbus are not allowed to use the extended runway. Absent an arrangement that ensures that the City of Bremen is compensated for the runway infrastructure created specifically for Airbus and open for use only by Airbus, Airbus receives a benefit from having been provided with this infrastructure.⁴³⁶

(iii) *Toulouse*

4.254 The US notes that Airbus decided to establish its second A380 assembly facility at its Toulouse site. The US contends that French authorities expended EUR 200,000,000 to transform agricultural land next to Airbus' Toulouse headquarters and the Blagnac airport into the "AéroConstellation" site – an aeronautics industrial park that French authorities described as a "tailor-made solution for the A380." The development of the AéroConstellation site and its provision to Airbus is a subsidy within the meaning of Article 1.1 of the SCM Agreement that is specific within the meaning of Article 2 of the SCM Agreement. First, the French authorities sold a portion of the site to Airbus for less than adequate remuneration. Second, the authorities are leasing the general facilities on the site (the EIG facilities) to Airbus for less than adequate remuneration.⁴³⁷

4.255 The US asserts that the French authorities spent at least EUR 78 million to develop the AéroConstellation site, plus another EUR 80 million to develop facilities on the site. Airbus purchased at least 51 hectares of the site, and the price Airbus supposedly paid is well below the amount the French authorities spent to develop the site. In this way, the French authorities conferred a subsidy on Airbus.⁴³⁸

4.256 The US notes that the EC's principal response is to argue that the goods the French authorities provided to Airbus constitute general infrastructure and therefore are excluded from the definition of "subsidy." This is another example of the EC's flawed understanding of what constitutes "general infrastructure." Moreover, as with the Hamburg site, the EC contention that the US has taken a cost-to-the-government approach to showing the existence of a subsidy ignores the fact that by

⁴³⁴ US, SWS, Executive Summary, para. 47.

BCI deleted, as indicated [***]

transforming agricultural land into an industrial site and then providing it to Airbus at a below-market price, the French authorities have conferred a benefit on Airbus in the form of a cost savings.⁴³⁹

4.257 Also, Airbus does not pay a lease price reflecting market conditions for the so-called EIG facilities (taxiways, parking, etc.) at the Toulouse site. The average annual lease price of EUR 3.1 million demanded by Grand Toulouse for Airbus' use of the EIG facilities is substantially below a market price of between EUR 9.9 million and EUR 12.1 million for the facilities and the land. Other non-commercial aspects of the lease include the fact that Grand Toulouse allows for a deferral of the lease payments.⁴⁴⁰

(b) Regional Aid

(i) *Nordenham*

4.258 The US argues that in June 2002, the parliament of the German land of Lower Saxony approved a EUR 6,000,000 grant to Airbus to help underwrite a EUR 49,000,000 expansion of Airbus' production facility in Nordenham. The purpose of the expansion was to accommodate the production of components for the A380. As a grant, the EUR 6,000,000 necessarily constitutes a subsidy within the meaning of Article 1.1 of the SCM Agreement. The US considers that the grant is also specific since it is an *ad hoc* grant exclusively to Airbus for the specific purpose of expanding its A380 component production facility.⁴⁴¹

(ii) *Broughton*

4.259 The US asserts that on September 24, 2000, the Welsh Assembly announced that it had agreed to provide a GBP 19,500,000 grant package to BAe Systems in support of its A380 wing production work in Broughton. The package included GBP 15,000,000 from the Welsh Development Agency for the "general infrastructure of a big site" and GBP 4,900,000 for the "development of people." As a grant, the GBP 19,500,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. The grant is also specific because, *inter alia*, it was an *ad hoc* grant to Airbus.⁴⁴²

4.260 The US notes that with respect to its claim concerning a GBP 19.5 million grant the Welsh Assembly provided to BAe Systems in September 2000, the EC argues that the grant is not specific within the meaning of Article 2 of the SCM Agreement. However, in the US view, the EC fails to address the circumstances under which the grants were provided. In particular, it ignores entirely BAe Systems' application for a grant under the Welsh government's RSA scheme and the reaction provoked by the rejection of that application, leading to the grant actually provided. Examining the circumstances surrounding the Welsh grant in their totality reveals that the grant indeed is specific within the meaning of Article 2 of the SCM Agreement.⁴⁴³

(iii) *La Rinconada*

4.261 The US argues that in April 2001, the Spanish Ministry of Economics issued an order approving regional grants of EUR 2,200,000 to EADS-CASA at Sevilla and EUR 814,000 to EADS-CASA at La Rinconada, Sevilla. As grants, the EUR 2,200,000 and EUR 814,000 are subsidies within the meaning of Article 1.1 of the SCM Agreement. The grants are also specific under

⁴³⁹ US, SWS, Executive Summary, para. 52.

⁴⁴¹ US, FWS, Executive Summary, para. 48.

⁴⁴² US, FWS, Executive Summary, para. 49.

⁴⁴³ US, SWS, Executive Summary, para. 56.

BCI deleted, as indicated [***]

Article 2.2 of the SCM Agreement because eligibility for the subsidies is explicitly limited to certain designated geographical regions within the jurisdiction of the authority granting the subsidies (Spain).⁴⁴⁴

(iv) *Illescas*

4.262 The US asserts that in March 2003, the Spanish Ministry of Economics approved a EUR 37,900,000 grant to Airbus España. The grant covered 15 percent of the total investment costs of an expansion of Airbus' parts and components production site in Illescas, in Toledo, Spain. The US asserts that as a grant, the EUR 37,900,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. The US contends that the grant is specific for the same reasons that the La Rinconada grants are specific.⁴⁴⁵

(v) *La Rinconada*

4.263 The US submits that in July 2003, the Spanish Ministry of Economics issued an order approving another regional grant, this time in the amount of EUR 43,100,000, to EADS-CASA at La Rinconada, in Sevilla. As a grant, the EUR 43,100,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. The grant is specific for the same reasons that the earlier La Rinconada grants were specific.⁴⁴⁶

(vi) *Puerto de Santa Maria*

4.264 The US asserts that in July 2003, the Spanish Ministry of Economics issued an order approving a EUR 5,900,000 grant to EADS-CASA at Puerto de Santa Maria, in Cadiz. As a grant, the EUR 5,900,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. The grant is specific for the same reasons that the La Rinconada grants were specific.⁴⁴⁷

(vii) *Puerto Real*

4.265 The US asserts that in July 2003, the Spanish Ministry of Economics issued an order approving a EUR 13,100,000 grant to EADS/Airbus España's facility at Puerto Real, in Cadiz. As a grant, the EUR 13,100,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. The grant is specific for the same reasons that the earlier grants are specific.⁴⁴⁸

(viii) *Puerto de Santa Maria*

4.266 The US submits that in July 2001, the government of the Spanish region of Andalusia provided a EUR 8,600,000 grant to CASA for a new production and maintenance facility in El Puerto de Santa Maria, in Cadiz. As a grant, the EUR 8,600,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. In addition, the grant is specific because it was provided as part of an Andalusian government development plan for the Bahía de Cadiz, and thus was limited to a designated geographical region of the authority granting the subsidies.⁴⁴⁹

⁴⁴⁹ US, FWS, Executive Summary, para. 55.

BCI deleted, as indicated [***]

(ix) *Sevilla*

4.267 The US asserts that in July 2002, the government of Andalusia authorized a grant of EUR 35,700,000 for an investment by EADS-CASA in Sevilla. The US explains that the grant was 75 percent financed by the European Regional Development Fund and 25 percent financed by the Andalusian government. As a grant, the EUR 35,700,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. The grant is also specific within the meaning of Article 2 of the SCM Agreement. Subsidies under the European Regional Development fund are necessarily limited to "certain enterprises located within a designated geographical region within the jurisdiction of the granting authority," and thus are specific within the meaning of Article 2.2 of the SCM Agreement.⁴⁵⁰

(x) *Puerto Real*

4.268 The US submits that in July 2003, the government of Andalusia authorized a further grant of EUR 17,500,000 for the expansion and modernization of Airbus' facilities in Puerto Real, in Cadiz. The European Regional Development Fund co-financed the grant. As a grant, the EUR 17,500,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. Additionally, the grant is specific within the meaning of Article 2 of the SCM Agreement because it was provided under a program that is limited to "certain enterprises located within a designated geographical region within the jurisdiction of the granting authority."⁴⁵¹

(xi) *Illescas*

4.269 The US argues that in March 2004, the government of Castilla-La Mancha approved a EUR 7,600,000 grant to Airbus España for the expansion and modernization of Airbus' parts and components production site in Illescas, in Toledo. The European Regional Development Fund co-financed the grant. As a grant, the EUR 7,600,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. The US considers that the grant is also specific within the meaning of Article 2 of the SCM Agreement because it was provided under a program that is limited to "certain enterprises located within a designated geographical region within the jurisdiction of the granting authority."⁴⁵²

(xii) *La Rinconada*

4.270 Finally, the US submits that in October 2004, the government of Andalusia authorized a grant of EUR 61,900,000 for an investment project by EADS-CASA in the municipalities of Sevilla and La Rinconada, Sevilla. As a grant, the EUR 61,900,000 is a subsidy within the meaning of Article 1.1 of the SCM Agreement. The grant is also specific within the meaning of Article 2 of the SCM Agreement because it was provided under a program that was explicitly limited to "certain enterprises" within the meaning of Article 2.1 of the SCM Agreement. The US notes that the EC asserts that the grant is not being used for large civil aircraft activities. However, the US argues, the evidence it provides fails to substantiate this assertion.⁴⁵³

(c) *General infrastructure*

4.271 In its second written submission the US notes that the EC argument concerning US claims relating to provisions of infrastructure rests largely on the position that much of what the US has challenged constitutes "general infrastructure" within the meaning of Article 1.1(a)(1)(iii) of the

⁴⁵⁰ US, FWS, Executive Summary, para. 56.

⁴⁵¹ US, FWS, Executive Summary, para. 57.

⁴⁵² US, FWS, Executive Summary, para. 58.

⁴⁵³ US, SWS, Executive Summary, para. 55.

BCI deleted, as indicated [***]

SCM Agreement and, therefore, is excluded from the definition of "subsidy." The US considers that to make that argument, the EC asserts a broad definition of "general infrastructure" that finds no support in the SCM Agreement or, indeed, in the EC's own practice under its state aids regime.⁴⁵⁴

4.272 The US asserts that based on its ordinary meaning, the term "general infrastructure" must include, involve, or affect all or nearly all the parts of a whole territory or community; must be completely or nearly universal, as opposed to partial, particular, or local. The US considers that the EC has proffered a very different definition that focuses on the fulfilment of broad public policy goals, such as "*enabl{ing}* members of the public at large, thereby fulfilling a public policy objective." Governments routinely act with the intention of "fulfilling a public policy objective." If any grant of infrastructure that met that test were deemed to be general infrastructure then virtually every grant of infrastructure would be excluded from the SCM Agreement's definition of "subsidy." But that result would deprive the word "general" in the phrase "general infrastructure" of any meaning. Nor do the *travaux préparatoires* for the SCM Agreement help the EC position. And, indeed, that position is contradicted by the EC's own practice under its state aids regime.⁴⁵⁵

4.273 The US points out that the EC relies on the erroneous view that any infrastructure is "general" as long as it is created for reasons of "public policy," and that all infrastructure is presumed to be general and becomes non-general only when limitations on its use are "clearly specified" and "restricted by regulation." Even under this flawed theory, however, the infrastructure provided to Airbus in Hamburg, Toulouse, and Bremen would not be "general infrastructure." Further, the government's investment in creating the infrastructure reflects the savings to the recipient – that is, the benefit – from receiving the infrastructure at a price that ignores that investment. Focusing on this fact does not represent, as the EC asserts, a cost-to-government approach to analyzing a subsidy.⁴⁵⁶

4.274 The US notes that the EC accuses it of inventing a legal test for determining whether infrastructure is general. However, what the EC refers to as the US "test" is nothing more than an application of the ordinary meaning of the term "general." The EC also repeats its argument that "knowledge about the first user does not render an infrastructure project non-general." But, once again, the EC observation is entirely beside the point. In the case of Hamburg and Toulouse, the government authorities did not simply undertake infrastructure projects with knowledge that Airbus would be the first user of that infrastructure. Rather, they undertook those projects expressly for Airbus.⁴⁵⁷

4.275 The US notes that at paragraph 212 of its second oral statement, the EC once again criticizes the US demonstration that infrastructure provided to Airbus by French and German authorities confers a benefit on Airbus. However, in each case, the governments involved undertook substantial efforts to alter the condition of certain land to make it suitable for Airbus production. The value that Airbus ultimately received was not simply the value of the bare land. The US asserts that a private landowner would have charged for these additional improvements, but the French and German authorities did not. According to the US, their provision of infrastructure to Airbus thus confers a benefit and constitutes a subsidy.⁴⁵⁸

4.276 The US notes that the EC asserts that in seeking a return on the provision of infrastructure a government need not obtain a market price if it expects to receive other "remuneration" in the form of

BCI deleted, as indicated [***]

"higher tax revenues and increased employment." However, if this were the relevant rule there would be virtually no SCM Agreement disciplines on the provision of infrastructure.⁴⁵⁹

(d) Specificity of regional aid

4.277 The US further notes that with respect to grants for the construction of Airbus and EADS manufacturing and assembly facilities provided by a regional government in Germany and by national, regional, and local governments in Spain, supported in some cases by the European Regional Development Fund, the EC's principal defense is to argue that the grants are not specific within the meaning of Article 2 of the SCM Agreement. The US considers that this argument rests on two mistaken propositions: (1) that for a subsidy to meet the regional specificity test under Article 2.2, it must be limited to a subset of enterprises within a designated geographical region, and (2) that even if a subsidy meets this mistaken standard, it nevertheless may be found non-specific by virtue of Article 2.1(b).⁴⁶⁰

4.278 In the US view, the EC reading of Article 2.2 would reduce Articles 2.1(a) and 8.2(b) of the SCM Agreement to redundancy or inutility. Article 2.1(a) provides that a subsidy "shall be specific" if access is "explicitly limit{ed}" to "certain enterprises." Yet, the EC would read Article 2.2 to provide the same thing. Article 8.2(b) made subsidies in the form of assistance to disadvantaged regions non-actionable during the period when the Article was in force, as long as the subsidies met certain criteria. One of those criteria was that the subsidies be "non-specific (within the meaning of Article 2) within eligible regions." Yet, under the EC reading of Article 2.2, if a subsidy provided to a particular region is non-specific within that region, then it is not specific under Article 2.2 in the first place. Following that logic, it would have been unnecessary to provide that a regional subsidy is non-actionable if, *inter alia*, it is non-specific within the region. Similarly, under the EC reading of Article 2.2, Article 8.1(b) would make no sense.⁴⁶¹

4.279 The US notes that the EC professes to find support for its reading of Article 2.2 in the SCM Agreement negotiating history. According to the US, the EC discussion of the history is inaccurate and ultimately does not support the EC conclusion. In particular, the EC ignores that the focus of the debate on regional specificity was on whether the fact that a subsidy was limited to a "designated geographical region" would automatically make it specific or whether, instead, regional specificity would depend on the scope of the granting authority's jurisdiction. According to the US, the EC's proposed construction of the regional specificity provision in Article 2.2 is contrary to its own practice in countervailing duty proceedings.⁴⁶²

4.280 Finally, the US points out that the SCM Agreement does not support the EC theory of a hierarchical relationship between Articles 2.1(b) and 2.2, whereby a finding of non-specificity under the former will prevail over a finding of specificity under the latter. The US highlights that when the drafters of the SCM Agreement wanted to make one provision subject to another then knew how to do so, but did not do so with respect to these two articles.⁴⁶³

2. Arguments of the European Communities

4.281 The EC rebuts the US allegations that certain infrastructure projects and regional aid constituted a subsidy under the SCM Agreement.⁴⁶⁴

(a) General Infrastructure

4.282 The EC points to the fact that the Article 1.1 (a) (iii) of the SCM Agreement excludes general infrastructure projects from its scope. Tracing back the origins of that provision, the EC argues that the provision of general infrastructure in Hamburg, Bremen and Toulouse are covered by that exception. The EC argues that having established this, to the extent that Airbus entities used, leased or purchased parts of an industrial site, no benefit was conferred on them as these transactions were done at commercial rates and backed up by independent expert assessments.

4.283 In its second written submission, the EC recalls that measures of general infrastructure are excluded from the scope of the SCM Agreement. Referring to the submissions from Canada and Korea on this issue, it explains that the phrase "general" illustrates a broader concept than the one advocated by the US. For something that is "general" to become "non-general", the limitation must be clearly specified. In other words, infrastructure does not become "non-general" because the public does not use it *de facto* or because there is uneven use. Rather, the government must have specified limitations on the general public's use.⁴⁶⁵

4.284 Moreover, concurring with Canada, the EC maintains that improvements of general infrastructure are covered by this carve-out as well. Every improvement of general infrastructure may initially have a particularly positive effect on certain immediate users. But that does not remove its character of general infrastructure, as it benefits the public at large in the long run.⁴⁶⁶

4.285 The EC notes that both Canada and Korea are of the view that limitations on the use of general infrastructure do not deprive that infrastructure of its general nature. That leads to the two-step approach that the EC has advocated in its first written submission: *First*, the governments build general infrastructure. *Second*, it may decide to put it at the disposal of certain users. The second step does not invalidate the first – rather, the second step has to be assessed on its own merits, since it is at this stage that a benefit may or may not be conferred.⁴⁶⁷

4.286 The EC asserts that it shows that the reclamation of land in Hamburg constitutes general infrastructure.⁴⁶⁸ The EC argues that contrary to what the US alleges, *Scott Paper* is not relevant to the Hamburg measure. Hamburg's measure involved the pure creation of land, in this case the conversion of wetland into usable land, which is a typical task of governments as providers of general infrastructure. Governments, unlike private actors, are bound by public law and public policy considerations in such general infrastructure measures, and there is no market for such measures where private investors act. Furthermore, Hamburg has not sold the land in the reclaimed area to Airbus Germany. On the contrary, Hamburg retains ownership of the property and the possibility to use the newly created land for other purposes after a possible termination of the lease agreement with

⁴⁶⁴ EC, FWS, Executive Summary, para. 49.

BCI deleted, as indicated [***]

Airbus. The EC submits that, therefore, Hamburg's measures of land reclamation are not "financial contributions" within the meaning of Article 1.1(a) of the SCM Agreement.⁴⁶⁹

4.287 The EC considers that the US relies on a mistaken legal test and misrepresents key facts. The EC points out that Hamburg did not create a "tailor-made industrial site" for Airbus Germany. It turned wetland into usable land. The internal development of the land was and is still being carried out by Airbus Germany, and when the land is returned to Hamburg after termination of the lease contract it must be undone.⁴⁷⁰ Even under the US test on general infrastructure, the Hamburg project would not be excluded from the notion of general infrastructure. With regard to the US argument that the Airbus site was created "exclusively" for Airbus, the EC argues that a government's knowledge of the first user does not render an infrastructure project non-general.⁴⁷¹

4.288 With regard to the US allegation that the Airbus site – apart from the quay facilities – is not part of the harbour area, the EC notes that it never claimed that the area was covered by the Hamburg Port Law. The EC's argument was that the harbour could easily be expanded to cover the newly created land, should Airbus Germany decide not to continue the lease agreement after its expiration.⁴⁷² In addition, the US argument that German planning law restricts the use of the land to aircraft manufacturing and aviation is misplaced. Under German Construction Law, a local "Bebauungsplan" can easily be amended at any time, if the regional "Flächennutzungsplan" so permits. The latter contains no restriction with regard to the aircraft industry and so the "Bebauungsplan" can be amended when the need arises in the future.⁴⁷³

4.289 The EC submits that the creation of the *Zone d'Aménagement Concertée* (ZAC) in Toulouse constitutes a measure of general infrastructure.⁴⁷⁴ According to the EC, the *Scott Paper* case under EC State aid law is not relevant to this measure, as the facts were assessed in the light of the State aid regime of the EC, and not the SCM Agreement. The EC argues that for that reason alone, this case is not relevant for the present dispute. Second, contrary to the US allegations, the facts in the *Scott Paper* case bear no resemblance to the undisputed facts in *Aéroconstellation*. In the *Scott Paper*, the authorities turned existing agricultural land into a tailor-made industrial site, by selling land and building a factory warehouse for the benefit of a single company.⁴⁷⁵ In the case of *Aéroconstellation*, the French authorities developed a *Zone d'Aménagement Concerté*, like many other ZACs elsewhere in France, which was then put for sale at what an appraisal confirms was a fair market price. Any company that was interested in purchasing land in the ZAC could do so without restriction, and, indeed, Airbus is only one of many companies that so purchased.⁴⁷⁶

4.290 The EC argues that in Bremen, the extension of the runway falls under the notion of general infrastructure and the specific use by Airbus of the extension is adequately remunerated.⁴⁷⁷ The city of Bremen is entitled to provide its citizens with modern transportation facilities and services, including the development and operation of an airport, and to take measures to reduce noise.⁴⁷⁸ There

BCI deleted, as indicated [***]

is no basis to the US claim that the lengthening of the runway was made for the "exclusive use" of Airbus.⁴⁷⁹

(b) The challenged measures do not confer a benefit

4.291 The EC argues that with respect particularly to the Mühlenberger Loch and the ZAC Aéroconstellation, the US clings to the cost incurred by government authorities in connection with these projects as the basis for asserting a "benefit". The cost-to-government standard has been rejected, and Article 14(d) tells us how to apply the benefit to recipient standard to the measures at issue. Specifically, Article 14(d) directs the Panel to assess whether "adequate remuneration" is paid for a good with reference to "prevailing market conditions", or in other words the market value of the good. Moreover, the EC notes that the US fails to cite a single provision of the SCM Agreement that would support its "cost savings" theory. Instead, it latches on to an EC state aid decision that reflects the *sui generis* characteristics of EC state aid law and has no bearing on this dispute.⁴⁸⁰

(i) *Hamburg*

4.292 The EC argues that, even if the panel were to conclude that the land creation and flood protection measures were not general infrastructure, the financial contribution reflected in the terms of the land lease, and also the leases for the special purpose facilities, does not confer a "benefit". This is because the lease rates were set at fair market value using accepted valuation principles, as affirmed by the City of Hamburg Real Estate Experts Committee.⁴⁸¹

4.293 According to the EC, the US argument that the land rent should be based, as a surrogate for a market benchmark, on the cost to the City of Hamburg of reclaiming the land and of constructing the flood protection is without merit. It wrongly applies a "cost to government" standard. Article 14(d) of the SCM Agreement unambiguously sets the proper standard for measuring the "benefit" from a financial contribution as the benefit to the recipient.⁴⁸²

4.294 The EC notes, moreover, that the market value of the land, the fundamental value needed to measure any benefit to Airbus, is not in dispute. The US real estate expert, Dr. Keunecke, and the City of Hamburg Real Estate Experts Committee agree on the market value of the land.⁴⁸³ The EC explains that the City of Hamburg Real Estate Experts Committee and Dr. Keunecke disagree only on the required market-based return on that investment. The EC offers calculations which it asserts demonstrate that when both proposed benchmarks are properly reconciled, the Experts Committee and Dr. Keunecke agree on the base measure of return, before Dr. Keunecke's recommended additional return premium of 3 percent.⁴⁸⁴ The EC argues that, contrary to the US assertion, Dr. Keunecke's report does not support the suggested additional return premium by any market evidence and that he justifies it by citing to market conditions that are not relevant for the leases at issue.⁴⁸⁵ The EC notes that Dr. Keunecke does not dispute the appropriate method to measure lease rates on the land and the special purpose facilities found to be at market by the City of Hamburg Real Estate Experts Committee.⁴⁸⁶

⁴⁷⁹ EC, FWS, paras. 871-874.

⁴⁸⁰ EC, SNCOS, Executive Summary, para. 7.

⁴⁸¹ EC, FWS, paras. 799-805.

⁴⁸⁶ EC, FWS, paras. 808-817, 828-857; EC, Answer to Panel Question 267, paras. 115-132.

BCI deleted, as indicated [***]

4.295 Moreover, the EC submits that Dr. Keunecke's report does not endorse the US cost to government measure of market rent. On the question of using cost rather than value as a measure of benefit, Dr. Keunecke's report states only that *if one accepts* the US legal standard of cost to government, the required lease rate paid by Airbus is too low. Dr. Keunecke does not state that cost is the appropriate measure of market, and the EC notes that he cannot logically do so, as his report's analysis of observed market rates of return on commercial real estate (before the recommended premium for industrial real estate) is based on observed rents as a percentage of value, rather than cost.⁴⁸⁷

4.296 The EC posits, moreover, that the US argument – that the cost-to-government standard is required because the government's investment in creating the infrastructure reflects the savings to the recipient – rests on the flawed premise that Airbus would itself have borne the cost of reclaiming the land and flood protection measures had the city of Hamburg not done so. In fact, the EC argues that evidence it has provided demonstrates that had Hamburg not performed the land reclamation project, Airbus would have located the entire A380 FAL in Toulouse, [***].⁴⁸⁸

4.297 According to the EC, this documentary evidence demonstrates not only that Airbus did not benefit from the land reclamation and flood protection measures, but, additionally, that [***]. Airbus located a portion of the final assembly in Hamburg in order to prevent loss of MSF for the A380. Accordingly, [***].⁴⁸⁹

4.298 According to the EC, cost does not provide a reliable measure of benefit to the recipient arising from government economic programs such as land reclamation, because, unlike the case of a private investor, the rental cost to the lessee and the total return to the lessor are not symmetrical. As Dr. Keunecke observed in his report, no private investor (which would include Airbus) with returns limited to lease income, would have reclaimed the land at the Mühlenberger Loch, because the cost would far exceed the value created. However, as a government investor, the City of Hamburg could anticipate other sources of return in addition to the lease payments, including returns generated from the increased economic activity in the form of higher tax revenue generated from increased employment and profits at Airbus and its many local suppliers. This, in turn, would accelerate regional development, thereby generating even greater tax revenue. Accordingly, providing the land to Airbus at market value could trigger economic expansion sufficient to justify the investment by the City. The EC notes that this was not mere speculation on the part of the City of Hamburg, but the finding of an economic consulting firm retained by the City before agreeing to the investment.⁴⁹⁰

4.299 Finally, the EC argues that the US assertion that the City of Hamburg should at least have extracted a rent premium above market because the reclaimed land was adjacent to an existing Airbus facility is equally without merit. The US fails to note that Hamburg and Toulouse were in competition for the location of the A380 final assembly line. In Toulouse, where sufficient land was available to accommodate the entire final assembly facility, Airbus paid [***] per square meter for land. For the Hamburg site, Airbus agreed to pay rent on the basis of a [***] per square meter market value. That is already a [***] premium over the value of comparable land in Toulouse. Competition from Toulouse put a limit on any so-called "premium" that Hamburg could demand.⁴⁹¹

⁴⁹¹ EC, SCOS, para. 23.

BCI deleted, as indicated [***]

4.300 The EC notes that the special-purpose facilities, however, are unlike raw land reclamation. These facilities were built to the specifications requested by Airbus, and the value of the facilities will be used up in whole or substantial part during the lease. In that case, the fair market rent, and accordingly any benefit, is best assessed based on a market return on the cost of constructing the facilities. The EC observes that this is precisely the approach followed by the Hamburg Real Estate Experts Committee, which found the rent agreed to by Airbus to reflect market.⁴⁹²

(ii) *Bremen*

4.301 The EC argues that in Bremen, the specific use by Airbus of the extension of the runway is adequately remunerated.⁴⁹³

4.302 The EC points out that as the US itself notes, Airbus pays fees for the use of Bremen airport in accordance with the general fee schedule. The EC notes that the US has not argued that these fees are not at market. Rather, the US seems to imply that Bremen should calculate a fee for Airbus which allows for a return on the costs of building the extension. However, for the reasons given in respect of Hamburg, costs to the government are irrelevant for determining the benefit to the recipient.⁴⁹⁴

(iii) *Toulouse*

4.303 The EC argues that the US allegations that the sale to Airbus France of a portion of the ZAC Aéroconstellation and the lease of EIG was for less than adequate remuneration is without merit. The EC indicates that a commercial appraiser confirmed that the price of the land purchased by Airbus France in the ZAC Aéroconstellation was consistent with market. As such, no benefit within the meaning of Article 1.1(b) of the SCM Agreement was thereby conferred. The EC considers that the US offers no credible reason why the Panel should ignore direct evidence of the *market price* for industrial land in the ZAC, in comparable ZACs or as provided in the Atisreal appraisal, in favour of the *cost* incurred by French authorities. The EC considers, moreover, that in evaluating the EIG lease, the US grossly overstated the amount of land included in the lease and also overstated the required lease rate of return.⁴⁹⁵

4.304 The EC notes that the US nonetheless asserts "benefits" to Airbus by reference to the cost incurred by the French authorities to create the ZAC. However, it is not relevant to the "benefit" inquiry whether the French authorities recover those costs by virtue of the purchase price paid by Airbus for land. The Appellate Body has stressed that the inquiry in Article 1.1(b) is whether a financial contribution confers a "benefit" on a recipient, relative to a market benchmark. Moreover, the Appellate Body has held that a cost-to-government approach "is at odds with the ordinary meaning of Article 1.1(b), which focuses on the "*recipient* and not on the *government* providing the 'financial contribution'".⁴⁹⁶

(iv) *Regional infrastructure measures*

4.305 The EC argues that certain of the regional infrastructure measures do not confer a benefit on Airbus because they were given to a company other than Airbus and/or do not relate to LCA.

⁴⁹⁶ EC, FWS, paras. 922-938; EC, SWS, paras. 368-398.

BCI deleted, as indicated [***]

(c) Specificity of regional aid

4.306 The EC submits that German, Spanish and British authorities provided grants under generally available schemes at EC, national or sub-national level. Those grants were not limited to "certain enterprises" located within a designated region within the jurisdiction of the granting authority. Rather they were available for all companies in that region, according to objective criteria. These criteria conformed to the requirements of Article 2.1(b) of the SCM Agreement and footnote 2 thereto. Just as any other company in the designated region, Airbus could benefit from a regional aid scheme that in itself is perfectly in line with the SCM Agreement.⁴⁹⁷

4.307 Further, the EC explains why in its view the grants for Airbus facilities in Nordenham (Germany), Sevilla, La Rinconada, Toledo, Puerto de Santa Maria, Puerto Real (Spain) and Broughton (United Kingdom) are not specific within the meaning of Article 2.2 of the SCM Agreement. The EC notes in particular that Article 2.2 does not make regional aid, *i.e.*, aid generally available to all enterprises in specifically designated regions, specific.⁴⁹⁸ In fact, such aid is quite clearly non-specific under Article 2.2. With regard to the US argument concerning Article 8.2(b), the EC explains that the US misunderstands the dynamics of the Uruguay Round negotiations. The "green lighting" of regional aid was a key EC policy objective, against the background of a definition of specificity which was changing throughout the negotiations.⁴⁹⁹ The EC argues that the US blatantly distorts the negotiating history of the provision, effectively claiming that federal states should have an inbuilt advantage under the SCM Agreement, an outcome agreed by nobody.⁵⁰⁰

4.308 Finally, the EC points out that several of the Spanish measures concern activities which are not connected the manufacture of Airbus LCA (*e.g.*, military aircraft). The EC further explains that the support to Broughton was not regional aid, but was granted under two schemes which are generally available in Wales. The EC argues that the US is alleging specificity on the basis of a previous application for a regional aid grant, which was refused.⁵⁰¹

G. WHETHER THE GERMAN GOVERNMENT HAS SUBSIDIZED AIRBUS BY ITS DECISION IN 1998 FORGIVING AT LEAST DM 7.7 BILLION OF DEUTSCHE AIRBUS' GOVERNMENT DEBT

1. Arguments of the United States

4.309 The US argues that Deutsche Airbus relied almost entirely on Launch Aid and other German government subsidies to underwrite its early participation in the Airbus project. The US observes that by the late 1990s, the total accumulated debt that Deutsche Airbus owed to the German government amounted to at least DM 11,000,000,000 (in principal alone), including DM 9,400,000,000 related to A300/A310 and A330/A340 Launch Aid and other, smaller loans ("repayable grants") that the government had provided to the company. In 1998, the German government allowed Deutsche Airbus to pay DM 1,735,000,000 to "settle" its DM 9,400,000,000 debt. The government forgave the remaining DM 7,700,000,000.⁵⁰²

4.310 The US notes that the EC does not dispute these facts. Nevertheless, it would have the Panel believe that the elimination of DM 7,700,000,000 in debt did not confer a benefit on the company. Its

BCI deleted, as indicated [***]

theory is that the 1998 transaction was a fair-value payment for the net present value of the outstanding debt.⁵⁰³ The US argues that whether this transaction is called debt forgiveness or a settlement for fair value does not matter. Either way, it is a subsidy.⁵⁰⁴

4.311 The US points out that as the panel stated in *Korea – Commercial Vessels*, debt forgiveness is "comparable to a cash grant, as funds that were previously provided as a loan, against interest, are now provided for free, given the removal of the repayment obligation." Therefore, the German government's forgiveness of Deutsche Airbus' repayment obligations constitutes a financial contribution to Deutsche Airbus within the meaning of Article 1.1(a)(1)(i). It also confers a benefit on Deutsche Airbus. The US submits that debt forgiveness is comparable to a cash grant, and therefore confers a benefit – and thus constitutes a subsidy – for the same reasons. Finally, the US asserts that the debt forgiveness is specific because it was effectuated through an *ad hoc* agreement between the German government and Deutsche Airbus.⁵⁰⁵

4.312 Although the US does not accept the EC characterization of the 1998 transaction, the characterization does not change the fact that the transaction conferred a benefit. The US asserts that under either characterization, the German government effectively turned potential benefits that Deutsche Airbus might have enjoyed in the future from savings on debt provided interest-free by the German government into an actual cash grant of DM 7.7 billion provided in 1998.⁵⁰⁶

4.313 The US considers that the EC wrongly accuses it of responding to the EC characterization of the 1998 transaction by asserting a new claim. In fact, the US simply has responded to the EC on its own terms, demonstrating that even if, *arguendo*, the EC characterization of the 1998 transaction were accurate, the transaction still conferred a benefit. The EC theory that the US really is challenging the German government's 1989 aid package to Deutsche Airbus rather than the 1998 debt settlement, and that the aid package is outside the Panel's terms of reference because it was not identified in the US panel request is mistaken. First, the US panel request refers, in relevant part, not only to the German government's "forgiveness" of debt owed by Deutsche Airbus but also to its earlier "assumption ... of ... debt accumulated by Deutsche Airbus."⁵⁰⁷

4.314 Second, the EC mistakes the relevance of the 1989 aid package to the US claim. The US explains that it is not challenging the aid package in and of itself. It is challenging the 1998 debt settlement transaction. That transaction appears to be a forgiveness of the approximately DM 7,700,000,000 difference between the face amount of the debt and the amount the company actually paid the government. In light of the EC response, the US re-examined the transaction from the point of view of the EC characterization. That necessarily entailed consideration of the elements that determined the fair value of the debt, notably its highly preferential repayment terms. This showed that following the EC characterization leads economically to the same result as originally observed by the US.⁵⁰⁸

2. Arguments of the European Communities

4.315 The EC argues that the 1998 settlement of outstanding repayment obligations owed the German Government by Deutsche Airbus does not constitute a subsidy.

⁵⁰³ US, SWS, Executive Summary, para. 57.

⁵⁰⁴ US, FNCOS, Executive Summary, para. 13.

⁵⁰⁵ US, FWS, Executive Summary, para. 61

⁵⁰⁶ US, SWS, Executive Summary, para. 58.

⁵⁰⁷ US, SWS, Executive Summary, para. 59. *See, also*, US closing statement, first meeting Executive Summary, para. 21-23 and US, SNCOS, Executive Summary, para. 12

⁵⁰⁸ US, SWS, Executive Summary, para. 60.

BCI deleted, as indicated [***]

4.316 The EC argues, first, that the US failed to make a *prima facie* case showing that Airbus SAS – the only company which is currently producing LCA in the EC and, in the US view, causing present adverse effects to US interests – actually benefits from the alleged subsidy.⁵⁰⁹

4.317 Second, the EC argues that the premise on which the US argument is based – *i.e.*, the existence of DM 9.4 billion in debt owed the German government – is factually incorrect. No such debt existed on Deutsche Airbus' books, as confirmed by, *inter alia*, the company's financial statements.⁵¹⁰ The EC argues that, therefore, the US assertions that the 1998 settlement constituted "debt forgiveness" fail.⁵¹¹ According to the EC, the 1998 settlement reflected the fair market value of the repayment claims that the German government actually held in 1998 against Deutsche Airbus, *i.e.*, claims for repayment of prior financial contributions subject to certain conditions.⁵¹² Accordingly, the 1998 settlement does not constitute a subsidy.

4.318 Specifically, the EC argues that the repayment claims at issue in the 1998 settlement were valued by an independent international auditing firm, which set out its findings on the fair market value of those claims in a report provided to the Panel.⁵¹³ The EC notes that the US has not challenged the robustness of that valuation.⁵¹⁴ The contemporaneous valuations by independent financial experts formed the basis for the 1998 settlement.⁵¹⁵ The settlement amount even exceeded the value placed on the claims held by the German government, which – the EC argues – precludes a finding of a benefit.⁵¹⁶

4.319 The EC further explains that the settlement amount in excess of the value determined by the international auditing firm can be seen as the application to the projected cash flow stream of a lower discount rate than used in the valuation. The EC argues that it shows that the actual settlement amount implies a discount rate that equals the risk free German government borrowing rate. According to the EC, this means that the parties discounted the stream of *likely* future payments by Deutsche Airbus to the Government as if those payments were certain. This results in assigning the highest possible present value to the stream of future payments.⁵¹⁷

4.320 The EC argues that, for these reasons, the 1998 settlement does not confer a benefit or constitute a subsidy.

4.321 The EC also argues that instead of rebutting the contemporaneous evidence showing that the 1998 settlement was made on market terms, the US raises a legally and factually new claim, challenging, in addition to the 1998 settlement, the terms of the 1989 restructuring by arguing that Deutsche Airbus received a substantial financial benefit "in the form of an interest rate of zero".⁵¹⁸ According to the EC, the US concedes that the allegedly "highly preferential repayment terms" emanate from the terms of the 1989 restructuring, *i.e.*, a legally and factually distinct measure from the 1998 settlement.⁵¹⁹ The EC points out that this new claim against a new measure appears neither in the US first written submission, nor in its panel request, and thereby falls outside the jurisdiction of

BCI deleted, as indicated [***]

this Panel.⁵²⁰ The Panel cannot, therefore, make findings or recommendations concerning the 1989 restructuring as a measure at issue.⁵²¹ The EC notes that the US subsequently confirmed that it is not challenging the 1989 restructuring "in and of itself", but that it is challenging the 1998 settlement for which the 1989 restructuring is "factual background".⁵²² Yet, the EC asserts that the US characterization of its approach cannot distract from the fact that the new US challenge is not merely a new argument, but rather a new claim which relates to a different measure that is outside the terms of reference of the Panel.⁵²³ According to the EC, the US cannot challenge, as conferring a subsidy through the 1998 settlement, measures that were put in place in the 1989 restructuring.⁵²⁴ In this regard, the EC notes, again, that the 1998 settlement was based fully on the terms of the 1989 restructuring and did not provide any advantage to Deutsche Airbus (as evidenced also by contemporaneous documents).⁵²⁵

4.322 Finally, the EC argues that even if the Panel were to find that the new US claim is within its terms of reference or that it is entitled to assess the 1989 restructuring of Deutsche Airbus as "factual background" to its claim of subsidization from the 1998 settlement, the US claim would fail nonetheless. The EC explains that it is the US burden to demonstrate that the 1989 restructuring itself constitutes a subsidy and that the US has failed to so demonstrate.⁵²⁶ Thus, even if the US approach was correct as a matter of law, which it is not, the US claims regarding two "cherry-picked" elements of the 1989 restructuring – the repayment terms and the KfW investment addressed below – must fail, because in these proceedings the US neither established nor claimed that the 1989 restructuring constitutes a subsidy.⁵²⁷ The US decision to limit its challenge cannot alleviate it of its burden to demonstrate that the 1989 restructuring constitutes a subsidy when challenging certain elements thereof.⁵²⁸ The EC, moreover, submits that the 1989 restructuring is consistent with the actions a private investor in the shoes of the German government would have undertaken to minimize its losses.⁵²⁹

H. WHETHER THE GERMAN GOVERNMENT'S 1989 INVESTMENT IN DEUTSCHE AIRBUS OR THE SUBSEQUENT 1992 TRANSFER OF ITS OWNERSHIP SHARE IN DEUTSCHE AIRBUS TO THE DAIMLER GROUP IS A SPECIFIC SUBSIDY TO AIRBUS

1. Arguments of the United States

4.323 The US argues that the German government's transfer of its ownership share in Deutsche Airbus to the Daimler Group is a specific subsidy to Airbus.⁵³⁰ The US submits that in 1989, the German government agreed to make an equity infusion into Deutsche Airbus by purchasing a 20 percent share of the company for DM 505,000,000 (EUR 258,000,000). Three years later, the German government agreed to give the shares to DASA, without compensation. The US first asserts that the equity infusion is a subsidy because the German government's decision to provide the DM 505,000,000 infusion to Deutsche Airbus was inconsistent with the usual investment practice of private investors in Germany. The US then asserts that the 1992 share transfer is a subsidy because it

BCI deleted, as indicated [***]

was, in effect, a DM 505,000,000 (EUR 258,000,000) grant. The US also asserts that both subsidies were specific to Airbus.⁵³¹

4.324 The US contends that Airbus benefits from equity infusions provided by the German government at moments when a market-oriented investor would not have made such investments due to the dire financial condition of the German Airbus company.⁵³² The US notes that the EC responded that the government's action was consistent with the usual practice of private investors. The US considers that the EC relies on a false benchmark that it holds up as a market benchmark. The EC asserts that "at the same time" that the government made its investment a private investor, "Daimler (through MBB)," also made an investment in Deutsche Airbus. However, the US asserts that the EC omits the fact that Daimler's willingness to make its investment depended heavily on the government first providing a substantial aid package which included the government's own investment⁵³³

4.325 In addition, the US considers that the EC errs in its attempt to discredit the evidence relied upon by the US. In the US view, the EC incorrectly suggests that the US based its assessment of Deutsche Airbus' equity-worthiness solely on an assessment of the financial condition of the company's parent (MBB). While noting the dire state MBB was in when Daimler invested in MBB, the US points in particular to the financial distress that Deutsche Airbus was in at the time and was expected to be in for the foreseeable future.⁵³⁴

4.326 The US points out that the EC's only basis for calling the original stock purchase a commercial transaction is a comparison to an investment by Daimler Benz. However, Daimler's investment was not independent of the German government's equity infusion such that it might corroborate the commercial nature of the infusion. As for the German government's later return of Deutsche Airbus shares to MBB, the US argues that the EC has yet to provide any explanation of why both Daimler and the then-Director General for Trade at the European Commission described the transaction as compensation for the withdrawal of the German exchange rate insurance scheme following an adverse dispute settlement panel report.⁵³⁵

2. Arguments of the European Communities

4.327 The EC argues that neither the German government's 1989 investment in Deutsche Airbus, nor the 1992 transfer to MBB of its shares in Deutsche Airbus, constitutes a subsidy.

4.328 The EC explains, first, that the US failed to make a *prima facie* case and show that either of the alleged subsidies benefits Airbus SAS, which today develops, manufactures and sells LCA alleged to cause adverse effects to the US interests.⁵³⁶

4.329 Second, with respect to the 1992 share transfer, the EC explains that this transaction could not have conferred a benefit on Deutsche Airbus because it was MBB that received the shares in Deutsche Airbus held by the German government.⁵³⁷ The EC notes that the US has not explained how a subsidy to one company – which did not manufacture LCA at the time and does not do so today – can morph into a subsidy to a company that does.⁵³⁸ The EC also explains that the participation of KfW in Deutsche Airbus was conceived, from the very beginning, as a *temporary* measure and that Daimler,

⁵³⁸ EC, FNCOS, para. 111.

BCI deleted, as indicated [***]

via MBB, exercised its commitment to take over KfW's 20 percent stake in Deutsche Airbus.⁵³⁹ The EC provides evidence showing that the determination of the value of KfW's shares in 1992 was based on the advice of two independent international respected accounting auditing firms and that the transfer of the KfW's shares to MBB was not free of charge, as the US asserts.⁵⁴⁰ In fact, in addition to the market value of the shares in 1992, the transfer price of KfW shares also included additional compensation envisioned under the terms of the 1989 restructuring.⁵⁴¹ Therefore, contrary to the US assertions, the transfer was not free of charge. It also did not benefit Deutsche Airbus.⁵⁴² Finally, the EC notes that the US accepts that the 1992 share transfer was part of a transaction that amended certain terms of the 1989 restructuring, and that the US agrees that, on balance, this transaction did not affect positively or negatively the economic position of Deutsche Airbus. As such, the 1992 transfer cannot constitute a subsidy.⁵⁴³

4.330 The EC also reacts to the US conditional challenge to the 1989 investment by KfW in Deutsche Airbus.⁵⁴⁴ The EC explains that the investment did not constitute a subsidy as it was not made on terms more favourable than those available at market, as evidenced by the fact that a private investor – Daimler Benz, through MBB – invested in Deutsche Airbus at the same time and on the same conditions. As such, the investment was consistent with the usual investment practice of private investors.⁵⁴⁵

4.331 The EC argues that this conclusion is not undermined by the fact that the investments by the German government and Daimler Benz in Deutsche Airbus were part of the 1989 restructuring of Deutsche Airbus. While the US argues that the "separation of the alleged 'restructuring package' ... from the KfW capital injection is artificial", the EC argues that it is an artificiality that the US has created by challenging only a particular aspect of the 1989 restructuring package.⁵⁴⁶ In fact, it is an artificiality that the US has created by "cherry-picking" certain elements of the 1989 restructuring for challenge, while ignoring others.⁵⁴⁷ Moreover, the EC submits that a financial restructuring is not *per se* a subsidy.⁵⁴⁸ As such, it is not possible to conclude that the investment by KfW is a subsidy without a complete assessment of the 1989 restructuring of Deutsche Airbus.⁵⁴⁹ The EC recalls its arguments that the 1989 restructuring is outside the Panel's terms of reference and notes that the US clarified that it is not challenging the 1989 restructuring "in and of itself".⁵⁵⁰ Finally, the EC argues that even if the Panel were to take account of the 1989 restructuring as factual background, the US failed to demonstrate that the 1989 restructuring itself constitutes a subsidy.⁵⁵¹ The EC submits that the 1989 restructuring is consistent with the actions a private investor in the shoes of the German government would have undertaken to minimize its losses.⁵⁵²

BCI deleted, as indicated [***]

4.332 Finally, the EC argues that, in case the Panel agrees with the US attempt to revoke the conditionality of its claim against the 1989 KfW investment, the Panel must deny the US assertion that the DM 505 million invested by the German government can constitute a subsidy in 1989 and again constitute a subsidy of the same amount in 1992.⁵⁵³

I. WHETHER CERTAIN CAPITAL CONTRIBUTIONS AND 1998 TRANSFER OF DASSAULT SHARES TO AÉROSPATIALE ARE SPECIFIC SUBSIDIES TO AIRBUS SAS

1. Arguments of the United States

4.333 The US argues that the equity infusions that the French government provided to Aérospatiale are specific subsidies.⁵⁵⁴ The US explains that in the late 1980s and in the 1990s, the French government made a series of equity infusions into the French Airbus company Aérospatiale. First, in 1987 and 1988, the French government made two infusions of FF 1,250,000,000, for a total of FF2,500,000,000. Then, in 1992, the government injected another FF 1,400,000,000 into Aérospatiale through the state-controlled bank Crédit Lyonnais. Two years later, in 1994, the French government provided another FF 2,000,000,000 infusion into Aérospatiale. Finally, in 1998, the French government transferred its 45.76 percent share in the capital of Dassault Aviation S.A. ("Dassault") to Aérospatiale. The share transfer was worth approximately FF 5,280,000,000.⁵⁵⁵

4.334 The US discusses Aérospatiale's financial condition and performance at the time of each of the equity infusions and contends that each of the decisions to invest in the company was inconsistent with the usual investment practice of private investors. Therefore, according to the US, each equity infusion was a subsidy within the meaning of the SCM Agreement. The US also contends that each infusion was specific to Airbus.⁵⁵⁶

4.335 In the US view, the EC fails to rebut the US showing that French equity infusions to Aérospatiale from 1987 to 1994 were not consistent with the usual investment practice of private investors. The US notes that the EC explains why Aérospatiale was in critical need of additional funds in the 1987 to 1994 time period, but it does not explain why a private investor would have provided them. Its discussion of the views of Boeing's and Aérospatiale's management ignores that the relevant test is the usual investment practice of private investors, not the views of management.⁵⁵⁷ The US notes that to make its case with respect to the French infusions, the EC relies on evidence such as statements by management (rather than potential private investors) and *ex post* information about returns supposedly realized on those investments. The EC does not provide any evidence of contemporaneous studies or analyses by the French government on the investment prospects of Aérospatiale. It also looks selectively at indicators of financial performance, ignoring Aérospatiale's abysmal balance sheet, its troublesome financial ratios, and the poor prospects it would have faced if it had not received very significant additional government financing.⁵⁵⁸

4.336 Furthermore, the US points out that the EC improperly relies on evidence newly included with its second written submission, which is not "objective," as it consists almost entirely of internal documents from Aérospatiale, Airbus GIE, and Crédit Lyonnais. Other evidence focuses on demand for aircraft in general, rather than the prospects for Airbus in particular.⁵⁵⁹

⁵⁵⁹ US, SNCOS, Executive Summary, para. 10.

BCI deleted, as indicated [***]

4.337 With respect to the French government's December 1998 transfer to Aérospatiale of its 45.76 percent equity stake in Dassault Aviation, the US notes that the EC argues that "nothing of economic significance occurred," because the French government effectively did nothing more than transfer its Dassault Aviation shares to itself.⁵⁶⁰ The US contends that while the EC may believe this is true from the government's perspective, the transaction provided a significant benefit to Aérospatiale.⁵⁶¹ The US considers that the EC mistakenly assumes that the relevant perspective is that of the French government rather than that of Aérospatiale, which unquestionably received a valuable asset for which it paid nothing.⁵⁶²

4.338 The US asserts that the main problem with the EC argument is that it focuses on the intentions and perspective of the grantor of the infusions. The US explains that under the SCM Agreement, the relevant perspective is that of the recipient. From that perspective, the infusions at issue in this dispute unquestionably provide a benefit and, therefore, constitute subsidies.⁵⁶³

4.339 The US also notes that the EC argues that when Aérospatiale was later combined with Matra Hautes Technologies to form ASM, the value of its "45.76 percent stake in Dassault was fully captured in the price charged for ASM shares in the public offering that took place in 1999." According to the US, neither argument is correct. The US explains that the problem with the EC's first argument is that it assumes that the relevant point of view is that of the government rather than that of Aérospatiale. Moreover, the EC assertion that "nothing of economic significance occurred" is belied by the fact that in order to persuade the private owners of Dassault Aviation to consent to what amounted to a tie-up with Aérospatiale, the French government had to give up the valuable double voting rights associated with its shares in Dassault Aviation.⁵⁶⁴

4.340 As for the EC's second argument, the US notes that the EC ignores that the French government received no compensation for giving up voting control in Dassault Aviation. Also, the price charged for ASM shares in the 1999 public offering was based not on independent "fairness opinions," but on valuations by investment banks (post-dating the actual Dassault Aviation transaction) that sought to ratify a previously identified outcome.⁵⁶⁵

2. Arguments of the European Communities

4.341 The EC rebuts the US allegations that the four subscriptions of new capital made by the French State in Aérospatiale in years 1988, 1989, 1992 and 1994 and the transfer of Dassault shares to Aérospatiale in 1998 constitute subsidies. The EC submits that the US did not establish that these alleged subsidies have benefited Airbus SAS, which is the only company that produces Airbus LCA (*i.e.*, the product which, in the US view, causes adverse effects to US interests) in the EC.⁵⁶⁶ Additionally, the EC notes that the US ignores that the capital increases in Aérospatiale concerned a company which no longer manufactures LCA.⁵⁶⁷

4.342 The EC also rebuts the US allegation that the four subscriptions of new capital by the French State in Aérospatiale in 1988, 1989, 1992 and 1994 were not in accordance with the usual investment practice of private investors.⁵⁶⁸ In the EC view, the US conclusion that the French State did not act

⁵⁶⁸ EC, SWS, Executive Summary, para. 41.

BCI deleted, as indicated [***]

consistently with "usual investment practice" is fundamentally wrong. This is because the US based its analysis solely on data concerning Aérospatiale's past financial performance and did not take account of Aérospatiale's future prospects at the time each investment was made. The data regarding past performance put forward by the US also were exaggerated.⁵⁶⁹ In the EC view, the US errs in assuming that a "usual investor" invests solely on the grounds of a company's past performance. The EC also asserts that for industries, such as the LCA industry, with long and costly development cycles, it is imperative to invest even during periods of weak performance.⁵⁷⁰ The French State's prospects of a favourable return on each of the investments into Aérospatiale at the time were very good, which also is confirmed by later developments.⁵⁷¹

4.343 The EC also argues that Boeing's own case underscores the forward-looking nature of investors' behaviour and explains that poor financial performance did not stop Boeing from investing in its future.⁵⁷² The EC notes that despite abysmal financial performance in the early 1990s, Boeing dramatically increased its investment in commercial aircraft assets by 82 per cent and assumed significant additional debt. Boeing's assessment of positive future prospects driven by forecasts of dramatic growth in LCA passenger demand led it and its investors to look beyond the firm's poor performance in recent years and to increase investment in the future.⁵⁷³ In the late 1980s and early 1990s, Aérospatiale and its shareholder drew the same conclusion.⁵⁷⁴

4.344 The EC explains that while the past performance of Aérospatiale may not have been as robust as Aérospatiale or the French State might have wished, investors do not invest on the grounds of a company's past performance – to the contrary, they assess, first and foremost, companies' future prospects. While the US expressly acknowledged this approach as being correct (in its response to Question 26 from the Panel, the US stated that "investors commit capital based on their assessment on potential earnings in the years ahead" and "evaluate company's future prospects"), it seems to have ignored the contemporaneous evidence of Aérospatiale's future prospects that the EC provided. In any event, in its second written submission, the EC provides to the Panel an even more comprehensive and detailed overview of the contemporaneous evidence of the very favourable prospects for the LCA industry and expected high demand for Airbus planes that, according to the EC, was available to informed investors, including the French State, at the time of each of the challenged capital contributions. The EC also provides evidence which it asserts shows that the French State, Aérospatiale's sole shareholder, was closely informed about the business plans and prospects of the company. It is in light of all of this evidence that the EC concludes that the US position is untenable.⁵⁷⁵

4.345 With regard to the French State's 1998 transfer of its shares in Dassault Aviation to Aérospatiale, the EC argues that it was not an "investment" and did not have any economic effect on Aérospatiale.⁵⁷⁶ The EC explains that unlike the four capital subscriptions, the contribution of the Dassault Aviation shares by the French State was made to facilitate the consolidation and privatization of the French aerospace industry and that the French State was adequately compensated for the transfer of its shares in Dassault Aviation to Aérospatiale.⁵⁷⁷ The EC asserts that the French state acted as any market investor would have – namely, by pooling assets in its different aerospace holdings together before selling them, in order to realize a higher return. The EC points out that the

BCI deleted, as indicated [***]

US has not established that this action would have been contrary to the usual investment practice of private investors. Further, the EC submits that since the French State was fully compensated for the value of Dassault Aviation shares in the context of Aérospatiale's subsequent privatization, in which Dassault Aviation shares were valued independently from those of Aérospatiale, the US also cannot establish a subsidy on any other grounds.⁵⁷⁸

4.346 The EC also argues that with respect to the capital contributions and share transfer by the French State, it presented voluminous contemporaneous evidence showing the capital contributions and share transfer were consistent with the usual investment practice of private investors. The French State did not secure the 30 percent control premium on the transfer of Dassault Aviation shares because it was legally impossible for the State to sell its control.⁵⁷⁹

4.347 Finally, the EC points out that the US assertion that "while Aérospatiale was able to obtain billions of francs in subsidized capital, Boeing was forced to assume 'significant additional debt'" speaks volumes about the arguments brought by the US in this case. Boeing's additional debt is irrelevant to the question of whether a specific capital increase in Aérospatiale constitutes a subsidy or not. There is ample evidence that each of the challenged investments was done with the expectation of a significant return.⁵⁸⁰

J. WHETHER RESEARCH AND DEVELOPMENT FUNDING THAT THE EUROPEAN COMMISSION AND THE MEMBER STATES PROVIDE TO AIRBUS ARE SPECIFIC SUBSIDIES

1. Arguments of the United States

4.348 The US argues that the EC and the Airbus governments also subsidize Airbus by helping to fund its research and development efforts. The US explains that the subsidies primarily take the form of straight cash grants, although in some cases they have taken the form of non-commercial loans. The primary vehicles for the subsidies at the European Commission level are the so-called EC Framework Programs, which the EC has maintained for many years. At the member State level, and at the sub-national level, the vehicles are dedicated programs that the governments have established for the specific purpose of funding aeronautics research.⁵⁸¹

(a) EC Framework Programs

4.349 First, the US argues that the R&D funding that the EC provides to Airbus under the EC "Framework Programs" are specific subsidies. The US submits that for many years, the EC has provided grants to Airbus under the so-called EC Framework Programs to assist the company in funding its research and development efforts. The EC provides the grants to research consortia that Airbus leads or in which it is a key participant. Each grant is for an individual, discrete research project focusing on a particular aeronautics technology or production process. A primary goal of the grants is to "improv{e} the competitiveness of the European aeronautical industries... ." ⁵⁸²

4.350 The US notes that the EC has confirmed that all of the funding that the EC provides to Airbus under the Framework Programs takes the form of grants. Article 1.1(a)(1)(i) of the SCM Agreement

⁵⁷⁸ EC, SWS, Executive Summary, para. 42

⁵⁷⁹ EC, SNCOS, Executive Summary, para. 8.

⁵⁸⁰ EC, FCCS, Executive Summary, para. 11.

⁵⁸¹ US, FWS, Executive Summary, para. 65.

⁵⁸² US, FWS, Executive Summary, para. 66.

BCI deleted, as indicated [***]

includes grants among the types of "direct transfers of funds" that constitute financial contributions within the meaning of the SCM Agreement.⁵⁸³

4.351 The US argues that grants confer benefits because, as the panel stated in *US – Cotton*, they "place the recipient in a better position than the recipient otherwise would have been in the marketplace." Therefore, since EC Framework Program funding takes the form of grants, it necessarily confers benefits – and thus constitutes subsidies – under Article 1.1 of the SCM Agreement. In addition, the US argues that the subsidies are specific to Airbus and/or the aeronautics industry because each Framework Program has a sub-budget that is specific to the aeronautics industry, and because research proposals must be aeronautics-related.⁵⁸⁴

(b) German funding

4.352 Second, the US argues that the R&D funding that German Federal Authorities provide to Airbus under their research and development programs are specific subsidies. The US explains that for many years, the German Federal Government and the sub-federal ("Länder") governments of Hamburg, Bremen, and Bavaria have provided grants to Airbus to help fund its civil aeronautics research and development efforts. The Federal government has provided at least EUR 695,000,000 – including EUR 217,000,000 since 1995 under a series of Aeronautics Research Programs ("Luftfahrtforschungsprogramme" or "Lufo" 1, 2, and 3). The Länder governments have provided tens of millions of euros of additional funds.⁵⁸⁵

4.353 The US notes that the EC concedes that all of the civil aeronautics R&D funding that the German Federal and sub-federal governments provide to Airbus takes the form of grants. Therefore, for the same reasons that the EC framework grants are subsidies, the German Federal and sub-federal grants are subsidies. In addition, the US argues that the subsidies are specific because Germany disburses the subsidies pursuant to programs that are dedicated specifically to aeronautics.⁵⁸⁶

(c) French funding

4.354 Third, the US argues that the R&D funding that French authorities provide to Airbus under their research and development program are specific subsidies. The US explains that between 1986 and 2005, the French Government budgeted over EUR 1.2 billion in grants to the aeronautics industry for civil aeronautics research and development ("recherche amont de l'aéronautique"). Based on public information, DPAC budgeted EUR 391,000,000 from 1986 to 1993, and EUR 809,000,000 from 1994 to 2005. During the Annex V process, the EC conceded that Airbus received a substantial amount of the DPAC funding from 1994 to 2005, although it refused to provide any information regarding the 1986 to 1993 time period.⁵⁸⁷

4.355 The US notes that the EC confirms that all of the R&D funding that French authorities provide to Airbus takes the form of grants. Therefore, for the same reasons that the EC framework grants are subsidies, the French government's grants are subsidies. In addition, the US argues that the subsidies are specific because France provides the grants pursuant to a budget that is dedicated to

⁵⁸³ US, FWS, Executive Summary, para. 67.

⁵⁸⁴ US, FWS, Executive Summary, para. 68.

⁵⁸⁶ US, FWS, Executive Summary, para. 70.

⁵⁸⁷ US, FWS, Executive Summary, para. 71.

BCI deleted, as indicated [***]

"aeronautic construction," and the government limits access to the grants to aeronautics manufacturing companies.⁵⁸⁸

(d) UK funding

4.356 Fourth, the US argues that the R&D funding that UK authorities provide to Airbus under their research and development programs are specific subsidies. The US explains that for many years, the UK Department of Trade and Industry ("DTI") has provided aeronautics-related research and development grants to Airbus research consortia that Airbus leads or in which it is a key participant. Since 1992, DTI has agreed to provide tens of millions of pounds in grants to Airbus research consortia under the CARAD program (subsequently renamed the Aeronautics Research Programme ("ARP")). In addition, in 2004, the UK replaced the CARAD program with the so-called "Technology Program" ("TP"). DTI has committed additional millions of pounds to Airbus under the TP program.⁵⁸⁹

4.357 The US notes that the EC concedes that all of the funding the DTI has agreed to provide to Airbus research consortia under CARAD/ARP and TP has taken the form of grants. Therefore, the UK's grants under CARAD/ARP and TP are subsidies for the same reasons that the EC framework grants are subsidies. In addition, the subsidies are specific because CARAD/ARP grants are limited to entities carrying out research in aeronautics technologies and TP grants are awarded through calls for proposals that are limited to aeronautics-related technologies.⁵⁹⁰

(e) Spanish funding

4.358 Fifth, the US argues that the R&D funding that Spanish authorities provide to Airbus under their research and development program are specific subsidies. The US submits that like the German, French, and UK governments, the Spanish Government provides funding to Airbus to help underwrite Airbus' R&D efforts. The US explains that the funding takes the form of loans with better than commercial terms. The US explains that the Spanish government disburses the funding through two programs, the Plan Tecnológico Aeronáutico ("PTA"), and the Programa de Fomento de Innovación Técnica ("PROFIT"). Airbus received the PTA loans between 1993 and 2003, and the PROFIT loans between 2000 and 2007.⁵⁹¹

4.359 Article 1.1(a)(i) of the SCM Agreement includes loans among the types of "direct transfers of funds" that constitute financial contributions within the meaning of the SCM Agreement. Thus, the loans are financial contributions under the SCM Agreement. In addition, they confer benefits on Airbus because Spain provides the loans on better than commercial terms. Thus, the loans are subsidies within the meaning of Article 1.1 of the SCM Agreement. In addition, they are specific because the government explicitly limited access to funding under the programs to aeronautics companies involved in the manufacturing, design, supply and maintenance of aircraft and aircraft parts, and to engineering services companies and research institutions and universities developing specific technologies with aeronautics use.⁵⁹²

⁵⁹¹ US, FWS, Executive Summary, para. 75.

⁵⁹² US, FWS, Executive Summary, para. 76.

BCI deleted, as indicated [***]

(f) Relevant amounts and specificity

4.360 The US notes that the EC admits that Airbus has received EUR 648.9 million in R&D subsidies. However, that number understates the amount actually received, as it reflects an arbitrary determination that certain recipients of LCA-related R&D subsidies are "relevant companies" and others are not.⁵⁹³ The US notes that the EUR 648.9 million figure includes only the subsidies granted to what the EC describes as the "relevant companies"; it does not include the subsidies received by other Airbus entities, such as Airbus' parent company EADS, and the EC has not explained why the Panel should disregard those subsidies.⁵⁹⁴

4.361 The US clarifies that it is not saying that the benefit of grants to non-Airbus companies went to Airbus. However, because the EC has refused to provide information on grants to companies that are Airbus companies, it has given the Panel an incomplete number in describing the amount of R&D subsidy. The number is higher than the EUR 650 million the EC asserts. But, because the EC has withheld relevant information, it is not possible to know how much higher.⁵⁹⁵

4.362 The US points out that the EC deems grants to certain entities to be "not relevant," based on its mistaken view that the US had to show that subsidies benefiting Airbus LCA models continued to benefit those models following corporate restructurings leading to the creation of Airbus SAS.⁵⁹⁶ Adding back in the amounts the EC arbitrarily excludes, the total R&D subsidies Airbus actually has received under both the EC Framework Programs (FPs) and national and regional programs likely exceeds EUR 3 billion.⁵⁹⁷

4.363 Further, the US notes that the EC responds to its showing that FP grants are specific by arguing that "{t}he Second, Third, Fourth and Fifth Framework Programmes do not have sub-budgets specific to the aeronautics industry." The EC does not dispute the existence of such a sub-budget in the Sixth Framework Programme. With respect to the Second through Fifth Framework Programs, the EC seems to be arguing semantics. Although it does not acknowledge the existence of formal "sub-budgets," it does seem to acknowledge that the programs "allocate . . . portions of their budget to research activities such as 'aeronautics and space' or 'aeronautics.'"⁵⁹⁸

4.364 The US notes that in addition to making a semantic argument, the EC argues that specificity should be analyzed not at the level of the sub-budget but at the level of the entire Framework Program. The US explains that accepting that argument, however, would lead to absurd results. A Member could make virtually any subsidy to "certain enterprises" non-specific simply by formally joining it under one roof with other subsidies to other certain enterprises and calling the combined subsidies a "program." The US argues that the SCM Agreement does not support such a formalistic approach. With respect to the *de facto* specificity of aeronautics R&D grants under the Framework Programs, the relevant numbers show predominant use by Airbus (as well as showing Airbus' receipt of disproportionately large amounts of FP aeronautics funding).⁵⁹⁹ The US considers that the EC contention that grants under certain programs are not specific is based on an artificial and unsubstantiated theory that specificity under Article 2 of the SCM Agreement must be determined at the broadest level of aggregation of the activities of the granting authority.⁶⁰⁰

⁵⁹³ US, FNCOS, Executive Summary, para. 16.

⁵⁹⁴ US, FNCOS, Executive Summary, para. 16.

⁵⁹⁵ US comments on EC, SNCOS, Executive Summary, para. 18.

⁵⁹⁶ US, SNCOS, Executive Summary, para. 8.

⁵⁹⁸ US, SWS, Executive Summary, para. 67.

⁵⁹⁹ US, SWS, Executive Summary, para. 68.

⁶⁰⁰ US, SNCOS, Executive Summary, para. 8.

BCI deleted, as indicated [***]

4.365 The US notes that with respect to R&D subsidies provided by member State governments, the EC admits certain grant amounts but asserts that other amounts are "not relevant." As it gives no explanation for its assertion of what is relevant and what is not, its argument should be rejected.⁶⁰¹

4.366 In the case of grants under Germany's LuFo program, the EC contends that certain amounts are not relevant because they were only committed but not yet received by July 1, 2005. However, a subsidy within the meaning of Article 1 of the SCM Agreement includes "potential direct transfers of funds" as well as an actual direct transfer of funds. Thus, even if the EC were correct in its characterization of the grants at issue that would not be a basis for excluding those amounts from the Panel's consideration.⁶⁰²

4.367 The US also notes that the EC argues that the US has not shown that loans provided to Airbus by the Spanish government under the PTA program confer a benefit on Airbus because the US has not performed a comparison to a market benchmark. However, in view of the terms of the loans as demonstrated by the US, they are, by definition, preferential to terms available in the market. In the US view, the EC also errs in arguing that loans provided by Spanish authorities under the PROFIT program are outside the Panel's terms of reference, as such loans plainly were covered by the US panel request. The US considers that the EC argument that PROFIT loans are not specific is equally erroneous. In addition, as with the EC Framework Programs, the EC mistakenly argues that for specificity purposes, PROFIT should be analyzed at the level of the broad "umbrella" under which it is implemented, rather than at the individual program level.⁶⁰³

4.368 Finally, with regard to the UK's Technology Programme, the EC itself has acknowledged that the program is sub-divided into 43 "research themes" targeting a limited set of industries. Each of the research themes has its own budget and tends to be highly industry-specific. The R&D funding provided to Airbus and the aeronautics industry under the Technology Programme is therefore specific within the meaning of Article 2.1 of the SCM Agreement.⁶⁰⁴

2. Arguments of the European Communities

4.369 The EC considers that it demonstrates that the US overstated the amount of support that the EC, Germany and its Länder Bavaria, Hamburg and Bremen, France, the United Kingdom and Spain provided to Airbus SAS under research and technology ("R&T") programmes. The EC examines the US allegations with regard to every R&T programme challenged and demonstrates that the US inflated the amount of R&T support in four ways.⁶⁰⁵

4.370 First, the EC makes clear that the US allegations with regard to R&T funding by France and one of the Spanish R&T programmes are outside the Panel's terms of reference. The EC asserts that in its panel request, the US has not properly identified the challenged French R&T funding and has not mentioned the relevant Spanish programme at all.⁶⁰⁶

4.371 Second, the EC shows that the US includes support for companies other than Airbus SAS or its subsidiaries, despite the fact that the latter are the only producers of LCA in the EC. The EC points out that the US included in its estimates: (1) other participants in collaborative research projects⁶⁰⁷,

⁶⁰¹ US, SWS, Executive Summary, para. 69.

⁶⁰³ US, SWS, Executive Summary, para. 71.

⁶⁰⁴ US, SWS, Executive Summary, para. 72.

⁶⁰⁵ EC, FWS, Executive Summary, para. 59.

⁶⁰⁶ EC, FWS, Executive Summary, para. 60.

⁶⁰⁷ EC, SWS, paras. 615-619.

BCI deleted, as indicated [***]

(2) the non-Airbus activities of companies with wide-ranging activities⁶⁰⁸ and (3) other recipients other than Airbus SAS.⁶⁰⁹ The EC argues that the US does not explain how such funding passed through to Airbus SAS. This applies to large parts of the support provided under the R&T programmes of the EC (EC Framework Programmes), Bavaria, Hamburg, Bremen, France and the UK.⁶¹⁰

4.372 Third, the EC asserts that the US includes support which falls outside the temporal scope of Article 5 of the SCM Agreement⁶¹¹ since it was provided before 1995.⁶¹² This concerns two of the challenged EC Framework Programmes and parts of the R&T support provided by the German Federal government⁶¹³, France, the United Kingdom and Spain.⁶¹⁴

4.373 Fourth, the EC maintains that the US included support under R&T programmes that are not specific within the meaning of Article 2 of the SCM Agreement. The EC explains that this applies to the EC Framework Programmes and to certain R&T programmes of the United Kingdom and Spain.⁶¹⁵ The EC considers that the US includes payments made under R&T programmes that are not specific since they are extremely broad, cover varying research areas and are open to a broad range of sectors.⁶¹⁶

4.374 The EC concludes that the total amount of R&T support provided to Airbus SAS between 1995 and 2005 under the programmes in question, and within the scope of the panel request, is *de minimis* when considered in light of Airbus SAS' annual research budget, R&T expenditure and its turnover.⁶¹⁷

4.375 The EC argues that the US inflates the actual R&T support for Airbus by including support for recipients other than Airbus SAS.⁶¹⁸ The EC states that the US has inflated the amount of R&T support to EUR 3 billion, around 5 times higher than the precise information on payments to Airbus provided by the EC.⁶¹⁹ The EC explains that the US included in its EUR 3 billion figure amounts provided not only to the current producer of LCA in Europe, Airbus SAS, but also to a wide range of other recipients and also inflated the amount of French R&D support. Airbus SAS received only a *de minimis* level of support.⁶²⁰

4.376 In its second written submission, the EC contends that the US still fails to substantiate its vastly inflated figures with regard to R&T support to Airbus SAS in the EC. The EC points out that the US has, in particular, not demonstrated how R&T support to companies other than Airbus SAS was passed on to Airbus SAS.⁶²¹

⁶²⁰ EC, SNCOS, Executive Summary, para. 9.

⁶²¹ EC, SWS, Executive Summary, para. 46.

BCI deleted, as indicated [***]

4.377 In its closing statement at the second Panel meeting, the EC stated that it welcomed the US statement that "it is not saying that the benefit of grants to non-Airbus companies went to Airbus." The EC therefore presumes that the US had dropped its allegation of EUR 3 billion of R&T support to Airbus.⁶²²

4.378 With regard to the EC Framework Programmes, the EC maintains that they are neither *de jure* nor *de facto* specific. According to the EC, the US allegation that "*aeronautics-specific sub-budgets exist under each Framework Program*" is factually incorrect and cannot serve as a basis for finding *de jure* specificity.⁶²³ Concerning the US claim on *de facto* specificity that "*within each FP's aeronautics sub-budget, Airbus is the predominant user of the grants*", the EC points out that specificity must be assessed for the programme as a whole. This also applies to the assessment of *de jure* specificity.⁶²⁴ At the level of the programme, it is clear that aeronautics companies, and even less so Airbus SAS, are not the predominant users of R&T support.⁶²⁵

4.379 The EC also contends that new US exhibits relating to the UK Technology Programme do not indicate its specificity within the meaning of Article 2.1 of the SCM Agreement. In the same way, the EC also contends that the Spanish PROFIT programme, in addition to not being within the scope of the panel request, is also clearly non-specific.⁶²⁶

4.380 Finally, concerning these and the remaining R&T programmes of Germany, Bavaria, Hamburg, Bremen, France, the UK and Spain, the EC sets out in detail why the actual level of R&T support to Airbus SAS is just a fraction of the inflated US estimate and confirms that it has reported all payments to Airbus SAS under the relevant R&T programmes.⁶²⁷

K. WHETHER THE SUBSIDIES HAVE CAUSED ADVERSE EFFECTS TO THE INTERESTS OF THE UNITED STATES

1. Arguments of the United States

4.381 The US argues that for over thirty years, the governments of France, Germany, the United Kingdom, and Spain (the "Airbus governments") have been giving Airbus the means to "win the battle" against its US competitors in the market for large civil aircraft ("LCA"). The US explains that they have done so systematically and methodically in pursuit of a "European industrial policy" to create the world's largest producer of LCA. The US claims that they have succeeded. The US indicates that in less than four decades, Airbus has gone from a zero percent market share to its current position as the world's largest producer.⁶²⁸ The US asserts that the Airbus governments maintain a formal and institutionalized "European industrial policy" toward Airbus. A core part of that policy has been the systematic and coordinated provision of massive subsidies that Airbus has used to develop a family of LCA targeted at its US competitors.⁶²⁹

4.382 The US points out that since Airbus delivered its first LCA in 1974, two US producers (Lockheed and McDonnell Douglas) have been driven from the market, and in 2003 Airbus displaced Boeing as the world's largest LCA producer. By 2005, Airbus' share of the world market had increased to 57 percent while Boeing's fell to 43 percent – a drop of 25 percentage points over the last

BCI deleted, as indicated [***]

decade and 19 percentage points in the last five years.⁶³⁰ Tens of thousands of US workers have lost their jobs.⁶³¹ Further, the subsidization of Airbus jeopardizes the durability of any recent improvement in Boeing's competitive situation. Indeed, the Airbus governments have recently "reaffirmed their agreement to support Airbus."⁶³²

4.383 The US states that if the losses that it has suffered were the result of fair competition, it would not be pursuing this dispute. The US values competition and acknowledges Europe's right to pursue its own interests in the LCA sector in a WTO-compatible manner. But the US maintains that its losses are not the result of fair competition. The Airbus governments created and fuel Airbus' success with massive amounts of WTO-inconsistent subsidies.⁶³³ The US argues that the provision of these subsidies to Airbus by the EC and the Airbus governments is inconsistent with Article 5 because, as demonstrated in its submissions, they have caused both injury to the US domestic LCA industry within the meaning of Article 5(a) and serious prejudice to the interests of the US within the meaning of Article 5(c).⁶³⁴

(a) Conditions of Competition in the LCA Market

4.384 The US explains that Boeing and Airbus are the world's only remaining LCA producers. Both companies compete head to head for virtually every LCA sale in the world in a largely "zero sum" competition – a win for one producer is almost always a loss for the other. Competition between Boeing and Airbus is driven by the performance characteristics of their aircraft and the price (net of all concessions) at which they offer their respective LCA.⁶³⁵

4.385 The US argues that Boeing and Airbus develop, produce, and market families of aircraft to supply demand for LCA that operate efficiently over a variety of different routes. The long-term viability of an LCA producer depends on continued innovation and periodic launches of new aircraft. Yet to do so, the producer must incur enormous up-front designing, engineering, and testing costs over a period of years before a single aircraft can be delivered to a customer. For an LCA manufacturer, decisions with respect to product launches drive its subsequent pricing and production decisions.⁶³⁶

4.386 The US notes that the EC has plainly different views about how competition in the LCA market occurs and which aspects of that competition are most relevant to the Panel's analysis. The US also notes that on virtually every significant point, the statement of Mr. Christian Scherer of Airbus coincides with its view of these matters, rather than the EC's.⁶³⁷ Mr. Scherer explained how Airbus and Boeing "compete to develop new and improved aircraft." This level of Airbus-Boeing competition – the competition to create the family of LCA that will best match customer needs – fundamentally shapes the day-to-day competition on sales and price. The US agrees. Yet Mr. Scherer also explained that, Boeing had, until quite recently, experienced a "failure to develop new aircraft." Mr. Scherer perceives that Airbus, not Boeing, has been dominant in new product launches in recent decades, and this perception is in fact quite broadly shared in the industry. Although Mr. Scherer did

BCI deleted, as indicated [***]

not say so, it is quite clear that Launch Aid has played an important role in giving Airbus this competitive advantage at this most fundamental level of competition.⁶³⁸

4.387 The US notes that in a spontaneous remark, Mr. Scherer explained that both Airbus and Boeing had an incentive to try to maintain stable production rates in the down market cycle that began in 2001. As the US has shown in its submission, Airbus was successful in this, while Boeing was not. In Mr. Scherer's words, Boeing "fell off a cliff." This shift in deliveries is what drove the enormous shift in the market share of Airbus, which Airbus has mostly maintained.⁶³⁹

4.388 The US points out that Mr. Scherer also explains why, in his view, Airbus was successful in maintaining production (and gaining market share) in a period of falling demand, while Boeing was unsuccessful. He tells of hearing from customers "that Boeing was responding very slowly to requests for technical assistance *and concessions*" – in his view, giving customers "not as much attention as we would have," and that Boeing salespeople were far less flexible in negotiations on price with customers than the Airbus sales force. In short, Airbus was willing and able to use price to win orders, when Boeing was not. Further, according to Mr. Scherer, this situation reversed only in 2004, when Boeing finally got tired of losing sales to Airbus and reluctantly capitulated on price concessions. The SCM Agreement has a term for this: "price depression."⁶⁴⁰

4.389 The US notes that it was in this period that Airbus was completing the launch of and delivering the first A340-500/600s, beginning the enormously expensive and risky launch of the A380, and preparing for the coming launch of the A350, and in this same period that Airbus took sales and market share from Boeing through more flexible pricing. And, as the US explained in its opening statement at the second Panel meeting, the evidence shows that, especially during this period, Airbus would have faced significantly greater financial constraints if not for Launch Aid. The US wonders: How is it that Airbus was the producer that was launching all the new aircraft, winning all the new customers, gaining all the new market share, winning more competitions on price, in a period when it faced real financial constraints? The US concludes that it is inconceivable that Launch Aid did not play a key causal role in this.⁶⁴¹

4.390 The US points out that as Mr. Scherer noted, "when demand decreases . . . there tends to be much greater competition by producers to win sales on price." The US explains that the downcycle that began in 2001 provided Airbus with the opportunity to complete its full LCA family, launch the A340-500/600, A380, and A350 in rapid succession, and gain nearly 20 points of market share at Boeing's expense. At that point, the US initiated these proceedings against the EC and the Airbus governments for providing the subsidies to Airbus that are the cause of this situation.⁶⁴²

4.391 If the EC had its way, this harm would be ignored as "historical" adverse effects, of purely academic interest, if one focuses only on a short-term snapshot of the LCA market in which the surge in demand in the last two years is used to portray everything as just fine. But everything is not fine. The adverse effects manifested during the 2001-2005 period are continuing in the form of ongoing losses of follow-on orders by customers captured by Airbus during this period, sustained lower pricing, and unrecovered market share. Moreover, Airbus is launching a new aircraft – the A350 – which Mr. Scherer confirmed is positioned to compete aggressively with the 787 and 777 on both technology and price. And it is absolutely clear that, if this Panel does not confirm that Launch Aid has impermissibly distorted the LCA market in favor of Airbus and caused adverse effects in

BCI deleted, as indicated [***]

contravention of the EC and Airbus governments' commitments under the SCM Agreement, the Launch Aid already committed for the A350 will be enhanced and the adverse effects will continue. The current surge in demand will not last forever. Mr. Scherer reminded us that the LCA industry is cyclical and that demand can turn down suddenly and unexpectedly.⁶⁴³

4.392 Finally, the US points out that Mr. Scherer not only confirms the basic US explanation for how Launch Aid was causing adverse effects in the 2001-2004 period, but also confirms the views that underlie the US subsidized product arguments. According to Mr. Scherer, two aircraft models will compete with one another if they have seating capacities within 15 to 20 percent of each other. The LCA market therefore forms a continuum in which all aircraft compete with their neighbours on the spectrum but in which there are no sharp dividing lines.⁶⁴⁴

(b) Subsidized and like product

4.393 The US asserts that "as early as 1973, Airbus Industrie proposed the development over time of five related aircraft types." The US argues that the EC and the Airbus governments have subsidized, and Airbus has developed, a family of aircraft in order to compete against the family of aircraft offered by Boeing. Airbus' business strategy has, accordingly, focused heavily on its integrated family. The US submits that because subsidies are provided to Airbus for the development of an LCA family, and because subsidies for the development of each major Airbus LCA model benefit the production and marketing of its full LCA family, the "subsidized product" is the Airbus LCA family as a whole.⁶⁴⁵

4.394 The US argues that Launch Aid benefits the Airbus family as a whole in at least six ways: (1) it enables Airbus to be present in all segments of the LCA market, as the EC agrees any competitive LCA producer must; (2) technologies or production facilities developed as part of the launch of one Airbus LCA model are used for other models; (3) Airbus uses "commonality," or common elements among different LCA models that reduce the cost of operating multiple Airbus LCA models, as a central feature in selling the entire Airbus LCA fleet to customers; (4) Airbus uses one Airbus LCA model to sell other LCA models in "package" deals, either simultaneously or consecutively; (5) Launch Aid reduces the debt burden on Airbus of building each individual LCA model, which in turn allows Airbus to move on to launch the next model much more easily and quickly; and (6) Launch Aid provides Airbus with additional cash flow that allows it to reduce prices of any LCA model whenever it concludes that a price reduction is necessary to capture orders that would otherwise have gone to Boeing. Thus, each provision of Launch Aid benefits the entire Airbus LCA family and has adverse effects on the entire like Boeing family. Accordingly, the "subsidized product" for each of the subsidies, and for all of the subsidies taken together, is Airbus LCA.⁶⁴⁶

4.395 The US asserts that Airbus markets its LCA products as a whole and prominently features the commonality between its different LCA types. The US notes that the EC submission acknowledges that an LCA producer cannot succeed by producing a single LCA model that competes independently in a particular segment of the LCA market. Rather, to succeed in *any* segment of the LCA market, a producer must offer a range of products to meet the diverse needs of customers. The Airbus governments have therefore subsidized the full range of Airbus LCA so that each individual model could compete successfully. The "subsidized product," therefore, is Airbus LCA as a whole.⁶⁴⁷

⁶⁴⁶ US, SWS, Executive Summary, para. 86.

⁶⁴⁷ US, FNCOS, Executive Summary, para. 25.

BCI deleted, as indicated [***]

4.396 The US argues that the panel in *US – Softwood Lumber Dumping* found that the identical definition of "like product" that appears in the Antidumping Agreement has no relevance for determining what may or may not be included in a single "product under consideration." Further, it is well established that a range of related, if not necessarily like, products can be grouped as a single "subsidized product" or "product under consideration" under the SCM Agreement, and likewise under the Antidumping Agreement. The recently circulated panel decision in *Japan – DRAMS CVD* provides an example in addition to those previously identified.⁶⁴⁸

4.397 The US notes that the EC insists that, as a legal matter, when each individual item that benefits from a subsidy is not a "like product" to every other such item, then there must be several separate "subsidized products" and several separate "like products" that correspond to them. The US considers that the EC confuses the definition of the subsidized product with the definition of the like product.⁶⁴⁹ The EC also argues that not every Airbus LCA model is "like" every other Airbus LCA model or every Boeing LCA model. In the US view, the EC confuses the identification of the "like product" with the identification of the "subsidized product." This confusion is particularly evident in the EC discussion of the panel report in *Indonesia – Autos*, where the identity of subsidized product was undisputed. Indeed, the reasoning of the *Indonesia – Autos* panel, which defines the "like product" narrowly with respect to the "subsidized product," would support a *broader* approach to the definition of the "subsidized product."⁶⁵⁰

4.398 The US asserts that the EC argues that the Panel *must* define the subsidized products based on whether the various items meet the "like product" test or compete with one another directly, and specifically not with reference to the way in which the US has shown these particular subsidies to have provided benefits to Airbus' production and sales. But, it cannot be overlooked that the subsidies at issue in this dispute have been provided to facilitate the development of the Airbus LCA family as a whole. The US believes that assessing the effect of the subsidy by breaking up the object of subsidization – the Airbus LCA family – into several distinct products fails to be "reasonable and coherent."⁶⁵¹ The US argues that "there are no clear dividing lines between the five categories proposed by the EC."⁶⁵² The US argues that even if it were useful or reasonable to divide the LCA market into a number of submarkets, the EC's proposed division is not supported by the evidence. The US observes that "in its own documents Airbus itself does not follow the particular five-market segmentation that the EC advocates here."⁶⁵³ And even if the Panel were to find any merit whatsoever in the EC market segmentation, the EC contention that no Airbus models compete with the Boeing 747 is manifestly erroneous.⁶⁵⁴

4.399 The US argues that just as the "subsidized product" in this dispute is the Airbus LCA family, the "like product" produced in the US is the Boeing LCA family. The Boeing and Airbus LCA families, however, have "characteristics closely resembling" one another within the meaning of footnote 46 to the SCM Agreement. This is unsurprising, given that Airbus has purposely developed its LCA family to compete directly with the Boeing LCA family.⁶⁵⁵

(c) Reference period

4.400 The US considers that the EC focus on market developments after Panel establishment is legally and factually misplaced. The US submits that it has demonstrated the validity of its claim, set forth in its request for the establishment of this Panel, that the challenged subsidies have caused adverse effects to the interests of the US. The US considers that the EC has chosen not to rebut this showing. Instead, the EC contends that the only question for the Panel is whether the adverse effects referred to in the US panel request have ceased to exist. Most of the trends that demonstrate the adverse effects to the interests of the US over the 2001-2005 period have continued unabated through 2006 and, to the extent data are available, into 2007. Where the trends show small improvements in 2006 when compared to 2005, these are largely due to temporary factors such as the 2006 delays in A380 production and A350 design rather than any elimination of the effects of the subsidies. In any event, the EC's exclusive focus on data for 2006 shows that it cannot contest that adverse effects had existed in the period through 2005; the EC certainly makes no effort to do so.⁶⁵⁶ The US considers that the EC wants the Panel to believe that the EC subsidies to Airbus are not causing adverse effects to the interests of the US, because Boeing is still alive. But, being alive is not relevant to the issue of adverse effects. What is relevant, among other things, is that Boeing has suffered a 20-point market share loss and price erosion due to Airbus subsidies.⁶⁵⁷

4.401 The US considers that the EC argument is also legally incorrect. The US notes that in *EC – Biotech*, the EC asked the panel to decline to rule on a disputed measure on the basis that the measure had allegedly ceased to exist after the establishment of the panel. The panel refused, finding that (1) it had the authority to make findings on the WTO-consistency of the measure even if it had ceased to exist subsequent to the establishment of the panel, (2) that such findings would help "secure a positive solution" to the dispute, and (3) that it did not need to make findings on whether the measure was still in existence in order to make the recommendation required by Article 19.1 of the DSU. The reasoning of the *Biotech* panel applies equally in the present dispute.⁶⁵⁸

4.402 The US finds no support for the EC view that the US *claims* that the contested measures in this dispute have breached the EC obligations under Article 5(a) and 5(c) of the SCM Agreement must be evaluated "at the time when a panel makes its decision" rather than at the time of panel establishment. To the contrary, the Panel's terms of reference require it to examine "the *matter* referred to the DSB by the US" in its 2005 request for panel establishment. The "matter" includes the "claims" contained in the panel request. Therefore, the Panel must examine the claim of the US that the subsidies were causing adverse effects in 2005. Any assertion by the EC that material injury ceased to exist after the establishment of the Panel should be left to the compliance stage.⁶⁵⁹

4.403 In addition, the US notes that the EC contends that the appropriate starting point for the Panel's adverse effects analysis is 2004, not 2001. The US points out that the 2001-2003 period was not aberrational, as the EC claims; if anything, it is the increase in LCA demand in 2005 and 2006 that is historically anomalous. Moreover, if the EC were correct in its contention that changes in market share from 2001 to 2003 were due to temporary phenomena unrelated to subsidization, one would expect the relative market shares of Boeing and Airbus to return to their "normal" levels after the market recovered in 2004. Yet this has not occurred.⁶⁶⁰

⁶⁶⁰ US, SWS, Executive Summary, para. 89.

BCI deleted, as indicated [***]

4.404 Indeed, the LCA market and industry operate under unusually long time horizons. It takes several years to develop a new aircraft and bring it to market. Similarly, LCA sales typically are for deliveries over several years with options to purchase additional aircraft over a time frame that is longer still. The subsidies at issue are long-term loans intended to fund the launch of LCA that are produced and sold over a period of decades; any measurement of their effects must therefore take into account their long-term nature.⁶⁶¹

4.405 The US notes that, in its report in the *US – Cotton Subsidies (Article 21.5)* dispute, "the Appellate Body reasoned that where subsidies have been found to insulate producers from market signals over a long period of time, trends in market share and prices in the most recent period are not dispositive as to whether there is present serious prejudice."⁶⁶² According to the US, "this reasoning would apply even more strongly in the present dispute, where the effect of the subsidy is to facilitate Airbus launch decisions that, by their nature, have even more long-term effects on Airbus production and pricing in the LCA market than could subsidies to an agricultural commodity with a single year's growing cycle."⁶⁶³ "Accordingly, under the approach of the Appellate Body, the Panel is entitled to consider all facts, especially the nature of the subsidies and the market at issue, in determining whether the EC and Airbus government subsidies have caused adverse effects. More particularly, the application of the Appellate Body's reasoning would lead the Panel to reject the EC's efforts to artificially restrict the Panel's focus to trends in the 2004-2006 period, without reference to what occurred before 2004 or the particular supply-creating effects of these subsidies."⁶⁶⁴

(d) Injury Within the Meaning of Article 5(a)

4.406 The US asserts that since 2001, Airbus has significantly increased its share of the LCA market relative to total US demand. Airbus increased its share of US LCA deliveries from 30 percent in 2001 to 48 percent in 2005. Measured by value (at list prices), Airbus' share of the US market increased from 28 percent in 2001 to 53 percent in 2005, or by 25 percentage points over the period. By any measure, this increase in the relative volume of LCA imports is significant, even after taking into account the overall decline in US demand during the period. For example, if Boeing had simply been able to maintain its 2001 share of the US LCA market by value, its LCA sales in the US would have been 54 percent greater in 2005 than they were.⁶⁶⁵

4.407 The US notes that a significant share of the Airbus LCA delivered in the US market during the 2001-2005 period were sold to customers new to Airbus, including both start-up airlines and previous Boeing customers. In each case, Boeing was a strong competitor for the initial order. Although the actual price that each airline paid to Airbus, taking into account all concessions on the sale, is not available to the US, publicly available information indicates that Airbus price undercutting played a key role in winning these customers. Boeing also lost the most significant campaigns that did occur in the US market during this period on the basis of price undercutting by Airbus.⁶⁶⁶

4.408 The US argues that the pricing pressures of these campaigns has had a direct and measurable impact on the prices Boeing has been able to obtain for those sales that it has made in the US market. Indexed pricing data for 2001-2005 provided as business confidential information ("BCI") by Boeing shows that the average price for B737s fell during this period. In addition, while the price of each LCA is contractually agreed at the time of a firm order, Boeing had to reduce prices on undelivered

aircraft for certain major customers because of downward trends in market pricing under pressure from Airbus. Pricing trends for B747 and B777 sales in the US market were similar. The US points out that one would ordinarily expect that in the absence of price suppression, producers would over time increase prices generally in line with increases in their costs. Both Airbus and Boeing typically include price escalation clauses in their sales contracts to reflect cost increases from the year of order to the year of delivery. However, Boeing has been unable to maintain its US pricing for its LCA in line with cost increases.⁶⁶⁷

4.409 In the US view, these data demonstrate that Boeing has experienced price depression (actual price decreases) and price suppression (price increases lower than what would be expected) for its US LCA sales. Given the evidence of aggressive Airbus pricing in US sales campaigns, the price depression and price suppression are attributable to subsidized imports.⁶⁶⁸

4.410 The US points out that data provided by Boeing relating to the factors enumerated in Article 15.4 of the SCM Agreement show a steep decline in the financial results of Boeing's LCA business over the past five years. This decline has occurred despite deep cuts in costs and steady gains in productivity.⁶⁶⁹

4.411 The US asserts that Airbus' gains in its share of the US market have come at the expense of Boeing, thus linking the subsidized imports to the significant adverse impact on Boeing's LCA production and sales figures. Moreover, the decline in Boeing's prices is a function of the pricing of subsidized imports from Airbus. The deterioration in the other relevant indicators of the economic health of Boeing's LCA operations follows directly from this loss of market share and loss of revenue. Any injury resulting from the decline in total demand – a factor that affected both Airbus and Boeing – is distinguishable from injury resulting from loss of market share to Airbus. As Airbus recognized, "For our competitor, the effects of loss of market share and the contraction of the market itself are cumulative." According to the US, no other factors have caused the material injury to Boeing.⁶⁷⁰

4.412 The US notes that material injury is defined to include a threat of material injury. The evidence also shows that a threat of material injury is "clearly foreseen and imminent."⁶⁷¹

4.413 The US argues that the improvement in Boeing's financial performance in 2006 does not undermine the US material injury claim. In 2006, Airbus could not effectively market either its A380 (because of production problems) or its A350 (which had to be redesigned). What 2006 shows is how the absence of a subsidized and aggressively marketed new Airbus aircraft improves the fortunes of the US LCA industry – and, by contrast, how significant the adverse effects of Launch Aid and the other Airbus subsidies have been. However, Airbus can be expected to overcome the technical problems with A380 production, and the A350 with fully revised technical specifications will be back in the market in the very near future. If Launch Aid is permitted to continue, the adverse effects seen in recent years will continue as well.⁶⁷²

4.414 The US notes that the EC discusses at length the improvement in Boeing's financial condition in 2006 (while neglecting to mention that Airbus, too, had record deliveries and performance in the same year) and argues that, whatever may have been the case in the past, Boeing cannot be said to be experiencing material injury at the present time. However, the relevant question for an adverse effects

claim under the DSU and the SCM Agreement is whether the EC was in breach of its obligation under Article 5(a) when the Panel was established. Moreover, the improvement in the financial condition of Boeing must be placed in the context of unusually high demand in 2005 and 2006 in this cyclical industry. Indeed, the events of 2006 demonstrate how significantly relief from subsidized competition improves the fortunes of the US LCA industry.⁶⁷³

(e) Serious Prejudice to the Interests of the US

4.415 The US submits that adverse effects from subsidies also include "serious prejudice to the interests of another Member" as provided in Article 5(c). Article 6.3 further provides that serious prejudice "may arise in any case where one or several" particular market effects of the subsidy are demonstrated. The US argues that several of the effects of the subsidies described in Article 6.3 apply in this dispute.⁶⁷⁴

(i) *Subsidized Airbus LCA Have Displaced or Impeded Imports of US-Produced LCA in the EC Market*

4.416 The US notes that Airbus increased its share of the EC LCA market by 9 percentage points from 2001 to 2005 measured by volume⁶⁷⁵ and maintained all of its increased market share in 2006.⁶⁷⁶ By value, Airbus increased its share by 12 percentage points over the period. The growth in Airbus' market share – and concomitant decline in Boeing's share – demonstrates that Airbus LCA have displaced Boeing LCA in the EC market.⁶⁷⁷ According to the US, a significant portion of the shift in EC market share is attributable to two particular campaigns – easyJet and Air Berlin. Both airlines were Boeing customers looking to expand their fleets, the competitions were directly between Boeing and Airbus, and the wins for Airbus were losses for (and significant displacements of) Boeing. Other lost sales campaigns have resulted in additional displacement of Boeing LCA in the EC market.⁶⁷⁸

4.417 The US considers that the EC fails to respond to its argument; instead it segments and breaks up the data in a way that magnifies random fluctuations and obscures trends. In the US view, the data speak for themselves – significantly fewer Boeing LCA are being imported into the EC than was the case just a few years ago.⁶⁷⁹

4.418 The US notes that the EC contends that the Panel should evaluate the US displacement and impedance claims under Article 6.3(a) and Article 6.3(b) by examining the market share of *orders* rather than the market share for actual *deliveries*. However, the text of Article 6.3(a) refers to the displacement or impedance of "imports" and "exports" of a like product of a Member. The ordinary meaning of the terms "imports" and "exports" includes actual *Articles* or *things* that cross international borders – that is, deliveries.⁶⁸⁰ The US argues that the EC focus on orders rather than deliveries is erroneous: the US notes that the EC agrees that the ordinary meaning of the terms "imports" in Article 6.3(a) and "exports" in Article 6.3(b) carries "the notion of movement of goods." As contracts for the future "movement of goods," orders are certainly relevant to an analysis of likely *future* trends in the LCA market, but the "movement of goods" that has actually occurred and is now occurring is captured by data on actual deliveries. Moreover, an exclusive analytical focus on *order* data leads to factually inaccurate conclusions, particularly in third-country markets where there are a relatively

small number of transactions. This can be seen, for example, in an examination of the LCA market in Mexico.⁶⁸¹

(ii) *Subsidized Airbus LCA Have Displaced or Impeded Exports of US-Produced LCA in Third-Country Markets*

4.419 The US observes that from 2001 to 2005 Airbus has increased its share in markets other than the US and the EC by a 20 percentage points (measured by volume) or 19 percentage points (measured by value). In the two largest third-country markets in the 2001-2005 period, Airbus gained 24 percentage points of market share at Boeing's expense in China and 18 percentage points in Australia. Other significant markets where Airbus significantly increased market share include Singapore, Korea, Brazil, the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu ("Chinese Taipei"), Mexico, and India. Large new orders in third-country markets, most evidently India, threaten further displacement of Boeing exports to these markets for years to come.⁶⁸²

4.420 Boeing regained only five percentage points of its share of these markets in 2006 and remains well below its share in 2001 and 2002. These markets other than the EC and the US have grown substantially over the 2001-2005 period and have continued to grow in 2006. Total deliveries by Boeing and Airbus have increased in each year (except for a very small drop from 2003 to 2004). Thus, the shift in market share in third-country markets largely results from Airbus gaining more of the increased demand than Boeing. With respect to particular third-country markets identified in the US first written submission, Boeing's loss of market share to Airbus continued in 2006 in most markets.⁶⁸³

(iii) *Subsidized Airbus LCA Have Undercut Prices and Taken Sales of Boeing LCA*

4.421 The US argues that from the late 1990s through at least 2005, Airbus won a series of campaigns at major low-cost carriers in the US, Europe, and Asia. Public and confidential evidence shows that aggressive Airbus pricing was the key factor in Airbus' winning, and Boeing's losing, these key campaigns.⁶⁸⁴ Airbus has captured market share through a strategy of aggressive product launch and aggressive pricing at key, strategic campaigns. In many cases, Airbus has succeeded in capturing key customers from Boeing. Even where Boeing has been able to maintain customers, the increased competition from Airbus on the basis of price has resulted in depressed market prices and, accordingly, reduced revenues. The public evidence, which is largely confirmed by the confidential evidence provided by the EC, is that Airbus, not Boeing, took the lead in driving prices downward in recent years.⁶⁸⁵

4.422 According to the US, that Airbus uses price undercutting to increase its share of the LCA market is well recognized in the industry. The US points out that Airbus admits that retaining its targeted market share is more important to it than profitability, stating that "one percent in profitability matters more than one percent in market share, provided it remains at an average 50 percent market share."⁶⁸⁶

4.423 The US argues that a number of significant sales campaigns can be identified, based on available information, in which the customer was in the market for new aircraft, invited Boeing and

BCI deleted, as indicated [***]

Airbus to bid against one another, chose the Airbus LCA over an equally qualified Boeing LCA, and did so because of the Airbus price. For example, easyJet officials remarked that "it surprised all of us to see just how aggressive Airbus was in the final round of sealed bids." Public data from easyJet indicates a purchase price of \$19.36 million per aircraft in 2001 US dollars, a discount of 56 percent off the \$44 million list price. Taking into account additional guarantees and services to be provided by Airbus, easyJet concluded that "the offer received from Airbus ... was significantly better value than the offer received from Boeing." Other major identifiable lost sales campaigns included Air Berlin/NIKI, AirAsia, Iberia Airlines, South African Airways, Thai Airways International, Singapore Airlines, Emirates Airlines, Qantas, and Czech Airlines.⁶⁸⁷

4.424 The US asserts that prices of A380 aircraft sold by Airbus in competition with Boeing were so low, in fact, that the impact of recently announced delivery delays has turned them into loss-making contracts. EADS has announced publicly that "A380 loss making contracts" would result in a EUR 600,000,000 reduction in its 2006 pre-tax earnings.⁶⁸⁸ Airlines that ordered the A380 would otherwise have expanded their fleets with Boeing LCA.⁶⁸⁹

4.425 With respect to A340-500/600 sales, the US notes that the EC argues that Airbus had the right plane at the right time, while Boeing did not. Once again, however, this concedes the causal link; in the absence of Launch Aid, Airbus would not have been in a position to offer what it claims was the right plane at the right time. According to the US, the evidence therefore confirms that the significant lost sales identified by the US were lost primarily because of subsidies.⁶⁹⁰

4.426 The US submits that when the evidence shows – as it does here – that Airbus has not only taken numerous large sales from Boeing, several of them worth billions of dollars, but also that it has done so primarily by offering a lower price than Boeing, that evidence demonstrates not only "significant ... lost sales," but also the existence of "significant price undercutting" within the meaning of Article 6.3(c). In the course of a sales campaign, each customer engages in a detailed and painstaking review of every contractual term, including the value of proposed concessions contingent on future events (such as residual value guarantees). When the evidence establishes that, in a particular LCA transaction, a customer concludes that Airbus, all other things being equal, offered a lower price than Boeing, this constitutes *prima facie* evidence of price undercutting within the meaning of Article 6.5 and, therefore, of Article 6.3(c).⁶⁹¹

4.427 The US notes the EC assertion that many LCA sales do not involve "competition" between Airbus and Boeing, and that where sales are not "competitive" there is no possibility for subsidies to cause adverse effects. According to the US, the EC definition of a "competitive" sale excludes many sales in which price competition between Airbus and Boeing is highly relevant. The US points out that a customer may not conduct a formal bidding process, but only if it believes that it is getting a market price. If a customer thinks that holding a competition will drive down the price, it will do so.⁶⁹²

4.428 The US also rebuts the EC interpretation of "the term 'non-subsidized like product' as used in Article 6.4 and 6.5 to mean that, if the like product of the complaining Member benefits from *any* specific subsidy – no matter how small or indirect – that Member is affirmatively prevented from

showing that the effect of another Member's subsidy – no matter how large or direct – has caused displacement or impedance of its exports to a third country under Article 6.3(b) or significant price undercutting under Article 6.3(c).⁶⁹³ According to the US, "nothing in Articles 6.3, 6.4, or 6.5 suggests that these provisions are intended to deal with subsidies *other* than the challenged subsidies – whether those other subsidies are provided by the responding Member, the complaining Member, or other Members."⁶⁹⁴

(iv) *Boeing Has Experienced Price Suppression and Price Depression for Its LCA Sales in the World Market*

4.429 The US argues that in the context of this case, the world market is the appropriate market for measuring the price effects of the Airbus subsidies. Boeing provided as BCI the indexed annual prices of all actual, worldwide Boeing LCA orders for the period 2001-2005 for the B737, B767, B747, and B777. These figures show negative trends in Boeing's prices for each aircraft type over the period. Post-order price adjustments further demonstrate the price depressing effects of Airbus' pricing practices. Airbus LCA was the only competition and Airbus was engaged in widespread and aggressive price undercutting during the period. Thus, the evidence demonstrates significant price depression and price suppression in the world LCA market.⁶⁹⁵

4.430 The US contends that prices for Boeing LCA in the world market fell, or failed to rise in keeping with cost inflation, in the period from 2001-2005. Despite two years of unprecedented high demand for LCA, prices for the Boeing 737, 747, and 767 continued to be seriously depressed in 2006. The US argues that aggressive Airbus pricing has altered price expectations of customers in the market and continues to prevent prices from rising. Price trends for the 777 were somewhat different both in 2001-2005 and in 2006. The US argues that its contention that the price suppression and depression is the effect of the subsidy is confirmed by the fact that the effect of price suppression and depression recedes first – and, so far, only – where Airbus' product offering has proven the weakest and at the time when Airbus' ability to leverage its subsidies to lower price to offset the difference is most strained.⁶⁹⁶

(v) *Subsidies Cause These Adverse Market Effects*

4.431 The US considers that with respect to the issue of adverse effects, the first question is: How do the subsidies work? How do they affect the market and how Airbus acts in the market? The US argues that it has shown that the subsidy distorts the market in two principal ways. It allows Airbus to launch aircraft it could not have launched on the scale and at the pace it has without subsidies. And, its impact on Airbus' cash flow and costs allows it to price aggressively to buy market share, all while maintaining its pace of product development.⁶⁹⁷

4.432 The US notes that the EC does not really contest the first point. And the EC largely avoids responding to the second point through its arguments about the subsidized product. By deciding in advance that there are five separate product markets, the EC decides in advance that, for example, the Launch Aid provided for the A320 can only affect sales of the A320. But this does not respond to the question of how the subsidy works; rather, the EC begs the question.⁶⁹⁸

BCI deleted, as indicated [***]

4.433 This leads to the second step in the analysis: what is the product that benefits from the subsidy? Given the way the subsidy works, the analysis must be of the effect of the subsidies on all LCA as a whole. The US notes that the EC says that it is necessary to take account of the differences among the various LCA models. The US agrees. Where the US differs with the EC is in how the US takes account of these differences. According to the US, the EC approach is wrong, because it would force the Panel to ignore how the subsidy actually works.⁶⁹⁹

4.434 After identifying how the subsidies work and the subsidized product, the third and final step in the analysis is whether the adverse effects – the various types of serious prejudice and the material injury – are the result of the subsidies. With regard to displacement and impedance, the subsidy affects what Airbus has to sell, and thus certainly has an effect on market share. With regard to lost sales, price undercutting, and price depression and suppression, the subsidy effects are plainly of sufficient magnitude, and the market is sufficiently competitive, that the effects on Boeing have been significant.⁷⁰⁰

4.435 According to the US, the key facts demonstrating adverse effects are not seriously disputable. First, Airbus increased its share of the world LCA market from 39 percent in 2001 to 57 percent in 2005, and has maintained most of these gains in 2006 and, according to available data, in 2007.⁷⁰¹ Airbus deliveries in 2006 broke the company record set in 2005, and in 2006 it built and delivered more LCA than Boeing for the fourth consecutive year.⁷⁰² Second, Boeing lost significant sales to Airbus during this period, often as a result of demonstrable price undercutting by Airbus. Third, the prices that Boeing has been able to receive for the LCA that it did sell during this period have fallen, or failed to increase in keeping with inflation, and largely have not recovered to this day.⁷⁰³

4.436 The US notes that none of these facts, as such, are disputed. In addition, the US notes that the EC concedes that the launches of the A300, A310, A320, A330, and A340 – that is, the base model for every LCA that Airbus had ever delivered to a customer before October 2007 – would not have occurred, at least not when and how they did, if the Airbus governments had not provided Launch Aid or other subsidies.⁷⁰⁴

4.437 The US argues that while Launch Aid has been the primary tool that the EC and the Airbus governments have used to subsidize the Airbus LCA family, the other subsidies also shift the costs of LCA development to the governments as part of the same broad strategy.⁷⁰⁵ The US asserts that subsidies other than Launch Aid, when provided in combination with Launch Aid, have the effect of amplifying and reinforcing the market-distorting impact of Launch Aid. To the extent that these subsidies to Airbus have effects that are complementary to Launch Aid, their effects should be considered together with Launch Aid.⁷⁰⁶ Because the volume and price effects of the various subsidies Airbus has received to develop and market its LCA family "manifest themselves collectively," it is permissible – as the panel stated in *US – Cotton Subsidies*, to "treat them as a 'subsidy' and group them and their effects together."⁷⁰⁷

BCI deleted, as indicated [***]

4.438 The US argues that subsidies have facilitated and accelerated the introduction of every major Airbus model, precisely as the EC and the Airbus governments designed them to do.⁷⁰⁸ The US notes that while it has demonstrated that the Airbus governments provided subsidies that were decisive to the launch of every Airbus LCA model, the EC contests this showing only for the A380. The US asserts that Launch Aid played an indispensable role in the development of the A380. Nonetheless, the EC, by its silence, has left uncontested one of the most important elements of the US adverse effects case – that Airbus and its entire product line would not be what it is today, but for the provision of Launch Aid and other subsidies.⁷⁰⁹

4.439 The US considers that the EC claim in this dispute that Launch Aid was not necessary for the launch of the A380 is contradicted by the evidence. For example, the stated policy of the UK government is to provide Launch Aid only if the recipient demonstrates, *inter alia*, "that Government investment is essential for the project to proceed on the scale and in the time-scale specified in the application." For the French government, the problem was "above all" the crushing financial impact of private financing for the A380, even assuming it could be found, on the balance sheet of Airbus.⁷¹⁰ In addition, the US points out that the British government concluded that the development of the A380 "would not have been possible if it had not been for the commitment of the British Government," and the French government found it "doubtful that the enterprise would be in a position to find outside financing" for the A380.⁷¹¹

4.440 Further, the US submits that each new aircraft model that Airbus has added to its LCA family has targeted US LCA models. The US notes that Airbus claims that its aircraft models were designed to "attack" or "kill" competitive US products or "really hurt" a US competitor. The US points out that the fact that the EC and the Airbus governments provide subsidies to help Airbus take actions *intended* to cause adverse effects to the US LCA industry is strong corroborating evidence that those adverse effects, which have in fact occurred, are caused by the subsidies. Indeed, Airbus and the Airbus governments have, through their own admissions, confirmed each major element of the US adverse effects case.⁷¹²

4.441 The US argues that the provision of Launch Aid by the Airbus governments distorts the fundamentals of competition among LCA producers by shifting the enormous costs and risks of aircraft development from the producer to the governments – as a French Senate report puts it, "a sort of insurance policy for the company against industrial risk."⁷¹³

4.442 The US argues that "Launch Aid commits European governments to absorbing much of any possible losses, so even if Airbus is risk averse, it has little incentive not to adopt a risky, aggressive strategy." According to the US, the Airbus governments thus enable Airbus to launch aircraft at an otherwise unsustainable scale and pace, if it could have launched them at all. Thus, they expand the range of the Airbus product family against which US producers must compete and lower the price at which Airbus is able to offer those products.⁷¹⁴ In the US view, the effect of Launch Aid is not only – and not even primarily – to bestow extra money on the LCA manufacturer when it launches. The effect is also to shift much of the risk of launch to the government – and therefore to make the very fact of launch more likely.⁷¹⁵

BCI deleted, as indicated [***]

4.443 The US argues that Launch Aid also has a second and independent market-distorting effect on the costs and cash flow of Airbus that gives Airbus an advantage in pricing, particularly in LCA campaigns of strategic importance. The impact of the subsidies on the market's perception of the creditworthiness of Airbus is substantial. The subsidies thus have a direct impact on Airbus' ability to raise additional capital, and thus on its marginal cost of capital. Launch Aid also reduces the cash drain of launch, allowing Airbus to be more flexible in pricing all of its LCA while still maintaining a rapid pace of project development.⁷¹⁶ The US argues that as the subsidies have been instrumental in creating Airbus' LCA product family, they necessarily create supply-side pressure on market prices. Further, the impact of Launch Aid on the overall financial performance of Airbus allows Airbus to keep to an aggressive launch schedule, while simultaneously following its publicly stated policy of pursuing market share, even at the cost of short-term profitability.⁷¹⁷

4.444 The US points out that what the EC calls the "US cash flow argument" is something else entirely – an alleged US argument that the effect of the subsidy is to give Airbus cash that it somehow "uses" in order to "price down" its aircraft. But this is an argument the US has not made.⁷¹⁸

4.445 The US further explained that Launch Aid also affects "the marginal production costs and marginal revenue that Airbus receives from each LCA sold and delivered. This occurs in at least two ways. First, ... Launch Aid improves Airbus's overall credit rating and therefore lowers its marginal cost of capital. Given the long lead times between investment at the time of launch and order and customer payment mostly at delivery, lowering Airbus's cost of borrowing has a direct impact on its marginal cost of production. Second, ... if Airbus had obtained a loan with all of the same terms as Launch Aid, except a commercial interest rate, each individual per-aircraft repayment would have to be substantially increased. The EC even calls this increased per-aircraft repayment the 'benefit per aircraft.' ... The lower per-aircraft repayment due to subsidized Launch Aid directly results in greater marginal revenue (or lower marginal costs) for each sale, and does so at the time of delivery for as long as the loan is outstanding."⁷¹⁹

4.446 The US observes that the report of Dr. Gary Dorman presents an economic model of the business case for a typical aircraft program and shows how the success-dependant, back-loaded, and below-market aspects of Launch Aid fundamentally change the economics of an LCA launch decision.⁷²⁰ In this model, the present value of the extra profits received because of Launch Aid if the "base case" assumptions turn out exactly as expected is more than \$1 billion, or 77 percent of the net present value without Launch Aid. More importantly, when Launch Aid is provided, the decision to launch a new aircraft model is much less sensitive to the level of confidence in the accuracy of the target assumptions.⁷²¹

4.447 The US considers that the EC attempt to rebut the economic model of Dr. Gary Dorman fails, and in any event, the EC has chosen not to contest that Launch Aid was decisive in most of Airbus' key launch decisions. The US argues that the economist selected by the EC to review Dr. Dorman's model, Dr. Wachtel does not consider the particular importance that economies of scale play in the LCA industry. The US points out that as a 1995 study for the British government states, "scale

⁷¹⁶ US, FNCOS, Executive Summary, para. 23. *See, also*, US, SWS, Executive Summary, para. 82.

BCI deleted, as indicated [***]

economies are so important in this technology that, if a producer enters a market at all, it will always do so at a scale of production that makes a significant difference to its competitors' sales."⁷²²

4.448 The US argues that nothing in the EC argument detracts from Dr. Dorman's conclusion that Launch Aid significantly affects the probability that a launch will be profitable and therefore significantly influences the recipient's decision on whether to launch at all. However, the EC argues that the existence of aircraft that would not have been launched without subsidies is part of the "conditions of competition" in the LCA market, a *fait accompli* that the US, and the Panel, have to accept as given. But some subsidies give their recipients a competitive advantage within the market as it exists, while other subsidies fundamentally change the dynamics of the market. Both types of subsidy have an impact on the pricing and marketing decisions of the subsidized entity, just in different ways. And so both types of effect must be actionable under Part III of the SCM Agreement. Launch Aid lets Airbus do more than it could otherwise do given its financial constraints, first in terms of bringing new aircraft models into production, and second in terms of having the pricing flexibility to gain market share with those aircraft models.⁷²³

4.449 The US provided a statement by Professors Joseph E. Stiglitz and Bruce C. Greenwald of Columbia University that "discusses differences in the effects of different types of subsidies to LCA producers. Their conclusion is that subsidies, like Launch Aid, that directly influence the development, production, or sale of specific aircraft are the subsidies that are most likely to affect competition generally and market pricing in particular. Their statement confirms that Launch Aid, because it has a direct impact on the supply of LCA that Airbus can produce and sell, has a causal relationship with the market behavior of Airbus and its impact on its competitor."⁷²⁴

4.450 The US also considers its approach to the effect of the subsidy in this dispute to be consistent with the approach of the Appellate Body in *US – Cotton Subsidies (Article 21.5)*. "According to the Appellate Body, an analysis of whether the 'effect of the subsidy' is significant price suppression (or, presumably, any of the other types of effects described in Article 6.3 of the SCM Agreement) properly includes not only an analysis of the effect of the subsidy on short-term production levels, but a longer-term analysis of whether producers would even be present in a particular market at all in the absence of subsidies."⁷²⁵ "Thus, ... significant price suppression (or, presumably, another form of serious prejudice) can be caused not only by a subsidy that directly impacts the recipient's short-term production or pricing decisions, but also by a subsidy that facilitates the entry or exit of the subsidy recipient into or out of a particular market and thus the presence or absence of the subsidy recipient in that market over time."⁷²⁶ "If the Appellate Body's approach is valid with respect to a commodity product such as upland cotton, it would appear to be even more appropriate in the LCA industry, which has vastly longer production cycles and significantly greater barriers to entry than does the production of upland cotton. The United States has demonstrated that the nature and magnitude of the EC and Airbus government subsidies to Airbus are such as to directly affect the outcome of Airbus's individual launch decisions, and therefore the entry of Airbus into various segments of the LCA market, which in turn has effects on the marketability of the entire Airbus LCA family."⁷²⁷

4.451 The US notes that the EC response to the US demonstration of the distorting effects of Launch Aid is *not* to contend that Launch Aid has had no impact on Airbus' launch decisions. Rather, the EC contends that the US, by arguing that subsidies created the existing supply, in fact argues that

BCI deleted, as indicated [***]

Boeing should have a monopoly in the LCA market; it then rebuts this straw man by arguing that even without the subsidized Airbus entry, there would have been another competitor with exactly the same product line as Airbus. The US considers that the EC argument is pure speculation devoid of evidentiary support.⁷²⁸

4.452 The US notes that the EC argues that even if Airbus was not able to launch any of its LCA models when it did, sooner or later Airbus or some other competitor would have done so. But it does not say when that "other competitor" would have entered the market, or what the technical capabilities and prices of the LCA produced by that "other competitor" would be. Moreover, at the time Airbus launched the A300, A310, A320, A330, and A340, there already was "another competitor" to Boeing, namely McDonnell Douglas, a US company.⁷²⁹

4.453 The US notes that the EC further complains that the US has not demonstrated that the subsidies have caused adverse effects because it fails to quantify with precision the benefit that Launch Aid provides to Airbus and asserts that the magnitude of the benefit of Launch Aid and certain other subsidies is too small to produce significant adverse effects. The US considers that the EC contention is incorrect for several reasons. First, the US is under no obligation to provide a detailed quantification and allocation of the subsidy benefit.⁷³⁰ The US points out that nothing in the SCM Agreement requires a precise quantification of the subsidy benefit in the context of a claim of serious prejudice; what matters is whether the subsidy is of sufficient magnitude to have caused the claimed effects.⁷³¹

4.454 Second, the EC attempt to show a small current benefit from Launch Aid is riddled with significant errors.⁷³² The US argues that it has shown that the magnitude of the subsidy was large enough to have materially affected all of Airbus' launch decisions because it did affect Airbus' launch decisions – that is a point that the EC mostly does not dispute.⁷³³ The US considers that the EC calculation of the subsidy benefit therefore is not credible. How is it possible that government support played the instrumental role that it has throughout the growth of Airbus, as the EC recognizes, if the magnitude of the support is *de minimis*?⁷³⁴

4.455 The US argues that "any reasonable calculation of the magnitude of the subsidy demonstrates that it is – contrary to the EC's claims – very large."⁷³⁵ The US notes that "the identification of a 'benefit' is only the beginning, not the end, of the inquiry into the effect of the subsidy. In particular, as the panel in *US – Cotton Subsidies* recognized, it is 'common economic sense' that 'the effects of a subsidy may vary depending upon the nature of the subsidy.'"⁷³⁶ To the extent that a rough calculation of the overall benefit is a useful way to determine the general magnitude of the subsidy, the impact of Launch Aid, over the life of Airbus, is well over \$100 billion. This figure represents the additional cost that Airbus would have incurred if it had obtained financing on the terms and conditions of Launch Aid at commercial interest rates for that type of financing. In the US view, the magnitude of the subsidy is more than sufficient to draw the conclusion that Airbus could not have done this.

BCI deleted, as indicated [***]

(vi) *Conclusions*

4.456 According to the US, the EC looks at this dispute through the lens of the "specific characteristics" of the LCA industry, including its status as "one of the last mass-employment industries in economically developed countries, with a highly skilled workforce" and "an industry in which a lot of pride is invested, which is considered strategic and is closely interwoven with defence industries." The US further notes that in the EC view, the massive subsidies provided to Airbus' LCA development and production are justified by these "specific characteristics" of the LCA industry – though, of course, this view has no basis in the SCM Agreement. Perhaps realizing this weakness in its argument, the EC has offered up a number of other defenses, none of which are any more persuasive.⁷³⁷

4.457 The US points out that in its statement at the first Panel meeting, the EC reminded it of the Appellate Body's admonition that "{t}he procedural rules of WTO dispute settlement are designed to promote, not the development of litigation techniques, but simply the fair, prompt and effective resolution of trade disputes." Yet, the US argues, on that day the Panel saw a perfect example of the EC disregard of that admonition. The US considers that the EC has improperly designated information as highly sensitive business information ("HSBI") when it did not deserve that status. A concern the US had when the HSBI rules were established was that they could be manipulated in a way that would put the US at a disadvantage in making its case. Regrettably, that concern was borne out by the EC's first submission, and was borne out again at the Panel's first meeting.⁷³⁸

4.458 The US considers that the EC oral statement at the first meeting was remarkable both for what it omitted and for its window into how the EC wants the Panel to think about this dispute. Key omissions include the following: (a) The EC refers to the SCM Agreement almost as an after-thought and asks instead that the Panel focus on agreements, such as the Tokyo Round Subsidy Code and the 1992 Agreement, that are not covered agreements and that are outside the Panel's terms of reference; (b) The EC disregards the concerted, systematic, deliberate aspect of the Launch Aid Program; (c) The EC never mentions the \$15 billion in Launch Aid that has been provided to Airbus; (d) The EC never mentions the below-market interest rates that are characteristic of Launch Aid; (e) The EC never mentions the amount of Launch Aid debt that is outstanding; (f) The EC never mentions the \$4.2 billion in Launch Aid provided for the A380; (g) The EC never mentions explicit commitments of Launch Aid for the A350; (h) The EC never mentions Boeing's 20-point market share loss; (i) The EC never mentions sales campaigns that Boeing lost.⁷³⁹

4.459 The US believes that the EC statement was revealing in several respects of how the EC wants the Panel to think about this dispute. The EC notes that much of the EC view is summed up in paragraph 5 of its opening statement. The US notes that there, the EC acknowledges that its support for the LCA industry is driven by a variety of social, non-commercial factors, such as maintaining "mass-employment" and preserving the "pride" invested in the industry. The EC would have the Panel believe that because the LCA industry is special, it is subject to a different set of rules. But that assuredly is not the case. The SCM Agreement is the only relevant standard for the dispute at hand, regardless of the factors that may make the LCA industry different from other industries.⁷⁴⁰

4.460 Curiously, the EC acknowledgment of the LCA industry's exceptional characteristics does not carry over into the EC understanding of the returns that a market player providing Launch Aid type

BCI deleted, as indicated [***]

financing would demand. In any event, whatever the exceptional features of the LCA industry, they do not exempt it from the disciplines of the SCM Agreement. Quite the contrary, the very fact that the SCM Agreement discusses LCA issues in certain footnotes, makes clear that the drafters thought about the Agreement's applicability to LCA and found it applicable.⁷⁴¹

4.461 Finally, the US notes that in its oral statement, the EC repeatedly appealed to the concept of "fairness."⁷⁴² The US points out that what is fair is that the rules that the US and the EC agreed to in the SCM Agreement apply even-handedly. These are rules the EC voluntarily undertook, not rules that would be "forcibly applied" to it, as it argued at the first Panel meeting.⁷⁴³

2. Arguments of the European Communities

4.462 The EC submits that to sustain its adverse effects claims, the US must show that the alleged subsidies at present (*i.e.*, the end of 2007) cause adverse effects to its LCA-related interests. The EC maintains that the US failed to establish the required "genuine and substantial relationship of cause and effect" between the alleged subsidies and the specific forms of adverse effects listed in these provisions.⁷⁴⁴ In particular, the EC argues that the US failed to establish all necessary elements of the "chain of causation" between the alleged subsidies and the alleged specific forms of adverse effects.⁷⁴⁵

4.463 The EC remarks that under the SCM Agreement, subsidies are, apart from export and local content subsidies, only actionable if they are demonstrated to cause adverse effects. Otherwise, they are legitimate public policy instruments that WTO Members are free to use.⁷⁴⁶ The EC also highlights its view that the 1992 Agreement should be the basis against which to judge the existence of adverse effects.

4.464 The EC submits in an introductory section to its submission, and indeed throughout its submission, that the US simply highlights the raw amounts of financing provided to various participants in the EC aerospace industry by EC governments, over a period of four decades.⁷⁴⁷ The EC argues that while the US exposition of figures may make for good story-telling, it is a story entirely devoid of either context or the specific content required to state a claim of adverse effects under Articles 1, 5 and 6 of the SCM Agreement, including of (i) significant price suppression and depression, (ii) significant lost sales and price undercutting, or (iii) displaced or impeded US market share.

4.465 The EC argues that given that the US raises claims based on allegedly subsidy-lowered Airbus pricing, the US must show that Airbus SAS, the entity that today develops, sells and manufactures Airbus LCA, somehow has subsidies at its disposal with which to cause price suppression, lost sales, displacement, impedance, or material injury. The EC argues that it is not enough for the US to show that some company that does not sell LCA has received those subsidies; the US must show that Airbus SAS, the company that sells LCA, benefits from those subsidies.⁷⁴⁸ According to the EC, the burden to show that Airbus SAS receives subsidies is a first critical step in showing that those subsidies cause adverse effects – a first step the US fails to take.

⁷⁴⁸ EC confidential closing statement, first meeting, para. 9.

BCI deleted, as indicated [***]

4.466 According to the EC, the US adverse effects causation analysis has many deficiencies.⁷⁴⁹ The EC considers that the US avoids critical issues, including by refusing to (i) discuss the 1992 Agreement, (ii) demonstrate that the EC producer of LCA benefits from any subsidies that may exist, (iii) recognize the market realities in relation to the definition of the subsidized and like products at issue, (iv) put a proper figure on any alleged subsidisation, or (v) assess how long benefits or effects from any subsidisation may last. According to the EC, the US furthermore fails to demonstrate that the alleged subsidies cause price undercutting, price depression or lost sales taking into account the required legal standards, nor does the US address any of the myriad of non-attribution factors, such as 9/11, Boeing's own admitted mismanagement of customer relations and significant changes in the conditions of competition.

4.467 The EC maintains that the US overly simplistic approach would allow most subsidies to be condemned as causing adverse effects. The EC contends that this is not the approach permitted or laid out in the SCM Agreement. In light of these deficiencies, the EC submits that the US does not show a causal link between subsidies and adverse effects, as required by Articles 5 and 6 of the SCM Agreement. Rather, in the EC's view, the US reasoning boils down to saying that any sales by Airbus necessarily take sales away from Boeing and prevents Boeing from obtaining monopoly profits.⁷⁵⁰

(a) 1992 Agreement – "*Volenti non fit Injuria*"

4.468 The EC argues that, in bringing its claim, the US ignores the agreement concluded with the EC that regulates the type and amount of government support that may be offered to the LCA industry – *i.e.*, the 1992 Agreement.⁷⁵¹ The EC consider this to be a fundamental obstacle to the US claims. According to the EC, the US cannot argue that it suffers adverse effects as a result of measures that were granted on terms that the US expressly consented to: *Volenti non fit Injuria*.⁷⁵² The EC considers that this principle is implicit in Articles 5 and 6 SCM Agreement as well as Article 3 DSU, all of which thus support a conclusion that those measures cannot be considered to cause adverse effects.⁷⁵³

4.469 In providing financing, the EC respected the terms and conditions set out in Article 4 of the 1992 Agreement and consider that the US has not even attempted to rebut this argument.⁷⁵⁴ The EC explains that WTO law should not be interpreted in clinical isolation from the rest of international law. It considers that there can be no conflict between two international agreements if one of the two contains more specific rules. *Lex specialis* prevails over the "later-in-time" rule in such a case.⁷⁵⁵

4.470 The EC also points out that Article 10.1 of the 1992 Agreement provides that parties shall seek to avoid any trade conflict "on matters covered by the present Agreement".⁷⁵⁶ The 1992 Agreement, voluntarily signed by the US, makes a careful distinction between pre-1992 and post-1992 government support. The EC considers that the continued application and reliance on the Agreement following the entry into force of the SCM Agreement justifies the EC's reliance on the fact that MSF granted in accordance with the terms of Article 4 of the 1992 Agreement would be

acceptable to the US.⁷⁵⁷ Since 1992, the EC has acted in a transparent manner, regularly consulting with the US and providing the information required by the agreement.⁷⁵⁸

4.471 In this situation, the US should be estopped from claiming adverse effects under Articles 5 and 6.3 of the SCM Agreement. It would run against a fundamental principle of fairness and good faith if the US were allowed to first encourage the EC to adopt certain MSF practices as being compatible with the 1992 Agreement and then challenge these very same practices as being incompatible with the SCM Agreement.⁷⁵⁹

4.472 Moreover, the EC notes that the 1992 Agreement allowed the US to provide billions of dollars in research and development subsidies to Boeing. These US subsidies are among the many factors that have played a major role in shaping the *present* conditions of competition.⁷⁶⁰

4.473 Finally, the EC submits, in the alternative, that the US still bears the burden of proving that the alleged subsidies cause adverse effects. The EC submits a host of arguments that demonstrate that the US claims of adverse effects must fail.⁷⁶¹

(b) Reference Period

4.474 The EC notes that the US argues that the Panel's "present" adverse effects analysis is limited to determining whether adverse effects existed as of the date of establishment of the Panel – *i.e.*, more than three years ago, on 20 July 2005.⁷⁶² According to the EC, the US errs.⁷⁶³ It explains that the disciplines of Part III of the SCM Agreement deal with subsidies that cause *present* adverse effects in the form of *serious* prejudice and *material* injury.⁷⁶⁴ That is, according to the EC, in examining the US claims under Articles 5 and 6.3 of the SCM Agreement, the Panel must determine whether there are any *present* adverse effects, based on *current factual conditions*.⁷⁶⁵ The Panel must make this assessment based on an appropriate reference period.⁷⁶⁶ Citing the panel decision in *US – Upland Cotton*, the EC argues that "the most recent period for which data are available will be the appropriate period."⁷⁶⁷

4.475 Any adverse effects that might have been caused 5, 10, 20 or 30 years ago do not constitute a present violation of Part III of the SCM Agreement.⁷⁶⁸ Rather, a complaining Member must show that the use of challenged subsidy measures causes adverse effects *today*.⁷⁶⁹ Only with such a showing would the US be entitled to remedy provided in Article 7.8 of the SCM Agreement.⁷⁷⁰

4.476 The EC cites to the panel and Appellate Body Reports in *US – Upland Cotton (Article 21.5 – Brazil)* in support of its position.⁷⁷¹ The EC also explains that the prevailing US arguments in that dispute are directly contrary to the arguments the US advances in this dispute.⁷⁷²

4.477 The EC notes that, before the panel in *US – Upland Cotton (Article 21.5 – Brazil)*, the US argued that the relevant time period for the panel to examine Brazil's claims of significant price suppression was "the immediate present rather than a historical period."⁷⁷³ The United States in that dispute urged the panel to use marketing year 2006⁷⁷⁴ – *i.e.*, a time period extending well after the date of the establishment of the panel in that dispute (28 September 2006).⁷⁷⁵ The panel in *US – Upland Cotton (Article 21.5 – Brazil)* agreed with the United States that it was required to assess data and evidence from marketing year 2006 in making its findings on Brazil's present adverse effects claims.⁷⁷⁶

4.478 The EC also notes that the compliance panel in *US – Upland Cotton (Article 21.5 – Brazil)* further reasoned that

{t}he claim of Brazil under Article 6.3(c) of the SCM Agreement requires an analysis by the Panel as to whether "the effect of the subsidy ... is ... significant price suppression." While the SCM Agreement does not contain a specific provision on the period to be considered for this purpose, the use of the present tense logically implies the need to make a determination with respect to the present period.⁷⁷⁷

4.479 Moreover, the compliance panel held that it was *required to examine the most current factual information* in making its assessment of Brazil's adverse effects claims. Specifically, the panel noted that it saw "no reason to exclude data relating to MY 2006 to the extent that it is available."⁷⁷⁸ The panel continued its reasoning, stating that a

failure to take into account relevant and available data placed before us pertaining to the period since July 2006 would not be consistent with the requirement under Article 11 of the DSU that a panel 'make an objective assessment of the matter before it, including an objective assessment of the facts of the case'⁷⁷⁹

4.480 Relying on the panel and Appellate Body decisions in *US – Upland Cotton (Article 21.5 – Brazil)*, the EC also refutes the US reliance on the *EC – Biotech* case.⁷⁸⁰ The United States cites to *EC – Biotech* as allegedly mandating the Panel to examine only whether adverse effects existed at the time of the panel request.⁷⁸¹ The EC argues that the *EC – Biotech* decision is not relevant for purposes of this dispute because the case did not involve a claim of *present* adverse effects under Articles 5 and 6 of the SCM Agreement.⁷⁸² The *US – Upland Cotton* decisions have firmly

BCI deleted, as indicated [***]

established that *claims* of adverse effects under Articles 5 and 6 of the SCM Agreement are particular because they require the establishment – at the time of briefing before the Panel – as to whether adverse effects are *present*. Adverse effects claims necessarily focus on *present* effects of subsidies – not *past* effects predating the period of time before the briefing before the panel.⁷⁸³ Both *US – Upland Cotton* panels have noted that the text of Article 6.3 ("the effect of the subsidy ... *is* significant price suppression") "logically implies the need to make a determination with respect to the present period."⁷⁸⁴

4.481 Second, the *EC – Biotech* case is also inapplicable because it dealt with the question of whether the panel had jurisdiction to rule on whether there was a *measure* existing at the time of the establishment of the panel and whether that measure continued to exist at the end of the proceedings.⁷⁸⁵ In this case, there is no dispute concerning any change to the alleged subsidy "measures" at issue since September 2005 (except that time has confirmed the absence of any alleged subsidies for the A350).⁷⁸⁶ But even if those measures had been withdrawn or expired, the question before this Panel would be whether there are *continuing* adverse effects *today* from those measures.⁷⁸⁷ That is the essence of an Article 5 and 6.3 claim involving "present" adverse effects as confirmed by both *US – Upland Cotton* panels and the Appellate Body.⁷⁸⁸ Moreover, in *EC – Selected Customs Matters*, the Appellate Body emphasized that "evidence in support of a claim challenging measures that are within a panel's terms of reference may pre-date or post-date the establishment of the panel."⁷⁸⁹

4.482 The EC identifies data and evidence from the 2004-2007 period as reflecting *current* factual conditions under which, according to the EC, the Panel must assess whether the alleged subsidies cause *present* adverse effects. Both *US – Upland Cotton* panels have noted that *past* effects may be relevant but only if they reflect conditions of competition that are similar to present conditions of competition.⁷⁹⁰

4.483 The US adverse effects claims are based, to a large extent, on evidence of alleged adverse effects from the period 1999-2003. Yet, sales campaigns during that time period were conducted under very different conditions of competition than those in effect today. Therefore, these historic sales campaigns provide the Panel with little, if any, information about the effects of any subsidies under present conditions of competition.

4.484 The EC argues that use of data from the 2001-2003 period to substantiate a finding of displacement or impedance in the European Community market or third country markets under Articles 6.3(a) and 6.3(b) of the SCM Agreement would be inconsistent with Article 6.7(c). Therefore, the EC considers that the Panel is legally precluded from using such information as a basis for assessing the US' displacement or impedance claims. With respect to the remaining US claims of serious prejudice or its claim of material injury, it is not the position of the EC that the Panel is precluded, as a matter of law, from considering information from 2001-2003, or from any other period. Instead, the EC questions the relevance of information from a historical period exhibiting

⁷⁸³ This contradicts the US arguments at paragraph 678 of its second written submission where the United States argues – contrary to what it argued before the panel in *US – Upland Cotton (Article 21.5 – Brazil)* – that the word "is" allows panels to make findings that adverse effects may have existed at any time, even presumably in the distant past.

conditions of competition that are very different from those prevailing in the LCA industry today to establishing the existence or absence of present adverse effects.⁷⁹¹ The EC points out that both *US – Upland Cotton* panels have noted that *past* effects may be relevant to an assessment of present effects, but *only if* they existed under conditions that resemble current factual conditions.⁷⁹²

4.485 The EC argues that in presenting its claim, the US ignores that there have been fundamental changes in the LCA markets since 2003. The EC argues that these changed economic circumstances (i) make pre-2004 data largely irrelevant to the Panel's assessment and (ii) have eliminated any basis for finding, on that basis, that adverse effects exist *presently*.⁷⁹³ Specifically, the EC considers relevant the following facts.⁷⁹⁴

4.486 First, the nature and extent of demand for LCA has changed significantly.⁷⁹⁵ The 2001-2003 period following the events of 9/11 was characterized by extraordinarily low demand, few deliveries, low revenues, and significant reductions in LCA prices for new and used LCA.⁷⁹⁶ Mr. Christian Scherer, Executive Vice President of Airbus, confirms that this period was a "buyers' market," in which both Airbus and Boeing had every incentive to compete vigorously to win sales campaigns on pricing considerations or other competitive parameters.⁷⁹⁷ In comparison, Mr. Scherer confirms that today's conditions of competition in the LCA markets reflect a "sellers' market."⁷⁹⁸ Today, demand for LCA has exploded to record highs in line with demand for air travel, and as a result of air traffic liberalization and the economic boom in China, India and the Middle East.⁷⁹⁹ Mr. Scherer explains that part of this demand-side development is the rapid growth and success of low-cost carriers in North America, Europe and Asia. The importance and market presence of low-cost carriers has expanded exponentially, as the low fares offered by such airlines have created additional demand for air travel.⁸⁰⁰ In the current market conditions reflecting very high demand, Airbus and Boeing generally have less of an incentive to heavily discount LCA prices, including an incentive to use subsidy funds, if available.⁸⁰¹

4.487 Second, both manufacturers' order backlog has increased dramatically.⁸⁰² In the buyers' market following 9/11, Mr. Scherer notes that both Boeing and Airbus had difficulties securing sufficient orders to keep their production lines filled.⁸⁰³ This has changed since the beginning of 2004. Since then, both Boeing and Airbus have experienced sustained, exponential growth in orders.⁸⁰⁴ Mr. Scherer explains that this growth has been far greater than both manufacturers' capability to meet demand. Although Boeing and Airbus are producing at full capacities, at

BCI deleted, as indicated [***]

increasing rates, both manufacturers' order backlog is ever increasing.⁸⁰⁵ For example, the value of Boeing Commercial Airplane's backlog is now \$255 billion – it increased by 46 percent in 2007 to more than seven times BCA's revenue in that year.⁸⁰⁶ Similarly, Mr. Scherer confirms that the time until delivery for new orders constantly increases. Boeing's new customers must wait four to six years between an order and delivery of its 737NG, 787, and 777 family LCA.⁸⁰⁷

4.488 Third, there have been significant changes in LCA products competing in sales campaigns through the introduction of new LCA and the abandonment of other LCAs.⁸⁰⁸ Mr. Scherer explains that the period since the beginning of 2004 is distinct from earlier periods because of changes in the LCA product offerings of Boeing and Airbus that compete in sales campaigns. These changes affect the competitive position of both manufacturers and include the launch of Boeing's 787⁸⁰⁹ and 747-8,⁸¹⁰ the launch of Airbus' A350XWB⁸¹¹ and the entry into service of Airbus' A380.⁸¹² Other LCA, such as Boeing's 717 and 757 and Airbus' A300 and A310, were phased out.⁸¹³ Similarly, the Boeing 767 has effectively been replaced by the 787.⁸¹⁴

4.489 Fourth, critically, Boeing's change in business strategy altered the conditions of competition in the LCA markets since 2004.⁸¹⁵ Over the 1999-2003 period, Boeing CFO James Bell acknowledged that Boeing – as the incumbent LCA supplier – had an "entitlement mentality."⁸¹⁶ Boeing officials readily acknowledge that Boeing had lost its customer focus and had poorly marketed its products, which led the company to lose market share.⁸¹⁷ This changed in 2004, when Boeing replaced its head of sales with Scott Carson. Mr. Scherer notes that under Carson, Boeing started engaging in a noticeable, widespread standardized pricing policy change.⁸¹⁸ Mr. Scherer testified that the "new" BCA was much more price-aggressive in sales campaigns, offering steep discounts to all its customers to a much greater extent than had been observed in the past.⁸¹⁹

4.490 Finally, changes in the regulatory environment affecting the LCA industry have changed conditions of competition.⁸²⁰ Mr. Scherer explains that through the de-regulation and liberalization of air traffic, the air transportation business has undergone – and is still undergoing – significant changes.⁸²¹ Mr. Scherer notes that the deregulation of state-owned airlines in many countries, as well as the growth of "open sky" agreements, have opened a considerable number of routes.⁸²² Many new airlines were formed, particularly in China, India, and other parts of Asia, but also in Europe and in the Middle East. Those airlines are now attempting to meet rapidly increasing demand for air travel,

and to build in expectations for future growth. In addition, regulatory pressures increase the need to replace older aircraft, in particular noise constraints and emissions constraints.⁸²³

(c) Subsidized and like product

4.491 The EC asserts that it corrects the artificial US grouping of all Airbus LCA into a single "subsidized" product and all Boeing LCA into a single like product.⁸²⁴ The EC argues that the product and market analyses must be based on objective facts taking into account the physical, performance and price characteristics, and the perception of market participants of the products involved.⁸²⁵

4.492 The EC presents evidence – including statements from Airbus Executive Vice President Christian Scherer, airline expert Rod Muddle, financiers, airline customers and Boeing itself – to demonstrate that the US single subsidized and single like product theory conflicts with market realities.⁸²⁶ The EC submits that technologically advanced, sophisticated and made-to-order LCA are not fungible commodities.⁸²⁷ According to the EC, the differences in physical – particularly seating capacity and range – performance and price characteristics, the perception of market participants, including Boeing and Airbus, and the actual competitive relationships between these products confirm there to be different Airbus LCA competing in different LCA markets.⁸²⁸

4.493 The EC identifies five different LCA product markets.⁸²⁹ Airbus "subsidized" products almost exclusively compete with Boeing "like" products in three of these five product markets.⁸³⁰ In his testimony, Mr. Scherer confirms the multitude of evidence supporting the existence of the following five LCA markets:⁸³¹ (i) the single-aisle (100-200 seat) LCA market, where the Airbus A320 and Boeing 737NG family LCA compete;⁸³² (ii) the 200-300 seat LCA market, where the Airbus A330 family and A350XWB-800 LCA and Boeing 767 and 787 family LCA compete;⁸³³ (iii) the 300-400 seat market, where the Airbus A340 family, A350XWB-900 and -1000XWB and Boeing 777 family LCA compete;⁸³⁴ (iv) the 400-500 seat LCA market, where Boeing offers its 747 family LCA with no competing Airbus product;⁸³⁵ and (v) the 500+ seat LCA market, where Airbus offers its A380 LCA, with no competing Boeing product.⁸³⁶ The EC also argues that Boeing itself divides its product portfolio into the same separate markets as those proposed by the EC.⁸³⁷

4.494 In addition, the EC adduces statements of Boeing executives confirming that the 747-8 is "the only airplane serving the 400- to 500-seat market."⁸³⁸ Further, the EC provides evidence to demonstrate that the Airbus A380 is not "like" the Boeing 747-8 and that both are sold and marketed

in different LCA markets.⁸³⁹ According to the EC, Boeing executives concur with the EC assessment.⁸⁴⁰ The EC adduces the following remark by Boeing's then Vice President Marketing, Randy Baseler, to that effect: "You'll probably see a lot of coverage in which the A380 is compared side-by-side with the Boeing 747-8. So, just to be clear, these two airplanes serve different markets - the 747-8 has about 100 fewer seats. We think there's a market there for both airplanes."⁸⁴¹

4.495 The EC notes that, to overcome these facts, the US relies on the alleged importance of commonality between Airbus LCA⁸⁴² and "bundled" sales (also called "package" deals).⁸⁴³ The EC argues that the US grossly overstates the importance of commonality and bundled sales.⁸⁴⁴ The EC provides evidence to demonstrate that these two factors are not significant enough to warrant conflating different aircraft families into one single LCA market.⁸⁴⁵ In addition, the EC submits that these factors do not affect the way in which Boeing, airlines, leasing companies, and other market participants *perceive* the various Airbus product, *i.e.*, as belonging to different LCA markets.⁸⁴⁶

4.496 With regards to the legal arguments regarding "subsidized" and "like" products, the EC asserts that it corrects the inaccurate US assertion that the Panel is required to slavishly adhere to the US definition of a single subsidized and like product.⁸⁴⁷ The EC argues that Article 11 of the DSU requires the Panel to conduct an objective assessment of the facts and matter before it – not merely rubber-stamp one Member's arguments.⁸⁴⁸ The EC asserts that it is fundamentally a question of fact for the Panel to determine the identity and composition of the "subsidized" product and the like product.⁸⁴⁹ The EC submits that this is confirmed by the panel's approach in *Korea – Commercial Vessels*.⁸⁵⁰ In that dispute, the panel did not find that its causation analysis must slavishly follow a complaining Member's assertions regarding "subsidized product" and "like" product.⁸⁵¹ Instead, that panel concluded after "having considered this question carefully" that "we should make separate serious prejudice findings in respect of each product category {which is} necessary for analytical coherence, *i.e.*, the scope of our final conclusions on serious prejudice will be consistent with the scope of our analysis of price suppression/price depression."⁸⁵²

4.497 The EC argues that this objective assessment must be based largely on the physical characteristics of the products, principally their seating capacity and range, and how those differences are perceived in the marketplace.⁸⁵³ The EC argues that this market-based analysis is consistent with footnote 46 of the SCM Agreement.⁸⁵⁴ This provision requires the "like" product to have, *inter alia*, "characteristics closely resembling those of the product under consideration," as confirmed by the panel in *Indonesia – Autos*.⁸⁵⁵ The panel in that dispute furthermore emphasized that "innumerable

differences among passenger cars and ... the identification of appropriate dividing lines between them ... does not ... justify lumping all such products together where the differences among the products are so dramatic."⁸⁵⁶ The EC argues that similar to the panel in *Indonesia – Autos*, the Panel should consider and rely on Boeing, Airbus, airlines, leasing companies and LCA industry experts' perceptions concerning the various LCA markets.⁸⁵⁷

4.498 In addition, the EC argues that a decision regarding subsidized and like product must give meaning not only to the physical similarities required by footnote 46, but also whether those products are in actual competition to each other.⁸⁵⁸ The Appellate Body in *US – Upland Cotton* confirmed that "two products would be in the same market if they were engaged in actual or potential competition in that market."⁸⁵⁹ Thus, allegedly subsidized aircraft may reasonably be considered to be in the same market if they are engaged in actual or potential competition with each other.⁸⁶⁰ According to the EC, the US reliance on AD jurisprudence, in particular *US – Softwood Lumber*, for the definition of "like" product ignores that the primary focus of an adverse effects claims under Part III of the SCM Agreement is the effects of subsidies on actual or potential competition in particular product and/or geographic markets.⁸⁶¹

4.499 Finally, the EC argues that, in any event, the causation analysis must be conducted on the foundation of appropriate groupings of products that compete in the relevant markets at issue.⁸⁶² Indeed, the EC notes that the US presents its own sales-campaign-based causation arguments largely with reference to exactly the same product groupings and markets advocated by the European Communities.⁸⁶³ Ultimately, determining whether subsidy effects exist or not must be conducted by examining their impact on actual competition between Airbus and Boeing LCA.⁸⁶⁴ That actual competition takes place in the competitive LCA markets identified by the EC.

(d) Material Injury

4.500 The EC argues that a claim under Article 5(a) involves two cumulative steps: First, an assessment of whether the domestic industry of another Member is suffering from "material injury;" and, second, whether the identified material injury found in the first step is caused by reason of the "use of any subsidy."⁸⁶⁵

4.501 The EC argues that, given the lack of any credible evidence of material injury to Boeing over the period 2001-2007 or 2004-2007, the Panel need not move on to the second step in the enquiry, *i.e.*, whether the material injury was caused by the effects of the alleged subsidies.⁸⁶⁶ The EC explains that, for purposes of its material injury claim, the US agrees with the EC and properly adopted a bifurcated approach, *i.e.*, it first sought to attempt to demonstrate the existence of material injury to Boeing, and in a second step, attempted to prove such material injury was caused by the alleged

subsidies.⁸⁶⁷ According to the EC, this means that, if there is no present "decline{ }in the state of the domestic industry, " the Panel need not assess "what factors caused" that state, including alleged subsidies.⁸⁶⁸

4.502 The EC refers to its arguments that the Panel is required to assess the existence of *present* adverse effects from the alleged subsidies. According to the EC, the US must, therefore, demonstrate *present* material injury on the basis of the most recent data available that is complete and reliable. The EC submits that complete and reliable data on the condition of Boeing is available through the end of 2007.⁸⁶⁹ Thus, the US cannot meet its burden of demonstrating material injury by relying exclusively on data from the 2001-2004 period.⁸⁷⁰

4.503 The EC adduces extensive evidence to demonstrate that Boeing is not presently materially injured or threatened with material injury.⁸⁷¹ The following table, prepared by the EC, summarizes data regarding Boeing's financial and commercial performance:

⁸⁷² EC, Comments on US Answer to Panel Question 240, table at para. 199.

BCI deleted, as indicated [***]

4.504 The EC explains that the required assessment of the overall picture of the domestic industry, as demonstrated by the above data, establishes that Boeing is not *presently* materially injured.⁸⁷³ The 2004-2007 period data demonstrates Boeing's LCA business remains vibrant, with Boeing achieving record profit levels (operating profits up 184per cent), record order levels (up 414per cent), and a record order backlog (up 224per cent). In light of this data, the EC argues that the US depiction of "the poor state of the domestic industry,"⁸⁷⁴ which the US attributes to "decreased revenues due to dramatically reduced production and sales volume and lower unit prices,"⁸⁷⁵ is wildly out of touch with reality.⁸⁷⁶

4.505 The EC explains that this current sales and financial data evidences that Boeing is neither experiencing present material injury nor is threatened with material injury.⁸⁷⁷ In particular, the EC points out that, at 3,427 aircraft orders, the 2007 level of the Boeing's backlog – nearly eight times the total number of aircraft Boeing produced in 2007 – is evidence that this robust health is not temporary.⁸⁷⁸ In addition to the above empirical data, the EC quotes the remarks of former Boeing Vice President Marketing, Randy Baseler, characterizing the future of Boeing's LCA business in the following glowing terms: "The Future's So Bright, I Gotta Wear Shades."⁸⁷⁹

4.506 The EC further argues that 2006 data provided by the US also corroborates the absence of material injury in that year.⁸⁸⁰ The EC also notes that the US recognition that "the state of the domestic industry has improved since the establishment of the Panel"⁸⁸¹ in mid-2005 and explains that this statement implies that the US accepts the absence of present material injury to Boeing.⁸⁸²

4.507 The EC argues that, given the lack of material injury to Boeing, the Panel need not move on to the second step in the enquiry, *i.e.*, whether the material injury was caused by the effects of the alleged subsidies.⁸⁸³

4.508 In any event, the EC argues that the US has failed to demonstrate a causal link and that the EC arguments rebutting the existence of the various forms of serious prejudice would apply similarly to rebut any causal link between the alleged subsidies and the alleged material injury.⁸⁸⁴

4.509 Finally, the EC notes that the US provided data relating to Boeing's LCA operations as a whole, but fails to provide data relating to each of the properly separated US domestic industries producing LCA for the various separate product markets at issue – *i.e.*, the single-aisle 100-200 seat LCA market, the 200-300 seat LCA market, the 300-400 seat LCA market, and the 400-500 seat LCA

market.⁸⁸⁵ According to the EC, the US also failed for this reason to make a *prima facie* case that the alleged subsidies cause material injury.⁸⁸⁶

(e) Causation

(i) *Magnitude of the Subsidy*

4.510 The EC argues that the US causation arguments fail to address the crucial issue of the *present* magnitude and age of the alleged subsidies.⁸⁸⁷

4.511 The EC points out that WTO panels and the Appellate Body have repeatedly stressed the importance of determining the magnitude of the subsidy for an objective assessment of an adverse effects claim. Specifically, the Appellate Body explained that "{t}he magnitude of the subsidy is an important factor" in determining whether a subsidy causes effects that are remediable under Part III of the SCM Agreement.⁸⁸⁸ In *US – Upland Cotton*, the Appellate Body also found "that a panel should have regard to the magnitude of the challenged subsidy" and that "it might be difficult to decide this question {whether adverse effects are caused} in the absence of such an assessment."⁸⁸⁹ The Appellate Body further held that "{a}ll things being equal, the smaller the subsidy for a given product, the smaller the degree to which it will affect the cost or revenue of the recipient, and the smaller its likely impact on the prices charged by the recipient for the product."⁸⁹⁰ And the panel in *US – Upland Cotton* found that "with the passage of time a subsidy's effects may diminish. For example a subsidy granted 9 or 10 years ago would indubitably be less likely to affect producer decisions now than it did 8 years ago."⁸⁹¹

4.512 The EC submits that the US ignores this jurisprudence and fails to provide the annual or per-aircraft magnitude of the alleged subsidies during the relevant reference period. The EC points out that the US fails even to establish that the benefit of subsidies actually passed through Airbus SAS. The US causation theory requires proof that, notwithstanding share transfers leading to the extinction of subsidies, cash extractions and the passage of time, subsidies (most of which were conferred decades ago) provide Airbus SAS with the financial cushion necessary to cause present adverse effects.⁸⁹²

4.513 According to the EC, the US failure to provide annual or per-aircraft subsidy magnitudes is telling. The EC explains that it assessed the magnitude of the alleged MSF and R&T subsidies to Airbus and its predecessor companies based on US CVD methodology, as informed by Boeing, and based on the overstated US benchmarks.⁸⁹³ Even with the overstated US benchmarks, the results of the EC analysis show that the magnitude of any "tied" and allocated subsidies for the A320, A330, A340, family LCA are at *de minimis* levels, *i.e.*, significantly below 1 percent *ad valorem*. Combined with the fact that most of the alleged subsidies were granted 15-25 years ago, the *de minimis* levels of

⁸⁹³ EC, FWS, paras. 1572.

BCI deleted, as indicated [***]

these subsidies could not possibly cause the alleged adverse effects.⁸⁹⁴ Accordingly, the EC argues, the magnitude of these subsidies strongly militates against the existence of current adverse effects.⁸⁹⁵

4.514 The EC notes that, rather than presenting evidence of any alleged per-aircraft magnitude of subsidies, at the first hearing, the US offered the Panel a subsidy figure of well over \$100 billion, allegedly representing the *present value* of the benefits to any of the recipient companies. With its second written submission, the US provides the Panel with a report by its economic consultants, NERA, which concludes that the December 2006 present value of alleged MSF subsidies was between \$122 billion and \$205 billion.⁸⁹⁶

4.515 The EC argues that the US approach, which led it to calculate first \$100 billion and then \$200 billion in present benefits to Airbus SAS, is fundamentally flawed.⁸⁹⁷ According to the EC, rather than assessing the magnitude of alleged subsidies presently available to Airbus SAS to cause adverse effects (or at the some other time when alleged adverse effects were caused), the US provides flawed information on what it considers to be the *present value* of all alleged MSF subsidies ever granted. That is, the US achieves the unrealistically large subsidy magnitudes that it does by compounding interest on alleged subsidies dating back as far as the 1970s – as if the alleged subsidies lay in a virtual bank account, unused and perpetually accumulating compound interest. The EC explains that under this US compounding methodology, the calculated benefits *increase* with age, *ad infinitum*; thereby, assigning the greatest present competitive impact to the oldest measures. MSF loans provided in the 1970s and early 1980s for the A300 and A310 programmes – aircraft no longer produced – account for approximately 70 percent of the alleged US \$200 billion in present subsidy benefits.⁸⁹⁸

4.516 The EC considers that the US results are manifestly absurd and inconsistent with panel and Appellate Body precedent. The EC argues that by compounding, rather than expensing and allocating decades-old subsidies, the US methodology is inconsistent with Part III of the SCM Agreement, which is based on the "use," not virtual banking, of subsidies.⁸⁹⁹ As such, it is even inconsistent with the US own causation theory, which is based on the alleged use of subsidies to cause launch LCA products and provide cash flow to use in sales campaigns, not their being put in a bank account. Specifically, that theory asserts that the subsidies allegedly associated with the MSF loans provide Airbus SAS and its predecessors with a financial "cushion" that it can use to launch and price down aircraft. In other words, the US theory assumes that the company has spent and continues to spend the subsidies that it receives.⁹⁰⁰ Finally, the EC submits that the US compounding methodology defies economic logic, resulting in alleged subsidy amounts that are many times larger than the present market capitalization and net assets of Airbus SAS' parent company, EADS.⁹⁰¹

4.517 The EC submits that, while arguing that the alleged subsidies provide Airbus with a cash flow "cushion", allowing it to price down aircraft, the US fails to quantify the per-aircraft magnitude of that alleged cushion.⁹⁰² The EC argues that, when quantifying the alleged present cash flow effects, their magnitude is *de minimis* – in 2007, for example, they were considerably less than one percent – and similar to the magnitude obtained under the US/Boeing CVD methodology. According to the EC, this

is true regardless of whether the inflated US Ellis benchmark or the corrected benchmark developed by Professor Whitelaw is applied, and regardless whether the alleged subsidies are properly treated as tied to particular programmes or improperly treated as untied. The resulting present per-aircraft magnitude of the subsidy in 2007 is too small to cause present adverse effect to US interest.⁹⁰³

4.518 The EC also responds to the US assertion that the cash flow benefit from the MSF loans exceeded EADS profits during the 1997-2007 period. The EC explains that, in making its comparison, the US erroneously relies on the principal of the loan, rather than any benefit from alleged below-market interest rates. Moreover, the EC points out that the US errs in its calculation by analyzing EADS' profits, rather than Airbus SAS' profits, and by comparing EADS' actual profit stream with an alleged cash benefit stream based on aircraft deliveries, as projected in the original 1980s business case, rather than *actual* deliveries. The EC explains that, once these US errors are corrected, the alleged cash flow benefit related to the MSF loans is shown to be much less than one percent of Airbus SAS' revenue, *i.e., de minimis*.⁹⁰⁴

4.519 Further, the EC argues that, to show remediable effect from the alleged subsidies, the US must show that, absent the subsidy, Airbus could not or would not have priced its LCA as it did.⁹⁰⁵ The EC submits that the corrected cash flow calculation demonstrates that removing the alleged subsidies over the past seven years would have allowed Airbus SAS to price in the exact same manner and to earn a return sufficient to meet its cost of equity.⁹⁰⁶ Specifically, if one assumes that, rather than passing the alleged cash flow benefit on to its customer via lower prices, Airbus retained it as increased earnings for its shareholders, the effect of removing these cash flow benefits on Airbus' earnings over the 2001-2007 period was insignificant. Airbus SAS' average return on equity during this period remains at a robust level of approximately 13 percent even after this reduction to earnings. Alternatively, if Airbus did pass the entire benefit on to its customers in the form of reduced prices (*i.e., without affecting its earnings*), any present benefits from these price reductions would be too small to cause the present adverse effects alleged by the US.⁹⁰⁷

4.520 Finally, the EC submits that, rather than quantifying the per-aircraft magnitude of any alleged subsidies benefiting Airbus LCA, the US improperly relies on affixing the term "subsidized" on each Airbus LCA and using this as its basis for claiming causation. While this approach is tactically understandable given the *de minimis* magnitude of the alleged subsidies, it is legally insufficient to demonstrate the required causal link between the alleged subsidies and the alleged specific forms of adverse effects.⁹⁰⁸

(ii) *US Causation Theories*

4.521 The EC submits that, to meet the standard of Articles 5 and 6.3 of the SCM Agreement, the US must establish the required "genuine and substantial relationship of cause and effect" between the alleged subsidies and the specific forms of adverse effects listed in these provisions.⁹⁰⁹ This involves demonstrating that, absent the alleged subsidies, Boeing's present prices would be higher,⁹¹⁰ Boeing

BCI deleted, as indicated [***]

would currently have significantly more sales,⁹¹¹ or Boeing's present market share in specific markets would be significantly higher.⁹¹² According to the EC, the US fails to meet the standard. Specifically, the EC argues that the US fails to establish causation under (i) its historic product launch causation arguments⁹¹³ and (ii) its cash flow causation arguments,⁹¹⁴ as well as (iii) under any "cumulation" of the two causation theories it develops.⁹¹⁵

US historical product launch causation theory

4.522 The EC responds to what the US terms its "primary" causation argument – *i.e.*, that MSF loans enabled all of Airbus' product launches over a period of four decades and that those product launches allegedly created "additional supply" that is causing competitive harm to Boeing.⁹¹⁶ According to the EC, to succeed in its argument the US must causally link the alleged "additional supply" to the specific forms of present adverse effects listed in Articles 5 and 6.3 of the SCM Agreement, including significant price suppression or depression, specific instances of significant lost sales and price undercutting, and displacement or impedance, amounting to serious prejudice.⁹¹⁷ The EC submits that the US "additional supply" argument based on historic product launches fails to sustain this burden.

4.523 First, the EC argues that the US fails to prove *present* adverse effects, *i.e.*, that *today* Boeing would be better off with a non-Airbus competitor, and absent Airbus and the products it launched over the past four decades.⁹¹⁸ The EC argues that, in practice, "today" refers to the period ending at the end of 2007.⁹¹⁹ According to the EC, the US concedes that, absent Airbus and its various LCA products, Boeing would face active competition in the LCA markets through the various reference periods identified by each party.⁹²⁰ The EC submits that the acknowledged presence of a viable competitor to Boeing means that Boeing would lose a substantial number of sales, would obtain far less than 100 percent market share, and – as the US recognizes – that competition would have the effect of lowering prices.⁹²¹ Against this background, the EC argues that the US failed to show that there is a significant difference – amounting to adverse effects – between the acknowledged competition that Boeing would face in the LCA markets from a non-Airbus competitor, and today's LCA markets, in which Airbus and its various LCA exist.⁹²²

4.524 Second, the EC argues that, with very few exceptions, the US makes no attempt to attribute specific instances of lost sales, price undercutting, price suppression or depression, and displacement or impedance to the alleged product launch effects.⁹²³ The US cites four instances in which alleged product effects led to lost sales. Yet, even in these limited instances – *i.e.*, sales campaigns involving the A340-500/600 (Thai Airways)⁹²⁴ and the A380 (Singapore Airlines, Qantas, and Emirates)⁹²⁵ – the

BCI deleted, as indicated [***]

EC explains that the evidence disproves the US claims for one simple reason: it shows that alleged MSF subsidies for these products were not instrumental in the launch of either aircraft.⁹²⁶ Thus, the US fails to show how *product* effects – in the form of product attributes, early availability, increased supply, or the like – have resulted in specific instances of competitive harm.

4.525 Based on either of these two deficiencies of the US causation theory, the Panel should end its analysis and find an absence of a causal link.⁹²⁷ Nonetheless, the EC also addresses the substance of the US arguments. The EC identifies as the centrepiece of the US historic product launch causation argument an economic analysis (the "Dorman report") that allegedly demonstrates that *but for* MSF loans, there would be no Airbus LCA.⁹²⁸ The EC maintains that certain key assumptions on which the Dorman report is based are unrealistic and result in severely understating LCA programme's expected financial return, as explained in a report by Professor Wachtel.⁹²⁹ This makes the Dorman model hypersensitive to small changes in budgeted costs or revenues.

4.526 The EC provides additional analysis supporting Professor Wachtel's finding. This additional analysis, according to the EC, demonstrates that the low revenue, profits and financial return forecast by Mr. Dorman's model are driven by his obsolete assumption of 850 programme lifetime deliveries for an allegedly "typical" middle-of-the-market wide-body aircraft programme launched in 2004 with estimated development costs of approximately 10 billion dollars. According to evidence provided by the EC, that number of expected deliveries should be between 1400 and 1750 aircraft, rather than 850.⁹³⁰ The EC notes that Boeing itself publicly contradicted Mr. Dorman's delivery estimate when it announced that its new aircraft the 787 – which precisely fits Mr. Dorman's criteria – was launched with expected deliveries of 1750 aircraft.⁹³¹

4.527 The EC submits that, when Mr. Dorman's model is run with a more realistic but still conservative assumption of 1375 aircraft deliveries it results in expected programme returns that are robust and [***].⁹³² The EC notes that the capital budget for the A380, which was prepared by the company prior to the launch of the aircraft in December 2000, concluded that the most likely return from the A380 programme was [***].⁹³³ The EC points out that that the capital budget finds that, if MSF for the A380 were not available, there would be [***].⁹³⁴ By contrast, Mr. Dorman finds that returns would be halved.⁹³⁵ Like Mr. Dorman, the [***]. In contrast to Mr. Dorman, however, [***] of a [[HSBI]] cost of capital, *i.e.*, the investment remains viable.⁹³⁶ The EC also relies on the capital budgeting studies for the A330-200 and A340-500/600 to show the same point.⁹³⁷

4.528 Thus, in contrast to the Dorman theory, the assessment underlying the actual launch decisions by Airbus GIE/SAS with respect to the A330-200, the A340-500/600, the A380, and the likely assessment by Boeing with respect to its decision to launch the 787, [***].⁹³⁸ Thus, the EC submits that Mr. Dorman – at Boeing's request – prepared a model for these proceedings that makes the achievement of viable returns on the LCA programme in all but the most fortuitous circumstances

dependent on extremely favourable MSF terms.⁹³⁹ Given unrealistic assumptions of the Dorman report, its conclusions cannot support the US argument that, absent MSF, none of Airbus' products would have been launched.⁹⁴⁰

4.529 The EC also addresses the alleged effect of MSF loans on two groups of LCA launches, and any resulting implications for the US ability to demonstrate causation. With respect to alleged product launch effects on Airbus LCA launches after the 1992 Agreement, the EC submits that the evidence shows that no such effects existed. According to the EC, [***] would have been launched even without MSF loans.⁹⁴¹ The EC argues that these analyses represent the best and most relevant evidence regarding the economics of each launch decision, remain un-rebutted by the US, and are supported by additional contemporary evidence.

4.530 The EC notes that the US attempts to challenge these contemporaneous analyses, by relying on a collection of quotes regarding the alleged inability of Aérospatiale, one of the four Associated Manufacturers, to finance the A340-500/600 or A380 without MSF loans.⁹⁴² The EC explains that the US distorts the meaning and import of these statements, which in any event cannot rebut the quantitative evidence provided in the launch business cases for these programmes.⁹⁴³ Crucially, the EC points out that these statements ignore what the US accepts – namely, that Airbus could have turned to risk-sharing supplier financing as an alternative source of financing, which means that the alleged inability to obtain finance did not exist.⁹⁴⁴

4.531 With respect to alleged product launch effects on Airbus LCA prior to the 1992 Agreement, the EC explains that even if, *arguendo*, Airbus would not have been able to launch these pre-1992 LCA without MSF loans, including those launched as long ago as the 1970s, this would not enable the US to demonstrate the existence of present adverse effects, *i.e.*, that Boeing's *current* commercial position would be better but for the alleged subsidies. According to the EC, this is due to the crucial US admission that absent Airbus, there would nonetheless be competition in the LCA markets at issue today.⁹⁴⁵ The EC agrees with the US that it is this competition "that holds prices down."⁹⁴⁶ The EC submits that by accepting the existence of a competitive duopoly absent Airbus, the US also accepts that each duopolist will secure roughly half of the sales and market share; otherwise, the commercial viability of the other competitor would be negatively impacted over the long-run.⁹⁴⁷

4.532 Against this background, the EC submits that, to demonstrate causation, the US would need to demonstrate how Boeing's present prices and market share in the face of non-subsidized non-Airbus competition would differ from its present prices, sales and market shares in the face of competition from Airbus. The US would need to show that this "difference" in prices, sales and market shares fulfils the conditions of the specific forms of adverse effects enumerated in Articles 5 and 6.3, *i.e.*, that Boeing's present prices, sales, and market share would be significantly higher.⁹⁴⁸

4.533 The EC argues that assessing the difference in competition between Airbus and a hypothetical non-subsidized Boeing competitor is hopelessly speculative. This is because, for decades, Boeing's product launches shaped Airbus' product launches and *vice versa*. As a consequence, it is impossible

BCI deleted, as indicated [***]

to determine what competition in the various product markets at issue would look like in a counterfactual with a non-Airbus competitor.⁹⁴⁹ Accordingly, the EC argues that the US leaves the Panel guessing as to how to link its primary causation argument, which relates to *historic* product launches 20-40 years ago, with its claim of specific forms of *present* adverse effects resulting from alleged Airbus price undercutting.⁹⁵⁰ The US requires the Panel to take unwarranted speculative leaps that would be inconsistent with the requirement to find a "genuine and substantial relationship of cause and effect",⁹⁵¹ under Articles 5 and 6.3 of the SCM Agreement. Such speculation is also inconsistent with the Panel's requirement to conduct an objective assessment of the facts under Article 11 of the DSU.⁹⁵²

4.534 Moreover, the EC emphasizes that, had the US been concerned with Airbus' existence and product launches as long ago as the 1970s, it could have challenged these alleged subsidy-enabled product launch much earlier, under Article XVI:1 of the GATT 1947, the Tokyo Round Subsidies Code, or even the SCM Agreement when it entered into force in 1995. Instead, the US chose to negotiate the 1992 Agreement with the European Communities, in which it expressly agreed to MSF financing on certain terms and conditions. Accordingly, the US should be estopped from challenging those alleged past effects today.⁹⁵³

4.535 The EC argues that, in any event, any product effects would be short-lived.⁹⁵⁴ LCA do not retain a performance advantage indefinitely. In the dynamic LCA industry, competitive conditions change over time and do not remain static over a period of 20-37 years. The EC explains that, within, on average, two to three years after any allegedly subsidy-enabled Airbus launch, any enhanced performance advantage enjoyed by those LCA was effectively eliminated through the launch of competing LCA by Boeing, and *vice versa*. According to the EC, once those competitive advantages are extinguished, and with them the ability of a subsidy-enabled product to cause adverse effects, a "launch" subsidy can cause adverse effects only through subsidy-enabled pricing, if any.⁹⁵⁵

4.536 Finally, the EC notes that the US belatedly submits a study by Professors Greenwald and Stiglitz. The US uses this generic report in an attempt to bolster its product launch arguments. The EC explains, however, that the study does not support the US contention the MSF causes present adverse effects. Asked to address a hypothetical extreme case of subsidy enabled product launches, the authors come to the unremarkable conclusion that these would have effects on supply and prices. The EC notes that, not surprisingly, however, the US did not ask Professors Greenwald and Stiglitz to examine the specific facts of this case, including the evidence that post 1992 launches were not dependent on MSF. Moreover, the EC notes that the Greenwald/Stiglitz study similarly does not address other critical factors such as passage of time and its effect on competitive advantage and the continued existence of any effects of a product launch subsidy, the declining magnitude of MSF subsidies, or any other elements that break the chain of causation in the present dispute. This renders the study's conclusions irrelevant for the present dispute.⁹⁵⁶

US cash-flow price effects causation theory

4.537 The EC also responded to US arguments related to its second general theory of causation, the so-called "cash flow" theory. Under its cash flow causation theory, the US asserts that the alleged

BCI deleted, as indicated [***]

subsidies enhance Airbus GIE/SAS' cash flow, permitting it to undertake a strategy of aggressive pricing that results in present competitive harm to Boeing and US interests in the form of significantly suppressed or depressed prices, significant price undercutting, significant lost sales, displacement or impedance, and in injury to the US domestic industry.⁹⁵⁷ Given the wholly speculative nature of the US product launch theory, and given the US reliance on "price undercutting" as evidence supporting all of its serious prejudice claims, the EC submits that the US must demonstrate (i) that the alleged subsidies provided Airbus with the ability to price down its aircraft, (ii) that Airbus had the opportunity and (iii) the incentive to use the alleged subsidies to price down its aircraft, and (iv) that further evidence suggests that it actually did so.⁹⁵⁸ The EC notes the US agreement that "{t}he mere fact that subsidies provide a recipient with additional cash is not sufficient, in and of itself, to demonstrate a causal link between the subsidy and any particular form of serious prejudice".⁹⁵⁹

4.538 The EC argues that the chief flaw in the US cash flow price effects argument is the US failure to demonstrate that a sufficient per-aircraft magnitude of subsidy was available for, and used in, individual sales campaigns to price aggressively during the reference period.⁹⁶⁰ The EC posits that the evidence shows conclusively that the alleged subsidies are not the cause of any significant price effects.

4.539 With respect to Airbus' ability to price down its aircraft, the EC notes the US claim that the alleged MSF subsidy provides two benefits: (i) a lower cost of capital, and (ii) below market MSF repayments on the delivery of each aircraft. Neither alleged "benefit" supports a finding of present price effects.⁹⁶¹

4.540 The EC observes that the first of these "benefits" is neither a "benefit" nor even the effect of a subsidy. It is not a benefit because the same risk reduction and accompanying improvement in the credit rating can be obtained from market financing. The EC explains that Boeing enjoys the same "benefit" from its heavy reliance on risk-sharing suppliers. It is also not an effect of the subsidy because the effect of risk-sharing financing in improving credit ratings exists, whether that financing is provided at market or at below market terms. In any event, the EC notes that the US has not demonstrated any price effect arising from the improved credit rating, let alone that those price effects are caused by allegedly subsidized MSF loans.⁹⁶²

4.541 The EC notes, the entire benefit, if any, is captured in the difference between the benchmark rate and the anticipated MSF return, the second basis for the US price effects claim. The EC refers to its arguments on the magnitude of any subsidies and notes that the US agrees that the magnitude of the benefit is the reduction in marginal cost – measured as the difference between what Airbus would have had to repay at market on each actual aircraft delivery and what it did repay.⁹⁶³ The EC recalls that the US has failed to even quantify the increased cash flow arising from below market financing on present sales of aircraft.⁹⁶⁴ The EC undertook this calculation and shows that any benefit from MSF loans for the A320, A330, and A340 aircraft during 2004-2007 is either zero or *de minimis*, whether measured on the basis of the US/Boeing methodology or the US cash flow methodology.⁹⁶⁵

⁹⁶⁵ EC, SWS, paras. 1010-1024, 1031-1034.

BCI deleted, as indicated [***]

The EC further argues that any price effects from alleged MSF subsidies exist only for as long as there remain outstanding repayment obligations, which at present is not the case for the discontinued A300 and A310, and for orders of the A320, A330, A340-300.⁹⁶⁶

4.542 The EC asserts that even if the Panel were to make the extreme assumption that the size of the price effect was the full amount of any subsidy, the per-aircraft subsidy is simply too small to cause significant price effects. And even here, the EC observes, the US concedes that the effect on price will be less than dollar-for-dollar.⁹⁶⁷

4.543 Further, the EC argues that even if, at present, Airbus had available cash flow from alleged subsidies, the company has no incentive to use any alleged subsidies to lower its prices, in light of present high levels of demand and substantial and growing order backlogs.⁹⁶⁸ Moreover, in certain of the challenged sales campaigns, Airbus did not even have the opportunity to lower its price in response to available subsidies, because Airbus was not involved in that sale.⁹⁶⁹

4.544 Finally, the EC recalls that, in the context of its subsidy magnitude related arguments, it established that Airbus could and would have behaved in a similar commercial manner during the 2001-2007 period, even if it had not received the alleged subsidies. As such, the alleged subsidies cannot have changed Airbus' commercial behaviour and, therefore, cannot be the cause of any price-based adverse effects.⁹⁷⁰

Cumulative US causation arguments

4.545 The EC notes that the US, in various instances alleges further causation arguments that are based on a cumulation of product launch and price effects. These arguments are, however, simply variations of their two constituent arguments, and therefore fail for the same reasons.⁹⁷¹

(iii) Serious Prejudice

4.546 The EC argues that, in addition to its failure to establish causation on a general level, the US also fails to meet its burden of demonstrating that the effects of the alleged subsidies caused the four types of serious prejudice asserted by the United States – significant price undercutting, significant lost sales, significant price suppression or depression, and impedance or displacement. The EC recalls the Appellate Body's finding that "the effect – {serious prejudice} – must result from a chain of causation that is linked to the impugned subsidy."⁹⁷²

Intervening Events and Non-Attribution Factors

4.547 The EC explains that, as a general matter, each of the US serious prejudice claims fail to take account of a number of important developments in the LCA markets that had a significant impact on sales and prices of Airbus and Boeing LCA during the reference periods advocated by the parties.⁹⁷³ These developments took place not only historically – beginning with launch of Airbus and Boeing LCA decades ago, but also in the most recent reference period of 2004-2007. The EC submits that

BCI deleted, as indicated [***]

these "intervening events" or "non-attribution" factors, coupled with the passage of time⁹⁷⁴ and the diminishing magnitude of the subsidies,⁹⁷⁵ collectively strain and then break the causal link between Airbus LCA launches and alleged present adverse effects. The EC considers that these intervening events are further evidence that the US "historic/product launch causation"⁹⁷⁶ and "cash flow"⁹⁷⁷ theories cannot be sustained. And more specifically, these intervening events break the causal chain for the various forms of serious prejudice asserted by the US – price undercutting, price suppression/depression, lost sales, and displacement/impedance.⁹⁷⁸ The EC considers that among the relevant intervening events that break the causal link are the following:

- Boeing's own launches of new LCA reduced or negated any competitive advantage enjoyed by Airbus at the time of an allegedly subsidy-enabled LCA launch.⁹⁷⁹ The EC considers that any enhanced performance-based competitive advantage from Airbus' LCA launches was short-lived.⁹⁸⁰ Even assuming, *arguendo*, that the alleged subsidies provided Airbus GIE with a competitive advantage over Boeing at the time of launch of the A300, A310, A320 and A340, the EC notes that Boeing generally responded within two to three years⁹⁸¹ with its own technological advances that allowed it to regain market share and, in some cases, even obtain a dominant market share. It claims that over a number of decades, these reactive Boeing launches put Boeing on either an equal or better footing than Airbus.⁹⁸²
- **Boeing's replacement of older version LCA.** The EC argues that in the 200-300 seat LCA market, Boeing's 767 has effectively been replaced by the 787.⁹⁸³ Similarly, the EC argues that the evidence from the 400-500 seat LCA market demonstrates that the 747-400 has effectively been replaced by the 747-8.⁹⁸⁴ And in the 100-200 seat LCA market, earlier versions of the 737 have been replaced by the 737NG family. The EC considers that those launches of new Boeing LCA have been the cause of any negative effects on earlier versions of Boeing products in the same markets – not decades old alleged subsidies to Airbus.⁹⁸⁵
- **Boeing's abandonment of LCA.** The EC notes that it was Boeing's commercial decision – not allegedly subsidized competition from Airbus – to discontinue the technologically outdated 757 programme.⁹⁸⁶ Similarly, the EC notes that shortly after its merger with McDonnell Douglas in 1997, Boeing decided to discontinue the performance-plagued 300-400 seat MD-11.⁹⁸⁷ These Boeing aircraft were discontinued long before even the US proposed reference period in this dispute.⁹⁸⁸ Thus, the EC considers that with respect to these Boeing LCA, the US cannot claim now – long after Boeing decided to discontinue these

respective LCA – that it is presently seriously prejudiced for an LCA that was removed from the market by a US company.⁹⁸⁹

- **Airbus' abandonment of LCA.** The EC notes that since 2003, Airbus has effectively phased out its A300 and A310 LCA.⁹⁹⁰ It emphasizes that abandoned LCA programmes – even if they were launched decades before as an effect of alleged subsidies – cannot cause present adverse effects.⁹⁹¹
- **Airbus' launch of new LCA.** The EC argues that a launch by Airbus of new or modified versions of LCA that are either not subsidized or which reflect far lower levels of alleged subsidization than earlier Airbus LCA diminishes the effects of any earlier Airbus subsidies.⁹⁹²
- **Enormous order backlog and Boeing's unwillingness – or inability – to meet demand.** The EC alleges that since 2004, both Boeing and Airbus are experiencing an exponential and sustained growth in orders, in particular in the single-aisle and 200-300 seat LCA markets.⁹⁹³ At the end of 2007, the value of BCA's order backlog stood at \$255 billion, representing many times its annual revenue and production capacity.⁹⁹⁴ Despite Boeing's moderate increases in production capacity, this backlog is a clear indication that the company is unable to meet demand.⁹⁹⁵ The EC considers that the US therefore cannot claim present adverse effects from historic lost sales when Boeing is presently producing at full capacity, suggesting that all production slots at issue in the alleged lost sales campaigns have subsequently been sold, potentially at higher prices.⁹⁹⁶ Indeed, the company is reportedly turning down orders for its 737NG.⁹⁹⁷ The EC also notes that Boeing itself put a limit on its increases in production capacity.⁹⁹⁸ In these circumstances, no lost sales can be significant, as required by Article 6.3(c).
- **Surge in fuel prices.** The dramatic rise in jet fuel prices since late 2004, the EC contends, has greatly reduced the market appeal of the four-engine A340 compared to the twin-engine Boeing 777.⁹⁹⁹ Given the market dominance of Boeing's 777,¹⁰⁰⁰ there is no basis for the US to claim adverse effects with respect to that product. Similarly, the surge in fuel prices and Boeing's offering of the fuel-efficient 787 have greatly reduced the market appeal of its technologically outdated 767.¹⁰⁰¹

4.548 Moreover, the EC considers that with respect to each form of serious prejudice asserted by the US, there are a number of non-attribution factors that further disprove the existence of any causal link. These are addressed in the following sections.

EC Responses to US Allegations of Price Undercutting

4.549 With respect to the US claims of significant price undercutting, the EC notes that each of US allegations of serious prejudice is based on the assertion that Airbus undercut Boeing prices.¹⁰⁰² As a result of such alleged price undercutting, the US argues, Boeing's prices were suppressed/depressed, Boeing allegedly lost sales, and Boeing lost third country market shares.¹⁰⁰³

4.550 In response, the EC argues that the US allegations of price undercutting are invalid for three fundamental reasons: First, the US failed to demonstrate that Boeing's LCA in competition with Airbus LCA were non-subsidized for the purposes of any claims under Articles 6.3(c) and 6.5 of the SCM Agreement.¹⁰⁰⁴ Second, the US failed to demonstrate that, based on actual LCA prices, the Airbus prices did, in fact, undercut the Boeing LCA prices.¹⁰⁰⁵ And third, that a detailed analysis from the sales campaign evidence demonstrated both the absence of price undercutting, and of any causal connection between alleged EC subsidies and Airbus pricing.¹⁰⁰⁶

4.551 First, the EC maintains that the US claims of significant price undercutting fail because the US like products – Boeing LCA – are subsidized. The US like products, therefore, fails the "non-subsidized like product" requirement in Article 6.5 of the SCM Agreement.¹⁰⁰⁷

4.552 Second, the EC argues that actual transaction prices are *key* for the US to prove that Airbus undercut, *i.e.*, offered a *lower* price, than Boeing.¹⁰⁰⁸ The EC notes that the US agrees that "the {price undercutting} analysis *must be based upon evidence regarding the actual price*, including all the relevant elements in a particular transaction."¹⁰⁰⁹

4.553 Thus, the EC submits that the issue in a price undercutting claim is whether Airbus undercut Boeing's *price*, not whether Airbus made a higher *value* offer.¹⁰¹⁰ The EC considers that the US improperly conflates the concepts of price and NPV.¹⁰¹¹ It implies that price undercutting is demonstrated simply by evidence that the customer decided to order from Airbus due to the better value of the Airbus offer.¹⁰¹²

4.554 The EC explains that pricing data is the required basis for an assessment of price undercutting, and that merely demonstrating that the NPV of the Airbus offer was better than the NPV of the Boeing offer, in and of itself, does not demonstrate *price* undercutting, unless it has been established that no non-price factor impacted the NPV calculation.¹⁰¹³ According to the EC, in the LCA industry, non-price factors can and do play an important factor in many customers' NPV assessment.¹⁰¹⁴ As Mr. Muddle and Mr. Scherer explain, the actual price of an aircraft is but one of

BCI deleted, as indicated [***]

the many elements that is taken into consideration together with many non-price related factors when a customer evaluates the total Net Present *Value* of an offer.¹⁰¹⁵ Customers order aircraft, not only on the basis of the aircraft price, but on the basis of the offers' total value, including the aircraft revenue capacity, operating costs, maintenance costs, delivery slots, financing, etc.¹⁰¹⁶ As a result, a clear distinction must be made between "price" and "value".¹⁰¹⁷

4.555 Consequently, in the view of the EC, the fact that the *value* of the Airbus offer is better than the *value* of the Boeing offer, does not necessarily mean that Airbus is offering its aircraft at a lower *price*.¹⁰¹⁸ Airbus may very well be offering its aircraft at a significantly higher price than Boeing, yet still be making the better value offer because, for example, it managed to offer the airline earlier delivery slots.¹⁰¹⁹

4.556 The EC considers that, contrary to its assertions, the US has not "presented evidence with respect to customers' evaluations of the *actual price* offered by Airbus and Boeing, taking into account all price concessions and all relevant attributes of the models in question."¹⁰²⁰ For example, the US has not submitted any evaluations of actual prices, instead limiting its evidence to press speculation and statements about NPVs.¹⁰²¹ Nor did the US take into account the relevant attributes (including operating performance and economics, size, technology, etc.) of the LCA in question in discussing that NPV – or more importantly prices properly adjusted, as required by Article 6.5 of the SCM Agreement.¹⁰²² Indeed, the EC is of the view that the US approach to rely on alleged evidence of better NPVs is inconsistent with the US acknowledgement that, in making their fleet decisions, customers consider a large number of factors, all of which can have an effect on the final *NPV* of an offer.¹⁰²³

4.557 The EC stresses that if the Panel were to uncritically use NPV as the proxy for price, as urged by the US, it would *assume* price undercutting in every sale won by either Airbus or Boeing. The EC submits that only in those particular instances where non-price factors have played no role in the value of the transaction for the purchaser could NPV substitute for "price."¹⁰²⁴

4.558 Third, the EC submits that the US does not meet the final step in establishing its price undercutting claim, *i.e.*, the establishment of the causal link between alleged subsidies and the significant price undercutting.¹⁰²⁵ The EC submitted extensive evidence from contemporaneous sales campaign documents refuting the US assertions that "product" or "price" effects of any alleged subsidies caused Airbus to offer the price it did in each and every one of the sales campaigns at issue in this dispute.¹⁰²⁶ Thus, according to the EC, based on the evidence existing at the level of a sales campaign, the US did not establish the required causal link between the alleged subsidies and any

alleged lower Airbus pricing. Nor does the EC consider that the general US historical/product launch and cash-flow causation arguments demonstrate such a causal link in these individual sales campaigns, particularly in light of the non-existent or *de minimis* levels of alleged subsidization.¹⁰²⁷

4.559 Because the EC considers that the US price undercutting claim fails – given the failure of the US to sustain either required step in its price undercutting claims – the US price suppression, price depression and lost sales claims must also fail. This is because all of the US serious prejudice claims are all based on the same "evidence," namely the US alleged evidence of price undercutting.¹⁰²⁸

4.560 Finally, with respect to the alleged "significance" of the price undercutting, the EC argues that the appropriate legal standard for assessing whether the alleged price undercutting is "significant" is whether *but for* the undercutting, Boeing would have secured the sale.¹⁰²⁹ The EC notes that when asked by the Panel for evidence of "significant" price undercutting, the US provided no information regarding the JetBlue, Frontier Airways, America West, Virgin America or Thai Airways sales campaigns.¹⁰³⁰ The EC points out that for these sales campaigns, there is therefore no evidence that the product or price effects alleged by the US were the *cause* of any alleged price undercutting.¹⁰³¹ In fact, the EC believes that the considerable weight of the evidence before the Panel demonstrates that Airbus did not undercut the Boeing price in any of the sales campaigns at issue, including the A320 sales campaigns involving JetBlue, Frontier Airlines, America West, Virgin America, easyJet, Air Berlin, Air Asia, Czech, the A340 sales campaigns involving Air Asia, Iberia Airways, South African Airways, and the A380 sales campaigns involving Qantas, Singapore Airlines and Emirates.¹⁰³²

EC Arguments Responding to US Lost Sales Allegations

4.561 The EC has offered extensive evidence and argumentation which it asserts rebuts each and every US claim of significant lost sales.¹⁰³³

4.562 The EC considers that the legal standard for establishing a lost sale requires the US to demonstrate that but for the effect of the subsidy, Boeing would have won the sale – *i.e.*, everything else being equal, the effect of the subsidy was the determining factor in the loss of the sale.¹⁰³⁴ Therefore, if Boeing would have lost the sale even if Airbus had raised its prices by the amount of available alleged subsidy, there is no basis for finding that the subsidy caused the lost sale.¹⁰³⁵ Given the conditions of the LCA markets, the EC considers that the Panel can only determine whether the subsidy is the "but for" cause of a lost sale by conducting a detailed assessment of the facts and circumstances of each sales campaign claimed to have been "lost."¹⁰³⁶ The rebuttal evidence offered by the EC, accordingly, is largely focused on such sales campaigns.

4.563 The EC argues that each of the alleged "lost" sales campaigns involved numerous "non-price" and, hence, non-subsidy factors, and that it established that in each of the sales at issue such non-

BCI deleted, as indicated [***]

subsidy factors were the cause of Boeing not securing the sale.¹⁰³⁷ Examples of relevant considerations include the availability of delivery slots, Boeing's mismanaged customer relationships, product preferences for Airbus products, political considerations, among many other factors discussed in detail in the EC submissions and in the contemporaneous evidence provided.¹⁰³⁸

4.564 The EC also argues that, given the *de minimis* magnitude of any alleged subsidies available to Airbus, the US cannot establish a causal link between any subsidies and the claimed lost sales. Even if Airbus had reduced its sales prices by the full amount of any allegedly available per-aircraft subsidy, that change in prices would have been so insignificant as to not impact the outcome of the sales campaign at issue.¹⁰³⁹

4.565 The EC recalls that, as a legal matter, the Panel is called upon to determine whether the alleged subsidies cause present adverse effects, including present serious prejudice.¹⁰⁴⁰ The EC also considers that the Panel must assess whether any past lost sales, should it find that these were caused by the alleged subsidies, continue to constitute a "significant" lost sale, amounting to present serious prejudice to US LCA-related interests.¹⁰⁴¹

4.566 The EC argues that, as a factual matter, it established that, in light of the particular conditions of competition that have existed in the LCA markets since 2005, any "lost" sale that the US might be able to demonstrate during the period 1999-2005 would no longer constitute prejudice to Boeing.¹⁰⁴² This is because the huge increase in orders in 2005-2007 resulted in Boeing's production capacity being sold out for years to come, and in an accompanying record large order backlog.¹⁰⁴³ According to the EC, this evidence shows that any delivery slot at issue in an allegedly "lost" sales campaign has been subsequently sold by Boeing.¹⁰⁴⁴ The EC also refers to the testimony of Christian Scherer who explained that, in periods of extremely high demand such as that existing since 2005, Airbus and Boeing can command premium prices for early delivery slots.¹⁰⁴⁵ Accordingly, the delivery slots subsequently sold were likely sold at even higher prices than those offered in the sales alleged lost sales campaigns at issue.¹⁰⁴⁶

4.567 The EC considers that these facts means that, even if it were established that Boeing lost a sale of a delivery slot during 1999-2005 due to alleged subsidies, this open delivery position constitutes a valuable asset at times of very high demand.¹⁰⁴⁷ This delivery slot would give Boeing a relative advantage over Airbus in the next sales campaign because Boeing could offer earlier delivery slots to customers that need new LCA quickly to either reduce operating cost or to increase capacity,

or both. And when Boeing eventually sold each and every one of the present and future delivery slots at issue in the alleged "lost" sales, it most likely did so at higher prices than it would have secured during the earlier competitive sales campaigns challenged by the US.¹⁰⁴⁸

4.568 The EC emphasizes that it is undisputed that neither Boeing nor Airbus could meet demand by increasing capacity. As Mr. Scherer explained "because both producers use thousands of aircraft components from hundreds of suppliers – including many of the same suppliers – to manufacture their products, supply chain constraints can make it difficult and time-consuming to ramp up production."¹⁰⁴⁹ The EC notes that the US agrees with this assessment that "production capacity at any point in time is limited by the capacity of the supply chain"¹⁰⁵⁰ and that "it takes time to ramp up existing capacity."¹⁰⁵¹ In addition to these limitations on Boeing's ability to significantly and rapidly increase production capacity, there are limitations on Boeing's willingness to do so.¹⁰⁵² Indeed, Boeing has repeatedly indicated that it is unwilling to increase its LCA production beyond the increase currently underway.¹⁰⁵³

4.569 Thus, according to the EC, Boeing's (and Airbus') growing and record-high backlog by the end of 2007 is a key fact to consider in objectively assessing whether the alleged subsidies cause present significant lost sales.¹⁰⁵⁴ Randy Baseler, former Vice President for Marketing for Boeing puts it succinctly: "if a customer came to us and said we want a 777 or a 747 and here's a big pile of money, we couldn't meet the demand."¹⁰⁵⁵

4.570 The EC notes that in response, the US argued that the sales that it lost in the 2001-2004 period still cause serious prejudice to Boeing today because "Airbus has been able to win further follow-on orders from some of these airlines."¹⁰⁵⁶ The EC responds by arguing that whether an airline ordered Airbus aircraft in 2001-2004 and made a follow-on order in 2006, in no way demonstrates how Boeing is suffering present serious prejudice, given that Boeing was more than able to "sell out" all of its slots in the period 2005-2007 and has a huge and increasing backlog of orders by the end of 2007.¹⁰⁵⁷ In addition, the EC notes that the US assertion is based on a false premise – that these airlines would never again order Boeing aircraft.¹⁰⁵⁸ The EC argues that the evidence demonstrates that many of these airlines, including Air Berlin, Thai Airways, Singapore Airways, Emirates Airlines, Qantas Airlines and Czech Airlines are not lost to Boeing but continue to order Boeing aircraft.¹⁰⁵⁹ Thus, the US suggestion that these airlines are somehow "lost" to Airbus, and that,

therefore, there is some kind of "continued effect"¹⁰⁶⁰ of a sale that Boeing lost in the 2001-2004 period, is inconsistent with the evidence.¹⁰⁶¹

EC Responses to US Allegations of Displacement or Impedance

4.571 The EC argues that it has set forth considerable contemporaneous documentary evidence to rebut the US claims of displacement or impedance in its various submissions.¹⁰⁶²

4.572 The EC argues that there are, however, a number of legal flaws in the US displacement and impedance claims. First, the EC maintains that the US claims of impedance and displacement of Boeing LCA in certain third country markets fail because the US like products – Boeing LCA – are subsidized.¹⁰⁶³ The US like products, therefore, fails the "non-subsidized like product" requirement in Article 6.4 of the SCM Agreement.¹⁰⁶⁴

4.573 A second legal flaw is that to the extent that the US relies on delivery data from the 2001-2003 period,¹⁰⁶⁵ the EC views the severe market impacts resulting from 9/11, which remained in effect through 2003, as *force majeure*.¹⁰⁶⁶ Therefore, it claims that use of delivery data from that severely distorted period to support a finding of displacement or impedance under Articles 6.3(a) or 6.3(b) is inconsistent with Article 6.7(c).

4.574 A third legal flaw asserted by the EC is the bundling by the US of all LCA into one single LCA product market.¹⁰⁶⁷ The EC has initially rebutted the US claims of displacement and impedance by examining evidence and data using the appropriate different LCA product markets (100-200 seat, 200-300 seat, and 300-400 seat) where competitive sales between Airbus and Boeing take place.¹⁰⁶⁸ The EC examined and rebutted US arguments using evidence of market share and causation-related evidence in each of the third country markets where the US claimed displacement and impedance.¹⁰⁶⁹

4.575 Alternatively, the EC accepted, for purposes of argument, the single LCA product market, and rebutted the US displacement and impedance arguments in the various third country markets.¹⁰⁷⁰ The EC argues that it provided extensive evidentiary analysis further demonstrating that, even when engaging in the wholly distorted single subsidized product/single like product/single LCA product market analysis, the US cannot sustain a displacement or impedance claim in any third country market.¹⁰⁷¹ The EC argues that in conducting that single-market LCA analysis, it showed that in a number of the third country markets addressed, Boeing's market share actually *increased* over the 2001-2006 period.¹⁰⁷² For these countries, there simply is no evidence of displacement.

BCI deleted, as indicated [***]

4.576 Regarding causation, the EC asserts that the appropriate counterfactual for this causation assessment is whether, but for the alleged subsidy, Boeing's deliveries would have been higher. In other words, what extra sales would Boeing have won, and how many more deliveries would it have made, *but for* the alleged subsidies?¹⁰⁷³ The EC states that by not examining each and every sales campaign in the various third country markets which form the statistical basis for its claims of displacement or impedance, the US has failed to make a *prima facie* case of a causal link between the alleged subsidies and the displacement or impedance claimed. Simply examining raw numbers of market share movement (involving a distorted single LCA product market) does not constitute a basis for the Panel to sustain a finding that such a causal link exists today – or that it existed at any time throughout the 2001-2007 period.¹⁰⁷⁴

4.577 The EC argues that whether the third country market shares are examined on a single LCA or multiple LCA basis, that the US claims of displacement or impedance fails to demonstrate, as required by Article 6.4 of the SCM Agreement, clear trends in the market share development because as the US acknowledged, "most individual third-country markets import only a small number of LCA in any given year, and it is therefore sometimes difficult to identify a 'representative period sufficient to demonstrate clear trends in the development of the {LCA} market.'"¹⁰⁷⁵ The sporadic, erratic and very small numbers of deliveries in many third country markets make it very difficult to draw any firm conclusions about meaningful, subsidy-affected, changes in market share – certainly when only deliveries to that market are examined.¹⁰⁷⁶

4.578 The EC argues that the US has also failed to demonstrate that Boeing's exports to the third country markets discussed above were displaced or impeded due to "the *effect of* the subsidy."¹⁰⁷⁷ In those third country markets in which Boeing did lose market share, the EC pointed out that the evidence demonstrates that it did so, not because of any alleged Airbus subsidies, but because of a variety of market-based factors, including the bankruptcy of airlines, the specific fleet choices of airlines, and geopolitical considerations, all of which had nothing to do with the decades old and *de minimis* alleged subsidies benefiting Airbus.¹⁰⁷⁸

4.579 The EC rebuts the US arguments that the alleged historical 2001-2005 decline in Boeing's third country market shares in some countries is due to a *single* factor – alleged subsidies benefiting Airbus. The EC argues that the US has failed to demonstrate causation, even apart from the specific non-attribution factors, for the following reasons:

- It does not meet its burden of establishing how Boeing's market share of deliveries in 2001-2005 would have been "different" or *less* adversely affected, if, according to the US "historic causation" theory, Airbus did not exist during that time period but some other LCA competitor did.¹⁰⁷⁹
- It fails to establish (much less rebut evidence to the contrary) that the magnitude of any additional cash flow from alleged MSF subsidies was *the* cause of Boeing losing orders/sales

BCI deleted, as indicated [***]

during 1998-2002 that resulted in Boeing losing market share of deliveries three years after those orders, during 2001-2005.¹⁰⁸⁰

- It does not assert, much less prove, that any subsidized *product* advantage from any Airbus LCA was the cause of Boeing's loss of delivery market share in 2001-2005. Moreover, the EC has established that any such product effects have been superseded by numerous launches of enhanced-performance Boeing LCA since the 1970s and the drastically changed conditions of competition between 2001-2003 and 2004-2007, among other factors.¹⁰⁸¹
- And even if the US had demonstrated those points, its focus on historic 2001-2005 events fails to satisfy the requirement to demonstrate *present* adverse effects.¹⁰⁸²

4.580 With respect to the specific evidence relating to Boeing's loss of market share in various third country markets, the EC claims that an objective assessment of that evidence reveals that Boeing's market share declined during 2001-2005 for reasons not causally linked to any alleged subsidies. In short, the EC argues that:

- The evidence adduced by the US fails to link Boeing's loss of delivery market share to specific sales it lost to Airbus.¹⁰⁸³
- By contrast, the evidence shows that Boeing's loss of market share in 2002/2003 was the result of Boeing having to cancel, defer or reschedule many more deliveries than Airbus.¹⁰⁸⁴
- More broadly, several other factors explain Boeing's overall loss of market share during the 2001-2005 period.¹⁰⁸⁵

4.581 In addition, the EC asserts that it produced evidence showing that there were other factors that were holding down Boeing's delivery market share during the 2001-2005 period. These include over 1000 LCA deliveries on Boeing's order books that had to be cancelled or rescheduled as a result of 9/11 as confirmed by Boeing officials.¹⁰⁸⁶ This volume of deferrals is enormous – equivalent to nearly the entirety of Boeing's order backlog in 2001 or 2002 – and understandably had a detrimental impact on Boeing's absolute number of deliveries by 2002.¹⁰⁸⁷ The EC points out that the events of 9/11 had a much less severe impact on the number of Airbus deliveries which remained relatively stable over the 2001-2004 period, in particular due to Airbus' more limited exposure to US legacy carriers affected the most by the crisis and by its much larger share of leasing company customers that did not cancel or reschedule their delivery positions.¹⁰⁸⁸

4.582 Second, the EC asserts that Boeing officials themselves admitted that their drop in market share was due to their mismanagement of customer relationships.¹⁰⁸⁹ These statements are

corroborated by, and entirely consistent with, what Airbus heard from its airline customers, as testified to by Christian Scherer.¹⁰⁹⁰ Consistent with Boeing's own recognition of its customer management failures, in 2004, Boeing opted to re-organize the entire LCA Division sales team, and fired its sales chief Toby Bright.¹⁰⁹¹

4.583 Third, EC claims that geopolitical factors such as state-owned airlines splitting orders between Boeing and Airbus, and other non-commercial-based decisions explained Boeing's failure to win specific sales campaigns and/or explain its losses of market share in various geographic markets.¹⁰⁹²

4.584 The EC argues that the US has improperly attributed to the effects of subsidies its loss of market share in various countries where such non-price, non-product-based factors are decisive in Airbus winning a sale.¹⁰⁹³

4.585 Apart from these general non-attribution factors that impacted many sales campaigns (and hence market share in many third countries), there were particular non-attribution factors that influenced particular sales campaign results. For example, the EC argues that there is no basis for the US claim that it lost market share, and failed to launch the 747X, because of Airbus price undercutting in the A380 Singapore Airlines, Qantas and Emirates sales campaigns.¹⁰⁹⁴ The US' assertion is that, but for the alleged subsidies, Boeing would have launched the 747X in 2000.¹⁰⁹⁵ Yet, the EC notes that even if the US were correct, the first delivery of the 747X would have been in 2005, at the earliest. Thus – based on the US own assertion – even if Boeing had won these three sales, the EC argues that this would have had no impact on Boeing's market share decline in the 2001-2004 period.¹⁰⁹⁶

4.586 In addition, the EC recalls that it rebutted US claims that Boeing lost market share because of Airbus price undercutting at easyJet (2002), South African Airways (2002), Thai Airways (2003), Iberia (2003), Air Berlin (2004) and Air Asia (2005).¹⁰⁹⁷ The EC notes that it has provided numerous rebuttals of the US allegations regarding these transactions.¹⁰⁹⁸ And it claims that the US has failed to demonstrate that Airbus significantly undercut Boeing's price and has failed to demonstrate that any price undercutting (and resulting displacement or impedance) was the effect of the subsidies.¹⁰⁹⁹

4.587 The EC also rebuts US legal and factual claims that there is allegedly a world-wide displacement or impedance of Boeing's LCA market shares. The EC notes that there is no legal basis for the US claims regarding because impedance or displacement is only recognized in third country markets in the case of Article 6.3(b) and the EC market under Article 6.3(a).¹¹⁰⁰

BCI deleted, as indicated [***]

4.588 The EC notes that while the US focuses its displacement or impedance claims on deliveries in the 2001-2005 period, it never produced evidence of the effect of subsidies on the orders that generated those deliveries, *i.e.*, three years earlier in the 1998-2002 time period.¹¹⁰¹ The EC contends that the absence of any temporal coincidence between alleged MSF subsidies and Boeing's maintenance of its delivery market share in the 1996-2000 period refutes US arguments that Airbus' alleged subsidy-enabled predatory market activity in the post 9/11 (2001-2003) period allowed it to allegedly use subsidies to seize market share.¹¹⁰²

4.589 This lack of temporal coincidence is important, the EC asserts, because Airbus received MSF and launched the A320, A330, and A340 models starting in 1984.¹¹⁰³ By 1996, all of the alleged subsidized A320, A330, and A340 models had been launched, had received orders, and had been delivered for years.¹¹⁰⁴ Yet, the EC stated that undisputed data from the 1996-2003 period shows that Boeing had a commanded market share of approximately 60 percent of the US-imagined single LCA market during the 1996-2000 period.¹¹⁰⁵ The EC points out that the same alleged subsidy effects must have been present in the 1996-2000 period as existed during the 2001-2003 and during the 2004-2007 period.¹¹⁰⁶ Yet, the EC notes that Boeing's share of the orders and deliveries remained in the 60 percent range during the 1996-2000 period.¹¹⁰⁷ It points out that during this period, the magnitude of alleged MSF subsidies were also higher than they were during the 2001-2003 period.¹¹⁰⁸ The EC noted that the US has never explained how, although the same alleged subsidies and their effects were present during the 1996-2000 period, there were no apparent negative impacts on Boeing's market share of orders or deliveries during that period.¹¹⁰⁹

4.590 Finally, the EC argues that US assertions that Airbus has allegedly maintained a "dominant position over Boeing" since 2001 are false.¹¹¹⁰ Airclaims data through 2007 shows that in a single LCA market, Airbus' average share of total LCA deliveries between 2004-2007 is 51 percent while Boeing's is 49 percent.¹¹¹¹ Boeing and Airbus' average share of total LCA orders between 2004-2007 is 50 percent.¹¹¹² When the individual competitive LCA markets in the 200-300 seat, and 300-400 seat market are examined, it is Boeing, rather than Airbus, that has more of a competitive advantage in recent years. In the 100-200 single-aisle market, Airbus and Boeing have achieved rough equivalence that would be expected from equally matched duopoly producers in orders and deliveries.¹¹¹³ This competitive situation between Boeing and Airbus over the past four years in both orders and deliveries is one of a series of key facts (along with Boeing's record profits and order backlog as of the end of 2007) suggesting that Boeing is not suffering present displacement or impedance.¹¹¹⁴

BCI deleted, as indicated [***]

4.591 Finally, the EC argues that Boeing's current operating performance by the end of 2007 is a key factor in determining whether Boeing is suffering present serious prejudice. In light of the fact that all of Boeing's delivery slots are sold out for the next four years, and considering that Boeing is producing at maximum capacity, the US claim of serious prejudice by reason of impedance and displacement in the EC and in certain third country markets must fail.

EC Responses to US Allegations Regarding Price Suppression and Depression

4.592 The EC argues that the US significant price suppression and depression claims involving Boeings various LCA – the 737, 767, 777, and 747 – are unfounded because the US fails to establish that the alleged effects on prices are caused by any alleged EC subsidies or are "significant".¹¹¹⁵ In particular, the EC pointed to the very small magnitude of the alleged subsidies throughout the period 2001-2007 and the decades old age of the subsidies, among other reasons, that explain why the alleged subsidies could not have caused significant price suppression or depression.¹¹¹⁶ And in light of the US acknowledgement that, but for Airbus, there would be other competition,¹¹¹⁷ the EC asserts that it is utterly speculative for the US to assume that competition from a non-Airbus competitor would be different and would not have suppressed or depressed Boeing prices to a similar degree.¹¹¹⁸ The EC notes that this is, after all, the essence of competition.¹¹¹⁹

4.593 Among the many non-attribution factors that caused lower prices in each of the LCA markets where the US claims significant price suppression, the EC points, first, to the collapse of demand following 9/11, the resulting cancellations of deliveries and the lack of orders that were recognized by market participants to have resulted in lower or stagnant prices.¹¹²⁰ The EC introduces substantial evidence, including the un-rebutted testimony of Christian Scherer, Airbus SAS Executive Vice President,¹¹²¹ establishing that other factors, such as Boeing's pricing strategy and launch of competing, low-priced LCA such as the 787, have been primarily or largely responsible for the lower LCA pricing alleged by the US.¹¹²² The EC notes that there is a close temporal correlation between 9/11 and the resulting collapse in demand, and declines in LCA prices between 2001 and 2002.¹¹²³ Boeing's former CEO declared this period as the "worst downturn" in the history of commercial aviation.¹¹²⁴

4.594 Second, the EC considers that another key non-subsidy factor that had a significant impact on LCA pricing in all LCA markets was [***].¹¹²⁵ The EC notes that US itself has acknowledged that [***] had a significant impact on LCA pricing in all LCA.¹¹²⁶

4.595 Third, the EC argues that during the 2001-2002 period, the relatively favourable Euro to US dollar exchange rate granted Airbus a pricing advantage because, although LCA are priced in US

dollars, Airbus keeps its financial accounts, incurs much of its costs, and accounts for its profits, in Euros.¹¹²⁷ The EC notes that the Euro to US dollar exchange rate in 2000-2002 was over 30 percent better than the rate in 2004-2006.¹¹²⁸ Indeed, the EC stresses that the exchange rate advantage was exponentially larger than any alleged MSF subsidy magnitude available for aggressive pricing in sales campaigns.¹¹²⁹

4.596 When coupled with the lack of demand in the 2001-2003 period, these factors are a far more likely explanation for Boeing's lower prices than the zero or *de minimis* magnitude of alleged subsidies.¹¹³⁰

4.597 The EC also argues that the US benchmark for assessing the alleged existence of price suppressing and depressing effects of subsidies – the US Aircraft Manufacturers Producer Price Index – was flawed.¹¹³¹ The EC considers that the US errs in concluding that the US PPI is both a measure for cost increases faced by Boeing and a proxy for expected LCA pricing.¹¹³² In fact, the US PPI is neither. According to the EC, the US PPI is a theoretical construct that provides little information about Boeing's actual aircraft manufacturing costs, but considers general cost increases for materials and US labour relevant to LCA.¹¹³³ That is, it does not take into account in which country Boeing's actual sourcing takes place, nor does it reflect Boeing's actual cost developments affected by efficiency improvement measures.¹¹³⁴ Indeed, the EC argues notes that despite Boeing's cost reductions over the last decade, the US PPI has consistently increased.¹¹³⁵ As such, the EC submits, the US PPI cannot be used to assess costs or be the baseline for determining whether Boeing's prices are suppressed or depressed.¹¹³⁶

4.598 Moreover, the EC explains that, the US PPI increases in line with inflation, while actual LCA pricing is "based on supply and demand."¹¹³⁷ As a logical consequence, LCA pricing may not increase at the same rate as the US PPI.¹¹³⁸ The EC notes that the US acknowledges as much when it argues that, "{b}ecause demand has increased substantially {in 2006-2007}, one would expect that prices would have increased substantially."¹¹³⁹ Thus, the EC concludes that with LCA pricing being a function of a number of factors and fluctuating from one year to the next, it cannot be said to be "suppressed" – *i.e.*, prevented or inhibited from rising – simply because it does not increase in line with the US PPI.¹¹⁴⁰ Nor can the US PPI be relevant for assessing price depression. In fact, the EC recalls that, as recognized by the Appellate Body, price depression is an observable phenomenon:

actual prices fall.¹¹⁴¹ No alleged cost-related index is necessary for assessment the direction in which actual prices move.¹¹⁴²

4.599 And even if the US PPI were the correct measure by which to compare actual pricing, the US must prove that Boeing's prices did not increase in line with the US PPI because of the alleged subsidies.¹¹⁴³ As the Appellate Body concluded "{t}he effect – price suppression {or price depression} – must result from a chain of causation that is linked to the impugned subsidy."¹¹⁴⁴ The EC concludes that the US has failed to establish this chain of causation.¹¹⁴⁵ It simply assumes that Boeing's failure to increase prices in line with the US PPI is the result of the alleged subsidies.¹¹⁴⁶ Specifically, when LCA prices do not increase at the same rate as the US PPI, the US attributes the price disparity to the alleged subsidies.¹¹⁴⁷ Yet, when LCA prices increase at a higher rate than the US PPI, the US does not attribute this to a lack of subsidies impacting the market, but readily attributes that price increase to favourable market conditions.¹¹⁴⁸ The US cannot square these two positions.¹¹⁴⁹

4.600 Turning to the US price suppression claims with respect to individual Boeing LCA, the EC explains that uncontested evidence shows that Boeing's launch of the 787, a replacement for the outdated Boeing 767, had a depressing effect on Boeing 767 pricing.¹¹⁵⁰ In addition, the EC emphasizes that the lack of causation is further demonstrated by the fact that there was no competition between the A330 and the Boeing 767 during 2004-2006.¹¹⁵¹ Thus, the EC asserts that any prices secured by Boeing for the 767 – and hence, any alleged price suppression or depression – were due to other, non-subsidy related factors.¹¹⁵²

4.601 With respect to the 747's allegedly suppressed/depressed prices, the EC argues that the evidence demonstrates that other non-subsidy related factors were the cause for the failure of Boeing's 747 prices to grow at the same rate as the US PPI over the 2001-2006 period.¹¹⁵³ In addition to submitting evidence demonstrating that Airbus was not even involved in most of the 747 orders that were allegedly secured at suppressed prices,¹¹⁵⁴ the EC has provided a significant amount of (un-rebutted) evidence that demonstrates that any pricing pressure felt on the Boeing 747 was caused by:¹¹⁵⁵

- The fact that the 747 is almost at the end of its product life;¹¹⁵⁶
- The fact that global air traffic has changed over the last decade to deemphasize long-haul, hub-to-hub services;¹¹⁵⁷ and

- The effect of geopolitical events such as the 1991 Gulf War, the 1997 Asian financial crisis and the terrorist attacks of September 2001 on demand for 747s.¹¹⁵⁸

4.602 Regarding 777 prices, the EC notes the US acknowledgement that the "combination of particular market factors ... appear to have been of sufficient magnitude as to [***]."¹¹⁵⁹ Thus, having looked at the conditions of competition in the industry, the EC argues that the US acknowledges that Boeing 777 prices are not significantly suppressed or depressed in 2006.¹¹⁶⁰

4.603 The lack of a causal link for the US price suppression/depression claims is further demonstrated, according to the EC, by Boeing's record profits and the projected future profits at the end of 2007. The EC recalls that Boeing's profits during 2005-2007 were based on prices secured for LCA orders in the period 2001-2004, reflecting the average three year gap between order and delivery that existed at that time. The EC considers that Boeing's record-high profit margins during the 2006-2007 period are inconsistent with the US argument that Boeing's prices were significantly suppressed during the earlier 2002-2004 period. Indeed, Boeing's 2006 operating margins exceeded those of any previous year since 1995, and Boeing's 2007 and 2008 margins are expected to reach "record" level.¹¹⁶¹

4.604 Nor is there any evidence, the EC asserts, of significant price suppression caused with respect to orders in the most recent 2006-2007 period. Indeed, it notes that sales prices for Boeing LCA have [***]. In April 2007, Boeing's CEO stated that Boeing's LCA pricing today is "better than it was 2-3 years ago."¹¹⁶² In June 2007, a Boeing executive explained that Boeing is "happy with where we are with prices now."¹¹⁶³ In line with improving prices, Boeing predicted near the end of 2007 that its record-setting operating margins will not only continue, but continue to increase.¹¹⁶⁴ These increasing prices are consistent with the record levels of demand for Boeing 737, 787, and 777 LCA during the 2005-2007 period. In view of this strong demand, the EC considers that Airbus had no incentive to lower its sales prices in sales campaigns with Boeing during the 2005-2007 period. And even if it had, the zero or *de minimis* magnitude of any allegedly available per-aircraft subsidies would be too small to cause any significant price effects.

4.605 Finally, even if the Panel were to conclude that significant price suppression existed in the 2001-2005 period, that price suppression is no longer "significant," *i.e.*, "important or meaningful," in light of Boeing's current financial performance. And even if Boeing were experiencing some minor prejudice in the form of lower revenue today from suppressed prices in historic sales – which it is not – this prejudice could not be considered "serious," within the meaning of Articles 5(c) and 6.3 of the SCM Agreement.¹¹⁶⁵

(f) Conclusions

4.606 The EC contends it has demonstrated that, today (as of the end of 2007), there are no present adverse effects to US interests, including Boeing. Boeing's generally dominant share of LCA markets at a time of sky-rocketing demand, its record-high backlog and lengthy wait for open aircraft delivery

BCI deleted, as indicated [***]

positions, its high and anticipated record profit margins, its record level of orders, the rising prices it receives for its LCA, and its many other rapidly rising financial and commercial indicators conclusively demonstrate this.¹¹⁶⁶ The EC argues that it has shown that the present per-aircraft magnitude of any alleged MSF subsidies available to Airbus SAS for the A320, A330, and A340 models is *de minimis*, or even non-existent, and, in light of their nature and the present conditions of competition, cannot be the cause of the alleged adverse effects. Alleged subsidies for the A380, which does not compete with any Boeing product, cannot cause present adverse effects. And the A350-XWB is non-subsidized.¹¹⁶⁷ In any event, Airbus frequently had neither the incentive – given, for example, Airbus' five-year backlog of single-aisle LCA orders – nor the opportunity – given widespread non-competition for LCA sales – to use any available subsidy to aggressively price its LCA. Moreover, the EC asserts it has demonstrated that, given the impact of numerous non-subsidy factors, the effects of any alleged subsidized pricing were not the determining factor in the sales campaigns raised by the US as evidence of adverse effects.¹¹⁶⁸

4.607 But even assuming, *arguendo*, that the effect of any alleged subsidies to Airbus caused Boeing to lose certain sales between 1999-2005, those alleged "lost sales" are not today significant given the huge order backlog and the fact that Boeing sold all the early "lost" order slots to other customers at what were likely higher prices. Similarly, historic price suppression is no longer "significant" both because prices have generally increased between 2004-2005 and 2006-2007 and because Boeing's 2006-2007 operating margins, largely reflecting present deliveries from orders made in the years 2002-2005, are at or near record levels.¹¹⁶⁹ Meanwhile, the US steadfastly refuses to show how – in light of their age, nature, and magnitude – the alleged subsidies caused the particular lost sales, price suppression, and displacement it claims existed during 1999-2005. Instead, its causation arguments – including the hopelessly speculative "historical product launch causation" counterfactual, wishing away Airbus and 40 years of LCA market developments – boil down to affixing a "subsidized" label on all Airbus products and then presuming that, so tainted, they cause the competitive harms alleged.¹¹⁷⁰

4.608 The EC argues that the US raises sweeping claims against more than 70 measures and alleges these to be prohibited subsidies or subsidies causing adverse effects to the US LCA interests. At the same time, however, the US chooses to ignore the specifics of the LCA market and the relevant legal framework it agreed to, namely the 1979 Agreement and the 1992 Agreement which specifically deal with LCA. On numerous occasions, the US fails to identify proper recipients of the alleged subsidies and, in so doing, fails to make a *prima facie* case demonstrating how the alleged subsidies benefit the EC producer of LCA that is alleged to cause adverse effects to US interests. Finally, the EC considers that the US fails to demonstrate a "genuine and substantial relationship of cause and effect" between the alleged subsidies and the adverse effects it claims – a claim which is at odds with economic reality, as Boeing is in excellent financial health.¹¹⁷¹

4.609 The EC considers that the US arguments in this dispute are based on unfounded presumptions and evidentiary shortcuts.¹¹⁷² As the Panel assesses whether the US has met its burden of establishing

BCI deleted, as indicated [***]

causation by positive evidence, the EC respectfully requests it to keep in mind some of the more consequential and unwarranted inferential leaps taken by the US.¹¹⁷³ In particular, the US:

- Selects a grouping of subsidized products and like products with no basis in the evidence of physical, performance and price characteristics, the perception of market participants, including Boeing and Airbus, and the actual competitive relationships between these products;
- Ignores the dissimilar nature, age, magnitude, and impact of individual MSF loans from four different governments over a 40-year period, in favour of an alleged effect from a non-existent "Launch Aid Program";
- Ignores the dissimilar nature, age, magnitude, and impact of alleged subsidies in the form of infrastructure measures, EIB loans, research & technology grants, capital contributions and restructuring measures, alleging that these measures all have the same effect as, and merely augment the effect of, the "Launch Aid Program";
- Ignores the changing conditions of competition in LCA markets and focuses its claims almost exclusively on sales campaigns, prices and market share data from the historical 1999-2005 period, rather than the appropriate 2006/2007 reference period;
- Fails to undertake the required sales campaign-specific assessment of causation, thereby glossing over the many factors that affect the outcome and pricing of an LCA sale;
- Refuses to determine the magnitude of any subsidies on a per-aircraft basis allegedly available, today, to Airbus to affect pricing decisions in individual sales campaigns, and instead ignores well-accepted allocation and amortization principles, the SCM Agreement, CVD practice, and logic in employing a "compounding" methodology to derive a nebulous subsidy amount of "well over \$100 billion"; and
- Concedes there would be active competition, but then fails to take into account the impact of competition when assuming that every sale Boeing fails to win is a "lost sale" due to alleged Airbus subsidies and that every price that is lower than the US' "expected price" is so exclusively as a result of alleged Airbus subsidies.¹¹⁷⁴

4.610 In combination with the affirmative evidence offered by the EC – demonstrating, among other things, the absence of present adverse effects and the absence of a causal link between the challenged measures and any alleged effects – the US cannot overcome this rebuttal.¹¹⁷⁵

4.611 The EC requests that the Panel reject all claims advanced by the US in this dispute.¹¹⁷⁶

V. ARGUMENTS OF THE THIRD PARTIES

5.1 The arguments of the third parties Australia, Brazil, Canada, China, Japan and Korea are set out in their written and oral submissions to the Panel, and in their answers to questions. The third

parties' arguments, based on the summaries submitted by them pursuant to paragraph 13 of the Panel's working procedures, are presented in this section.¹¹⁷⁷

A. AUSTRALIA

5.2 In its Third Party Submission, Australia states that these proceedings raise significant systemic issues as well as important questions of legal interpretation. In its submission Australia focused on a select few issues. However, Australia points out that the fact that it has not commented on a particular issue should not be taken as an indication that it accepts the views of either party on that issue.¹¹⁷⁸

1. The 1979 and 1992 Agreements

(a) The 1979 and 1992 Agreements as applicable law

5.3 Australia considers that the EC argument that the 1979 and 1992 Agreements constitute law that is applicable to this dispute invites an examination of the position of these agreements in relation to the WTO Agreement.¹¹⁷⁹ Australia notes that the 1979 Agreement is one of the Plurilateral Trade Agreements listed in Annex 4 to the WTO Agreement. The Plurilateral Trade Agreements are listed in Appendix 1 to the DSU as falling within the coverage of the DSU, provided that the parties to each Agreement have taken a decision setting out the terms for the application of the DSU to that Agreement. Australia notes that the parties to the 1979 Agreement have not taken such a decision. Accordingly, the 1979 Agreement is not a covered agreement under the DSU.¹¹⁸⁰

5.4 Australia notes that the EC asserts that the 1992 Agreement can be invoked as a defence in this dispute, arguing that Article 7.2 of the DSU permits defences to be drawn from non-WTO law. However, Article 7.2 deals only with defences based on covered agreements cited by parties to a dispute, and not with defences based on non-covered agreements.¹¹⁸¹ Australia points out that the Appellate Body has made it clear, in light of DSU Article 7.2 that the DSU operates in relation to covered agreements only. It is not the function of panels to seek to clarify the provisions of non-covered agreements. The 1979 Agreement falls into the latter category. The 1992 Agreement also falls into the latter category. In Australia's view, the Panel in this dispute should decline to use the WTO dispute settlement system to determine rights and obligations in the 1979 and 1992 Agreements.¹¹⁸²

(b) The 1979 and 1992 Agreements as aids to interpretation of the SCM Agreement

5.5 Australia notes that the EC relies on Article 31(3)(c) of the Vienna Convention in support of its argument that the 1979 and 1992 Agreements can be drawn on to assist with interpreting the SCM Agreement.¹¹⁸³ Australia does not consider that the rules of international law contained in the 1979 and 1992 Agreements, which are only applicable in the relations between subsets of parties to the SCM Agreement, can be taken into account under Article 31(3)(c) of the Vienna Convention in

¹¹⁷⁷ China and Korea did not submit executive summaries of their oral statements. The presentation therefore refers to the full text of their oral submissions.

¹¹⁸³ Australia Third Party Submission Executive Summary, para. 5.

BCI deleted, as indicated [***]

interpreting the SCM Agreement. More generally, given that the application of Article 31(3)(c) has potentially significant systemic implications for the WTO dispute settlement system, Australia submits that the Panel in this dispute should approach the issue with a degree of caution.¹¹⁸⁴

5.6 At the Panel meeting with the third parties Australia noted that the Panel did not consider it necessary to determine whether the 1992 Agreement¹¹⁸⁵ fell within the scope of Article 31(3)(c) of the *Vienna Convention on the Law of Treaties 1969*. Should the Panel have cause to consider the application of that provision, Australia reiterates its view that the 1979 Agreement¹¹⁸⁶ and the 1992 Agreement are not covered by Article 31(3)(c). Neither agreement is a rule of international law which is applicable in the relations between all the parties to the SCM Agreement, as required by Article 31(3)(c).¹¹⁸⁷ Australia notes that the Panel's preliminary ruling expressly states that it does not address certain arguments made by the EC in relation to the relevance of Article 4 of the 1992 Agreement.¹¹⁸⁸ In Australia's view, the Panel should reject these arguments.¹¹⁸⁹ Finally, Australia observes that the Panel's preliminary ruling dealt at some length with the EC argument that the 1992 Agreement gives rise to an estoppel. Australia points out that no claim of estoppel has been accepted by a panel or the Appellate Body. Australia does not accept the EC position on estoppel in this dispute.¹¹⁹⁰

2. Applicability of the SCM Agreement to Pre-1995 subsidies

5.7 Australia notes that the US asserts that subsidies have been provided by the EC over a number of decades, beginning with the provision of Launch Aid for the development of the first large civil aircraft (LCA) in the Airbus family, the A300, in the 1970s.¹¹⁹¹ Australia contends that as a number of these alleged subsidies were provided prior to the entry into force of the SCM Agreement on 1 January 1995, the question arises as to whether those alleged subsidies properly fall within the scope of the SCM Agreement.¹¹⁹²

5.8 Australia notes that Article 28 of the Vienna Convention provides that, absent a contrary intention, a party is not bound by a treaty in relation to 'any situation which ceased to exist' before entry into force of the treaty for that party. The use of the word 'situation' suggests something that subsists and continues over time. Article 28 also necessarily implies that, absent a contrary intention, treaty obligations do apply to any 'situation' which has not ceased to exist.¹¹⁹³ Australia considers that the Panel in this dispute should draw on guidance provided by the Appellate Body in relation to Article 28 of the Vienna Convention in determining whether payments made prior to the entry into

force of the SCM Agreement can be properly characterised as forming part of a 'situation' or subsidy continuum which continued to exist after entry into force of the SCM Agreement.¹¹⁹⁴

3. In Fact Export Contingency

5.9 Australia notes that the US alleges that the Launch Aid granted to Airbus for the A380, the A340-500/600, and the A330-200 models was contingent in fact on export performance, and accordingly, is a prohibited subsidy under Article 3.1(a) of the SCM Agreement. Australia considers that in making this argument the US focuses primarily on the export propensity of the LCA product at the expense of an examination of the total configuration of the facts. In Australia's view, this leads to a misapplication of the Appellate Body guidance on export contingency and the Panel's findings in *Australia – Automotive Leather II*.¹¹⁹⁵

5.10 Australia recalls that, in establishing export contingency three elements must be established: (1) the granting of a subsidy; (2) that is 'tied to'; (3) actual or anticipated exportation or export earnings. The second element is at the very heart of the legal standard and must be considered independently from the third element and evidence of export orientation. Consequently, evidence of the export nature of a product supports the establishment of a relationship of conditionality but is not conclusive of this second element.¹¹⁹⁶

5.11 The second sentence of footnote 4 to Article 3.1(a) explicitly states that the mere fact that a subsidy is granted to enterprises which export cannot by itself support a finding of export contingency. This does not mean that export propensity is irrelevant to the analysis of contingency—it simply means that it is only one of several facts to be taken into account. Careful consideration needs to be given in the present case to the evidence used to support export contingency and the weight it should be accorded. If disproportionate emphasis is given to export propensity, this would undermine the second sentence of footnote 4.¹¹⁹⁷

5.12 In Australia's view there are two main deficiencies with the US analysis of in fact export contingency in the present case. First, by focusing on export propensity the US conflates product sales generally with export sales. This leads to the erroneous conclusion that sales performance is export performance. Second, the US focuses on the contractual requirement to repay the loan and its connection with sales performance. However, it is not clear on the facts presented the extent to which the repayment of Launch Aid is mandatory. Moreover, it appears that Airbus receives payment of Launch Aid whether or not there are any sales. Therefore, the US has failed to explain why a link between the requirement to repay the loan and sales performance establishes a tie between the grant of an alleged subsidy and export performance.¹¹⁹⁸

5.13 Australia points out that in meeting the legal standard of export contingency under footnote 4 of Article 3.1, the relationship of conditionality between the granting of the subsidy and export performance is paramount. Australia observes that the Appellate Body in *Canada – Aircraft* noted that to establish export contingency, the requisite relationship of contingency 'must be *inferred* from the total configuration of the facts constituting and surrounding the granting of the subsidy, none of which on its own is likely to be decisive in any given case'.¹¹⁹⁹ In Australia's view, such relevant facts could include: an analysis of the nature of the product; the design and form of the subsidy; the export

BCI deleted, as indicated [***]

propensity of the product; performance requirements or conditions attached to the granting of the subsidy; any distinction made between domestic and export sales in relation to repayment requirements; the level of sales requirements relative to domestic demand; and official statements by governments indicating the intention behind the granting of the subsidies. The possibility that there may also be some sales that do not involve exportation may not sever the tie to anticipated exportation.¹²⁰⁰

5.14 Australia considers that the US characterization of export performance as an 'exchange of commitments'¹²⁰¹ is a lesser standard than that required under footnote 4 of Article 3.1. The Panel's analysis of the relationship of conditionality between the granting of the subsidy and export performance should be based on the total configuration of facts. The loan contracts may contain provisions whereby Airbus promises to make loan repayments based on sales. The issue is therefore to what extent the text of these contracts is representative of the true nature of the loans, and to what extent it can be said that the granting of the subsidy is conditional upon the promise to repay based on export sales.¹²⁰²

5.15 Australia considers that one relevant factor in determining to what extent sales or production targets amount to export performance is the point at which repayment of the loans is due. For instance, if the loans require a certain level of sales that could only be achieved by exporting, then that would indicate that the performance requirements necessitate exports.¹²⁰³

5.16 Australia does not agree that 'motivations' or 'reasons' are necessarily irrelevant to the test for in fact export contingency.¹²⁰⁴ Such 'motivations' or 'reasons' may be objectively ascertained from official statements by a government and may shed light on whether the granting of the subsidy is tied to exportation.¹²⁰⁵

5.17 Australia considers that the EC approach, namely that to be contingent upon export performance a subsidy must be a 'consequence of' export performance,¹²⁰⁶ seriously undermines the standard for in fact export contingency in the first sentence of footnote 4 to Article 3.1. The fact that the grant of a subsidy is not the consequence of actual exportation does not mean that the grant of a subsidy is not tied to export performance and therefore contingent upon export performance within the meaning of the SCM Agreement.¹²⁰⁷

5.18 Australia notes that the EC has raised some legitimate concerns in relation to the likelihood of export propensity in the case of small export dependent economies or in the case of a global market.¹²⁰⁸ Australia considers that the second sentence in footnote 4 of the SCM Agreement has relevance in this regard. Export propensity is only one element in demonstrating the requisite relationship of conditionality or dependence between the granting of a subsidy and export

BCI deleted, as indicated [***]

performance. Contingency must still be established. Export propensity must not be confused with export contingency and must be assessed on an analysis of the total configuration of the facts. Establishing a relationship of contingency allows a differentiation to be made between situations where the size of a country's economy, and its general dependence on exports, would lead to a positive finding of export propensity and thereby discrimination against small export dependent economies.¹²⁰⁹

5.19 Australia notes that for the EC, the term 'anticipated' in footnote 4 of the SCM Agreement means an export that has not yet taken place at the moment when the subsidy is deemed to exist but will occur subsequently.¹²¹⁰ Australia considers that this interpretation is problematic as it requires an analysis after the fact and renders 'anticipated' exportation as 'actual' exportation. The ordinary meaning of the term 'anticipate' involves an element of probability, that is, exportation is likely to occur but it may not occur. Further, the Appellate Body has found that it does not suffice to demonstrate solely that a government granting a subsidy anticipated that exports would result.^{1211,1212}

4. Adverse Effects

5.20 Australia notes that the US claims that the provision of the alleged subsidies to Airbus by the EC and the Airbus Governments has caused adverse effects to its interests under Article 5 of the SCM Agreement.¹²¹³

(a) Temporal issues regarding the US claim of adverse effects

5.21 Australia considers that there are two temporal issues in relation to the US claim of adverse effects. First, whether adverse effects should be assessed at the time when the panel makes a decision or at the time of the panel establishment. Second, what is an appropriate representative period for assessing adverse effects. According to Australia, in addressing these issues the Panel in this dispute should draw on guidance in *US – Upland Cotton*.¹²¹⁴ Australia notes that Part III of the SCM Agreement provides minimal direction as to the specific time period within which to conduct an evaluation of adverse effects. *US – Upland Cotton* refers to a 'recent period'¹²¹⁵ but does not specify how long that period should be. However, the case does seem to suggest that consideration of developments over a period longer than one year provides a more robust basis for evaluation and puts developments in a broader temporal context.¹²¹⁶

5.22 In Australia's view, the appropriate reference period for adverse effects must be assessed on a case-by-case basis taking into account all the relevant facts and circumstances. Relevant factors include: (a) that subsidization is alleged to have occurred for over thirty years; (b) the nature of the alleged subsidies, including long term loans; (c) that product development and sales in the large civil aircraft industry occur over long timeframes; (d) that the average useful life of an aircraft is over 20 years; (e) that neither the SCM Agreement nor the DSU preclude the Panel from considering evidence of adverse effects subsequent to the date of panel establishment (*i.e.*, 20 July 2005), provided that the

¹²¹⁵ Australia Opening Statement Executive Summary, para. 17, citing, Third Party Submission of Australia, 7 May 2007, paras. 35-36.

¹²¹⁶ Australia Opening Statement Executive Summary, para. 17, citing, *US – Upland Cotton*, Panel Report, para. 7.1199.

BCI deleted, as indicated [***]

evidence relates to measures that were within the panel's terms of reference; and (f) the reference in Article 6.4 of the SCM Agreement to 'an appropriately representative period sufficient to demonstrate clear trends in the development of the market for the product concerned, which, in normal circumstances, shall be at least one year'.¹²¹⁷

(b) Causation

5.23 Australia considers that, depending on the facts and circumstances of a particular case, aggregation of subsidies to assess whether they are causing adverse effects is permissible under the SCM Agreement. In such circumstances a complainant is not required to demonstrate adverse effects with respect to each subsidy individually.¹²¹⁸

(c) Magnitude of the subsidy and methodology

5.24 Australia notes that in terms of methodology, Part III and Part V of the SCM Agreement serve different purposes.¹²¹⁹ As stated by the Appellate Body in *US – Upland Cotton*, the provisions of Part V 'must not be automatically transposed into Part III'.¹²²⁰ Those provisions may nevertheless provide context for the interpretation on Part III in appropriate cases.¹²²¹

5.25 Australia does not consider that Part III of the SCM Agreement calls for a precise quantification or allocation of the subsidy benefit.¹²²² The magnitude of a subsidy benefit is only relevant to a serious prejudice claim to the extent that it confirms whether the subsidy is of sufficient magnitude to cause the claimed effects.¹²²³ Accordingly, there is no basis for the EC to suggest in this dispute that the US is required to allege a precise per-aircraft magnitude of subsidy.¹²²⁴

(d) Relevance of the concepts of 'subsidized product' and 'like product'

5.26 Australia notes that in light of Articles 5(a), 5(c), 6.3, 15.1, and footnote 46 of the SCM Agreement, it is clear that when assessing the US claim of adverse effects, it is necessary to identify both the 'subsidized product' (*i.e.*, 'product under consideration') and the corresponding 'like product'. Further, Australia notes that, in elaborating on the requirements for establishing serious prejudice under Articles 6.3(b) and 6.3(c), the SCM Agreement refers to 'non-subsidized like product' in Articles 6.4 and 6.5 respectively.¹²²⁵

(e) US' characterization of the 'subsidized product' and the 'like product'

5.27 Australia notes that in order to demonstrate its claim of adverse effects the US has grouped all the Airbus LCA models together under the banner of the Airbus LCA family. According to the US the 'subsidized product' for the purposes of this dispute is the Airbus LCA family. Similarly, the US has grouped all the Boeing LCA models together and asserted that the 'like product' for the purposes of this dispute is the Boeing LCA family. Australia notes that the EC acknowledges the existence of some sort of 'family concept' in relation to LCA.¹²²⁶

5.28 In Australia's view, one of the key issues for the Panel in this dispute is whether the US characterisation of the 'subsidized product' and the 'like product' provides an appropriate point of comparison for the purposes of assessing whether the alleged subsidies have caused adverse effects to the interests of the US.¹²²⁷

(f) Legal considerations in determining the 'subsidized product' and the 'like product'

5.29 Australia argues that in assessing a claim of adverse effects it is necessary to first identify the 'subsidized product' before identifying the 'like product'. However, the two concepts are obviously closely related.¹²²⁸ Australia notes that there appears to be little guidance in the SCM Agreement or WTO cases regarding the complaining WTO Member's determination of the 'subsidized product'. However, given that the definition of 'like product' under the SCM Agreement in footnote 46 requires that the 'like product' be 'identical' or have 'characteristics closely resembling' the subsidized product it seems reasonable to assume that there must be limitations on the scope of the 'subsidized product'.¹²²⁹ Australia has highlighted a number of WTO cases which provide guidance on the determination of 'like product'. *Indonesia – Autos* seems to be of particular relevance to the present dispute.¹²³⁰

5.30 In light of the relevant WTO cases, Australia submits that the Panel should satisfy itself of the following issues when examining the US characterisation of the 'subsidized product' and the 'like product':

- (i) Is it reasonable for the US, having predominantly sought to establish the existence of subsidies on the basis of particular models of Airbus LCA, to shift focus, in relation to its claim of adverse effects, to the Airbus LCA family as the 'subsidized product'? In other words, does a claim under the SCM Agreement require a consistent approach in establishing the existence of a subsidy and in establishing adverse effects?
- (ii) In terms of physical characteristics (*e.g.*, length, height, wingspan, seating capacity, cargo capacity, and range) and price, is it appropriate to suggest, for example, that the Boeing 747 (as the notional 'like product') has 'characteristics closely resembling' those of the Airbus A320 (as the notional 'subsidized product')?
- (iii) How does the LCA industry analyse market segmentation? What are the airlines' (*i.e.*, consumers') tastes and habits in purchasing a range of LCA models to form their fleet?

¹²²⁹ Australia Third Party Submission Executive Summary, para. 21.

¹²³⁰ Australia Third Party Submission Executive Summary, para. 22.

BCI deleted, as indicated [***]

- (iv) How widely should the 'accordion of likeness' be stretched in terms of the definition of 'like product' under the SCM Agreement?
- (v) Does the US grouping of various LCA models together result in individual product characteristics being ignored so that it could affect the outcome of the case?
- (vi) Would it be appropriate to disaggregate the US grouping of products on the basis of the physical characteristics (e.g., length, height, wingspan, capacity and range), end-uses, and consumers' perceptions?¹²³¹

5.31 Australia points out that contrary to what the EC has suggested,¹²³² Australia's third party submission does not 'urge this Panel to follow the findings of the panel in *Indonesia – Autos*'. Australia considers that in assessing a claim of adverse effects it is necessary first to identify the 'subsidized product' before identifying the 'like product'.¹²³³ Australia also reiterates that in *Japan – Alcoholic Beverages II* the Appellate Body highlighted that the concept of likeness was flexible and depends on 'the particular provision...as well as...the context and the circumstances that prevail in any given case'.¹²³⁴ In addition, Australia recalls that the Appellate Body has held that the grouping of products may be an acceptable analytical tool when assessing likeness.¹²³⁵

5.32 Finally, Australia notes that in *Korea – Commercial Vessels* the Panel indicated that it was always for the complaining party in a WTO dispute to determine the basis and nature of its own complaint, including the breadth or narrowness of the description of the 'subsidized product'. The Panel stated that it was then up to the complainant to demonstrate causation in relation to this 'subsidized product'.¹²³⁶

5. General Infrastructure

5.33 Australia considers that Article 1.1(a)(1)(iii) excludes "general infrastructure" from what is deemed a financial contribution in the context of the provision of goods and services by government. The Appellate Body has noted in regard to sub-paragraph (iii), that general infrastructure is infrastructure of a general nature.¹²³⁷ Australia submits that the Panel should take into account its observation that 'general infrastructure' in this context means the provision, by government, of goods and services that are generally available or multi-user.¹²³⁸

5.34 Australia considers that a broad definition, as advocated by the EC, of 'general infrastructure'¹²³⁹ as infrastructure that fulfils public policy goals finds no support in the

BCI deleted, as indicated [***]

SCM Agreement. If this were the test, then virtually every financial contribution by government towards infrastructure would be excluded from the definition of 'subsidy' in the SCM Agreement, even if granted to a specific enterprise. Such an interpretation would seriously undermine the discipline of the SCM Agreement.¹²⁴⁰

5.35 Further, Australia does not accept that 'as long as the infrastructure is potentially accessible by the public or providing common goods to the public, it should be treated as "general infrastructure"'.¹²⁴¹ Such a test would be too broad.¹²⁴²

5.36 Australia submits that the Panel needs to analyse whether the infrastructure is for exclusive or limited use by enterprises. Australia does not consider that sub-paragraph (iii) requires a presumption that government funded infrastructure is general unless evidence demonstrates that its use is limited exclusively to certain users. Further, infrastructure is not necessarily of a general nature simply because limitations on its use to certain users are temporary. Ultimately, any analysis of infrastructure needs to be undertaken on a case-by-case basis, taking into account all the relevant facts and circumstances, including the terms and conditions relating to its use.¹²⁴³

5.37 According to Australia, the 'general infrastructure' exclusion under Article 1 of the SCM Agreement should be distinguished from specificity analysis under Article 2. It is also a separate consideration from the question of whether a benefit has been conferred by government which is required in order to complete the analysis of the existence of a subsidy.¹²⁴⁴

6. Regional Specificity

5.38 Australia notes that the EC argues that Article 2.2 involves a two-step test: (i) the subsidy is limited to a designated geographic region; and (ii) the subsidy is limited to certain enterprises within that designated geographic region. However, Australia draws the Panel's attention to the fact that under such a two-step test for regional specificity it is difficult to envisage a situation covered by Article 2.2 that would not already be covered by Article 2.1(a).¹²⁴⁵

7. Extinguishment of Subsidies

5.39 Australia notes that the EC argues that any benefit conveyed by a financial contribution is presumptively 'extinguished' for purposes of the SCM Agreement when the recipient firm (or segments thereof) is sold at 'arms length' and for 'fair market value'. In Australia's view, in addressing this issue, the Panel should examine all relevant facts in this dispute, including any provisions made in loan contracts between governments and Airbus SAS in relation to the transfer of obligations to successor entities.¹²⁴⁶

8. Withdrawal of the subsidy

5.40 Finally, Australia notes that the EC states erroneously that Article 4.7 requires the withdrawal of the subsidy in terms of withdrawal of the benefit amount, not the subsidy.¹²⁴⁷ However, Article 4.7 is clear that it is the subsidy that must be withdrawn, not the benefit.¹²⁴⁸

B. BRAZIL

1. Introduction

5.41 In its third party submission, Brazil discusses the following specific issues of particular importance to Brazil in this dispute:

- The rights and obligations under the SCM Agreement apply in all respects to the aircraft sector.
- Subsidies provided before 1 January 1995 should be excluded from the scope of the proceeding.
- Failure of the EC to cooperate in the Annex V information gathering process threatens to undermine the WTO dispute settlement process and should result in the application of inferences, including adverse inferences, where appropriate.
- "Launch aid" severely distorts the competitive conditions in the market for civil aircraft. Upon considering all of the characteristics of launch aid, the Panel should find that launch aid confers a benefit and should examine carefully the EC arguments regarding the duration or expiration of the benefit of launch aid subsidies.
- The Panel should avoid a narrow interpretation of *de facto* export contingency under Article 3.1(a) of the SCM Agreement.
- In evaluating whether the subsidies to Airbus are causing adverse effects or the threat thereof, the Panel should (a) take into account the conditions of competition in the LCA market, (b) give substantial discretion to the US to define the "subsidized product," and (c) examine other critical legal issues relevant to its consideration of the US claims of serious prejudice and material injury.¹²⁴⁹

2. The SCM Agreement applies in all respects to the aircraft sector

5.42 Brazil considers that the SCM Agreement establishes the rights and obligations applicable to assessing the US claims in this dispute. In Brazil's view, the 1979 Agreement and the 1992 Agreement are outside the Panel's terms of reference. To the extent relevant to the Panel's review, the 1979 Agreement actually places an additional burden on the EC not to cause further distortions in the civil aircraft market. Moreover, the 1992 Agreement cannot serve to carve EC subsidies to its aircraft

¹²⁴⁷ Australia Opening Statement Executive Summary, para. 25, citing, Second Written Submission of the EC, para. 224.

¹²⁴⁸ Australia Opening Statement Executive Summary, para. 25.

BCI deleted, as indicated [***]

industry out of the obligations under the SCM Agreement, in particular because it is not a WTO covered agreement to which all WTO Members are a party.¹²⁵⁰

5.43 At the Panel meeting with the third parties, Brazil noted that in its preliminary ruling, the Panel found no basis for applying the 1992 Agreement to the temporal scope of the dispute¹²⁵¹ but did not address whether the 1992 Agreement was relevant to other substantive issues.¹²⁵² Among other things, the Panel's conclusion was based on lack of jurisdiction and on its finding that the SCM Agreement prevails over the 1992 Agreement.¹²⁵³ For the same reasons, Brazil considers that the Panel should find no basis for applying the 1992 Agreement to the substantive claims under the SCM Agreement in this dispute.¹²⁵⁴

5.44 Brazil also objects to the use of the 1992 Agreement to interpret provisions of the SCM Agreement. A bilateral treaty such as the 1992 Agreement simply does not reflect the common intentions of all WTO Members, and as a result, it cannot be used to inform what WTO Members intended when drafting the SCM Agreement. Any other interpretation would lead to absurd and prejudicial results, with third parties seeing their WTO rights affected by a bilateral treaty to which they were not a party and with the provisions of the SCM Agreement potentially being interpreted differently for different WTO Members. Alternatively, any interpretation of the SCM Agreement based on the 1992 Agreement can only apply to the bilateral relations between the US and the EC.¹²⁵⁵

3. Subsidies provided before 1 January 1995 should be excluded from the scope of this proceeding

5.45 Brazil notes that the US has presented a number of claims based on subsidies provided prior to 1 January 1995, the date the SCM Agreement entered into force. Consistent with the text and as interpreted in accordance with customary rules of interpretation of public international law, Brazil maintains that the SCM Agreement cannot bind a WTO Member in relation to any act that has taken place before 1 January 1995.¹²⁵⁶

5.46 Accordingly, Brazil considers that the temporal scope of any dispute under the SCM Agreement is limited to subsidies actually granted or maintained on or after 1 January 1995. One-time grants provided prior to 1 January 1995, for example, should be excluded. Recurring subsidies and subsidy programmes in which contributions are actually provided on or after 1 January 1995 should be covered, including any contributions provided on or after 1 January 1995 that are pursuant to commitments, decisions, or other actions taken prior to that date. Brazil also considers that launch aid that was granted prior to 1 January 1995 and that remains subject to the repayment of interest or principal after that date should be within the scope of this dispute, including, under certain circumstances, situations where the relevant launch aid was fully repaid after 1 January 1995.¹²⁵⁷

¹²⁵⁷ Brazil Third Party Submission Executive Summary, para. 4.

BCI deleted, as indicated [***]

4. The EC failure to cooperate in the Annex V process threatens to undermine the WTO dispute settlement process and should result in the application of inferences, including adverse inferences, where appropriate

5.47 In Brazil's view, the Annex V process is particularly critical in cases such as this one in which the relevant information is almost exclusively contained in confidential documents held by the subsidizing Member.¹²⁵⁸ Brazil points out that Annex V of the SCM Agreement establishes an information gathering process that is a critical and integral part of the SCM Agreement. In Brazil's view, the Annex V process is mandatory.¹²⁵⁹ In the interest of the timely and efficient resolution of disputes and consistent with the text of Annex V, Members should consent to the initiation of Annex V procedures and should fully cooperate in providing requested information, particularly because information about subsidies is often only available to the subsidizing Members.¹²⁶⁰

5.48 Brazil notes that at the outset of this proceeding, the EC refused to consent to three requests by the US to initiate the procedures under Annex V of the SCM Agreement. The EC also failed to respond fully to questions and "follow-up" questions from the Annex V Facilitator. In Brazil's view, the EC actions in withholding evidence in the Annex V process severely prejudiced the rights of third parties to protect their interests in this proceeding within the meaning of Article 10 of the DSU.¹²⁶¹

5.49 To the extent that the EC continues to withhold relevant evidence, Brazil encourages the Panel to use its discretion under paragraph 7 of Annex V of the SCM Agreement to draw adverse inferences where appropriate and thereby adopt effective sanctions to ensure that Annex V remains an effective tool for the resolution of disputes under the SCM Agreement.¹²⁶²

5. "Launch aid" severely distorts the markets for aircraft and constitutes a specific subsidy

5.50 Brazil considers that launch aid is a particularly distortive type of subsidy because it shifts the enormous up-front expense and commercial risk of developing new aircraft to taxpayers. Although Brazil agrees with the EC that the LCA industry has special characteristics, it rejects the notion that this justifies subsidies inconsistent with a Member's WTO obligations.¹²⁶³

5.51 Brazil agrees with the legal test articulated by the US for determining whether a benefit was conferred, *i.e.*, a benefit corresponds to some form of advantage and can be identified by determining whether the recipient has received a financial contribution on terms more favourable than those available to the recipient in the commercial market. Launch aid takes the form of a loan for which repayment is success-dependent and, thus, may not earn a commercial rate of return if relevant aspects are taken into account, including the risks inherent in the development and marketing of new aircraft, the nature of the launch aid (including its success-dependent and back-loaded features and lack of security), the relevant interest rates (including the nature of any obligation to pay interest), the fact that credit ratings are affected by the expectation of continuing government support, and any other preferential features, including the waiver of normal fees. The Panel should account for these aspects in establishing an appropriate commercial benchmark for determining whether the launch aid

BCI deleted, as indicated [***]

subsidies in this proceeding have conferred a benefit within the meaning of Article 1.1(b) of the SCM Agreement.¹²⁶⁴

5.52 Based on the evidence provided by the US, Brazil considers that the US has presented a *prima facie* case that launch aid granted without any interest obligation confers a benefit on Airbus. Moreover, when the launch aid does require the payment of interest or royalties, the EC admission that such launch aid was granted on terms and conditions more favourable than even its own proposed commercial benchmarks means that the US has established that launch aid confers a benefit on Airbus. Brazil considers that the additional statements by officials from member States of the EC and by Airbus further demonstrate that launch aid confers a benefit on Airbus.¹²⁶⁵

5.53 Brazil disagrees with the EC assertion that the test for whether launch aid confers a benefit should be based solely on the reasonableness of sales forecasts.¹²⁶⁶ This test has no support in the SCM Agreement. Based on its reference to governments securing an "adequate rate of return" and ensuring "adequate recoupement of its contribution,"¹²⁶⁷ the EC is attempting to resurrect the "cost to government" approach to examining the existence of a benefit, which has been rejected in past cases.¹²⁶⁸ Brazil also objects to the use of risk-sharing suppliers in determining the appropriate commercial benchmark for assessing the benefit of launch aid to a civil aircraft producer. The terms and conditions for risk-sharing suppliers are substantially distorted by the government subsidies for the underlying project and would not reflect the situation without government intervention.¹²⁶⁹

5.54 Regarding the duration and expiration of the benefits of subsidies to Airbus, Brazil urges the Panel to examine the issues carefully and to ensure that its findings in this dispute do not lead to interpretations that would undermine the disciplines set out in the SCM Agreement. In the absence of guidance in the SCM Agreement regarding the quantification of subsidies, the Panel should not, as the EC argues, require the US to allege a precise per aircraft subsidy rate in accordance with strict methodologies or thresholds. Moreover, although the general magnitude of the subsidies may be relevant, the Panel should also consider the nature of launch aid, which necessarily distorts the market and facilitates the ability of Airbus to launch aircraft that would not otherwise be developed or at least not developed at the same time or at the same cost.¹²⁷⁰

5.55 At the Panel meeting with the third parties, Brazil asserted that absent launch aid, certain new aircraft would not be developed and sold in the market or would be developed and sold much later at a higher cost. Therefore, a beneficiary of launch aid is able to be more aggressive in producing and marketing aircraft than a competing producer without launch aid.¹²⁷¹

5.56 Brazil also notes that subsidies are not a requirement for the development and launch of new aircraft, even if a producer is located in a developing country. For example, to finance the design and

BCI deleted, as indicated [***]

development of its EMBRAER 170/190 family of aircraft with four models ranging from 70 to 118 seats, EMBRAER did not rely on launch aid.¹²⁷²

6. The Panel should avoid a narrow interpretation of *de facto* export contingency

5.57 In examining US claims that certain launch aid constitutes prohibited export subsidies under Article 3.1(a) and footnote 4 of the SCM Agreement, Brazil considers that the Panel should not interpret the applicable provisions so narrowly as to effectively prevent a finding of *de facto* export contingency in certain sectors where there may indeed be a global market or in industries with substantial export orientation.¹²⁷³ In particular, the Panel should examine export contingency as of the date the subsidy is granted. In the relevant agreements to provide launch aid (*i.e.*, to provide the subsidy) in this proceeding, each government required a certain rate of return, and thus, the provision of the launch aid was contingent on agreement between the government and Airbus to the specified contractual rate of return and the projected sales. If this return could only be reached through actual or anticipated exportation or export earnings as evidenced by, for example, market data in the launch aid agreement itself, Brazil considers that this may be sufficient to demonstrate *de facto* export contingency. Likewise, the relevant launch aid contracts were concluded in the expectation that a certain amount of sales would occur, according to "reasonable forecasts". If this amount could only be reached through actual or anticipated exportation, this should also be sufficient to demonstrate *de facto* export contingency.¹²⁷⁴

5.58 At the Panel meeting with the third parties, Brazil stated that based on the information available to it, certain instances of launch aid in this dispute do appear to constitute prohibited subsidies because they are contingent on export performance within the meaning of Article 3.1(a) of the SCM Agreement. If the evidence demonstrates that the launch aid contracts were concluded on the basis of a rate of return that could only be achieved through sales forecasts that inevitably imply exportation of subsidized products, the Panel should find that such evidence may be sufficient to demonstrate *de facto* export contingency.¹²⁷⁵

5.59 Brazil notes that in *Canada-Aircraft*, the Panel stated that, in order to rebut Brazil's *prima facie* case, Canada should have, *inter alia*, "adduce{d} ... evidence demonstrating that TPC assistance to the Canadian regional aircraft industry would have been granted irrespective of anticipated exportation or export earnings."¹²⁷⁶ Likewise, in order to rebut the US *prima facie* case here, the EC must present evidence demonstrating that the *same* launch aid would have been granted *irrespective of anticipated exportation or export earnings*.¹²⁷⁷ Brazil concludes that if the launch aid at issue here is endorsed by the Panel, it will open a loophole for Members to provide export incentives under the guise of "royalty-based" or similar *de facto* export performance based financing. In Brazil's view, the Panel should ensure that its findings do not open such a loophole, and it should not otherwise interpret Article 3.1(a) of the SCM Agreement so narrowly that a finding of *de facto* export contingency is no longer possible.¹²⁷⁸

BCI deleted, as indicated [***]

7. The US has made a *prima facie* case that the subsidies to Airbus cause adverse effects or the threat thereof

5.60 Brazil considers that the conditions of competition in the LCA market are critical to the Panel's analysis of adverse effects under Article 5 of the SCM Agreement. Brazil disagrees with the EC argument that there is often a lack of competition in the LCA market. Given that Boeing and Airbus are the only surviving LCA producers, if Airbus wins a sales campaign, Boeing necessarily loses a sale, even if Boeing was not asked to compete for the sale.¹²⁷⁹

5.61 Brazil also agrees with the US description of the competitive conditions in the LCA market, including the large but infrequent orders of LCA and the likelihood that airlines purchasing subsidized aircraft will continue purchasing the same model or models from the same family due to commonality of spare parts, pilot and crew training, special tooling, and ground support equipment. Accordingly, subsidies that distort a customer's purchasing decisions have adverse effects that are far greater than in most other sectors and are also likely to affect future aircraft sales.¹²⁸⁰

5.62 Moreover, the nature of aircraft production is such that the continued development of new aircraft and technology is necessary to remain competitive. Brazil agrees with the US and with the logic contained in the Dorman Report that subsidies significantly distort the market because they enable a producer to reduce the risk of launching new aircraft, lower its costs, divert internal funds to other uses, and otherwise make decisions that are inconsistent with normal commercial considerations.¹²⁸¹

5.63 Regarding the determination of the "subsidized product" in this dispute, Brazil considers that the Panel should afford the US substantial discretion as the complaining party to define the subsidized product or products to which its claims apply.¹²⁸² Brazil also agrees with the criteria proposed by the US for determining the "like product" in this dispute, although Brazil does not take a position regarding whether the entire Boeing family of LCA is the appropriate like product or products in this case.¹²⁸³ Brazil notes that the SCM Agreement provides no definition for "subsidized product" and no textual support for the proposition that the subsidized product has to conform to a particular configuration, be it narrow or wide.¹²⁸⁴

5.64 In its Third Party submission and at the Panel meeting with the third parties, Brazil provided the following comments on some of the important issues regarding the US adverse effects-related claims and arguments:

- Brazil notes that the SCM Agreement does not specify what type of market (monopoly, duopoly or a perfectly competitive market) should prevail in any given context of international trade. If the evidence shows, for example, that a certain aircraft *would not exist* but for a subsidy and that the entire market for that kind of product would be supplied by a single non-subsidized firm, there are strong grounds for a *prima facie* case that the subsidy causes serious prejudice within the meaning of Article 6.3.

¹²⁸³ Brazil Third Party Submission Executive Summary, para. 17

¹²⁸⁴ Brazil Opening Statement Executive Summary, para. 11.

BCI deleted, as indicated [***]

- Brazil submits that contrary to the EC position, price need not be the only reason for lost sales, provided it is one of the material factors causing the lost sales.
- Brazil disagrees with the EC assertion that adverse effects are extinguished, for example, by the launch within two or three years of a technologically equal or superior competing aircraft by Boeing. The continuing distortive effect of subsidies in the market does not disappear with the launch of a competing aircraft.
- Brazil disagrees with the EC position that Boeing's healthy financial and market position at the peak of the business cycle precludes the possibility that the US is suffering serious prejudice caused by the subsidy. The relevant issue is whether Boeing's market share would be greater absent the subsidized Airbus product.
- Brazil agrees with the US that if data on exports to certain third country markets is insufficient, the Panel may conduct an analysis of displacement or impedance under Article 6.3(b) of the SCM Agreement based on the aggregate of all third country markets.
- Brazil considers that the effect of subsidies may be gauged not only as aircraft are physically delivered to customers, but also as orders are secured by manufacturers subsidized by their governments.
- Brazil disagrees with the EC two-step analysis of displacement or impedance under Article 6.3(b) of the SCM Agreement requiring proof first that 'displacement' or 'impedance' is caused by the effects of challenged subsidies and second that such displacement or impedance rises to the level of serious prejudice. Brazil notes that displacement or impedance in the sense of Article 6.3(b) is an instance of "serious prejudice" within the meaning of Article 5(c). There is no additional requirement to show that such displacement or impedance rises to the level of serious prejudice. The panel in *US-Cotton* made it clear that a finding of an effect under Article 6 is sufficient for a finding of serious prejudice under Article 5(c). In *Indonesia-Autos*, the panel found that "{i}f the type of analysis set forth in Article 6.4 is appropriate in this case, then the complainants arguably could make a *prima facie* case of displacement or impedance simply by demonstrating that the market share of a subsidized product has increased over an appropriately representative period." Thus, Brazil considers that if the demonstration required by Article 6.4 is made for a *single* third country market (or for third country markets considered as a whole) under Article 6.4, this amounts to a *prima facie* case of serious prejudice within the meaning of Article 5(c) of the SCM Agreement.¹²⁸⁵
- With respect to material injury under Article 5(a) of the SCM Agreement, Brazil agrees with the US that evidence that Boeing's performance was improving in 2006 does not mean that the US did not suffer adverse effects from subsidized Airbus products.¹²⁸⁶

5.65 Brazil points out that the precise quantification of subsidies is not required in a dispute under Part III of the SCM Agreement. In addition to the findings of the Appellate Body in *US-Cotton (AB)* directly on this point,¹²⁸⁷ the absence of a *de minimis* provision under Part III of the SCM Agreement and the use of the language "effect of the subsidy" in Article 6.3 of the SCM Agreement support the lack of any requirement to quantify the subsidy. Thus, the Panel should not adopt any specific

BCI deleted, as indicated [***]

calculation or allocation methodologies for purposes of this case and should not require the US to demonstrate a precise per-aircraft subsidy rate.¹²⁸⁸

5.66 Brazil notes that the EC contends that Airbus LCA would have been viable without the challenged launch aid.¹²⁸⁹ In Brazil's view, the EC arguments are not relevant in demonstrating causation in this case. The possibility that certain aircraft would have been launched without the preferential terms provided by launch aid does not undermine arguments in relation to the effects of alleged subsidies on the pace and conditions by which such aircraft were actually introduced into the market.¹²⁹⁰

5.67 Brazil points out that according to the EC, the competitive advantage enjoyed by Airbus in launching a more technologically advanced aircraft earlier than it would have done absent subsidies was quickly neutralized or eliminated when Boeing launched a competing or superior aircraft.¹²⁹¹ As a legal matter, Brazil objects to the EC argument that the actions of a producer of the like product to remedy the adverse effects caused by subsidies either breaks the causal link between the subsidies and the adverse effects or removes the adverse effects. Such an interpretation is not supported by the SCM Agreement and would lead to the absurd result that a commercial response to reduce the adverse effects of subsidization would lessen the likelihood that the subsidizing Member would be found to violate its WTO obligations, despite causing the adverse effects in the first place.¹²⁹²

5.68 Brazil notes that the EC would have the Panel require the US to provide evidence showing that funds received in the past under launch aid contracts is directly linked to cash flow or "free money" that Airbus has chosen at the time of sale to spend on reducing prices in each and every sales campaign. Given the fungible nature of the funds provided and the fact that the subsidies benefited Airbus far in advance of the actual sale of any particular aircraft, such test is not required and would impose an impossible evidentiary burden on a complainant.¹²⁹³

5.69 Moreover, the EC argues that the US must also prove that Airbus had the incentive and commercial opportunity to use the additional cash flow from subsidies to lower sales prices. Brazil considers that the EC approach lacks the common sense that the EC advocated in *Korea-Vessels*.¹²⁹⁴ It follows from basic principles of economics and, in fact, from common sense that a significant magnitude of subsidy-induced cash flow would reduce a producer's costs and affect prices. A complainant should not be required to further demonstrate that the subsidized producer had the incentive and commercial opportunity to lower prices for its products.¹²⁹⁵

5.70 Brazil disagrees with the EC assertion that the lower development costs provided by launch aid do not affect pricing. Because it lowers per unit costs of aircraft and improves the recipient's cash flow, launch aid enables Airbus to offer more aggressive pricing on its products.

5.71 Brazil notes that the EC contends that to show that displacement or impediment under Articles 6.3(a) and 6.3(b) of the SCM Agreement is caused by the "effect of the subsidy," the US must

conduct a sales-campaign by sales-campaign analysis.¹²⁹⁶ Such an approach lacks any support under the SCM Agreement or past practice. It is simply not a requirement for the complainant to present evidence relating to each sale of a subsidized product (whether aircraft or any other product) and demonstrate that the subsidy caused the relevant displacement or impediment on a sale-by-sale basis.¹²⁹⁷

5.72 Brazil agrees that the challenged subsidies should be cumulated in examining whether they are causing adverse effects to US interests if such subsidies "manifest themselves collectively."

5.73 Brazil notes that the EC argues that the US cannot meet its burden of demonstrating serious prejudice under Articles 6.3(b) and 6.3(c) of the SCM Agreement because the various like Boeing products are subsidized and because Articles 6.4 and 6.5 refer to comparisons only with the "non-subsidized like product."¹²⁹⁸ The drafters' use of "non-subsidized like product" in Articles 6.4 and 6.5 (as well as in paragraph 5 of Annex V), however, was intended merely to ensure that the analysis excluded the like product of third countries and was limited to a comparison of the subsidized product and the like product of the complainant. In short, Brazil considers that alleged subsidies to Boeing are no defence to the US claims in this dispute.¹²⁹⁹

5.74 In Brazil's view, the Panel should disregard the EC attempts to use US subsidies to Boeing as a defence against the US claims. Alleged claims regarding US subsidies to Boeing will be considered by the panel in DS353.

C. CANADA

1. Introduction

5.75 Canada states that it is participating in this proceeding because of its role as one of the world's major producers of civil aircraft and its systemic interest in the interpretation of the SCM Agreement.¹³⁰⁰

2. *De facto* Export Contingency

5.76 Canada considers that the US has failed to accurately apply the test for *de facto* export contingency set out in footnote four of the SCM Agreement.¹³⁰¹ Canada argues that instead of applying this test, the US attempts to establish only that repayment of the financing was tied to actual or anticipated exportation or export earnings.¹³⁰² Canada notes that the US paraphrases the test as: "(1) the 'granting' of a subsidy; (2) that is 'tied to' (3) 'actual or anticipated exportation or export earnings'." By inserting the word "that" the US has obscured the locus of the inquiry. In Canada's

¹³⁰⁰ Executive Summary of the Third Party Submission of Canada (hereinafter Canada Third Party Submission Executive Summary), para. 1.

¹³⁰¹ Canada Third Party Submission Executive Summary, para. 2. Canada asserts that this standard is met when the facts demonstrate that the granting of a subsidy, without having been made legally contingent upon export performance, is in fact tied to actual or anticipated exportation or export earnings. The mere fact that a subsidy is granted to enterprises which export shall not for that reason alone be considered to be an export subsidy within the meaning of this provision.

¹³⁰² Canada Third Party Submission Executive Summary, para. 2.

BCI deleted, as indicated [***]

view, the text is clear in establishing the locus of the "tied to" inquiry as "the granting of the subsidy". Therefore, the relevance of repayment is limited to the light it sheds on whether the granting of the subsidy was export contingent. Repayment is not dispositive.¹³⁰³

5.77 Canada asserts that the SCM Agreement locates the "tied to" inquiry in the granting of the subsidy rather than its repayment for good reason. A tie between repayment of a subsidy and sales can provide governments with an effective mechanism for establishing when repayments are due without creating any incentive to export. Indeed, requiring repayment of a subsidy only when export sales are made could be a device for using subsidies to develop domestic sales in preference to export sales.¹³⁰⁴

5.78 According to Canada, the US errs in conflating the terms "export performance", "exportation" and "export earnings", with the term "sales". By conflating these terms, the US would have it that any subsidy provided in the form of royalty-based financing is prohibited if the level of anticipated repayment factored in even a single export sale. This nullifies the final sentence of footnote four.¹³⁰⁵

5.79 Canada considers that if the US is arguing that the granting of the financing was conditioned on full repayment, it has provided no evidence. Even if such evidence was provided, it would be absurd to characterize a full repayment requirement as an export contingency. Every prior finding of a prohibited export subsidy was based on a positive, direct correlation between subsidization and exportation. Here, the correlation is the inverse: repayments triggered by export sales only reduce any benefit to Airbus.¹³⁰⁶

5.80 Canada notes that the US argues that the contractual commitments to repay Launch Aid on a per plane basis are sufficient in this globalized market to establish that the granting of the alleged subsidies is export contingent. This turns Article 3.1 on its head. As is clear from footnote four, the locus of the inquiry in Article 3.1 is the granting of the subsidy, not the repayment of the financial contribution.¹³⁰⁷

5.81 The US further asks the Panel to accept the proposition that the per plane repayment requirements in the member State financing at issue are "like" the best endeavours performance targets set out in the grant contract in *Australia – Leather*. However, the two cases are in no way analogous. *Australia – Leather* involved targets that, if met, would result in additional subsidization. In the case before the Panel, each sale, export or domestic, when made, only triggers repayment of the financial contribution.¹³⁰⁸

5.82 Canada points out that by its own admission, the entire US case on export contingency depends on the repayment schedules in the relevant financial contribution agreements. Canada notes that in its second submission, for example, the US claims that "{i}t is this contractual tie that distinguishes the provision of Launch Aid from the provision of a subsidy based on the mere expectation that the subsidy would result in exportation."¹³⁰⁹ However, the simple fact that the repayment schedules are incorporated into the financial contribution agreements does not make the granting of the alleged subsidies contingent upon export performance. In *Australia – Leather*, the

¹³⁰³ Canada Third Party Submission Executive Summary, para. 3.

¹³⁰⁷ Executive Summary of the Oral Statement of Canada at the Meeting with the Third Parties (hereinafter Canada Oral Statement Executive Summary), para. 2.

¹³⁰⁸ Canada Oral Statement Executive Summary, para. 3. See, also, Canada Third Party Submission Executive Summary, para. 5.

¹³⁰⁹ Canada Oral Statement Executive Summary, para. 4.

BCI deleted, as indicated [***]

panel took into account a number of circumstances to find that export performance was one of the conditions of the granting of the subsidies. The two cases are dissimilar, since the per plane repayment schedules in this case are based on all sales – export and domestic – and therefore the agreements are neutral as to export performance. This neutrality suggests no tie between export performance and the granting of the alleged subsidy.¹³¹⁰

5.83 Canada asserts that the repayment terms confer no subsidy on Airbus based on its export performance. Indeed, if Airbus failed to make a single export sale of the relevant planes, the Airbus governments would have no recourse against Airbus under these contracts. Further, repayments triggered by export sales can only reduce the conferral of benefit to Airbus. These facts alone are sufficient to dispose of the US claim.¹³¹¹

5.84 Canada notes that the US complains that the EC ignores its arguments in respect of the repayment terms and answers an argument that the US did not make. But in fact it is the US that misunderstands the importance of the contractual terms of repayment for the granting of the subsidies in question. The most that these terms can show in respect of the granting of the subsidy is an expectation of export sales. In Canada's view, as is clear from the last sentence of footnote four to the SCM Agreement, mere expectation of export sales is not sufficient to establish that a subsidy is export contingent.¹³¹²

5.85 Canada notes that in its second written submission, the EC elaborated on its argument that the test for export contingency in Article 3.1 requires a finding of contingency in respect of both elements of the definition of subsidy in Article 1 – the financial contribution and the benefit conferred by that financial contribution.¹³¹³ In Canada's view, the reference in Article 3.1 to subsidies "within the meaning of Article 1" supports the EC view that export contingency must be proven in respect of both the financial contribution requirement established by Article 1.1(a) and the benefit thereby conferred element established by Article 1.1(b). Canada has previously noted the importance of the words "the granting of" in footnote four for identifying the relevant locus for the export contingency inquiry. The reference to "the granting of" also serves to emphasize the importance of conducting the contingency inquiry in respect of the conferral of benefit element of a subsidy.¹³¹⁴

5.86 Canada points out that a failure to examine whether an export contingency relates to the conferral of benefit would lead to the absurd result that an alleged export contingency, which withdraws benefit rather than confers benefit on export, is sufficient to qualify a subsidy as prohibited. That interpretation of export contingency would run counter to every prior finding of a prohibited export subsidy in WTO dispute settlement cases, all of which relied on a positive and direct correlation between subsidization and exportation. Yet that is exactly the interpretation advanced by the US in this dispute. The Panel should reject that interpretation.¹³¹⁵

3. Infrastructure

5.87 Canada notes that the US claims that certain infrastructure projects are subsidies, but fails to first establish that they are not excluded from the SCM Agreement as "general infrastructure" by Article 1.1(a)(1)(iii).¹³¹⁶ Canada identifies problems with the US definition of general infrastructure

¹³¹⁰ Canada Oral Statement Executive Summary, para. 5.

¹³¹⁶ Canada Third Party Submission Executive Summary, para. 8.

BCI deleted, as indicated [***]

and elaborates on the principles it identified in its written submission as relevant to the Panel's analysis of the US infrastructure claims.¹³¹⁷

5.88 In Canada's view, the most relevant ordinary meaning of "general" is "not specifically limited in application; relating to a whole class of objects, cases, occasions, etc". According to Canada it is possible to say therefore, that where a government provides infrastructure and does not specifically limit its public availability, there is no financial contribution. Canada considers that this meaning of "general" is confirmed by the exclusion's roots in proposals that infrastructure available "for general public use" be excluded from the SCM Agreement.¹³¹⁸

5.89 In Canada's view, the context of the term "general infrastructure" supports a presumption that infrastructure is general unless a government specifically restricts usage by the general public. First, the term is in Article 1. It is the only exclusion in the SCM Agreement where the legal analysis can be completed without any consideration of whether the measure confers a benefit. Second, the drafters only reference infrastructure in an exclusion, indicating their primary purpose was to ensure that general infrastructure was excluded, rather than ensuring that certain infrastructure was included.¹³¹⁹ Finally, the object and purpose of Article 1 supports a presumption that infrastructure is general unless specifically limited. As the panel in *US – Export Restraints* found, the Article 1 subsidy definition "was drafted with the express purpose of ensuring that not every government intervention in the market would fall within the coverage of the Agreement." Article 1.1(a)(1)(iii) should not be interpreted to unduly broaden the scope of the Agreement.¹³²⁰

5.90 Canada notes that the US claims that public road network improvements constitute "the provision of goods or services other than general infrastructure". However, the US identifies no limits on the use of the roads at issue by the public as a result of the improvements. The Bremen runway extension could raise different issues if the new portion is indeed for exclusive use by Airbus. Restrictions on the use of a distinguishable element of infrastructure can justify separate consideration of that element.¹³²¹

5.91 Canada submits that limitations on the use of infrastructure to certain users do not necessarily deprive infrastructure of its general nature if there is a reasonable expectation that general use will resume in the foreseeable future. A temporary right of exclusive use may, however, require independent consideration to determine if an exclusive right itself constitutes provision of a good (or service).¹³²²

5.92 Canada notes that the US first written submission merely asserted its view that the infrastructure at issue was "other than general". At the prompting of the Panel, the US finally offered a definition of general infrastructure in its answer to Panel question 20.¹³²³ Canada points out that in this definition, the US restricted the concept of general infrastructure to infrastructure that "must include, involve or affect all or nearly all the parts of a whole territory or community; must be completely or nearly universal, as opposed to partial, particular or local in order to qualify as general infrastructure." According to Canada, this is an impossible standard. For one thing, it would create a host of new definitional problems such as what constitutes a "whole territory or community". But more fundamentally, it would be an impossible standard to meet. Infrastructure such as a harbour

¹³²³ Canada Oral Statement Executive Summary, para. 12.

BCI deleted, as indicated [***]

facility might never satisfy this definition. And for WTO Members as geographically large as Canada, or either of the disputing Parties, it is hard to imagine any element of the physical infrastructure that could be said to include, involve or affect all or nearly all of its territory or community.¹³²⁴

5.93 The guiding principles identified by Canada in its written submission are more consistent with the margin of appreciation that WTO Members accorded themselves for determining what constitutes general infrastructure. This margin of appreciation has appropriate boundaries. As Canada demonstrated in its written submission, the concept of general infrastructure is closely tied to its availability for use by the public and covers the provision of basic goods and services underpinning the economy.¹³²⁵

5.94 While public policy considerations are at the core of any government decision to provide general infrastructure, Canada is not arguing that a public policy justification is by itself sufficient. The fact that infrastructure is provided exclusively to one company for public policy reasons does not preclude another Member from establishing, through evidence, that it is something other than general infrastructure because it is not a basic good or service underpinning the economy or because there is no actual or potential general availability.¹³²⁶ Canada argues that the presumption that government-provided infrastructure is "general" absent proof to the contrary reflects the standard rule under the DSU that "the burden of proof rests upon the party, whether complaining or defending, who asserts the affirmative of a particular claim or defence". In this case, the US has the burden to establish that the infrastructure it is challenging is "other than general infrastructure".¹³²⁷

5.95 Canada disagrees with the proposition advanced by Australia that the facts and circumstances surrounding the provision of general infrastructure need to be examined to determine whether it confers a benefit to an enterprise. General infrastructure, by its nature, is presumed to have wide-ranging benefits and so the fact of benefit to an enterprise is not relevant to the question of whether it constitutes a financial contribution. Australia is blending the 'benefit' and 'financial contribution' tests, something the Appellate Body has repeatedly cautioned against. In the structure of Article 1, it is only once infrastructure has been determined to be a financial contribution – that is to say infrastructure "other than general infrastructure" – that the analysis proceeds to the question, under Article 1.1(b), as to whether it also confers a benefit on a recipient.¹³²⁸

5.96 Canada considers that the concept of disproportionate or predominant use by certain enterprises is an issue to be considered under Article 2 of the SCM Agreement and is not appropriate in the context of Article 1.1(a)(iii). As noted in Canada's written submission, this concept is not appropriate because it would introduce an element of redundancy to the analysis under Articles 1 and 2 and would disadvantage Members with little economic diversification. Also, establishing whether infrastructure is general or not based on subsequent private use would make the status of the measure at the time of its creation uncertain. Whether a government action will result in a subsidy should be clear before, not after, a government takes action.¹³²⁹

5.97 Similarly, the US has challenged the AéroConstellation industrial site, in part, because it was a site "tailor-made" for a specific sector of the economy. Caution needs to be exercised with this line

¹³²⁴ Canada Oral Statement Executive Summary, para. 13.

¹³²⁵ Canada Oral Statement Executive Summary, para. 14.

¹³²⁶ Canada Oral Statement Executive Summary, para. 15.

¹³²⁷ Canada Oral Statement Executive Summary, para. 16.

¹³²⁹ Canada Oral Statement Executive Summary, para. 18. *See, also*, Canada Third Party Submission Executive Summary, para. 12.

BCI deleted, as indicated [***]

of reasoning, as an airport or harbour could also be classified as "tailor-made" for a specific sector of the economy, even though they are more properly understood as basic goods underpinning the economy and available for public use. In regard to the US argument that the French Government should have sold land at the AéroConstellation site at a price that reflected its own costs, Canada considers that a more appropriate benchmark for the sale of land is the market value of the land as determined by reference to prevailing market rates in accordance with Article 14(d) of the SCM Agreement.¹³³⁰

5.98 In respect of land reclamation, it is hard to conceive of a more durable asset than land. Any reasonable consideration of possible use and availability by the public of new lands, where title is retained by the state, must necessarily take a very long view. In the case of the Mühlenburger Loch facility, the lease terms to Airbus provide the Panel with a valuable encapsulation of that aspect of the project that is exclusive to Airbus. In Canada's view, the lease provides a useful basis for determining whether Airbus has received terms more favourable than those it would have received on a comparable commercial lease in the prevailing market.¹³³¹

5.99 Canada notes that the US also argues that EC State Aid rules offer guidance in defining when infrastructure is a subsidy. However, those rules represent the internal practice of the EC and are in no way related to the SCM Agreement. As such, they have no relevance at all to the proper interpretation of Article 1.1(a)(iii) of the SCM Agreement.¹³³²

4. Serious Prejudice

5.100 Canada considers that there are two fundamental deficiencies in the US serious prejudice analysis. First, the US approach to "like product" is, on the facts of this case, incorrect. Second, assessing the effect of all the alleged subsidies in the aggregate does not account for differences in their nature and effect.¹³³³

(a) Like Product

5.101 Canada notes that the US claims of serious prejudice are premised on its assertion that there is only one subsidized product at issue in this dispute, which is the entire family of LCA aircraft produced by Airbus. However, this ignores the market realities in the civil aircraft sector which recognize that the family of LCA aircraft include a number of different and distinct products. Recognizing the vulnerability of its position, the US has asked the Panel to defer to the US in its identification of the subsidized product.¹³³⁴

5.102 Canada sees no basis in the SCM Agreement to require deference by this Panel to either of the disputing parties' views on subsidized product and corresponding like product. Whether the dispute implicates one or several subsidized products is a matter for the Panel to determine, as the trier of fact. As trier of fact, the Panel acts pursuant to its obligation under Article 11 of the DSU to make "an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements".¹³³⁵

¹³³⁰ Canada Oral Statement Executive Summary, para. 19.

¹³³¹ Canada Oral Statement Executive Summary, para. 20.

¹³³² Canada Oral Statement Executive Summary, para. 21.

¹³³³ Canada Third Party Submission Executive Summary, para. 15.

¹³³⁴ Canada Oral Statement Executive Summary, para. 23.

¹³³⁵ Canada Oral Statement Executive Summary, para. 24.

BCI deleted, as indicated [***]

5.103 In this regard, and contrary to the assertions of the US, Canada considers the definition of like product in footnote 46 of the SCM Agreement is highly relevant context for determining whether there are one or more subsidized products at issue. In particular, the requirement in footnote 46 that there be a close correspondence between the subsidized product and like product, based on the characteristics of the like product, would be rendered meaningless if the complainant could simply assert that a number of discrete products with very different characteristics were a single subsidized product.¹³³⁶

5.104 Canada notes that to support its request for deference to its unilateral grouping of all LCA into a single product, the US relies on a case decided under the Anti-Dumping Agreement. However Anti-Dumping jurisprudence is inapposite – since, in the context of the AD Agreement, the determination of dumped and like product only arises for a panel in a review of determinations already made by a domestic investigating authority. In reviewing a determination of an investigating authority, a panel may not engage in a *de novo* review and may not substitute its views for that of the investigating authority. Those strictures do not apply here.¹³³⁷

5.105 According to Canada, it is not accurate to claim, as the US does here, that "because subsidies are provided to Airbus for the development of an LCA family.... the 'subsidized product' is the Airbus LCA family as a whole." Canada explains that the identification of a "like product" and its corresponding subsidized product in the serious prejudice analysis, is, by virtue of the definition in footnote 46, focused on the characteristics of the products at issue, not the characteristics of the subsidy.¹³³⁸ It follows that the fact that a complainant has challenged multiple subsidies in one panel request does not justify aggregating a number of discrete products into a single "like product". To consider otherwise would be to blur the distinction between the scope of a panel proceeding, which is set by the panel request, and the definition of "like product", which is set by footnote 46.¹³³⁹

5.106 In Canada's view, the US misses the point when it seeks to support its "like product" claim by noting that royalty-based financing for individual Airbus models actually benefit the entire Airbus LCA production because the "subsidies for the development of each major Airbus LCA model benefit the production and marketing of its full LCA family". It is the characteristics of the products being compared that are relevant to whether they are "like". Company-wide benefits of a subsidy have nothing to do with the actual characteristics of the products produced by that company.¹³⁴⁰

5.107 Canada notes that the US 'family'-related arguments essentially propose that the Airbus 380 is somehow 'like' the Boeing 737. However, the 737 is a narrow body aircraft with a seating capacity of approximately 120 to 200 seats and a range of approximately 3,000 to 6,000 km. The A380 is a wide body aircraft of over 500 seats and a range of 15,000 km. It is inconceivable that an A380 could displace or impede or price undercut a 737 as they are simply not considered by the market to be in competition.¹³⁴¹

5.108 Canada points out that the panel in *Indonesia – Autos* dismissed a similar argument. A key reason why that panel rejected the argument that all passenger cars should be considered a "like

¹³³⁶ Canada Oral Statement Executive Summary, para. 25.

¹³³⁷ Canada Oral Statement Executive Summary, para. 26.

¹³³⁸ Canada Third Party Submission Executive Summary, para. 16, citing, Footnote 46: "Throughout this Agreement the term "like product" ("produit similaire") shall be interpreted to mean a product which is identical, *i.e.*, alike in all respects to the product under consideration, or in the absence of such a product, another product which, although not alike in all respects, has characteristics closely resembling those of the product under consideration."

¹³⁴⁰ Canada Third Party Submission Executive Summary, para. 18.

¹³⁴¹ Canada Third Party Submission Executive Summary, para. 19.

BCI deleted, as indicated [***]

product" of the "Timor" car was the lack of substitutability between the Timor, a small budget car, and passenger cars at the high end of the market, for example a Rolls-Royce. The *Indonesia – Autos* panel found that it was "almost inconceivable" that a subsidy for Timors could displace or impede Rolls-Royces or that there could be any meaningful price undercutting analysis between these two models.¹³⁴²

5.109 Canada notes that the panel in *Indonesia – Autos* found that "one reasonable way" to approach the like product issue is to look at the manner in which the industry at issue has analyzed market segmentation. Canada agrees that industry analyses of market segmentation can be a useful tool in conducting a like product analysis and would urge the Panel to conduct its analysis in a manner that distinguishes among products based on characteristics that the market itself considers significant and distinctive.¹³⁴³

(b) Causation and the US Aggregated Analysis

5.110 In Canada's view, the US errs by examining only whether a causal link exists between the aggregated grouping of subsidies and the aggregated grouping of effects set out in Article 6.3(a) to (c). There are two aspects to this error. First, subsidies were aggregated without regard for their nature and effect. Second, the US failed to establish a nexus between alleged subsidies and the adverse effects claimed.¹³⁴⁴

(i) *Aggregation of Subsidies*

5.111 Canada notes that the US serious prejudice claim remains predicated on the aggregated effects of all alleged subsidies, regardless of the amount, age, nature or type of benefit in respect of all Boeing LCA. In Canada's view, this approach is not consistent with the approach of prior panels, particularly the panel in *US – Upland Cotton*, and it is inconsistent with the rigour required by Article 6.3 of the SCM Agreement.¹³⁴⁵ Canada states that the aggregation of a number of subsidies for a serious prejudice analysis is appropriate to the extent the subsidies that are aggregated share a similar nature and effect in relation to the like product. Canada notes that the *US – Upland Cotton* panel aggregated certain subsidies and declined to aggregate others because of what it considered to be their different nature and effect.¹³⁴⁶

5.112 Canada considers that the caution exercised by the *US – Upland Cotton* panel in recognizing that "due attention must be paid to each subsidy at issue" was appropriate because of the dangers of any cumulative assessment. An aggregate assessment may result in a finding of serious prejudice even if not all of the subsidies result in serious prejudice. Overly broad aggregation can, therefore, leave Parties with inadequate guidance as to what actions are required by a subsidizing Member to comply with a recommendation from the DSB to withdraw the adverse effects caused by subsidies in the aggregate.¹³⁴⁷

5.113 Canada argues that in this case, it is not appropriate for the US to aggregate: 1. the effect of four decades of subsidies regardless of when they were granted and expended; and 2. research and

development programs with other forms of subsidies without considering how such subsidies relate to the subsidized products and the adverse effects claimed.¹³⁴⁸

(ii) *Aggregation of Subsidies Regardless of When Granted and Expended*

5.114 It is highly speculative that royalty-based financing granted and expended between 1969 and 2001 could have any continuing effect on Airbus pricing decisions, and therefore on Boeing LCA. This is particularly true as repayment obligations are triggered by each sale. Canada questions whether the receipt of such subsidies, in what is the distant past from a corporate standpoint, could trigger current price undercutting or establish an ongoing risk of price undercutting.¹³⁴⁹

5.115 Canada notes that the EC submission lays out what it refers to as the "US/Boeing methodology" for allocating subsidies over time. According to Canada, whether or not the Panel adopts this methodology, the Panel should decline to aggregate subsidies granted prior to the review period with more recent subsidies absent persuasive evidence from the US that the earlier subsidies have an ongoing effect.¹³⁵⁰

(iii) *Aggregation of Research and Development (R&D) Programs*

5.116 Similarly, Canada considers that R&D programs should only be aggregated after analyzing their nature and effects to determine if they are sufficiently similar to other alleged subsidies to warrant aggregation. Canada notes that there is no such analysis in the US first submission.¹³⁵¹

5.117 Canada points out that R&D frequently results in benefits that go beyond the particular interests of a producer. R&D programs may therefore not be appropriate to aggregate with financing for the launch of a new aircraft. The view that R&D is distinctive is supported by Part IV of the SCM Agreement on non-actionable subsidies. The provisions of this Part have lapsed by operation of Article 31 of the SCM Agreement and Members have taken no action to extend its application. However, as the *US – Upland Cotton* panel and the Arbitrator in *US – FSC (Article 22.6 – US)* found, these provisions "can nevertheless be instructive in understanding the overall architecture of the Agreement with respect to the different types of subsidies it sought and seeks to address."¹³⁵²

5.118 Canada notes that Part IV, Article 8.2(a) established that "assistance for research activities conducted by firms or by higher education or research establishments on a contract basis with firms" qualified conditionally for non-actionable status. Thus, Article 8(2)(a) indicates that, for the drafters of the SCM Agreement, these R&D programs were distinctive. Automatic protection for qualifying subsidies under this provision has lapsed, but the provision does support giving separate consideration to R&D programs from other subsidies.¹³⁵³

5.119 Canada notes that the R&D programs are also distinctive in this proceeding as they involved a number of different entities, many with no direct connection to Airbus. In such circumstances, the US has the burden of demonstrating how the benefits were passed through to Airbus.¹³⁵⁴

(iv) *The US fails to demonstrate the causal link required under Article 6.3*

5.120 Canada maintains that Article 6.3 requires that there must be a link between the subsidy and its effect. If an allegation of displacing imports under Article 6.3(a) is made, the "causal link", between the subsidy and the displacing of the imports must be demonstrated. If an allegation of significant price undercutting under Article 6.3(c) is made, the causal link between the subsidies and the price undercutting must be demonstrated, and so on for each effect alleged.¹³⁵⁵

5.121 This was the approach in *US – Upland Cotton*. That panel conducted one examination to determine whether all the elements of the allegation under Article 6.3(c) were fulfilled and a separate examination to determine whether all the elements of the allegation under Article 6.3(d) were fulfilled. The panel identified the causal link between the alleged effect and the alleged subsidies as one of the elements to be demonstrated under Article 6.3(d).¹³⁵⁶

5.122 Canada submits that here, the US is required to demonstrate the causal link for each of Article 6.3(a) to Article 6.3(c) since it alleges each of these effects. Further, for its allegation relating to Article 6.3(c), the US is required to demonstrate that the requisite causal link exists between the subsidies and each of the alleged effects of significant price suppression, significant price depression and lost sales. Canada argues that by simply examining the existence of a causal link between the aggregated grouping of subsidies and the aggregated grouping of effects, the US has failed to perform a causal analysis for each alleged effect in Article 6.3(a) to Article 6.3(c). Rather, by adopting a global causal analysis the US has obscured the elements required to be demonstrated under Article 6.3.¹³⁵⁷

5.123 According to Canada, the US global causal theory is two-fold: 1. the cumulative effect of the subsidies allowed the development of Airbus LCA, "that would not have been undertaken at all, or at the same pace, without subsidies"; and 2. the cumulative effect of the subsidies provides Airbus with a financial cushion that permits it "to further a policy of pricing its LCA in order to obtain market share." In respect of the first aspect, it is speculative to assert that, absent subsidies, there would be no competition affecting the US producer. Canada notes that the US has not substantiated such a claim. Moreover, the focus in Article 6.3 is on determining the effects of subsidies in the relevant markets on the complainant's products. The benchmarks for this exercise are not the markets absent the products of the subsidizing Member, but the markets absent the effects of the subsidies at issue. The second aspect of the US causal theory – that subsidies support an Airbus pricing policy designed to obtain market share – does, in theory, relate directly to each inquiry in Article 6.3(a) to (c). However, the US never engages in this analysis with respect to each of the effects it has alleged.¹³⁵⁸

5.124 Last, Canada agrees with the views of Japan that a non-attribution analysis is important in respect of other known factors that could be causing the alleged serious prejudice. As Japan's written submission explained, while the SCM Agreement does not provide an explicit requirement to conduct a non-attribution analysis in serious prejudice cases, it is an implicit obligation of any causal test. Previous WTO reports have recognised the importance of ensuring that the effects of other factors are not improperly attributed to the challenged subsidies in the context of Article 5.3(c). In this regard, the requirements identified for a non-attribution analysis in Part V of the SCM Agreement, and related jurisprudence, establish a reasonable roadmap for this Panel to follow.¹³⁵⁹

5. Conclusion

5.125 Canada takes the view that the application of the SCM Agreement to specific measures requires rigorous analysis that cannot be abbreviated because of the complexity of the dispute. Canada argues that the US serious prejudice claim is so general that it fails the legal tests provided for in Part III of the SCM Agreement. In regards to *de facto* export contingency under Article 3.1(a) and the test for determining whether infrastructure is subject to the SCM Agreement pursuant to Article 1.1(a)(1)(iii), the US has not tied its analysis to the text of these provisions, considered in context and in the light of the Agreement's object and purpose.¹³⁶⁰

D. CHINA

1. Introduction

5.126 In its third party submission and at the Panel meeting with the third parties China presents its views on the following two legal issues: (i) in fact export contingency under Article 3.1(a) of the *Agreement on Subsidies and Countervailing Measures* ("SCM Agreement"); and (ii) the non-attribution analysis under Article 15.5 of the SCM Agreement in the context of joint claims under Article 5(a) and (c).¹³⁶¹

2. In fact export contingency under Article 3.1(a) of the SCM Agreement

5.127 China notes that in this dispute, the US seems to argue that certain Launch Aids – in the form of loans – are in fact contingent upon export performance in that (i) the Airbus governments tied the *repayment* of such aids to the sales of LCA, and (ii) given the limited demand in the European market, the *repayment* was necessarily tied to substantial exports.¹³⁶² In China's view, the finding of in fact export subsidies in the form of loans, as a matter of rules under footnote 4 to Article 3.1(a) of the SCM Agreement, shall be focused on the "*granting*" – instead of the "*repayment*" – of the loans.¹³⁶³

5.128 First, in accordance with Article 3.1(a) and footnote 4 thereto of the SCM Agreement, three elements must be demonstrated in order to find in fact export contingency, *i.e.*, (i) "the granting of a subsidy"; (ii) "is ... tied to ..."; and (iii) "actual or anticipated exportation or export earnings".¹³⁶⁴ In this regard, China recalls that the Appellate Body in *Canada – Aircraft* further clarified the above three elements in finding in fact export contingency. As to "the granting of a subsidy", the Appellate Body held, *inter alia*, that the initial inquiry must be on whether the *granting authority* imposed a condition based on export performance in *providing* the subsidy, and that the prohibition under Article 3.2 and footnote 4 of the SCM Agreement is on the "*granting* of a subsidy" and not on receiving it.¹³⁶⁵ Based upon the above quoted and other holdings by the Appellate Body, China submits that in finding in fact export contingency, the focus should be placed on the *granting* of a

¹³⁶⁰ Canada Third Party Submission Executive Summary, para. 36.

¹³⁶⁵ China Third Party Submission Executive Summary, para. 6. *See, also*, China Opening Statement, para. 4.

BCI deleted, as indicated [***]

subsidy and it must be demonstrated by the total configuration of the facts that there is a conditionality between the *granting* of a subsidy and the actual or anticipated export.¹³⁶⁶

5.129 Second, in China's view, the same rule well applies to a subsidy in the form of a loan. In such a case, in order to determine whether the loan constitutes a subsidy in fact contingent upon export, it must be established that the granting authority imposes a condition based on export performance when *providing* the loan. In reality, the actors of granting and repaying the loan are different, respectively the government and the subsidy recipient. Therefore, in light of the above quoted holdings of the Appellate Body, China submits that Article 3.1(a) is not intended to prohibit the repayment of a loan contingent upon export performance. In any event, when considering in fact export contingency, the granting of a loan has nothing to do with how the debtor will repay the loan subsequently, which is more closely related to the finding of a benefit. Thus, one should not blur the distinction between the granting of a loan and the repayment of a loan when discussing the issue of in fact export contingency.¹³⁶⁷

5.130 Furthermore, after observing two relevant WTO cases, *Canada – Aircraft* and *Australia – Leather*, China submits that the relevant facts of a particular case must sufficiently prove the "tie" between the "granting of a subsidy" and the "actual or anticipated exportation" and that the export orientation of a subsidy recipient alone does not sufficiently demonstrate the existence of in fact export contingency.¹³⁶⁸

3. Non attribution analysis in the context of joint claims under Article 5 (a) and (c)

5.131 China notes that in its first written submission, the US claims the adverse effects under both paragraphs (a) and (c) of Article 5 of the SCM Agreement. As to its Article 5(a) claim, the US submits that the subsidized imports of Airbus LCA into the US market have caused injury to the US domestic LCA industry.¹³⁶⁹

5.132 At the outset, in view of the cross-reference to Part V in footnote 11 to Article 5(a), China submits that, when a complaining party files an Article 5(a) claim and asserts injury, it is obligated to firstly demonstrate on a *prima facie* basis that the *subsidized imports*, through the effects of subsidies, cause injury to the domestic industry, in accordance with Article 15 of the SCM Agreement.¹³⁷⁰

5.133 As to the non-attribution analysis under Article 15.5, China submits that a complaining party filing an Article 5(a) claim is also required to conduct such an analysis. The US also shares such a position. In addition, recalling the Appellate Body's interpretation in *US – Hot-Rolled Steel* of the parallel provision of Article 3.5 of the *AD Agreement*, China submits that a complaining party is obligated under Article 15.5 of the SCM Agreement to *separate and distinguish* the injurious effects of *the other known factors* from those of the subsidized imports.¹³⁷¹ Furthermore, China submits that

¹³⁶⁶ China Third Party Submission Executive Summary, para. 7. *See, also*, China Opening Statement, para. 5.

¹³⁶⁷ China Third Party Submission Executive Summary, para. 8. *See, also*, China Opening Statement, para. 6.

¹³⁷¹ China Third Party Submission Executive Summary, para. 12. *See, also*, China Opening Statement, para. 8.

BCI deleted, as indicated [***]

the non-attribution requirement under Article 15.5 is particularly relevant when a Member files claims under both paragraphs (a) and (c) of Article 5 of the SCM Agreement for the following reasons.¹³⁷²

5.134 First, an Article 5(c) claim requires the demonstration of any scenario of serious prejudice as prescribed under Article 6.3, any of which is a manifest indication of a downturn of the export performance of the complaining Member's domestic industry. Accordingly, if the complaining Member allegedly establishes the existence of any serious prejudice scenario, it seems appropriate to infer that the relevant domestic industry must have been, more or less, adversely affected or "injured" by its *poor export performance*.¹³⁷³

5.135 Second, Article 15.5 of the SCM Agreement explicitly requires the investigating authority (in this case, the complaining Member) not to attribute the injury caused by *export performance* to that caused by subsidized imports. Thus, it is obvious that when a Member makes joint claims under Article 5(a) and (c), it is manifestly obligated to conduct a non-attribution analysis on the injury caused by the downturn of the export performance of its domestic industry.¹³⁷⁴

5.136 Third, "injury to the domestic industry" and "serious prejudice" are two different legal concepts. "Injury to the domestic industry" under Article 5(a) is the injury caused by subsidized *imports* to the domestic industry in the *home market* of the complaining Member. While "serious prejudice" under Article 5(c) as elaborated in Article 6.3 are the adverse situations caused by "*the effect of the subsidy*" in the market of the subsidizing Member, in a third country market, or in the same market, as the case may be.¹³⁷⁵

5.137 Fourth, there are separate legal requirements under the SCM Agreement on how to find injury and how to establish the various cases of serious prejudice respectively. Therefore, an Article 5(a) claim is legally distinct and independent from an Article 5(c) claim.¹³⁷⁶

4. Conclusion

5.138 In conclusion, China submits that,

1. in order to determine the existence of in fact export contingency under Article 3.1(a) of the SCM Agreement, it must be demonstrated based on all relevant facts that the granting – instead of repayment or anything else – of a subsidy is in fact tied to or contingent upon actual or anticipated exports. Meanwhile, the export orientation of a subsidy recipient alone does not sufficiently demonstrate the existence of in fact export contingency; and
2. a complaining Member filing an Article 5(a) claim shall be subject to the obligations under Part V, which includes, *inter alia*, the non-attribution requirement under Article 15.5 of the SCM Agreement. This is particularly important where the complaining Member also files an Article 5(c) claim, knowing that the export performance of its domestic industry, besides the subsidized imports, is also causing injury to the domestic industry.¹³⁷⁷

E. JAPAN

1. Subsidy measures that came into existence prior to January 1, 1995 are subject to the SCM Agreement if they provided a benefit on or after that date

5.139 In its Third Party Submission, Japan points out that an important threshold question before the Panel is whether the SCM Agreement applies to subsidy measures that came into existence prior to January 1, 1995, the date on which the SCM Agreement entered into force. Japan explains below that Article 28 of the Vienna Convention supports the conclusion that subsidies granted prior to 1995 are not automatically beyond the reach of the SCM Agreement.¹³⁷⁸

5.140 Japan notes that Article 28 of the Vienna Convention provides that, "{u}nless a different intention appears from the treaty or is otherwise established, its provisions do not bind a party in relation to any act or fact which took place or *any situation which ceased to exist* before the date of the entry into force of the treaty with respect to that treaty" (emphasis supplied). As applied to the alleged subsidies conferred on Airbus before 1995, the Panel should consider two key questions: (1) whether the SCM Agreement contains any provision indicating the intention of the WTO Members with respect to the temporal limitations of the Agreement, and, (2) whether the alleged EC and member state subsidy measures under challenge were "situations" that continued "to exist" on January 1, 1995 or thereafter.¹³⁷⁹

5.141 Japan notes that the text of the SCM Agreement demonstrates that its drafters did not intend its disciplines to be limited only to subsidies that were granted on or after January 1, 1995. Japan's position accords with the Panel's preliminary analysis of this issue.¹³⁸⁰ For example, the language of Article 28.1 of the SCM Agreement implies that Members *could* challenge pre-WTO programs after the grace period had expired. It also appears that individual subsidies granted before January 1, 1995 could be challenged under Part II of the SCM Agreement even during the grace period, because Article 28.1 refers only to "subsidy programmes" and not to individual subsidies. Similarly, Annex IV, paragraph 7, recognizes that Members may allocate benefits to future production arising from "*s}ubsidies granted prior to the date of entry into force of the WTO Agreement*" (emphasis supplied) and that are being challenged under Part III of the SCM Agreement. Further, the provisions most directly at issue here – Articles 1, 5, 6, and 7¹³⁸¹ – contain no temporal limitations whatsoever. The absence of any such limitation for pre-1995 subsidies is significant.¹³⁸²

5.142 Japan notes that the Appellate Body has applied Article 28 on a number of occasions in finding that pre-1995 measures were covered by other WTO Agreements, and these findings are directly relevant to the present dispute. For example, in *Canada – Patent Term*, the Appellate Body concluded that "treaty obligations *do* apply to 'any situation' which has *not* ceased to exist – that is, to

¹³⁷⁸ Executive Summary of the Third Party Statement of Japan (hereinafter Japan Third Party Submission Executive Summary), para. 1.

¹³⁷⁹ Japan Third Party Submission Executive Summary, para. 2.

¹³⁸⁰ Japan Third Party Submission Executive Summary, para. 3. *See*, Panel Letter to Parties to Third Participants (11 January 2007).

¹³⁸¹ Japan Third Party Submission Executive Summary, para. 3. Japan considers that these provisions are most directly at issue here because, in this dispute, the US advances its claim on prohibited subsidies only in relation to certain Launch Aids (US First Written Submission, para. 321), all of which the US argues came into existence on or after January 1, 1995.

¹³⁸² Japan Third Party Submission Executive Summary, para. 3. Japan notes that Article 27 of the SCM Agreement, concerning the special and differential treatment of developing countries, contains several such temporal limitations.

BCI deleted, as indicated [***]

any situation that arose in the past, but continues to exist under the new treaty."¹³⁸³ The facts of *Canada – Patent Term* are directly analogous to the present dispute because the patent protection at issue, which came into effect before the TRIPS Agreement entered into force for Canada, remained in place and thus had continuing "effects" after entry into force of the TRIPS Agreement – just as alleged subsidies that came into effect remained in place and thus had continuing effect on or after January 1, 1995.¹³⁸⁴

5.143 Japan submits that the Panel should determine whether each alleged pre-1995 EC or EC member state subsidy is covered by the SCM Agreement by evaluating whether the subsidy "situation," to use the terms of Article 28 of the Vienna Convention, "ceased to exist" prior to 1995, or if it continued into 1995 or beyond. In this regard, Japan would like to express to the Panel its views as to the appropriate test for the Panel to apply in conducting this analysis.¹³⁸⁵

5.144 Japan explains that under the logic of the SCM Agreement's provisions, a subsidy "situation" is ongoing so long as the benefit of that subsidy continues to exist. For example, the benefits of a subsidy bestowed prior to 1995 might be properly allocated over future production extending into or beyond 1995.¹³⁸⁶ In this case the subsidy would be subject to the SCM Agreement, because the subsidy "situation" had continued to exist.¹³⁸⁷

5.145 In Japan's view, the analysis should begin by reviewing the SCM Agreement's definition of a subsidy, set forth in Article 1.1. As the Appellate Body has observed, "Article 1.1 does not address the *time* at which the 'financial contribution' and/or the 'benefit' must be shown to exist."¹³⁸⁸ Indeed, the Appellate Body goes on to state that normally it "may {be} presume{d} ... that a 'benefit' continues to flow from an untied, non-recurring 'financial contribution'."¹³⁸⁹ This supports the provisions of Part III, mentioned above, which indicate that, in certain circumstances, "benefits" may extend over a period of time subsequent to the conferral of the underlying financial contribution. For example, Annex IV, which provides guidelines for the calculation of subsidy rates for purposes of Article 6.1(a), at paragraph 7 requires the inclusion of subsidy benefits "allocated to future production."¹³⁹⁰

5.146 Interpreting the SCM Agreement definition of subsidy in light of Article 28 of the Vienna Convention, Japan notes that the concept of "situation" in Article 28 corresponds closely to the concept of "benefit" in the sense that a subsidy "situation" would continue should the benefits

¹³⁸³ Japan Third Party Submission Executive Summary, para. 4, citing, *Canada – Patent Term*, Appellate Body Report, at para. 72 (emphasis in original).

¹³⁸⁴ Japan Third Party Submission Executive Summary, para. 4.

¹³⁸⁵ Japan Third Party Submission Executive Summary, para. 5.

¹³⁸⁶ Japan Third Party Submission Executive Summary, para. 6. Japan notes that Annex IV to the SCM Agreement, at para. 7, anticipates that some benefits may properly be allocated to future production. As explained by the panel in *US – Upland Cotton*, Panel Report, at para. 7.1179, that the benefit methodologies set forth in Part V of the SCM Agreement are not binding in an analysis conducted under Part III. Nevertheless, benefit calculation methodologies set forth in Part V suggest methodologies that may serve as a reference for Part III analyses as well.

¹³⁸⁷ Japan Third Party Submission Executive Summary, para. 6.

¹³⁸⁸ Japan Third Party Submission Executive Summary, para. 7, citing, *US – Lead Bar*, Appellate Body Report, at para. 60 (emphasis in original).

¹³⁸⁹ Japan Third Party Submission Executive Summary, para. 7, citing, *US – Lead Bar*, Appellate Body Report, at para. 62.

¹³⁹⁰ Japan Third Party Submission Executive Summary, para. 7. Japan recognizes that Article 6.1 of the SCM Agreement and Annex IV are no longer in force. However, as noted by the panel in the *US – Upland Cotton*, provisions of the SCM Agreement that have lapsed can be useful in understanding the "overall architecture" of the SCM Agreement with respect to the different types of subsidies it sought and seeks to address. *US – Upland Cotton*, Panel Report, at para. 7.907, n.1086.

BCI deleted, as indicated [***]

accruing from that subsidy continue as well. Accordingly, the task of the Panel is to determine, for each alleged subsidy that was conferred prior to January 1, 1995, whether the benefits of that subsidy continued in effect on or after that date.¹³⁹¹

2. The Panel is authorized to take into account evidence of any continuing adverse effects after the date of establishment of the Panel

5.147 Concerning the adverse effects which the Panel should examine, Japan is of the view that nothing in the SCM Agreement or the DSU precludes the Panel from considering evidence of continuing adverse effects (or absence thereof) subsequent to the date of panel establishment, provided that the evidence related to measures that were within the Panel's terms of reference. Japan notes that the US acknowledges that a panel may examine evidence that pre-dates or post-dates the establishment of a panel,¹³⁹² in line with the position it has taken in prior cases.¹³⁹³

5.148 Japan's position is that the Panel is authorized to consider evidence concerning continuing adverse effects, beyond the date of panel establishment, of a subsidy measure within the Panel's terms of reference. The Appellate Body has indicated that evidence that post-dates the panel establishment is not precluded from the panel's assessment.¹³⁹⁴ The same logic can be applied by the Panel in this dispute to evaluate evidence generated after the date of panel establishment concerning any continuing adverse effects of the challenged subsidy measures.¹³⁹⁵

5.149 Japan respectfully requests the Panel to carefully examine post-panel establishment evidence that it considers relevant to the evaluation of claimed adverse effects and, where the Panel considers such evidence probative, to provide a detailed explanation of its reasoning. Given the rapidly evolving conditions of competition for the US and EC LCA industries, it is possible that highly probative evidence concerning continuing adverse effects (or the lack thereof) will come to light for the period following the date of panel establishment. In analogous scenarios, the Appellate Body has stressed the importance of consideration of the most recent available evidence.¹³⁹⁶ As explained in the next section, such post-panel establishment evidence may assist the Panel in determining, among other things, possible causes of the adverse effects *other than* the alleged subsidies.¹³⁹⁷

5.150 At the Panel meeting with the third parties Japan reiterated that it has observed that neither the SCM Agreement nor the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU") precludes a panel from considering evidence of continuing adverse effects (or the absence thereof) subsequent to the date of panel establishment, provided that the evidence relates to measures that were within the panel's terms of reference.¹³⁹⁸ Japan clarified its position by noting

¹³⁹¹ Japan Third Party Submission Executive Summary, para. 8.

¹³⁹² Japan Third Party Submission Executive Summary, para. 9, citing, Opening Statement of the US, First Meeting of the Panel (March 20, 2007), at para. 182.

¹³⁹³ Japan Third Party Submission Executive Summary, para. 9, citing, *EC – Customs Matters*, at para. 183.

¹³⁹⁴ Japan Third Party Submission Executive Summary, para. 10, citing, *EC – Customs Matters*, at para. 188 (emphasis supplied). *EC - Trademarks/GIs*, Panel Report, para. 7.20.

¹³⁹⁷ Japan Third Party Submission Executive Summary, para. 11.

¹³⁹⁸ Executive Summary of the Oral Statement of Japan at the Meeting with the Third Parties (hereinafter Japan Oral Statement Executive Summary), para. 7, citing, Third-Party Submission of Japan, paras. 12-14.

BCI deleted, as indicated [***]

that, consistent with the Appellate Body's finding in *EC – Customs Matters*,¹³⁹⁹ this Panel is authorized to examine evidence both that pre-dates – as well as post-dates – the establishment of the Panel. In this regard, with reference to paragraph 694 of the EC second written submission, Japan also makes clear that while it believes that the Panel may consider post-panel establishment evidence of claimed adverse effects, it is not required to do so.¹⁴⁰⁰

3. Demonstrating causation requires detailed analysis of relevant facts and economic data

5.151 Japan expresses its views on the analysis required to determine whether the claimed adverse effects were caused by the subsidies the US has alleged, or by other factors. Such a determination is required under Article 5 of the SCM Agreement. In the case of adverse effects through injury to the US domestic industry, pursuant to Article 5(a), the SCM Agreement requires application of the causation test set forth in Article 15.5, which requires a demonstration of a causal relationship between the subsidized imports based on an examination of all relevant evidence and of any known factors other than the subsidized imports that are injuring the domestic industry.¹⁴⁰¹

5.152 Japan notes that in the case of adverse effects resulting from serious prejudice, under Articles 5(c) and 6 of the Agreement, the SCM Agreement does not provide an express test for evaluating the causes of the serious prejudice. However, the Appellate Body in *US – Upland Cotton* explained that in evaluating claims of serious prejudice under Article 6.3 of the SCM Agreement, it is "necessary to ensure that the effects of other factors on prices are not improperly attributed to the challenged subsidies."¹⁴⁰² Japan respectfully submits that the Panel should refer to the causation tests set forth in Article 15.5 of the SCM Agreement and in the other WTO Agreements as relevant context for its examination of the US claims in this case, as the Appellate has found previously.¹⁴⁰³

5.153 Finally, Japan also submits that the analysis required to evaluate the causes of the claimed adverse effects for purposes of Article 5 is closely related to the selection of the appropriate reference period, as addressed above. In Japan's view, the Panel should, in its causation analysis, take into account the features of the market for the goods at issue *during the entire reference period*. As explained in Section II, there is no doctrine requiring panels to reject evidence of adverse effects subsequent to the date of panel establishment, and there may be compelling reasons why it may be appropriate for panels to consider such evidence.¹⁴⁰⁴

BCI deleted, as indicated [***]

4. The Panel is authorized to examine alleged subsidies whose adverse effects have ceased to exist

5.154 Japan agrees with the US that the Panel has the authority to examine and to issue findings concerning an alleged subsidy even where the adverse effects of that subsidy have ceased to exist, provided that they existed at the time the Panel was established.¹⁴⁰⁵

5.155 Japan considers that the first step in interpreting a WTO Agreement is, of course, to examine the text of the Agreement itself.¹⁴⁰⁶ Articles 7.1, 7.4 and 7.5 of the SCM Agreement, which provide for the rules on consultations and a panel establishment as remedies for actionable subsidies, do not indicate that a panel may not examine and rule upon an alleged subsidy where the adverse effects have ceased to exist between the time of the panel request and the issuance of the report.¹⁴⁰⁷

5.156 This conclusion is supported by the jurisprudence. The Appellate Body in *US – Upland Cotton* ruled that measures that had expired prior to the date of panel establishment could be challenged, provided that benefits accruing to the complaining Member under the covered agreements were still being impaired by the measures *at the time of the panel request*.¹⁴⁰⁸ Thus, it is the time of the panel request that governs, and the possibility that adverse effects may have ceased after the establishment of the panel does not impair the ability of the panel to rule on the consistency of the alleged subsidy with the SCM Agreement.¹⁴⁰⁹

5.157 Japan further notes that there are also numerous GATT and WTO decisions in which panels have made findings with respect to measures that had been withdrawn after the establishment of the panel.¹⁴¹⁰ These analogous cases further show that the cessation of adverse effects after the establishment of a panel does not affect the panel's authority to issue findings concerning the alleged subsidies.¹⁴¹¹

5.158 Japan notes that an important reason for this doctrine is that it may help to secure a positive solution to the dispute, which is the aim of the WTO dispute settlement system as expressed in Article 3.7 of the DSU. In *EC – Biotech*, the panel, in line with the decisions referred to above, held that it had authority to make findings on a measure within its terms of reference even if that measure had subsequently ceased to exist.¹⁴¹² It observed that the challenged measure, even if it had ceased to exist, might subsequently be re-introduced, and that a finding that it was inconsistent with WTO obligations might help to prevent this from occurring. In the present case, if any cessation of adverse effects of the subsidies at issue is due to temporary phenomena, the adverse effects could reappear if conditions change. A remedy based on a ruling that the subsidies were inconsistent with the

¹⁴⁰⁵ Japan Oral Statement Executive Summary, para. 8, citing, US Second Submission, para. 670. Japan does not express a view as to whether, as a factual matter in this dispute, alleged adverse effects are still occurring.

¹⁴⁰⁶ Japan Oral Statement Executive Summary, para. 9, quoting the Appellate Body statement, "{a} treaty interpreter must begin with, and focus upon, the text of the particular provision to be interpreted." *US – Import Prohibition of Certain Shrimp and Shrimp Products*, WT/DS58/AB/R, adopted November 6, 1998, para. 114.

¹⁴⁰⁷ Japan Oral Statement Executive Summary, para. 9.

¹⁴⁰⁸ Japan Oral Statement Executive Summary, para. 10, citing, *US – Subsidies on Upland Cotton*, WT/DS267/AB/R (2005), adopted March 21, 2005, para. 270.

¹⁴⁰⁹ Japan Oral Statement Executive Summary, para. 10.

¹⁴¹⁰ Japan Oral Statement Executive Summary, para. 11, citing, cases cited in *Upland Cotton*, at n.214; *Indonesia – Certain Measures Affecting the Automobile Industry*, WT/DS64/R, adopted July 23, 1998, at n.642.

¹⁴¹¹ Japan Oral Statement Executive Summary, para. 11.

¹⁴¹² Japan Oral Statement Executive Summary, para. 12, citing, *EC – Measures Affecting the Approval and Marketing of Biotech Products*, WT/DS291/R, adopted November 21, 2006, para. 7.1308.

BCI deleted, as indicated [***]

SCM Agreement might therefore help to secure a positive outcome by preventing the recurrence of adverse effects.¹⁴¹³

5.159 It is of course true that the withdrawal of a subsidy or the ending of adverse effects after the establishment of the panel could affect the nature of the recommendation made by the panel, as noted by the Appellate Body in *US – Upland Cotton*.¹⁴¹⁴ However, as also observed by the Appellate Body in that case, this is *not* dispositive of the question whether the panel has authority to address claims with respect to the measure before it.¹⁴¹⁵

5. Arm's-length, fair market value transactions extinguish alleged subsidies

5.160 Japan notes that many of the subsidies alleged by the US in this dispute were bestowed upon corporate entities that were predecessors to Airbus SAS.¹⁴¹⁶ Japan respectfully submits that the Panel should closely examine whether the EC has demonstrated that the privatizations have been accomplished at arm's length and for fair market value and any alleged benefits have in fact been extinguished, based on the specific facts pertinent to the current case. Japan sets out below relevant precedents in this regard.¹⁴¹⁷

5.161 Japan points out that the Appellate Body has indicated in its analysis of possible extinguishment of subsidies – that a benefit flowing from a financial contribution is *presumptively* extinguished when the firm that received the subsidy is sold at "arm's length" and for "fair market value."¹⁴¹⁸ The Appellate Body, in this respect, has indicated an important limitation in the context of the privatization of government-owned assets. As the Appellate Body held in that case, "{p}rivatization at arm's length for fair market value may result in extinguishing the benefit," but does not necessarily do so.¹⁴¹⁹ The outcome of the analysis will depend on the unique factual circumstances of each case.¹⁴²⁰

5.162 According to Japan, there is no basis in the SCM Agreement, in the applicable jurisprudence, or in logic, for the proposition that a partial transfer should not be subject to the same rebuttable presumption of extinguishment as set forth by the Appellate Body in *US – CVDs on EC Products*. Thus, in the Article 21.5 phase of that case, the panel reviewed a revised determination in which the US Department of Commerce found that a subsidy was partially extinguished where the majority, but not all, of the company's shares were sold at arm's length and for fair market value.¹⁴²¹

¹⁴¹³ Japan Oral Statement Executive Summary, para. 12.

¹⁴¹⁴ Japan Oral Statement Executive Summary, para. 13, citing, *US – Upland Cotton*, para. 272.

¹⁴¹⁵ Japan Oral Statement Executive Summary, para. 13, citing, *US – Upland Cotton*, para. 272.

¹⁴¹⁶ Japan Third Party Submission Executive Summary, para. 16, citing, EC, FWS, (5 April 2007), at paras. 192-97.

¹⁴¹⁷ Japan Third Party Submission Executive Summary, para. 16.

¹⁴¹⁸ Japan Third Party Submission Executive Summary, para. 17, citing, *US – CVDs on EC products*, Appellate Body Report, at para. 127.

¹⁴¹⁹ Japan Third Party Submission Executive Summary, para. 17, citing, *US – CVDs on EC products*, Appellate Body Report, at para. 127 and *US – Lead Bar*, Appellate Body Report, at para. 62. Japan notes that the applicable jurisprudence examined the issue of extinguishment in the context of countervailing measures. However, because the definition of subsidy set forth in Article 1 of the SCM Agreement (including the concept of "benefit") applies equally to the provisions governing prohibited and actionable subsidies, Japan considers that the principles enunciated in those cases apply equally in the present dispute.

6. Mere anticipation of exports is not proof of *de facto* export contingency

5.163 Japan expresses its views on the applicable standard for determining whether an alleged export subsidy is "contingent ... in fact ... upon export performance" for purposes of SCM Agreement Article 3.1(a). Japan is of the view that mere anticipation of future exports at the time of subsidy bestowal does not, by itself, prove that the subsidy is contingent upon export performance. Japan also notes that while the term "contingent" in Article 3.1(a) has the same meaning as applied to both *de jure* and *de facto* export contingency, demonstrating the latter is inherently more difficult.¹⁴²²

5.164 Japan considers that Footnote 4 to SCM Agreement Article 3.1(a) is central to the Panel's analysis in determining whether the alleged export subsidies are contingent in fact upon export performance. In Japan's view, the Panel's task in applying footnote 4 is to determine whether the *granting* of the alleged export subsidies at issue was *tied to actual or anticipated* export activity. As described by the Appellate Body in *Canada – Aircraft*, the footnote 4 test for *de facto* export contingency "requires proof of three different substantive elements".¹⁴²³ Each test must be independently applied to the relevant facts. The mere fact of anticipated export activity, standing alone, cannot suffice to establish *de facto* export contingency for a given subsidy.¹⁴²⁴ Similarly, like mere anticipation of export performance, an exporter's export orientation, standing alone, is insufficient.¹⁴²⁵

5.165 Japan further observes that the *de facto* export contingency analysis is necessarily fact-intensive, and will differ based on the unique facts of each case. The Appellate Body in *Canada – Aircraft*, for example, cautioned that, in performing the analysis required by footnote 4, "there can be no general rule as to what facts or what kinds of facts *must* be taken into account,"¹⁴²⁶ none of which facts had been given undue emphasis.¹⁴²⁷ Japan submits that a similarly broad approach is warranted in this dispute and that the Panel should examine the specific factual elements pertinent to this case.¹⁴²⁸

5.166 At the Panel meeting with the third parties, Japan pointed out that Article 1.1 of the *Agreement on Subsidies and Countervailing Measures* ("SCM Agreement") provides that a subsidy shall be deemed to exist if:

- (a) (1) there is a financial contribution...where: ...
 - (i) a government provides goods or services other than general infrastructure...; and...
- (b) a benefit is thereby conferred. (Emphasis added.)

BCI deleted, as indicated [***]

The SCM Agreement does not define the term "general" in this regard, but the plain language of Article 1 makes clear that the exception applies only to "general infrastructure" and does not apply to infrastructure of any kind.¹⁴²⁹

5.167 Japan notes that Canada in its third-party submission presents its views on how the Panel should determine whether alleged subsidies constitute "general infrastructure." Japan agrees with Canada that analysis of whether a "subsidy" exists under Article 1 and whether that subsidy is "specific" under Article 2 are distinct issues and require separate analyses under the SCM Agreement. Japan is not, however, sure if Canada's argument is correct when it asserts that the tests for *de facto* specificity under Article 2.1(c), such as predominant use or disproportionate benefit, are not relevant at all to the analysis of whether an alleged subsidy constitutes "general infrastructure" under Article 1.1(a)(1)(iii), and that the fundamental test is whether the government has limited use of the infrastructure "exclusively to certain users."¹⁴³⁰ Japan believes that, under some circumstances, the *de facto* specificity analysis under Article 2 could help inform the Panel's determination of whether infrastructure is "general" under Article 1. The Panel should analyze all relevant information – including the *de facto* specificity criteria under Article 2, where warranted – when determining whether the infrastructure at issue is "general."¹⁴³¹

5.168 Moreover, Canada's proposed test of whether the government has limited use of the infrastructure "exclusively to certain users" essentially seems to be equal to the *de jure* specificity test set out in Article 2.1(a).¹⁴³² In effect, therefore, Canada seems to be arguing that the *de jure* specificity criteria set out in Article 2.1(a) – whether the granting authority "explicitly limits access to a subsidy to certain enterprises" – are relevant to the identification of "general" infrastructure under Article 1, but that the *de facto* specificity criteria set out in Article 2.1(c) are not relevant to that same determination. Japan believes that there is no textual support for differentiating application of the *de jure* and *de facto* specificity criteria in this regard.¹⁴³³

5.169 Japan points out that pursuant to the Vienna Convention on the Law of Treaties, the Panel should interpret the phrase "general infrastructure" in accordance with the ordinary meaning of the term. The ordinary meaning of the term "general" could support the Panel's examination of the *de facto* specificity criteria for the purposes of determining whether infrastructure is "general" or not. The word "general" is defined as "(1) involving or belonging to the whole of a body, group, class, or type: applicable or relevant to the whole rather than to a limited part...(2) involving or belonging to every member of a class, kind or group: applicable to everyone in the unit referred to, applicable or pertinent to the majority of individuals involved..."¹⁴³⁴ The *de facto* specificity criteria, including predominant use or disproportionate use, thus could be relevant to a determination of whether the infrastructure at issue is "applicable or pertinent to the majority of individuals involved," or is "applicable to everyone in the unit referred to."¹⁴³⁵

5.170 Japan addresses another aspect of the test for determining whether infrastructure is "general." Japan notes that the EC would include within the meaning of "general" infrastructure those projects that fulfill a "public policy objective (e.g., unemployed workers may participate in a government

training scheme...)," and states that WTO members left "a large margin of appreciation to decide for themselves what they consider to constitute 'general infrastructure'."¹⁴³⁶ Japan notes that there is no textual support in the SCM Agreement for this position. Nor is it consistent with the ordinary meaning of the term "general." Japan considers that such a broad test would make it effectively impossible to distinguish between "general infrastructure" and "infrastructure."¹⁴³⁷

F. KOREA

1. Introduction

5.171 In its Third Party Submission, the Republic of Korea ("Korea") focuses on:

- the standard of proof required to establish a *prima facie* case in a subsidy dispute;
- the meaning of general infrastructure under Article 1.1(a)(1)(iii) of the SCM Agreement;
- the interpretation of "benefit" within the meaning of Article 1.1(b) of the SCM Agreement; and
- *de facto* contingency of export subsidies under Article 3.1(a) of the SCM Agreement.¹⁴³⁸

2. The standard of proof required to establish a *prima facie* case in a subsidy dispute

5.172 Korea observes that while it does not wish to take a particular side in this proceeding, it would like to set out the standard of proof, in its view, required to establish a *prima facie* case in a subsidy dispute.¹⁴³⁹

(a) The legal standard to establish a *prima facie* case

(i) "*Evidence sufficient to demonstrate*"

5.173 Korea submits that as a basic rule, a Member claiming a violation of a provision of WTO Agreements by another Member must "assert and prove its claim" by putting forward "evidence and legal argument sufficient to demonstrate" the inconsistency of the challenged action with the defending Member's obligations under the WTO Agreements. Korea asserts that a submission is insufficient where only facts or only legal arguments are provided.¹⁴⁴⁰ Korea further notes that the legal standard the Appellate Body sets for *prima facie* evidence is relatively high and clearly excludes mere allegations and conjectures of the facts. Likewise, mere claims that certain measures violate relevant WTO Agreements without further substantiations are also insufficient.¹⁴⁴¹

¹⁴³⁶ Japan Oral Statement Executive Summary, para. 6, citing, EC First Written Submission, paras. 712, 716.

¹⁴³⁷ Japan Oral Statement Executive Summary, para. 6.

¹⁴⁴⁰ Korea Third Party Submission Executive Summary, para. 4. *See, also*, Korea Opening Statement, para. 2.

¹⁴⁴¹ Korea Third Party Submission Executive Summary, para. 5.

BCI deleted, as indicated [***]

(ii) *Prima facie* evidence sets a higher standard than Article 6.2 of the DSU

5.174 Korea points out that established case law shows that *prima facie* evidence is a higher standard than that required under Article 6.2 of the DSU for the establishment of a Panel.¹⁴⁴² In *Thailand – H Beams* the Panel elaborated that Article 6.2 of the DSU does not relate directly to the sufficiency of the subsequent written and oral submissions of the parties in the course of the proceedings, which may develop the arguments in support of or against the claims set out in the panel request. Nor does the Article determine whether or not the complaining party will manage to establish a *prima facie* case of violation of an obligation under a covered agreement in the actual course of the panel proceedings.¹⁴⁴³

(b) Other factors relevant to *prima facie* evidence

5.175 Having established the basic standard for *prima facie* evidence, there are several other relevant issues to consider.¹⁴⁴⁴

(i) *Difficulty of collecting information to prove a case*

5.176 According to established case law, the burden of proof and consequently the standard for establishing *prima facie* evidence are not lowered where the complaining Member has difficulties in obtaining relevant information. The complaining Member must nevertheless prove its claim.¹⁴⁴⁵ Therefore, if a Member cannot obtain sufficient information to establish a *prima facie* case, its claim should fail. In Korea's view, this rule is of particular importance to this proceeding.¹⁴⁴⁶

(ii) *The Panel's obligation to investigate under Article 13 of the DSU does not override the party's obligation to establish prima facie evidence*

5.177 The Appellate Body held in *Japan – Agricultural Products II* that the Panel's authority under Article 13 of the DSU to engage in fact-finding does not relieve the complaining party of the requirement to present a *prima facie* case on its own.¹⁴⁴⁷ A Member cannot rely on the Panel to find a violation of WTO Agreements and the Panel should refrain from deciding the issue if the party fails to establish *prima facie* evidence. Korea submits that this ruling is of significant importance in this proceeding as well.¹⁴⁴⁸

(iii) *Summary*

5.178 The DSU does not allow derogation from the above described standard of proof simply because relevant evidence is difficult to obtain. Korea argues that while the Panel is free to make a decision based on the facts before it, this does not relieve the complaining Member of the requirement to first establish a *prima facie* case.¹⁴⁴⁹

¹⁴⁴⁸ Korea Third Party Submission Executive Summary, para. 12.

¹⁴⁴⁹ Korea Third Party Submission Executive Summary, para. 13.

BCI deleted, as indicated [***]

(c) Standard of Review by the Panel under Article 11 of the DSU

5.179 Further to the arguments concerning *prima facie* evidence, Korea believes that established case law (*EC – Hormones*) requires the Panel to review and evaluate each and all evidence on the record carefully to determine whether the measures challenged by the US do constitute financial contributions by the EC and the Airbus Governments that confer benefits specifically on Airbus.¹⁴⁵⁰

3. The meaning of general infrastructure under Article 1.1(a)(1)(iii) of the SCM Agreement

5.180 Korea notes that the US alleges that the Airbus Governments have provided subsidies to Airbus in the form of expanding and upgrading infrastructure, as well as other facilities, within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement. Korea notes that the US thereby fails to analyse whether the infrastructures at issue are "general" in accordance with the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement.¹⁴⁵¹

5.181 Korea requests the Panel to interpret the term "general infrastructure" under Article 1.1(a)(1)(iii) of the SCM Agreement carefully, based on general rules of treaty interpretation as stipulated in the 1969 Vienna Convention. Such interpretation, Korea believes, dictates¹⁴⁵² that goods and services, to the extent they constitute infrastructure and either affect all or most people or things or are not specialised or limited, must be considered to be "general infrastructure" in the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement and not to constitute a subsidy. Once these conditions have been satisfied, whether such "general infrastructure" is, in the specific circumstances, used by a limited number of people or enterprises is irrelevant. As long as the infrastructure is potentially accessible by the public or providing common goods to the public, it should be treated as "general infrastructure", hence no financial contribution by the government.¹⁴⁵³

4. The interpretation of "Benefit" within the meaning of Article 1.1(b) of the SCM Agreement

5.182 Korea notes that the US claims that the EC and the Airbus Governments provide subsidies within the meaning of Article 1 of the SCM Agreement to Airbus, through measures such as Launch Aid, corporate restructurings, share transfer, debt forgiveness and equity infusions. The EC argues that these measures did not confer benefits in the meaning of Article 1.1(b) of the SCM Agreement on Airbus.¹⁴⁵⁴ It is Korea's view that measures as those at issue only constitute a subsidy if they clearly confer a benefit on the recipient. This requires a thorough analysis of the relevant factual circumstances.¹⁴⁵⁵

5.183 In *Canada – Aircraft*, the Appellate Body confirmed that a financial contribution only confers a "benefit", if it is provided on more advantageous terms than those available to the recipient on the market. The Panel in *Brazil – Aircraft* further elaborated that the beneficiary must be the producer not a third party and that "market" to which reference must be made is the commercial market.¹⁴⁵⁶

¹⁴⁵⁰ Korea Third Party Submission Executive Summary, para. 14.

¹⁴⁵¹ Korea Third Party Submission Executive Summary, para. 15.

¹⁴⁵² Opening Statement of Korea at the Meeting with the Third Parties (hereinafter Korea Opening Statement), para. 5.

¹⁴⁵³ Korea Third Party Submission Executive Summary, para. 16.

¹⁴⁵⁴ Korea Third Party Submission Executive Summary, para. 17.

¹⁴⁵⁵ Korea Third Party Submission Executive Summary, para. 18.

¹⁴⁵⁶ Korea Third Party Submission Executive Summary, para. 19. *See, also*, Korea Opening Statement, para. 6.

BCI deleted, as indicated [***]

5.184 It is Korea's view that, in order to demonstrate that a contribution confers a benefit, the contribution must be (1) provided to the recipient (2) on terms more advantageous than (3) those available on the market. All three criteria must be fulfilled separately and individually.¹⁴⁵⁷

5.185 Regarding the first element, Korea agrees that a benefit within the meaning of Article 1.2 of the SCM Agreement only exists where an enterprise targeted by an investigation is the actual beneficiary. The second element, "on terms more advantageous", requires a detailed inquiry including the circumstances under which a financial contribution is provided. A benefit is not conferred where the recipient provides adequate commercial consideration. With regard to the third element, Korea generally agrees that the commercial market will provide an appropriate benchmark for the comparison of terms available for a certain investment or transaction. Nevertheless, it is necessary to acknowledge that under particular circumstances, the general market may encounter a systematic failure or that an undistorted commercial market does not exist in a particular sector, as acknowledged by the Appellate Body in *US – Certain Products from the EC*.¹⁴⁵⁸

5.186 Korea is of the view that a finding of benefit should include a detailed analysis of the conditions established in *Canada – Aircraft*. The US must establish a *prima facie* case as to all three criteria and cannot plainly state that a benefit is conferred.¹⁴⁵⁹

5. De facto contingency of export subsidies under Article 3.1(a) of the SCM Agreement

5.187 Korea notes that the US argues that the Launch Aids that Airbus has received for the aircrafts A380, A340-500/600 and A330-200 are prohibited export subsidies under Article 3.1(a) of the SCM Agreement. The EC contests that claim.¹⁴⁶⁰

5.188 Korea notes that the Panel and the Appellate Body have previously addressed the issue of a *de facto* export subsidy on various occasions. In particular, the Appellate Body in *Canada – Aircraft* set out a three elements test for demonstrating *de facto* export contingency. Accordingly, (1) the "granting of a subsidy" must be (2) "tied to" (3) "actual or anticipated exportation or export earnings".¹⁴⁶¹

5.189 Korea is of the view that, in order to establish that the Launch Aid is "tied to" export performance, the US has to prove that the Launch Aid would not have been granted to Airbus if the Airbus Governments had known that no export sales may ensue from the Launch Aid. In other words, the US has to prove that the grant of a subsidy is contingent upon export sales, and not mere sales.¹⁴⁶²

5.190 Korea respectfully submits that the Panel reviews evidence on the record carefully and determines whether the US has duly satisfied various legal thresholds in setting forth its legal claims in accordance with applicable jurisprudence.¹⁴⁶³

VI. INTERIM REVIEW

A. INTRODUCTION

6.1 On 4 September 2009, we submitted our Interim Report to the parties. On 16 October 2009, the United States and the European Communities submitted written requests for review of precise aspects of the Interim Report. On 6 November 2009, the United States and the European Communities submitted written comments on each other's requests for interim review. Neither party requested an additional meeting with the Panel.

6.2 Due to changes as a result of our review, the numbering of paragraphs and footnotes in the final report has changed from the Interim Report. The text below refers to the paragraph and footnote numbers in the Interim Report regarding which the parties requested review. Where we have made changes, a reference to the corresponding paragraph or footnote number in the final report is included (in parentheses) for ease of reference. We have also corrected a number of typographical and other non-substantive errors throughout the report, including those identified by the parties, which are not referred to specifically below.

6.3 In order to facilitate understanding of the interim review comments and changes made, the following section is structured to follow the organization of the report itself, with the review requests of the parties, and their comments, addressed sequentially.

B. GENERAL COMMENTS

1. Use of the term "EC"

6.4 The European Communities notes that the term "EC" is used in the Interim Report when referring to the European Communities, while the term "United States", which the European Communities describes as a "full reference", is used when referring to the United States of America. In light of this, the European Communities requests the Panel to replace the term "EC" by the term "European Communities" in all instances where the European Communities is mentioned or used as a noun, referring in support to a footnote in its answers to the Panel's questions filed 30 April 2007, which states "{t}he European Communities would also ask the Panel to avoid adopting the irritating US habit of systematically abbreviating the European Communities to "EC".¹⁴⁶⁴

6.5 The United States did not comment on this aspect of the European Communities' request.

6.6 Although we have referred to the European Communities variously, using both the term "European Communities" and the abbreviated term "EC" throughout these proceedings and the use of the abbreviated term "EC" is common in WTO dispute settlement and other areas, we have determined to grant the European Communities' request, and will refer to the European Communities by its preferred designation.

6.7 In this context, we note that as a result of the entry into force of the Lisbon Treaty, the European Union succeeds and replaces the European Community with respect to all rights and obligations of the latter in the WTO. However, all the arguments and presentations in this dispute, including the requests for interim review and comments thereon predate the entry into force of that

¹⁴⁶⁴ Comments of the European Communities on the Panel's Interim Report (hereinafter "EC, Request for Interim Review"), p. 2, citing, EC, Replies to Questions of the Panel Following the Panel's First Substantive Meeting with the Parties, footnote 2. The European Communities implies that it made more than one request in this regard, but refers only to this submission.

BCI deleted, as indicated [***]

treaty. Therefore, we have not referred to the European Union in our final report. However, we recognize the significance of the entry into force of the Lisbon Treaty, and have included the following footnote in the final report at the beginning of the report, and, in view of the length of the document, again at the beginning of our findings:

"On 1 December 2009, the *Treaty of Lisbon amending the Treaty on European Union and the Treaty establishing the European Community* (done at Lisbon, 13 December 2007) entered into force. On 29 November 2009, the WTO received a Verbal Note (WT/L/779) from the Council of the European Union and the Commission of the European Communities stating that, by virtue of the Treaty of Lisbon, as of 1 December 2009, the European Union replaces and succeeds the European Community."

2. Specific references to BCI/HSBI exhibits

6.8 The European Communities comments that there are numerous references to BCI/HSBI Exhibits in which the Panel does not precisely indicate the source and/or the specific location of the information used by the Panel, and requests the Panel to provide specific references to page numbers, paragraphs, bullet points, etc. when referring to BCI/HSBI information.¹⁴⁶⁵

6.9 The United States requests that the Panel decline the European Communities' request, stating its view that where the Panel has relied on HSBI evidence, it has adequately identified the location of the relevant information, particularly when citations to HSBI documents are considered in conjunction with the text of the report, such that the parties are aware of the context in which the HSBI document in question is considered relevant by the Panel.¹⁴⁶⁶

6.10 The European Communities cites only one instance as an example of "missing" specific references, and identifies no instance in which the lack of more specific references to pages or paragraphs of BCI or HSBI exhibits has affected its ability to comprehend the Panel's analysis. We have, in each instance where we refer to BCI or HSBI exhibits, specifically identified the relevant exhibits and sources, and in some, but not all cases, indicated specific page or paragraph numbers. There is, however, no rule or consistent practice in this regard. We agree with the United States that the relevant information is adequately identified when considered in context with the analysis set out in the Interim Report, and consider that the degree of precision sought by the European Communities is not, in all instances, necessary. This is particularly the case as the European Communities does not even suggest that any particular reference is, in its view, insufficiently clear to allow it to understand the relevance of the cited information to the Panel's decision. We therefore deny the European Communities' request to systematically provide more detailed references for all citations of BCI/HSBI exhibits throughout the report. However, we have added such specific references to the extent possible in light of our consideration of such evidence in the context of the interim review, and particularly where references to HSBI information were made by the parties in their requests for interim review or comments thereon.

3. Consistency and accuracy in names

6.11 The European Communities contends that the Interim Report is inconsistent in its references to "BAe" and "BAE Systems", argues that those entities are distinct companies that existed at various

¹⁴⁶⁵ EC, Request for Interim Review, p. 2.

¹⁴⁶⁶ US, Comments on EC Request for Interim Review, para. 7.

BCI deleted, as indicated [***]

points in time and requests that the Panel "review its report and amend it" such that it accurately reflects the particular companies at issue.¹⁴⁶⁷

6.12 The United States did not comment on this issue.

6.13 As we noted in footnote 1764 of the Interim Report (now footnote 2057), the "original" British Airbus partner in 1979 was the crown corporation, British Aerospace Corporation.¹⁴⁶⁸ The successor entity to British Aerospace Corporation was the public limited company, British Aerospace PLC. The European Communities refers to this company as "BAe" in its submissions.¹⁴⁶⁹ In 1999, this company merged with Marconi Electronic Systems to become BAE Systems PLC. We have revised the Interim Report to use the term "British Aerospace" to refer to British Aerospace PLC, the UK Airbus partner prior to the 1999 merger, and the term "BAE Systems" to refer to BAE Systems PLC, the UK Airbus partner following the 1999 merger.

6.14 The European Communities also requests that the Panel use the term "Broughton, Wales" consistently when referring to "Broughton", and use the term "UK Department" rather than the term "British Department".¹⁴⁷⁰

6.15 The United States did not comment on this request.

6.16 With the exception of one instance of usage of "British Department" at paragraph 7.1906 (now paragraph 7.1917) of the Interim Report, the European Communities did not provide any specific indications as to where in the Interim Report it noted the inconsistencies to which it refers in this regard. Nonetheless, we have reviewed the Interim Report and made every effort to ensure that that consistent references to "Broughton, Wales" and "UK Department" are made, as appropriate.

4. Text in French or Spanish

6.17 The European Communities observes that the Interim Report contains references to text provided in Spanish or French, referring in this regard to paragraphs 7.418 and 7.547 of the Interim Report. The European Communities notes that in other WTO disputes an English translation has been provided in the report itself under similar circumstances, referring to Panel Report, *Mexico – Telecoms* at, *inter alia*, paragraph 7.93, where the Spanish version of text cited in the body of the Report in English was provided in a footnote.¹⁴⁷¹ In view of this, the European Communities requests the Panel to include a translation of any Spanish or French text included in the Interim Report.¹⁴⁷²

6.18 The United States did not comment on the European Communities' request in this regard.

6.19 The Interim Report quotes in the original Spanish and French language the text of exhibits that were submitted by the parties **only** in those languages, which are, we recall, working languages of the WTO.¹⁴⁷³ In *Mexico – Telecoms*, the English text in the body of the report was quoted from a WTO document, the English version of Mexico's schedule, while the footnote quoted from another WTO document, the authentic Spanish version of that schedule submitted by Mexico – that is to say,

¹⁴⁶⁷ EC, Request for Interim Review, p. 2.

¹⁴⁶⁸ Interim Report, para. 7.183, at footnote 1764.

¹⁴⁶⁹ EC, FWS, para. 60.

¹⁴⁷⁰ EC, Request for Interim Review, p. 2.

¹⁴⁷¹ Panel Report, *Mexico – Measures Affecting Telecommunications Services* ("*Mexico – Telecoms*"), WT/DS204/R, adopted 1 June 2004, DSR 2004:IV, 1537, para. 7.93.

¹⁴⁷² EC, Request for Interim Review, p. 2.

¹⁴⁷³ We recall that the Panel did require the translation by the parties of exhibits in non-WTO working languages, principally German, into English, where it deemed necessary.

BCI deleted, as indicated [***]

both versions already existed. In this case, we considered exhibits submitted by both parties in original French and Spanish versions in our deliberations, without translation into English. Thus, references to text in Spanish and French accurately reflect our deliberations, and form part of our findings. Therefore, we have determined not to translate into English those sections of the Interim Report that quote text in Spanish or French prior to issuance of the final report to the parties. However, we do note that those sections will be translated prior to circulation of the final report to the Members and the public, such that the Spanish version of the final report will be entirely in Spanish, the French version of the final report will be entirely in French, and the English version of the final report will be entirely in English.

C. PRELIMINARY RULING

1. Paragraph 7.46

6.20 According to the United States, the last sentence of paragraph 7.46 of the Interim Report may be read to suggest that the Panel is applying Article 28 of the Vienna Convention on the Law of Treaties (VCLT) as a rule of international law to adjudicate the rights and obligations of Members under the covered agreements. The United States argues that panels and the Appellate Body cannot apply rules of international law other than the provisions of the WTO Agreement. The United States submits that, pursuant to Article 3.2 of the DSU, panels do not clarify rules of international law that are not found in the covered agreements, although such rules may be relevant to clarifying the provisions of the covered agreements under the customary rules of interpretation of public international law, specifically as reflected in Article 31.3(c) of the VCLT.¹⁴⁷⁴ The United States suggests that the Panel replace the last sentence in paragraph 7.46 of the Interim Report with a proposed text it considers to be a more appropriate formulation of the relationship between Article 5 of the SCM Agreement and Article 28 of the VCLT.¹⁴⁷⁵

6.21 The European Communities objects to the United States' request to modify the last sentence of paragraph 7.46 of the Interim Report.¹⁴⁷⁶ First, the European Communities considers that the United States' concern is fully addressed in footnote 1536 at the end of paragraph 7.46 of the Interim Report, which states that the Appellate Body has said in previous disputes that the principle codified in Article 28 of the VCLT is relevant to the interpretation of the covered agreements. Second, the European Communities argues that the Appellate Body has qualified Article 28 of the VCLT as a "general principle of international law", with the result that the United States is mistaken in arguing that Article 28 can only be taken into account in the context of Article 31.3(c) of the VCLT.¹⁴⁷⁷

6.22 The principle of non-retroactivity embodied in Article 28 of the VCLT has been recognized by the Appellate Body to be a "general principle of international law" relevant to the interpretation of obligations contained in the WTO Agreements in many disputes. The United States' comment appears to have given rise to a disagreement between the parties as to the basis on which Article 28 of the VCLT may be applied by the Panel. The United States maintains that Article 28 can only be given effect as a rule of interpretation through Article 31.3(c) of the VCLT, while the European Communities appears to consider this approach too narrow and suggests that Article 28 of the VCLT

¹⁴⁷⁴ US, Request for Interim Review, para. 3.

¹⁴⁷⁵ US, Request for Interim Review, para. 3. The United States also suggests that the Panel may need to make conforming edits to the remaining paragraphs in this section, but does not specify where or what changes it would consider necessary or appropriate.

¹⁴⁷⁶ EC, Comments on US Request for Interim Review, p. 2.

¹⁴⁷⁷ EC, Comments on US Request for Interim Review, p. 2. The European Communities cites to the Appellate Body Report in Panel Report, *Brazil – Measures Affecting Desiccated Coconut* ("Brazil – Desiccated Coconut"), WT/DS22/R, adopted 20 March 1997, upheld by Appellate Body Report WT/DS22/AB/R, DSR 1997:I, 189, p. 15.

BCI deleted, as indicated [***]

may be given effect as a general principle of international law, independently of Article 31.3(c) of the VCLT. In our view, it is unnecessary to engage in this debate, as neither party disputes that the interpretation of Article 5 of the SCM Agreement should be consistent with the principle of non-retroactivity embodied in Article 28 of the VCLT. We therefore have made revisions to paragraph 7.46 and footnote 1536 (paragraph numbering unchanged, now footnote 1829) to clarify that we interpret Article 5 of the SCM Agreement consistently with the principle of non-retroactivity embodied in Article 28 of the VCLT, in accordance with the approach taken by the Appellate Body in prior disputes.

2. Paragraph 7.92 and footnote 1613

6.23 The United States requests that the Panel remove footnote 1613 of the Interim Report in its entirety.¹⁴⁷⁸ According to the United States, footnote 1613 might be read as applying Article 30 of the VCLT when it is not a provision of the covered agreements, and thus cannot be applied to adjudicate rights and obligations of members in WTO dispute settlement proceedings. The United States considers that Article 30 of the VCLT could only be relevant if it were being relied upon in order to apply a customary rule of interpretation reflected in Article 31.3(c) of the VCLT. The United States considers that footnote 1613 of the Interim Report does not purport to interpret anything in the WTO Agreement, and so the discussion of Article 30 in footnote 1613 of the Interim Report is not relevant to any application by the Panel of customary rules of interpretation of public international law to the text of the WTO Agreement.

6.24 The European Communities considers that the United States' request to remove footnote 1613 of the Interim Report is without merit and should be rejected.¹⁴⁷⁹ The European Communities contends that the footnote appears in the context of the Panel's interpretation of Article 23 of the DSU in paragraph 7.92 of the Interim Report and that the United States is therefore wrong to assert that the footnote does not interpret anything in the text of the WTO Agreement.¹⁴⁸⁰ Moreover, the European Communities asserts that conflict rules, such as those embodied in Article 30 of the VCLT, always apply in the context of international litigation. Finally, the European Communities observes that if footnote 1613 of the Interim Report is removed, the text of 7.92 of the Interim Report would be deprived of reasoning that supports the Panel's conclusions in that paragraph.

6.25 Our view, as expressed at the end of paragraph 7.92 of the Interim Report, is that in the absence of a reservation concerning the interpretation or application of Article 23 of the DSU, a Member cannot be considered to have "waived" its rights under Article 23 of the DSU to initiate a WTO dispute by means of an agreement that it entered into *prior* to entry into force of the DSU. This view is consistent with the principle embodied in Article 30 of the VCLT, rather than an application of Article 30 of the VCLT by the Panel. We have revised footnote 1613 (now footnote 1906) to clarify our position in this regard.

D. IDENTITY OF THE ALLEGED SUBSIDY RECIPIENT AND PASS-THROUGH, EXTINCTION AND EXTRACTION OF SUBSIDIES

1. Paragraph 7.248

6.26 The United States requests that the first sentence of paragraph 7.248 of the Interim Report be modified to remove any suggestion that reports of the Appellate Body are binding except with respect

¹⁴⁷⁸ US, Request for Interim Review, para. 4.

¹⁴⁷⁹ EC, Comments on US Request for Interim Review, p. 2.

¹⁴⁸⁰ EC, Comments on US Request for Interim Review, p. 2.

BCI deleted, as indicated [***]

to resolving the particular dispute between the parties to that dispute.¹⁴⁸¹ The United States also notes that, consistent with Article 17 of the DSU, it would be more accurate to refer to "reports" of the Appellate Body, rather than "decisions". The United States identifies a number of references throughout the Interim Report to "decisions" of the Appellate Body which it requests be modified to "reports".¹⁴⁸²

6.27 The European Communities does not agree with the United States' request to modify the first sentence of paragraph 7.248 of the Interim Report.¹⁴⁸³ According to the European Communities, the United States' request omits reports subsequent to *Japan – Alcoholic Beverages II* in which the Appellate Body clarified its reasoning about the relevance of adopted Appellate Body reports in subsequent proceedings. The European Communities considers that the current wording of paragraph 7.248 of the Interim Report properly reflects the Appellate Body's position on this issue.¹⁴⁸⁴

6.28 The question of the relevance of Appellate Body reports is highly contentious among Members, and it is not necessary for us to address it in order to resolve the dispute before us. The changes requested by the United States do not affect or undermine our reasoning on the substantive issues before us. We therefore have amended paragraph 7.248 (numbering unchanged), and made conforming changes, both where identified by the United States, and where identified by us, throughout the final report, to refer to Appellate Body "report" rather than "decision".

2. Paragraph 7.275 and Footnote 1925

6.29 The European Communities requests that the Panel revise footnote 1925 of the Interim Report in order to acknowledge the effect of the public offering of EADS shares on the ownership interests of the former partners in Airbus Industrie.¹⁴⁸⁵ According to the European Communities, the Panel's statement, at footnote 1925 of the Interim Report, that Dasa and SEPI effectively held the same proportional interests in Airbus Industrie, only through EADS and the contractual partnership, ignores the effect of the public offering of EADS shares. The European Communities proposes a modification of footnote 1925 of the Interim Report which it considers more accurately depicts the ownership structure of Airbus following the reorganization of Airbus Industrie in 2001.

6.30 The United States disputes the European Communities' assertion that footnote 1925 of the Interim Report ignores the effect of the public offering of EADS shares, referring to various paragraphs of the Interim Report which indicate that the Panel was aware of the contractual relations between the various Airbus entities and the public offering of EADS shares.¹⁴⁸⁶ The United States submits that the details of the Airbus ownership structure that existed following the reorganization of Airbus Industrie (*i.e.*, the information that the European Communities seeks to include in footnote 1925 of the Interim Report) were not critical to the Panel's analysis because the new structure maintained the overall interests of DaimlerChrysler and the Spanish government in Airbus Industrie as a whole. According to the United States, the Panel does not ascribe to the new ownership structure

¹⁴⁸¹ US, Request for Interim Review, para. 5.

¹⁴⁸² US, Request for Interim Review, para. 6; referring to paras. 7.73, 7.75, 7.82, 7.86, 7.203, 7.212, 7.225, 7.226, 7.233, 7.236, 7.239, 7.241, 7.250, 7.255, 7.1295, 7.1637, 7.1664, 7.1678, 7.1695, 7.1740, 7.1835 and 7.2066 of the Interim Report (now paragraphs 7.73, 7.75, 7.82, 7.86, 7.203, 7.212, 7.225, 7.226, 7.233, 7.236, 7.239, 7.241, 7.250, 7.255, 7.1305, 7.1648, 7.1675, 7.1689, 7.1706, 7.1751, 7.1846 and 7.2077).

¹⁴⁸⁶ US, Comments on EC Request for Interim Review, paras. 8 - 10.

BCI deleted, as indicated [***]

of Airbus following the EADS transaction the same significance that the European Communities does.¹⁴⁸⁷

6.31 In our view, the modification proposed by the European Communities is unnecessarily complicated and confusing. Paragraph 7.275 of the Interim Report explains why we rejected the European Communities' argument (described at paragraph 7.274 of the Interim Report) that as "minority shareholders" of EADS, DaimlerChrysler and the Spanish government would be unlikely to re-inject into EADS the cash that they had allegedly "extracted" prior to the transactions that led to the creation of EADS. The point that is made in paragraph 7.275 of the Interim Report is simply that it is inaccurate to portray DaimlerChrysler and the Spanish government as "minority shareholders" in the newly-created EADS when the EADS transactions were structured in such a way as to preserve the *status quo* among the former Airbus partners and both DaimlerChrysler and the Spanish government were part of the contractual partnership that controlled EADS and Airbus. However, it is possible that that footnote 1925 of the Interim Report could be understood to suggest that DaimlerChrysler and the Spanish government held the same overall ownership interest in Airbus through EADS as they did through the Airbus Industrie partnership. This was not the case of course, owing to the public offering of approximately 30 percent of the EADS shares. However, as the United States notes, the fact that DaimlerChrysler and the French government may each have indirectly held only 24 percent of the shares in Airbus SAS following the EADS transactions is immaterial, because through the EADS contractual partnership, DaimlerChrysler, the French government and the Spanish government jointly exercised voting rights with respect to 65.48 percent of the shares of EADS (and thus Airbus SAS). For practical purposes, the nature of control that the former Airbus partners exercised over Airbus SAS through EADS was the same as the control that they had previously exercised through Airbus Industrie. In light of the foregoing, we have revised footnote 1925 (now footnote 2218) in order to more accurately set forth the facts.

3. Section VII.E.1 Attachment: Corporate History of Airbus, paragraph 2

6.32 The European Communities requests the Panel to change the statement that a GIE does not have as its goal the *making* of profits, with the statement that a GIE does not have as its goal the *retaining* of profits.¹⁴⁸⁸ According to the European Communities, this modification more accurately reflects the fact that a GIE distributes profits to its members, and in that sense, may in fact have the goal of making profits, although it is to distribute them, rather than retain them.

6.33 The United States has not made any comments in respect of this request.

6.34 We have made the requested change.

4. Section VII.E.1 Attachment: Corporate History of Airbus, paragraph 3

6.35 The European Communities notes its view that certain transactions and changes are not reflected in the graph following paragraph 3 of the Attachment in the Interim Report, specifically:

- (a) the 1989 acquisition of Deutsche Airbus by Daimler;
- (b) the 1999 merger of British Aerospace with Marconi Electric Systems to become BAe Systems; and

¹⁴⁸⁷ US, Comments on EC Request for Interim Review, para. 10.

¹⁴⁸⁸ EC Request for Interim Review, p. 3.

BCI deleted, as indicated [***]

- (c) the 1999 merger between Aérospatiale and Matra Hautes Technologies, to create Aérospatiale Matra.¹⁴⁸⁹

6.36 The United States notes that the Panel has in fact recognized each of the above three corporate transactions in the Interim Report.¹⁴⁹⁰ According to the United States, the graph following paragraph 3 of the Attachment in the Interim Report reflects the Panel's determination, inherent in its findings, that those specific corporate transactions, which did not alter the ownership interests of the Airbus partners, were not relevant to its analysis.¹⁴⁹¹ The United States requests that the Panel decline the European Communities' request on the basis that the request amounts to the European Communities' disagreement with the Panel's conclusion as to the relevance of information proffered by the European Communities.

6.37 We agree with the United States that each of the specific corporate transactions is noted in the Interim Report, specifically at footnotes 1762, 1761 and 1764 of the Interim Report (now footnotes 2054, 2055 and 2057), and again at footnotes 2232, 2233 and 2235 of the Attachment, albeit they are not explicitly noted in the diagram following paragraph 3. Nonetheless, for the sake of clarity, we have added a reference to each of the transactions as part of the diagram following paragraph 3 (numbering unchanged) of the Attachment.

5. Section VII.E.1 Attachment: Corporate History of Airbus, paragraph 6

6.38 The European Communities requests that the Panel cite to the source for the lower portion of the graph, below the box for EADS.¹⁴⁹²

6.39 The United States submits that, if the Panel were to consider that a specific citation for the source of the information in the lower part of the graph is necessary, paragraph 7.183 of the Interim Report and the sources cited therein would serve the purpose.¹⁴⁹³

6.40 We have made the change requested by the European Communities. However, we have not relied on paragraph 7.183 of the Interim Report, as suggested by the United States, but rather have reviewed the relevant submissions and exhibits for the additional references.

E. THE ALLEGED LA/MSF MEASURE FOR THE A350

1. Paragraph 7.300

6.41 The European Communities considers that paragraph 7.300 of the Interim Report does not properly reflect the arguments it made in respect of the United States' claim concerning the alleged LA/MSF commitment for the A350. In particular, the European Communities recalls that its submissions referred to the alleged A350 LA/MSF "commitment" in quotation marks. Moreover, the European Communities asserts that the paragraphs of its submissions cited in the Interim Report only referred to "financing for the A350" not LA/MSF for the A350. Finally, the European Communities notes that the same paragraphs cited in the Interim Report also mention that "{n}ot a single Euro of MSF has been disbursed or scheduled for future disbursement in support of A350 development". The

¹⁴⁸⁹ EC Request for Interim Review, p. 3.

¹⁴⁹⁰ US Comments on EC Request for Interim Review, para. 11; referring to the following footnotes of the Interim Report: footnote 1762 (Daimler-Benz and Deutsche Airbus); footnote 1761 (Aérospatiale and Matra Hautes Technologies) and footnote 1764 (British Aerospace and Marconi Electronic Systems).

¹⁴⁹¹ US Comments on EC Request for Interim Review, para. 11, referring to paras. 7.199 and 7.275 of the Interim Report.

¹⁴⁹² EC Request for Interim Review, p. 4.

¹⁴⁹³ US Comments on EC Request for Interim Review, para. 12.

BCI deleted, as indicated [***]

European Communities asks that these details be reflected in the characterisation of its arguments in paragraph 7.300 of the Interim Report.¹⁴⁹⁴

6.42 The United States considers that paragraph 7.300 of the Interim Report correctly reflects the arguments the European Communities advanced in respect of its claim concerning the alleged A350 LA/MSF measure. The United States cites several passages from the European Communities' submissions, which it argues support the characterisation of the European Communities' arguments found in paragraph 7.300 of the Interim Report. Thus, the United States asks the Panel to dismiss the European Communities' request for modifications to paragraph 7.300 of the Interim Report.¹⁴⁹⁵

6.43 The European Communities was not always consistent in how it referred to the "commitment" in question and how it described the type of financing being negotiated between Airbus and the relevant European Communities member States in respect of the A350. For instance, in paragraph 132 of its second written submission, the European Communities uses the word "commitment" both with and without quotation marks. Moreover, while the European Communities refers in this paragraph to negotiations between Airbus and the relevant European Communities' member States on the "terms for financing of the A350", it also refers to negotiations on the "terms of these agreements", citing a discussion in its first written submission about the terms and conditions of LA/MSF. Similarly, in the same paragraph, the European Communities mentions "the price at which A350 MSF would be provided".

6.44 In our view, it can reasonably be understood that in this paragraph, the European Communities described the type of financing being negotiated between Airbus and the French, German, Spanish and UK governments as "MSF", not unlike other LA/MSF "agreements" it described in its first written submission. We therefore decline the European Communities' request to amend paragraph 7.300 of the Interim Report by placing the word "commitment" in quotation marks, and by removing the reference to "LA/MSF" in the characterisation of its argument.

6.45 On the other hand, we consider it appropriate to make the additional change requested by the European Communities, to ensure completeness in presenting its arguments, and have revised paragraph 7.300 (numbering unchanged) to do so.

2. Paragraph 7.307

6.46 The European Communities asks the Panel to delete the language in paragraph 7.307 of the Interim Report indicating that it had argued that financing *in the form of LA/MSF* for the A350 was being negotiated with Airbus as of 20 July 2005.¹⁴⁹⁶

6.47 The United States observes that paragraph 7.307 of the Interim Report contains an expression of the Panel's own views, not a summary of the European Communities' argument. Therefore, according to the United States, there is no basis for making the change requested by the European Communities.¹⁴⁹⁷

6.48 Paragraph 7.307 of the Interim Report sets out our findings of fact concerning the existence of the alleged A350 LA/MSF commitment measure. As originally drafted, it might be understood to imply that the European Communities shares the Panel's view that the facts before it demonstrate that "the EC member States had in principle agreed to provide Airbus with financial assistance for the

¹⁴⁹⁴ EC, Request for Interim Review, p. 4.

¹⁴⁹⁵ US, Comments on EC Request for Interim Review, paras. 13-16.

¹⁴⁹⁶ EC, Request for Interim Review, p. 4.

¹⁴⁹⁷ US, Comments on EC Request for Interim Review, para. 17.

BCI deleted, as indicated [***]

A350 in the form of LA/MSF on terms and conditions *to be negotiated*." Given the European Communities' argument about what it actually argued in this regard, we consider it appropriate to avoid implying that the European Communities agrees with the Panel's conclusion in this regard, and have revised paragraph 7.307 (numbering unchanged) accordingly.

F. WHETHER EACH OF THE INDIVIDUAL GRANTS OF LA/MSF FOR THE A300, A310, A320, A330/A340, A330-200, A340-500/600 AND A380 MODELS OF LCA CONSTITUTES A SUBSIDY WITHIN THE MEANING OF ARTICLE 1 OF THE SCM AGREEMENT

1. Paragraph 7.374 and footnote 2155

6.49 The European Communities requests that the second sentence of paragraph 7.374 and footnote 2155 of the Interim Report be modified to more accurately reflect what it asserts is the fact that for two of the challenged LA/MSF contracts, revenues generated from aircraft sales were not the only means through which repayment of the respective loans was required.¹⁴⁹⁸

6.50 The United States argues that the two contractual provisions cited in footnote 2155 of the Interim Report, as understood by the Panel, describe "minor" mechanisms that supplemented, rather than supplanted, the basic levy-based repayment scheme. Therefore, according to the United States, even if one were to accept that those mechanisms may have existed for two of the LA/MSF contracts, the primary repayment mechanism has always been per-aircraft levies.¹⁴⁹⁹ The United States also argues that it is far from unambiguous that Article 6.5 of the German A380 contract provides for [***].¹⁵⁰⁰ Thus, the United States submits that the European Communities' requests should be rejected.

6.51 In addition, the United States requests that the words "in almost all cases" be deleted from the third sentence of paragraph 7.374 of the Interim Report in order to more accurately reflect what it asserts is the fact that the primary repayment mechanism under the challenged LA/MSF contracts has always been per-aircraft levies.¹⁵⁰¹

6.52 The European Communities argues that the two departures referenced in footnote 2155 of the Interim Report are not "minor", as the United States describes, but rather an integral part of the repayment schedules specified in the respective LA/MSF contracts. Thus, according to the European Communities, making the changes to paragraph 7.374 of the Interim Report requested by the United States would result in an incomplete description of the repayment requirements under each of the relevant contracts.¹⁵⁰²

6.53 In order to set out the relevant characteristics of the LA/MSF contracts in question more specifically, we have modified paragraph 7.374 and footnote 2155 (paragraph numbering unchanged, now footnote 2449).

¹⁴⁹⁸ EC, Request for Interim Review, pp. 4-5.

¹⁵⁰² Comments of the European Communities on the US Request for Review of Precise Aspects of the Panel's Interim Report (hereinafter "EC, Comments on US Request for Interim Review"), p.3.

BCI deleted, as indicated [***]

2. Paragraph 7.375

6.54 The United States requests that the phrase "as a general matter" be deleted from the penultimate sentence of paragraph 7.375 of the Interim Report. The United States asserts that this language is superfluous and does not accurately reflect what the United States demonstrated in its submissions. In particular, the United States submits that it has shown that Airbus' repayment obligations under each of the LA/MSF contracts are dependent on the success of the particular LCA project, not just "as a general matter".¹⁵⁰³

6.55 The European Communities argues that the change requested by the United States would render the relevant sentence in paragraph 7.375 of the Interim Report "simply incorrect" because it asserts that the facts contained in that paragraph demonstrate that Airbus repayment obligations are not "entirely" dependent on the success of the particular LCA project.¹⁵⁰⁴

6.56 We have revised the penultimate sentence of paragraph 7.375 (numbering unchanged) to more clearly reflect our views.

3. Table 1 (following paragraph 7.380) and footnote 2172

6.57 The European Communities requests that the source of each of the figures contained in Table 1 following paragraph 7.380 of the Interim Report be identified, and asks the Panel to change its factual finding in respect of the amount of "financial contribution" associated with the challenged Spanish A380 LA/MSF contract, which is explained in original footnote 2172 of the Interim Report. The European Communities alleges that there is evidence before the Panel, including HSBI, which confirms that the appropriate amount of the financial contribution was EUR [***] million or at least that this was the "maximum" amount of funding associated with the Spanish A380 contract.¹⁵⁰⁵

6.58 The United States argues that the European Communities' request should be rejected, because the European Communities failed to provide any evidence in support of its factual assertion during the appropriate phase of this panel proceeding, including in response to a specific Panel question. In any case, the United States submits that the other evidence, including HSBI, which the European Communities now refers to in support of its request, has not been demonstrated by the European Communities to more accurately represent the amount of Spanish LA/MSF for the A380.¹⁵⁰⁶

6.59 Turning first to the European Communities' request that the source of the figures contained in Table 1 be identified, we have made the requested modification in order to more clearly identify the source of each of the relevant values. As a result of our review of those sources, we have also corrected three of the figures in Table 1.

6.60 As regards the European Communities' request concerning footnote 2172 of the Interim Report, we note that the Panel explicitly asked the European Communities, in Panel Question 259, to explain the differences between the amounts of "financial contribution" referred to in the Spanish A380 contract and in the European Communities' first written submission. The explanation provided by the European Communities in response to that question was less detailed and referred to fewer pieces of evidence than the explanation now given in its request for interim review. Even assuming we were willing to consider the newly cited evidence, however, in our view, that evidence does not advance its cause any further. In particular, we note that the European Communities places

¹⁵⁰³ US, Request for Interim Review, para. 8.

¹⁵⁰⁴ EC, Comments on US Request for Interim Review, p. 3.

¹⁵⁰⁵ EC, Request for Interim Review, pp. 5-6.

¹⁵⁰⁶ US, Comment on EC, Request for Interim Review, paras. 24-26.

BCI deleted, as indicated [***]

considerable reliance on the amount of non-recurring costs identified in the Airbus A380 business case, and argues that, in the light of other information contained in the Spanish A380 LA/MSF contract, it is possible to conclude that the "financial contribution" associated with the Spanish A380 contract was even less than the EUR [***] million figure it had initially asserted to be the correct amount in its first written submission. Although we have been able to verify all of the numbers the European Communities has referred to in its request for interim review, we note that the non-recurring cost figure the European Communities relies upon *pre-dates* the Spanish A380 LA/MSF contract by approximately one year.¹⁵⁰⁷ Absent a substantiated explanation as to why reliance should be placed on cost information contained in Airbus A380 business case, which pre-dates the Spanish A380 contract by more than 12 months, we would in any case reject the European Communities' argument in this regard.

6.61 Therefore, we dismiss the European Communities' request. However, we have revised Table 1 following paragraph 7.380 and footnotes 2171 and 2172 (paragraph numbering unchanged, now footnotes 2465 and 2484) so as to clearly identify that the EUR [***] million we have considered as being provided for the Spanish A380 LA/MSF is a "maximum" amount.

4. Paragraph 7.407

6.62 The United States asks that a footnote be added to the first sentence of paragraph 7.407 of the Interim Report explaining that it contests the view advanced by the European Communities that the rates of return of the LA/MSF contracts must be determined by taking into account the "internal rate of return" ("IRRs"). The United States also requests that we reflect its arguments regarding the lack of substantiation for the European Communities' IRR calculations.¹⁵⁰⁸

6.63 The European Communities considers that the additional references requested by the United States would be duplicative and confusing, noting that the United States' arguments concerning the relevance of royalty payments to the calculations of the IRRs are already reflected elsewhere in the Interim Report. In addition, the European Communities submits it has substantiated the IRR calculations it has advanced in this dispute.¹⁵⁰⁹

6.64 In order to fully reflect the United States' arguments, we have modified paragraph 7.407, and made a consequential change to footnote 2205 (paragraph numbering unchanged, now footnote 2518).

5. Paragraph 7.409

6.65 The United States submits that it did not argue, as it asserts is described in paragraph 7.409 of the Interim Report, that potential royalty payment obligations are "relevant" or "play only a marginal role" in determining the rate of return expected by the EC member State governments providing LA/MSF. The United States requests that the last sentence of paragraph 7.409 of the Interim Report be replaced with proposed language it asserts more correctly describes its argument.¹⁵¹⁰

6.66 The European Communities opposes the United States' request. The European Communities submits that it is inaccurate for the United States to now argue that it "did not accept" that royalty payments "play only a marginal role" given that this is precisely what the United States expert, Ellis,

¹⁵⁰⁷ The A380 business case – Exhibit EC-362 (HSBI) – is dated 8 December 2000. The Spanish A380 LA/MSF contract – Exhibit US-73 (BCI) – is dated 27 December 2001.

¹⁵⁰⁸ US, Request for Interim Review, paras. 9-10.

¹⁵⁰⁹ EC, Comments on US Request for Interim Review, pp. 3-4.

¹⁵¹⁰ US, Request for Interim Review, paras. 11-13.

BCI deleted, as indicated [***]

stated to the Panel and precisely the element of the Ellis statement that the United States chose to repeat verbatim in its second written submission.¹⁵¹¹

6.67 First, we note that paragraph 7.409 of the Interim Report does not say that the United States considers that royalty payment obligations are relevant to the determination of the appropriate IRRs of the LA/MSF contracts. Rather, it states that the United States does not consider "*expectations* of royalty payments to be *irrelevant*". Second, although the United States now submits that it did not argue that they play a "marginal role", this is not, in our view, what can reasonably be understood from its submissions. For instance, when discussing royalty payments required under the UK A380 contract, the United States concluded that they were "essentially meaningless", not because the payment of royalties fell outside of the UK government's expectations, but because according to the government's expectations, reflected by the delivery schedule, there would be only a few sales that could actually generate such payments.¹⁵¹² Similarly, the United States submitted that "{e}ven for the other Launch Aid contracts at issue, royalties become due only after a number of deliveries that, according to Airbus' and the governments' own forecasts, at best will be achieved only by the very end of the 17-year period described in the European Communities' ITR report as the life of a plane."¹⁵¹³ Thus, the United States did not negate the relevance of royalty payments to the governments' expected returns from LA/MSF. Rather, the United States minimized the importance of such payments to the overall expected return. Thus, we do not consider that paragraph 7.409 of the Interim Report erroneously describes the United States' argument.

6.68 However, we recognize that in addition to making these statements, the United States has also observed that it was likely that a market investor would not take such royalty payments into account, but instead look to recover its investment and make a commercial return over a much shorter period of time.¹⁵¹⁴ Therefore, while we decline to make the changes requested by the United States, we have modified paragraph 7.409 (numbering unchanged) so as to include the latter *additional* perspective of the United States, which is not reflected in the interim report. We have also added a footnote to the end of paragraph 7.412 (numbering unchanged) to reflect a further consideration relevant to our evaluation of the effect of royalty payments on the IRR.

6. Paragraph 7.416

6.69 The European Communities asks the Panel to reconsider its findings in respect of the internal rate of return ("IRR") of the French A340-500/600 LA/MSF contract. The European Communities explains that Articles 6.2 and 6.4 of this contract prescribe [***] – one intended to reimburse the principal loaned plus interest for the A340-500/600 project, [***]. The European Communities notes that [***] were taken into account and separately identified in the ITR Report, submitted as Exhibit EC-13 (BCI). However, for the purpose of the calculations shown in Exhibit EC-597 (HSBI), the European Communities [***] in order "to preserve space to demonstrate the alleged effect of taxation" on LA/MSF. The European Communities suggests that this explains why the Panel was unable to match the repayment values used to calculate the internal rate of return contained in Exhibit EC-597 (HSBI) with those derived from Article 6.2 of the A340-500/600 LA/MSF contract. According to the European Communities, [***] must be taken into account in order to determine the IRR the French government expected to obtain from the A340-500/600 contract. Finally, the European Communities observes that, for the French A330-200 LA/MSF contract, the Panel accepted an IRR that was calculated taking into account a similar repayment structure involving [***] – one to repay the principal loaned plus interest for the A330-200 project, [***]. The European Communities

¹⁵¹¹ EC, Comments on US Request for Interim Review, pp. 4-5.

¹⁵¹² US, Answer to Panel Question 142.

¹⁵¹³ US, Answer to Panel Question 142.

¹⁵¹⁴ US, Answer to Panel Question 142.

BCI deleted, as indicated [***]

therefore asks the Panel to take a consistent approach in respect of the French A340-500/600 contract and equally accept the internal rate of return calculated on the basis of the [***] contractually prescribed repayment streams.¹⁵¹⁵

6.70 The United States recalls that in its answer to Panel Question 42 it had observed that:

"[a]ccording to the French A340-500/600 Launch Aid contract, Airbus was required [***]."

Thus, the United States disputes the European Communities' inclusion of the [***] into its calculation of the IRR for LA/MSF provided for the A340-500/600, and asks the Panel to reject the European Communities' request.¹⁵¹⁶

6.71 In its first written submission, the European Communities explained that in return for French government LA/MSF for the A330-200 and A340-500/600, Airbus was required to pay "a levy for the MSF (including interest) invested in the variant [***]".¹⁵¹⁷ The IRR calculations relied upon by the European Communities for both LA/MSF measures were first presented in the ITR Report, Exhibit EC-13 (BCI). The ITR Report identified [***] in the cash-outflows column of its calculations for each LA/MSF measure, [***]. The only contractual provision specifically referred to in these submissions was Article 6.4 of the French A340-500/600 contract.¹⁵¹⁸

6.72 The European Communities was asked in Panel Question 69 to explain how the "implicit" rates of return it had presented with its first written submission were calculated, "with reference to all of the relevant data used in their calculation". In addition to the written response provided to that question, the European Communities presented Exhibit EC-597 (HSBI), which it described as measuring "the rate of return for the MSF contracts covering the A320, A330/A340 basic, A330-200, A340-500/600, and A380".¹⁵¹⁹ For the French A330-200 and French A340-500/600 LA/MSF contracts, this Exhibit [***], which was labelled "MSF repayments". The European Communities' response did not explain how the IRR was specifically determined for either of the French A330-200 and French A340-500/600 LA/MSF contracts. In this respect, the European Communities' Answer to Panel Question 69 provided little, if any, additional insight into what was set out in its first written submission.

6.73 In the Interim Report, we rejected the IRR calculated by the European Communities for the A340-500/600 because, on the basis of the information contained in Exhibit EC-597 (HSBI), the repayment amounts used to determine the IRR were greater than those derived from the actual LA/MSF contract, when read in the light of the schedule of forecast deliveries. In other words, we rejected the European Communities' inclusion of [***] it argues were called for under the French A340-500/600 LA/MSF contract. However, we accepted the IRR the European Communities calculated for the French A330-200 LA/MSF contract, even though this also appears to have been determined taking into account [***].

6.74 In light of the arguments in the European Communities' request for interim review, we have reconsidered our findings in respect of the IRRs of these LA/MSF contracts. We note that, even accepting the European Communities' explanations and IRRs for both the French A330-200 and A340-500/600 LA/MSF contracts, our findings on whether such measures constitute subsidies do not

¹⁵¹⁵ EC, Request for Interim Review, pp. 6-7.

¹⁵¹⁸ EC, FWS, footnote 250.

¹⁵¹⁹ EC, Answer to Panel Question 69.

BCI deleted, as indicated [***]

change. The only impact of accepting both IRR calculations would be on the amount of benefit associated with the French A340-500/600 contract. However, as we never quantified this amount precisely, the difference of approximately 2 percentage points between the IRR proposed by the European Communities and that identified in the Interim Report makes little difference. Thus, ultimately, even accepting the entirety of the European Communities' submissions on the IRRs associated with these two LA/MSF measures, our findings effectively remain the same.

6.75 In view of the foregoing, we have modified the report by adding new paragraphs 7.416-7.421 to describe and evaluate how the European Communities determined the IRRs for, primarily, the French A340-500/600 LA/MSF contract (and by implication the French A330-200 LA/MSF contract), concluding that, despite having some doubt as to the appropriateness of the European Communities' methodology for determining the IRR (discussed below at paragraphs 7.412 to 7.414, we need not come to a firm conclusion on the question, as even accepting the entirety of the European Communities' arguments, the measures would nevertheless constitute subsidies for the purpose of Article 1.1 of the SCM Agreement. We have also made consequential amendments to paragraph 7.415 (numbering unchanged) and 7.1959 (now paragraph 7.1970) and to Tables 5 and 7 setting out our findings on the rates of return for the LA/MSF measures.

7. Paragraph 7.426

6.76 The European Communities requests the Panel to insert footnotes next to each figure contained in Table 5 referring to the precise source of information used by the Panel to make its finding, as well as, where appropriate, an explanation as to how the figure was calculated.¹⁵²⁰

6.77 The United States considers there to be no reason for the Panel to add references to sources underlying the findings set out in paragraph 7.426 of the Interim Report and Table 5. In its view, the explanations already provided are detailed enough to understand the basis of the Panel's findings.¹⁵²¹

6.78 In order to more clearly explain our findings, and the sources for the figures referred to in Table 5, we have revised paragraph 7.426 (now paragraph 7.431) and Table 5.

8. Paragraph 7.429

6.79 The United States requests that the first sentence of paragraph 7.429 of the Interim Report be modified because, in its view, it incorrectly characterizes the "dispute" between the parties on the question of the market interest rate benchmark for the challenged LA/MSF measures to be centred on the appropriate project-specific risk premium. The United States submits that while the European Communities' objection to this issue related only to the value of the risk premium, the United States noted that the risk premium could not be considered in isolation. Specifically, the United States observes that it argued that the risk premium must be considered together with the corporate borrowing rate, and that these together represent the hybrid-equity nature of LA/MSF. Accordingly, the United States asks that the first sentence of paragraph 7.429 of the Interim Report be modified to reflect this understanding of the parties' arguments.¹⁵²²

6.80 The European Communities considers the Panel's characterisation of the "dispute" between the parties in the first sentence of paragraph 7.429 of the Interim Report to be accurate, and therefore asks the Panel to reject the United States' request. The European Communities recalls that the parties agreed that a benchmark would properly include three components: the relevant risk-free rate, a

¹⁵²⁰ EC, Request for Interim Review, p. 7.+

¹⁵²¹ US, Comment on EC, Request for Interim Review, paras. 28-30.

¹⁵²² US, Request for Interim Review, para. 14.

BCI deleted, as indicated [***]

corporate risk premium and a project-specific risk premium. The European Communities submits that the nature of the loans at issue – equity, debt or hybrid – was a central part of the disagreement between the parties as to the correct project-specific risk premium.¹⁵²³

6.81 The text in paragraph 7.429 of the Interim Report with which the United States takes issue states that the dispute between the parties as to the appropriate market interest rate benchmark "...is focused on only one aspect of the particular benchmarks that have been proposed – the value of the project specific risk premium". It is true that the parties were also in disagreement about whether LA/MSF was essentially a hybrid financing instrument or debt-like, and that the United States' proposed project-specific risk premium was advanced in the context of its view that LA/MSF was a hybrid financing instrument. However, the United States' submissions on these points, and the European Communities' difference of opinion, are recorded in the paragraphs describing each parties' arguments on the appropriate project-specific risk premium. Therefore, we do not consider it is necessary to make the modification requested by the United States. Nevertheless, we have modified paragraph 7.429 (now paragraph 7.434), in order to avoid creating the impression that the level of the project-specific risk premium was the *only* aspect of the benchmark issue on which the parties held differing views.

9. Paragraphs 7.430 – 7.464

6.82 The United States asks that, "in the interests of completeness", a footnote be added at the end of paragraph 7.457 of the Interim Report reflecting the emphasis placed by the United States and its expert on the high-risk nature of aircraft development and the risk-shifting nature of LA/MSF.¹⁵²⁴

6.83 The European Communities submits that the information the United States requests be included at the end of paragraph 7.457 of the Interim Report is already reflected in paragraphs 7.432 and 7.433 of the Interim Report. Accordingly, the European Communities asks the Panel to reject the United States' request.¹⁵²⁵

6.84 The particular passage from the Ellis Report that the United States asks the Panel to insert in a footnote at the end of paragraph 7.457 of the Interim Report is already quoted in paragraph 7.433 (now paragraph 7.438). We therefore reject the United States' request.

10. Paragraph 7.476

6.85 The United States requests that paragraph 7.476 of the Interim Report be drafted so as to express the full range of reasons supporting the Panel's decision to reject the European Communities' project-specific risk premium.¹⁵²⁶

6.86 The European Communities submits that the additional text requested by the United States serves no additional purpose not already met by paragraph 7.475 of the Interim Report, which according to the European Communities, already expresses the statements the United States requests should be included in paragraph 7.476. The European Communities therefore objects to the United States' request.¹⁵²⁷

¹⁵²³ EC, Comments on US Request for Interim Review, p.5.

¹⁵²⁴ US, Request for Interim Review, para. 15.

¹⁵²⁵ EC, Comments on US Request for Interim Review, pp.5-6.

¹⁵²⁶ US, Request for Interim Review, para. 16.

¹⁵²⁷ EC, Comments on US Request for Interim Review, p.6.

BCI deleted, as indicated [***]

6.87 We have amended paragraph 7.476 (now paragraph 7.481) in order to more fully reflect the reasons underlying our rejection of the European Communities' project-specific risk premium.

11. Paragraph 7.483

6.88 The European Communities asks the Panel to insert a footnote next to each figure shown in Table 7 explaining how it was calculated and citing the specific source of information relied upon.¹⁵²⁸

6.89 The United States submits that the data contained in Table 7 is adequately referenced, but considers that it may be useful to reflect in the accompanying footnotes some additional information on the sources of the listed values.¹⁵²⁹

6.90 We have revised Table 7 and related footnotes with a view to providing a clearer and more precise understanding of how each figure was calculated and the information on which it was based. As a result of our review, certain figures in the table have also been revised.

G. WHETHER LA/MSF AS A PROGRAMME IS A SUBSIDY WITHIN THE MEANING OF ARTICLE 1 OF THE SCM AGREEMENT

1. Paragraphs 7.495 and 7.508

6.91 The United States argues that paragraphs 7.495 and 7.508 of the Interim Report incorrectly describe the argument it advanced in respect of the alleged LA/MSF Programme as being premised on the alleged Programme having "normative value". The United States asserts, however, that its analysis of whether the alleged LA/MSF Programme is a "measure" was premised on the ordinary meaning of the word "measure", in context and in the light of the object and purpose of the WTO Agreement. The United States recalls that it also argued, "as a separate and distinct matter", that even assuming that the "test" the European Communities derives from Appellate Body Reports such as *US – Zeroing(EC)* is appropriate, that "test" has been satisfied by the United States' description of the alleged LA/MSF Programme. Accordingly, the United States requests that paragraphs 7.495 and 7.508 of the Interim Report be modified to more accurately reflect the full scope of the United States' argument in respect of the alleged LA/MSF Programme, in particular as set out in the United States' answer to Panel Question 136.¹⁵³⁰

6.92 The European Communities considers that paragraphs 7.495 and 7.508 of the Interim Report do not suggest that the United States' argument in respect of the alleged LA/MSF Programme was premised on it having "normative value". Moreover, it notes that paragraph 7.495 of the Interim Report expressly refers to the United States' answer to Panel Question 136. Thus, the European Communities opposes the United States request for modifications to paragraphs 7.495 and 7.508 of the Interim Report.¹⁵³¹

6.93 The United States' interim review request appears to rest on the view that the "test" set out in *US – Zeroing(EC)* should not have been at the centre of the Panel's evaluation of its claim because it is a "test" relevant only in disputes where an unwritten measure is challenged "as such". The United States emphasizes that it did not challenge the alleged LA/MSF Programme "as such", but rather as a "measure" that is opposable in WTO dispute settlement proceedings. Although the United States acknowledges that it also argued, "as a separate and distinct matter", that even assuming that the *US –*

¹⁵²⁸ EC, Request for Interim Review, p.8.

¹⁵²⁹ US, Comment on EC, Request for Interim Review, paras. 31-32.

¹⁵³⁰ US, Request for Interim Review, para. 17.

¹⁵³¹ EC, Comments on US Request for Interim Review, p6.

BCI deleted, as indicated [***]

Zeroing(EC) "test" were relevant, the LA/MSF Programme satisfied its criteria because it possessed *inter alia* "normative value", it asserts that this line of argument was not its primary position. Rather the United States' characterizes this as its *response* to the European Communities' arguments.

6.94 In the Interim Report, we explicitly recognized that the United States is not challenging the alleged LA/MSF Programme "as such", explaining that, in evaluating the United States' claim, our first step taken was to assess whether the United States had established the *existence* of the alleged LA/MSF Programme as a "measure". Therefore, we did not treat the United States' complaint as an "as such" claim. We did, however, apply the criteria in *US – Zeroing(EC)* to evaluate the United States' claim, but only to determine whether the "measure" the United States characterised as having "normative value" actually exists. In other words, we relied upon the "test" in *US – Zeroing(EC)* as guidance for what must be established in order to demonstrate the existence of an unwritten measure with "normative value". We did not rely upon this "test" for the purpose of evaluating the merits of any "as such" claim.

6.95 In its first written submission, the United States concluded that in the light of the evidence introduced, "the specific content of {the}Launch Aid program and the future conduct it will entail {was} clear".¹⁵³² In other words, the United States expressed the view in its first written submission that the evidence before the Panel clearly demonstrated that the unwritten measure it was challenging unavoidably necessitated certain future conduct. Moreover, in its first oral statement, the United States confirmed that it was making a complaint against an unwritten LA/MSF Programme in response to the European Communities' suggestion to the contrary, characterizing it as a measure that "creates expectations among the public and among private actors" demonstrating that it has "normative value".¹⁵³³ In its second oral statement, the United States asserted:

"In the present dispute, we have shown that a measure that is not set forth in a single written instrument – the Launch Aid Program – is in fact a measure and in fact possesses the qualities the Appellate Body identified in *US – Zeroing (EC)*".

Neither of these oral statements was prefaced by any explanation that the United States was only responding to the European Communities' counter-argument. Later in its second oral statement and again in its answer to Panel Question 136, the United States explained that it considered it was not necessary to show that the measure possessed "normative value" in order to show it existed as a "measure". However, in light of its previous submissions, it was not apparent that this was in fact the United States' *primary* argument. Nevertheless, both of the United States' lines of argument are recognized in the Interim Report, which addresses and rejects each one.

6.96 Thus, in light of the foregoing, we see no need to make the changes the United States requests, and therefore deny the United States' request. However, in order to ensure that our views in this regard are clear, we have modified the footnotes to paragraphs 7.495, 7.508, 7.513 and 7.570 (now paragraphs 7.500, 7.513, 7.518 and 7.575).

2. Footnote 2469

6.97 The European Communities asks the Panel to modify footnote 2469 of the Interim Report so that it properly describes the repayment terms contained in Article 6.5 of the German A380 LA/MSF contract, as the European Communities describes those terms.¹⁵³⁴

¹⁵³² US, FWS, para. 106.

¹⁵³³ US, FNCOS, para. 25.

¹⁵³⁴ EC, Request for Interim Review, p. 8.

BCI deleted, as indicated [***]

6.98 The United States argues that Article 6.5 of the German A380 LA/MSF contract does not unambiguously support the European Communities' reading of that provision. It therefore asks the Panel to remove any discussion of this provision from footnote 2469 of the Interim Report or to bring it into conformity with the language used in footnote 2155 of the Interim Report.¹⁵³⁵

6.99 We have revised footnote 2469 (now footnote 2807), albeit not in the terms proposed by the European Communities, to bring it into conformity with the description of the same provision in footnote 2155 (now footnote 2449).

3. Footnote 2473

6.100 The United States requests that the last sentence in footnote 2473 of the Interim Report be removed because it considers that there was no reason to expect the United States to have been able to know that Airbus had not sought LA/MSF in respect of certain models, given that the European Communities provided only one LA/MSF application, which was for the German A380 contract. Moreover, the United States submits that had it obtained access to all the relevant documents, it would not likely have been able to establish the negative proposition that Airbus had not sought LA/MSF from the German, Spanish and UK governments for the A330-200.¹⁵³⁶

6.101 The European Communities argues that the United States misconstrues footnote 2473 of the Interim Report and Panel Question 3(a), on which it is based. According to the European Communities, the Panel is entitled to assume that, having introduced in its answer to Panel Question 3(a) a distinction between instances in which Airbus sought LA/MSF and instances in which it did not, the United States considered that there were indeed instances in which Airbus did not seek LA/MSF. Accordingly, the European Communities opposes the United States' request, and suggests that at most, footnote 2473 of the Interim Report could be clarified by placing the Panel's view in the context of the United States' answer to Panel Question 3(a).¹⁵³⁷

6.102 We have modified footnote 2473 (now footnote 2811) and moved it to the end of the first sentence of paragraph 7.522 (now paragraph 7.527) in order to clarify the meaning of the last sentence of that paragraph.

4. Footnote 2478

6.103 The European Communities asks the Panel to delete footnote 2478 of the Interim Report because it considers that it is "speculative" to assert that the terms of any LA/MSF provided by the UK government for the A340-500/600 would have been "non-commercial". The European Communities argues that footnote 2478 of the Interim Report refers to a measure that never existed, and according to the European Communities, the Panel should not make findings on non-existent measures. In addition, the European Communities asserts that the proposed agreement was not finalised, implying that it cannot demonstrate the terms that would have been finally negotiated and agreed between the parties. The European Communities also asserts that the final agreement might not have been concluded in 1998, a fact that would be relevant to identifying the appropriate market interest rate benchmark.¹⁵³⁸

6.104 The United States disagrees with the European Communities' request. According to the United States, the European Communities' request is not only based on an incorrect understanding of

¹⁵³⁵ US, Comment on EC, Request for Interim Review, para. 33.

¹⁵³⁶ US, Request for Interim Review, para. 18.

¹⁵³⁷ EC, Comments on US Request for Interim Review, pp.6-7.

¹⁵³⁸ EC, Request for Interim Review, p.8.

BCI deleted, as indicated [***]

the relevance of footnote 2478 of the Interim Report to the Panel's analysis, but is itself based only on speculation.¹⁵³⁹

6.105 In our view, the European Communities has misunderstood footnote 2478. The footnote does not indicate a view that any LA/MSF provided by the UK government for the A340-500/600 *would have been* "non-commercial", but rather simply that the UK government's LA/MSF *proposal* or *offer* was "non-commercial" *at the time it was made*. We therefore deny the European Communities' request.

H. WHETHER LA/MSF FOR THE A380, A340-500/600 AND THE A330-200, CONSTITUTES, IN EACH CASE, A PROHIBITED EXPORT SUBSIDY WITHIN THE MEANING OF ARTICLE 3 OF THE SCM AGREEMENT

1. Paragraph 7.583, second sentence

6.106 The European Communities asks the Panel to revise the description of its argument set out in the second sentence of paragraph 7.583 of the Interim Report, by replacing the words "will actually" with "may". The European Communities states that it does not argue that the export must occur in order for there to be a finding that a measure providing for a subsidy contingent upon export exists. In addition, the European Communities submits that it does not use the term "actually" in the manner advocated by the United States.¹⁵⁴⁰

6.107 The United States observes that the passage the European Communities requests be revised is taken verbatim from the European Communities' own second written submission. Thus, the United States requests that the Panel decline the European Communities' request to modify paragraph 7.583 of the Interim Report.¹⁵⁴¹

6.108 Although the European Communities now contends that its argument on what constitutes an "anticipated" export should be understood to mean that it holds the view that an "anticipated" export is an export that "may" take place in the future, the actual language used in the European Communities' submissions indicates that it argued that an "anticipated" export is one that "*will*" take place in the future, not one that "*may*" take place.¹⁵⁴² This view is reflected in the first sentence of paragraph 7.583 of the Interim Report, where the statement in this regard made by the European Communities in its second written submission is quoted. Therefore, we reject the European Communities' request to replace the verb "will" with "may" in the second sentence of paragraph 7.583 of the Interim Report, because to do so would misrepresent what was explicitly stated in the European Communities' own submissions.

6.109 The European Communities contends that it does not use the word "actually" in the sense advocated by the United States, and for this reason, this word should be removed from the second sentence of paragraph 7.583 of the Interim Report. However, the second sentence of paragraph 7.583 of the Interim Report does not suggest that the European Communities considers the term "actually" in the same manner as the United States. Rather it merely explains what we understand to be the

¹⁵³⁹ US, Comment on EC, Request for Interim Review, paras. 34-37.

¹⁵⁴⁰ EC, Request for Interim Review, p.9.

¹⁵⁴¹ US, Comment on EC, Request for Interim Review, paras. 38-40.

¹⁵⁴² EC, SWS, paras. 235 ("...the term 'anticipated' (also juxtaposed to the meaning of the term 'actual') means an export that has not yet taken place at the moment when the subsidy is deemed to exist, but **will** take place in the future.") and 238 ("an 'anticipated' export is one that has not yet occurred at the moment when the subsidy is deemed to exist, and by definition is therefore envisaged to be one that **will** occur subsequently.") (Emphasis added).

BCI deleted, as indicated [***]

European Communities' view of the meaning of "anticipated exportation or export earnings" in footnote 4 of the SCM Agreement.¹⁵⁴³

6.110 Our understanding of the European Communities' interpretation of the term "anticipated exportation or export earnings" as articulated in the Interim Report was developed not only from the European Communities' explanations of what it considered this term to mean,¹⁵⁴⁴ but also from the arguments it advanced to reject the United States' interpretation of the same language, particularly in paragraphs 233 to 235 of its second written submission:

"Thus, the United States is interpreting the term 'actual' as if it means 'real' – that is, 'actually' has taken place in the past or 'actually' takes place in the future; whilst it is interpreting the term 'anticipated' (in juxtaposition to the term 'actual') as if it means 'potential', so that, according to the United States, whether or not the 'anticipated' export ever 'actually' takes place is irrelevant to the question of whether or not there is a subsidy contingent upon export performance. Thus, for the United States, the required condition is not export, but 'the anticipating of' export; this necessarily involves an enquiry into the hypothetical 'state of mind' or 'intent' of a natural person whose thoughts are imputable to the defending Member; with mere anticipation or consideration being sufficient to demonstrate contingency.

The European Communities submits that, on any interpretation, including that advanced by the United States, the facts evidently do not support a finding of export contingency.

However, quite apart from this factual point, the European Communities additionally submits that the United States' arguments are also based on a legally erroneous interpretation of the term 'actual or anticipated'. The correct interpretation, as indicated in the submissions of the European Communities, is that the term 'actual' means an export that exists (that is, has already taken place) at the moment when the subsidy is deemed to exist within the meaning of Article 1 of the *SCM Agreement*; whilst the term 'anticipated' (also juxtaposed to the meaning of the term 'actual') means an export that has not yet taken place at the moment when the subsidy is deemed to exist, but will take place in the future."¹⁵⁴⁵

Nonetheless, we recognize that the European Communities did not use the adverb "actually" when explaining that it understood an "anticipated" export to be an export that is not a 'potential' export, but one that will take place in the future. We therefore have removed it from the second sentence of paragraph 7.583 (now paragraph 7.588).

¹⁵⁴³ In this regard, we note that Australia appears to have taken a similar view of the European Communities' argument. See Australia, Third Party Oral Statement, 24 July 2007, para. 15. ("The fact that the grant of a subsidy is not the consequence of **actual** exportation does not mean that the grant of a subsidy is not tied to export performance and therefore contingent upon export performance within the meaning of the SCM Agreement".) (Emphasis added.)

¹⁵⁴⁴ In addition to EC, SWS, paras. 235 and 238, see also EC, SNCOS, paras. 126 ("Correctly interpreted, the term 'actual or anticipated' in footnote 4 simply confirms that the provision captures the whole range of possibilities, that is, exports that currently exist at the time of the initial grant (actual exports) **as well as those that occur in the future (anticipated exports)**") and 144 ("Furthermore, as the EC has already explained, and contrary to what the United States appears to believe, a measure may be a subsidy contingent upon export regardless of whether the export **occurs before or after the initial grant**"). (Emphasis added.)

¹⁵⁴⁵ EC, SWS, paras. 233 - 235 (Footnote omitted, emphasis added).

BCI deleted, as indicated [***]

2. Paragraph 7.625, third, fourth, fifth and final sentences; paragraph 7.626 first sentence; paragraph 7.627; and paragraph 7.628, fourth and fifth sentences

6.111 The European Communities asks the Panel to "more precisely and accurately" state its arguments concerning the interpretation of Article 3.1(a) and footnote 4 of the SCM Agreement in several sentences in paragraphs 7.625 to 7.628 of the Interim Report, and further requests that the Panel then re-consider the conclusions drawn from those arguments. In particular, the European Communities asks the Panel to "more precisely and accurately" state its arguments in paragraphs 7.625 of the Interim Report, third, fourth, fifth and final sentences and 7.626 of the Interim Report, first sentence. It indicates that "it cannot recognize its submissions" in paragraph 7.627 of the Interim Report, and asks the Panel to re-consider the statements made in paragraph 7.628 of the Interim Report, fourth and fifth sentences. To this end, the European Communities presents alternative text which it considers could be used to replace the text it considers misrepresents or misunderstands its arguments.¹⁵⁴⁶

6.112 The United States asks that the Panel reject the changes requested by the European Communities. The United States argues that to the extent that the Interim Report does not describe the European Communities' argument in terms that European Communities would prefer, the European Communities has only its own failure to present a single and coherent argument on export contingency to blame. According to the United States, the Interim Report faithfully reflects the actual text of the European Communities' own submissions, often by quoting and citation to European Communities' submissions. Moreover, the United States submits that the European Communities' requests to replace the Panel's understanding of its argument in several of the relevant passages with the verbatim language of Article 3.1(a) of the SCM Agreement is tautological.¹⁵⁴⁷

6.113 In the Interim Report, we set out and evaluated two characterisations of the European Communities' interpretation of Article 3.1(a) and footnote 4 of the SCM Agreement. One is the Panel's own, which the European Communities now asks be revised (paragraphs 7.625 to 7.628 of the Interim Report). The other is that put forward by the United States (paragraphs 7.632 and 7.633 of the Interim Report). After carefully reviewing and reconsidering the European Communities' arguments concerning the interpretation of Article 3.1(a) and footnote 4 of the SCM Agreement, we deny the European Communities' requests to alter the description of its arguments in the manner requested.

6.114 There are essentially two reasons for our decision. First, subject to certain clarifying adjustments, the language used in the Interim Report to describe the European Communities' submissions accurately reflects the core of its arguments in respect of the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement as made in its submissions. Second, the alternative text the European Communities proposes in its request for interim review, for the most part, does not provide any additional insight into its interpretation of Article 3.1(a) and footnote 4, and would, in any case, alter the meaning of relevant passages of the Report in ways we consider would not accurately convey our understanding.

6.115 In its first written submission, the European Communities argued that Article 3.1(a) and footnote 4 contain three "requirements" – "the required condition: actual or anticipated export performance, exportation or export earnings; the required consequence: the grant of a subsidy; and the required contingent relationship (or contingency) between condition and consequence".¹⁵⁴⁸ In its first non-confidential oral statement, the European Communities argued that the United States had "failed

¹⁵⁴⁶ EC, Request for Interim Review, pp.9-11.

¹⁵⁴⁷ US, Comment on EC, Request for Interim Review, paras. 38-52.

¹⁵⁴⁸ EC, FWS, para. 567. The EC explained the three "requirements" in paragraphs 570-582. EC, FNCOS, para. 73.

BCI deleted, as indicated [***]

to demonstrate any of the requirements of Article 3.1(a) and footnote 4 of the SCM Agreement: the United States has not demonstrated any condition of export performance; neither that the grant of a subsidy is the consequence of that condition being fulfilled; nor the required contingency".¹⁵⁴⁹ Similarly, in its answer to Panel Question 79, the European Communities recalled that "consistent with the case law, it distinguishes three elements of the prohibition on export subsidies: the required condition (export performance or exportation or export earnings); the required consequence (the grant of a subsidy); and the required relationship between the first two things (the required contingency)" and that "{i}n order to assess the United States claims, and to fully appreciate the arguments of the European Communities made in its first written submission (and eventually also in its rebuttal), it is essential to keep the distinctions between these three elements constantly in mind".¹⁵⁵⁰

6.116 This presentation of the legal framework of Article 3.1(a) and footnote 4 is one that cannot be found in previous WTO dispute settlement proceedings dealing with prohibited export subsidies. In our view, it is a novel understanding of the elements of Article 3.1(a) and footnote 4, and for this reason, we reject the modifications to paragraph 7.625 of the Interim Report requested by the European Communities. However, we have made some modifications to this paragraph (now paragraph 7.630) in order to more precisely articulate the European Communities' arguments.

6.117 The European Communities is also concerned about certain statements in paragraphs 7.627 and 7.628 of the Interim Report which it considers indicate that it is arguing that "the existence of a subsidy contingent in fact upon export performance can *only* be demonstrated by adducing a document pursuant to which a recipient is legally required to satisfy a performance obligation that cannot be achieved without exports". The European Communities submits that it never made this argument.¹⁵⁵¹

6.118 Paragraph 7.627 of the Interim Report states that "according to the European Communities, contingency in fact upon anticipated export performance arises when the measure granting a subsidy legally requires the recipient to satisfy a performance condition that cannot be achieved without exports, irrespective of whether those exports (or that performance) actually takes place". In paragraph 7.628, we concluded that "we see nothing in the ordinary meaning of the word 'contingent' to support the view that the required link between the anticipation of export performance and the granting of a subsidy can only be established by proving the existence of a legal obligation to achieve that anticipated performance." Thus, in the Interim Report, we did not indicate that the European Communities argued that it is necessary to *adduce a document* pursuant to which a recipient is legally required to satisfy a performance obligation that cannot be achieved without export in order to establish that a subsidy is, in fact, granted contingent upon anticipated export performance. Rather, the focus of the relevant paragraphs was our understanding of the circumstances the European Communities considered would show that a subsidy is granted contingent, in fact, upon anticipated export performance. They did not address the *type of evidence* that could be used to demonstrate those circumstances.

6.119 In this regard, we note that, in its second non-confidential oral statement, the European Communities presented what it described as "a succinct and simple re-statement of how the European Communities sees the overall design and architecture of Article 3.1(a) and footnote 4", in particular at paragraphs 116-122. The European Communities expressed the "hope{ } that the Panel may return to this statement as a point of reference to guide it in its future deliberations".¹⁵⁵² The European Communities drew from the contents of this oral statement to answer Panel Question 175.

¹⁵⁴⁹ EC, FNCOS, para. 68.

¹⁵⁵² EC, SNCOS, para. 115.

BCI deleted, as indicated [***]

Paragraph 7.626 of the Interim Report quotes passages from both submissions which are relevant for the purpose of understanding the European Communities' interpretation of Article 3.1(a) and footnote 4 of the SCM Agreement.

6.120 In order to fully appreciate the European Communities' "re-statement" of its interpretation of Article 3.1(a) and footnote 4, it is important to understand the meaning it gives to "actual or anticipated" exports. The European Communities submitted a detailed exposition of its view on the meaning of this term in its second written submission, in particular at paragraphs 233, 235, 237-238 and 244-245. Based on that exposition, it is in our view clear that the European Communities is of the view that an "anticipated" export is not an export that is "anticipated" in the sense that it is expected by a granting authority at the time of the granting of a subsidy. Rather, according to the European Communities, an "anticipated" export is one that has not yet occurred but will take place in the future.

6.121 We find it difficult to understand how it would ever be possible to show, at the time of the granting of a subsidy, that an export that has not yet taken place will occur, if not by demonstrating the existence of an obligation or requirement to export at that very same moment. This leads us to conclude that the European Communities must be arguing that the grant of a subsidy that is contingent upon *anticipated* export performance can *only* be demonstrated by showing that a subsidy has been granted pursuant to a measure requiring the recipient to satisfy a performance condition that cannot be achieved without exports, irrespective of whether those exports (or that performance) actually takes place. Although rejecting this characterisation of its arguments in the Interim Report, the text proposed by the European Communities to replace the description of its arguments found in the Interim Report provides little, if any, clarification of how its views differ from the description in the Interim Report.¹⁵⁵³ Moreover, we observe that in its own submissions the European Communities stated:

"By arguing that the required condition is the "anticipating of" exports – whether or not the "anticipated" export ever "actually" (as that term is understood by the United States) takes place - the United States is arguing that the requirement of contingency that is at the heart of the provision can be replaced by mere consideration – that is, consideration by the granting Member that exports *might* occur in the future, rather than imposition by the granting Member of a requirement that the recipient export in order to obtain the subsidy."¹⁵⁵⁴

"...the EC is saying that the measure enacting the initial grant must provide that the subsidy is granted contingent upon export, and that the measure must also provide that it is only export (whether in the past or in the future) that completes the grant and triggers the right to receive or retain the funds unconditionally."¹⁵⁵⁵

¹⁵⁵³ For instance, the EC requested that we replace the sentence "In other words, according to the EC, contingency *in fact* upon *anticipated* export performance arises when the measure granting a subsidy *legally requires* the recipient to satisfy a performance condition that cannot be achieved without exports, irrespective of whether those exports (or that performance) actually takes place" appearing in paragraph 7.627 with "In other words, according to the EC, contingency *in fact* upon *anticipated* export performance arises when *the facts demonstrate the existence of a* measure granting a subsidy *contingent upon export performance*. The EC requested similar modifications elsewhere in this paragraph, and asked the Panel to take them into account in paragraph 7.628, where we evaluated the EC' argument. However, merely replacing the characterisation of its argument with text that essentially repeats the language of Article 3.1(a) does little to clarify what the EC understands that provision to mean.

¹⁵⁵⁴ EC, SWS, para. 245 (emphasis added).

¹⁵⁵⁵ EC, SWS, para. 122 (emphasis added).

BCI deleted, as indicated [***]

"To succeed, the United States had to cite a provision in the measure stating that if the condition referred to in Article 3.1(a) (export performance) is fulfilled then the legal consequence referred to in Article 3.1(a) (the grant of the subsidy) results".¹⁵⁵⁶

"The United States has "failed to demonstrate any of the requirements of Article 3.1(a) and footnote 4 of the SCM Agreement: the United States has not demonstrated any condition of export performance; neither that the grant of a subsidy is the consequence of that condition being fulfilled; nor the required contingency".¹⁵⁵⁷

6.122 Having carefully reviewed the European Communities original arguments in this context, and taking as a whole its arguments on the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement, and in particular its interpretation of "anticipated" export performance, we can only understand its legal argument to express the view that a subsidy will be contingent upon anticipated export performance **only** when the measure granting the subsidy requires the recipient to satisfy a performance condition that cannot be achieved without exports, irrespective of whether those exports, or that performance, actually takes place. Thus, we believe we have correctly understood and accurately described the European Communities' arguments on this issue.

6.123 For all of the above reasons, we deny the European Communities' request to make changes to paragraphs 7.626 to 7.628 of the Interim Report. However, in the light of our reconsideration of its arguments, we have modified paragraphs 7.625-7.631 (now paragraphs 7.630 – 7.637) in order to more clearly articulate our understanding of the European Communities' arguments.

3. Paragraph 7.633

6.124 The European Communities argues that the final sentence of paragraph 7.633 of the Interim Report, and consequently paragraph 7.636 of the Interim Report, are not an appropriate characterisation of its arguments. In particular, the European Communities asserts that it "has repeatedly stated that a measure providing for a subsidy contingent upon export is WTO-inconsistent whether or not exports occur, as the Panel itself records in para. 7.626 of the interim report".¹⁵⁵⁸

6.125 The United States notes that paragraphs 7.633 and 7.636 of the Interim Report accurately reflect the United States' understanding of the European Communities' arguments. Therefore, the United States argues that there is no reason to amend these paragraphs, and asks the Panel to reject the European Communities' request.¹⁵⁵⁹

6.126 As noted above,¹⁵⁶⁰ the characterisation of the European Communities' arguments on the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement set out and evaluated in paragraphs 7.633 to 7.636 of the Interim Report was that advanced by the United States. This is explicitly stated in the relevant passages. To avoid any confusion, we have made some modifications to paragraphs 7.633 and 7.636 (now paragraphs 7.639 and 7.642) reiterating this fact.

4. Paragraph 7.645, second bullet point and paragraph 7.655, seventh bullet point

6.127 The European Communities asserts that the United Kingdom government sought repayment of LA/MSF for the A380 over [***] deliveries, and not the [***] deliveries mentioned in

¹⁵⁵⁶ EC, FWS, para. 591 (emphasis added).

¹⁵⁵⁷ EC, FNCOS, para. 68 (emphasis added).

¹⁵⁵⁸ EC, Request for Interim Review, p.11.

¹⁵⁵⁹ US, Comment on EC, Request for Interim Review, para. 53.

¹⁵⁶⁰ See paragraph 6.113 above.

BCI deleted, as indicated [***]

paragraph 7.645 of the Interim Report, second bullet point, and paragraph 7.655 of the Interim Report, seventh bullet point. The European Communities requests that these passages be corrected accordingly.¹⁵⁶¹

6.128 The United States does not oppose the European Communities' request, and proposes specific language which it considers could give effect to the European Communities' request.¹⁵⁶²

6.129 We have carefully reviewed the facts, and have revised the second bullet point of paragraph 7.645, and the seventh bullet point of paragraph 7.655 (now paragraphs 7.651 and 7.661) to more clearly reflect the facts.

5. Paragraph 7.655, fourth bullet point, items (h) and (i)

6.130 The European Communities requests that additional text be inserted into paragraph 7.655 of the Interim Report, fourth bullet point, items (h) and (i) in order to ensure that the Report records its response to the United States' allegations concerning the evidence identified in those passages.¹⁵⁶³

6.131 The United States submits that the European Communities' requests seek to have reflected in items (h) and (i) of paragraph 7.655 of the Interim Report arguments that either do not, or do not entirely, match the matters discussed therein. Accordingly, the United States asks that should the Panel make any modification to these passages of the Interim Report, it should mirror the limited focus of the matters set out in those passages.¹⁵⁶⁴

6.132 We have reviewed the European Communities' arguments and consider that much of the language it requests be inserted in the relevant passages does not constitute a *specific* response to the precise evidence identified by the United States, but rather a general response to the United States' reliance on this and other "additional" evidence overall. Therefore, it does not belong in the passages the European Communities asks to modify. Nevertheless, we have included the European Communities' arguments in paragraph 7.655 (now paragraph 7.661) in order to ensure that they are recorded in the Report, and have in addition modified paragraph 7.655 (now paragraph 7.661), fourth bullet point, item (i), so as to capture what we understand to be the European Communities' specific response to the evidence identified therein.

6. Paragraphs 7.674 - 7.682

6.133 The United States requests that, "in the interest of completeness", a footnote be added to the end of paragraph 7.673 of the Interim Report noting the European Communities' alleged refusal to provide the French, Spanish, and UK A380 LA/MSF applications, and the German and Spanish A380 project appraisals, as well as the absence of any explanation for the European Communities' alleged refusal. The United States declares that it does not understand the European Communities to dispute the fact that it did not provide these documents.¹⁵⁶⁵

6.134 The European Communities submits it is incorrect to state that it "refused to provide" the French, Spanish and UK A380 LA/MSF applications because such documents were never requested by either the United States (in the Annex V process) or the Panel. Accordingly, the European Communities asks the Panel to not only reject the United States' request, but also to revise footnotes

¹⁵⁶¹ EC, Request for Interim Review, p.11.

BCI deleted, as indicated [***]

2745, 2760, 2816 and 2908 and paragraph 7.677 of the Interim Report, which record the United States' assertion that the European Communities "refused to provide" a particular LA/MSF application, with text it considers would provide a more even-handed account. As regards the United States' comments concerning the "critical project appraisals", the European Communities explains that Germany and Spain [***]. The European Communities recalls that in its response to Question 13(f) of the Facilitator during the Annex V process, it explained that it had provided all copies of "the available critical project appraisals". Thus, the European Communities asks the Panel to reject the United States' request because it submits that it is incorrect to assert that (i) it "failed to provide" the German and Spanish "critical project appraisal" documents for the A380, when there were no such documents available; and that (ii) it "offered no explanation" for not providing these documents, given that it noted in its answer to Question 13(f) of the Facilitator that it had provided all "available" copies.¹⁵⁶⁶

6.135 No questions posed during the Annex V process *specifically* requested the European Communities to provide copies of the relevant LA/MSF applications. Although it could be argued that the relevant A380 LA/MSF applications fell within the scope of the information requested under the more general questions asked by the Facilitator,¹⁵⁶⁷ in our view, such questions were too broad to conclude that the European Communities should have realised that the United States was requesting it to provide copies of the A380 LA/MSF applications. This is particularly so when such questions are considered in the context of the many specific questions asked by the United States for particular documents. In this light, the United States' allegation that the European Communities failed to provide the LA/MSF application for the German A380 contract, recorded in footnotes 2745, 2760 and 2816, and paragraph 7.677 of the Interim Report, is not entirely accurate. While these passages of the Interim Report do not express any view on the part of the Panel as to whether the United States is correct, leaving them as they are may create the impression that the Panel agrees with the United States. Thus, we have made several changes to footnotes 2745, 2760 and 2816, and paragraph 7.677 (now footnotes 3087, 3103, and 3163, and paragraph 7.683) in order to clarify this point.

6.136 On the other hand, the European Communities **was** specifically asked by the Facilitator to provide copies of "any 'critical project appraisals'", in Question 13(f).¹⁵⁶⁸ The European Communities notes that in answering this question, it explicitly stated that it had provided "a copy of the available critical project appraisals", which included the French and UK government "critical project appraisals" for the A380. However, it did not explain, as it has now in its comments to the United States request for interim review, that the reason no German and Spanish "critical project appraisals" were provided was that these governments applied a "continuous" approach to critically appraising the projects. Had the European Communities explained this in its answer to Question 13(f), the United States would have at least known that the German and Spanish "critical project appraisals" were recorded in various documents. The United States could thereafter have asked the Panel to request the European Communities to produce these documents during the course of the Panel proceeding. In this light, we have modified footnotes 2901 and 2904 (now footnotes 3248 and 3251) to reflect the United States' concerns.

¹⁵⁶⁶ EC, Comments on US Request for Interim Review, pp.7-9.

¹⁵⁶⁷ For instance, Question 23 reads: "Please provide information and documents that relate to Airbus member State support for the development and/or production of the A380, including but not limited to: (a) ... (b)". EC, Answers to Questions by the Facilitator under Annex V, Exhibit US-5 (BCI).

¹⁵⁶⁸ Question 13(f) reads: "Please provide information and documents that relate to the implementation and use of launch aid by Airbus, broken down by Airbus entity, Airbus member State, Airbus model, including, but not limited to: ... (f) all risk assessments performed with respect to that government support, including any "critical project appraisals". EC, Answers to Questions by the Facilitator under Annex V, Exhibit US-5 (BCI).

BCI deleted, as indicated [***]

7. Paragraph 7.677

6.137 The United States argues that the Panel's conclusion in paragraph 7.677 of the Interim Report, that the UK A380 LA/MSF contract was concluded at least in part on the condition or because of the UK government's anticipation of exportation, does not reflect any consideration of the UK A380 Project Appraisal or the related HSBI comments provided by the United States. The United States requests that paragraph 7.677 of the Interim Report be modified to reflect consideration of this evidence.¹⁵⁶⁹

6.138 The European Communities submits that the HSBI comments the United States refers to in support of its request asserted that the UK A380 critical project appraisal established that the UK government *anticipated* exportation or export earnings. The European Communities submits that the United States provides no basis for the Panel to take these comments into account for the purpose of the conclusion reached in paragraph 7.677 of the Interim Report, and therefore asks the Panel to reject the United States requested amendment.¹⁵⁷⁰

6.139 The United States' HSBI appendix to its first written submission raised the UK A380 critical project appraisal in order to support two of its assertions: (i) that the UK government anticipated exports; and (ii) that the UK government contractually "tied" repayment of LA/MSF to Airbus making a number of sales that must have necessarily involved exports. The United States' reliance on the UK critical project appraisal in this regard is already noted and considered in paragraphs 7.645 (footnote 2741) (anticipated exports), footnote 2813 and 7.672 (footnote 2897) (export contingency) of the Interim Report. Paragraph 7.677 of the Interim Report evaluates the evidence and arguments the United States advanced that were "additional" to those already set out and addressed in the previous paragraphs of the Interim Report in respect of the question of export contingency. We therefore consider the changes requested by the United States to be unnecessary and redundant, and decline to make them.

8. Paragraph 7.679

6.140 The United States submits that the first sentence of paragraph 7.679 of the Interim Report is incorrect when it states that "{t}he only other specific piece of evidence the United States relies upon is the statement reportedly made by French Prime Minister, Lionel Jospin in March 2000". The United States submits that this statement does not reflect any consideration of the French A380 Project Appraisal or the related HSBI comments provided by the United States in its first written submission. The United States requests that paragraph 7.679 of the Interim Report be modified to reflect consideration of this evidence.¹⁵⁷¹

6.141 The European Communities contends that the HSBI comments the United States refers to in support of its request asserted that the French A380 critical project appraisal established that the French government *anticipated* exportation or export earnings. The European Communities notes that these comments have already been taken into account by the Panel at paragraphs 7.645-7.646 of the Interim Report. Thus, the European Communities asks the Panel to reject the United States' requested amendment.¹⁵⁷²

6.142 The United States relies on the French government critical project appraisal for the A380 in essentially the same way that it relies upon the UK government's critical project appraisal for the

¹⁵⁶⁹ US, Request for Interim Review, para. 20.

BCI deleted, as indicated [***]

A380, that is, to support two of its assertions: (i) that the French government anticipated exports; and (ii) that the French government contractually "tied" repayment of LA/MSF to Airbus making a number of sales that must have necessarily involved exports. The Interim Report notes and considers the United States' reliance on the French government's critical project appraisal for the A380 in paragraphs 7.645 (footnote 2741) (anticipated exports) and 7.672 (footnote 2897) (export contingency) of the Interim Report. Moreover, the particular paragraphs of its HSBI appendix the United States requests be reflected in paragraph 7.679 of the Interim Report deal with the question whether the French government anticipated exports. However, this is not what paragraph 7.679 of the Interim Report is about. Paragraph 7.679 of the Interim Report evaluates the evidence and arguments the United States advanced that were "additional" to those already set out and addressed in the previous paragraphs of the Interim Report in respect of the question of export contingency. In this light, we decline to make the changes requested by the United States, as we did with respect to the United States' request concerning paragraph 7.677 of the Interim Report.¹⁵⁷³ However, we have modified paragraph 7.679 (now paragraph 7.685) in order to clarify our views.

9. Paragraphs 7.690-7.710

6.143 The European Communities asks the Panel to evaluate the United States' in law export contingency claims before its in fact export contingency claims. According to the European Communities, "one cannot measure indirect evidence against a standard without first having a precise and clear understanding of what that standard is. In the present case, that precise and clear understanding would be the meaning of in law contingency."¹⁵⁷⁴

6.144 The United States argues that the European Communities has provided no explanation as to what aspects of the claims compel the Panel to follow its preferred order of analysis. The United States recalls that, as the European Communities has recognized throughout these proceedings, the legal standard for *de jure* and *de facto* export contingency claims is the same. In its view, the Panel does not need to conduct an analysis of *de jure* claims first in order to "understand" the standard it must apply to *de facto* claims.¹⁵⁷⁵

6.145 The European Communities' request presupposes that the legal standard applicable to claims of in fact export contingency cannot be ascertained without first determining what the legal standard is for in law export contingency claims. However, as we note in the Report, the legal standard applicable to in law and in fact export contingency claims under Article 3.1(a) of the SCM Agreement is the same.¹⁵⁷⁶ The only difference between the two types of claims is the evidence that may be relied upon for the purpose of their substantiation. Moreover, we note that in other dispute settlement proceedings, panels faced with in fact export contingency claims have not evaluated them by first determining what the legal standard is for in law export contingency and then assessing whether the facts before them satisfied this standard. Indeed, given that the legal standard is the same, it would in our view make little sense to do so. We therefore deny the European Communities' request.

¹⁵⁷³ See paragraph 6.139 above.

BCI deleted, as indicated [***]

I. WHETHER CERTAIN EUROPEAN INVESTMENT BANK LOANS TO AIRBUS ARE SPECIFIC SUBSIDIES WITHIN THE MEANING OF ARTICLES 1 AND 2 OF THE SCM AGREEMENT

1. Paragraphs 7.744, 7.747, 7.781, 7.795, 7.814, 7.854, 7.856, 7.857, 7.862 and 7.875

6.146 The European Communities argues that the Interim Report incorrectly characterised the EIB's lending activities as "not-for-profit" in paragraphs 7.744, 7.747, 7.781, 7.795, 7.814, 7.854, 7.856, 7.857, 7.862 and 7.875 of the Interim Report. According to the European Communities, all of the evidence before the Panel only confirms that the EIB is "a not-for-profit institution". In the view of the European Communities, nowhere in the evidence before the Panel was there any reference that the "lending activities" of the bank have a "non-profit nature". The European Communities argues that the Interim Report confuses the non-profit nature of the EIB as *an institution* with the nature of its *lending activities*. Accordingly, it asks the Panel to rectify this alleged error of assessment in the relevant paragraphs.¹⁵⁷⁷

6.147 The United States considers that the European Communities' requests are based on a highly selective reading of the Interim Report and the relevant evidence. The United States points to various pieces of evidence reviewed by the Panel that it argues show that the interest rates charged to EIB clients cover only the costs of EIB borrowing and operations but do not provide for any profit, and which, when combined, lead the Panel to conclude in paragraph 7.747 of the Interim Report that EIB lending is non-commercial.¹⁵⁷⁸

6.148 Our finding concerning whether the evidence about the nature and function of the EIB (beginning at paragraph 7.741 of the Interim Report) demonstrates that the EIB's loans are provided at non-commercial interest rates, is set out in paragraph 7.747 of the Interim Report. This paragraph does not draw any conclusion about whether the EIB's lending activities are not-for-profit. Rather, it concludes that "... the evidence ... reviewed on the nature of the EIB's lending activities (especially its non-profit-making nature) indirectly supports the view that the rate of return it obtains on the loans it grants to borrowers (including those challenged by the United States in this dispute) is below the rate of return that would be demanded by a commercial lender, thereby conferring a benefit within the meaning of Article 1.1(b) of the SCM Agreement." Eight of the nine remaining paragraphs identified by the European Communities all refer to the findings made in respect of the "nature of the EIB's lending activities" in paragraph 7.747 of the Interim Report, namely, that the evidence before the Panel indirectly supports the view that the EIB's loans are provided at non-commercial interest rates. Thus, contrary to the European Communities' view that all 10 of the cited paragraphs refer to the EIB's not-for-profit *lending activities*, only paragraph 7.744 of the Interim Report explicitly describes the EIB's *lending activities* as not-for-profit.

6.149 While it is true that there is no evidence that explicitly characterises the EIB's *lending activities* as not-for-profit, the evidence that has been submitted, in our view, strongly suggests this to be the case. In this regard, we note particularly Exhibits US-160 and US-151 (both referred to in the Interim Report). In both exhibits, statements authored by the EIB indicate that as a "not-for-profit institution" it is able to pass on the benefits of its ability to borrow funds on the capital markets at AAA credit rating levels to its clients at "fine rates". The statements explain that the interest rates charged include only "a small margin {above its borrowing cost} to cover operating expenses", namely, "administrative expenses and other costs". Thus, in describing the level of interest charged on its client loans, the EIB makes no mention of any profits. On the contrary, the EIB's statements indicate that the interest rates charged to clients only cover costs. This is consistent with Article 19 of the EIB Statute, which provides that:

¹⁵⁷⁷ EC, Request for Interim Review, pp.12-13.

¹⁵⁷⁸ US, Comment on EC, Request for Interim Review, paras. 58-60.

BCI deleted, as indicated [***]

"Interest rates on loans to be granted by the Bank and commission on guarantees shall be adjusted to conditions prevailing on the capital market and shall be calculated in such a way that the income therefrom shall enable the Bank to meet its obligations, to cover its expenses and to build up a reserve fund as provided for in Article 24."¹⁵⁷⁹

6.150 While the European Communities contests the characterisation of the EIB's lending activities as "not-for-profit", it has not at any stage during these proceedings asserted that the EIB includes a *profit* margin in the interest rates charged on its client loans. Neither has the European Communities pointed to any evidence before us that could substantiate such an assertion. It is true that in addition to needing to cover expenses, the EIB must, according to Article 19 of its Statute, also "build up a reserve fund". The European Communities explained during the proceedings in this dispute that "{i}f the EIB's reserve is reduced (for example as a result of loan losses and/or the use of funds sitting on EIB's reserve fund to finance a capital increase) then the EIB may need to increase its interest rate in order to ensure compliance with its obligations under Article 24 of the EIB Statute which requires it to build up a 10% reserve fund".¹⁵⁸⁰ Thus, in addition to covering its costs, the interest rates charged by the EIB on its loans may also contain a margin for its reserve fund. However, even assuming, *arguendo*, that any such reserve fund margin could be viewed as akin to a profit margin, it is clear from the European Communities' own description that it will not always be included in the interest rate charged by the EIB.

6.151 In view of the foregoing, we deny the European Communities' request to amend paragraphs 7.744, 7.747, 7.781, 7.795, 7.814, 7.854, 7.856, 7.857, 7.862 and 7.875 of the Interim Report. However, we have modified paragraph 7.744 (now paragraph 7.750), in order to more accurately reflect the evidence.

2. Paragraph 7.753 and footnote 3041

6.152 The European Communities requests that the last sentence in footnote 3041 of the Interim Report, where it contends the Panel "speculated" that the funds used to finance the 2002 loan to EADS might well have been sourced from the Eurodollar bond market, be deleted.¹⁵⁸¹

6.153 The United States considers that the statement at issue reflects an appropriate exercise of the Panel's discretion when evaluating the evidence and should therefore not be deleted as the European Communities requests. Nevertheless the United States suggests that footnote 3041 of the Interim Report could be modified to clarify that the statement in the last sentence, while not based on evidence specifically on the point being made, is an appropriate inference to draw from the evidence that is before the Panel.¹⁵⁸²

6.154 At paragraph 7.753 of the Interim Report, we considered the relevance of the Eurodollar Bond Index relied upon by the United States for the purpose of constructing its market interest rate benchmark for the 2002 loan to EADS. Footnote 3041 of the Interim Report reflects one aspect of our thinking with respect to that issue, and therefore, we decline to make the change requested.

3. Paragraphs 7.760 and 7.779

6.155 The European Communities requests that references to "project-specific" obligations and costs in paragraphs 7.760 and 7.779 of the Interim Report be deleted. According to the European

¹⁵⁷⁹ Exhibit EC-157.

¹⁵⁸⁰ EC, Answer to Panel Question 179.

¹⁵⁸² US, Comment on EC, Request for Interim Review, paras. 61-65.

BCI deleted, as indicated [***]

Communities, its submissions on the obligations and costs discussed in these paragraphs used the term "project-related". Moreover, the European Communities argues that the word "specific" has a distinct meaning in the context of the SCM Agreement as a result of which the term used in the Interim Report may be misunderstood.¹⁵⁸³

6.156 The United States submits that the change in terminology requested by the European Communities would not accurately reflect the nature of those obligations and costs and is therefore not warranted. Accordingly, the United States asks the Panel to reject the proposed changes.¹⁵⁸⁴

6.157 We recognize that, overall the European Communities did not use the term "project-specific", but rather the term "project-related" in its submissions when describing the "additional" costs it argued are incurred in connection with EIB financing. However, in responding to Panel Question 176, the European Communities explained that the costs associated with EIB financing were additional to those incurred with bond financing instruments because the latter "were made for 'general corporate purposes' and were not project-specific". Thus, although the European Communities generally described the costs at issue as "project-related", when comparing them to the costs associated with the bond instruments used by the United States to establish the proposed interest rate benchmark, the European Communities also indirectly described them as "project-specific" costs. In light of the foregoing, we have replaced the term "project-specific" with the term "project-related" in paragraphs 7.760 and 7.779 (now paragraphs 7.766 and 7.785), except where the former is used in the context of explaining the European Communities' argument in respect of the costs associated with bond financing.

4. Paragraphs 7.783, 7.791 and 7.793

6.158 The European Communities does not agree with the conclusion expressed at paragraph 7.791 of the Interim Report that *one* of the purposes of a commitment fee is to compensate a lender for the risk that a borrower's credit rating will deteriorate between the time the interest rate is set in a loan contract and the disbursement of funds to that borrower. According to the European Communities, the evidence before the Panel, and the position of the European Communities, only confirmed that a commitment fee is requested in return for tying up the capital of the lender and to compensate the lender for committing to a loan. Thus, the European Communities asserts that there is no connection between the commitment fee and the creditworthiness evolution of the borrower. In its view, a commitment fee has to do with the lender's liquidity constraint, not the borrower's credit standing.¹⁵⁸⁵

6.159 The United States submits that there is no merit to the European Communities' request. The United States points out that both the NERA EIB Report and Brealey and Myers support the view that commitment fees are intended to compensate lenders for agreeing, at the time of the conclusion of a loan contract, to provide funding at a later date on interest rate terms reflecting, *inter alia*, the credit worthiness of the borrower at the time the loan contract was concluded. Thus, the United States suggests that should the Panel decide to make any changes to the relevant paragraphs, it should be only to remove any reference to the European Communities' agreement with this proposition.¹⁵⁸⁶

6.160 During the proceedings in this dispute, when asked to elaborate its view on the meaning of "commitment fee", the European Communities drew support from the same passage of the Brealey and Myers text relied upon by the United States.¹⁵⁸⁷ This passage, which also informed our own

¹⁵⁸³ EC, Request for Interim Review, p.13.

¹⁵⁸⁴ US, Comment on EC, Request for Interim Review, paras. 66-68.

¹⁵⁸⁵ EC, Request for Interim Review, p. 13.

¹⁵⁸⁶ US, Comment on EC, Request for Interim Review, paras. 69-72.

¹⁵⁸⁷ EC, Answer to Panel Question 179.

BCI deleted, as indicated [***]

understanding, explained that a commitment fee was an extra cost charged by banks in exchange for which a borrower:

"receives a valuable option: It has guaranteed access to the bank's money at a fixed spread over the general level of interest rates. This amounts to a put option, because the firm can sell its debt to the bank on fixed terms even if its own creditworthiness deteriorates or the cost of credit rises". (emphasis added)

As we understand it, this passage suggests that a commitment fee is not only related to the risk associated with a lender's "liquidity constraint" ("cost of credit"), as the European Communities now argues, but also the creditworthiness of the borrower. Moreover, in explaining that a commitment fee is a cost "associated with commercial loans guaranteeing the borrowing entities immediate access to a lending bank's money 'at a fixed spread over the general level of interest rates'", the European Communities noted:

"By contrast to the types of loans considered by Brealey, the challenged EIB loans extended under 'open-rate' contracts do not guarantee the entities access to EIB funds at a fixed spread over a general level of interest. This is true irrespective of whether or not the borrower's 'credit worthiness deteriorates' or 'cost of credit rises'".¹⁵⁸⁸

6.161 Thus, while the European Communities argued that commitment fees are ordinarily charged on commercial loans when a borrowing entity is offered "immediate access" to a loan "at a fixed spread over the general level of interest rates", it is less than clear, on the basis of the arguments advanced during the proceeding, that the European Communities did not consider such fees to, at least in part, compensate for the risk that the borrower's credit rating might deteriorate, *in addition* to the possibility that the cost of credit for the bank might increase.

6.162 Nevertheless, as it has now clarified its argument in this regard, we have made changes to paragraphs 7.784, 7.791 and 7.793 (now paragraphs 7.790, 7.797, and 7.799) to accurately reflect the European Communities' position. Despite this clarification, we have left unchanged our overall conclusion on the purpose of a commitment fee.

5. Paragraphs 7.733-7.833

6.163 The European Communities expresses its disagreement with the benefit/benchmark analysis for the EIB loans contained in paragraphs 7.733 to 7.883 of the Interim Report. The European Communities contends that the evidence it had advanced was wrongly dismissed, and that more credibility and weight was unjustifiably ascribed to the United States' proposed benchmarks.¹⁵⁸⁹ Apart from making this statement, the European Communities has neither identified any particular error in the Interim Report, nor asked for any specific changes to the text of any of the relevant paragraphs.

6.164 The United States did not comment on this aspect of the European Communities' request for interim review.

6.165 Given that the weighing of evidence, including its credibility, is the task of the Panel, and in the absence of any substantiated arguments supporting any specific requests from the European Communities, we consider that there is no need to make any changes in response to the European Communities' comments in this regard.

¹⁵⁸⁸ EC, Answer to Panel Question 179 (emphasis added, footnotes omitted).

¹⁵⁸⁹ EC, Request for Interim Review, p.13.

BCI deleted, as indicated [***]

6. Paragraph 7.966

6.166 The European Communities requests that the word "would", used twice in the last sentence of paragraph 7.966 of the Interim Report, be replaced with the word "may", in order to, in its view, ensure consistency between the analyses made in paragraphs 7.966 and 7.963 of the Interim Report.¹⁵⁹⁰

6.167 The United States considers that the European Communities' request appears to be premised on a misunderstanding of the Panel's reasoning. According to the United States, the analyses set out in paragraphs 7.966 and 7.963 of the Interim Report do not raise any questions of consistency.¹⁵⁹¹

6.168 We consider it useful to modify the explanation in paragraph 7.966 of the Interim Report to avoid any confusion about our views. To this end, we have revised paragraph 7.966 (now paragraphs 7.792 – 7.793), albeit not in the terms proposed by the European Communities.

7. Paragraphs 7.983-7.984 and 7.987-7.989

6.169 The United States considers that the Panel could assist the positive resolution of this dispute by providing alternative findings that complete the specificity analysis under the assumption that, as the United States proposed, "disproportionately large amounts of subsidy" and "predominant use" should be examined in the light of the i2i Programme.¹⁵⁹²

6.170 The European Communities opposes the United States' request, noting that the Panel has already thoroughly addressed and assessed the United States' arguments and factual assertions on this issue. The European Communities submits that based on that assessment, the Panel concludes that the i2i was not a "programme" and was not a correct basis for the specificity analysis in the context of Article 2.1(c) of the SCM Agreement.¹⁵⁹³

6.171 The United States' contention that the i2i is the relevant "programme" for the purpose of performing a *de facto* specificity analysis under Article 2.1(c) of the SCM Agreement is described and evaluated in paragraphs 7.971 to 7.982 of the Interim Report. Our conclusion leaves little, if any, room for doubt that we rejected the United States' contention. The United States asserts that alternative findings would contribute to a positive resolution of the dispute, but has not explained how such alternative findings would have this effect.¹⁵⁹⁴ In light of the above, we consider there is no need to prepare alternative findings on this question, and we deny the United States' request that we do so.

8. Paragraphs 7.983, 7.987 and 7.998

6.172 The European Communities proposes the insertion of a new footnote in paragraphs 7.983, 7.987 and 7.998 of the Interim Report to give more support to the observations made in those paragraphs.¹⁵⁹⁵

6.173 The United States considers that the language proposed by the European Communities finds no support in the Panel's evaluation of specificity under Article 2.1(c), nor the evidence on the record

¹⁵⁹⁰ EC, Request for Interim Review, p.14.

¹⁵⁹¹ US, Comment on EC, Request for Interim Review, paras. 73-76.

¹⁵⁹² US, Request for Interim Review, para. 22.

¹⁵⁹³ EC, Comments on US Request for Interim Review, p.10.

¹⁵⁹⁴ Assuming the United States is concerned with the ability of the Appellate Body to "complete the analysis" were it to overturn the Panel's finding and consider that the i2i is the relevant "programme", there are, in our view, sufficient facts discussed in paragraphs 7.971 to 7.982 of the Interim Report to enable it to do so.

¹⁵⁹⁵ EC, Request for Interim Review, p.14.

BCI deleted, as indicated [***]

or even Article 2.1(c) of the SCM Agreement. Equally, the United States submits that the European Communities' own submissions do not provide support for the language it requests be added to paragraphs 7.983, 7.987 and 7.998 of the Interim Report.¹⁵⁹⁶

6.174 In our view, there is no need to add the proposed text to paragraphs 7.983, 7.987 and 7.998 of the Interim Report in order to strengthen the observations made therein, and we therefore deny the European Communities' request.

9. Paragraph 7.996

6.175 The European Communities asserts that the funding amounts referred to in paragraph 7.996 and footnote 3449 of the Interim Report (citing Exhibits US-176 to US-181) refer to "signed" amounts of funding within the European Communities, rather than "disbursed amounts of funding".¹⁵⁹⁷

6.176 The United States argues that the European Communities has provided no evidence to support the assertions it now makes, and notes that it is not entitled to introduce new evidence at the interim review stage of these proceedings.¹⁵⁹⁸

6.177 We agree with the United States that the European Communities' position is an assertion without supporting evidence. Nevertheless, without modifying the text of paragraph 7.996 (now paragraph 7.1003), we consider it useful to insert a footnote in the relevant passage to reflect the European Communities' assertion.

J. WHETHER THE GERMAN, FRENCH, UK, AND SPANISH GOVERNMENTS HAVE SUBSIDIZED AIRBUS THROUGH THE PROVISION OF INFRASTRUCTURE AND INFRASTRUCTURE-RELATED GRANTS

1. Paragraphs 7.1012 and 7.1035

6.178 The European Communities requests that the Panel amend its description of the European Communities' argument concerning the evaluation of general infrastructure in paragraphs 7.1012 and 7.1035 of the Interim Report to more accurately reflect the European Communities' argument as presented, referring in this regard to paragraph 340 of the European Communities' second written submission.¹⁵⁹⁹

6.179 The United States did not comment on the European Communities request in this regard.

6.180 The change proposed by the European Communities would amend our paraphrasing of its argument to incorporate the wording actually used in the European Communities' second written submission, which is the source referred to in the relevant footnotes. We therefore grant the European Communities' request, and have modified the relevant text in both paragraphs 7.1012 and 7.1035 (now paragraphs 7.1019 and 7.1042, respectively).

¹⁵⁹⁶ US, Comment on EC, Request for Interim Review, paras. 77-82.

¹⁵⁹⁷ EC, Request for Interim Review, p.14.

¹⁵⁹⁸ US, Comment on EC, Request for Interim Review, para. 83.

¹⁵⁹⁹ EC, Request for Interim Review, p. 15.

BCI deleted, as indicated [***]

2. Paragraph 7.1036

6.181 The European Communities further requests, in view of its comments on paragraphs 7.1012 and 7.1035 of the Interim Report, that the Panel amend paragraph 7.1036 of the Interim Report to delete the phrase "a proposition with which both parties appear to agree".¹⁶⁰⁰

6.182 The United States asks that the Panel deny the European Communities' request in this regard, asserting that nothing in the comments referred to would support finding that the European Communities does not agree with the notion that there is no infrastructure that is inherently "general".¹⁶⁰¹ Moreover, the United States notes that the European Communities does not object to the final sentence of footnote 3529 of the Interim Report which is appended to the phrase to which the European Communities objects. That footnote notes the Panel's understanding that the European Communities is not arguing that certain types of infrastructure are general *per se*, and that the European Communities argues that three factors should be considered in determining whether infrastructure is "general", and that the type of infrastructure is only one of those three.

6.183 In our view, the mere fact that the European Communities argues for a two-stage approach in determining whether limitations on the use of infrastructure are relevant to the determination whether it is general does not demonstrate that it disagrees with the proposition that there is no infrastructure that is inherently general. The European Communities points to no submission or argument it made during the proceedings which would demonstrate its disagreement with this proposition. Moreover, the European Communities argues that the term "infrastructure" means "basic goods and services in a society which underpin its economic performance" and that "general infrastructure" is provided for the benefit of the public at large, where the relevant good or service is accessible by the public at large, or where it "enables" members of the public at large, thereby fulfilling a public policy objective.¹⁶⁰² The European Communities argues that determining whether infrastructure is "general" requires consideration of three factors:

"(i) the substance of government action related to basic installations, facilities and services needed to support social as well as economic development; (ii) their public policy objective and (iii) their designation for public use by either being publicly accessible, by enabling access by members of the public at large, or by providing common goods to the public".¹⁶⁰³

Based on the foregoing, it seems clear to us that the European Communities did not argue that the *nature* of infrastructure is determinative of whether it is general. Thus, we maintain our interpretation of the European Communities' position as appearing to agree with the proposition that there is no infrastructure that is inherently "general" *per se*, and deny the requested amendment.

3. Paragraph 7.1044, footnote 3547

6.184 The European Communities requests the Panel to amend its description of the facts concerning the upgrading of existing and building of new dykes in footnote 3547 to paragraph 7.1044 of the Interim Report, to reflect the European Communities' factual assertions.¹⁶⁰⁴

6.185 The United States did not comment on this aspect of the European Communities comments.

¹⁶⁰⁰ EC, Request for Interim Review, pp. 15-16.

¹⁶⁰¹ US, Comments on EC Request for Interim Review, paras. 84-88.

¹⁶⁰² EC, FWS, para. 716.

¹⁶⁰³ EC, Answer to Panel Questions 90, 186 and 221; EC, FWS, para. 724.

¹⁶⁰⁴ EC, Request for Interim Review, p. 16.

BCI deleted, as indicated [***]

6.186 The European Communities seeks to include, in the Panel's description of the factual background of the Mühlenberger Loch project, its assertions that the upgrading of existing and building of new dykes around the existing Airbus facility and the reclaimed land "were part of the federal and regional flood protection programme for the whole of the river Elbe for the period 2002-2012. The programme, which was started in the early 1990s, required the authorities to make improvements to the existing dykes."¹⁶⁰⁵ However, the European Communities cites no evidence in support of these assertions. Paragraph 756 of the European Communities' first written submission, where these assertions are first made, cites Exhibits EC-545 and EC-549, albeit not as support for these specific assertions of fact. In any event, neither of these documents refers to the federal and regional flood protection programme, or links the work undertaken in the Mühlenberger Loch area with any required improvements to flood protection in the area. Indeed, both documents indicate that most, if not all, of the flood protection measures were necessary as a result of the land reclamation project. Thus, while we do not doubt that the work was undertaken in a manner consistent with the need for flood protection in the area and with the applicable standards, and that it was carried out consistently with the general flood protection programme, we see no basis for the conclusions proposed by the European Communities, and therefore deny this aspect of its request.

4. Paragraph 7.1059

6.187 The European Communities requests that the Panel amend paragraph 7.1059 of the Interim Report to add a footnote describing the Hamburg Real Estate Experts Committee and specifically its independence and autonomy, asserting that this would be commensurate with the Panel's description of the United States' real estate experts in footnote 3560 to paragraph 7.1048 of the Interim Report.¹⁶⁰⁶

6.188 The United States observes that it understands that the fact that the Panel did not include the European Communities' assertions in this regard reflects that they were not relevant to the Panel's ultimate analysis.¹⁶⁰⁷ The United States does not specifically object to the European Communities' request, but requests that, should the Panel grant it, it should clearly indicate that these are the European Communities' arguments, not undisputed facts, and refer in addition to the United States' counterarguments at paragraphs 365-371 of its second written submission.

6.189 We grant the European Communities' request in part, by adding a footnote to paragraph 7.1059 (now paragraph 7.1066) describing the function of the Experts Committee. However, we have not included the European Communities' assertions as to the independence and autonomy of the Experts Committee, which the United States specifically disputed, and as to which we made no findings.

5. Paragraph 7.1061

6.190 The European Communities requests the Panel to add a sentence at the end of paragraph 7.1061 of the Interim Report summarizing the European Communities' argument concerning possible returns other than rent that justified Hamburg's investment in the creation of the land.¹⁶⁰⁸

6.191 The United States did not comment on this aspect of the European Communities' request.

¹⁶⁰⁵ EC, Request for Interim Review, p. 16.

¹⁶⁰⁶ EC, Request for Interim Review, p. 16.

¹⁶⁰⁷ US, Comments on EC Request for Interim Review, para. 90.

¹⁶⁰⁸ EC, Request for Interim Review, p. 16.

BCI deleted, as indicated [***]

6.192 We have added a sentence to paragraph 7.1061 (now paragraph 7.1069) summarizing the European Communities' arguments in this regard, which were already partially reflected in paragraph 7.1055 of the Interim Report (now paragraph 7.1062 below), albeit in terms different from those proposed by the European Communities.

6. Paragraph 7.1080

6.193 The European Communities requests an amendment to paragraph 7.1080 of the Interim Report to more fully reflect the European Communities' argument that the amount the United States asserted Hamburg authorities invested in the creation of land at Mühlenberger Loch was an early estimate, and that the aggregate costs were lower, to indicate specific evidence relied upon in this regard, with a footnote reference to Exhibit EC-548, and to add a parenthetical indicating that these were the total costs foreseeable in 2006.¹⁶⁰⁹

6.194 The United States considers that the first part of the European Communities' request is unnecessary, since the panel rejected the estimate cited by the European Communities as not representing all the relevant costs.¹⁶¹⁰ The United States further requests that if the Panel grants the first part of the European Communities' request, it also include a more detailed explanation of the United States' argument and evidence relied upon in this regard.¹⁶¹¹ Finally, the United States objects to the second part of the European Communities' request, asserting that the assertion made by the European Communities is new, and that the European Communities has offered no evidentiary support for it.

6.195 We have modified paragraph 7.1080 (now paragraph 7.1088) to more fully reflect both parties' arguments, and the evidence relied upon by them, albeit in different terms than suggested by either party.

7. Paragraph 7.1087

6.196 The European Communities requests that the Panel amend the second sentence of paragraph 7.1087 of the Interim Report to reflect the "equal importance" the European Communities asserts it ascribed to the two aspects of its argument discussed in this paragraph.¹⁶¹²

6.197 The United States objects to the European Communities' request, asserting that the sentence in question reflects the Panel's characterization of the extent of the European Communities' reliance on a particular argument, and that while the European Communities may not agree with that characterization, it has provided no explanation for why that characterization is unfounded.¹⁶¹³

6.198 The sentence which the European Communities seeks to amend clearly describes our understanding as to the extent of the European Communities' reliance on the view that land reclamation is a government task. As the European Communities has made no argument now, and refers to none made previously, that would suggest that our understanding in this respect is unwarranted, we deny the European Communities' request.

BCI deleted, as indicated [***]

8. Paragraph 7.1086, footnote 3652

6.199 The European Communities requests the Panel to amend footnote 3652 of the Interim Report to reflect the correct source, and supplement the text of the footnote to more fully reflect the European Communities' argument.¹⁶¹⁴

6.200 The United States did not comment on this aspect of the European Communities' comments.

6.201 The European Communities is correct that the footnote as originally drafted cites the wrong source. The text the European Communities seeks to add to the footnote is based on the correct source which should have been cited, and therefore reflects the European Communities' argument as originally presented. We therefore grant the European Communities' request, and have amended footnote 3652 (now footnote 4004) to refer to the correct source and adding additional text.

9. Paragraph 7.1087, footnote 3655

6.202 The European Communities requests that the Panel supplement footnote 3655 of the Interim Report to cite paragraphs 1079-1089 of the European Communities' second written submission in addition to the cited reference.¹⁶¹⁵

6.203 The United States objects to this request, asserting that the paragraphs to which the European Communities seeks to add a reference do not deal with the question whether land reclamation conferred a benefit within the meaning of Article 1.1(a) of the SCM Agreement, but with the adverse effects caused by the provision of the infrastructure in question, noting the location of those paragraphs in the European Communities' second written submission, and the location of the Panel's consideration of those paragraphs in its Interim Report.

6.204 The European Communities provides no justification for its request. The reference in footnote 3655 of the Interim Report is the specific source for the text quoted in paragraph 7.1087 of the Interim Report, to which the footnote is appended. Moreover, we agree with the United States that the paragraphs referred to by the European Communities do not address the question of benefit, which is the subject of this section of the Interim Report, and thus are not relevant to the Panel's analysis here. We therefore deny the European Communities' request.

10. Paragraph 7.1120

6.205 The European Communities disagrees with the Panel's conclusion in paragraph 7.1120 of the Interim Report that the cost of the runaway extension was DM 40 million, arguing that it did not accept the amount of DM 40 million "as an accurate estimate, as the cost of the runway extension". The European Communities argues that there is evidence on the record showing that the actual cost of the runway extension was much lower. Consequently, the European Communities requests the Panel to revisit the evidence in the record on this matter and concludes that the City of Bremen actually paid [***] or at least an amount not exceeding [***].¹⁶¹⁶

¹⁶¹⁴ EC, Request for Interim Review, p. 17.

¹⁶¹⁵ EC, Request for Interim Review, p. 17.

¹⁶¹⁶ EC, Request for Interim Review, pp. 17-18.

BCI deleted, as indicated [***]

6.206 The United States objects to the European Communities' request in this regard, asserting that the statement that the parties do not disagree about the accuracy of the DM 40 million figure as an estimate of the cost of the runway extension is correct as a matter of fact.¹⁶¹⁷

6.207 Our conclusion in paragraph 7.1120 of the Interim Report was not that the European Communities accepted the amount of DM 40 million as the cost of the runway extension, but merely that the European Communities did not dispute that this figure represented the planned expenditures, *i.e.*, an accurate estimate of the cost of the runway extension as of the date of the estimate. We continue to understand the European Communities not to dispute the accuracy of this figure as an *estimate* at the time of the costs of the runway extension. The European Communities argued, and maintains, that the estimate turned out to be wrong, and that the actual cost of the runway extension was a different, lesser amount. We considered those arguments, and concluded that the evidence presented by the European Communities did not demonstrate what the actual costs of the runway extension alone were, distinct from other aspects of the project. We therefore accepted the estimated amount, rather than the amount the European Communities asserted was the actual cost, for purposes of our analysis.

6.208 In arguing that we should revise our findings in paragraph 7.1120 of the Interim Report, the European reiterates its argument, which we rejected in the Interim Report, relying on the same exhibits, and suggesting no further relevant analysis. Taking the evidence proffered by the European Communities at face value, Exhibits EC-621 and EC-622 are, respectively, undated excerpts from (1) a budgetary plan showing amounts expensed in 1988, amounts budgeted for 1989 and 1990, and amounts committed for 1990 and (2) an overview from the City of Bremen showing actual payments for the "Relocation of the River Ochtun /extension of the runway" between 1987 and 1994. Since the latter document does not distinguish between the amounts spent for the extension of the runway, the measure at issue in this dispute, the amounts spent for the restoration of the runway and amounts spent on other aspects of this project, it is, in our view, insufficient to substantiate the European Communities' argument as to the actual cost of the runway extension. And since the former document does not show the actual expenditures for the extension of the runway, but a combination of expensed amounts for 1988, budgeted amounts for 1989 and 1990, and commitments for 1990, it is similarly insufficient to substantiate the European Communities' argument as to the actual cost of the extension. Moreover, the figures in the columns labelled "commitments" "budgeted" and "expensed" in Exhibit EC-621 do not sum to the total in the note referring to the "total costs of the extension", and the figures in that note do not sum to the total referred to in the heading of the note as the total costs of the extension. While the European Communities argues that the evidence demonstrates that the total amounts expended were less than the estimated amount, we simply cannot reach a conclusion as to the actual amount expended on the basis of the evidence before us. We therefore conclude that nothing in the European Communities' argument as now formulated, or the evidence relied upon, substantiates the amount of the actual expenditure on the runway extension, and therefore deny the European Communities' request to revisit the evidence and change our conclusion.

6.209 However, we recognize that the phrase "accurate estimate" is not clear in context, given the European Communities' position that the actual costs were lower, implying that the estimate was not "accurate", since it turned out to be wrong. Therefore, we have modified paragraph 7.1120 (now paragraph 7.1128) to clarify its meaning in this regard.

11. Paragraph 7.1124

6.210 The European Communities requests the Panel to modify the third sentence of paragraph 7.1124 of the Interim Report, to reflect that it argued that "aircraft weight bears a

¹⁶¹⁷ US, Comments on EC Request for Interim Review, paras. 100-102.

BCI deleted, as indicated [***]

relationship to use of the runway extension, for the simple reason that heavier aircraft require longer runways".¹⁶¹⁸

6.211 The United States objects to the European Communities' request, asserting, *inter alia*, that the cited European Communities' statement concerns the need for longer runways in the abstract, and does not address the question whether heavier Airbus aircraft actually required the use of the extended Bremen runway.¹⁶¹⁹

6.212 The point made in paragraph 7.1124 of the Interim Report is that the European Communities did not argue, and did not provide any evidence, that Airbus aircraft use the extended runway **because** they are heavier than other aircraft landing at Bremen airport. On the other hand, the United States submitted evidence indicating that other aircraft, heavier than Airbus aircraft using the extended runway, did not, barring emergencies, use the extended runway. Thus, we concluded that Airbus paid fees on the basis of aircraft weight – as did all other users of the Bremen airport – but that the fees paid by Airbus did not relate to the use of the extended runway. The European Communities does not now assert that it provided evidence that heavier aircraft require use of the extended runway, but merely that it argued that this was the case in general. Since this general proposition, even accepting it as true, does not demonstrate that Airbus paid fees for the use of the extended runway, we see no basis for the European Communities' request. We therefore deny the European Communities' request, but have modified paragraph 7.1124 (now paragraph 7.1131) to make our point more clearly.

12. Paragraph 7.1131

6.213 The European Communities requests the Panel to modify the first sentence of paragraph 7.1131 of the Interim Report by deleting the phrase "and particularly with the development and production of the A380 aircraft", asserting that the cited reference, EC, FWS, paragraph 916, while noting that Airbus France, Air France, SIDMI, CUS-Elyo, Exxon Mobil, STTS and 3R purchased land at the site, does not state that all of these companies, at the Aéroconstellation site or otherwise, were engaged "particularly with the development and production of the A380".¹⁶²⁰

6.214 The United States considers that the statement in question is not properly understood as indicating that the companies that purchased the land were engaged particularly with the development and production of the A380, but rather that the statement reflects the Panel's understanding based on evidence submitted by the United States that, *inter alia*, the site was designed and built specifically for Airbus and related business, particularly in connection with A380 production.¹⁶²¹ Accordingly, while the United States agrees with the European Communities' that the reference to paragraph 916 of the European Communities' first written submission may not sufficiently reference the facts underlying the Panel's statement, it suggests that rather than deleting the statement, which the United States considers factually correct as drafted, the Panel could reflect the United States' evidence in support of this statement in footnote 3741 of the Interim Report.

6.215 We note in this regard that paragraph 7.1131 of the Interim Report does not state that land in the ZAC Aéroconstellation was sold to companies "engaged particularly with the development and production of the A380" but rather that the land was sold to companies "involved in the aeronautical industry, and particularly with the development and production of the A380 aircraft" (footnote omitted). This statement reflects our understanding, based on, *inter alia*, evidence referred to by the United States in its Comments on the EC request for Interim Review, that the development of the

¹⁶¹⁸ EC, Request for Interim Review, p. 18, referring to EC, Answer to Panel Question 96, para. 257.

¹⁶¹⁹ US, Comments on EC Request for Interim Review, para. 103.

¹⁶²⁰ EC, Request for Interim Review, pp. 18-19.

¹⁶²¹ US, Comments on EC Request for Interim Review, para. 107.

BCI deleted, as indicated [***]

ZAC Aéroconstellation was undertaken to provide a suitable site for Airbus A380 final assembly line, and related businesses, *i.e.*, companies involved in the aeronautical industry, and involved in the development and production of the A380. We therefore deny the European Communities' request, but have modified paragraph 7.1131 (now paragraph 7.1139) to more clearly explain our views.

13. Paragraph 7.1167, footnote 3840

6.216 The European Communities requests the Panel to delete the phrase "the production of A380 aircraft" from the second sentence of footnote 3840 of the Interim Report, arguing that the cited reference, the European Communities' second confidential oral statement at paragraph 31, does not state that all of the companies, at the Aéroconstellation site or otherwise, were engaged in "the production of A380 aircraft".¹⁶²²

6.217 The United States suggests that the European Communities appears to misunderstand the statement in that footnote, which it considers to indicate that, had the French authorities not done so, "Airbus could have created the EIG facilities itself because they are necessary for its A380 production activities and for those of the other companies purchasing land in the ZAC that participate in the production of A380 aircraft." The United States proposes alternative text should the Panel agree with the United States' understanding and decide to modify the footnote.¹⁶²³

6.218 The European Communities seems to be of the view that because we cited a reference, that reference must itself reflect the entirety of the statement in connection with which it is cited. This is not the case here. The source referenced in footnote 3840 of the Interim Report, the European Communities' second confidential oral statement at paragraph 31, is cited to reflect that the European Communities itself recognized that had the French authorities not created the EIG facilities, Airbus would have done so itself. The remainder of the sentence reflects our view as to why Airbus would have done so – because those facilities were necessary to its activities in the production of A380 aircraft, and those of other companies also involved in production of that aircraft at the ZAC site. Therefore, we deny the European Communities' request, but we have modified footnote 3840 (now footnote 4192) to more accurately reflect our views.

14. Paragraph 7.1171

6.219 The European Communities observes that paragraph 7.1171 of the Interim Report states that the Aéroconstellation project "was undertaken to suit Airbus' needs (...)", while at paragraphs 7.1131 and 7.1169, and footnotes 3839 and 3840 of the Interim Report, the Panel notes the project's utility for Airbus France as well as the other companies purchasing land at the site, and requests that the Panel "adopt a consistent approach to this question".¹⁶²⁴

6.220 The United States does not consider there to be any inconsistency in the passages referred to by the European Communities, and therefore asks the Panel to decline the European Communities' request.¹⁶²⁵

6.221 Paragraph 7.1171 of the Interim Report sets out our conclusion that the ZAC Aéroconstellation was not a measure of general infrastructure, which rests on our consideration of the facts concerning its creation and provision, which in our view demonstrated that "the development of the ZAC Aéroconstellation was undertaken to suit Airbus' needs, and in particular its needs in

¹⁶²² EC, Request for Interim Review at p. 19.

¹⁶²³ US, Comments on EC Request for Interim Review, paras. 110-111.

¹⁶²⁴ EC, Request for Interim Review at p. 19.

¹⁶²⁵ US, Comments on EC Request for Interim Review, para. 114.

BCI deleted, as indicated [***]

connection with the assembly and testing of A380 aircraft." This conclusion is not inconsistent with the other statements referred to by the European Communities, which merely reflect that other companies located at the site are also involved in the assembly and testing of A380 aircraft, and thus the development of the ZAC is useful to them in those activities, as well as in their other aeronautical industry activities at the site. We therefore deny the European Communities' request and make no changes.

15. Paragraph 7.1193

6.222 The European Communities requests the Panel to replace the first sentence of paragraph 7.1193 of the Interim Report with text quoted from the second sentence of the European Communities' first written submission at paragraph 739, which states "However, even if regional aid programmes were considered to limit access to the subsidy under Article 2.1(a) of the SCM Agreement to those enterprises located in the designated area, such programmes could be non-specific within the meaning of Article 2.1(b) of the SCM Agreement". The European Communities further requests, "for the same reason" that the Panel replace the reference to Article 2.2 at the end of the second sentence of paragraph 7.1193 of the Interim Report by "Article 2.1(a)". The European Communities notes that at paragraphs 896-907 (Nordenham) and 970-973 (July 2003 grant in Andalusia) of its first written submission, it explained its view that these regional aid grants are non-specific under Article 2.1(b), and requests the Panel to reflect this in paragraph 7.1193 of the Interim Report.¹⁶²⁶

6.223 The United States requests the Panel to reject the European Communities' request to amend paragraph 7.1193 of the Interim Report, arguing that the requested change would not accurately reflect the European Communities' arguments as made.¹⁶²⁷ The United States notes that the Panel did not cite only the second sentence of paragraph 739 of the European Communities' first written submission, but the paragraph as a whole, which in the United States' view, taken in context, confirms that the Panel's description of the European Communities' argument is accurate. The United States considers that no change is necessary, but proposes alternative text should the Panel decide to amend paragraph 7.1193 of the Interim Report.¹⁶²⁸

6.224 While the United States is correct that we did not rely on only the second sentence of the cited reference, and that therefore simply quoting that sentence would not accurately reflect the European Communities' argument summarized in this paragraph, we do consider that the summary as originally drafted may not fully reflect the European Communities' argument. However, the European Communities' proposed text does not, in our view, accurately summarize the European Communities' argument in this regard. We therefore have made certain clarifying changes to paragraph 7.1193 (now paragraph 7.1201), albeit in different terms from those proposed by the European Communities.

16. Paragraph 7.1227 and footnote 3920

6.225 The European Communities requests that the Panel reconsider the statement in footnote 3920 of the Interim Report that:

"Although the EC asserts that the programme under which the Andalusian grants were made was generally available throughout Andalusia, the information before us supports the United States' assertions concerning the limitation to a "designated

¹⁶²⁶ EC, Request for Interim Review, p. 19.

¹⁶²⁷ US, Comments on EC Request for Interim Review, paras. 116-118.

¹⁶²⁸ US, Comments on EC Request for Interim Review, para. 119.

BCI deleted, as indicated [***]

geographical region within the jurisdiction of the granting authority. Exhibits US-240, US-242."

The European Communities considers this statement to be incorrect as a matter of fact.¹⁶²⁹ The European Communities reviews evidence it submitted on this question, and requests the Panel to find that the July 2001 grant to Puerto Santa Maria and the July 2002 grant to Sevilla were not specific subsidies within the meaning of Article 2.2 of the SCM Agreement.

6.226 The United States opposes the European Communities' request, noting that the European Communities does not provide any new explanation or point to other evidence in the record, but rather asks the Panel to review, *de novo*, the arguments and evidence before the Panel, on the basis that the European Communities disagrees with the Panel's conclusion, which the United States, referring to evidence and arguments it submitted, considers to be correct.¹⁶³⁰

6.227 With respect to paragraph 7.1227 of the Interim Report, the European Communities notes that, in the case of the EUR 7.6 million grant from Castilla-La Mancha in March 2004, it had argued that this grant was made under a programme providing funds throughout the granting authority, *i.e.*, the government of Castilla-La Mancha, citing its first written submission as paragraphs 979-981 and Exhibits EC-136 and EC-137. The European Communities further notes that the United States appears not to dispute this.¹⁶³¹ The European Communities considers that this should be reflected in this paragraph and the subsequent analysis, and requests the Panel to find that the EUR 7.6 million grant from Castilla-La Mancha was not specific within the meaning of Article 2.2 of the SCM Agreement.

6.228 The United States opposes this aspect of the European Communities' request, again asserting that the European Communities asks the Panel to conduct a *de novo* review of arguments and evidence it has already reviewed before coming to its conclusion.¹⁶³² The United States points out that the EUR 7.6 million Castilla-La Mancha grant is co-funded by the European Regional Development Fund, citing the second to last paragraph of the preamble of Exhibit EC-136, and asserts that it is, as such, specific under Article 2.2 of the SCM Agreement, referring to arguments at paragraph 511 of its first written submission. The United States notes that the European Communities has not disputed the participation of the European Regional Development Fund in this grant, and therefore requests the Panel to reject the European Communities' request to modify paragraph 7.1227 of the Interim Report and its subsequent analysis.¹⁶³³

¹⁶²⁹ EC, Request for Interim Review, pp. 19-20.

¹⁶³⁰ US, Comments on EC Request for Interim Review, paras. 121-122.

¹⁶³¹ EC, Request for Interim Review, p. 20. The EC asserts in particular, that United States did not contest that the legal bases for the grant from Castilla-La Mancha are the Decree 53/1998 and the Orden 25 July 2002, and that under these the regional government may grant subsidies throughout the region of Castilla-La Mancha to companies active in all economic sectors. EC, Request for Interim Review, p. 20, footnote 15.

¹⁶³² US, Comments on EC Request for Interim Review, para. 123.

¹⁶³³ The United States also recalls that the EC had opportunity to clarify any aspect of the Castilla La Mancha grant, as it did with the other subsidies at issue in this dispute, in response to questions posed by the Annex V Facilitator. The Facilitator asked the EC and the Airbus governments to provide numerous categories of information regarding each of the grants, including the reasons for approval of the grants, all agreements or other documents providing the legal basis for the grants, and whether the grant "was part of a broader support program run by the Spanish, Castilla-La Mancha or Andalusian government, as the case may be, and, if so, a complete description of each such program, including the terms and conditions for access to funding under such program." Question 76(f), Exhibit US-4 (BCI). The EC did not respond to these questions. *See* Exhibit US-5 (BCI). US, Comments on EC Request for Interim Review, para. 123, footnote 60.

BCI deleted, as indicated [***]

6.229 Although the United States objects to the Panel reviewing *de novo* the evidence on which its conclusions in the Interim Report were based, in our view, it is appropriate for us to do just that in the face of a request for interim review asserting a factual error in the Interim Report. We therefore have reconsidered the evidence and arguments presented by the parties in this regard.

6.230 The European Communities, referring to its first written submission and supporting exhibits, maintains that the July 2001 grant to Puerto Santa Maria and the July 2002 grant to Sevilla were both made under a scheme of the Andalusian government, and that the applications and disbursements were managed by the *Consejería de Trabajo e Industria de la Junta de Andalucía*. The United States acknowledged that the government of Andalusia "provided" the grant to Puerto Santa Maria, and "authorized" the grant to Sevilla.¹⁶³⁴ Citing information submitted by the United States, Exhibits US-240 and US-242, we originally concluded that these grants were provided as part of an Andalusian government development plan for a particular geographic region within Andalusia, the Bahía de Cadiz, and thus were limited to "enterprises located within a designated geographical region within the jurisdiction of the granting authority".

6.231 Having reconsidered the evidence, we are persuaded that this conclusion was incorrect as a matter of fact. Page 14,291 of Exhibit US-240, cited by the United States, provides that the funds were granted "for a plan of action for the Bahía de Cádiz Centre (*Polígono Parque Industrial Bahía*)". Having carefully considered the evidence again, we cannot conclude that the "Plan" referred to in Exhibit US-240 is an Andalusian government development plan for the Bahía de Cadiz.¹⁶³⁵ It appears that the facts surrounding this grant were confounded with the facts surrounding the July 2003 grant to Puerto Real, which was made pursuant to a programme directed toward aiding development in the Bahía de Cadiz area, and which the European Communities acknowledged is not generally available throughout Andalusia.¹⁶³⁶ However, that programme did not come into effect until after the application for the July 2001 Puerto Santa Maria grant had been made, and thus is not relevant to the question of specificity of that grant. The United States did not assert any other basis of specificity with respect to this grant.¹⁶³⁷ In the absence of any other arguments or evidence of specificity, we have changed our conclusion, and determine that the 2001 grant to Puerto Santa Maria was not provided to an enterprise in a designated geographical region within the territory of the granting authority, and is therefore not specific under Article 2.2 of the SCM Agreement.

6.232 Turning to the 2002 grant to Sevilla, we recall that this grant was co-financed by the government of Andalusia and the European Regional Development Fund.¹⁶³⁸ The United States asserted specificity on the basis that "subsidies under the European Regional Development Fund {ERDF} are necessarily limited to "certain enterprises located within a designated geographical region within the jurisdiction of the granting authority," and thus are specific within the meaning of Article 2.2 of the SCM Agreement".¹⁶³⁹ The European Communities did not dispute the fact that the grant was co-financed by the ERDF. However, the European Communities asserted that this grant was made under the same programme as the 2001 Puerto Santa Maria grant, and asserted that it was similarly not limited to "certain enterprises located within a designated geographical region within the jurisdiction of the granting authority", that is, the government of Andalusia. As noted above, the

¹⁶³⁴ US, FWS, para. 505-506.

¹⁶³⁵ Exhibit US-242, also originally cited in this regard, does not even mention the Bahía de Cadiz, since it concerns the 2002 grant to Sevilla, with respect to which the United States did not assert this basis of specificity, and is therefore irrelevant.

¹⁶³⁶ EC, FWS, paras. 970-971.

¹⁶³⁷ As noted above, in footnote 1635, Exhibit US-242, also originally cited in this regard, concerns the 2002 grant to Sevilla, and is therefore irrelevant to the question of specificity with respect to the grant to Puerto Santa Maria.

¹⁶³⁸ US, FWS, para. 506, Exhibit US-242.

¹⁶³⁹ US, FWS, para. 507.

BCI deleted, as indicated [***]

United States acknowledged that the government of Andalusia authorized the grant to Sevilla.¹⁶⁴⁰ The United States' assertion of specificity thus implies that the fact of co-financing makes the ERDF, in effect, the granting authority, within the meaning of Article 2.2 of the SCM Agreement, with respect to the portion of this grant it financed, despite that the government of Andalusia administered the provision of the grant. The European Communities did not address this implication of the United States' argument, and, as noted, did not dispute the fact of co-financing.

6.233 In our view, it is reasonable to conclude that, while "authorized" by the government of Andalusia, in the sense that the government of Andalusia processed the applications and handed out the funds, the ERDF may be considered a granting authority within the meaning of Article 2.2 of the SCM Agreement for the 75 percent of this grant which it financed. As the United States noted, and the European Communities did not dispute, the purpose of the ERDF is "to provide investment in socially and economically challenged areas of Europe."¹⁶⁴¹ Were we to accept the European Communities' position that this grant was not specific because it was authorized by the government of Andalusia under a programme generally available in Andalusia, this would imply that European Communities' funds directed to particular regions in the European Communities, which can clearly be considered "designated geographical region{s} within the jurisdiction of the {ERDF}", could be sheltered from a finding of specificity under Article 2.2 by putting the administration of such grants in the hands of local governments. In our view, such an outcome would create a loophole in the SCM Agreement disciplines on regional subsidies, thereby undermining the object and purpose of that Agreement. We therefore deny the European Communities' request that we find that this grant was not specific under Article 2.2 of the SCM Agreement.

6.234 With respect to the 2004 grant to Castilla-La Mancha, the sole basis for a finding of specificity asserted by the United States was the fact that the ERDF co-financed the grant, a fact which is not disputed by the European Communities. For the reasons just discussed, we maintain our conclusion that this grant was specific and deny the European Communities' request that we find that this grant was not specific under Article 2.2 of the SCM Agreement.

6.235 In view of the above, we have amended paragraph 7.1227 and footnote 3920 (now paragraphs 7.1235 – 7.1237 and accompanying footnotes) to clarify our views and conclusions concerning these grants. In addition, we have made consequential conforming changes to paragraphs 7.1234 (now paragraph 7.1244), 8.1(b)(iv) and 8.3(c) (numbering unchanged) reflecting our amended conclusions.

K. WHETHER THE GERMAN GOVERNMENT'S TRANSFER OF ITS OWNERSHIP SHARE IN DEUTSCHE AIRBUS TO THE DAIMLER GROUP IS A SPECIFIC SUBSIDY TO AIRBUS

1. Paragraph 7.1235

6.236 The European Communities considers that the phrase "various transactions" in the first sentence of paragraph 7.1235 of the Interim Report is imprecise and requests that the sentence be reworded.¹⁶⁴²

6.237 The United States has not made any comment in respect of this request.

6.238 We have made the changes requested by European Communities in paragraph 7.1235 (now paragraph 7.1245).

L. WHETHER THE GERMAN GOVERNMENT HAS SUBSIDIZED AIRBUS BY FORGIVING AT LEAST DM 7.7 BILLION OF DEUTSCHE AIRBUS' GOVERNMENT DEBT

1. Paragraph 7.1302 and footnote 4060

6.239 The European Communities requests the Panel to add to its summary of the European Communities' argument at the end of paragraph 7.1302 of the Interim Report to describe it fully. In this regard, the European Communities suggests specific changes to paragraph 7.1302 of the Interim Report and the addition of a reference in footnote 4060 of the Interim Report.¹⁶⁴³

6.240 The United States has not made any comment in respect of this request.

6.241 At paragraphs 297 – 301 of its Response to Panel Question 103, the European Communities explained the due process concerns that it alleges would arise if the United States were permitted to broaden the scope of the dispute to include a challenge to an element of the 1989 restructuring of Deutsche Airbus. We recall that the European Communities argued that the United States' argument, that the question whether the 1998 settlement could be considered a settlement for fair market value should involve a consideration of the terms of the original debt obligation in 1989 (specifically, the interest rate that the original debt carried), was in fact an attempt by the United States to enlarge the scope of the dispute to challenge an element of the 1989 restructuring of Deutsche Airbus. According to the European Communities, this constitutes a "new claim against a different measure" to the 1998 settlement that was not covered by the U.S. panel request or addressed in the United States' First Written Submission.¹⁶⁴⁴ At paragraphs 297-298 of its Response to Panel Question 103, the European Communities contended that it would be "seriously prejudiced and injured in its rights, as a defendant" if it were required to defend itself against "such a new and complex" claim.¹⁶⁴⁵ Specifically, the European Communities stated that it had never understood the United States to be challenging the terms of the 1989 restructuring, noting that "the terms of reference of a panel are not a moving target that can be adjusted as the complainant likes, and at the expense of the defending party."¹⁶⁴⁶ In addition, the European Communities refers to the factual complexity of the 1989 restructuring (including difficulties that arise from the fact that the measure occurred some 17 years previously), as well complex legal issues concerning the scope, meaning and temporal application of Article 6.1 of the SCM Agreement, and submitted that it cannot be expected to form a position on such issues overnight.¹⁶⁴⁷

6.242 We have revised paragraph 7.1302 (now paragraph 7.1312) in order to more fully reflect European Communities' arguments as outlined above. However, we have used different language from that proposed, in order to more closely reflect the arguments actually made by the European Communities in paragraphs 297 – 298 of its Response to Panel Question 103.

2. Paragraph 7.1304

6.243 The European Communities requests an addition to paragraph 7.1304 of the Interim Report describing the European Communities' responses to the United States' arguments concerning the

¹⁶⁴³ EC Request for Interim Review, pp. 20-22.

BCI deleted, as indicated [***]

nature of the benefit conferred on Deutsche Airbus by the 1998 settlement. The European Communities does not explain why it makes this request.¹⁶⁴⁸

6.244 The United States takes the view that the additions proposed by the European Communities do not accurately reflect the European Communities' arguments as presented in paragraphs 245 and 246 of its Second Oral Statement.¹⁶⁴⁹ Indeed, the United States submits that much of what is reflected in the text proposed by the European Communities is nowhere to be found in the paragraphs of the European Communities' submissions to which the European Communities refers; *i.e.*, paragraphs 245-246 of European Communities' second non-confidential oral statement.¹⁶⁵⁰ The United States therefore requests that, if the Panel decides to modify paragraph 7.1304 of the Interim Report, it do so in a way that more accurately reflects the arguments that the European Communities actually made.^{1651 1652}

6.245 Assuming that the reason for its request is that the European Communities wishes to have additional elements of its arguments on this particular issue reflected in the Report, we are of the view that the European Communities' proposed text does not accurately summarize the arguments that it made at paragraphs 245 – 246 of its second non-confidential oral statement, although it generally reflects those arguments. Therefore, we have revised paragraph 7.1304 (now paragraph 7.1314) in different terms than those suggested by the European Communities, to more fully reflect its arguments.

3. Footnote 4074

6.246 The European Communities considers that footnote 4074 of the Interim Report imprecisely identifies the scope of the United States' claims concerning elements of the 1989 restructuring and requests that the Panel modify it.¹⁶⁵³

6.247 The United States has not made any comment in respect of this request.

6.248 The European Communities' request appears to be related to the request that it makes to modify paragraph 7.1235 of the Interim Report¹⁶⁵⁴ in order to clarify that the United States has challenged only two elements of the 1989 restructuring of Deutsche Airbus. While we do not consider that there is any reason to deny the European Communities' wish for clarity on this point, in our view the European Communities' suggested modification incorrectly narrows the universe of transactions underlying the total DM 9.4 billion in accumulated claims outstanding to the German government that are being challenged by the United States to the two particular elements of the 1989 restructuring. The United States has, in fact, challenged transactions other than those arising from the 1989 restructuring that are also reflected in the DM 9.4 billion amount outstanding in 1998. The first two sentences of paragraph 7.1310 of the Interim Report distinguish between two levels of potential

¹⁶⁴⁸ EC Request for Interim Review, pp. 20-21.

¹⁶⁴⁹ US, Comments on EC Request for Interim Review, para. 124.

¹⁶⁵⁰ US, Comments on EC Request for Interim Review, para. 126.

¹⁶⁵¹ US, Comments on EC Request for Interim Review, para. 126.

¹⁶⁵² We note it may be that the United States mistakenly referred to the version of the European Communities' second non-confidential oral statement submitted on 27 July 2007, which contained different paragraph numbering to the versions submitted on 14 November 2007 and 7 December 2007. The relevant version of the European Communities' second non-confidential oral statement is that submitted on **7 December 2007**, following a series of communications between the parties and the Panel between 7 August 2007 and the submission of the revised version of the European Communities' second non-confidential oral statement on 7 December 2007.

¹⁶⁵³ EC Request for Interim Review, p. 21.

¹⁶⁵⁴ See paragraphs 6.236 - 6.238 above.

BCI deleted, as indicated [***]

subsidies; namely, the original transactions between Deutsche Airbus and the German government, the principal amounts of which amounted to DM 9.4 billion by 1998, and the settlement of those claims in 1998 for a payment of DM 1.75 billion. Footnote 4074 of the Interim Report explains that some of the transactions that are part of the first level of transactions have in fact been challenged by the United States as subsidies in this dispute. It further explains that elements of the 1989 restructuring arrangement fall within this first level category of transactions. The footnote also makes clear that the United States does not challenge all of the transactions comprising the 1989 restructuring, and thus, appears to address the European Communities' concern. In light of the foregoing, we have revised footnote 4074 (now footnote 4434) in order to make this point more clearly.

M. WHETHER THE EQUITY INFUSIONS THAT THE FRENCH GOVERNMENT PROVIDED TO AEROSPATIALE ARE SPECIFIC SUBSIDIES

1. Paragraph 7.1315

6.249 The European Communities requests that the Panel revise its findings that the initial FF 1.25 billion capital contribution to Aérospatiale was made in 1987 (rather than 1988) and that the "second" capital contribution of FF 1.25 billion was made in 1988 (rather than 1989) to conclude that either: (i) the two contributions were made, respectively, in 1988 and 1989; or (ii) as a matter of cash flow, both contributions were in 1988.¹⁶⁵⁵ The European Communities contends that it correctly reported the capital contributions as taking place in 1988 and 1989, as these were the years in which the respective contributions were approved by Aérospatiale's Assemblée Générale and recorded as permanent capital by the company.¹⁶⁵⁶ The European Communities asserts that both contributions were actually received in 1988, should the Panel wish to record the capital contributions on a cash basis.¹⁶⁵⁷

6.250 The United States requests that the Panel decline the European Communities' request to modify its finding in paragraph 7.1315 of the Interim Report.¹⁶⁵⁸ The United States notes that the arguments presented by the European Communities as to the timing of the capital contributions were considered and rejected by the Panel in paragraph 7.1315 of the Interim Report, noting that in footnote 4083 of the Interim Report, the Panel refers to the paragraph of the European Communities' first written submission that cites to Exhibits EC-172 and EC-173. The United States notes that the European Communities' only reference to Exhibit EC-746 in its submissions was in connection with its arguments concerning the benefit conferred by the capital contributions.¹⁶⁵⁹ Moreover, the United States submits that this exhibit simply evidences a decision by Aérospatiale's Assemblée Générale to increase the capital of the company, reflecting one of the steps in the chain of events *following* the capital contribution made by the French government in 1987, but not altering the underlying evidence that the French government made the capital contribution in 1987.¹⁶⁶⁰

¹⁶⁵⁵ EC, Request for Interim Review, p. 21.

¹⁶⁵⁶ EC, Request for Interim Review, p. 21; referring to the following exhibits: Procès-Verbal de l'Assemblée Générale Extraordinaire du 27 avril 1988, Exhibit EC-746 (BCI); Aérospatiale Comptes de l'Exercice 1988, Exhibit EC-172, p. 17; Rapport du Conseil D'Administration à l'Assemblée Générale Extraordinaire du 10 février 1989, Exhibit EC-747 (BCI); Aérospatiale Comptes de l'Exercice 1989, Exhibit EC-173, p. 43.

¹⁶⁵⁷ EC, Request for Interim Review, p. 22.

¹⁶⁵⁸ US, Comments on EC Request for Interim Review, para. 131.

¹⁶⁵⁹ US, Comments in EC Request for Interim Review, para. 129; referring to EC, SWS, para. 549. In addition, we note that reference to Exhibit EC-747 was made in the context of the European Communities' arguments concerning the benefit conferred by the financial contributions; see EC, SWS, para. 548.

¹⁶⁶⁰ US, Comments on EC Request for Interim Review, para. 130.

BCI deleted, as indicated [***]

6.251 The fourth sentence of paragraph 7.1315 of the Interim Report states: "The exhibits to which the EC refers in support of its assertions that the relevant dates of the two capital contributions are 1988 and 1989, rather than 1987 and 1988 as alleged by the United States, actually record the capital contributions as having been made in 1987 and 1988." The exhibits in question, Exhibit EC-172, *Aérospatiale Comptes de l'Exercice 1988* (at p. 32) and Exhibit EC-173, *Aérospatiale Comptes de l'Exercice 1989* (at p. 43) are referred to in paragraph 1132 of the European Communities' first written submission. Exhibits EC-746 and EC-747, to which the European Communities now refers in support of its arguments that the dates of the relevant capital contributions were 1988 and 1989, refer to the actions of Aérospatiale, the recipient of the capital contributions by the French government, to increase its outstanding share capital as a result of the French government's financial contributions. There is no reason why the dates on which Aérospatiale undertook this corporate action should be indicative of the dates on which the funds were actually provided to it. In short, there is nothing in the two exhibits to which the European Communities now refers (Exhibits EC-746 and EC-747) that contradicts or calls into question our factual conclusions concerning the dates of the capital contributions by the French government based on Exhibits EC-172 and EC-173. We therefore deny the European Communities' request.

2. Paragraph 7.1332 and footnote 4125

6.252 The European Communities requests that the Panel delete footnote 4125 of the Interim Report in favour of a substantially expanded description of evidence addressed by the European Communities at paragraphs 1110-1124 and 1131-1160 of its first written submission, paragraphs 531-541 of its second written submission, and in Exhibits EC-166, EC-167 (BCI), EC-169 through EC-181, EC 184 through EC-186 and EC-723 through EC-745.¹⁶⁶¹ In addition, the European Communities requests that, to fully reflect the arguments made and evidence provided by the European Communities, the Panel add to paragraph 7.1332 of the Interim Report or elsewhere, a description of the evidence provided by the European Communities at paragraphs 545 through 550 of its second written submission.¹⁶⁶²

6.253 The United States has not made any comments in respect of these requests.

6.254 The European Communities appears to object to what it considers to be the Panel's "relegation" of evidence it provided in support of its arguments concerning future prospects for Aérospatiale and for the aerospace industry more generally to a one-sentence footnote.¹⁶⁶³ However, the discussion of the European Communities' arguments in the paragraphs that follow paragraph 7.1332 of the Interim Report (*i.e.*, paragraphs 7.1333 through 7.1340 of the Interim Report) make extensive and detailed reference to the same sections of the European Communities' submissions that the European Communities now requests be included in the substantially expanded discussion that it proposes. The evidence referred to at paragraphs 545 through 550 of the European Communities' second written submission indicates information relating to the condition and prospects of Aérospatiale that the French government was legally entitled to receive in its capacity as a shareholder of the company. This evidence appears to have been submitted in order to demonstrate that the French government, as sole shareholder of Aérospatiale, was closely informed about the business plans and prospects of the company. In light of the foregoing, rather than the expanded discussion requested by the European Communities, we have revised footnote 4125 (now footnote 4485) to indicate that the evidence in question is discussed further in paragraphs 7.1334 through 7.1340, 7.1355, 7.1359 and 7.1363 (now paragraphs 7.1344 through 7.1350, 7.1365, 7.1369, and

¹⁶⁶¹ EC, Request for Interim Review, p. 22.

¹⁶⁶² EC, Request for Interim Review, p. 22.

¹⁶⁶³ EC, Request for Interim Review, p. 22.

BCI deleted, as indicated [***]

7.1373), and have revised the footnotes in those paragraphs to explicitly identify the exhibits to which the European Communities' refers in support of the arguments described in those paragraphs.

3. Paragraph 7.1336

6.255 The European Communities requests that, to fully reflect the arguments made and evidence provided by the European Communities, the Panel insert several sentences in a footnote at the end of paragraph 7.1336 of the Interim Report.

6.256 The United States has not made any comment in respect of this request.

6.257 We have revised footnote 4133 (now footnote 4493) to more fully reflect the arguments of the European Communities.

4. Paragraph 7.1364

6.258 The European Communities requests that the Panel include a citation to the "very pessimistic statements made by management in its annual reports about prospects for recovery in the short to medium term" referred to in paragraph 7.1364 of the Interim Report.

6.259 The United States has submitted a list of evidence referred to in the submissions which the Panel might refer to in this regard.¹⁶⁶⁴

6.260 The pessimistic statements of Aérospatiale's management in its annual reports that are referred to in paragraph 7.1364 of the Interim Report are those that are specifically described in paragraph 7.1362 of the Interim Report, and referenced in footnotes 4166, 4167, 4168 and 4169 of the Interim Report, which may have been inadvertently overlooked. Given that we did, in fact, address the matters raised by the European Communities, we deny the request, and make no changes in this regard.

¹⁶⁶⁴ US, Comments on EC Request for Interim Review, paras. 132-133. Specifically, the United States points to the following:

- Message from Louis Gallois, the Chairman of Aérospatiale, in Aérospatiale's 1993 Annual Report, that "Economic conditions will remain very difficult in 1994." US, FWS, para. 603; Aérospatiale Annual Report 1993, Message from the Chairman, Exhibit US-300, p. 3/3.
- Statement by Airbus management, as reflected in a press report, that there was a "poor outlook for military and civil sales for the next two years." US, FWS, para. 603; France rules out Aérospatiale sell-off, Flight International, 9 March 1994, Exhibit US-299.
- Statement in the Aérospatiale Annual Report for 1994 that "An upturn in orders remains uncertain for 1995, particularly new aircraft orders", Exhibit EC-293; and that "The outlook was gloomy in the short-term due to the fragile financial health of airline customers."; "Aérospatiale posts FFr 2.3bn loss", Financial Times, 26 March 1993, Exhibit US-295.
- Statement from a 1994 report of the U.S. National Research Council to the effect that long-term optimism about the market for new commercial aircraft contrasts with considerable pessimism concerning the next several years, in which most observers believe that sales will continue to decline from their 1992 peak for several more years, perhaps through 1996. EC, FWS, para. 1119; National Research Council, High Stakes Aviation: U.S.-Japan Technology Linkages in Transport Aircraft, 1994, pp. 65-66, Exhibit EC-170.

BCI deleted, as indicated [***]

N. WHETHER RESEARCH AND TECHNOLOGICAL DEVELOPMENT FUNDING THAT THE EUROPEAN COMMISSION AND THE MEMBER STATES PROVIDE TO AIRBUS ARE SPECIFIC SUBSIDIES

1. Paragraph 7.1410

6.261 The European Communities requests that a sentence be added to the end of paragraph 7.1410 of the Interim Report, recalling that it had expressed the view, in answering question 279 of the Facilitator during the Annex V process, that the United States' claims against the PROFIT scheme were outside of the Panel's terms of reference.

6.262 The United States did not comment on the European Communities' request.

6.263 We have revised paragraph 7.1410 (now paragraph 7.1421) to record the European Communities' position.

2. Paragraph 7.1413, third sentence and footnote 4292

6.264 The European Communities notes that the third sentence of paragraph 7.1413 of the Interim Report states that the European Communities did not provide information requested during the Annex V process "in respect of all of the alleged measures" because it considered some of the challenged measures to be outside of the temporal scope of the dispute. The European Communities asks that this sentence be amended to more accurately reflect what it asserts is the fact that it did not provide requested information during the Annex V process in respect of only *two* of the challenged R&TD measures for the reason that it considered these to be outside of the temporal scope of the dispute.¹⁶⁶⁵

6.265 The United States did not comment on the European Communities' request.

6.266 During the Annex V process, the European Communities refused to provide information in respect of five groups of R&TD measures: (i) grants made under the 2nd FP; (ii) loans provided under the PROFIT; (iii) the French government R&TD grants between 1986 and 1994; (iv) various R&TD measures relating to the A350; and (v) various alleged R&TD measures involving German *länder* governments.¹⁶⁶⁶ The United States in its first written submission pursued its claims only in respect of the first three groups of measures. While the language in used in paragraph 7.1413 is not inaccurate, we have revised that paragraph (now paragraph 7.1424) to be more precise by explicitly identifying the measures for which the European Communities refused to provide information during the Annex V process.

3. Paragraphs 7.1419, 7.1425, 7.1431, 7.1437 and 7.1443

6.267 The European Communities requests that the statements contained in paragraphs 7.1419, 7.1425, 7.1431, 7.1437 and 7.1443 of the Interim Report indicating that it did not contest the publicly available information submitted by the United States in Exhibits US-317, US-319, US- 314, US-322 and US-324 be deleted. The European Communities considers they wrongly suggest that the European Communities accepted that the publications submitted by the United States give an accurate account of the projects in which Airbus participated. The European Communities justifies its request by pointing to paragraph 1231 of its first written submission and Exhibit EC-194 (BCI).¹⁶⁶⁷

¹⁶⁶⁵ EC, Request for Interim Review, p.23.

¹⁶⁶⁶ EC, Answers to Questions by the Facilitator under Annex V, Exhibit US-5 (BCI).

¹⁶⁶⁷ EC, Request for Interim Review, p.23.

BCI deleted, as indicated [***]

6.268 The United States argues that the only disagreement reflected in paragraph 1231 of the European Communities' first written submission and Exhibit EC-194 (BCI) appears to be with the companies the European Communities considers to be "relevant", and not with the facts reflected in the evidence submitted by the United States and referred to in paragraphs 7.1419, 7.1425, 7.1431, 7.1437 and 7.1443 of the Interim Report.¹⁶⁶⁸

6.269 In our view, paragraph 1231 of the European Communities' first written submission and Exhibit EC-194 (BCI) do not specifically contest the publicly available information submitted by the United States in Exhibits US-317, US-319, US-314, US-322 and US-324. Rather the European Communities' submissions set out the European Communities' own account of the projects and the payments it considers were provided to the "relevant" Airbus entities under the Second to Sixth EC Framework Programmes.¹⁶⁶⁹ In other words, the European Communities' submissions do not contest that, for example, MBB received funding under the Second Framework Programme for the ASANCA project, as indicated in Exhibit US-317. Rather, they reject the view that the "relevant" Airbus companies, as defined by the European Communities, participated in and received funding under this project. We therefore decline to make the changes to paragraphs 7.1419, 7.1425, 7.1431, 7.1437 and 7.1443 of the Interim Report requested by the European Communities. However, in light of the European Communities comments, we have modified paragraphs 7.1416, 7.1422, 7.1428, 7.1434 and 7.1440 (now paragraphs 7.1427, 7.1433, 7.1439, 7.1445 and 7.1451), to ensure the European Communities' arguments are not misunderstood.

4. Paragraphs 7.1416-7.1445

6.270 The European Communities asserts that the projects identified in footnotes 4307, 4325, 4340, 4356 and 4373 of the Interim Report do not relate to LCA, and for this reason they should be excluded from the findings concerning payments made to Airbus under the Second to Sixth EC Framework Agreements. The European Communities asks the Panel to instead focus on the information contained in Exhibits EC-969, 970, 971, 972 and 993 (all BCI).¹⁶⁷⁰

6.271 The United States argues that the European Communities' request merely reasserts the argument that it made in response to Panel Question 277, and should for this reason alone be rejected. In addition, the United States argues that, like that response, the European Communities' request does not point to any submission from European Communities discussing evidence before the Panel that would substantiate its assertion of non-relevance. The United States therefore asks the Panel to reject the European Communities' request.¹⁶⁷¹

6.272 We recall that we asked the European Communities in question 277 to, *inter alia*, "provide a breakdown of all LCA-related projects" under each of the EC Framework Programmes at issue. In response, the European Communities first referred to Exhibits EC-189 through EC-193 (all BCI), which it had already submitted, stating that the information contained therein was over-inclusive in the sense that it included "all projects in which the relevant companies have participated – whether or not they have been judged to be LCA relevant". However, it did not explain which of projects listed in these exhibits were not "LCA relevant". The European Communities then referred to Exhibits EC-968 to EC-972 (all BCI), stating that these contained "payment information ... with regard to other

¹⁶⁶⁸ US, Comment on EC, Request for Interim Review, paras. 134-136.

¹⁶⁶⁹ In Exhibit EC-194, the EC provided information for both "Airbus entities" (Airbus UK, Airbus France, Airbus Deutschland, Airbus Spain, Airbus S.A.S and the "Airbus" operations of their predecessor companies) as well as "non-Airbus entities such as" (EADS Deutschland, GIE EADS CCR, GIE Airbus Industrie and BAE Systems).

¹⁶⁷⁰ EC, Request for Interim Review, p.23.

¹⁶⁷¹ US, Comment on EC, Request for Interim Review, para. 137.

BCI deleted, as indicated [***]

entities ... detailing the EC contribution for each project and the amounts received by each of those entities". Again, the European Communities did not specifically identify which of the projects listed were (or were not) "LCA relevant". Comparing the two sets of Exhibits, we note that the only difference between them is that the latter disclose funding paid to entities the European Communities does not consider to be "relevant" Airbus entities. In other words, the same projects are identified in both sets of Exhibits.

6.273 The European Communities asks the Panel to rely upon Exhibits EC-969 through EC-972 and EC-993 for the purpose of identifying the relevant LCA-related projects. However, these Exhibits list several projects the European Communities now asserts were in fact **not** LCA-related, namely: EUROMESH and All Electric Aircraft (2nd Framework Programme); BRAIN, CRASHWORTHINESS and IMAGES 2000 (3rd Framework Programme); ENHANCE, EDAVCOS, ELGAR, EUROSUP, ISAWARE and PROFOCE (4th Framework Programme); C-WAKE (5th Framework Programme); and TATEM and SMIST (6th Framework Programme). The remaining projects listed in footnotes 4307, 4325, 4340, 4356 and 4373 of the Interim Report, and which the European Communities now asserts were not LCA related, cannot be found in Exhibits EC-189 to EC-193, even though the European Communities described these latter Exhibits to be "over-inclusive" in the sense that they identified projects that were not LCA-related.

6.274 Almost all of the projects identified in footnotes 4307, 4325, 4340, 4356 and 4373 of the Interim Report are listed in Exhibit EC-194 (BCI). However, the European Communities did not refer to this Exhibit in its answer to Panel Question 277. Moreover, in the introductory page of this Exhibit, the European Communities seeks to explain the discrepancies between the lists contained in this Exhibit and the Exhibits submitted by the United States. However, the European Communities' explanation does not identify any of the listed projects as not being related to LCA.

6.275 Thus, having carefully reviewed the European Communities' submissions, and in view of the above discussion, we deny the European Communities' request to revise footnotes 4307, 4325, 4340, 4356 and 4373 of the Interim Report.

5. Paragraphs 7.1425, 7.1427, 7.1430, 7.1431, 7.1433, 7.1442, 7.1443 and 7.1445

6.276 The European Communities asserts that it submitted the total amounts of funding received by "all relevant companies" and "all additional entities requested by the Panel" under the Third, Fourth and Sixth EC Framework Programmes in Exhibits EC-193 (BCI), EC-969 (BCI), EC-970 (BCI), EC-972 (BCI) and EC-993 (BCI). The European Communities asserts that these Exhibits confirm that the contributions identified in footnotes 4324, 4325, 4326, 4340, 4341, 4372, 4373 and 4374 of the Interim Report were not actually made. It therefore asks that the references to "*inter alia*" the BRAIN, IMAGES 2000, ENHANCE, EDAVCOS, ELGAR, EUROSUP, ISAWARE, PROFOCE, SMIST and TATEM projects be removed from these footnotes and, consequently, that an amendment be made to the relevant numbers of and values of projects and contributions identified in paragraphs 7.1425, 7.1427, 7.1430-7.1433 and 7.1445 of the Interim Report.¹⁶⁷²

6.277 The United States argues that the European Communities' request is essentially a restatement of the argument it made in response to Panel Question 277. The United States recalls that in its comments on the European Communities' response to this question, it noted that the European Communities had not disclosed amounts of funding provided to several Airbus entities in allegedly 64 of 145 R&TD projects funded through the Framework Programmes. The United States notes that the

¹⁶⁷² EC, Request for Interim Review, pp.23-24.

BCI deleted, as indicated [***]

Interim Report at least partially agrees with its assessment of the facts. Accordingly, the United States asks the Panel to reject the European Communities' request.¹⁶⁷³

6.278 As explained in the Interim Report, the starting point of our findings on the values of contributions received by Airbus under the Third, Fourth and Sixth EC Framework Programmes was the list of projects submitted by the United States in Exhibits US-314, 317 and 319. These Exhibits contained synopses published by the European Commission of the aeronautics-related projects supported under each of the relevant EC Framework Programmes, listing for each project, the individual participants, endorsers, coordinators and partners. The projects listed in footnotes 4324, 4325, 4326, 4340, 4341, 4372, 4373 and 4374 of the Interim Report, which the European Communities requests be disregarded and deleted from the Interim Report, were identified in Exhibits US-314, 317 and 319; and in each case, one or more Airbus entities were listed as a participant, endorser, coordinator and/or partner. However, the European Communities did not provide any details of any payments received by these Airbus entities under those programmes. While the European Communities contends that these Airbus entities did not receive any contributions under the relevant projects, it has not explained why they were listed in the publicly available project synopses authored by the European Commission. In the absence of any substantiated explanation from the European Communities, the Interim Report treated each identified entity as being a beneficiary of R&TD funding provided under each relevant project. Accordingly, we deny the European Communities' request to amend footnotes 4324, 4325, 4326, 4340, 4341, 4372, 4373 and 4374 and paragraphs 7.1425, 7.1427, 7.1430-7.1433 and 7.1445 of the Interim Report.

6. Paragraphs 7.1436, 7.1437 and 7.1439

6.279 The European Communities explains that the contributions listed in Exhibits EC-968 to EC-972 (all BCI) that were received by "BAE Systems" corresponds to all contributions received by all divisions of BAE Systems (including BAE (Operations) Ltd.), as they existed at the relevant time. In particular, it notes that a grant of EUR [***] to BAE Systems for the C-Wake project under the Fifth Framework Programme appears in Exhibit EC-971 (BCI). Accordingly, it asks that the reference to "C-Wake" be deleted from paragraph 7.1436 and footnotes 4356 and 4357 of the Interim Report, with a consequential amendment being made to the relevant numbers of projects and contributions identified in paragraphs 7.1437 and 7.1439 of the Interim Report.¹⁶⁷⁴

6.280 The United States asks the Panel to reject the European Communities' request for the same reasons it argues the Panel should reject the European Communities' previous request.¹⁶⁷⁵

6.281 The European Communities' request relates to what is effectively a difference in how the European Communities has described the BAE companies receiving funds under the Framework Programme ("BAE Systems") and how the relevant BAE company is named in the publicly available information ("BAE (Operations) Ltd"). We accept the European Communities' explanation and have modified our findings to reflect the amount for BAE (Operations) Ltd, which is referred to in Exhibit EC-971 (BCI) as "BAE Systems".

7. Paragraph 7.1461

6.282 The European Communities submits that instead of attributing to Airbus the total amount of French government aeronautics research funding provided to all recipients between 1986 and 1993, it would be more appropriate to "fill the perceived 'evidentiary gap'" concerning the amount of French

¹⁶⁷³ US, Comment on EC, Request for Interim Review, paras. 138-139.

¹⁶⁷⁴ EC, Request for Interim Review, p.24.

¹⁶⁷⁵ US, Comment on EC, Request for Interim Review, paras. 138-139.

BCI deleted, as indicated [***]

government support provided to Airbus, by attributing to Airbus [***] of the total amount of funds provided to all recipients between these years. This would represent the same proportion of the French government's total funding to aeronautics projects in the years 1994 to 2005 that was actually received by Airbus in those years, which the European Communities submits is confirmed in Exhibit EC-209 (BCI).¹⁶⁷⁶

6.283 The United States did not comment on the European Communities' request.

6.284 We recall that the European Communities was specifically asked in Panel question 278 to provide a "break-down of all LCA-related projects funded by the French government between 1986 to 1993". The European Communities failed to do so because it said that neither the French government nor Airbus was able to locate the relevant contracts. Instead, the European Communities submitted that the proportion of total government funding that Airbus would have received would have been "far less" than the EUR 391 million alleged, citing the fact that Airbus had only received EUR [***] million out of the EUR 809 million provided to all recipients between 1994 to 2005 as supporting this conclusion. At paragraph 7.1461 of Interim Report we dismissed the European Communities' response, observing, *inter alia*, that:

"the explanation the EC has provided for its failure to submit the requested information and the approach it suggests might be adopted by the Panel in order to arrive at an appropriate R&TD figure are less than satisfactory. ... we recall that where a party refuses to supply information requested by a panel, it is open to that panel to draw inferences from the full configuration of facts that are before it. "

6.285 The European Communities now asks the Panel to reconsider its findings and conclude that it would be appropriate to attribute to Airbus [***] of the total amount of funds provided to all recipients between 1986 and 1993, that is, [***] of EUR 391 million, instead of the entire amount. However, in making this request, the European Communities points to no facts that would suggest that the funding Airbus received during the relevant period (1986-1993) represented the same or a similar proportion of total funds granted to all recipients as the proportion of total funding it actually received in the subsequent period (1994-2006). Thus, the European Communities refers to no facts to support its view that it would be appropriate to allocate to Airbus [***] of total funds granted by the French government between 1986 and 1993 as opposed to any other proportion that is less than 100%. We therefore deny the European Communities' request.

8. Paragraph 7.1481

6.286 The European Communities requests that paragraph 7.1481 of the Interim Report be amended to reflect what it asserts was an argument "directly relevant to the benefit analysis" conducted in paragraph 7.1491 of the Interim Report, which made in paragraph 630 of its second written submission.¹⁶⁷⁷

6.287 The United States did not comment on the European Communities' request.

6.288 The focus of the European Communities' request is on the underlined statement in the following excerpt from paragraph 630 of the European Communities' second written submission:

"The European Communities confirms that the total amount of R&T support that has been *committed* to Airbus SAS under the *Luftfahrtforschungsprogramm* (LUFO) I to

¹⁶⁷⁶ EC, Request for Interim Review, p.24.

¹⁶⁷⁷ EC, Request for Interim Review, p.24.

BCI deleted, as indicated [***]

III by 1 July 2005 for the period until 2007 is [***].¹⁶⁷⁸ However, there is no guarantee of funding to Airbus SAS. The amount *disbursed* depends on the amount of eligible costs incurred by Airbus Germany." (underline added, footnote omitted).

In our view, nothing in this statement can be reasonably understood to be "directly relevant" to the question of benefit addressed in paragraph 7.1491 of the Interim Report. Indeed, there is no indication at all in this paragraph that the statement now referred to by the European Communities was intended to articulate its views on the question of whether funding committed under the LuFo III programme, but not disbursed, conferred any benefit of Airbus. We therefore decline to make the requested changes.

9. Paragraphs 7.1502, 1551 and 1552

6.289 The European Communities asks that the reference to "...and the EC member States ..." be removed from paragraphs 7.1502, 7.1551 and 7.1552 of the Interim Report, noting in this regard that the EC Framework Programmes are funded solely from the EC budget and disbursed by the European Commission.¹⁶⁷⁸

6.290 The United States did not comment on the EC request.

6.291 We have modified paragraphs 7.1502, 7.1551 and 7.1552 (now paragraphs 7.1513, 7.1562 and 7.1563) to delete the reference to "...and the EC member States ...".

O. ADVERSE EFFECTS

1. Paragraph 7.1610

6.292 The European Communities requests the Panel to modify the second sentence of paragraph 7.1610 of the Interim Report to indicate that BAe, a UK company, and not the United Kingdom, joined the Airbus consortium in 1979. The European Communities also requests the Panel to modify the third sentence of this paragraph by omitting the United Kingdom, because BAE Systems did not merge into EADS.

6.293 The United States did not comment on this request.

6.294 The European Communities is correct as a matter of fact with respect to both aspects of its request, and we therefore have modified paragraph 7.1610 (now paragraph 7.1621) to correctly reflect the facts.

2. Paragraph 7.1664

6.295 The United States requests that, in order to correctly reflect the cited panel report, the references to "subsidized product" in lines 10 and 12 of paragraph 7.1664 of the Interim Report should both be modified to read "dumped product."¹⁶⁷⁹

6.296 The European Communities agrees with the United States' request.¹⁶⁸⁰

¹⁶⁷⁸ EC, Request for Interim Review, pp.24-25.

¹⁶⁷⁹ US, Request for Interim Review, para. 23.

¹⁶⁸⁰ EC, Comments US, Request for Interim Review, p. 11.

BCI deleted, as indicated [***]

6.297 The Panel report at issue concerned a US Department of Commerce investigation of alleged dumping, and therefore we have made the requested changes to paragraph 7.1664 (now paragraph 7.1675), in order to correctly reflect the facts of that dispute.

3. Paragraph 7.1693, footnote 4785

6.298 The European Communities requests that the Panel amend footnote 4785 of the Interim Report to indicate that the last A300 was delivered in July 2007, whereas the last A310 was delivered in 1993, asserting that this change reflects more accurately the timing of the last deliveries of these aircraft, and requests a similar clarification in paragraph 7.1963 of the Interim Report.¹⁶⁸¹

6.299 The United States did not comment on this request.

6.300 The European Communities cites no source for the date of 1993 for the last delivery of the A310. According to the Airclaims information submitted by the European Communities, there were 7 orders for A310 aircraft in 1993 and 1995, and 9 A310 aircraft were delivered to customers between 1994 and 1998.¹⁶⁸² Moreover, footnote 4785 and paragraph 7.1963 of the Interim Report do not refer to delivery dates, but rather to production dates. The European Communities gives no reason for proposing to change the reference to delivery dates, rather than the production dates mentioned. In the absence of any evidence to support the European Communities' assertion as to the last delivery date for the A310, which is contradicted by information before the Panel, and the absence of any justification for consideration of the last delivery date, rather than the last production date referred to by the Panel, we deny the European Communities' request.

4. Paragraphs 7.1741-1747

6.301 The United States notes that, as part of the assessment of whether imports of Boeing LCA were displaced in the EC market, paragraphs 7.1742-7.1747 of the Interim Report reproduce data presented by the United States on the quantity of LCA deliveries. However, the United States points out that, although the Panel noted, at paragraph 7.1729 of the Interim Report, that the United States also presented data on the value of LCA deliveries (as measured by list prices) in the EC market, the analysis at paragraph 7.1741 of the Interim Report does not reflect the consideration of this data, while paragraph 7.2103 of the Interim Report makes clear that the Panel did consider comparable data on market share measured by value in the context of its material injury analysis.¹⁶⁸³ The United States reiterates its view, as explained during the proceeding, that "the similarity of estimated market shares by value and by volume suggests that the companies are selling relatively similar mixes of high-value and low-value aircraft at any given time."¹⁶⁸⁴ Accordingly, the United States asserts that the similarity of the trends in market share whether measured by quantity of aircraft or estimated value (at list prices) of aircraft corroborates the validity of the data on units delivered relied upon by the Panel and confirms that the Panel's analysis, which is based on units delivered, is not distorted by changes in the relative mix of high-value and low-value aircraft within the single LCA product category. The United States suggests that the displacement analysis in the Interim Report would be strengthened by taking note of the market share data based on value.¹⁶⁸⁵

6.302 The European Communities agrees with the United States on the need for alternative factual findings regarding market shares in the EC market, recalling its own request for alternative factual

¹⁶⁸¹ EC, Request for Interim Review, p. 25.

¹⁶⁸² Exhibit EC-21.

¹⁶⁸³ US, Request for Interim Review, para. 24.

¹⁶⁸⁵ US, Request for Interim Review, para. 26.

BCI deleted, as indicated [***]

findings.¹⁶⁸⁶ However, the European Communities considers that the Panel should make alternative factual findings on market shares based on value not only for the EC market, as requested by the United States, but also for the third country markets at issue in the dispute for specific product groupings, reiterating its view that such alternative factual findings would assist the Appellate Body in completing the analysis in the event it would reverse the Panel's findings. To this end, the European Communities submitted, in its Comments on the United States' Request for Interim Review, a series of tables presenting market share data measured by value. The European Communities explains the methodology it used in preparing those tables, and cites the sources of the data it presents. The European Communities requests the Panel to make alternative factual findings based on that data for all country markets at issue (i) covering all LCA and (ii) broken down by the LCA product groupings that the European Communities suggested.

6.303 With respect to the United States' request, we note that in our analysis of displacement or impedance in the EC market, we focussed on deliveries of LCA as the appropriate measure, as had been argued by the United States, rather than on orders, as had been argued by the European Communities.¹⁶⁸⁷ The United States had submitted delivery information based on both quantities of LCA delivered, and value as measured by list prices, in support of its assertion that both Airbus and Boeing "are selling relatively similar mixes of high-value and low-value aircraft at any given time."¹⁶⁸⁸ This assertion was not disputed by the European Communities. Nor did the European Communities argue that the trends in market share measured by numbers of deliveries was distorted by changes in the relative mix of high-value and low-value LCA within the single like product considered in the Panel's analysis. Therefore, we did not find it necessary to, and did not, make any findings concerning market share in the EC market on the basis of the value of LCA delivered. Moreover, as discussed elsewhere in the Interim Report, the list prices of LCA are not an accurate measure of the price of LCA actually sold and delivered, and thus it is less than clear that market share value information, measured by list price of LCA delivered, is particularly meaningful. We therefore deny the United States' request.

6.304 With respect to the European Communities' request, we deny it for the same reasons as discussed below in connection with our decision to deny the European Communities' other request in this regard.¹⁶⁸⁹

5. Paragraphs 7.1762-7.1781

6.305 The European Communities notes that the Interim Report sets out market share developments between 2001 and 2006 in individual third country markets on an aggregate basis in paragraphs 7.1762-7.1781 of the Interim Report. The European Communities requests that the Panel make alternative findings with respect to market share developments in individual third country markets based on the product groupings that it suggested during the course of the proceedings. The European Communities asserts that such alternative factual findings would enable the Appellate Body to complete the analysis were it to disagree with the Panel's product-related findings. The European Communities considers that its arguments should be fully presented in the report in a fair and balanced manner, and submits that this necessitates presentation of the data by product grouping in tabular form. The European Communities also indicates that it was unaware of criticisms stated by the Panel in the Interim Report concerning its presentation of data. Specifically, the European Communities refers to the Panel's comments that (i) that the European Communities did not count deliveries of Boeing 747 aircraft, (ii) that the European Communities did not count deliveries of

¹⁶⁸⁶ EC, Comments on US Request for Interim Review, pp. 25-30. See paragraphs 6.305 - 6.314 below.

¹⁶⁸⁷ Interim Report at paragraphs 7.1734- 1739.

¹⁶⁸⁸ US, Request for Interim Review, para. 25, citing US, FWS, para. 734.

¹⁶⁸⁹ See below, beginning at paragraph 6.309

BCI deleted, as indicated [***]

Boeing 757 aircraft into the EC market and (iii) that the European Communities treated deliveries to a leasing company as deliveries to the country of the leasing company and not as deliveries to the country of the operating airline. the European Communities notes that the Panel did not request it to present data in this form.

6.306 The European Communities submitted, in its Request for Review of the Interim Report, tables setting out market share developments in individual country markets by product grouping, correcting for the Panel's criticisms described above, and asks that the Panel use this data, or derive the same data itself from the record evidence, to (i) record the European Communities' arguments and (ii) make alternative factual findings regarding market share developments in the country markets at issue broken down by products.¹⁶⁹⁰ The European Communities observes that the source of the data it presents, Airclaims, has never been contested, and that both parties, and the Panel, have relied on data from this source.

6.307 The United States objects to the European Communities' request, and asks that the Panel decline to incorporate the tables submitted by the European Communities in the final report, and decline to make alternative factual findings based on these tables.¹⁶⁹¹ The United States contends that the Panel's criticisms of the European Communities' counting methodology could not have come as a surprise to the European Communities, given that these methodological issues were matters of contention between the parties. The United States notes in this regard, for example, that the European Communities argued specifically that deliveries made through leasing companies should be excluded from the market share calculation,¹⁶⁹² and that whether deliveries of the Boeing 747 were relevant to claims of displacement and impedance, or indeed any claims of serious prejudice at all, was addressed at length by both parties.¹⁶⁹³ Thus, the United States considers that the Panel did not deny the European Communities a fair opportunity to present its case, but rather decided that the European Communities' methodological approach to presenting aircraft delivery data was not appropriate.

6.308 The United States notes that, as the European Communities states, the data underlying the tables the European Communities has now presented is not in dispute and is on the record before the Panel. In the United States' view, however, to present that data tabulated according to one set of methodological assumptions rather than another is not simply to rearrange the evidence, but, in effect, to make an argument about the meaning of the evidence in a particular legal context. In the United States' view, that the Panel rejected the European Communities' arguments in the Interim Report does not entitle the European Communities to another opportunity to reframe its arguments at the interim review stage or to present its arguments in a different way, in light of the Panel's decisions on the methodological issues.¹⁶⁹⁴ The United States considers that to include the tables submitted by the European Communities with its Request for Interim Review would imply, wrongly, that the European Communities made arguments with respect to Article 6.3(a) and 6.3(b) during the proceedings on the basis of that data, as presented in the newly-submitted tables, which the European Communities did

¹⁶⁹⁰ EC, Request for Interim Review, pp. 25-30. While the paragraphs referred to in the EC's Comments set out the Panel's consideration of market share developments in individual third country markets, the EC also submitted newly tabulated data for the EC market, which the panel addressed at paragraphs 7.1727-7.1747 of the Interim Report, without any further discussion concerning that data in its Request for Interim Review.

¹⁶⁹¹ US, Comments on EC Request for Interim Review, para. 140.

¹⁶⁹² US, Comments on EC Request for Interim Review, para. 141, citing, *e.g.*, EC, Answer to Panel Question 207, paras. 333-334, 350, 357-358, 364, 382, 389. The United States disagreed. US, Comments on EC Answer to Panel Question 207, paras. 275-277.

BCI deleted, as indicated [***]

not do. Thus, the United States respectfully requests the Panel to reject the European Communities' request.¹⁶⁹⁵

6.309 While the European Communities characterizes the presentation of market share data in the Interim Report as "reflect{ing} the arguments by the United States"¹⁶⁹⁶, in fact it is clear that the presentation of market share data reflects our own conclusions as to the relevant subsidized and like product in this dispute. Having concluded that the relevant subsidized and like product is all Airbus and all Boeing LCA, respectively,¹⁶⁹⁷ we went on to examine the evidence on the basis of that single product, as indicated in paragraph 7.1731 of the Interim Report. We followed the same approach with respect to our consideration of market share in individual third country markets, as set out in paragraph 7.1749 of the Interim Report. In considering the question of market share, we relied on the data presented by the United States, whose accuracy was not disputed by the European Communities, as this data accorded with our own view of the relevant subsidized and like product, while the data presented by the European Communities did not. The European Communities had submitted market share data broken down by the product groupings it asserted the Panel should find to be separate subsidized and like products in this dispute. Having rejected that approach, the European Communities' data as presented was not suitable as a basis for our analysis of market share. Nonetheless, we reviewed the European Communities' data, and concluded that "it provides an inaccurate and incomplete picture of LCA deliveries to the EC market between 2001 and 2006", noting specific concerns with the European Communities' counting methodology in presenting the data in question.¹⁶⁹⁸

6.310 While the European Communities indicates that it was surprised by our criticisms concerning the data it presented, those criticisms did not relate to the presentation of data on the basis of the product groupings advocated by the European Communities during the proceedings, but rather to the European Communities' counting methodology in preparing the tables of data submitted.¹⁶⁹⁹ Moreover, some of these methodological issues were the subject of arguments from the parties, including extensive argument concerning whether the Boeing 747 and Airbus A380 were relevant to the consideration of the United States' claims at all. The European Communities argued throughout that the Panel should not consider the Boeing 747 to be like any Airbus LCA, and should not consider the Airbus A380 to be like any Boeing LCA, views disputed by the United States, and ultimately rejected by us in finding a single subsidized and a single like product. Further, the European Communities suggested that deliveries by leasing companies should not be included in calculating market share,¹⁷⁰⁰ while the United States took the opposing view.¹⁷⁰¹ For the European Communities

¹⁶⁹⁵ US, Comments on EC Request for Interim Review, para. 143.

¹⁶⁹⁶ EC, Request for Interim Review, p. 25.

¹⁶⁹⁷ Interim Report, paras. 7.1639-7.1669.

¹⁶⁹⁸ Interim Report, para. 7.1745. See also, Interim Report, para 7.1767, where we noted that "the data presented by the EC in respect of deliveries to third country markets presents the same concerns as the information it presented on deliveries to the EC market."

¹⁶⁹⁹ We note that we have spot-checked the newly-submitted figures on numbers of LCA delivered, and when aggregated to comport with our conclusions regarding subsidized and like product, they do not yield the same figures as the data on deliveries we relied on in the Interim Report. The European Communities never disputed the figures on deliveries presented by the United States on which we relied. In our consideration of the data as originally submitted by the European Communities, we undertook a similar exercise of aggregations. That exercise resulted in greater differences from the data submitted by the United States, on which we relied, than the aggregation of the newly-submitted data, but the latter still shows differences. Thus, in order to serve as the basis for factual findings, we believe the newly-submitted data would have to be carefully examined in an effort to determine the reason(s) for these discrepancies. That effort should, in our view, necessarily include the views of the United States, were we to undertake such a task.

¹⁷⁰⁰ E.g., EC, Answer to Panel Question 207, paras. 333-334, 350, 357-358, 364, 382 and 389,

¹⁷⁰¹ US, Comments on EC Answer to Panel Question 207, paras. 654-656.

BCI deleted, as indicated [***]

to now submit data in which it includes deliveries of the Boeing 747 and deliveries by leasing companies in its tabulation of deliveries to the different markets being considered is inconsistent with the positions it took throughout the proceedings. In our view, this demonstrates that the newly tabulated data does not, in fact, record the European Communities' arguments as made during the proceeding.

6.311 We agree with the United States that the presentation of data on the basis of a particular set of underlying assumptions is effectively the presentation of an argument in a particular legal context, not simply a question of organizing data. It is clear to us that the presentation of new arguments, which is what the European Communities' newly tabulated data effectively does, is not permissible at this interim review stage of the proceedings. As the European Communities itself argues in a different context, a party cannot change its arguments at this stage of the proceeding, nor is the Panel entitled to mischaracterise a party's arguments in its report.¹⁷⁰² It would, in our view, be entirely inappropriate for us to make alternative findings on the basis of these newly-submitted data, as any such findings would necessarily be based on evidence and arguments not previously before us, and to which the United States has had only the most minimal opportunity to respond. To include such newly-submitted evidence, thereby allowing it to appear as if the arguments based on that evidence had been made during the proceeding, would in our view be unfair, and would deprive the United States of the due process to which it is entitled in dispute settlement in the WTO. Thus, even were we inclined to make alternative findings on the basis of the product groupings asserted by the European Communities, at most such findings would involve consideration of the evidence originally put before the Panel by the European Communities, and not these newly-submitted tables. However, we do not consider alternative findings on the question of market share developments on the basis of the product groupings proposed by the European Communities to be necessary in any event.¹⁷⁰³

6.312 The European Communities suggests that alternative findings would allow the Appellate Body to "complete the analysis" in the event it disagreed with our product-related findings. However, regardless of the evidence on which alternative findings might be made, it is not clear to us, and the European Communities provides no elaboration, as to how such findings would allow the Appellate Body to "complete the analysis". Even were we to make alternative findings with respect to market share developments on the basis of the product groupings asserted by the European Communities, this would not allow for the independent resolution of the dispute by the Appellate Body. Our finding of a single subsidized and like product is a fundamental premise of our entire analysis of serious prejudice, including the analysis of causation, and our overall findings. Thus, it is not apparent to us how, if at all, factual findings concerning market share for separate product groupings could be related to our findings regarding causation based on the premise of a single subsidized and like product. We can see little to be gained from making such alternative findings, as they would not be sufficient, in our view, to allow resolution of this dispute on the basis of the European Communities' view of distinct product categories.

6.313 The question whether to consider LCA as a single subsidized and like product or to consider different products on the basis of the distinctions argued by the European Communities was a critical, and hotly disputed, issue in this dispute. That we might decide that issue in line with the United States' position was clearly a possibility from the outset, one of which the European Communities must have been well aware. That the European Communities chose, despite that possibility, to argue

¹⁷⁰² See, EC, Comments on US Request for Interim Review, p. 21.

¹⁷⁰³ We note that the most significant alternative findings we made concern the question of interpretation of the term "benefit" in the context of the EC's pass-through argument, which is a matter of legal interpretation that has not previously been definitively addressed. That is a very different matter from making alternative factual conclusions based on a legal argument that has been rejected by the Panel for reasons grounded in the text of the Agreement and previous dispute settlement reports.

BCI deleted, as indicated [***]

its entire case on the basis of its own view of the appropriate subsidized and like products, that is, on the basis of multiple distinct subsidized and corresponding like products, rather than presenting arguments and evidence responding directly to the claims as formulated by the United States and the evidence it presented in support of those claims, represents a strategic and tactical choice by the European Communities which it was entitled to make. However, its exercise of this choice, and its presentation of evidence and argument based on its own view of the underlying issue of like and subsidized product does not, in our view, mean that, having rejected the European Communities' position, we are nonetheless required to make alternative findings regarding the United States' claims of displacement and impedance as if we had decided the product issues in line with the European Communities' position.

6.314 For all of the foregoing reasons, we deny the European Communities' request to include in the final report the newly presented tabulations of data on deliveries of LCA to the EC and third country markets,¹⁷⁰⁴ and decline to make alternative findings with respect to market share on the basis of the product groupings put forward by the European Communities, either on the basis of the newly presented data, or on the basis of the originally-submitted evidence.

6. Paragraph 7.1773

6.315 The European Communities requests the Panel to amend the sixth sentence of paragraph 7.1773 of the Interim Report to correct a misstatement.¹⁷⁰⁵

6.316 The United States did not comment on this request.

6.317 The European Communities is correct, and we have therefore corrected paragraph 7.1773 (now paragraph 7.1784) to reflect, as shown in Table 28, that Airbus' 100 percent market share in 2004 reflects orders for two aircraft, not one aircraft as originally stated.

7. Paragraph 7.1790

6.318 The United States requests a modification of the penultimate sentence of paragraph 7.1790 of the Interim Report to more accurately reflect its position.¹⁷⁰⁶ The United States recalls that it explained, in response to a question from the Panel, that

"{W}hen the evidence demonstrates that a customer, after making an "analytical and exhaustive review" of all {relevant} factors, found a difference in price that was significant enough to have a major impact on the outcome of the sale, the evidence demonstrates the existence of price undercutting within the meaning of Articles 6.3(c) and 6.5."¹⁷⁰⁷

In other words, the United States asserts it did not contend that the simple fact that a customer chose one LCA model over another is sufficient evidence of price undercutting. Rather, the United States' argument was that when a customer monetizes all relevant factors, it is making a price comparison that, in the words of Article 6.5, is "made at the same level of trade and at comparable times, due account being taken of any other factor affecting price comparability."¹⁷⁰⁸ If, having made this price

¹⁷⁰⁴ As discussed above, for these same reasons, we deny the European Communities' request to include newly-presented tabulations of data on value of deliveries to the EC and third country markets. See paragraphs 6.301 to 6.304.

¹⁷⁰⁵ EC, Request for Interim Review, p. 30.

¹⁷⁰⁸ SCM Agreement, art. 6.5.

BCI deleted, as indicated [***]

comparison, it finds that one LCA model has a lower net price than a competing LCA model, all such factors having been taken into consideration, the United States argued that the customer's analysis is relevant evidence of the existence of price undercutting within the meaning of Articles 6.3(c) and 6.5.¹⁷⁰⁹ The United States contends that the difference between its actual argument and the argument attributed to it in paragraph 7.1790 of the Interim Report is not immaterial. Although one might conclude from the mere fact that a customer chose one LCA model over a competing LCA model, the customer determined that the LCA model it chose offered better value, this would not – as the text in paragraph 7.1790 of the Interim Report would seem to suggest – necessarily mean that the chosen LCA model had a lower price. According to the United States, airlines do not always make their decisions among competing LCA solely on the basis of price, and therefore an airline's choice of one LCA model over another does not necessarily indicate price undercutting. But where a customer specifically finds that, having taken all relevant factors into account, one LCA model is in fact offered at a lower price than another – and where such price difference has a major impact on the outcome of the sale – then the customer's finding is relevant evidence of "significant price undercutting," as that term is used in Articles 6.3(c) and 6.5 of the SCM Agreement.¹⁷¹⁰ The United States therefore requests that the Panel revise the penultimate sentence of paragraph 7.1790 of the Interim Report.

6.319 The European Communities did not comment on this request.

6.320 Having reviewed the submissions cited by the United States in support of its request, we consider that its proposed text does more accurately represent the thrust of its argument in this regard, and in the absence of any objection from the European Communities, we therefore have modified the penultimate sentence of paragraph 7.1790 (now paragraph 7.1801).

8. Paragraph 7.1856

6.321 The United States requests that the Panel amend the first sentence of paragraph 7.1856 of the Interim Report to more accurately reflect its argument.¹⁷¹¹ That sentence notes that the United States presented, "as evidence of the magnitude of the subsidy," a report by NERA Economic Consulting. The United States notes that, as stated elsewhere in the Interim Report, the figures calculated by NERA represent an estimate of the additional debt burden, in 2006 dollars, that Airbus would have had to carry if it had obtained financing on commercial terms.¹⁷¹² The United States considers that such a figure, while clearly relevant to the question of whether the magnitude of the subsidies is sufficient to cause the alleged effects, does not necessarily represent the amount of the "benefit" of LA/MSF, as that term is used in Articles 1.1(b) and 14 of the SCM Agreement. In the United States' view, while the use of the term "benefit" in conjunction with an explanation of the actual methodology used in the NERA quantification report, as in paragraph 7.1954 of the Interim Report, is not necessarily inappropriate, the use of the term "benefit" in paragraph 7.1856, without further explanation, could be misleading.

6.322 The European Communities agrees with the United States' request to replace the term "benefit" in the first sentence of paragraph 7.1856 of the Interim Report.¹⁷¹³ However, the European

¹⁷⁰⁹ The United States also considered that, if the difference in price was significant enough to have a major impact on the outcome of the sale, then the price undercutting would be "significant price undercutting" within the meaning of Article 6.3(c).

¹⁷¹⁰ The United States notes that paragraph 8.1824 {sic} correctly summarizes the U.S. argument on this point. US, Request for Interim Review, footnote 24. We presume this to be a reference to paragraph 7-1824 of the Interim Report.

BCI deleted, as indicated [***]

Communities disagrees that the language proposed by the United States represents an accurate description of the way in which the United States and NERA have characterised these figures. The European Communities maintains that the United States itself described NERA's figures as calculations "express{ing} [***] uniformly in current dollars"¹⁷¹⁴, and that NERA describes its figures as the "cumulative amount of cash that Airbus saves over time by paying less than market".¹⁷¹⁵ Moreover, the European Communities notes that in describing the relevance of these figures to its arguments, the United States stated that "the relevant counterfactual for determining the effect of the subsidy is *not* to consider what the LCA market would be like if Airbus had launched all of its aircraft when it did and was an additional \$178.2 billion in debt"¹⁷¹⁶, but rather that that these figures were evidence that Airbus could not have launched its products as and when it did absent LA/MSF.¹⁷¹⁷ Thus, in the European Communities' view, the United States did not frame the relevance of these figures in terms of "the net present impact of LA/MSF on the balance sheet of Airbus" – *i.e.*, the United States did not make the argument that it now asks the Panel to include in the description of the United States' arguments. The European Communities asserts that the United States cannot change its arguments at this stage of the proceeding, nor is the Panel entitled to mischaracterise the United States' arguments in its report.

6.323 While the United States asserts that the figures it presented based on the NERA report are relevant to the question whether the magnitude of the subsidies is sufficient to cause the alleged effects, it argues that they do not necessarily represent the amount of the "benefit" of LA/MSF, as that term is used in Articles 1.1(b) and 14 of the SCM Agreement. However, the NERA report states that

"{t}he analysis performed in the Ellis Report shows the existence of a benefit to Airbus under each provision of launch aid, because in every case the benchmark commercial rate exceeded the stated launch aid rate. That analysis, however, did not quantify the benefit in "dollar" terms nor show the total benefit to Airbus over time. The purpose of this report is to do so."¹⁷¹⁸

In introducing that report during the Panel's second meeting, the United States stated:

"Because the ITR methodology does not accurately measure the full magnitude of the subsidy benefit, the economists at NERA Consulting have made an estimate of the total benefit to Airbus from Launch Aid".¹⁷¹⁹

Thus, it seems clear to us that, even if not a measure of "benefit" as that term is used in Articles 1.1(b) and 14 of the SCM Agreement, the NERA calculations were intended as evidence of the benefit of the LA/MSF subsidies to Airbus, measured, as the United States put it, in terms of "the impact of Launch Aid on the present financial condition of Airbus".¹⁷²⁰ In light of the foregoing, we have modified the first sentence of paragraph 7.1856 (now paragraph 7.1867) to more closely reflect the United States' argument, albeit not in the terms suggested by either party.

¹⁷²⁰ US, SWS, para. 612.

BCI deleted, as indicated [***]

9. Paragraph 7.1861

6.324 The European Communities requests that the Panel replace the term "benefit" in the last sentence of paragraph 7.1861 of the Interim Report with the term "effect" to properly reflect the European Communities' argument.¹⁷²¹

6.325 The United States did not comment on this request.

6.326 Although the European Communities cites no source for its requested correction, we agree that, in context, the term "effect" is more appropriate to reflect the European Communities' argument, and in the absence of any objection from the United States, we grant the European Communities' request, and have made the requested change to make the change to paragraph 7.1861 (now paragraph 7.1872).

10. Paragraph 7.1863

6.327 The United States requests that the Panel amend the second sentence of paragraph 7.1863 of the Interim Report to reflect the United States' view that the European Communities' benefit calculation methodology referred to does not accurately reflect U.S. countervailing duty law.¹⁷²² The United States recalls its argument in this regard:

"The EC tendentiously refers to the ITR approach as the "US/Boeing methodology," *e.g.*, EC FWS para. 1588-1590, although it is in fact no such thing. The United States does not endorse the erroneous benefit calculation and allocation methodologies developed by ITR; indeed, many of these errors are at direct variance with the CVD methodologies used by the EC and the United States. Further, Boeing's 1997 comments on the U.S. CVD regulations submitted to the U.S. Department of Commerce, submitted by the EC as Exhibit EC-325, cannot plausibly be read to endorse the many errors in the ITR methodology."¹⁷²³

6.328 The European Communities asks the Panel to deny the United States' request, and the United States' request with respect to paragraph 7.1952 of the Interim Report, which the European Communities considers deals with essentially the same issue.¹⁷²⁴ The European Communities contends that it did, in fact, apply the United States' CVD methodology, drawing on Boeing's 1997 comments to the US Government concerning proposed CVD regulations) for insights on applying the methodology to LCA and specifically to LA/MSF. The European Communities notes that it identified the specific provisions of the United States' CVD regulations applied in the ITR report, described the manner in which it applied Boeing's comments on those regulations and provided detailed worksheets showing its calculations.¹⁷²⁵ In the European Communities' view, the United States relies, in its request for interim review, on an unsubstantiated footnote to the US Answer to Panel Question 42, which the European Communities notes does not refer to any United States' CVD regulation or practice that the European Communities allegedly failed to apply or allegedly applied incorrectly.

¹⁷²¹ EC, Request for Interim Review, p. 30.

¹⁷²³ US, Request for Interim Review, para. 33, citing, US, Answer to Panel Question 42, para. 250, footnote 313.

¹⁷²⁴ EC, Comments on US Request for Interim Review, p. 21.

¹⁷²⁵ EC, Comments on US Request for Interim Review, p. 21, citing, EC, SWS, paras. 948-950, 997-1008. *ITR Subsidy Magnitude Report*, 5 February 2007. Exhibit EC-13 (BCI/HSBI). *ITR Response to US Assertions that ITR's Method of Calculating the Magnitude of Subsidies is Flawed*, 21 May 2007. Exhibit EC-660 (BCI/HSBI).

BCI deleted, as indicated [***]

The European Communities also notes that the US Response to Question 42 set out an alternative calculation for one grant of LA/MSF which assertedly illustrated a correct "CVD-style", but without references to the United States' CVD regulations or practice. The European Communities disputed this calculation as containing various factual errors regarding the grant of LA/MSF in question, and failing to follow United States' CVD regulations or practice.¹⁷²⁶ Thus, in the European Communities' view, the United States has failed to substantiate its assertions that the European Communities did not apply United States' CVD methodology, and the Panel should deny the United States' requests regarding paragraphs 7.1863 and 7.1952 of the Interim Report.

6.329 While the European Communities is correct that the United States did not cite to specific provisions of US law and regulations in disputing the European Communities' arguments in this regard, the United States clearly disagreed with the European Communities' allocation methodology, which it asserted contained numerous errors, which the United States contended "are at direct variance with the CVD methodologies used by the European Communities and the United States."¹⁷²⁷ The United States then went on at some length to give examples of these errors, in the course of which it is made clear that the United States' interpretation of an appropriate allocation methodology under its own laws and regulations differs from that on which the European Communities' calculations were based.

6.330 Having found that there was no requirement to allocate the subsidies at issue in this dispute on a per-aircraft basis, we did not attempt to adjudicate the disagreement between the parties on the appropriateness of the allocations presented by the European Communities. Thus, there is no finding as to the correct interpretation of US law and regulation in this context. In order to make explicit the parties' positions on this question, we have modified the second sentence of paragraph 7.1863, and footnote 5166 (now paragraph 7.1874 and footnote 5524), and made conforming modifications to paragraph 7.1952 (now paragraph 7.1963)¹⁷²⁸, to reflect that the European Communities relied on its own interpretation of United States' countervailing duty law and regulations, which interpretation the United States did not accept as correct.

11. Paragraph 7.1891

6.331 The European Communities requests the Panel to clarify the context of the phrase "allegedly designated BCI" in the fourth sentence of paragraph 7.1891 of the Interim Report. Specifically, the European Communities requests the Panel to indicate that this phrase refers to the sources of the data that Dorman used in his cash-flow analysis, which the European Communities contends the United States never disclosed. According to the European Communities, this failure made it impossible to assess the confidentiality designation of the data.¹⁷²⁹

6.332 The United States considers that the sentence should be corrected, but not in the way suggested by the European Communities.¹⁷³⁰ According to the United States, the "cash flows" addressed in paragraph 7.1891 of the Interim Report are the inflows of LA/MSF disbursements, and the outflows of LA/MSF repayments. The simulation of the French A380, A340-500/600, and A330-200 LA/MSF packages are based on the cash flows that Dr. Dorman "derived from documents

¹⁷²⁶ EC, Comments on US Request for Interim Review, p. 21, citing, *ITR Response to US Assertions that ITR's Method of Calculating the Magnitude of Subsidies is Flawed*, 21 May 2007, paras. 25-29. Exhibit EC-660 (BCI/HSBI)

¹⁷³⁰ US, Comments on EC Request for Interim Review, para. 144.

BCI deleted, as indicated [***]

designated as BCI."¹⁷³¹ The United States contends that, although Dr. Dorman does not say so explicitly, the only possible documents "designated as BCI" that could contain confidential information related to these LA/MSF packages at the time his report was prepared, before any of the written submissions to the Panel, would be the documents provided by the European Communities during the Annex V process, which the United States provided to the Panel, together with the Dorman Report, with its first written submission.¹⁷³² Thus, the United States contends that the source of the information was provided and disclosed, allowing for any person with access to the relevant BCI to examine and verify the cash flow data used by Dr. Dorman, and notes that the final two sentences of this paragraph of the Interim Report state that the Panel did precisely this.¹⁷³³

6.333 We have reviewed the Dorman report in this regard, and having reconsidered the description of how Dr. Dorman undertook to conduct his simulation, it now seems clear that he relied on information drawn from LA/MSF contracts, designated BCI during the Annex V process, made available to him for purposes of preparing his report, and which the United States submitted with its first written submission. Given that we have been able to confirm the United States' explanation of the source of the data, and that it was designated BCI, we deny the European Communities' request. However, we have modified paragraph 7.1891 (now paragraph 7.1902) to clarify the facts.

12. Paragraph 7.1893

6.334 The European Communities requests that the Panel modify the first sentence of paragraph 7.1893 of the Interim Report, so as to avoid the implication that the European Communities endorsed the Ellis benchmark as a market benchmark, which the European Communities maintains it does not.¹⁷³⁴

6.335 The United States did not comment on this request.

6.336 While it is not apparent to us that the paragraph as originally drafted gives rise to the implication that concerns the European Communities, in order to alleviate those concerns, we have modified paragraph 7.1893 (now paragraph 7.1904) in order to clarify it, albeit in somewhat different terms than proposed by the European Communities.

13. Paragraphs 7.1917-7.1918, 7.1919-7.1920, 7.1926-7.1927, and 7.1928

6.337 The United States observes that, with respect to the business cases for the A340-500/600 and A330-200, the European Communities' "cash flow analysis" for the A320, and the A330/A340 launch documents provided by the European Communities, these paragraphs of the Interim Report do not appear to reflect the Panel's consideration of the comments provided by the United States.¹⁷³⁵ Because the European Communities designated the information discussed in these paragraphs as HSBI, the United States' comments are necessarily largely HSBI as well. The United States requests that the Panel's consideration of the United States' comments with respect to each of these aspects be incorporated in the final report, although it makes no specific suggestions in this regard.

¹⁷³¹ US, Comments on EC Request for Interim Review, para. 145, citing, Dorman Report at 5 n.13 (Exhibit US-70).

¹⁷³² US, Comments on EC Request for Interim Review, para. 145, citing, Exhibits US-35, US-36, US-78, US-116. The United States notes that Dr. Dorman's use of the term, "designated as BCI", should be understood as referring specifically to documents that have been "designated as BCI" within the meaning given to that term in this dispute. US, Comments on EC Request for Interim Review, footnote 77.

¹⁷³³ US, Comments on EC Request for Interim Review, para. 145.

¹⁷³⁴ EC, Request for Interim Review, p. 31.

¹⁷³⁵ US, Request for Interim Review, paras. 34 - 37, citing US, Comments on EC Answer to Panel Question 262 (HSBI Appendix), paras. 10-12, 7-9, 3 and 4-6.

BCI deleted, as indicated [***]

6.338 The European Communities expresses no view on these aspects of the United States' request.¹⁷³⁶

6.339 The submission referred to by the United States comments on and criticizes various aspects of the European Communities' arguments concerning the evidence discussed in these paragraphs of the Interim Report. That submission is designated as HSBI almost in its entirety, and is not susceptible of meaningful non-confidential summary. In the absence of any objection from the European Communities these aspects of the United States' request, and given that we did, in fact, consider the United States' comments in making our decision, we have added footnote references to the relevant paragraphs of those comments to paragraphs 7.1917-7.1918, 7.1919-7.1920, 7.1926-7.1927, and 7.1928 (now paragraphs 7.1928 - 7.1929, 7.1930 - 7.1931, 7.1937 - 7.1938 and 7.1939) to reflect that consideration.

14. Paragraph 7.1952

6.340 The European Communities requests the Panel to add, at the end of paragraph 7.1952 of the Interim Report, a reference to the European Communities' calculation of the potential cash flow effect of the alleged subsidies, in order to properly reflect the European Communities' argument.¹⁷³⁷

6.341 The United States does not object to this request, but suggests an alternative formulation to that proposed by the European Communities in order to make clear that any addition reflects the European Communities' argument, and not a conclusion of the Panel.¹⁷³⁸

6.342 We have no objection to expanding the summary of the European Communities' argument in this respect, but agree that it should be clear that the statement refers to European Communities' argument, and not a Panel conclusion. We have therefore modified paragraph 7.1952 (now paragraph 7.1963) to reflect the European Communities' argument, albeit in different terms than those proposed by the European Communities.

6.343 The United States also requests a modification to paragraph 7.1952 of the Interim Report.¹⁷³⁹ As it noted in its comments with respect to paragraph 7.1863 of the Interim Report, the United States considers the assertion that the European Communities' benefit calculation methodology is based on "United States' law and regulations governing the calculation and allocation of subsidy amounts in countervailing duty investigations" to be erroneous. In the United States' view, the final report should reflect that this is merely an assertion by the European Communities, one that the United States strongly disputes.

6.344 The European Communities objects to this request, for the same reasons that it objected to the United States' request with respect to paragraph 7.1863 of the Interim Report, discussed above.¹⁷⁴⁰

6.345 For the same reasons as discussed above at paragraph 6.329 with respect to paragraph 7.1863 of the Interim Report, we have modified the second sentence of paragraph 7.1952 and footnote 5335 (now paragraph 7.1963 and footnote 5701), in order to make clear the disagreement between the parties on US law and regulations in the CVD context as relied on by the European Communities in this case.

BCI deleted, as indicated [***]

15. Paragraph 7.1954

6.346 The European Communities requests the Panel to delete the parenthetical describing the benchmark rates used in its calculation of the magnitude of the subsidies in paragraph 7.1954 of the Interim Report. The European Communities considers that this parenthetical suggests that the European Communities endorsed the United States' benchmark rates, which it did not.¹⁷⁴¹

6.347 The United States objects to this request, noting that the statement does not suggest that the European Communities endorsed the relevant figures, but merely reports the fact that ITR "used" those figures. The United States considers this an accurate statement which the European Communities does not dispute.¹⁷⁴² Moreover, the United States notes that this paragraph summarizes the United States' argument, which indicated that the NERA and ITR reports used the same benchmark rates, which the United States considers an important point.

6.348 In our view, the parenthetical phrase in question simply states the fact, which the European Communities does not dispute, that the ITR report "used" the Ellis Report benchmark rates in its calculations, a point made by the United States in its argument. We do not consider that this statement of fact can be reasonably understood as implying that the European Communities endorsed those rates in any way. We therefore deny the European Communities' request.

6.349 The United States notes that, in assessing the United States' arguments with respect to the magnitude of the subsidy, the Interim Report appears not to reflect the United States' arguments based on the amount by which per-delivery repayments would have had to increase in order to repay LA/MSF at benchmark interest rates.¹⁷⁴³ According to the United States, the Panel does appear to have recognized elsewhere in its report (e.g., in paragraph 7.1997 of the Interim Report) that repayments of LA/MSF would have been greater if LA/MSF had been provided on commercial terms, and states that this consideration would also seem to be relevant to the issue of the magnitude of the subsidy, although it makes no specific suggestions for action by the Panel.

6.350 The European Communities did not comment on this aspect of the United States' request.

6.351 Having considered the United States' comments, we have added a footnote to paragraph 7.1954 (now paragraph 7.1965) to indicate that the United States presented arguments concerning the benefit from LA/MSF calculated on the basis of the amount by which each per-aircraft repayment would have to be increased in order to repay the LA/MSF at a commercial rate.

16. Paragraph 7.1958

6.352 The European Communities requests the Panel to modify its finding, in the second sentence of paragraph 7.1958 of the Interim Report, that the European Communities focused on the interest rate differentials and failed to take into account the financial contribution at issue.¹⁷⁴⁴ The European Communities contends it discussed at length the proper interest rates that should be applied to determine the amount and magnitude of any subsidy, and did take the principal amount of LA/MSF into account when calculating subsidy magnitudes. The European Communities asserts that its calculations are based on the difference between (i) the amount of interest paid under the MSF

¹⁷⁴¹ The EC notes that it consistently described these rates as "inflated", "overstated" and "flawed". EC, Request for Interim Review, p. 31, citing, e.g., EC, FWS, paras 551, 553 and 1590.

¹⁷⁴² US, Comments on EC Request for Interim Review, para. 148.

¹⁷⁴³ US, Request for Interim Review, para. 39, citing, US, SNCOS, paras. 184-186; US, Comments on EC Answer to Panel Question 289, paras. 221-225.

¹⁷⁴⁴ EC, Request for Interim Review, p. 31.

BCI deleted, as indicated [***]

agreement and (ii) the amount of interest that would be paid at the benchmark rate, which calculations are a function of both the applicable interest rates and the amount of loan principal.¹⁷⁴⁵ Consequently, the European Communities requests that the Panel delete paragraph 7.1958 of the Interim Report, save for the first sentence, and adapt the numbering of the issues addressed in subsequent paragraphs accordingly.

6.353 The United States objects to the European Communities' request, asserting that the European Communities' objection misses the point that the Panel develops in paragraph 7.1958 of the Interim Report.¹⁷⁴⁶ The United States notes that it is undisputed that the ITR report contains purported values for the amount of the subsidy benefit in Euros, and not simply in basis points, but considers that the text the European Communities proposes to delete does not suggest otherwise. Rather, in the United States' view, the text proposed for deletion states that an assessment of the magnitude of the subsidy for purposes of a serious prejudice analysis requires more than a simple calculation of the benefit, whether in Euros or in basis points, explaining that an analysis of the nature and effects of the subsidy - such as whether the total amount of subsidized LA/MSF provided equals 1 percent or 100 percent of the total development costs - is also relevant to determining the magnitude of the subsidy's effects.¹⁷⁴⁷ The United States maintains that, as it argued during the dispute, one of the flaws in the ITR analysis is that it treats the subsidy as if it were a lump-sum grant disbursed in the year an aircraft model is launched, thus ignoring the **effect** of the subsidy in, for example, shifting programme risk from Airbus to the governments and enabling aircraft launches that would not otherwise occur.¹⁷⁴⁸ In the United States' view, this is the point that the Panel makes in the paragraph 7.1958 of the Interim Report, and the point is correct. The United States proposes that the Panel modify the paragraph to clarify this point.

6.354 We consider that the United States has correctly understood the import of paragraph 7.1958 of the Interim Report. We therefore deny the European Communities' request, and have modified paragraph 7.1958 (now paragraph 7.1969) to clarify our views.

17. Paragraph 7.1961

6.355 The European Communities requests that the Panel modify the EUR [***] million figure for the subsidy amount from the extension of the runway at Bremen airport referred to in paragraph 7.1961 of the Interim Report, so as to conform it to paragraph 7.1120 of the Interim Report, where the Panel concluded that the subsidy amount was DM [***] million, or approximately EUR [***] million. The European Communities further requests that, if the Panel accepts the European Communities' request for changes in paragraph 7.1120 of the Interim Report, it also modify paragraph 7.1961 of the Interim Report accordingly.¹⁷⁴⁹

6.356 The United States recalls that it objected to the proposed changes to paragraph 7.1120 of the Interim Report, and therefore disagrees with this aspect of the European Communities' request.¹⁷⁵⁰

6.357 We have corrected paragraph 7.1961 (now paragraph 7.1972) to conform to our finding set out in paragraph 7.1120 (now paragraph 7.1128) that the amount of the financial contribution in

¹⁷⁴⁵ EC, Request for Interim Review, p. 31, citing, EC, FWS, paras 1593-1595. ITR Subsidy Magnitude Report, exhibit EC-13 (HSBI and BCI). EC, SWS, para. 1012. ITR Cash Flow Effect of Member State Financing, 20 May 2007, Exhibit EC-661 (BCI).

BCI deleted, as indicated [***]

connection with the Bremen airport runway extension was [***], and not "over EUR 40 million". We do not see any reason to convert the amount stated in DM to an amount in EUR, and the European Communities has not suggested any.

P. CONCLUSIONS AND RECOMMENDATION

1. Paragraph 8.6

6.358 The United States suggests that, for greater certainty, and in light of the Panel's findings reflected in paragraphs 7.169 through 7.177 of the Interim Report, the recommendation in paragraph 8.6 of the Interim Report should be expressed in the active voice (as is the recommendation in paragraph 8.7 of the Interim Report).

6.359 The European Communities did not comment on this request.

6.360 A change to the active voice would more closely track the text of Article 4.7 of the SCM Agreement, and would parallel the recommendation in paragraph 8.7 of the report. In the absence of any objection from the European Communities, we grant the United States' request, and have revised paragraph 8.6 (numbering unchanged) accordingly.

Q. BCI/HSBI DESIGNATIONS

1. Footnote 2158 and paragraph 7.410

6.361 The European Communities requests that the list of contracts containing royalty provisions identified in footnote 2158 of the Interim Report and those referred to in paragraph 7.410 of the Interim Report should be placed in square brackets in order to maintain consistency with the Panel's square bracketing of the number of such contracts in paragraph 7.374 of the Interim Report.¹⁷⁵¹

6.362 The United States did not comment on the European Communities' request.

6.363 We grant the European Communities' request and have modified footnote 2158 and paragraph 7.410 (now footnote 2452, paragraph numbering unchanged) accordingly.

2. Paragraphs 7.426 and 7.483 (tables 5 and 7)

6.364 The United States asks the Panel to remove the square brackets from the interest rates identified in Tables 5 and 7 of the Interim Report for the Spanish A320 and A330/A340 LA/MSF contracts, because it considers the two interest rates to be information that is in the public domain. The United States points in particular to its paragraph 223 of its first written submission, which cites Exhibit US-19.¹⁷⁵²

6.365 The European Communities did not comment on this request.

6.366 The Spanish A320 and A330/A340 LA/MSF interest rate information identified in Tables 5 and 7 of the Interim Report comes from Exhibit EC-597 (HSBI), which contains the European Communities' IRR calculations using information that is HSBI, in particular the forecast delivery schedule. The European Communities' calculation is confirmed in the text of the contracts themselves, which are designated BCI. Thus, the bracketed interest rates contained in Tables 5 and 7

¹⁷⁵¹ EC, Request for Interim Review, p.5.

¹⁷⁵² US, Comment on EC, Request for Interim Review, para. 154.

BCI deleted, as indicated [***]

were not derived from the information contained in Exhibit US-19, but from BCI. Moreover, in revealing that Spanish government support for CASA's involvement in the development of Airbus LCA was provided in the form of reimbursable advances at zero interest, the information in Exhibit US-19 does not explicitly refer to the Spanish A320 and A330/A340 LA/MSF contracts. Rather, it refers to funding provided by the Spanish government for Airbus LCA models pursuant to Intergovernmental Agreements entered into by the Spanish government since 1969. While it may be inferred from this information that the interest rate information disclosed in Exhibit US-19 referred to the Spanish A320 and A330/A340 contracts, in the absence of any explicit connection with these contracts, and given that the interest rates identified in Tables 5 and 7 were sourced from BCI, we have taken a cautious approach and deny the United States' request.

3. Paragraph 7.1916

6.367 The United States asserts that, in the text immediately prior to footnote 5259 in paragraph 7.1916 of the Interim Report, the bracketed text ("thus [***]") is simply a conclusion drawn from publicly available information and is not BCI.¹⁷⁵³

6.368 The European Communities did not comment on this request.

6.369 Given that the information originally bracketed pertains to the sales and financial performance of the A380, and that the European Communities did not object to the United States' view that this information is not BCI, we conclude that the statement is not properly designated as BCI and have deleted the brackets from paragraph 7.1916 (now paragraph 7.1927).

4. Paragraph 7.1960

6.370 The European Communities requests the Panel to bracket as BCI the amounts of [***] and [***] as well as the figures [***] and [***] in the second sentence of paragraph 7.1960 of the Interim Report. The European Communities asserts that to leave these figures would enable a reader to reverse-engineer the data designated BCI in the LA/MSF section of the report.¹⁷⁵⁴

6.371 The United States did not comment on this request.

6.372 In order to ensure the confidentiality of information designated as BCI elsewhere in the report, by precluding calculations that would allow that information to be derived from information not designated as BCI, and in the absence of any objection from the United States, we grant the European Communities' request and have modified paragraph 7.1960 (now paragraph 7.1971) to designate this information as BCI by enclosing it in brackets.

¹⁷⁵³ US, Request for Interim Review, para. 55.

¹⁷⁵⁴ EC, Request for Interim Review, p. 31.

BCI deleted, as indicated [***]

VII. FINDINGS

A. GENERAL INTRODUCTION

7.1 The United States' complaint in this dispute alleges more than 300 separate instances of subsidization, over a period of almost forty years, by the European Communities¹⁷⁵⁵ and four of its member States, France, Germany, Spain and the United Kingdom, with respect to large civil aircraft ("LCA") developed, produced and sold by the company known today as Airbus SAS. The measures that are the subject of the United States' complaint may be grouped into five general categories: (i) "Launch Aid" or "member State Financing"; (ii) loans from the European Investment Bank; (iii) infrastructure and infrastructure-related grants; (iv) corporate restructuring measures; and (v) research and technological development funding. The United States claims that each of the challenged measures is a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement, and that the European Communities and the four member States, through the use of these subsidies, cause adverse effects to the United States' interests within the meaning of Articles 5 and 6 of the SCM Agreement. In addition, the United States claims that seven of the challenged "Launch Aid" or "member State Financing" measures are prohibited export subsidies within the meaning of Article 3 of the SCM Agreement.

7.2 On 6 October 2004, the United States requested consultations with the European Communities and certain EC member States (France, Germany, Spain and the United Kingdom) with regard to the challenged measures.¹⁷⁵⁶ The United States requested the establishment of this Panel on 31 May 2005.¹⁷⁵⁷ Following the 24 February 2006 submission of the report of the Designated Representative in the information-gathering procedure under Annex V of the SCM Agreement, the Panel temporarily set aside its time-table, recommencing its work in September 2006.

7.3 This Report addresses the United States' claims in four parts. First, in parts VII.C and VII.D, we set forth our decision of 11 July 2007 with respect to the European Communities' request for preliminary ruling of 25 October 2005 and address other preliminary matters. Next, in part VII.E, we evaluate the United States' claims with respect to whether each of the challenged measures is a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement, and whether seven of those challenged measures are export subsidies. Finally, with respect to those measures we find to be specific subsidies, we address in part VII.F the United States' claims that the European Communities and the four member States, through the use of those subsidies, cause the claimed adverse effects to the United States' interests within the meaning of Articles 5 and 6 of the SCM Agreement. We set forth our conclusions and recommendation in Section VIII.

B. RELEVANT PRINCIPLES REGARDING STANDARD OF REVIEW, TREATY INTERPRETATION, AND BURDEN OF PROOF

1. Standard of Review

7.4 Article 11 of the DSU provides the standard for decision-making by WTO panels, requiring them to make an "objective assessment" of the matter, including an objective assessment of the facts,

¹⁷⁵⁵ As previously noted, see footnote 1 above, on 1 December 2009, the *Treaty of Lisbon amending the Treaty on European Union and the Treaty establishing the European Community* (done at Lisbon, 13 December 2007) entered into force. On 29 November 2009, the WTO received a Verbal Note (WT/L/779) from the Council of the European Union and the Commission of the European Communities stating that, by virtue of the Treaty of Lisbon, as of 1 December 2009, the European Union replaces and succeeds the European Community.

¹⁷⁵⁶ WT/DS316/1, attached at Annex A.

¹⁷⁵⁷ WT/DS316/2, attached at Annex B.

BCI deleted, as indicated [***]

and the applicability of and conformity with the relevant covered agreements, and to "make such other findings as will assist the DSB in making the recommendations or in giving the ruling provided for in the covered agreements."

2. Relevant Principles of Treaty Interpretation

7.5 With respect to the question of legal interpretation, Article 3.2 of the DSU provides that Members recognise that the dispute settlement system serves to clarify the provisions of the covered agreements "in accordance with customary rules of interpretation of public international law". Article 31.1 of the Vienna Convention on the Law of Treaties ('Vienna Convention'),¹⁷⁵⁸ which is generally accepted as such a customary rule, provides:

"A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose."

7.6 There is a considerable body of WTO case law dealing with the application of these provisions on treaty interpretation in dispute settlement in the WTO. It is clear that interpretation must be based above all on the text of the treaty,¹⁷⁵⁹ but that the context of the treaty also plays a role. It is also well-established that these principles of interpretation "neither require nor condone the imputation into a treaty of words that are not there or the importation into a treaty of concepts that were not intended."¹⁷⁶⁰ Furthermore, panels "must be guided by the rules of treaty interpretation set out in the Vienna Convention, and must not add to or diminish rights and obligations provided in the WTO Agreement."¹⁷⁶¹

3. Burden of Proof

7.7 While the parties have not generally raised burden of proof as an issue, we have kept in mind the general principles applicable to burden of proof in WTO dispute settlement, which require that a party claiming a violation of a provision of a WTO Agreement by another Member must assert and prove its claim.¹⁷⁶² In this dispute, the United States, which has challenged certain measures and their effects, thus bears the burden of demonstrating that the disputed measures are specific subsidies, and in some cases export subsidies, and that through the use of those subsidies, the European Communities and certain member States cause adverse effects to the United States' interests. It is generally for each party asserting a fact to provide proof thereof.¹⁷⁶³ Therefore, it is also for the European Communities to provide evidence for the facts which it asserts.

7.8 We have also kept in mind that a *prima facie* case is one which, in the absence of effective refutation by the other party, requires a panel, as a matter of law, to rule in favour of the party

¹⁷⁵⁸ Done at Vienna, 23 May 1969, 1155 United Nations Treaty Series 331 (1980); 8 *International Legal Materials* 679 (1969).

presenting the *prima facie* case.¹⁷⁶⁴ Finally, we recall that the Appellate Body also stated that "{a} complaining party may not simply submit evidence and expect the panel to divine from it a claim of WTO-inconsistency. Nor may a complaining party simply allege facts without relating them to its legal arguments."¹⁷⁶⁵

C. PRELIMINARY RULING¹⁷⁶⁶

1. Introduction

7.9 On 6 October 2004, the United States requested consultations with the Governments of Germany, France, the United Kingdom and Spain, and with the European Communities, pursuant to Articles 1 and 4 of the DSU, Article XXIII:1 of GATT 1994 and Articles 4, 7 and 30 of the SCM Agreement, with regard to measures affecting trade in large civil aircraft. Pursuant to this request, the United States held consultations with the European Communities on 4 November 2004.¹⁷⁶⁷

7.10 On 31 May 2005, the United States requested the establishment of a panel pursuant to Article 6 of the DSU, Article XXIII:2 of GATT 1994 and Articles 4, 7 and 30 of the SCM Agreement.¹⁷⁶⁸

7.11 On 20 July 2005, the DSB established the Panel with the following terms of reference:

"To examine, in the light of the relevant provisions of the covered agreements cited by the United States in document WT/DS316/2, the matter referred to the DSB by the United States in that document, and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements."¹⁷⁶⁹

7.12 On 25 October 2005, the European Communities submitted a request to the Panel for preliminary rulings addressing two distinct sets of issues. First, the European Communities asks the Panel to find that certain measures alleged by the United States to constitute prohibited or actionable subsidies fall outside the 'temporal scope' of these proceedings. Second, the European Communities asked the Panel to find that certain measures fall outside the Panel's terms of reference because the measures did not exist at the time of the establishment of the Panel, were not identified in the request for consultations, or were not identified in the request for the establishment of a panel in accordance with Article 6.2 of the DSU.¹⁷⁷⁰

7.13 The first set of issues involves a consideration of the temporal scope of application of Article 5 of the SCM Agreement and the relevance, if any, of the *Agreement between the European Community and the Government of the United States concerning the Application of the GATT Agreement on Trade in Civil Aircraft on Trade in Large Civil Aircraft* (the 1992 Agreement) to the

¹⁷⁶⁴ Appellate Body Report, *EC Measures Concerning Meat and Meat Products (Hormones)* ("EC – Hormones"), WT/DS26/AB/R, WT/DS48/AB/R, adopted 13 February 1998, DSR 1998:I, 135, para. 104.

¹⁷⁶⁵ Appellate Body Report, *United States – Measures Affecting the Cross-Border Supply of Gambling and Betting Services* ("US – Gambling"), WT/DS285/AB/R, adopted 20 April 2005, DSR 2005:XII, 5663 (Corr.1, DSR 2006:XII, 5475), para. 140.

¹⁷⁶⁶ Originally transmitted to the parties and third parties on 11 July 2007.

¹⁷⁷⁰ European Communities, Request for Preliminary Rulings, 25 October 2005, (hereinafter "EC, Original Request"), para. 8.

BCI deleted, as indicated [***]

determination regarding measures which are properly within the scope of this dispute. We address these issues first, before turning to consider those related to the alleged non-existence of the measures, alleged lack of consultations, and alleged failure to comply with Article 6.2 of the DSU.

2. Issues relating to the temporal scope of this dispute

(a) Background

7.14 On 7 November 2006, the European Communities submitted an updated request for preliminary rulings, updating and partially replacing its request of 26 October 2005 in relation to its arguments concerning the 'temporal scope' of this dispute.¹⁷⁷¹ In its updated request, the European Communities submits that the measures included in the United States' Panel request which pre-date 1 January 1995 (the effective date of the SCM Agreement) and/or 17 July 1992 (the effective date of the 1992 Agreement) fall outside the temporal scope of this dispute.

7.15 As modified by the updated request for preliminary rulings, the European Communities requests the Panel to rule that:

- (a) all alleged prohibited and actionable subsidies granted by the European Communities before 1 January 1995 are excluded from the temporal scope of the proceedings; and
- (b) any alleged government support committed prior to 17 July 1992 is excluded from the temporal scope of the proceedings.

7.16 On 22 December 2006, the Panel issued a communication, the relevant parts of which are set forth below:

"1. After carefully considering the Parties' and Third Party submissions and responses to written questions concerning the European Communities' preliminary ruling request to exclude certain challenged measures from the temporal scope of this proceeding, the Panel informs the Parties as follows:

2. The Panel understands that the European Communities, in the light of the content of the United States' First Written Submission, are no longer pursuing their claims regarding the temporal scope of Article 3 of the SCM Agreement. Therefore, on the basis of the facts and arguments presented by the Parties to date, the Panel considers that, for the moment, it is not necessary for it to rule on this aspect of the European Communities' request for a preliminary ruling.

3. The Panel also understands that the European Communities has acknowledged that the alleged measures identified in paragraphs 34-36, 38, 39, 41, 42, 44, 45, 49, 51, 53, 55 and 56 of the European Communities' response of 8 December 2006 to Panel Question 3, fall entirely or "partially" within the temporal scope of this proceeding; and that the European Communities' request for a preliminary ruling is, to this extent, limited to the other alleged measures identified, in paragraphs 23-38, 40, 41, 43, 47, 48, 50 and 54 of the European Communities' response of 8 December 2006 to Panel Question 3, as allegedly falling entirely or "partially" outside of the temporal scope of this proceeding.

¹⁷⁷¹ European Communities, Updated Request for Preliminary Rulings, 7 November 2006, (hereinafter "EC, Updated Request"), para. 3.

BCI deleted, as indicated [***]

4. On the basis of the facts and arguments that the Panel has thus far considered, and without prejudice to any views that it may develop during the course of this proceeding in the light of additional facts and arguments that may be introduced by the Parties and Third Parties, the Panel is not convinced by the European Communities' assertions that (i) as a general matter, "subsidies granted" or "brought into existence" prior to 1 January 1995, cannot fall within the scope of Article 5 of the SCM Agreement; and (ii) "alleged government support committed prior to 17 July 1992" is outside of the temporal scope of this proceeding, because of the *Agreement between the European Community and the Government of the United States concerning the Application of the GATT Agreement on Trade in Civil Aircraft on Trade in Large Civil Aircraft*. Furthermore, the Panel considers that it is not currently in a position to determine whether the measures identified in paragraphs 23-38, 40, 41, 43, 47, 48, 50 and 54 of the European Communities' response of 8 December 2006 to Panel Question 3, fall outside of the scope of Article 5 of the SCM Agreement. The Panel therefore invites the Parties and Third Parties to proceed on the understanding that all of the alleged measures challenged by the United States continue to fall within the scope of this proceeding.

5. The reasons for the Panel's views on this aspect of the European Communities' request for a preliminary ruling will be disclosed to the Parties in due course.¹⁷⁷²

7.17 We recall that in response to a question from the Panel concerning the temporal scope of application of the SCM Agreement, the European Communities confirmed that the measures that are alleged by the United States to be prohibited subsidies under Part II of the SCM Agreement (namely, the LA/MSF in respect of the Airbus A380, A340-500/600 and the A330-200) all came into existence after 1 January 1995.¹⁷⁷³ The Panel further notes that the United States has made no claims under Article 3 with respect to subsidies granted prior to 1 January 1995. Therefore, it is not necessary for the Panel to address the European Communities' request for a preliminary ruling on the temporal scope of application of Part II of the SCM Agreement.

7.18 Also in response to a question from the Panel, the European Communities has accepted that certain of the measures challenged by the United States fall within the scope of Article 5 of the SCM Agreement because the sums were disbursed after 1 January 1995.¹⁷⁷⁴ At issue, however, are the remaining challenged measures which the European Communities maintains are outside the scope of Article 5 of the SCM Agreement. The European Communities requests the Panel to exclude these remaining measures from this dispute on the basis that, to the extent that they were 'granted' or 'brought into existence' prior to 1 January 1995, they are outside the 'temporal scope' of Article 5 of the SCM Agreement.

¹⁷⁷² Panel Communication to the parties, 22 December 2006 (footnotes omitted).

¹⁷⁷³ European Communities, Answer to Panel Question 1 of 8 December 2006 (hereinafter "EC, Answer to Panel Question X of 8 December 2006"), paras. 4-6. During the First Meeting of the Panel, the European Communities objected to the use by the United States of the term 'launch aid' to describe the provision by the member States of the European Communities of financing for large civil aircraft design and development to the Airbus companies. The European Communities refers to such financing as 'member State Financing' (MSF). For purposes of this Preliminary Ruling, we use the term LA/MSF to refer to the financing described by the United States as 'launch aid' and by the European Communities as 'MSF'. This question is addressed further in the Panel's findings at paragraph 7.291.

¹⁷⁷⁴ EC, Answer to Panel Question 3 of 8 December 2006, paras. 22-57. The measures in question are set forth in Section VII.C Attachment, following para. 7.158.

BCI deleted, as indicated [***]

(b) Article 5 of the SCM Agreement

(i) *Arguments of the European Communities*

7.19 The European Communities submits that the temporal scope of the SCM Agreement must be determined in accordance with Article 28 of the *Vienna Convention on the Law of Treaties* (VCLT), which sets out the general rule that treaty provisions do not apply retroactively.¹⁷⁷⁵ The European Communities' principal argument is that, consistent with the principle of non-retroactivity embodied in Article 28 of the VCLT, Article 5 of the SCM Agreement applies to subsidies that were granted after 1 January 1995, while subsidies granted prior to 1 January 1995 fall outside the temporal scope of Article 5.¹⁷⁷⁶

7.20 The European Communities contends that the focus of the obligation contained in Article 5 of the SCM Agreement is on the conduct, or act of a Member in bringing about adverse effects through the use of subsidies.¹⁷⁷⁷ The European Communities argues that, consistent with the principle of non-retroactivity reflected in Article 28 of the VCLT, in order to be subject to Article 5 of the SCM Agreement, a Member's conduct in bringing about adverse effects to the interests of other Members must have occurred after 1 January 1995.¹⁷⁷⁸ The European Communities contends that the conduct or act of the Member to which Article 5 is addressed may be the "bringing into existence of a subsidy within the meaning of Article 1 of the SCM Agreement."¹⁷⁷⁹ Therefore, according to the European Communities, Article 5 of the SCM Agreement does not apply to government *conduct in bringing into existence* a subsidy if that conduct occurred prior to 1 January 1995.

7.21 The European Communities notes that a subsidy within the meaning of Article 1.1 of the SCM Agreement consists of two elements; namely, a financial contribution, which confers a benefit.¹⁷⁸⁰ According to the European Communities, a subsidy is only 'brought into existence' when the financial contribution has been made and the benefit has been conferred.¹⁷⁸¹ For the European Communities, it is not sufficient to subject a Member to the obligations of Article 5 that the adverse effects of a subsidy granted by a Member prior to 1 January 1995 are felt by Members subsequent to 1 January 1995. Nor is it sufficient to bring a subsidy within the scope of Article 5 that the 'benefit' of

¹⁷⁷⁵ EC, Updated Request, paras. 10-13.

¹⁷⁷⁶ Consistent with this approach, the European Communities argues that LA/MSF committed and paid prior to 1 January 1995 is outside the temporal scope of Article 5 because the grants of LA/MSF constitute completed 'acts' for purposes of Article 28 of the VCLT. The European Communities also argues that EIB loans to EADS and the Airbus companies which were provided in full prior to 1 January 1995 are outside the temporal scope of Article 5. In relation to the measures that the United States has challenged as infrastructure subsidies, the European Communities argues that the extension of the runway at Bremen Airport, which occurred in 1988 and 1989, falls outside the temporal scope of Article 5 because the 'financial contribution' (*i.e.*, the provision of the runway) was a completed act by 1 January 1995. Subsidies alleged to have arisen out of certain share transfers and equity infusions relating to the Airbus companies are also, according to the European Communities, outside the temporal scope of Article 5 to the extent that such transfers or infusions took place before 1995, because at that point, they became completed 'acts'. In relation to research and development funding which the United States has challenged as involving actionable subsidies, the European Communities argues that grants or disbursements made after 1 January 1995 pursuant to programmes established prior to 1 January 1995 are within the temporal scope of Article 5, while grants or disbursements which were made prior to 1 January 1995 are outside the temporal scope of Article 5 and should be excluded from these proceedings.

¹⁷⁷⁷ EC, Updated Request, paras. 27-28. Reiterated in the Second Written Submission of the European Communities, (hereinafter "EC, SWS"), para. 11.

BCI deleted, as indicated [***]

the financial contribution was conferred subsequent to 1 January 1995 if the financial contribution was made prior to that date.¹⁷⁸² The consequence of this approach is that, in order to be subject to Article 5 of the SCM Agreement, the financial contribution *and* the benefit components of a subsidy (and obviously, the adverse effects) must take place subsequent to 1 January 1995.¹⁷⁸³ The European Communities characterises the obligation contained in Article 5 in the following manner:

"The drafters of the SCM Agreement created the (negative) duty to abstain from granting new actionable subsidies after 1995. Had they intended also to create an additional (positive) duty for Members to revise all their pre-1995 subsidies because of their possible economic effect as 'continuing benefits' after 1995 they would have done so in Part IX on transitional arrangements."¹⁷⁸⁴

7.22 The European Communities argues that for the Panel to determine otherwise would be contrary to the non-retroactivity principle because it would effectively require Members to carry out full reviews of all individual subsidies that they had granted prior to 1 January 1995 in order to determine whether "they could produce 'continuing benefits' and could retroactively fall foul of Article 5 of the SCM Agreement."¹⁷⁸⁵

7.23 The European Communities submits that, although the conduct of a Member in bringing a subsidy into existence may result in economic effects which continue after completion of that conduct, this circumstance does not transform what is properly characterised as a completed "act" for purposes of Article 28 of the VCLT into a "situation" which continues to exist.¹⁷⁸⁶ The European Communities contends that a "situation" of a continuing character, for purposes of Article 28 of the VCLT "asks for more than bringing a subsidy into existence pre-1995 with economic effects post-1995."¹⁷⁸⁷ The European Communities posits a subsidy programme involving recurring grants of subsidies as an example of a 'situation' of a continuing character in the field of subsidies.¹⁷⁸⁸ The European Communities contrasts such programmes with the one-off granting of a subsidy, which the European Communities contends would not fall within the temporal scope of Article 5 if the conduct in question had occurred before 1 January 1995, even if the adverse effects caused by that conduct arise subsequent to that date.¹⁷⁸⁹

7.24 The European Communities considers that its interpretation of Article 5 is indirectly confirmed by paragraph 7 of Annex IV of the SCM Agreement which sets forth the method for calculating the total *ad valorem* subsidization of a product for purposes of the presumption of serious prejudice in Article 6.1(a).¹⁷⁹⁰ The European Communities regards paragraph 7 of Annex IV as

¹⁷⁸² In other words, the European Communities argues that if a Member made a financial contribution before 1 January 1995, part or all of the benefits of which are conferred after 1 January 1995, this conduct would not, consistently with the principle of non-retroactivity, be subject to Article 5 of the SCM Agreement.

¹⁷⁸³ EC, Updated Request, para. 30; EC, Answer to Panel Question 5 of 8 December 2006, para. 67.

¹⁷⁸⁴ EC, Answer to Panel Question 5 of 8 December 2006, para. 67.

¹⁷⁸⁵ EC, SWS, para. 17.

¹⁷⁸⁶ EC, Answer to Panel Question 2 of 8 December 2006, paras. 19 and 20. *See, also*, Answer of the European Communities to Panel Question 57 (hereinafter "EC, Answer to Panel Question X"), paras. 5-8; EC, SWS, paras. 12 and 16.

¹⁷⁸⁷ EC, Answer to Panel Question 2 of 8 December 2006, para. 20.

¹⁷⁸⁸ EC, Answer to Panel Question 2 of 8 December 2006, para. 20; EC, Answer to Panel Question 57, paras. 6-7. The European Communities argues therefore that, post-1995 grants made pursuant to subsidy programmes which were established prior to 1 January 1995 would be subject to Article 5 of the SCM Agreement because such grants effectively constitute new state conduct.

¹⁷⁸⁹ EC, Updated Request, para. 27.

¹⁷⁹⁰ EC, Updated Request, para. 29; EC, Answer to Panel Question 5 of 8 December 2006, paras. 66-67.

BCI deleted, as indicated [***]

addressing an exceptional situation in which subsidies granted prior to 1 January 1995 are included in the *ad valorem* subsidization calculation, provided their benefits are allocated to future production.¹⁷⁹¹ According to the European Communities, if Article 5 had been intended generally to apply to subsidies granted prior to 1 January 1995, this specific exception would not have been necessary.

7.25 The European Communities also argues that Article 5, in obligating Members not to cause adverse effects "through the use of any subsidy within the meaning of Article 1" necessarily requires reference to the definition of 'subsidy' in Article 1 of the SCM Agreement and therefore excludes subsidies provided prior to 1 January 1995.

(ii) *Arguments of the United States*

7.26 As an initial matter, the United States notes that it is not a party to the VCLT.¹⁷⁹² However, the United States does not regard this circumstance as problematic to the resolution of the issues raised by this request for preliminary rulings because it is not seeking to interpret Article 5 of the SCM Agreement in a retroactive manner.¹⁷⁹³ The United States submits that Members undertook the obligation contained in Article 5 as of the date of entry into force of the WTO Agreement and that the relevant issue is how the Panel determines the precise content of that obligation.

7.27 The United States argues that the act, fact or situation that is the focus of the obligation contained in Article 5 of the SCM Agreement is the *causing* of adverse effects to the interests of a Member through the use of subsidies and that this act, fact or situation of causing adverse effects to the United States through the use of the subsidy measures at issue in this dispute has continued to exist after 1 January 1995.¹⁷⁹⁴ The United States supports its construction of Article 5 of the SCM Agreement on the basis that the "positioning of 'through the use of' as a subordinate, modifying clause accords with the focus of the provision, which is the causation of adverse effects, and not on the grant of a subsidy."¹⁷⁹⁵ The United States contrasts the structure of the obligation in Article 5 with the prohibition in Article 3.2 which, in providing that a Member "shall neither grant nor maintain" prohibited subsidies, focuses squarely on the grant or maintenance of a prohibited subsidy, rather than on causing certain effects through the use of the subsidy.¹⁷⁹⁶

7.28 The United States notes that the term 'use' in Article 5 appears as a noun which names a fact or situation; namely, the 'act of using, fact of being used', rather than as a verb.¹⁷⁹⁷ According to the United States, the term 'use' as it appears in Article 5 does not carry any temporal connotation to indicate that the obligation in Article 5 applies only at the time at which the subsidy is initially granted.¹⁷⁹⁸ On the contrary, the United States contends that Article 5, in focusing on the act, fact or situation of *causing adverse effects* through the use of subsidies, reflects that there may be a lag

between the initial commitment of a subsidy and the adverse effects it causes, and that the subsidy and the adverse effects caused thereby need not be contemporaneous.¹⁷⁹⁹

7.29 The United States submits that its interpretation of Article 5 is consistent with Part III of the SCM Agreement generally, which it argues is addressed to an ongoing 'situation' in which adverse effects are being caused over time through the use of subsidies, rather than the discrete 'act' of making a financial contribution.¹⁸⁰⁰ In support, the United States notes that Article 6.4 provides that claims of displacement or impedance for purposes of Article 6.3(d) of the SCM Agreement are required to be examined 'over an appropriately representative period sufficient to demonstrate clear trends in the development of the market for the product concerned, which, in normal circumstances, shall be at least one year.' In addition, Article 6.3(d) requires that the effects in question follow a consistent trend over a period when subsidies have been granted.¹⁸⁰¹

7.30 The United States argues that the text of Article 5 of the SCM Agreement does not distinguish between subsidy measures that came into existence prior to 1 January 1995 and those that came into existence after 1 January 1995.¹⁸⁰² The United States contends that contextual support for this position can be found in the provisions of Article 28 dealing with transitional arrangements. According to the United States, Article 28.1, which conditionally exempts subsidy programmes established before 1 January 1995 from Part II of the SCM Agreement for a three-year transition period, confirms that the only obligations in the SCM Agreement that did not apply to subsidy programmes established before 1 January 1995 were those of Part II.¹⁸⁰³

7.31 In response to the European Communities' argument that paragraph 7 of Annex IV of the SCM Agreement should be regarded as an exceptional circumstance where subsidies granted prior to 1 January 1995 may be taken into account in determining whether a subsidy has caused adverse effects for purposes of Article 5, the United States argues that paragraph 7 of Annex IV actually confirms the United States' conclusion that the SCM Agreement does not exclude subsidy measures that came into existence prior to 1 January 1995 from its temporal scope.¹⁸⁰⁴ The United States argues that this provision is not an 'exception' to a general rule of non-retroactivity in Part III of the SCM Agreement; it simply sets out a methodology for determining *which* subsidies granted prior to 1 January 1995 should be taken into account for purposes of Article 6.1.¹⁸⁰⁵

(iii) *Arguments of Third Parties*

7.32 Australia observes that, in considering the application of Article 28 of the VCLT to Article 5 of the SCM Agreement, the Panel may be called on to determine whether "payments made prior to the entry into force of the SCM Agreement can be characterised as forming part of a 'situation' or subsidy continuum which continued to exist after entry into force of the SCM Agreement."¹⁸⁰⁶ In this regard, Australia submits that the Panel should draw on the guidance provided by the Appellate Body on the

BCI deleted, as indicated [***]

application of Article 28 of the VCLT to 'situations'.¹⁸⁰⁷ Australia also notes that the SCM Agreement contains provisions which require an examination of a representative period for purposes of establishing the effects of subsidization, and that, depending on the nature of the subsidy granted, such effects may continue to exist through the ongoing conferral of a benefit to the subsidized product.¹⁸⁰⁸

7.33 Brazil argues that the relevant 'act' in the subsidies context is the provision of the subsidy by the government 'in the form of a financial contribution conferring a benefit within the meaning of Article 1 of the SCM Agreement'.¹⁸⁰⁹ According to Brazil, a single 'act' cannot constitute a 'situation' that continues over time "without more, such as the continuing application of a WTO-inconsistent measure."¹⁸¹⁰

7.34 Based on this approach, single grants made prior to 1 January 1995 would be excluded from the temporal scope of Article 5, while 'recurring subsidies' and contributions made after 1 January 1995 would fall within the scope of Article 5, even where they are made pursuant to commitments, decisions or actions taken prior to 1 January 1995.¹⁸¹¹ Brazil supports this interpretation of Article 5 by noting that the obligation 'not to cause adverse effects' contained in Article 5 is qualified by reference to the Member's 'use' of any subsidy *referred to in paragraphs 1 and 2 of Article 1*.¹⁸¹² In addition, Brazil argues that active verbs 'grant,' 'maintain,' and 'use' suggest that the drafters intended that the SCM Agreement would cover only subsidies *within the meaning of Article 1* that were actually provided after 1 January 1995.¹⁸¹³

7.35 Finally, Brazil considers that the absence of any transition provisions expressly according WTO Members the right to challenge pre-WTO subsidies under Parts II and III of the SCM Agreement further supports Brazil's interpretation of the temporal scope of Article 5.¹⁸¹⁴

7.36 Japan submits that the text of the SCM Agreement demonstrates that its drafters did not intend its disciplines to be limited only to subsidies granted on or after 1 January 1995.¹⁸¹⁵ In this regard, Japan notes that Article 28.1 of the SCM Agreement, by providing a three-year grace period during which Members could not challenge certain subsidy programmes under Part II of the SCM Agreement "implies that Members *could* challenge such pre-WTO programmes after the grace period had expired."¹⁸¹⁶

¹⁸⁰⁷ Australia, Third Party Submission, para. 24. Australia refers to the Appellate Body Report, *Canada – Term of Patent Protection* ("Canada – Patent Term"), WT/DS170/AB/R, adopted 12 October 2000, DSR 2000:X, 5093 in this regard.

¹⁸¹⁶ Japan Third Party Submission (emphasis in original). The European Communities and the United States also addressed the significance of Article 28 and Annex IV, paragraph 7 to the contextual interpretation of Article 5. These arguments are considered below.

BCI deleted, as indicated [***]

7.37 Similarly, Japan notes that paragraph 7 of Annex IV of the SCM Agreement recognizes that members may allocate benefits to future production arising from "subsidies granted prior to the date of entry into force of the WTO Agreement" that are being challenged under Part III of the SCM Agreement.

7.38 Finally, Japan notes that the relevant provisions of the SCM Agreement in this dispute; namely, Articles 1, 5, 6 and 7, contain no temporal limitations, and contends that the absence of such limitations is significant, as the drafters expressly provided for temporal limitations in other parts of the SCM Agreement, such as Article 27.¹⁸¹⁷

7.39 According to Japan, the relevant inquiry for the Panel in the present dispute is to determine whether each alleged pre-1995 subsidy 'situation' had 'ceased to exist' prior to 1995, or whether it continued into 1995 or beyond.¹⁸¹⁸ Japan submits that, in conducting this analysis, the Panel should consider a subsidy situation to be ongoing "so long as the benefit of that subsidy continues to exist."¹⁸¹⁹

(iv) *Responses of the Parties to the Arguments of Third Parties*

7.40 The United States argues that Brazil has erroneously equated the 'provision' of a subsidy to the making of a 'financial contribution' in determining whether a subsidy was 'provided' before 1 January 1995. According to the United States, to the extent that it is even relevant to determine when a particular subsidy was 'provided' for purposes of the application of Article 5, the analysis cannot be limited to the point in time when the financial contribution was made. The United States refers in support to the observation of the Appellate Body in *US – Lead and Bismuth II* that the definition of subsidy in Article 1.1 does not address the time at which the 'financial contribution' and/or 'benefit' must be shown to exist.¹⁸²⁰

7.41 The United States also disputes Brazil's characterization of the obligation contained in Article 5 of the SCM Agreement as essentially an obligation to avoid 'providing' certain subsidies.¹⁸²¹ The United States contends that the obligation contained in Article 5 is rather, an obligation not to *cause adverse effects* through the use of a subsidy; an obligation which the United States argues is of a fundamentally different nature to the obligation not to 'grant' prohibited subsidies in Article 3.2. The United States contends that the provisions of Parts II and III of the SCM Agreement "each apply in their own way upon the entry into force of the SCM Agreement, obligating Members henceforth not to grant or maintain a certain class of subsidies and not to cause adverse effects through a broader group of subsidies."¹⁸²² According to the United States, the absence of any transition provisions expressly according Members the right to challenge pre-WTO subsidies under Parts II and III of the SCM Agreement is "completely consistent with the different character of the obligations in Parts II

¹⁸¹⁷ Japan Third Party Submission, para. 5.

¹⁸¹⁸ Japan Third Party Submission, para. 6.

¹⁸¹⁹ Japan Third Party Submission, para. 8.

¹⁸²⁰ United States, Comments on the Third Party Comments of Brazil, 18 December 2006 (hereinafter "US, Comments on the Third Party Comments of Brazil"), para. 5; referring to Appellate Body Report, *United States – Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom* ("US – Lead and Bismuth II"), WT/DS138/AB/R, adopted 7 June 2000, DSR 2000:V, 2595, para. 60. The United States notes that, in the *US – Lead and Bismuth II* dispute, the alleged subsidies countervailed involved financial contributions (principally equity infusions) made by the British government during 1977-1978 and 1985-1986, the benefits of which were allocated by the USDOC over the subsequent 18 years. No party to that dispute contested that a pre-1995 financial contribution resulting in post-1995 benefits could amount to an actionable subsidy under Part V of the SCM Agreement (at footnote 11).

¹⁸²¹ US, Comments on the Third Party Comments of Brazil, para. 6.

¹⁸²² US, Comments on the Third Party Comments of Brazil, para. 8.

BCI deleted, as indicated [***]

and III and in no way suggests that the obligations must be read in a way that is contrary to their express meaning."¹⁸²³

7.42 In response to Japan's comments, the European Communities disagrees with what it regards as Japan's unsupported contention that individual subsidies could have been challenged during the grace period provided for subsidy programmes in Article 28.1. According to the European Communities, there is no contrary intention expressed in the SCM Agreement that the drafters intended to overcome the presumption of non-retroactivity for individual subsidies granted prior to 1 January 1995.¹⁸²⁴

7.43 With respect to Japan's argument that express temporal scope limitations are contained in other provisions of the SCM Agreement, such as Article 27, the European Communities responds that Article 27 does not concern the question of specific temporal rules for past conduct, but exempts developing countries for a period *after* entry into force of the SCM Agreement. According to the European Communities, if subsidies provided prior to 1 January 1995 had been intended to be subject to Article 5, the exemption concerning special and differential treatment of developing countries contained in Article 27.3 would have covered subsidies provided prior to 1 January 1995, when it did not.¹⁸²⁵

(v) *Evaluation by the Panel*

7.44 We recall that Article 5 of the SCM Agreement provides, in relevant part:

"No Member should cause, through the use of any subsidy referred to in paragraphs 1 and 2 of Article 1, adverse effects to the interests of other Members..."

7.45 There is nothing in the text of Article 5 of the SCM Agreement to indicate that the obligation it sets forth should operate in a retroactive manner. We consider that Members undertook to be bound by the obligation contained in Article 5 of the SCM Agreement as of 1 January 1995. It is important to emphasize, however, that accepting to be bound by the obligation contained in Article 5 as of 1 January 1995 is not necessarily the same as agreeing that only subsidies granted after 1 January 1995 may be subject to adverse effects claims under Part III of the SCM Agreement. Whether or not this is so depends on the content of the obligation contained in Article 5.

7.46 Based on its ordinary meaning, Article 5 imposes an obligation on Members not to cause adverse effects to the interests of other Members through the use of subsidies as defined in Article 1.¹⁸²⁶ As the United States observes, the predicate of the sentence in Article 5 is to 'cause adverse effects to the interests of other Members', while the phrase 'through the use of' is an adverbial phrase that describes the manner in which the Member should not cause the adverse effects.¹⁸²⁷ Article 5 thus comprises an obligation not to cause certain results through a specific causal pathway, rather than an obligation not to engage in certain conduct. This is reflected in the remedy envisaged for subsidies which have been determined to have resulted in adverse effects within the meaning of Article 5: Members shall either withdraw the subsidy *or* shall take appropriate steps to remove the

¹⁸²³ US, Comments on the Third Party Comments of Brazil.

¹⁸²⁴ EC, SWS, para. 14.

¹⁸²⁵ EC, SWS, para. 14.

¹⁸²⁶ We note that, in contrast to Article 5, Article 3 is formulated as a prohibition on the act of granting or maintaining export subsidies, as these subsidies are regarded as harmful *per se*. Article 5 is directed towards the adverse effects which can be shown to have been caused by the use of subsidies by a Member, including by use of the narrow class of subsidies whose grant or maintenance is prohibited in Article 3.

¹⁸²⁷ US, Answer to Panel Question 2 of 8 December 2006, para. 2.

BCI deleted, as indicated [***]

adverse effects.¹⁸²⁸ The Appellate Body has indicated in previous disputes that the principle codified in Article 28 of the VCLT is a general principle of international law that is relevant to the interpretation of the covered agreements.¹⁸²⁹ In our view, it is the obligation not to cause, through the use of any subsidy referred to in paragraphs 1 and 2 of Article 1, adverse effects to the interests of other Members, that is to be interpreted consistently with the principle of non-retroactivity reflected in Article 28 of the VCLT.

7.47 Article 28 of the VCLT, entitled 'Non-retroactivity of treaties' provides:

"Unless a different intention appears from the treaty or is otherwise established, its provisions do not bind a party in relation to any act or fact which took place or any situation which ceased to exist before the date of the entry into force of the treaty with respect to that party."¹⁸³⁰

7.48 In *Canada – Patent Term*, the Appellate Body explained the application of Article 28 of the VCLT in the following terms:

"Article 28 of the *Vienna Convention* covers not only any 'act', but also any 'fact' or 'situation which ceased to exist'. Article 28 establishes that, in the absence of a contrary intention, treaty provisions do *not* apply to 'any situation which ceased to exist' before the treaty's entry into force for a party to the treaty. Logically, it seems to us that Article 28 also necessarily implies that, absent a contrary intention, treaty obligations *do* apply to any 'situation' which has *not* ceased to exist – that is, to any situation that arose in the past, but continues to exist under the new treaty."¹⁸³¹

7.49 As the above statement makes clear, the non-retroactivity principle reflected in Article 28 of the VCLT distinguishes between discrete 'acts' and 'facts' on the one hand, and 'situations' on the other. It is not a violation of the non-retroactivity principle for a treaty to apply to situations that are in existence when the treaty comes into force, even if they first arose at an earlier date.¹⁸³²

¹⁸²⁸ In contrast, where a Member is determined to have granted or maintained a prohibited subsidy contrary to Article 3, the remedy contained in Article 4 calls for the Member to withdraw the subsidy without delay.

¹⁸²⁹ Appellate Body Report, *Brazil – Measures Affecting Desiccated Coconut* ("*Brazil – Desiccated Coconut*"), WT/DS22/AB/R, adopted 20 March 1997, DSR 1997:I, 167, p. 14; Appellate Body Report, *Canada – Patent Term*, paras. 71-72; Appellate Body Report, *EC – Hormones*, para. 128; Appellate Body Report, *European Communities – Trade Description of Sardines* ("*EC – Sardines*"), WT/DS231/AB/R, adopted 23 October 2002, DSR 2002:VIII, 3359, para. 200.

¹⁸³⁰ Article 28 of the VCLT has been described as reflecting a general principle of international law, or according to the Panel in *Brazil – Desiccated Coconut*, "an accepted principle of customary international law"; Panel Report, *Brazil – Measures Affecting Desiccated Coconut* ("*Brazil – Desiccated Coconut*"), WT/DS22/R, adopted 20 March 1997, as upheld by Appellate Body Report WT/DS22/AB/R, DSR 1997:I, 189, para. 279. We therefore see no need to concern ourselves with the question of whether the Article 28 itself is binding on the United States. In any case, the United States does not appear to dispute the application of the principle, whether its source is in customary law, general principles or the VCLT. The Panel notes that the United States was the complaining party in *Canada – Patent Term* in which the Appellate Body applied Article 28 of the VCLT to obligations under the TRIPS Agreement.

¹⁸³¹ Appellate Body Report, *Canada – Patent Term*, para. 72.

¹⁸³² International Law Commission Commentary on the draft Vienna Convention, Yearbook of the ILC, 1966, Vol. II, Comment 3 on draft Article 24, p. 212; referred to by the Appellate Body in *Canada – Patent Term*, para. 73.

BCI deleted, as indicated [***]

7.50 We note that the dictionary definition of 'act' includes "a thing done; a deed".¹⁸³³ When considering the manner in which Article 28 of the VCLT applied to provisions of the TRIPS Agreement, the Appellate Body in *Canada – Patent Term*, described the term 'act' (in the context of interpreting Article 70.1 of the TRIPS Agreement) as "something that is 'done'".¹⁸³⁴ By contrast, a 'situation', for purposes of Article 28 of the VCLT has been defined as "a set of circumstances; a state of affairs".¹⁸³⁵ In *Canada – Patent Term*, the Appellate Body described the concept of 'situation' in Article 28 of the VCLT as suggesting "something that subsists and continues over time".¹⁸³⁶

7.51 Both the European Communities and the United States agree that nothing in the SCM Agreement reveals an intention on the part of the drafters to apply Article 5 (or any other provision of the SCM Agreement) to an "act or fact which took place or a situation which ceased to exist" prior to 1 January 1995.¹⁸³⁷ Where they differ is over the characterisation of the obligation contained in Article 5 as addressing either the discrete 'act' of bringing a subsidy into existence, or the 'situation' of causing adverse effects through the use of subsidies, for purposes of the non-retroactivity analysis. The European Communities argues that, in the context of Article 5, the non-retroactivity principle applies to the 'act' of a Member in bringing into existence a subsidy. As this conduct is necessarily completed when the subsidy is brought into existence, subsidies brought into existence prior to 1 January 1995 are 'completed acts' and are therefore outside the temporal scope of application of Article 5, even if the 'economic effects' of such subsidies may continue to be felt subsequently.¹⁸³⁸ We do not agree.

7.52 We consider that Article 5 addresses a set of circumstances or state of affairs (*i.e.*, a 'situation') rather than specific acts of a Member. While 'cause' is used as a verb in Article 5, it does not connote specific action on the part of a Member. Rather, it describes a particular relationship between the antecedent conduct of a Member and subsequent events which ultimately are attributed to that Member. To the extent that Article 5 involves 'acts' or conduct, they relate to the 'use' of the subsidy, and not the 'bringing into existence' or granting of the subsidy. We consider that our characterisation of the obligation in Article 5 as a 'situation' rather than an 'act' is consistent with other provisions of Part III of the SCM Agreement (*e.g.*, Article 6.3(d) and Article 6.4) which require an examination of a representative period for the purposes of establishing the effects of subsidization. These provisions suggest that Part III generally is concerned with a situation that subsists and continues over time, rather than with specific acts performed by Members.

7.53 The European Communities argues that, because the obligation in Article 5 relates to the use of a "subsidy referred to in paragraphs 1 and 2 of Article 1", the temporal scope of Article 5

¹⁸³³ *Shorter Oxford English Dictionary*, 5th ed., Oxford, OUP 2002, p. 21.

¹⁸³⁴ Appellate Body Report, *Canada – Patent Term*, para. 58.

¹⁸³⁵ *Shorter Oxford English Dictionary*, 2002, p. 2852.

¹⁸³⁶ Appellate Body Report, *Canada – Patent Term*, para. 72. The panel in that dispute had characterised the protection accorded to inventions by patents granted under a pre-1989 Canadian patent regime as a 'situation which has not ceased to exist' at the date of the application of the TRIPS Agreement for Canada, and found that this situation could not be related to 'acts which occurred' before that date, and thereby brought within the scope of Article 70.1 of the TRIPS Agreement.

¹⁸³⁷ EC, Updated Request, para. 13.

¹⁸³⁸ In this regard, the European Communities argues that a 'continuing situation' for purposes of the SCM Agreement is a subsidy programme involving recurring grants of subsidies. Thus, for the European Communities, grants made subsequent to 1 January 1995, even if pursuant to a pre-1995 programme, would be subject to Article 5 of the SCM Agreement, while grants made prior to 1 January 1995 would not. EC, Answer to Panel Question 57, paras. 6-7. However, as we have indicated, it is the obligation contained in Article 5 of the SCM Agreement that must be characterised as either an 'act' or 'situation' in order to be construed consistently with the non-retroactivity principle reflected in Article 28 of the VCLT.

BCI deleted, as indicated [***]

necessarily depends on the bringing into existence of such a 'subsidy'.¹⁸³⁹ We understand the European Communities to be arguing that, through the definition of 'subsidy' in Article 1.1, the temporal scope of the obligation contained in Article 5 is limited to adverse effects caused through the use of financial contributions conferring benefits that came into existence after 1 January 1995.

7.54 Article 1.1 of the SCM Agreement provides as follows:

"For the purpose of this Agreement, a subsidy shall be deemed to exist if:

(a)(1) there is a financial contribution by a government or any public body within the territory of a Member (referred to in this Agreement as "government"), *i.e.*, where:

(i) a government practice involves a direct transfer of funds (*e.g.*, grants, loans, and equity infusion), potential direct transfers of funds or liabilities (*e.g.*, loan guarantees);

(ii) government revenue that is otherwise due is foregone or not collected (*e.g.*, fiscal incentives such as tax credits);

(iii) a government provides goods or services other than general infrastructure, or purchases goods;

(iv) a government makes payments to a funding mechanism, or entrusts or directs a private body to carry out one or more of the type of functions illustrated in (i) to (iii) above which would normally be vested in the government and the practice, in no real sense, differs from practices normally followed by governments;

or

(a)(2) there is any form of income or price support in the sense of Article XVI of GATT 1994;

and

(b) a benefit is thereby conferred."¹⁸⁴⁰

7.55 We do not read the reference in Article 5 to the definition of 'subsidy' in Article 1 as limiting the application of the SCM Agreement to financial contributions made and benefits conferred subsequent to 1 January 1995. Article 1.1 sets forth the circumstances in which a 'subsidy' is 'deemed to exist' for purposes of the SCM Agreement. It does not impose on Members an obligation to which the non-retroactivity principle reflected in Article 28 of the VCLT could apply.

7.56 We recall further that 'subsidy' in Article 1.1 of the SCM Agreement is a compound definition. As the Appellate Body observed in *Brazil – Aircraft*, the issues and respective definitions of 'financial contribution' and 'benefit' are separate legal elements in Article 1.1, which *together*

¹⁸³⁹ EC, SWS, paras. 18 and 19. Brazil makes a similar argument in its Third Party Comments at para. 19.

¹⁸⁴⁰ Footnote omitted.

BCI deleted, as indicated [***]

determine whether a 'subsidy' exists.¹⁸⁴¹ In *US – Lead and Bismuth II*, the Appellate Body rejected an argument that the use of the present tense of the verb 'is conferred' in Article 1.1(b) of the SCM Agreement indicated that an investigating authority must demonstrate the existence of 'benefit' only at the time the 'financial contribution' is made. In rejecting this argument, the Appellate Body observed in particular that "Article 1.1 does not address the *time* at which the 'financial contribution' and/or the 'benefit' must be shown to exist."¹⁸⁴²

7.57 In addition, there are significant contextual factors that militate against the interpretation of Article 5 advocated by the European Communities. Specifically, paragraph 7 of Annex IV to the SCM Agreement indicates that the drafters did not regard the temporal scope of Part III of the SCM Agreement as confined to financial contributions made, or subsidies otherwise brought into existence, after 1 January 1995. We recall that paragraph 7 of Annex IV to the SCM Agreement, which sets forth the method for calculating the total *ad valorem* subsidization of a product for purposes of the presumption of serious prejudice in Article 6.1(a) of the SCM Agreement, required that certain subsidies granted prior to 1 January 1995 be included in the total *ad valorem* subsidization calculation. Paragraph 7 of Annex IV provided:

"Subsidies granted prior to the date of entry into force of the WTO Agreement, the benefits of which are allocated to future production, shall be included in the overall rate of subsidization."

This is an express textual recognition that the 'adverse effects' that are the subject of Article 5 can be 'caused' through the use of subsidies granted prior to 1 January 1995, at least to the extent that the benefits of such subsidies can be allocated to the period subsequent to 1 January 1995. Although Article 6.1 and Annex IV have now expired (pursuant to the provisions of Article 31 of the SCM Agreement), they did form part of the original framework for determining when a Member could be considered to have caused 'adverse effects' (*i.e.*, serious prejudice to the interests of another Member) through the use of a subsidy for purposes of Article 5.1(c), and thus provide an important indication of the intended scope of Article 5.¹⁸⁴³

7.58 The European Communities argues that paragraph 7 of Annex IV should be regarded as an exception which proves the general rule that only post-1995 subsidies can be subject to adverse effects claims. According to the European Communities, paragraph 7 of Annex IV concerned the 'allocation' of a subsidy to 'future production'; a concept which it contends is "different from the idea that a pre-1995 subsidy 'continues to confer a benefit' post-1995." The European Communities argues that paragraph 7 of Annex IV provided a valuation rule "in the narrow circumstance that any benefits incurred in relation to {pre-WTO} subsidies *are allocated to future production*",¹⁸⁴⁴ and in this sense, the relevant conduct for purposes of determining the temporal scope of paragraph 7 of Annex IV is

¹⁸⁴¹ Appellate Body Report, *Brazil – Export Financing Programme for Aircraft ("Brazil – Aircraft")*, WT/DS46/AB/R, adopted 20 August 1999, DSR 1999:III, 1161, para. 157.

¹⁸⁴² Appellate Body Report, *US – Lead and Bismuth II*, para. 60.

¹⁸⁴³ We recall that the Panel in *US – Upland Cotton* noted that provisions of the SCM Agreement that have lapsed may nevertheless be useful in understanding the overall architecture of the SCM Agreement with respect to the different types of subsidies it sought and seeks to address; Panel Report, *United States – Subsidies on Upland Cotton ("US – Upland Cotton")*, WT/DS267/R, Corr.1, and Add.1 to Add.3, adopted 21 March 2005, as modified by Appellate Body Report WT/DS267/AB/R, DSR 2005:II, 299, para. 7.907 (footnote 1086). A similar view was expressed in the Decision by the Arbitrator, Decision by the Arbitrator, *United States – Tax Treatment for "Foreign Sales Corporations" – Recourse to Arbitration by the United States under Article 22.6 of the DSU and Article 4.11 of the SCM Agreement ("US – FSC (Article 22.6 – US) ")*, WT/DS108/ARB, 30 August 2002, DSR 2002:VI, 2517, footnote 66.

¹⁸⁴⁴ EC, SWS, para. 21.

BCI deleted, as indicated [***]

the allocation of the subsidy to future production.¹⁸⁴⁵ The European Communities contends that if Part III of the SCM Agreement had been intended to apply generally to subsidies granted prior to 1 January 1995 "irrespective of their benefit allocation", a provision such as paragraph 7 of Annex IV would have been unnecessary and redundant.¹⁸⁴⁶ The European Communities therefore considers that Annex IV and Article 6.1(a) are unique and exceptional provisions of the SCM Agreement which include specific rules on the quantification of a subsidy which are normally found in Part V.¹⁸⁴⁷

7.59 We do not agree. Paragraph 7 of Annex IV recognises that a subsidy granted prior 1 January 1995 may, in certain circumstances (*i.e.*, where its benefits are allocated to future production) be relevant to the serious prejudice determination in Article 5(c) and thus, may give rise to adverse effects under Article 5. Its significance to the present dispute is as a rebuttal of the European Communities' core argument that Article 5 was intended to apply only to subsidies brought into existence subsequent to 1 January 1995. Paragraph 7 of Annex IV is a clear indication that subsidies granted prior to the entry into force of the SCM Agreement are considered subject to the obligation concerning adverse effects contained in Article 5.

7.60 Moreover, we disagree with the European Communities that the purpose of paragraph 7 of Annex IV was to set forth exceptional circumstances that would be deemed to constitute serious prejudice for purposes of the adverse effects determination in Article 5. We can conceive of no plausible reason why the drafters would provide that serious prejudice could be presumed on the basis of pre-1995 subsidies while precluding the possibility that serious prejudice arising from pre-1995 subsidies could be affirmatively demonstrated. We consider that the role of Annex IV was to specify an agreed methodology for the total *ad valorem* calculation contemplated by Article 6.1(a). Paragraph 7 of Annex IV set forth how pre-1995 subsidies were to be included in that calculation. In this context, we consider paragraph 7 of Annex IV to be indicative of, rather than an exception to, the drafters' intentions regarding the subsidies that would be subject to the obligations of Part III.

7.61 As regards the contextual significance of Article 28.1 of the SCM Agreement to the temporal scope of Article 5, the European Communities argues that the fact that Article 28.1(b) grants Members a transitional period of three years in which to bring their existing subsidy *programmes* into conformity with the SCM Agreement, "shows *a fortiori* that individual cases of subsidization before 1995 are not covered by the SCM Agreement at all."¹⁸⁴⁸

7.62 According to the United States, Article 28.1 of the SCM Agreement makes clear that subsidy programmes established before the date of entry into force of the SCM Agreement *are* subject to the SCM Agreement; however, it grants Members a window of three years to bring inconsistent programmes into conformity with the obligations of Part II.¹⁸⁴⁹ The United States contends that the necessary implication of this temporary exemption of inconsistent measures from the obligations of Part II of the SCM Agreement, is that such programmes are otherwise subject to Part I and to Parts III through XI.¹⁸⁵⁰

¹⁸⁴⁵ EC, SWS, para. 22.

¹⁸⁴⁶ EC, Updated Request, para. 29.

¹⁸⁵⁰ US, Answer to EC, Updated Request, para. 16.

BCI deleted, as indicated [***]

7.63 We recall that Article 28 provides:

"28.1 Subsidy programmes which have been established within the territory of any Member before the date on which such a Member signed the WTO Agreement and which are inconsistent with the provisions of this Agreement shall be:

(a) notified to the Committee not later than 90 days after the date of entry into force of the WTO Agreement for such Member; and

(b) brought into conformity with the provisions of this Agreement within three years of the date of entry into force of the WTO Agreement for such Member and until then shall not be subject to Part II.

28.2 No Member shall extend the scope of any such programme, nor shall such a programme be renewed upon its expiry."

We do not consider Article 28.1 to be of contextual assistance in deciding whether subsidies granted prior to 1 January 1995 may be subject to the obligations of Article 5. The wording of Article 28.1(b), particularly the final phrase "*until then* shall not be subject to Part II," indicates that the three year period during which Members were required to bring their WTO-inconsistent measures into conformity with the SCM Agreement operated only as a temporary exemption from the application of the provisions of Part II.¹⁸⁵¹ In other words, it may be inferred from Article 28 that WTO-inconsistent subsidy *programmes*, established prior to 1 January 1995 and continuing in effect after that date, were generally intended to fall within the temporal scope of Part II, subject to the three-year grace period granted by Article 28.1. If such subsidy programmes were generally intended to fall within the temporal scope of the SCM Agreement for purposes of Part II (*i.e.*, as regards the prohibition on the granting or maintaining of prohibited export subsidies) then, in the absence of any contrary intention expressed in the text or implied from the structure of the SCM Agreement, they would likewise fall within the temporal scope of Part III of the SCM Agreement (*i.e.*, for purposes of the obligation not to cause, through the use of subsidies, adverse effects to the interests of other Members). Thus, Article 28.1 suggests that subsidy programmes established prior to 1 January 1995 and maintained subsequent to this date are subject to Part III - it does not tell us whether subsidies granted by Members prior to 1 January 1995 are subject to Part III.

7.64 Based on the foregoing, we construe the obligation contained in Article 5 of the SCM Agreement as an obligation not to cause adverse effects to the interests of other Members through the use of subsidies as defined in Article 1. For purposes of the application of the non-retroactivity principle reflected in Article 28 of the VCLT, we characterise Article 5 as addressing a 'situation'; namely, causing adverse effects through the use of subsidies. Consistent with Article 28 of the VCLT, Article 5 applies to any such "situation" which exists as of the effective date of the SCM Agreement, even if that situation arose as a result of the granting of a subsidy prior to that date. In other words, our interpretation of the temporal scope of application of Article 5 is based on the ordinary meaning of the terms of Article 5 in their context and in the light of the object and purpose of the SCM Agreement. In this regard, we note in particular that paragraph 7 of Annex IV demonstrates that subsidies granted prior to 1 January 1995 were considered relevant to the serious prejudice determination in Article 5(c) and thus, could give rise to adverse effects under Article 5.

¹⁸⁵¹ Part II of the SCM Agreement relates to prohibited export subsidies. Article 3.2, which is contained in Part II of the SCM Agreement, prohibits Members from granting or maintaining export subsidies referred to in Article 3.1. Article 4.7 provides that, should a panel find that a Member has granted or maintained a prohibited export subsidy in contravention of Article 3.2, it shall recommend that the subsidizing Member withdraw the subsidy without delay.

BCI deleted, as indicated [***]

7.65 In conclusion, we therefore reject the European Communities' request for a preliminary ruling that all alleged prohibited and actionable subsidies granted by the European Communities prior to 1 January 1995 be excluded from the temporal scope of these proceedings.

(c) Relevance of the 1992 Agreement Between the European Communities and the United States to the Temporal Scope of These Proceedings

(i) *Introduction*

7.66 In its updated request for preliminary rulings, the European Communities asks the Panel to rule that any alleged government support committed prior to 17 July 1992, the effective date of the 1992 Agreement, is excluded from the temporal scope of these proceedings. In support of this request, the European Communities advances various arguments regarding the relevance of the 1992 Agreement to the rights and obligations of the parties in this dispute. In this Preliminary Ruling, we address only those which relate to the European Communities' claims regarding the temporal scope of Article 5 of the SCM Agreement made in its request and updated request for preliminary rulings. These arguments concern the relevance of Articles 2 and 10 of the 1992 Agreement to the question whether alleged government support committed prior to the effective date of the 1992 Agreement is outside the temporal scope of application of Article 5 of the SCM Agreement, and should therefore be excluded from these proceedings. We do not address in this Preliminary Ruling the European Communities' 'defence' that Article 4 of the 1992 Agreement constitutes the appropriate 'benchmark' for the assessment of LA/MSF under the SCM Agreement.¹⁸⁵² Nor do we consider the European Communities' arguments that Article 4 of the 1992 Agreement is relevant to the questions of the existence of a subsidy under Article 1 of the SCM Agreement, and the causation of adverse effects under Article 5 of the SCM Agreement.¹⁸⁵³

7.67 However, before turning to consider the European Communities' arguments, we consider it useful to provide a brief description of the provisions of the 1992 Agreement. The 1992 Agreement was concluded by the United States and the European Communities on 17 July 1992.¹⁸⁵⁴ It had been negotiated against a background of differences between the European Communities and the United States over support measures to their respective large civil aircraft industries.¹⁸⁵⁵ In the preamble to the 1992 Agreement, the parties recognised the need to promote a more favourable environment for international trade in large civil aircraft and to reduce trade tensions in the area. They also acknowledged that the disciplines in the GATT Agreement on Trade in Civil Aircraft should be strengthened with a view to progressively reducing the role of government support. The parties expressed their agreement as being in pursuit of their common goal of preventing trade distortions resulting from direct or indirect government support for the development and production of large civil

¹⁸⁵² First Written Submission of the European Communities (hereinafter "EC, FWS"), paras. 394-404.

¹⁸⁵³ EC, SWS, paras. 148-157.

¹⁸⁵⁴ On 6 October 2004, the United States notified the European Communities that it was abrogating the 1992 Agreement; Note verbale No. 55 of the US mission to the EU to the General Secretariat of the Council of the EU, 6 October 2004. However, the European Communities considers that the 1992 Agreement is still in force between the parties. We need not resolve this issue in order to decide the European Communities' preliminary ruling request, and therefore express no views on it.

¹⁸⁵⁵ One manifestation of these differences was the United States' challenge to an exchange rate guarantee Agreement between the German Government and Deutsche Airbus as an export subsidy inconsistent with Article 9 of the *Agreement on Interpretation and Application of Articles VI, XVI, and XXIII of the General Agreement on Tariffs and Trade* (the "Tokyo Round Subsidies Code"). On 4 March 1992, a GATT Panel concluded that the exchange rate guarantee scheme resulted in a subsidy granted on exports and that the scheme was prohibited by Article 9 of the Tokyo Round Subsidies Code, as an export subsidy covered by Item (j) of the Illustrative List. GATT Panel Report, *German Exchange Rate Scheme for Deutsche Airbus*, SCM/142, 4 March 1992, unadopted.

BCI deleted, as indicated [***]

aircraft, introducing greater disciplines on such support, and encouraging the adoption of such disciplines multilaterally within the GATT. The fifth recital to the preamble noted the parties':

"{I}ntention to act without prejudice to their rights and obligations under the GATT and under other multilateral Agreements negotiated under the auspices of the GATT..."

In Article 1, the parties agreed to act in conformity with the interpretative note to Article 4 of the GATT Aircraft Agreement on Trade in Civil Aircraft. Article 2 of the 1992 Agreement, entitled 'Prior government commitments' specified the following:

"Government support to current large civil aircraft programmes, committed prior to the date of entry into force of this Agreement, is not subject to the provisions of this Agreement except as otherwise provided below. The terms and conditions on which support is granted shall not be modified in such a manner as to render it more favourable to the recipients: however, *de minimis* modifications shall not be deemed inconsistent with this provision."

7.68 Article 3 imposed a prohibition on the grant of direct government support to both existing and future large civil aircraft programmes "other than what has already been firmly committed for the production of large civil aircraft." Article 4 established qualitative and quantitative parameters for the provision of support for the development of new large civil aircraft programmes or derivative programmes. Article 5 set limitations for the provision of indirect government support and Article 6 restricted the parties from assuming liability for specific loans made available by aircraft manufacturers to airlines, other than through official export credit financing consistent with OECD guidelines. Article 7 excluded equity infusions from the scope of the 1992 Agreement. Article 8 was a transparency provision which required the parties to regularly and systematically exchange all public information of a kind governments make available to their respective national elected assemblies relating to matters covered by the 1992 Agreement. Article 8.2 provided that, in relation to prior government commitments for large civil aircraft programmes described in Article 2, the parties shall separately provide a complete list of such commitments already disbursed or committed, and shall each notify the other party of any changes which render the terms and conditions of such support commitments more favourable to the recipient. Article 9 permitted a party, in certain unforeseen, exceptional circumstances, and subject to the fulfilment of certain conditions, to derogate temporarily from the disciplines laid down in the 1992 Agreement.

7.69 Article 10 of the 1992 Agreement provided as follows:

"Avoidance of trade conflicts and litigation

10.1 Parties shall seek to avoid any trade conflict on matters covered by the present Agreement.⁽³⁾

10.2 They will not self-initiate action under their national trade laws with respect to government supports granted in conformity with this Agreement for as long as this Agreement is in force. However, nothing in this paragraph shall prevent a Party from abrogating this Agreement on grounds of non-compliance by the other Party.

10.3 In order to avoid trade conflict they will strongly encourage private parties to request the use of the provisions of Article 11 to resolve any disputes on matters covered by this Agreement. If, however, private petitioners request that action be taken under national laws on matters covered by this Agreement, the petitioners'

BCI deleted, as indicated [***]

government will immediately inform the other Party and offer to enter into consultations in accordance with Article 11. The Party against whom such action is brought shall have the right either to suspend the application of some or all of the provisions of the present Agreement or to terminate the Agreement 15 days after the conclusion of consultations.

10.4 In the conduct of any investigations of trade allegations concerning products covered by this Agreement that have been initiated under national trade laws as the result of private petitions, Parties shall, consistent with their law take account of representations concerning compliance with the terms of this Agreement.

⁽³⁾ Action with respect to 'matters covered by the present Agreement' refers to trade actions relating to direct and indirect government support as defined by this Agreement. It does not include actions relating to dumping, intellectual property protection, or anti-trust or competition laws."

(ii) *Arguments of the European Communities*

7.70 The European Communities argues that, without prejudice to its arguments regarding the temporal scope of the SCM Agreement, the European Communities and the United States have agreed to limit the temporal scope of the SCM Agreement *inter se* in relation to pre-1992 government support measures for large civil aircraft. According to the European Communities, this agreement between the parties as to the temporal scope of disputes related to the application of the SCM Agreement to measures of support to large civil aircraft is embodied in the 1992 Agreement.¹⁸⁵⁶

The 1992 Agreement as 'applicable law'

7.71 The European Communities argues that, in its examination of the matter referred to it in this dispute, the Panel should directly apply the provisions of the 1992 Agreement.¹⁸⁵⁷ The European Communities contends that Article 2 of the 1992 Agreement constitutes an agreement between the European Communities and the United States to 'grandfather' all government support to large civil aircraft programmes committed prior to the entry into force of the 1992 Agreement. The effect of this 'grandfathering' provision is, according to the European Communities, that all such support is deemed to be compatible with the 1979 *Agreement on Civil Aircraft* and the Tokyo Round Subsidies Code. Moreover, the European Communities argues that, by continuing to apply the 1992 Agreement after the entry into force of the SCM Agreement on 1 January 1995, the parties thereby also deemed such measures to be compatible with that subsequent Agreement, and consequently, have agreed that such measures would not be challenged in WTO dispute settlement proceedings.

The 1992 Agreement as a "relevant rule of international law" applicable to the interpretation of the SCM Agreement

7.72 The European Communities also argues that the Panel should take into account the 1992 Agreement in its interpretation of the SCM Agreement as a "relevant rule of international law

¹⁸⁵⁶ EC, Updated Request, paras. 36 and 37.

¹⁸⁵⁷ This broader argument regarding the significance of the 1992 Agreement to the determination of the present dispute was made by the European Communities in its Updated Request, at paras. 34-71 and was reiterated by the European Communities in its Answer to Panel Question 9 of 8 December 2006, para. 79.

BCI deleted, as indicated [***]

applicable in the relations between the parties".¹⁸⁵⁸ Specifically, the European Communities argues that the 1992 Agreement can be used to interpret an 'outer temporal scope' for this dispute, applicable between the United States and EC.¹⁸⁵⁹ In this regard, the European Communities argues that the 1992 Agreement, as an agreement between the United States and the European Communities not to re-open their settled dispute on pre-1992 measures of support to the large civil aircraft industry, 'informs' the interpretation of the SCM Agreement.¹⁸⁶⁰

7.73 The European Communities points to Article 31(3)(c) of the VCLT as the basis on which the Panel may use the 1992 Agreement in order to interpret an outer temporal scope for this dispute. The European Communities submits that the 1992 Agreement, as a bilateral agreement between the United States and the European Communities, is a relevant rule of international law applicable in the relations between the parties within Article 31(3)(c) because the term 'parties' in Article 31(3)(c) of the VCLT should be taken to refer to parties to the particular dispute only, rather than parties to the Agreement being interpreted (in this case, the SCM Agreement).¹⁸⁶¹ The European Communities disagrees with the view expressed by the panel in *EC – Biotech*, that Article 31(3)(c) of the VCLT requires that the rules of international law to be taken into account in interpreting the WTO Agreements at issue are those applicable in the relations between the WTO Members, rather than those Members that are parties to the dispute in question.¹⁸⁶² The European Communities refers the Panel to the reports of the Appellate Body in *US – Shrimp*, *US – FSCs* and *EC – Computer Equipment* in support of its contention that the term 'parties' in the text of Article 31(3)(c) of the VCLT refers to the parties to the particular dispute only, and not the entire membership of the WTO.¹⁸⁶³ In this regard, the European Communities also refers the Panel to the Report of the Study Group of the International Law Commission on Fragmentation of International Law, the International Law Commission's Commentaries on the Draft Articles on the Law of Treaties, and the practice of other international bodies.¹⁸⁶⁴

The 1992 Agreement as giving rise to an estoppel against the United States

7.74 In addition, the European Communities argues that the 1992 Agreement was part of a 'mutually agreed solution' to a dispute between the European Communities and the United States over

¹⁸⁵⁸ EC, Original Request, paras. 122-146. We note that, although Section IV of this request was updated and replaced by the European Communities' Updated Request for Preliminary Rulings (pursuant to para. 3 of EC, Updated Request) which did not contain the argument made in the original request that the 1992 Agreement is a "relevant rule of international law" applicable in the relations between the parties within the meaning of Article 31(3)(c) of the VCLT, the European Communities has clarified in its Answers to the Panel's questions that it intended to retain the argument based on Article 31(3)(c) of the VCLT as a narrower and alternative claim to the broader argument as to the applicability of the 1992 Agreement which it advanced in the Updated Request for Preliminary Rulings, in the event that the Panel were to reject the broader claim: EC, Answer to Panel Question 9 of 8 December 2006, paras. 78 and 79. The European Communities also reiterated the argument based on Article 31(3)(c) of the VCLT in its FWS, paras. 95, 134, 150, in its non-confidential opening statement at the first meeting with the Panel, (hereinafter, "EC, FNCOS"), para. 24 and in its second written submission, paras. 42-68.

BCI deleted, as indicated [***]

support to large civil aircraft.¹⁸⁶⁵ According to the European Communities, the mutually agreed solution between the parties involved an agreement, embodied in Article 10.1 of the 1992 Agreement, to avoid trade conflicts on matters covered by the 1992 Agreement (*i.e.*, government measures of support to large civil aircraft committed subsequent to 17 July 1992) and an agreement, embodied in Article 2, to 'grandfather' government measures of support committed prior to 17 July 1992.¹⁸⁶⁶ The European Communities contends that the mutually agreed solution evidenced by the 1992 Agreement "must at least give rise to an estoppel preventing a party to such an agreement from reneging on its terms."¹⁸⁶⁷ The European Communities contends that the parties, through their conduct, continued to apply the 1992 Agreement after the entry into force of the SCM Agreement by continuing to measure their respective measures of support to large civil aircraft against the benchmarks of the 1992 Agreement rather than against the SCM Agreement.¹⁸⁶⁸ The European Communities states:

"It would run against a fundamental principle of fairness and good faith if the United States were allowed to first encourage the European Communities to adopt certain MSF practices as being compatible with the 1992 Agreement and then challenge these very same practices as being incompatible with the SCM Agreement."¹⁸⁶⁹

7.75 In response to a question from the Panel concerning the legal basis on which we may apply the principle of estoppel in the present dispute, the European Communities submits that in *EC – Export Subsidies on Sugar*, the Appellate Body accepted that it is reasonable to analyse the good faith obligation contained in Article 3.10 of the DSU in light of the general international law principle of estoppel.¹⁸⁷⁰ The European Communities submits that, based on the reports of the panels in *Argentina – Poultry Anti-Dumping Duties*¹⁸⁷¹ and *Guatemala – Cement II*,¹⁸⁷² the principle of estoppel applies in the context of WTO dispute settlement proceedings where (i) there is a clear and unambiguous statement of fact; (ii) that statement was made voluntarily, unconditionally and is authorised by one party; and (iii) is relied on in good faith by another party.¹⁸⁷³

7.76 The European Communities argues that the United States collaborated in the conclusion and implementation of the 1992 Agreement as the practical way in which the legality of support to large civil aircraft would be determined between the parties. According to the European Communities, the United States should not now be permitted to challenge as prohibited or actionable subsidies under the

¹⁸⁶⁵ EC, FNCOS, para. 25; EC, SWS, paras. 39-41.

¹⁸⁶⁶ EC, SWS, para. 39.

¹⁸⁶⁷ EC, FNCOS, para. 25. In addition, the European Communities argues that, through the 1992 Agreement, the parties agreed upon certain benchmarks for government support for large civil aircraft going forward, however, as we have indicated, this Preliminary Ruling addresses only the issue of the relevance of the 1992 Agreement to the temporal scope of this dispute.

¹⁸⁶⁸ EC, Answer to Panel Question 60, para. 35.

¹⁸⁶⁹ EC, Answer to Panel Question 60, para. 35.

¹⁸⁷⁰ EC, Answer to Panel Question 59, para. 22. The European Communities contends therefore that the mutually agreed solution embodied in the 1992 Agreement gives rise to estoppel under Article 3.10 of the DSU; EC, SWS, para. 41.

SCM Agreement the very same measures in which it "acquiesced and, indeed, actively contributed to (if not encouraged)".¹⁸⁷⁴

(iii) *Arguments of the United States*

7.77 The United States makes several arguments in response to the European Communities' arguments regarding the relevance of the 1992 Agreement to the present dispute.

The 1992 Agreement as 'applicable law'

7.78 First, the United States argues that there is no express provision in the SCM Agreement establishing its temporal scope of application, and no legal basis for the Panel to use the 1992 Agreement to impute a temporal scope into the SCM Agreement.¹⁸⁷⁵ In this regard, the United States notes that the covered Agreements which it cited in its request for the establishment of a panel include the DSU, the GATT 1994, and the SCM Agreement. Further, the United States notes that the definition of 'covered Agreements' in Article 1.1 of the DSU; namely, Agreements listed in Appendix 1 to the DSU, is a closed list which does not include the 1992 Agreement and that the 1992 Agreement is also not one of the instruments included within GATT 1994 according to the GATT incorporation clause. Thus, according to the United States, it is the SCM Agreement and the GATT 1994, and not the 1992 Agreement, that contain the relevant obligations of the parties to this dispute.¹⁸⁷⁶ The United States argues that, where the drafters of the SCM Agreement intended to exclude a particular matter from its disciplines, or qualify the disciplines applicable to a particular matter, they did so explicitly.¹⁸⁷⁷ The United States notes that there is no exemption, qualification or safe harbor with respect to the challenged measures in this dispute which were provided prior to 1992.¹⁸⁷⁸ The United States draws contextual support for this position from footnotes 15, 16 and 24 of the SCM Agreement, which carve out civil aircraft from the 'deemed' serious prejudice provision in Article 6.1 of the SCM Agreement and the 'non-actionable' subsidy provision in Article 8.2 of the SCM Agreement. According to the United States, these specific carve-outs relating to civil aircraft confirm that, in other respects, the SCM Agreement applies to civil aircraft subsidies.¹⁸⁷⁹

7.79 The United States also points to Article 32 of the SCM Agreement in support of its contention that the 1992 Agreement does not establish an outer temporal scope for this dispute. Article 32.2 of the SCM Agreement requires that reservations to the SCM Agreement obtain the consent of the Members. The United States notes that the European Communities neither sought a reservation with respect to the alleged subsidies granted to Airbus prior to 17 July 1992, nor did the United States (or any other Member) consent to any such reservation.¹⁸⁸⁰ The United States notes that there is nothing in the SCM Agreement to indicate that Article 32.5, which obliges each Member to take all necessary steps to ensure the conformity of its laws, regulations and administrative procedures with the provisions of the SCM Agreement, does not apply to the alleged subsidy measures granted to Airbus prior to 17 July 1992, or to matters addressed by the 1992 Agreement in general.¹⁸⁸¹

¹⁸⁷⁴ EC, FNCOS, para. 26.

¹⁸⁷⁵ US, Answer to EC, Updated Request, paras. 31, 34-40, 41-45.

¹⁸⁷⁶ US, Answer to EC, Updated Request, para. 30.

¹⁸⁷⁷ US, Answer to EC, Updated Request, para. 35. The United States refers to the following provisions of the SCM Agreement in this regard: Articles 3.1, 5, 6.9 and 7.1; Article 8; Articles 27.2 and 27.3; Article 29 and the second paragraph of item (k) in Annex I.

¹⁸⁷⁸ US, Answer to EC, Updated Request, para. 35.

¹⁸⁷⁹ US, Answer to EC, Updated Request, para. 36.

¹⁸⁸⁰ US, Answer to EC, Updated Request, para. 38.

¹⁸⁸¹ US, Answer to EC, Updated Request, para. 39.

BCI deleted, as indicated [***]

7.80 The United States also notes that, to the extent that Article 1.2 of the DSU provides for its rules and procedures to apply subject to such special or additional rules and procedures on dispute settlement as are contained in the covered Agreements or identified in Appendix 2 to the DSU, neither Article 1.2 of the DSU, nor Appendix 2, makes any reference to the 1992 Agreement or to the alleged subsidy measures granted to Airbus prior to 17 July 1992.¹⁸⁸²

7.81 Further, the United States contends that acceptance of the European Communities' argument that the 1992 Agreement constitutes applicable law in this dispute would effectively mean, either that the SCM Agreement can be interpreted differently as between the European Communities and the United States than as between other Members, or that the interpretation of the SCM Agreement depends not on what Members had negotiated in that Agreement, but on the terms of a separate bilateral Agreement between two Members.¹⁸⁸³ According to the United States, neither of these outcomes can be supported.

The 1992 Agreement as a "relevant rule of international law" applicable to the interpretation of the SCM Agreement

7.82 The United States argues that the 1992 Agreement does not constitute a relevant rule of international law 'applicable in the relations between the parties' within the meaning of Article 31(3)(c). The United States agrees with the views expressed by the panel in *EC – Biotech*, that Article 31(3)(c) of the VCLT should be interpreted as requiring consideration of those rules of international law which are applicable in the relations between all parties to the treaty which is being interpreted.¹⁸⁸⁴ As the 1992 Agreement is not applicable in the relations between all parties to the SCM Agreement, the United States argues that Article 31(3)(c) of the VCLT does not provide a basis for it to be taken into consideration by the Panel when interpreting the SCM Agreement.¹⁸⁸⁵ The United States submits that none of the Appellate Body reports cited by the European Communities in relation to the interpretation of Article 31(3)(c) of the VCLT suggests that the term 'parties' in Article 31(3)(c) refers to parties to the particular dispute only, and not all of the Members of the WTO.¹⁸⁸⁶

The 1992 Agreement as giving rise to an estoppel against the United States

7.83 The United States submits that the Panel should reject the European Communities' arguments regarding estoppel as having "absolutely no basis in the covered Agreements."¹⁸⁸⁷ The United States notes that Article 3.10 of the DSU does not use the term 'estoppel' and submits that the provision does not even implicitly support the European Communities' argument that the principle of estoppel can be grounded in the 'good faith' obligation embodied in Article 3.10.¹⁸⁸⁸ The United States also challenges the European Communities' reliance on the panel and Appellate Body reports in *EC –*

BCI deleted, as indicated [***]

Export Subsidies on Sugar in support of its estoppel argument. According to the United States, these reports actually undermine the European Communities' position.¹⁸⁸⁹

7.84 In addition, the United States argues that the European Communities' estoppel argument should fail on its own terms, as the 1992 Agreement does not constitute a 'clear and unambiguous statement of fact' that the measures covered by that Agreement would not be subject to WTO dispute settlement.¹⁸⁹⁰ The United States argues that, contrary to the European Communities' assertions, the text of the 1992 Agreement actually confirms that pre-1992 subsidies are *not* immune from challenge under the SCM Agreement.¹⁸⁹¹ Moreover, the United States argues that the fifth recital in the preamble to the 1992 Agreement confirms that the United States and the European Communities expressly reserved their rights under the GATT when they entered into the 1992 Agreement.¹⁸⁹²

7.85 According to the United States, Article 2 of the 1992 Agreement simply provides that the provisions of the 1992 Agreement do not apply to government support committed prior to 17 July 1992, not that such support was deemed to be consistent with the 1979 *Agreement on Trade in Civil Aircraft* or the Tokyo Round Subsidies Code, or that pre-1992 subsidies are exempted from the GATT/WTO disciplines.¹⁸⁹³ The United States considers that the commitment of the parties in Article 10.1 to seek to avoid trade conflict on matters covered by the 1992 Agreement relates to the self-initiation of actions under national trade laws, as is made clear by Article 10.2.¹⁸⁹⁴

(iv) *Arguments of Third Parties*

7.86 Australia considers that, on the issue whether the 1992 Agreement may constitute applicable law to this dispute, the Panel should take full account of the statement of the Appellate Body at paragraph 56 of its report in *Mexico – Taxes on Soft Drinks* that the DSU operates in relation to covered Agreements only.¹⁸⁹⁵ In this regard, Australia notes that the 1992 Agreement is not a covered Agreement under the DSU. In addition, Australia does not consider that the rules of international law contained in the 1992 Agreement, which are only applicable in the relations between a subset of parties to the SCM Agreement, can be taken into account under Article 31(3)(c) of the VCLT in interpreting the SCM Agreement.¹⁸⁹⁶ Australia urges the Panel to approach the question of the application of Article 31(3)(c) of the VCLT to the SCM Agreement with "a degree of caution", given its "potentially significant systemic implications for the WTO dispute settlement system."¹⁸⁹⁷

7.87 Brazil disagrees with the European Communities that the 1992 Agreement is relevant to this dispute.¹⁸⁹⁸ Moreover, Brazil considers that Article 6.1 of the 1979 *Agreement on Trade in Civil Aircraft* does not authorize the Panel to apply a less restrictive standard for government support in the civil aircraft sector. Brazil considers that the 1992 Agreement does not qualify as a "relevant rule of

BCI deleted, as indicated [***]

international law applicable in the relations between the parties" within Article 31(3)(c) of the VCLT because it is not binding on all of the parties to the SCM Agreement.¹⁸⁹⁹

(v) *Evaluation by the Panel*

The 'application' of the 1992 Agreement

7.88 We recall that Article 3.2 of the DSU provides that the WTO dispute settlement system "serves to preserve the rights and obligations of Members under the *covered Agreements*, and to clarify the existing provisions of *those Agreements*."¹⁹⁰⁰ The jurisdiction of a panel is established by that panel's terms of reference, which are governed by Article 7 of the DSU.¹⁹⁰¹ In the present dispute, the Panel's terms of reference are:

"To examine, in the light of the relevant provisions of the covered Agreements cited by the United States in document WT/DS316/2, the matter referred to the DSB by the United States in that document, and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those Agreements."

7.89 Article 7.2 of the DSU requires panels to "address the relevant provisions in any covered Agreement or Agreements cited by the parties to the dispute." The 'covered Agreements' cited by the United States in document WT/DS316/2 include the DSU, the GATT 1994 and the SCM Agreement. As the 1992 Agreement is not a covered Agreement cited by the United States in document WT/DS316/2, or contained in the list of covered Agreements in Appendix 1 to the DSU, or one of the instruments included in the GATT 1994, we do not have jurisdiction to determine of the rights and obligations of the parties under the 1992 Agreement.

7.90 However, the European Communities argues that, although the 1992 Agreement is not a covered Agreement, and a determination of the rights and obligations of the parties under the 1992 Agreement is therefore beyond the jurisdiction of the Panel, the 1992 Agreement may nevertheless constitute law that the Panel may apply in order to resolve the claims under the covered Agreements.¹⁹⁰²

7.91 Whether presented as the direct application of what the European Communities contends is an agreement to 'grandfather' support measures to large civil aircraft committed prior to 17 July 1992, or as a rule relevant to the 'interpretation' of a modified temporal scope of application of Article 5 of the SCM Agreement for disputes between the parties concerning support measures to large civil aircraft, the European Communities is effectively inviting the Panel to find that the United States agreed, in the 1992 Agreement, to waive its rights under the WTO Agreements to challenge certain measures in WTO dispute settlement proceedings.¹⁹⁰³ In essence, we are confronted with the question whether it is possible for a Member to have waived its rights under the WTO Agreements in an agreement which it

¹⁸⁹⁹ Brazil, Third Party Submission, para. 4.

¹⁹⁰⁰ Emphasis added.

¹⁹⁰¹ Appellate Body Report, *India – Patents (US)*, para. 92.

¹⁹⁰² The European Communities notes the distinction between jurisdiction and applicable law; arguing that although this Panel does not have jurisdiction to adjudicate a dispute between the parties under the 1992 Agreement, whether as a preliminary question or as part of a broader dispute, it may nonetheless examine the 1992 Agreement as part of the law applicable to its resolution of the claims under the covered Agreements: EC, SWS, paras. 80-84.

¹⁹⁰³ The estoppel claim is similarly a claim that the United States should, in light of the waiver of its rights under the WTO Agreements and the detrimental reliance of the European Communities on such waiver, be prevented from reasserting those rights.

BCI deleted, as indicated [***]

entered into *prior* to entering into the WTO Agreements, and if so, whether and on what basis a WTO panel could enforce such a waiver.¹⁹⁰⁴

7.92 We recall that Article 23 of the DSU states that Members *shall* have recourse to the rules and procedures of the DSU when they "seek the redress of a violation of obligations or other nullification or impairment of benefits under the covered Agreements." As the Appellate Body has stated, the fact that a Member may initiate a WTO dispute whenever it considers that any benefits accruing to it are being impaired by measures taken by another Member implies that that Member is *entitled* to a ruling by a WTO panel.¹⁹⁰⁵ Assuming, for the sake of argument, that a Member can waive its rights under the WTO Agreements pursuant to a non-WTO Agreement, we cannot conceive that a Member can be considered to have waived such rights by means of an agreement which it entered into *prior* to entering into the WTO Agreements. The SCM Agreement, which came into effect on 1 January 1995, does not make any reference to the antecedent 1992 Agreement, and as the United States points out, the European Communities has not made any reservations regarding the application or interpretation of the SCM Agreement.¹⁹⁰⁶

7.93 The European Communities argues that the 'continued application' of the 1992 Agreement after the entry into force of the SCM Agreement evidences the parties' intention to apply the provisions of the 1992 Agreement (particularly Article 2 which, according to the European Communities, deems all pre-1992 support measures to be compatible with the Tokyo Round Subsidies Code) to the SCM Agreement. We consider that the fact that the parties may have continued to engage in the exchanges of information required under Article 8 of the 1992 Agreement subsequent to the entry into force of the SCM Agreement, and that the United States had refrained from initiating a complaint against the European Communities concerning the compatibility of certain EC measures with the SCM Agreement, is insufficient to constitute a subsequent Agreement between the European Communities and the United States which modifies the application of the SCM Agreement between them.

7.94 Even if it were somehow possible to find that a Member had prospectively waived certain of its rights under the WTO Agreements in a prior Agreement in the manner contended for by the European Communities (a contention which we reject), and assuming such waiver were enforceable in WTO dispute settlement (an issue which we need not and do not decide), any such waiver would need to be clear and unambiguous. Here we come to the fundamental weakness of all of the European Communities' arguments regarding the relevance of the 1992 Agreement to the present dispute: we are simply unable to construe the 1992 Agreement, and Article 2 in particular, as constituting an agreement that the parties would not challenge support measures to large civil aircraft committed prior to 17 July 1992 in subsequent WTO dispute settlement proceedings.

¹⁹⁰⁴ As noted above, *see* footnote 1854, the parties disagree whether the 1992 Agreement is in force between them, an issue we need not resolve and do not address.

¹⁹⁰⁵ Appellate Body Report, *Mexico – Tax Measures on Soft Drinks and Other Beverages* ("*Mexico – Taxes on Soft Drinks*"), WT/DS308/AB/R, adopted 24 March 2006, DSR 2006:I, 3, para. 52.

¹⁹⁰⁶ Moreover, we note that Article 30(3) of the VCLT provides that, when all of the parties to an earlier treaty are also parties to the later Agreement but the earlier treaty is not suspended in operation, the earlier treaty applies *only to the extent that its provisions are compatible with those of the later treaty*. This is also consistent with our view that, even if the 1992 Agreement could be considered a bilateral Agreement expressly modifying the application of the GATT/Tokyo Round subsidies rules in the way for which the European Communities contends, it *precedes* the SCM Agreement, and in the absence of any provision in the SCM Agreement to the effect that the SCM Agreement is subject to, or not to be considered incompatible with, the 1992 Agreement, the SCM Agreement would prevail over the 1992 Agreement to the extent of any inconsistency between them.

BCI deleted, as indicated [***]

7.95 We understand Article 2 of the 1992 Agreement as drawing a line between new support measures for large civil aircraft, which would be subject to the limitations agreed in the 1992 Agreement, and previously existing commitments, which would not be subject to the limitations agreed in the 1992 Agreement and therefore did not need to be modified to conform to the requirements of Articles 3 through 7 of the 1992 Agreement, but equally could not be modified to provide even greater benefits to the recipients. In other words, we construe Article 2 of the 1992 Agreement as providing that, with the exception of the notification obligation contained in Article 8.2, the relevant measures of support committed prior to the effective date of the 1992 Agreement were to be outside the scope of the 1992 Agreement. Moreover, the context of Article 2 suggests that the parties in fact intended to preserve their rights to challenge pre-1992 measures for inconsistency with the GATT/WTO subsidies disciplines. We note in particular that the fifth preambular paragraph of the recitals indicated that the 1992 Agreement was intended to operate without prejudice to the parties' rights and obligations under the GATT and other multilateral Agreements negotiated under the auspices of the GATT, which would include the SCM Agreement.

7.96 The European Communities contends that, while the fifth paragraph of the recitals may be read as preserving the right of either side to challenge both pre-1992 and post-1992 measures as being inconsistent with the parties' GATT-related rights and obligations, this is qualified once the preamble is read in the context of the rest of the 1992 Agreement.¹⁹⁰⁷ Specifically, the European Communities contends that the obligation of the parties in Article 10.1 to 'seek to avoid' trade conflict, preserved the parties' rights to avail themselves of GATT dispute settlement only in respect to the 'matters covered by the present Agreement' (*i.e.*, support measures committed after 17 July 1992), because Article 2 made clear that support measures committed prior to 1992 were outside the scope of the 1992 Agreement (because "Article 2 of the 1992 Agreement already contained the negotiated settlement between the parties on pre-1992 governmental support measures")¹⁹⁰⁸. We are not persuaded by this argument. We consider it unconvincing because it depends on the prior acceptance of the very issue that it ultimately seeks to establish (*i.e.*, that Article 2 deemed pre-1992 measures to be compatible with the GATT/WTO subsidies rules). Moreover, we disagree with the European Communities that Article 10 of the 1992 Agreement related to GATT/WTO dispute settlement at all. We note that, in Article 10.1 of the 1992 Agreement, the parties agreed to "seek to avoid any trade conflict" on "matters covered by the present Agreement".¹⁹⁰⁹ It is clear from Articles 10.2 through 10.4, however, that the obligation to "avoid any trade conflict" in Article 10.1 related to action by government or private parties under *national trade laws*, not GATT/WTO dispute settlement proceedings. For example, in Article 10.2, the parties agreed not to 'self-initiate' action under their national trade laws with respect to government supports granted in conformity with the 1992 Agreement. Article 10.3 concerned the parties' conduct in the event that private parties petitioned for specific action under national trade laws, and Article 10.4 dealt with the conduct of the parties in investigations which, notwithstanding Articles 10.1 through 10.3, were nonetheless initiated under national trade laws.¹⁹¹⁰

7.97 The object and purpose of the 1992 Agreement also fails to support an interpretation of Article 2 as an agreement to 'grandfather' pre-1992 measures of support to large civil aircraft for purposes of the GATT/WTO subsidies rules. While the object and purpose of the 1992 Agreement

¹⁹⁰⁷ EC, Original Request, paras. 139-142.

¹⁹⁰⁸ EC, Original Request, paras. 141-142.

¹⁹⁰⁹ The footnote to Article 10.1 defines the latter phrase as "trade actions relating to direct and indirect government support as defined by this Agreement".

¹⁹¹⁰ Thus, Article 10.1 does not even preclude national trade law actions, much less GATT trade actions or WTO dispute settlement. It is merely an obligation to 'seek to avoid' trade conflicts on a particular subject, which the parties discharge by taking certain actions (and refraining from taking others, *i.e.*, self-initiation) in the context of investigations and other actions initiated under their respective national trade laws.

BCI deleted, as indicated [***]

appears to have been to establish agreed (reduced) levels of governmental support measures to large civil aircraft in an effort to reduce trade tensions between the parties, the 1992 Agreement is silent on the status under the GATT and the Tokyo Round Subsidies Code of governmental supports committed prior to 17 July 1992 and we find no evidence that the object and purpose of the 1992 Agreement was additionally to grandfather measures of support to large civil aircraft committed prior to 17 July 1992 for purposes of GATT/WTO disciplines.

7.98 In conclusion, we consider that there is no basis for directly applying the provisions of the 1992 Agreement to determine a particular temporal scope for this dispute in the manner for which the European Communities contends. Moreover, we do not consider that the 1992 Agreement contains any agreement that the parties would not invoke their rights under the WTO Agreements to challenge support measures to large civil aircraft committed prior to 17 July 1992.

The 1992 Agreement as a relevant rule of international law applicable to the interpretation of the SCM Agreement.

7.99 The European Communities argues that the Panel should take the 1992 Agreement into consideration in its interpretation of the temporal scope of application of the SCM Agreement for purposes of this dispute. The European Communities argues that Article 31(3)(c) of the VCLT provides a basis for us to do so, because the 1992 Agreement constitutes a relevant rule of international law applicable in the relations between the parties. Although presented as an argument relating to the 'interpretation' of the SCM Agreement, the European Communities has not specifically indicated how the 1992 Agreement should influence our interpretation of the actual terms in Article 5 of the SCM Agreement, other than to argue that we should 'interpret' a particular temporal scope of application of the SCM Agreement for this dispute because the parties agreed in Article 2 of the 1992 Agreement to exclude pre-1992 measures from GATT/WTO dispute settlement proceedings. In reality, this is an argument that a particular group of measures (*i.e.*, support measures for large civil aircraft committed by either of the parties prior to 17 July 1992) should be excluded from the disciplines of the SCM Agreement based on the 1992 Agreement, rather than an argument about the interpretation of provisions of the SCM Agreement, or of specific terms within those provisions.

7.100 It is not necessary for us to determine whether, for purposes of Article 31(3)(c) of the VCLT, the 1992 Agreement constitutes applicable law between the parties that we must take into account in interpreting the SCM Agreement.¹⁹¹¹ Even if it were (and we emphasize that on this issue we express no view), as we have previously indicated, we do not agree with the European Communities that the 1992 Agreement constitutes an agreement between the parties to 'grandfather' pre-1992 measures of support for large civil aircraft for the purposes of subsequent GATT/WTO proceedings.¹⁹¹²

¹⁹¹¹ In *EC – Approval and Marketing of Biotech Products*, the European Communities argued that provisions of the *Convention on Biological Diversity* and the *2000 Cartagena Protocol on Biosafety to the Convention on Biodiversity* informed the meaning and effect of various provisions in the SPS Agreement and the GATT 1994. The Panel rejected this argument because not all of the parties to the *dispute* were parties to the conventions in question. That situation is different from the one before this Panel, where both parties to the dispute are parties to the 1992 Agreement. We note that, in *EC – Approval and Marketing of Biotech Products*, the Panel expressed the view (at para. 7.68 and footnote 243) that the term 'the parties' in Article 31(3)(c) of the VCLT suggests that the rules of international law to be taken into account in interpreting the WTO Agreements at issue in a dispute are those which are applicable in the relations *between the WTO Members* (and not merely the parties to the dispute). Panel Report, *EC – Approval and Marketing of Biotech Products*, para. 7.68 and footnote 243.

¹⁹¹² We recall that Article 2 of the 1992 Agreement provides:

"Government support to current large civil aircraft programmes, committed prior to the date of entry into force of this Agreement, is not subject to the provisions of this Agreement except as otherwise provided below. The terms and conditions on which support is granted shall not be modified in such a manner as to

BCI deleted, as indicated [***]

Consequently, even if we were to interpret the temporal scope of the SCM Agreement 'taking into account' the 1992 Agreement pursuant to Article 31(3)(c) of the VCLT, there is nothing in the 1992 Agreement that would lead us to 'interpret' the SCM Agreement as not applying to measures of support to large civil aircraft committed by the parties prior to 17 July 1992.

The 1992 Agreement gives rise to an estoppel preventing consideration of measures of support provided prior to the effective date of the 1992 Agreement

7.101 The European Communities also argues that the conclusion and implementation of the 1992 Agreement between the European Communities and the United States, in which the United States agreed to the European Communities providing a certain level and type of support to its large civil aircraft industry, "must at least give rise to an estoppel" preventing the United States from subsequently challenging such support in WTO dispute settlement proceedings. In response to a question from the Panel concerning the basis on which we are to apply the principle of estoppel in WTO dispute settlement proceedings, the European Communities argues that the good faith obligation contained in Article 3.10 of the DSU, can reasonably be analysed "in the light of the general international law principle of *estoppel*."¹⁹¹³

7.102 In the present dispute, the European Communities argues that, based on the established case law of previous panels,¹⁹¹⁴ the principle of estoppel applies in WTO dispute settlement proceedings where: (i) there is a clear and unambiguous statement of fact; (ii) that statement was made voluntarily, unconditionally and is authorized by one party; (iii) and is relied on in good faith by another party.¹⁹¹⁵

7.103 The European Communities argues that Article 2 of the 1992 Agreement "constitutes the definitive settlement on any outstanding controversy between the European Union and the United States over {pre-1992 government support to the LCA industry}."¹⁹¹⁶ According to the European Communities, "by grandfathering pre-1992 measures in Article 2 of the 1992 Agreement read in

render it more favourable to the recipients: however, *de minimis* modifications shall not be deemed inconsistent with this provision."

¹⁹¹³ The European Communities refers to the statement in the Panel Reports, *European Communities – Export Subsidies on Sugar, Complaint by Australia ("EC – Export Subsidies on Sugar (Australia)")*, WT/DS265/R, adopted 19 May 2005, as modified by Appellate Body Report WT/DS265/AB/R, WT/DS266/AB/R, WT/DS283/AB/R, DSR 2005:XIII, 6499, para. 7.74, Panel Report, *European Communities – Export Subsidies on Sugar, Complaint by Brazil ("EC – Export Subsidies on Sugar (Brazil)")*, WT/DS266/R, adopted 19 May 2005, as modified by Appellate Body Report WT/DS265/AB/R, WT/DS266/AB/R, WT/DS283/AB/R, DSR 2005:XIV, 6793 and Panel Report, *European Communities – Export Subsidies on Sugar, Complaint by Thailand ("EC – Export Subsidies on Sugar (Thailand)")*, WT/DS283/R, adopted 19 May 2005, as modified by Appellate Body Report WT/DS265/AB/R, WT/DS266/AB/R, WT/DS283/AB/R, DSR 2005:XIV, 7071), and subsequently confirmed in the Appellate Body Report, *European Communities – Export Subsidies on Sugar ("EC – Export Subsidies on Sugar")*, WT/DS265/AB/R, WT/DS266/AB/R, WT/DS283/AB/R, adopted 19 May 2005, DSR 2005:XIII, 6365, para. 3.12, that the principle of good faith embodied in Article 3.10 of the DSU applies to the initiation (as well as conduct and implementation) of dispute settlement proceedings. According to the European Communities, a Member therefore acts inconsistently with Article 3.10 of the DSU if it requests the establishment of a panel in violation of the principle of good faith. EC, Answer to Panel Question 59, para. 21.

¹⁹¹⁴ Citing the panel reports in *Argentina – Poultry Anti-Dumping Duties*, para. 7.38 and *Guatemala – Cement II*, para. 7.71-7.72. In our view, these panels did not establish that the principle of estoppel applies in WTO dispute settlement proceedings; rather, the respective panels proceeded on the basis that, even if *arguendo* a principle of estoppel in the terms contended for did exist, it was not established on the specific facts of the case.

¹⁹¹⁵ EC, Answer to Panel Question 59, para. 23.

¹⁹¹⁶ EC, Answer to Panel Question 59, para. 27.

BCI deleted, as indicated [***]

conjunction with Article 10 (*e contrario*) the United States made a clear and unambiguous statement that it will not attack these measures anymore."¹⁹¹⁷

7.104 However, as already discussed, we do not consider that Article 2 of the 1992 Agreement can be interpreted as an agreement between the parties that pre-1992 support measures are deemed to be compatible with the GATT/WTO subsidies disciplines, or that the parties thereby waived their rights to challenge pre-1992 measures as being inconsistent with those disciplines. Even assuming *arguendo* that the Panel were to accept the European Communities' submissions as to the basis for applying the principle of estoppel in the context of WTO dispute settlement (on which we express no view), we would also reject the European Communities' request for preliminary rulings on this ground because we consider that Article 2 falls far short of being a "clear and unambiguous statement" in the sense required by the first element of the European Communities' own definition of the principle of estoppel. We also note that, although the European Communities asserts that it has complied with its obligations under the 1992 Agreement concerning the level of support it has provided to its large civil aircraft industry, it has not identified any behaviour that would amount to detrimental reliance on the alleged representation made by the United States.

7.105 In conclusion, we reject the European Communities' request for a preliminary ruling that any alleged government support committed prior to 17 July 1992 is excluded from the temporal scope of these proceedings.

3. Non-Temporal Scope Issues

(a) Background

7.106 As part of its 26 October 2005 request for preliminary rulings, the European Communities asked the Panel to rule that alleged subsidies to support the Airbus A350, along with five other alleged subsidy measures, are outside the Panel's terms of reference.¹⁹¹⁸ In addition to LA/MSF for the A350, the alleged subsidy measures the subject of this request for preliminary rulings are: (i) EIB financing to Aérospatiale for the Super Transporteurs; (ii) funding from the French government for civil aeronautics-related R&D projects in which Airbus participated; (iii) the provision by certain enumerated German, French and UK research institutions of civil aeronautics R&D-related goods or services to Airbus; (iv) financial contributions to develop, expand, and upgrade facilities and other infrastructure for the Airbus companies in certain locations in Germany, France, Spain and the United Kingdom; and (v) the assumption of debt by the Spanish government on behalf of the Spanish Airbus company, CASA.¹⁹¹⁹

7.107 The European Communities purports to identify three general flaws in the United States' request for the establishment of a panel. First, the European Communities asserts that the measures concerning LA/MSF for the A350 are outside the Panel's terms of reference because they did not exist at the time of the request for the establishment of a panel.¹⁹²⁰ Second, the European Communities argues that LA/MSF for the A350 and various other measures were not subject to consultations.¹⁹²¹ Finally, the European Communities argues that the United States' descriptions of certain of the

¹⁹¹⁷ EC, Answer to Panel Question 59, para. 28.

¹⁹¹⁸ EC, Original Request, para. 8.

¹⁹¹⁹ This Preliminary Ruling does not address the European Communities' objection that the argument made by the United States in its Opening Oral Statement that Deutsche Airbus received a benefit from the 1998 debt settlement, on the basis that the fair value of the German Government's claims "already embedded a substantial benefit to Deutsche Airbus in the form of an interest rate of zero", constitutes a new claim that falls outside the Panel's terms of reference.

¹⁹²⁰ EC, Original Request, para. 12.

¹⁹²¹ EC, Original Request, paras. 12 and 36.

BCI deleted, as indicated [***]

measures in the panel request failed to satisfy the requirements of Article 6.2 of the DSU to identify the specific measures at issue.¹⁹²²

(b) Support for the Airbus A350

(i) *Arguments of the European Communities*

7.108 The European Communities claims that the LA/MSF measures for the Airbus A350 identified by the United States in Section (1) of its panel request fall outside the Panel's terms of reference because these measures did not exist at the time of the establishment of the Panel.¹⁹²³

7.109 The European Communities recalls that in *EC – Chicken Cuts*, the Appellate Body confirmed that "the term 'specific measures at issue' in Article 6.2 suggests that, as a general rule, the measures included in a panel's terms of reference must be measures that are in existence at the time of the establishment of the panel."¹⁹²⁴ The European Communities also notes that the Panel in *US – Upland Cotton* excluded from its terms of reference a measure that was not yet in existence at the date when the panel request was submitted to the DSB, even though the measure had come into existence by the time that the panel was established.¹⁹²⁵

7.110 According to the European Communities, Airbus' shareholders approved the industrial launch of the A350 on 7 October 2005.¹⁹²⁶ The European Communities contends therefore, that no government measures relating to the financing of the A350 existed at the time of the establishment of this Panel by the DSB on 20 July 2005.¹⁹²⁷

(ii) *Arguments of the United States*

7.111 The United States argues that the existence or non-existence of the challenged measures is a question of fact that is not an appropriate issue for a preliminary ruling.¹⁹²⁸

7.112 The United States notes that in *EC – Chicken Cuts*, the Panel examined the complainants' and respondents' arguments on the issue of the existence of the measure and reached its decision in its final report, not in a preliminary ruling.¹⁹²⁹ The United States submits that a more relevant report for present purposes is the Panel report in the *EC – Biotech* dispute. In that dispute, the existence or non-existence of the challenged measure was one of the central issues that the parties addressed over the course of the proceeding, and the Panel reached its decisions on the issue in its final report after fully developing the factual record during the proceeding.¹⁹³⁰

¹⁹²² EC, Original Request, para. 52.

¹⁹²³ EC, Original Request, para. 29. The European Communities also contends that launch aid for the A350 was not identified in the request for consultations, paras. 22-23.

¹⁹²⁴ Appellate Body Report, *European Communities – Customs Classification of Frozen Boneless Chicken Cuts* ("EC – Chicken Cuts"), WT/DS269/AB/R, WT/DS286/AB/R, adopted 27 September 2005, and Corr.1, DSR 2005:XIX, 9157, para. 156.

¹⁹²⁵ EC, Original Request, para. 20.

¹⁹²⁶ EC, Original Request, para. 21.

¹⁹²⁷ EC, Original Request, para. 21.

¹⁹²⁸ US, Answer to EC, Original Request, para. 26.

¹⁹²⁹ US, Answer to EC, Original Request, para. 26.

¹⁹³⁰ The United States recalls that, despite the European Communities' denials regarding the existence of the measure in that dispute, the Panel in that dispute found that the facts demonstrated the European Communities did, in fact, maintain a *de facto* moratorium.

BCI deleted, as indicated [***]

7.113 Moreover, the United States contends that the measures relating to LA/MSF for the A350 do exist, and that they existed at the time of the establishment of this Panel.¹⁹³¹ The United States argues that, while it is true that Airbus' shareholders approved the industrial launch of the A350 on 7 October 2005, Airbus typically ensures that LA/MSF measures are committed before it decides on the industrial launch of an aircraft, as the measures are an important part of the financing that makes the launch possible.¹⁹³² According to the United States, LCA manufacturers make at least two 'launch' decisions when deciding to develop a new model of LCA. In addition to the 'industrial' launch (when the manufacturer confirms its decision to begin development of the model), there is also an earlier 'commercial' launch, the purpose of which is to determine whether there are enough potential customers for the new aircraft to merit an industrial launch. The United States notes that the 'commercial' launch of the A350 took place on 10 December 2004; more than seven months prior to the establishment of this Panel.¹⁹³³

7.114 The United States also points to facts which it contends contradict the European Communities' assertion that no government measures relating to the financing of the A350 existed on 7 October 2005; namely, media comments from the CEO of Airbus on the day of the industrial launch "confirming that Airbus had in fact already received {LA/MSF} commitments from all four governments, and that the commitments were 'legally binding'"; EADS's 2005 financial statements which state that certain EU countries had already committed to fund the development of the A350 commercial aircraft programme; and a statement by the German Economics Minister in December 2004, confirming that state subsidies for the A350 were already included in the budget.¹⁹³⁴ The United States contends that, prior to the date of establishment of the Panel, the Airbus governments had made a legally binding commitment to provide LA/MSF for the A350, and that this commitment to make a financial contribution, as a 'potential direct transfer of funds', is a subsidy capable of being challenged in WTO dispute settlement.¹⁹³⁵

7.115 The United States also questions the European Communities' refusal to respond to the Facilitator's specific request for information and documents relating to LA/MSF for the A350 as part of the Annex V process in this dispute.¹⁹³⁶ The United States contends that it would have been relatively simple for the European Communities to have stated that no such measures existed, rather than refusing to provide information about them. The United States considers that, by so refusing, the European Communities "appears to concede that the measures do in fact exist."¹⁹³⁷

(iii) *Evaluation by the Panel*

7.116 We do not understand there to be a dispute over the question whether measures included in a panel's terms of reference must be in existence at the time of the establishment of the panel.¹⁹³⁸ What

¹⁹³¹ US, Answer to EC, Original Request, paras. 31-38.

¹⁹³² US, Answer to EC, Original Request, para. 31. Therefore, according to the United States, the significance of the industrial launch of the A350 on 7 October 2005 is that it demonstrates that LA/MSF measures for the A350 were in place prior to that date, not subsequently

¹⁹³³ US, Answer to EC, Original Request, para. 32, footnote 12. By way of example, the United States notes that the UK government's contract for LA/MSF for the A380 was dated 12 March 2000, some nine months prior to the industrial launch of the A380 in December 2000; at para. 34.

¹⁹³⁴ US, Answer to EC, Original Request, para. 31. The European Communities contends that the evidence provided by the United States does not establish the existence of LA/MSF to the A350; EC, FWS, paras. 345-360.

¹⁹³⁵ US, Answer to Panel Question 2, paras. 15-18.

¹⁹³⁶ US, Answer to EC, Original Request, para. 36.

¹⁹³⁷ US, Answer to EC, Original Request, para. 36.

¹⁹³⁸ We recall that the Appellate Body has indicated that the term "specific measures at issue" in Article 6.2 of the DSU suggests that, as a general rule, the measures included in a panel's terms of reference

BCI deleted, as indicated [***]

the parties do dispute is the factual issue of whether or not LA/MSF for the A350 was in existence at the time of the establishment of this Panel.

7.117 We consider that the issue of whether or not there were any 'measures' in existence regarding LA/MSF for the A350 at the time of the establishment of the Panel is a disputed question of fact in this case. Both parties have presented evidence and argument on this issue in the written submissions, which we will be required to assess in order to resolve this issue.¹⁹³⁹ We agree with the United States that, where the existence or non-existence of a challenged measure is a disputed question of fact, it is not an appropriate matter for determination in a preliminary ruling. We therefore reject the European Communities' request for a preliminary ruling on whether or not LA/MSF for the A350 falls within the scope of our terms of reference on the grounds that the measure allegedly did not exist at the time of the establishment of the Panel.

(c) Measures Allegedly Not Previously Subject to Consultations

(i) *Arguments of the European Communities*

7.118 Alternatively, and in addition to its argument concerning the non-existence of the measure, the European Communities argues that the LA/MSF measures for the A350 should be excluded from the Panel's terms of reference because they have not been subject to consultations, as required by Articles 4.4 and 6.2 of the DSU.¹⁹⁴⁰

7.119 The European Communities also requests that we exclude other measures from our terms of reference on the same grounds. These measures relate to: financing to Aérospatiale Super Transporteurs as described in Section (2)(f) of the United States' panel request; funding from the French government for civil aeronautics-related R&D projects in which Airbus participated (Section (6)(e) of the United States' panel request); and the provision by certain enumerated German, French and UK research institutions of civil aeronautics R&D -related goods and services to Airbus (Section (6)(f) of the United States' panel request).¹⁹⁴¹

7.120 The European Communities argues that only measures that have been subject to consultations can properly be included in a request for the establishment of a panel. In support of this contention, the European Communities refers the Panel to statements of the Appellate Body in *US – Upland Cotton* and *EC - Chicken Cuts*.¹⁹⁴² Relying on the Appellate Body Report in *US - Upland Cotton*, the European Communities argues that even though there does not have to be a "precise and exact identity" between the scope of the consultations and the request for the establishment of a panel, the complaining party cannot include additional measures in its panel request and thereby "expand the scope of the dispute".¹⁹⁴³

must be measures that are in existence at the time of the establishment of the panel; Appellate Body Report, *EC – Chicken Cuts*, para. 156.

¹⁹³⁹ We recall that, in *Korea –Alcoholic Beverages*, the Panel considered that the issue before it was "one that requires a weighing of evidence" and "{a}s such it is not an issue appropriate for a preliminary ruling in this case." Panel Report, *Korea – Taxes on Alcoholic Beverages ("Korea –Alcoholic Beverages")*, WT/DS75/R, WT/DS84/R, adopted 17 February 1999, as modified by Appellate Body Report, WT/DS75/AB/R, WT/DS84/AB/R, DSR 1999:I, 44, para. 10.16.

¹⁹⁴⁰ EC, Original Request, para. 12.

¹⁹⁴¹ EC, Original Request, paras. 88-89.

¹⁹⁴² EC, Original Request, paras. 31-32; citing the Appellate Body, *US – Upland Cotton*, para. 293 and Appellate Body, *EC – Chicken Cuts*, para. 156 (footnote 315).

¹⁹⁴³ Appellate Body Report, *US – Upland Cotton*, para. 293.

BCI deleted, as indicated [***]

(ii) *Arguments of the United States*

7.121 The United States contends that it is well established that it is the panel request, and not the consultation request, that establishes a panel's terms of reference.¹⁹⁴⁴ The United States also notes that the Appellate Body has said that it does not believe "Articles 4 and 6 of the DSU . . . require a *precise and exact identity* between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel," provided that the "essence" of the challenged measures had not changed.¹⁹⁴⁵

7.122 In relation to LA/MSF for the A350, the United States notes that its panel request specifically refers to LA/MSF for the A350. The United States also contends that, contrary to the European Communities' assertions, it did ask questions about LA/MSF for the A350 during the initial round of consultations on 4 November 2004, and that during the second round of consultations on 23 March 2006, it provided the European Communities with written questions concerning LA/MSF for the A350, which the European Communities refused to answer.¹⁹⁴⁶ Moreover, the United States argues that, in its first written submission, it has established a *prima facie* case that the LA/MSF which the Airbus governments have committed to provide for the A350 is the same in its essential respects to all of the LA/MSF they provide to Airbus.¹⁹⁴⁷

7.123 The United States has indicated that it does not intend to pursue its claim with respect to the 1997 EIB loan to Aérospatiale for the Super Transporteurs programme owing to the European Communities' confirmation that this loan was never drawn by Aérospatiale. However, the United States is still pursuing its claim in relation to a 1993 EIB loan to Aérospatiale for the Super Transporteurs programme.¹⁹⁴⁸ As regards the challenge to this measure the United States notes that its panel request refers specifically to financing from the EIB to Aérospatiale Super Transporteurs, that its request for consultations made specific reference to the provision by the EIB "to the Airbus companies" of "research and development and other loans on preferential terms, including financing for the A320, the A321, the A330/A340, and the A380," and that its request for consultations also lists financing by the EIB "to the Airbus companies" for "large civil aircraft design, development, and other purposes" before then listing specific examples of such financing.¹⁹⁴⁹ According to the United States, the 'essence' of the challenged measures; namely, subsidized loans from the EIB to the Airbus companies for the development of Airbus aircraft, is the same in both the consultation request and the panel request.¹⁹⁵⁰ The United States also contends that it raised the issue of the EIB's loans for Aérospatiale Super Transporteurs during the consultations with the European Communities on 4 November 2004.¹⁹⁵¹ Moreover, the United States contends that its Statement of Available Evidence included a reference to a portion of the EIB website entitled "Loans activity, Breakdown by Sector –

¹⁹⁴⁴ US, Answer to EC, Original Request, para. 39, referring to Appellate Body Report, *US – Upland Cotton*, para. 293.

BCI deleted, as indicated [***]

Industry" in which all loans to Airbus companies, including two loans for the Aérospatiale Super Transporteur project, are listed.¹⁹⁵²

7.124 As regards the provision by certain enumerated German, French and UK research institutions of civil aeronautics R&D-related goods or services to Airbus (Section (6)(f) of the panel request), the United States advises that, although it considers its panel request in respect of the measures described in Section (6)(f) of its panel request to conform with the requirements of Article 6.2 of the DSU, it has decided not to pursue its claims with respect to these measures in this dispute. Accordingly, there is no need for the Panel to address the European Communities' arguments concerning the measures described in Section (6)(f) of the panel request.¹⁹⁵³

(iii) *Evaluation by the Panel*

7.125 We recall that Article 4.4 of the DSU reads in relevant part:

"Any request for consultations shall be submitted in writing and shall give the reasons for the request, including identification of the measures at issue and an indication of the legal basis for the complaint."

Article 6.2 of the DSU provides:

"The request for the establishment of a panel shall be made in writing. It shall indicate whether consultations were held, identify the specific measures at issue and provide a brief summary of the legal basis of the complaint sufficient to present the problem clearly. In case the applicant requests the establishment of a panel with other than standard terms of reference, the written request shall include the proposed text of special terms of reference."

7.126 We recall that the Appellate Body has stated that Articles 4 and 6 of the DSU "set forth a process by which a complaining party must request consultations, and consultations must be held, before a matter may be referred to the DSB for the establishment of a panel".¹⁹⁵⁴ It is well established that Articles 4 and 6 of the DSU do not "require a *precise and exact identity* between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel."¹⁹⁵⁵ In this regard, we recall that Article 4.4 of the DSU requires only that the request for consultations must identify "the measures at issue", as opposed to the "*specific measures at issue*" as required by Article 6.2 of the DSU. As the Appellate Body in *Brazil - Aircraft* stated:

"We do not believe, however, that Articles 4 and 6 of the DSU, or paragraphs 1 to 4 of Article 4 of the SCM Agreement, require a *precise and exact identity* between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel. As stated by the Panel, 'the purpose of consultations, as set forth in Article 4.3 of the SCM Agreement, is to 'clarify the facts of the situation', and it can be expected that information obtained

¹⁹⁵² US, Answer to EC, Original Request, para. 74.

¹⁹⁵³ US, Answer to EC, Original Request, para. 75.

¹⁹⁵⁴ Appellate Body Report, *Brazil - Aircraft*, para. 131.

¹⁹⁵⁵ Appellate Body Report, *Brazil - Aircraft*, para. 132.

BCI deleted, as indicated [***]

during the course of consultations may enable the complainant to focus the scope of the matter with respect to which it seeks establishment of a panel."¹⁹⁵⁶

We are also mindful of the Appellate Body's statement in *US – Upland Cotton*:

"We also note that Article 4.2 of the DSU calls on a WTO Member that receives a request for consultations to 'accord sympathetic consideration to and afford adequate opportunity for consultation regarding any representations made by another Member'. *As long as the complaining party does not expand the scope of the dispute*, we hesitate to impose too rigid a standard for the 'precise and exact identity' between the scope of consultations and the request for the establishment of a panel, as this would substitute the request for consultations for the panel request. According to Article 7 of the DSU, it is the request for the establishment of a panel that governs its terms of reference, unless the parties agree otherwise."¹⁹⁵⁷

Finally, we recall that in *US – Upland Cotton*, the Appellate Body indicated that a panel's determination of the scope of the consultations should be limited to an analysis of the request for consultations.¹⁹⁵⁸

7.127 With these considerations in mind, we now turn to examine the text of the consultation request and the panel request in order to determine whether there is a sufficient degree of identity between the measures that were the subject of consultations and the specific measures identified in the request for the establishment of the panel to warrant a conclusion that the challenged measures were subject to consultations as required by Article 4 of the DSU.

Launch aid for the Airbus A350 (Section (1) of the panel request)

7.128 The sections of the consultation request pertaining to LA/MSF read:

"The provision by the member States of financing for large civil aircraft design and development to the Airbus companies (hereinafter "launch aid"). This financing provides benefits to the recipient companies including financing for projects that would otherwise not be commercially feasible. The non-commercial terms of the financing include no interest or interest at below-market rates and a conditional repayment obligation that is tied to the success of the aircraft model being financed; if a model is not successful, some or all of the financing is forgiven...."

The subsidies in question include those relating to Airbus models A300, A310, A320 family, A330/340, A330-200, A340-500/600, and most recently the A380."¹⁹⁵⁹

The section of the United States' panel request pertaining to LA/MSF in respect of the A350 reads:

"The provision by the member States of financing for large civil aircraft design and development to the Airbus companies (hereinafter "launch aid"). This financing

¹⁹⁵⁶ Appellate Body Report, *Brazil – Aircraft*, para. 132. In this connection, we recall that the Panel on *Brazil - Aircraft* stated (at para. 7.9) "...to limit the scope of the panel proceedings to the identical matter with respect to which consultations were held could undermine the effectiveness of the panel process."

¹⁹⁵⁷ Appellate Body Report, *US – Upland Cotton*, para. 293 (footnotes omitted, emphasis added).

¹⁹⁵⁸ Appellate Body Report, *US – Upland Cotton*, para. 287.

¹⁹⁵⁹ *European Communities and Certain Member States – Measures Affecting Trade in Large Civil Aircraft*, Request for Consultations by the United States, WT/DS316/1-G/L/697-G/SCM/D62/1 (12 October 2004) (footnotes omitted) (hereinafter "US, Consultation Request").

BCI deleted, as indicated [***]

provides benefits to the recipient companies including financing for projects that would otherwise not be commercially feasible. The non-commercial terms of the financing may include no interest or interest at below-market rates and a repayment obligation that is tied to sales. If the aircraft is not successful, some or all of the financing need not be repaid. Specific examples of the financing at issue include:

- (a) French financing for the Airbus A300, A310, A320, A330/340, A330-200, A340-500/600, A380 and A350;
- (b) German financing for the Airbus A300, A310, A320, A330/340, A380 and A350;
- (c) United Kingdom financing for the Airbus A300, A310, A320, A330/340, A330-200, A340-500/600, A380 and A350; and
- (d) Spanish financing for the Airbus A300, A310, A320, A330/340, A330-200, A340-500/600, A380 and A350."¹⁹⁶⁰

7.129 We consider that there is a sufficient identity between the measures described in the request for consultations and the specific measures as described in the panel request. We note that the consultation request indicates that the measures in question 'include' LA/MSF relating to the aircraft models specified therein. The consultation request therefore indicates that the alleged subsidies to the specific aircraft models are part of a class or category of measures identified as 'launch aid' for large civil aircraft design and development to the Airbus companies. In the panel request, the United States provides particular examples of the specific measures it identifies as 'launch aid' for large civil aircraft design and development to the Airbus companies. We do not consider that the United States has 'broadened the scope of the dispute' by including in the panel request 'launch aid' for the A350 as one of the examples of the specific measures that are described in the same terms in both the consultations and panel requests. We consider that the essence of the challenged measures; namely, 'launch aid' for large civil aircraft design and development to the Airbus companies, is the same in both requests.

EIB financing to Aérospatiale for the Super Transporteurs (Section (2)(e) of the panel request).

7.130 The section of the United States' consultation request dealing specifically with EIB financing refers to:

"The provision by the EC and the member States, through the European Investment Bank ("EIB"), to the Airbus companies, including Airbus' parent company EADS, of research and development and other loans on preferential terms, including financing for the A320, the A321, the A330/340, and the A380."¹⁹⁶¹

Section (2)(e) of the United States' panel request, pertaining to EIB financing to Aérospatiale Super Transporteurs reads:

"(2) In addition to launch aid, the provision by the EC and the member States, through the European Investment Bank ("EIB"), to the Airbus companies, of

¹⁹⁶⁰ *European Communities and Certain Member States – Measures Affecting Trade in Large Civil Aircraft*, Request for the Establishment of a Panel by the United States, WT/DS316/2 (3 June 2005) (footnotes omitted), (hereinafter "US, Panel Request").

¹⁹⁶¹ US, Consultation Request.

BCI deleted, as indicated [***]

financing for large civil aircraft design, development, and other purposes. Specific examples of the financing at issue include: ...

(e) Financing to Aérospatiale Super Transporteurs;"¹⁹⁶²

7.131 In our view, the United States has not "broadened the scope of the dispute" by specifying EIB financing to Aérospatiale Super Transporteurs in the panel request. We note that the consultation request specifically refers to the provision by the EIB "to the Airbus companies" of "research and development and other loans on preferential terms, *including* financing for the A320, the A321, the A330/A340, and the A380". The panel request also lists financing by the EIB "to the Airbus companies" for "large civil aircraft design, development, and other purposes" and then provides specific examples of the financing at issue. We consider that the essence of the challenged measures; namely, subsidized loans from the EIB to the Airbus companies for the development of Airbus aircraft (which category includes Aérospatiale Super Transporteurs), is the same in both requests.

Funding from the French government for civil aeronautics-related R&D projects in which Airbus participated (Section (6)(e) of the panel request).

7.132 Section (6)(e) of the United States' panel request refers to:

"The provision by the EC and the member States of financial contributions for aeronautics-related research, development, and demonstration ("R&D"), undertaken by Airbus, whether alone or with others, or in any other way to the benefit of Airbus, including: ...

(e) Funding from the French government, including regional and local authorities, since 1986 for civil aeronautics-related R&D projects in which Airbus participated."¹⁹⁶³

7.133 The European Communities argues that the measures described in Section (6)(e) are not included in the consultation request.¹⁹⁶⁴

7.134 We recall, however, that there is a section of the request for consultations dealing specifically with funding for civil aeronautics-related R&D projects in the following terms:

"The provision by the EC and member States of research and development loans and grants in support of large civil aircraft development. These loans and grants directly benefit the Airbus companies."¹⁹⁶⁵

7.135 We consider that the specific measures identified in Section (6)(e) of the United States' panel request fall within the scope of this description of the measure in the request for consultations.

¹⁹⁶² US, Panel Request.

¹⁹⁶³ US, Panel Request.

¹⁹⁶⁴ EC, Original Request, para. 73.

¹⁹⁶⁵ US, Consultation Request.

BCI deleted, as indicated [***]

Provision by certain enumerated German, French and UK research institutions of civil aeronautics R&D-related goods and services to Airbus (Section (6)(f) of the United States' panel request).

7.136 The United States advises that it has decided not to pursue its claims with respect to these measures in this dispute.¹⁹⁶⁶ Accordingly, there is no need for us to address the European Communities' objections to these measures.

7.137 In conclusion, for the reasons stated above, we reject the European Communities' request for a preliminary ruling that the measures identified in Sections (1), (2)(e) and (6)(e) of the United States' panel request be excluded from our terms of reference on the grounds that they were not subject to consultations.

(d) Measures Allegedly not Adequately Identified in the Panel Request

(i) *Arguments of the European Communities*

7.138 The European Communities challenges a number of other measures as being outside the Panel's terms of reference on the grounds that, in its request for the establishment of a panel, the United States described these measures in an overly broad, ambiguous or overly inclusive manner.¹⁹⁶⁷ According to the European Communities, the United States has thereby failed to comply with the basic obligation under Article 6.2 of the DSU to identify the 'specific measures at issue' in its request for the establishment of a panel.¹⁹⁶⁸

7.139 Where a measure is not explicitly identified in the text of a request for the establishment of a panel, the European Communities contends that WTO jurisprudence has established that there must be a description of the specific measures at issue in the panel request that *effectively* achieves the same result.¹⁹⁶⁹ According to the European Communities, the complainant is under a duty to identify, with sufficient precision, the 'specific measures at issue' in its panel request, and a respondent is not required to engage in research or guesswork in determining what the specific measures are supposed to be, particularly in complex cases potentially involving numerous measures.¹⁹⁷⁰ Moreover, the European Communities argues that with respect to programmes and schemes subject to the disciplines of the SCM Agreement, WTO jurisprudence indicates that broad descriptions of measures at issue "may be acceptable as long as the group of measures in question has clearly been limited by some *restricting or specifying reference(s)* which, *in light of the circumstances of the case*, nonetheless enable the 'specific measures at issue' to be ascertained."¹⁹⁷¹ According to the European Communities, depending on the specific circumstances and type of measure, "other specifying elements may be necessary, such as the nature of the financial contribution, the amount thereof or the

BCI deleted, as indicated [***]

date on which it was provided, the purpose of the grant, or the recipient."¹⁹⁷² The European Communities notes that the inclusion or non-inclusion of a measure in the panel's terms of reference must be demonstrated "on the face (text) of the panel request."¹⁹⁷³

(ii) *Arguments of the United States*

7.140 The United States argues that its panel request identifies the specific measures at issue in accordance with Article 6.2 of the DSU.

7.141 According to the United States, the Appellate Body report in *US – Carbon Steel* made clear that a panel reviewing a panel request under Article 6.2 must consider the panel request as a whole, and may take into account the attendant circumstances.¹⁹⁷⁴ Such 'attendant circumstances' are the circumstances surrounding the filing of the panel request, such as the consultation request, the consultations, the Statement of Available Evidence, the DSB's consideration of the panel requests and such other facts.¹⁹⁷⁵ The United States also argues that the European Communities has not been prejudiced in any way by the description of the measures in the panel request.¹⁹⁷⁶ Specifically, the United States points to the fact that the European Communities received a first set of questions from the facilitator in the Annex V process on 7 October 2005, following an earlier exchange of draft questions on 23 September 2005. The United States contends that, given the level of detail in the questions, and the fact that its first written submission was not due until February 2007, the European Communities cannot seriously assert that it has been unable to begin preparing its defence.¹⁹⁷⁷

7.142 The United States also refers to the procedural history of this dispute as indicating that the European Communities' request for preliminary rulings "had nothing to do with addressing alleged shortcomings in the US panel request, and everything to do with increasing the complexity of the matter, avoiding the need to provide information on the challenged measures in the Annex V process, and forcing delay."¹⁹⁷⁸ The United States also raises the European Communities' refusal to provide details of its concerns regarding the lack of specificity in the United States' panel request when the request was considered by the DSB as demonstrating that the European Communities' approach to its concerns regarding the United States' panel request is "strikingly different from the approach suggested by the Appellate Body and prior panels."¹⁹⁷⁹ Finally, the United States points to the fact

¹⁹⁷² EC, Original Request, para. 50.

¹⁹⁷³ EC, Original Request, para. 51; citing the Panel Report, *US – Upland Cotton*, para. 7.123-7.128; 7.137-7.144; 7.145-7.152; 7.172-7.181; and Appellate Body Report, *EC – Export Subsidies on Sugar*, paras. 145-156, particularly para. 154.

¹⁹⁷⁴ US, Answer to EC, Original Request, para. 45; referring to Appellate Body Report, *US – Carbon Steel*, paras. 128-133.

¹⁹⁷⁵ US, Answer to EC, Original Request, para. 60; citing Panel Report, *United States – Safeguard Measures on Imports of Fresh, Chilled or Frozen Lamb Meat from New Zealand and Australia* ("*US – Lamb*"), WT/DS177/R, WT/DS178/R, adopted 16 May 2001, as modified by Appellate Body Report, WT/DS177/AB/R, WT/DS178/AB/R, DSR 2001:IX, 4107, para. 5.32.

¹⁹⁷⁶ US, Answer to EC, Original Request, para. 41.

¹⁹⁷⁷ US, Answer to EC, Original Request, para. 78.

¹⁹⁷⁸ Specifically, the United States refers to the further consultations which were held on 23 March 2006 and the second request for the establishment of a panel in this dispute which it filed on 10 April 2006. The United States contends that, since the time at which the United States filed the second panel request that ultimately led to the composition of a panel in DS347, the European Communities has fully understood the nature of the United States' case and has been able to prepare its defence in this dispute. US, Answer to EC, Original Request, para. 79.

¹⁹⁷⁹ US, Answer to EC, Original Request, para. 82; referring to the Appellate Body Report, *United States – Tax Treatment for "Foreign Sales Corporations"* ("*US – FSC*"), WT/DS108/AB/R, adopted 20 March 2000, DSR 2000:III, 1619, para. 166, and Panel Report, *Canada – Wheat Exports and Grain Imports*, para. 6.10, subpara. 65.

BCI deleted, as indicated [***]

that it consented to the European Communities receiving extended time during which to prepare its first written submission (12 weeks compared to the two to three weeks proposed in the DSU) as demonstrating the lack of prejudice to the EC.¹⁹⁸⁰

(iii) *Evaluation by the Panel*

7.143 A panel's terms of reference are based on the request for establishment of a panel. We recall that, when faced with an issue relating to the scope of its terms of reference, a panel is required to scrutinize carefully the request for establishment of a panel to ensure its compliance with both the letter and the spirit of Article 6.2 of the DSU.¹⁹⁸¹ Article 6.2 of the DSU provides:

"The request for the establishment of a panel shall be made in writing. It shall indicate whether consultations were held, *identify the specific measures at issue* and provide a brief summary of the legal basis of the complaint *sufficient to present the problem clearly*. In case the applicant requests the establishment of a panel with other than standard terms of reference, the written request shall include the proposed text of special terms of reference."¹⁹⁸²

7.144 We recall that the requirement of precision in the request for establishment of a panel flows from the two essential purposes of the terms of reference; namely, to define the scope of the dispute, and to serve the due process objective of notifying the parties and third parties of the nature of a complainant's case.¹⁹⁸³ Compliance with the requirements of Article 6.2 must be determined on the merits of each case, after a consideration of the panel request as a whole, and in light of attendant circumstances.¹⁹⁸⁴ Moreover, such compliance must be demonstrated on the face of the request for establishment of a panel, and defects in the request for the establishment of a panel cannot be cured in the subsequent submissions of the parties during the panel proceedings.¹⁹⁸⁵

7.145 In the sections that follow, we set forth the specific measure contained in the United States' panel request which the European Communities challenges on the basis that it fails to meet the requirements of Article 6.2 of the DSU, followed by the arguments advanced by the European Communities and the United States, respectively, in relation to the specific measure. Finally, we set out our analysis, based on the foregoing principles, and our conclusion with respect to each specific measure.

Funding from the French government for civil aeronautics-related R&D projects in which Airbus participated (Section (6)(e) of the United States' panel request)

7.146 Section (6)(e) of the panel request refers to:

"The provision by the EC and the member States of financial contributions for aeronautics-related research, development, and demonstration ("R&D"), undertaken

¹⁹⁸² Emphasis added.

¹⁹⁸³ Appellate Body Report, *US – Carbon Steel*, para. 126.

¹⁹⁸⁴ Appellate Body Report, *US – Carbon Steel*, para. 127. "Attendant circumstances" that a panel may examine when evaluating a panel request include the consultations that were held concerning the measure and the DSB's consideration of the requests for a panel and the establishment of the Panel; Panel Report, *US – Lamb*, para. 5.32.

¹⁹⁸⁵ Appellate Body Report, *US – Carbon Steel*, para. 127.

BCI deleted, as indicated [***]

by Airbus, whether alone or with others, or in any other way to the benefit of Airbus, including: ...

(e) Funding from the French government, including regional and local authorities, since 1986 for civil aeronautics-related R&D projects in which Airbus participated."

7.147 The European Communities argues that the phrase 'research, development, and demonstration' used by the United States in its panel request is unclear and overly broad.¹⁹⁸⁶ The reference to 'funding' could, in the European Communities' view, relate to any funding ever provided by French authorities.¹⁹⁸⁷ According to the European Communities, 'funding' by the 'French government, including regional and local authorities' could cover any of the hundreds, if not thousands, of authorities in France. The European Communities submits that the failure to specify *which* governmental institutions or authorities are of particular concern creates unacceptable uncertainty, especially in larger countries with complex administrations and wide networks of sub-national authorities.¹⁹⁸⁸ The European Communities argues that it is impossible for it to know which alleged actions taken by which French authorities over the past 20 years the United States is interested in pursuing.¹⁹⁸⁹

7.148 The United States disputes the European Communities' contention that the phrase 'funding for civil aeronautics-related R&D projects in which Airbus participated' could be understood to mean 'any funding ever provided by French authorities'. The United States contends that it used the same term; namely, 'funding for civil aeronautics-related R&D projects in which Airbus participated' to describe the European Communities, German, UK and Spanish R&D measures, in Section (6)(a) through (d) of its panel request and notes that the European Communities has not raised concerns over compliance with Article 6.2 in that context, nor has the European Communities explained why the term was sufficiently clear with respect to the European Communities, German, United Kingdom and Spain R&D measures, and unclear and broad with respect to the French R&D measures.¹⁹⁹⁰

7.149 The United States also raises attendant circumstances surrounding the filing of its Panel request. In this regard, the United States contends that it raised the issue of French R&D subsidies during consultations and provided the European Communities with five specific written questions about French funding for R&D projects related to civil aircraft in which Airbus participated between 1986 and 2003.¹⁹⁹¹ The United States notes that the Statement of Available Evidence appended to its consultation request included several documents addressing French government funding for R&D for civil aircraft projects, including funding to Airbus.¹⁹⁹² In addition, the United States notes that, when the United States' panel request was first on the agenda of the DSB, the United States made specific reference to the nature of the R&D subsidies in its statement to the DSB.¹⁹⁹³

¹⁹⁸⁶ EC, Original Request, para. 57.

¹⁹⁸⁷ EC, Original Request, para. 57.

¹⁹⁸⁸ EC, Original Request, para. 59.

¹⁹⁸⁹ EC, Original Request, para. 61.

¹⁹⁹⁰ US, Answer to EC, Original Request, para. 63. We note that in its first written submission, the European Communities responded that in Sections (6)(a) through (d) of the panel request, the United States has included additional specifying elements, such as the name of the R&D programme, which the European Communities claims helped it to identify the specific measures at issue; EC, FWS, para. 183.

¹⁹⁹¹ US, Answer to EC, Original Request, para. 64.

¹⁹⁹² US, Answer to EC, Original Request, para. 64.

¹⁹⁹³ US, Answer to EC, Original Request, para. 65; Minutes of Meeting held in the Centre William Rappard, 13 June 2005, WT/DSB/M/191, 28 June 2005, para. 3.

BCI deleted, as indicated [***]

7.150 In the Panel's view, Section (6)(e) of the panel request, considered as a whole and in light of attendant circumstances, identifies the measures at issue in a manner sufficient to present the problem clearly. We do not consider that the reference to funding for "civil aeronautics-related R&D projects in which Airbus participated" can be read as covering any funding ever provided by French authorities. In addition, while the terms "funding" by "the French government, including regional and local authorities" might, if read in isolation, cover "hundreds if not thousands of 'authorities' in France", we do not consider that funding for "civil aeronautics-related R&D projects in which Airbus participated" can be so broadly construed, especially when considered in the light of the attendant circumstances described in the arguments of the United States.¹⁹⁹⁴

Financial contributions to develop, expand, and upgrade facilities and other infrastructure for the Airbus companies in certain locations in German, France, Spain and the United Kingdom (Section (3) of the United States' panel request).

7.151 Section (3) of the United States' panel request reads:

"The provision by the EC and the member States of financial contributions to develop, expand, and upgrade facilities and other infrastructure for the Airbus companies. Specific instances include public investments by German authorities in Hamburg, Nordenham, Bremen, and Varel, by French authorities in the Toulouse region, by UK authorities at Broughton, and by Spanish authorities at numerous locations in Spain (such as Puerto Real, Illescas, Puerto de Santa Maria, and La Rinconada)."

7.152 The European Communities challenges the descriptions of "public investments by French authorities in the Toulouse region", and "public investments" by "German authorities in Hamburg, Nordenham, Bremen, and Varel"; by "UK authorities at Broughton" and "by Spanish authorities at numerous locations in Spain (such as Puerto Real, Illescas, Puerto de Santa Maria, and La Rinconada)" as insufficiently clear in light of the fact that local administrations undertake an immense number of infrastructure measures of varying scale and scope each year and the specification of the United States' claim is insufficient to enable the European Communities to identify the specific measures the United States seeks to challenge.

7.153 The United States contends that the European Communities' assertion that the description of the measures in Section (3) of the United States panel request is insufficient under Article 6.2 of the DSU is not credible, particularly in light of the attendant circumstances.¹⁹⁹⁵ The United States gives the example of the public investments by German authorities in Hamburg: According to the United States, the measure in question is the expenditure by Hamburg of approximately EUR 751 million to develop land and expand facilities at Airbus' Hamburg production facility.¹⁹⁹⁶ The United States notes that it listed this measure in its consultation request, it submitted two written questions on the Hamburg project in advance of the consultations between the parties on 4 November 2004 and it discussed the measure at length with the European Communities during the consultations.¹⁹⁹⁷ The United States notes that it appended to its consultation request no fewer than nine different Hamburg government documents describing the Hamburg infrastructure project in detail.¹⁹⁹⁸ In addition, the United States notes that, at the first DSB meeting at which the United States panel request was on the agenda, the US representative made specific reference to the City of Hamburg spending

¹⁹⁹⁴ US, Answer to EC, Original Request, paras. 64-67.

¹⁹⁹⁵ US, Answer to EC, Original Request, para. 56.

¹⁹⁹⁶ US, Answer to EC, Original Request, para. 56.

¹⁹⁹⁷ US, Answer to EC, Original Request, para. 56.

¹⁹⁹⁸ US, Answer to EC, Original Request, para. 56.

BCI deleted, as indicated [***]

EUR 751 million to fill in a protected wetland on the River Elbe to create additional land for Airbus's use at its production site in Hamburg.¹⁹⁹⁹

7.154 With respect to the other alleged infrastructure subsidies, the United States notes that it submitted specific written questions about the Nordenham, Varel, Bremen, Toulouse, Broughton, Wales, Illescas, Puerto de Santa Maria, Puerto Real and La Rinconada measures to the European Communities in advance of the consultations on 26 October 2004.²⁰⁰⁰ The United States notes that it also included documents about these other infrastructure subsidies in the Statement of Available Evidence appended to its request for consultations.²⁰⁰¹

7.155 In the Panel's view, the 'public investments' referred to in Section (3) of the panel request relate to the development, expansion and upgrading of facilities and other infrastructure *for* the Airbus companies. Infrastructure *for* the Airbus companies' is clearly narrower than infrastructure that might in some way *benefit* the Airbus companies. For example, contrary to the European Communities' suggestion, we do not consider that it is plausible to read the reference to "infrastructure for the Airbus companies" as potentially covering insignificant infrastructure measures such as a new stop sign near an Airbus company plant. Moreover, we consider that this section of the panel request, when considered in the light of attendant circumstances, identifies the measures at issue in a manner sufficient to present the problem clearly.

The assumption of debt by the Spanish government on behalf of the Spanish Airbus company CASA (Section (4) of the United States' panel request).

7.156 The United States advises that, although it considers its request under this section consistent with the requirements of Article 6.2 of the DSU, it has decided not to pursue its claims with respect to these measures. Accordingly, there is no need for the Panel to address the European Communities' contentions on these measures.²⁰⁰²

The provision by certain enumerated German, French, and UK research institutions of civil aeronautics R&D-related goods or services to Airbus (Section (6)(f) of the United States' panel request).

7.157 The United States advises that, although it considers its panel request in respect of these measures to conform with the requirements of Article 6.2 of the DSU, it has decided not to pursue its claims with respect to these measures in this dispute.²⁰⁰³ Accordingly, there is no need for us to address the European Communities' objections to these measures.

¹⁹⁹⁹ US, Answer to EC, Original Request, para. 57; referring to WT/DSB/M/191, 28 June 2005, para. 3.

²⁰⁰⁰ US, Answer to EC, Original Request, para. 59. The United States contends that neither the European Communities, France, Germany, Spain nor the United Kingdom expressed confusion about the nature of the measures at issue at that time.

²⁰⁰¹ US, Answer to EC, Original Request, para. 59.

²⁰⁰² US, Answer to EC, Original Request, para. 75.

²⁰⁰³ US, Answer to EC, Original Request, para. 75.

BCI deleted, as indicated [***]

7.158 In conclusion, for the reasons stated above, we reject the European Communities' request for a preliminary ruling that the measures identified in Sections (6)(e) and (3) of the United States' panel request be excluded from our terms of reference on the grounds that the descriptions of these measures fail to meet the requirements of Article 6.2 of the DSU.

Section VII.C Attachment: Annex A to the Preliminary Ruling of the Panel

Measures which the European Communities Agrees Are Subject
to Article 5 of the SCM Agreement
because they came into existence after 1 January 1995

Nature of Measure	Alleged amount of financial contribution	Details of Existence
MSF for A330/A340²⁰⁰⁴		
Germany	DM 126.8 million and DM 66.7 million	Disbursed in 1995 and 1996, respectively.
France	€75.93 million and €1.518 million	Disbursed in 1995 and 1996, respectively.
Spain	€9.28 million	Disbursed in 1995.
EIB Loans		
EIB loan to EADS for R&D related to the Airbus A380	€700 million	Granted in 2002 ²⁰⁰⁵
EIB loan to Aérospatiale for Super Transporteur program (Super Transporteur A) 1993	€12,614,303	Some disbursements were made in 1996.
EIB loan to Aérospatiale for Super Transporteur program (Super Transporteur B) 1997	€38,098,547	EC says this loan was never drawn on and was therefore cancelled. ²⁰⁰⁶
Infrastructure		
Alleged infrastructure support provided by the City of Hamburg to Airbus Deutschland		EC concedes this is within the temporal scope of the SCM Agreement (see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 42).

²⁰⁰⁴ Based on EC, Answer to Panel Questions of 8 December 1996, paras. 22-38.

²⁰⁰⁵ The European Communities concedes that this loan is within the temporal scope of the SCM Agreement: *see* EC, Answer to Panel Questions of 8 December 1996, para. 39.

²⁰⁰⁶ EC, Answer to Panel Questions of 8 December 1996, para. 40. It remains however, within the temporal scope of the dispute, even on the European Communities' definition.

Nature of Measure	Alleged amount of financial contribution	Details of Existence
Alleged infrastructure support provided by French authorities by creating the AéroConstellation Industrial Site in Toulouse		EC concedes this is within the temporal scope of the SCM Agreement (see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 44).
Grant by German Land of Lower Saxony for Airbus's Nordenham Site (US, FWS, para.488)	€6 million	Grant approved in June 2002. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45
Grant by Welsh Assembly to BAE Systems for Airbus's Broughton, Wales facility (US, FWS, para 490)	£19.5 million	Announcement made 24 September 2000. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45
Regional grants by Spanish Government to EADS-CASA's Sevilla and La Rinconada Facilities (US, FWS, para 494)	€2.2 million to EADS-CASA in Sevilla €14,000 to EADS-CASA at La Rinconada	Announced April 2001. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45.
Spanish government grant to Airbus España for Airbus España's Toledo Facility (US, FWS, para 496)	€37.9 million	Approved March 2003. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45.

Nature of Measure	Alleged amount of financial contribution	Details of Existence
Regional grant by Spanish Government for EADS-CASA's La Rinconada Facility (<i>US, FWS, para 498</i>)	€43.1 million	Order approving grant issued July 2003. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45.
Grant by Spanish Government for EADS-CASA's Puerto de Santa Maria Plant (<i>US, FWS, para 500</i>)	€5.9 million	Order approving grant issued July 2003. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45.
Grant by Spanish Government for EADS/Airbus España's Puerto Real Facility (<i>US, FWS, para 502</i>)	€3.1 million	Order approving grant issued July 2003. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45.
Grant by Government of Andalusia for EADS-CASA's Puerto de Santa Maria Plant (<i>US, FWS, para 504</i>)	€8.6 million	Grant provided July 2001. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45.
Grant by Andalusian Government for EADS-CASA's Sevilla facility (<i>US, FWS, para 506</i>)	€5.7 million	Grant authorized July 2002. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45.

BCI deleted, as indicated [***]

Nature of Measure	Alleged amount of financial contribution	Details of Existence
Grant by Andalusian Government for EADS/Airbus España's Puerto Real Facility (<i>US, FWS, para 508</i>)	€17.5 million	Grant authorized in July 2003. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 2006 on Preliminary Ruling Request by the European Communities, para. 45.
Grant by Government of Castilla-La Mancha for Airbus España's Illescas Facility (<i>US, FWS, para 510</i>)	€7.6 million	Grant approved March 2004. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 45
Alleged Forgiveness of Debt of Deutsche Airbus by German Government (<i>US, FWS, para. 515 et seq</i>)	Forgiveness of DM7.7 billion in debt owed by Deutsche Airbus	Decision taken in 1998. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 46.
French Government's transfer of its 45.76% share in Dassault to Aérospatiale (<i>US, FWS, para. 607 et seq</i>)	Translated into equity infusion of FF5.28 billion	Transfer effected December 1998. EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 49.
R&D Funding		
Alleged measures of support under the Fourth Framework Program	At least €195.3 billion	EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 51.

Nature of Measure	Alleged amount of financial contribution	Details of Existence
Alleged measures of support under the Fifth Framework Program	€509 million	EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 51.
Alleged measures of support under the Sixth Framework Program	€450 million	EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 51.
German government civil aeronautics R&D grants under Aeronautics Research Programs: LuFo 1, LuFo 2 and LuFo 3. (<i>US, FWS, para 663</i>)	€217 million	1995-2007 EC concedes within temporal scope: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 52.
Länder R&D Grants (<i>US, FWS, para. 667</i>)	€44 million	All are post 1995 EC says that Airbus did not benefit from any R&T funding from Bavaria, but concedes that the claims themselves fall within the temporal scope: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 53.
French Government R&D Funding (<i>US, FWS, para 678</i>)	€262 million	Grants between 1995 and 2005 EC says that the French R&D funding from 1995 to 2005 is properly before the Panel: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 54

BCI deleted, as indicated [***]

Nature of Measure	Alleged amount of financial contribution	Details of Existence
UK R&D (<i>US, FWS, para 686</i>) - CARAD program -TP program (established 2004)	£28 million disbursed since 1992 £5.5 million committed since 2004	EC says any disbursements made post 1 January 1995 under these programs are within the temporal scope of Article 5: see EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 55.
Spanish authorities' R&D Funding programs (<i>US, FWS, para 692 et seq</i>) - PTA (1993-2003) - PROFIT (2000-2003; 2004-2007)	Airbus alleged to have received PTA I loans between 1993 and 1998 and PTA II loans between 1999 and 2003. Airbus alleged to have received €1.5 million under PROFIT I	EC says that payments under these programs occurring after 1 January 1995 are within temporal scope: See EC, Response to Panel Questions of 8 December 1996 on Preliminary Ruling Request by the European Communities, para. 56.

BCI deleted, as indicated [***]

D. OTHER PRELIMINARY MATTERS

1. Requests for Enhanced Third Party Rights

7.159 On 9 November 2005, Brazil submitted a request for enhanced third party rights in this panel proceeding; similar requests were received from Canada on 23 November 2005 and from Korea on 13 October 2006. After careful consideration of this issue in light of all comments received from parties and third parties, on 23 October 2006 we informed the parties and third parties of our decision declining to grant enhanced third party rights to any third party. We indicated in our communication of that date that we would issue our reasons in due course. We set out the reasons for our decision below.

(a) Arguments of the Parties and Third Parties

7.160 Brazil seeks "enhanced" third party rights in this proceeding, including specifically, the rights to: 1) attend the entirety of all substantive meetings of the Panel with the Parties; 2) present oral statements and oral observations at the substantive meetings of the Panel with the Parties; 3) receive copies of all submissions to the Panel, including answers to the questions posed by the Panel or the parties; and 4) review and comment on the interim Panel Report, in particular the summary of Brazil's arguments in the draft descriptive part of the Panel report.²⁰⁰⁷

7.161 Brazil argues that it has a significant economic interest in this dispute because it is the fourth largest aircraft manufacturer in the world. Brazil draws attention to the unique nature of the aircraft industry, which develops a few product types at very high costs. According to Brazil, the impact of WTO-inconsistent subsidies on aircraft manufacturers is greater than that of subsidies given to other sectors. Brazil notes that it was a party to three prior dispute settlement proceedings in the WTO involving subsidies in the aircraft sector, and submits that it has concerns regarding the interpretation of certain provisions of the SCM Agreement as applied to the aircraft sector. Brazil considers that fundamental fairness requires that it be granted enhanced third party rights in this dispute because absent such rights it cannot fully present its views to the Panel. In Brazil's view, the systemic implications of the outcome of the dispute for developing countries should also be considered. Finally, Brazil argues that granting of the enhanced rights it is seeking in this case will not blur the line between the rights of parties and those of third parties.

7.162 Canada considers that, if the Panel chooses to grant enhanced third party rights to Brazil, fundamental fairness dictates that the same enhanced rights should be granted to Canada.²⁰⁰⁸ Canada asserts that, like Brazil, it has a significant economic interest in the aircraft sector, and notes that it was a party to the same three previous dispute settlement proceedings concerning subsidies in the aircraft sector as Brazil. To the extent that this Panel's findings may have consequences for the development and production of civil aircraft, they are just as likely to have a significant impact on Canada's aircraft sector as Brazil's. Moreover Canada asserts that, like Brazil, it has interests and perspectives on the WTO disciplines governing the civil aircraft sector that are distinct from those of the United States and the European Communities.

7.163 Korea has no objection to Panel's granting Brazil and Canada the requested rights given their substantial commercial and systemic interests, but contends that should the Panel decide to grant enhanced third party rights to Brazil and Canada the same rights should be accorded to Korea and other third parties, as a matter of due process.²⁰⁰⁹ Korea is concerned that differentiated application of third party rights could result in discrimination amongst third parties, which would adversely affect

²⁰⁰⁷ Letter from Brazil to the Panel, dated 9 November 2005, para. 12.

²⁰⁰⁸ Letter from Canada to the Panel, dated 23 November 2005.

²⁰⁰⁹ Letter from Korea to the Panel, dated 13 October 2006.

BCI deleted, as indicated [***]

the integrity of the WTO dispute settlement system. Korea asserts that it has strong economic interests in the aircraft sector, and that therefore, the outcome of this case could have implications for Korea. Moreover, Korea asserts that it also has a significant systemic interest in this dispute, as it has been, and is currently, involved, as a primary party, in several WTO disputes on subsidies.

7.164 Both parties ask the Panel to deny the requests for enhanced third party rights. The European Communities asserts that enhanced third party rights are justified only in very special circumstances, and maintains that this case does not present such circumstances as to warrant their grant.²⁰¹⁰ The European Communities disagrees with Brazil's assertion that Brazil has a significant economic interest in these proceedings and that past panels have granted enhanced third party rights in such circumstances. In the European Communities' view past panel proceedings show that a third party may be granted enhanced rights only if the impugned measure had a *direct economic impact* upon it. This is not the case with Brazil in the dispute at hand, since it is neither benefiting from any EC measure nor operating a similar scheme. A general "economic interest" is simply not enough. Second, the European Communities asserts that the grant of enhanced third party rights to Brazil would disturb the rights of other third parties. As a matter of due process, it is appropriate to provide the same procedural rights to all third parties in this dispute. Yet, only Canada, which expressly made its request conditional upon the Panel's decision to grant enhanced third party rights to Brazil²⁰¹¹, had requested enhanced third party rights in this case and there is no reason to grant such rights. Third, the European Communities points out that enhanced third party rights are closely connected to the issue of access to highly confidential information.²⁰¹² Given that Canada made its request conditional upon Brazil's request, the European Communities requests the Panel to refuse the grant of enhanced third party rights to Canada as well.

7.165 The United States asserts that none of the rationales that existed for previous panels to grant enhanced third party rights exist in this case.²⁰¹³ The effect of the disputed measures cannot be an issue, as the dispute does not cover the aircraft sector as a whole, but is limited to subsidies provided for the development and production of large civil aircraft, namely, passenger aircraft with more than 100 seats and analogous air freighters. The aircraft producers in Brazil and Canada produce regional jets, which are both smaller than large civil aircraft and have a shorter range. There is no claim that the economic benefits of the measures derive from an international agreement, or that there is relevant past practice in the aircraft sector. And, Brazil and Canada are entirely ordinary third parties; they are not complaining parties in a dispute regarding the measures covered by this dispute. Brazil does not claim to apply measures similar to the disputed measures and, in fact, emphasizes the differences between its situation and the situations of the European Communities and the United States. Thus, Brazil has no direct economic interest in the outcome of the dispute, and its trade policy interest is no different from that of any other Member that has a stake in the analysis of Members' rights and obligations under the SCM Agreement. As such, there is no reason for the Panel to grant the requests for enhanced third party rights. The United States also notes that the European Communities has indicated its willingness to allow public viewing of the reading of oral statements, and that both the European Communities and the United States have a practice of making their WTO submissions publicly available. Therefore, there is little need to enhance third parties rights to attend panel meetings or receive submissions. Finally, the United States notes the admonition to guard against an

²⁰¹⁰ Letter from the European Communities, dated 29 September 2006.

²⁰¹¹ At the time the European Communities filed its submission in this regard, Korea had not yet made its request. The European Communities did not seek to file any subsequent additional comments on this matter.

²⁰¹² At the time the European Communities filed its submission in this regard, we had not yet adopted procedures for the handling of confidential information in this dispute. The procedures ultimately adopted, which are attached to our Report at Annex E, contain provisions governing third party rights with respect to such information.

²⁰¹³ Letter from the United States, dated 29 September 2006, para. 18.

BCI deleted, as indicated [***]

inappropriate blurring of the distinction drawn in the DSU between parties and third parties, and asserts that granting Brazil's request would be inconsistent with that principle.

(b) Evaluation by the Panel

7.166 The DSU establishes the rights of third parties in panel proceedings in paragraphs 2 and 3 of Article 10 of the DSU and paragraph 6 of Appendix 3 to the DSU. Under these provisions, third parties have the right to receive the submissions made by the parties up to the first meeting of the panel, to make submissions to the panel, to present their views during a session of the first substantive meeting of the panel set aside for that purpose, and to be present during the entirety of such a session.²⁰¹⁴ It is well-established that panels have the discretion to grant additional rights to third parties, subject to the requirements of due process and the need to guard against an inappropriate blurring of the distinction drawn in the DSU between the rights of parties and those of third parties.²⁰¹⁵ However, all third parties in a panel proceeding may be presumed to have a "substantial interest" in the matter before the panel²⁰¹⁶, and additional third party rights have so far been granted in panel proceedings for specific reasons only.²⁰¹⁷ Previous panels have granted enhanced third party rights on the basis of, *inter alia*, the significant economic effect of the measures at issue on certain third parties²⁰¹⁸, the importance of trade in the product at issue to certain third parties²⁰¹⁹, the significant trade policy impact that the outcome of the case could have on third parties maintaining measures similar to the measures at issue²⁰²⁰, at least one of the parties agreeing that enhanced third

²⁰¹⁴ We also note that, in accordance with Article 10.4 of the DSU, nothing precludes a Member participating as a third party in a panel proceeding from requesting the establishment of another panel to examine the measures at issue.

party rights should be granted²⁰²¹, claims that the measures at issue derived from an international treaty to which certain third parties were parties²⁰²², third parties having previously been granted enhanced rights in related panel proceedings²⁰²³, and certain practical considerations arising from a third party's involvement as a party in a parallel panel proceeding.²⁰²⁴

7.167 In this case, Brazil has not presented us with any similar reasons in support of its request for enhanced third party rights. As noted, the requests of Canada and Korea are conditional upon the granting of Brazil's request, and do not contain any additional arguments in support of those requests. While we accept that Brazil, and Canada, have an interest in the aircraft sector, we consider this interest to be insufficient to justify granting enhanced third party rights.²⁰²⁵ Neither manufactures large civil aircraft, and neither has claimed that it has any trade interests in large civil aircraft, for instance as a supplier to producers of large civil aircraft. Brazil has not claimed that regional aircraft produced in Brazil compete with large civil aircraft, or that it maintains any measures similar to those at issue in this dispute. To the contrary, Brazil claims that it does not confer subsidies for the development and production of new aircraft products.²⁰²⁶ While Brazil has been a party, either as complainant or defendant, in several WTO disputes involving the aircraft sector, these disputes involved a product – regional aircraft – and measures that are not at issue in this dispute. Brazil has not explained how, in the light of the foregoing, the measures at issue have a significant economic or trade policy effect on Brazil. While we accept that Brazil has a general systemic interest in the interpretation of the SCM Agreement, this does not differentiate Brazil from any other WTO Member, whether appearing as a third party in this dispute or not. Finally, both parties agree that enhanced third party rights are not warranted in this case.

7.168 We therefore decline Brazil's request for "enhanced" third party rights in these proceedings, and the requests of Canada and Korea.²⁰²⁷

²⁰²¹ Panel Reports, *EC – Bananas III*, para. 7.8.

²⁰²² Panel Reports, *EC – Bananas III*, para. 7.8.

²⁰²³ Panel Reports, *EC – Bananas III*, para. 7.8.

²⁰²⁴ Panel Report, *EC Measures Concerning Meat and Meat Products (Hormones), Complaint by Canada ("EC – Hormones (Canada))*, WT/DS48/R/CAN, adopted 13 February 1998, as modified by Appellate Body Report WT/DS26/AB/R, WT/DS48/AB/R, DSR 1998:II, 235, para. 8.17.

²⁰²⁵ Brazil notes that it is a manufacturer of aircraft, albeit not the LCA at issue in this dispute, and submits that it has a significant economic interest in "the aircraft sector" (Letter from Brazil to the Panel, dated 9 November 2005, para. 6), that any findings concerning the relevant provisions of the SCM Agreement "in relation to the aircraft sector" are necessarily of direct and substantial economic interest to Brazil (*Ibid.*, para. 6), that trade-distorting subsidies in "the aircraft sector" are considerably greater than the impact of similar policies on other industries (*Ibid.*, para. 7), and that the interpretation of the SCM Agreement "as applied to the aircraft sector" may affect the way Brazil and other Members apply the relevant disciplines of the SCM Agreement to the "civil aircraft sector" (*Ibid.*, para. 8). Canada makes similar claims. Letter from Canada to the Panel, dated 23 November 2005. Korea makes a general claim of "strong economic interests in the aircraft sector", although it does not assert that it has any LCA manufacturing operations. Letter from Korea to the Panel, dated 13 October 2006.

²⁰²⁶ Letter from Brazil to the Panel, dated 9 November 2005, para. 7.

²⁰²⁷ Brazil has requested the Panel to grant it the "enhanced" third party right "to review and comment on the interim Panel Report, in particular the summary of Brazil's arguments in the draft descriptive part of the Panel report". In *EC – Bananas III*, the panel referred to the "normal practice" of permitting third parties to review the draft of the summary of their arguments in the descriptive part of the report (Panel Reports, *EC – Bananas III*, para. 7.9). Insofar as Brazil is merely requesting the Panel to permit Brazil to review and comment on the summary of its arguments contained in any descriptive sections of the Panel's draft report, the Panel sees no reason to depart from the normal practice in WTO panel proceedings. We note that, while both the United States and the European Communities oppose Brazil's request for "enhanced" third party rights, the United States considers that "the ability to comment on the description of its arguments in the draft descriptive

BCI deleted, as indicated [***]

2. Decision on Proper Respondent

7.169 The Panel takes note of the letter from the European Communities dated 23 May 2008, in which the European Communities requests that the Panel "decide, prior to the issuance of an interim report, who is the proper respondent in this dispute".²⁰²⁸ The Panel notes that this request brings before it once more a matter that first arose in 2005 during the Annex V process for gathering information, and was raised before the Panel as well at that time. The European Communities states that it "has consistently pointed out that the only proper respondent in this case is the European Communities, which represents itself in these proceedings (and it is not therefore correct to speak of the European Communities 'representing' its member States)."²⁰²⁹ The European Communities is "concerned that the identity of the respondent, and eventually the identity of the entity to which any recommendations might or might not be addressed, could give rise to significant legal ambiguity, potentially adverse to the interests of the European Communities."²⁰³⁰

7.170 We recall that on 12 October 2004, the United States filed a request for consultations "with the Governments of Germany, France, the United Kingdom, and Spain (the "member States"), and with the European Communities ("EC"), ... with regard to measures affecting trade in large civil aircraft."²⁰³¹ The subsequent request for establishment of this Panel noted that "The United States held consultations with the European Communities and the member States on 4 November 2004. These consultations provided some helpful clarifications, but unfortunately did not resolve the dispute."²⁰³² The claims set forth in that request concern, *inter alia*, alleged subsidies provided by the governments of Germany, France, Spain and the United Kingdom, and by the EC.

7.171 When questions concerning the role of the member States in this dispute first arose in the Annex V process, the United States noted that its panel request

"was directed to all four individual member States in their own right as Members of the WTO, and the EC has insisted on representing their interests in the dispute to date. ... If the EC is unable to represent the member States in this Annex V proceeding, the United States requests the Facilitator to direct questions concerning member State measures (as well as any further correspondence and submissions concerning these measures) directly to the member States, which, it should be recalled, are WTO Members in their own right."²⁰³³

The European Communities responded that it "has never said that it "represents" its member States but takes full responsibility in these proceedings for the actions of its member States and will to the best of its ability provide documents that are properly requested wherever they may be located..." and went on to request that the term "and certain member states" be dropped from the name of the case.²⁰³⁴

7.172 On 23 November 2005, the European Communities submitted a request to the Panel, asking that this dispute be designated "European Communities – Measures Affecting Trade in Large Civil

part of the report" is "a right routinely provided to third parties, not an "enhanced right"." (Letter from the United States to the Panel, dated 29 September 2006, footnote 20).

BCI deleted, as indicated [***]

Aircraft (DS316)" to reflect that the European Communities "was the only respondent".²⁰³⁵ In response, the United States reiterated that it had:

"requested consultations, and the establishment of a Panel, with respect to the governments of Germany, France, Spain, and the United Kingdom, in addition to the EC. Therefore, all five WTO Members are properly respondents in this dispute. While the EC is representing the interests of the member States in the dispute, that representation does not change their legal status as respondents".²⁰³⁶

The United States further noted that although it had "addressed its submissions in a way that has respected the EC's wish that it serve as the representative of the member States, {it} repeatedly made clear during the Annex V process that the US questions were directed to the member States as well as the EC." In response, the European Communities stated that it:

"is entirely false to claim that the European Communities "represents" its member States in this dispute or that these member States have the status of respondents. The violations that are alleged by the United States all relate to matters for which the European Communities bears responsibility in the WTO and the European Communities is therefore the only proper respondent."²⁰³⁷

The European Communities went on to state that it would "fully understand if the Panel did not wish to take a position on this matter immediately, especially since this may not be necessary for the purposes of resolving the dispute."²⁰³⁸ The Panel did not take any action with respect to the European Communities' request.

7.173 Since this exchange of views in 2005, as well as prior to it, the European Communities has made all submissions and communications in this dispute to the Panel. Representatives of the EC member States in question (France, Germany, Spain, and the United Kingdom) appeared before the Panel at the two meetings it held with the parties, and the meeting it held with third parties, but did not speak or make any submissions.²⁰³⁹ In addition to representatives of the European Communities and outside advisors, representatives of these four member States have been designated as "Approved Persons" with access to Business Confidential Information and Highly Sensitive Business Information submitted in this dispute, in accordance with the procedures adopted by the Panel in this regard. Individuals designated as "Approved Persons" have contacted the Secretariat to arrange access to the confidential information submitted in this dispute in accordance with the applicable procedures, but have made no substantive submissions or representations at any time to the Panel. Thus, it is clear to us that, whatever the interests of the four member States in this dispute, they have taken no actions to make those interests known to the Panel directly.²⁰⁴⁰

7.174 On 23 May 2008, as noted above, the European Communities requested that the Panel resolve the "outstanding issue" of "who is the proper respondent in this dispute."²⁰⁴¹ Fundamentally, in our

²⁰³⁸ *Id.*

²⁰³⁹ For example, the "EC Delegation list" provided to the Panel before the first meeting identifies representatives of France, Germany, Spain and the United Kingdom, as well as representatives of other member States of the European Communities who also appeared at that meeting.

²⁰⁴⁰ Of course, what their role may be in the context of preparations for these proceedings is unknown to us. However, we do not consider this of any relevance to the question before us, but rather a purely internal matter between the European Communities and the governments of its member States France, Germany, Spain, and the United Kingdom.

²⁰⁴¹ Letter from the European Communities, 23 May 2008.

BCI deleted, as indicated [***]

view, there is no issue to be resolved. The United States requested consultations and the establishment of this Panel asserting claims concerning, *inter alia*, alleged subsidies provided by the European Communities and by the governments of each of four EC member States, France, Germany, Spain, and the United Kingdom, which subsidies allegedly cause adverse effects to the interests of the United States. Each of these five is, in its own right, a Member of the WTO, with all the rights and obligations pertaining to such membership, including the obligation to respond to claims made against it by another WTO Member.²⁰⁴² The Dispute Settlement Body established this Panel on the basis of the United States' request, establishing our terms of reference, which thus encompass claims against the five Members of the WTO identified by the United States in its request. The fact that four of those Members are member States of the European Communities, which is itself a Member of the WTO, does not affect their individual status as Members of the WTO against whom another Member, the United States, has brought claims of violation of various provisions of the WTO Agreements. Whether these four WTO Members choose to appear and actively defend their interests before the Panel separate from the actions of the European Communities is a matter entirely within their discretion, subject to the obligations of their status as member States of the European Communities. However, those obligations do not affect their status in this dispute.

7.175 We note that the European Communities informed the Panel, on 8 July 2008, that "the four member States referred to by the United States share the European Communities' view that they are not the proper parties to this dispute – and have acted in reliance on this fact".²⁰⁴³ The views of the four member States, and of the European Communities, in this regard, do not change our conclusions. Nor does the fact, asserted by the European Communities, that France, Germany, Spain the United Kingdom "acted in reliance" on their own, and/or the European Communities' view as to their status. As Members of the WTO, identified as having violated various provisions of the WTO Agreements in the requests for consultations and for establishment of this Panel, they are respondents in this dispute. The European Communities has indicated to this Panel that "the violations that are alleged by the United States all relate to matters for which the European Communities bears responsibility in the WTO..."²⁰⁴⁴ However, it does not follow from this, as the European Communities asserts, that it is the only "proper respondent."²⁰⁴⁵ Whatever responsibility the European Communities bears for the actions of its member States does not diminish their rights and obligations as WTO Members, but is rather an internal matter concerning the relations between the European Communities and its member States.

7.176 That the member States against whom the United States has made claims have chosen not to participate in this dispute directly by making oral and written submissions does not affect their rights or status as respondent parties to this dispute. Similarly, the fact that the European Communities has made all submissions in this dispute does not affect the rights and status of the four member States as

²⁰⁴² We recognize that Article IX:1 of the Marrakesh Agreement establishes limitations on the cumulative number of votes of the European Communities and its member States, in the event a matter is decided by a vote of WTO Members. This provision does not, in our view, have any relevance to our conclusions here.

²⁰⁴³ Comments by the European Communities on Comments by the United States on the Panel and Appellate Body Reports in *US – Upland Cotton (Article 21.5 – Brazil)*, 8 July 2008, para. 94. *Brazil*. We note the suggestion of the United States that we disregard this portion of the European Communities' submission as "not within the scope of the comments that the Panel invited." Letter from the United States, 9 July 2008. While this is strictly speaking true, we nonetheless take note of these comments, as well as the subsequent letters regarding this matter submitted by both parties. We are not inclined to disregard any relevant submissions on a matter which requires some action or decision from us. To do so would, in our view, be inconsistent with our obligations in resolving this dispute.

²⁰⁴⁴ Letter from the European Communities, 13 December 2005.

²⁰⁴⁵ *Id.*

BCI deleted, as indicated [***]

respondent parties to this dispute.²⁰⁴⁶ The manner of any WTO Member's participation in dispute settlement is up to it to decide. We need not and do not decide whether the European Communities "represents" the member States in this dispute in some formal sense. Nor does the title given to the dispute have any legal significance with respect to the rights and obligations of Members against whom claims are made, or with respect to their individual or direct participation in the dispute.²⁰⁴⁷

7.177 Finally, we note the statement by the European Communities that,

"{s}hould the Panel, in spite of the position of the four member States and the arguments of the European Communities, nevertheless decide to address recommendations to those four member States, it follows logically that they would be entitled to defend their interests individually, *inter alia*, by commenting on the

²⁰⁴⁶ Thus, for instance, the four member States may, if they wish, comment on the interim report of the Panel when it is issued. To date, the Panel has not communicated directly with the member States, acting on the understanding that the European Communities was transmitting the Panel's communications to them insofar as necessary and relevant, was coordinating their participation in this dispute, and was communicating their concerns to the Panel. Should this not be the case, the member States are free to request that the Panel provide copies of the interim report directly to their representatives, mindful of the limitations imposed by the special procedures for confidential information in this case. As noted above, how a WTO Member chooses to participate in WTO dispute settlement is, from the perspective of the WTO Agreements, a matter entirely within its own discretion, although of course, it may be subject to non-WTO obligations such as those that may exist between the European Communities and its member States.

²⁰⁴⁷ In this context, we note that there is no consistent practice in the titles of disputes concerning measures taken by the European Communities and/or one or more of its member States. It is not unusual for a dispute to name only the European Communities, despite the fact that the claims concern a measure of a single member State, while other disputes name only the member State concerned, yet organs of the European Communities participate actively in the dispute. *See, e.g., DS7 - European Communities — Trade Description of Scallops* (concerning a French measure, mutually agreed solution communicated by Canada and the European Commission); *Denmark — Measures Affecting the Enforcement of Intellectual Property Rights* (concerning Denmark's alleged failure to make provisional measures available in the context of civil proceedings involving intellectual property rights, mutually agreed solution communicated by the United States, Denmark and the European Commission); *DS86 - Sweden — Measures Affecting the Enforcement of Intellectual Property Rights* (concerning Sweden's alleged failure to make provisional measures available in the context of civil proceedings involving intellectual property rights, mutually-agreed solution communicated by the United States, the European Commission and Sweden); *DS124 - European Communities — Enforcement of Intellectual Property Rights for Motion Pictures and Television Programs* (concerning lack of enforcement of intellectual property rights by Greece, mutually agreed solution communicated by the United States and the European Commission); *DS125 - Greece — Enforcement of Intellectual Property Rights for Motion Pictures and Television Programs* (mutually agreed solution communicated by the United States, Greece and the European Commission); *DS135 - European Communities — Measures Affecting Asbestos and Asbestos-Containing Products*; (concerning measures imposed by France, submissions made by the European Communities) *Belgium — Administration of Measures Establishing Customs Duties for Rice* (mutually agreed solution notified by United States and the European Commission); *DS291 - European Communities — Measures Affecting the Approval and Marketing of Biotech Products*, Panel Report, (concerning measures taken by the European Communities and by its member States affecting imports of agricultural and food imports, submissions made by the European Communities); *DS301 - European Communities — Measures Affecting Trade in Commercial Vessels* (concerning certain measures taken by the European Communities and by its member States, submissions made by the European Communities).

We are unaware of any dispute involving claims against the European Communities and one or more of its member States in which the member State has made submissions and representations separate from or in addition to those made by the European Communities. We are also unaware of any case in which a question such as the one before us was raised.

BCI deleted, as indicated [***]

interim report. In addition, France and Spain would request to receive the interim report in French and Spanish, respectively".²⁰⁴⁸

Whatever may be the extent of the right of a WTO Member to participate in dispute settlement in its preferred WTO working language, in our view, this is not a right that can be exercised in this dispute at this late stage of the proceedings. As noted above, the European Communities has made all submissions and representations throughout this proceeding, both during the Annex V process, and before this Panel. All such submissions and representations have been in English – there have been no requests for translation, and there were no requests for interpretation at any of the Panel's meetings with the parties and third parties. The Panel has communicated with the parties and third parties exclusively in English. To provide the interim report in all three WTO working languages would significantly delay these proceedings, which, due to the number and complexity of the claims, and the volume of materials submitted, have already gone on for much longer than is the norm in WTO dispute settlement. We consider this situation to be analogous to that addressed in *United States – Continued Dumping and Subsidy Offset Act of 2000*,²⁰⁴⁹ where the Appellate Body found that the right to issuance of separate panel reports, which is explicitly provided for in Article 9.2 of the DSU, was not unqualified, and concluded that the Panel in that case did not act inconsistently with Article 9.2 in denying a request for separate reports that was not made in a timely manner.²⁰⁵⁰ Similarly, we consider that the request made by the European Communities in this case is not timely. In addition, we note that the request made by the European Communities in this case does not concern a right explicitly provided for in the DSU or any other provision of the WTO Agreements, and is in any event conditional on whether we address recommendations to the member States involved in this dispute, a decision that will be known only when we have completed our decision-making process. Moreover, the Members whose right to defend their interests would assertedly be served by receiving our interim report in translation have not previously participated directly in this dispute, and even now have not made any requests directly to the Panel. In light of the foregoing, we therefore deny the European Communities' conditional request for translated versions of the interim report.

E. WHETHER THE CHALLENGED MEASURES ARE SPECIFIC SUBSIDIES WITHIN THE MEANING OF ARTICLES 1 AND 2 OF THE SCM AGREEMENT

1. Identity of the Alleged Subsidy Recipient and pass-through, extinction and extraction of Subsidies

(a) Introduction

7.178 The European Communities submits that the United States' claim of adverse effects in this dispute cannot be sustained because the United States has failed to demonstrate that Airbus SAS, the legal entity responsible for the development and manufacture of Airbus LCA since 2001, benefited or continues to benefit from a large number of the alleged subsidies that are the focus of the United States' complaint.²⁰⁵¹ The European Communities raises three lines of argument in support of this submission.

7.179 First, the European Communities argues that the United States has failed to establish that the alleged benefits conferred by various financial contributions received by entities other than

²⁰⁴⁸ Comments by the European Communities on Comments by the United States on the Panel and Appellate Body Reports in *US – Upland Cotton (Article 21.5 – Brazil)*, 8 July 2008, para. 95.

²⁰⁴⁹ Appellate Body Report, *United States – Continued Dumping and Subsidy Offset Act of 2000 ("US – Offset Act (Byrd Amendment)")*, WT/DS217/AB/R, WT/DS234/AB/R, adopted 27 January 2003, DSR 2003:I, 375.

BCI deleted, as indicated [***]

Airbus SAS and its subsidiaries prior to 2001 "passed through" to Airbus SAS. According to the European Communities, it is for the United States to affirmatively demonstrate, as part of its *prima facie* case, how the benefit conferred by such financial contributions "passed through" to Airbus SAS. The European Communities contends that, absent this demonstration, none of the financial contributions at issue can be considered to have conferred a benefit on Airbus SAS and they should therefore be excluded from the Panel's adverse effects analysis.

7.180 Second, the European Communities submits that certain transactions involving the shares of the Airbus partner, Aérospatiale, the parent company of Airbus SAS, European Aeronautic Defence and Space Company EADS N.V. (EADS), and Airbus SAS, have "extinguished" any benefits that could be said to have accrued to Airbus SAS in respect of subsidies received by entities other than Airbus SAS and its subsidiaries.²⁰⁵²

7.181 Third, the European Communities asserts that two particular transactions in which "cash" was paid to shareholders of certain Airbus partners in connection with the consolidation of Airbus Industrie under EADS in 2000 "extracted" a corresponding portion of the benefit conferred by alleged financial contributions provided to those specific Airbus partners, thereby also "extinguishing" a portion of any subsidies that Airbus SAS could currently enjoy. The European Communities argues that it is also possible to regard the cash "extractions" as withdrawals of subsidies pursuant to Articles 4.7 and 7.8 of the SCM Agreement.

7.182 Before turning to evaluate these three lines of argument, we believe it is useful to describe the forms of industrial organization used by the various Airbus partners since the constitution of Airbus Industrie in 1970 to develop and manufacture Airbus LCA.

7.183 Prior to 2001, no single legal entity produced the family of Airbus LCA as a "product", or for that matter, any of the individual Airbus LCA that are the subject of this dispute. The family of Airbus LCA was produced by a consortium of French, German, Spanish and (from 1979) United Kingdom aerospace companies (the Airbus partners), operating in a form of partnership arrangement through the French entity, Airbus GIE.²⁰⁵³ The Airbus Industrie consortium was originally established in 1970 between the French aerospace manufacturer, Aérospatiale Société Nationale Industrielle (Aérospatiale)²⁰⁵⁴ and the German aerospace manufacturer, Deutsche Airbus GmbH (Deutsche Airbus).²⁰⁵⁵ The Spanish aerospace manufacturer, Construcciones Aeronáuticas S.A. (CASA) became

²⁰⁵² EC, SNCOS, para. 56.

²⁰⁵³ Airbus Industrie GIE was registered under French law as a "*Groupement d'intérêt économique*" (GIE) which is a French legal framework that allows its members to carry out collectively certain economic activities while maintaining their separate legal identities, and which does not have as its goal the retaining of profits. A GIE has a separate legal personality from its members, although in other respects, it resembles a partnership. For example, the sharing of Airbus Industrie's profits and losses among the Airbus partners is based on their membership rights; see GATT Panel Report, *German Exchange Rate Scheme for Deutsche Airbus ("EEC – Airbus")*, 4 March 1992, unadopted, SCM/142, para. 2.6.

²⁰⁵⁴ Aérospatiale was founded in 1970 through the merger of three French aerospace companies, Sud Aviation, Nord Aviation and Société d'Etudes et de Réalisation d'Engins Balistiques. It was owned directly and indirectly by the French government until its merger with Matra Hautes Technologies in 1998 to form Aérospatiale-Matra S.A. (Aérospatiale-Matra). The French government sold a portion of its shares in Aérospatiale-Matra in a public offering in 1999. In 2000, Aérospatiale-Matra joined with Dasa and CASA to form EADS. In connection with the formation of Airbus SAS in 2001, the LCA business of Aérospatiale-Matra was transferred to an Airbus SAS subsidiary, Airbus France SAS. Therefore, from 1998 until its liquidation in 2001, the French Airbus partner was Aérospatiale-Matra; EC, FWS, paras. 52-53.

²⁰⁵⁵ Deutsche Airbus was founded in 1967 to assume work for the development of a European widebody aircraft that had originally begun in 1965 as a joint venture among five German companies: Blohm-Hamburger Flugzeugbau GmbH, Messerschmitt AG, Vereinigte Flugtechnische Werke (VFW), Siebel and Dornier. By 1969, the first three of these companies had merged to form Messerschmitt-Bölkow-Blohm GmbH (MBB); Exhibit EC-26. MBB originally held 60 percent of the interests in Deutsche Airbus, with Dornier and

BCI deleted, as indicated [***]

a member of the consortium in 1971.²⁰⁵⁶ British Aerospace Corporation, a United Kingdom aerospace manufacturer, subsequently joined the consortium in 1979.²⁰⁵⁷ Through this partnership arrangement, the Airbus partners in France, Germany, Spain and the United Kingdom produced specific parts of Airbus LCA, which were then assembled in France by Aérospatiale.²⁰⁵⁸ The entity Airbus GIE did not carry out any production activities; rather, it coordinated the production efforts of the Airbus partners, allocated revenues and profits to each of the partners and assumed responsibility for areas such as marketing, sales, aircraft delivery and customer service. In 2000, the Airbus partners consolidated their LCA-related activities under EADS. This consolidation involved each of the French, German and Spanish Airbus partners placing their Airbus-related design, engineering, manufacturing and production assets and activities (including their corresponding membership interests in Airbus Industrie GIE) into legal entities that would become wholly owned subsidiaries of the newly formed EADS, in return for shares in EADS representing the agreed values of the Airbus partners' corresponding contributions.²⁰⁵⁹ In 2001, EADS and BAE Systems placed their Airbus-related assets and operations and their membership rights in Airbus GIE under the common control of a newly-created holding company, Airbus SAS.²⁰⁶⁰ Finally, in 2006, EADS purchased BAE Systems'

VFW each holding 20 percent. MBB took over VFW in 1981. Prior to Daimler-Benz AG acquiring control of MBB in 1989, the German federal states of Bavaria, Hamburg and Bremen held 52.3 percent of the capital stock of MBB; Monopolkommission, *Zusammenschlussvorhaben der Daimler Benz AG mit der Messerschmitt-Bolkow-Blohm GmbH*, Sondergutachten 18, 1989 (hereinafter "*Monopolkommission Report*"), Exhibit US-30, para. 138. In late 1989, as part of the German government's plans to restructure Deutsche Airbus, Daimler-Benz A.G. acquired control of MBB by merging its subsidiary Deutsche Aerospace AG (Dasa) with MBB. Deutsche Airbus has been a wholly owned subsidiary of Dasa since 1992. In 2000, Dasa merged with Aérospatiale-Matra and CASA to form EADS. In 2001, EADS transferred Dasa's LCA operations to an Airbus SAS subsidiary, Airbus Deutschland GmbH; EC, FWS, paras. 54-56.

²⁰⁵⁶ CASA was founded in 1923 and was Spain's largest aerospace and defence manufacturer. CASA was 99 percent owned by Sociedad Estatal de Participaciones Industriales (SEPI), a Spanish government holding company entrusted with the management and privatisation of certain Spanish government controlled companies. In 2000, CASA was merged into the EADS structure. In 2001, CASA's LCA activities were transferred to an Airbus SAS subsidiary, Airbus España SL; EC, FWS, paras. 57-58.

²⁰⁵⁷ British Aerospace Corporation was formed in 1977 as a Crown corporation without shares, wholly owned by the United Kingdom government. Its formation was the result of the merger of the United Kingdom aerospace companies Hawker Siddeley Aviation Ltd, Hawker Siddeley Dynamics Ltd, Scottish Aviation Ltd and the British Aircraft Corporation (Holdings) Ltd. In 1981, the assets and business of the British Aerospace Corporation were transferred to the newly incorporated British Aerospace PLC, a United Kingdom public limited company. The United Kingdom government sold 51.57 percent of its shares in British Aerospace PLC in a public offering in 1981 and, subject to retaining a share to ensure that the company remained under United Kingdom control, sold the remainder of its shares in British Aerospace PLC in 1985. In 1999, British Aerospace PLC merged with Marconi Electronic Systems to become BAE Systems PLC (BAE Systems). In 2001, BAE Systems placed its LCA business into Airbus UK Limited in exchange for a 20 percent share in Airbus SAS. EC, FWS, paras. 59-61.

²⁰⁵⁸ By 1999, Aérospatiale was the partner responsible for flight control systems, cockpits, power plant integration, ground and flight testing, complex structural sections, equipped subassemblies and technical publications. Dasa produced the major fuselage sections containing hydraulic equipment, secondary flight control systems, wing assemblies and commercial furnishing, as well as equipping the wings furnished by BAE Systems. Dasa also carried out final assembly of A321 and A319 aircraft, as well as some cabin outfitting and customization of the cabins of the A300/A310 and the A320 family. BAE Systems was the partner in charge of the wings for the entire Airbus product line, and equipped wings for the A320 family by installing hydraulic, electrical and environmental control system hardware. CASA's role in the Airbus consortium was to produce the carbon fibre horizontal tails used in all Airbus aircraft, including integrated fuel tanks. CASA also designed fuselage panels and interior panels for the A320 family and produced nose and landing gear doors for the A300/A310 family and passenger doors for the A330/A340 family; see Aérospatiale-Matra Offering Memorandum, 25 May 1999, Exhibit EC-53, pp. 90-91.

²⁰⁵⁹ These subsidiaries are Airbus France S.A.S., Airbus Deutschland GmbH and Airbus España SL.

²⁰⁶⁰ Airbus SAS, a *société par actions simplifiée* (a joint stock or limited liability company) incorporated under French law, was created in 2001 in order to hold all of the LCA-related design, engineering,

BCI deleted, as indicated [***]

20 percent interest in Airbus SAS, and Airbus SAS became a wholly-owned subsidiary of EADS. A history of the Airbus Industrie consortium and the legal steps through which the LCA operations conducted by the Airbus partners through Airbus Industrie were consolidated under EADS, and then reorganized under Airbus SAS (as a wholly-owned subsidiary of EADS) is set forth in Section VII.E.1 Attachment, following para. 7.289.

7.184 In the evaluation that follows, we use the term "Airbus Industrie" to refer to the Airbus consortium as it operated between 1970 and 2001; *i.e.*, each of the four Airbus partners: Aérospatiale (subsequently Aérospatiale Matra), Deutsche Airbus,²⁰⁶¹ CASA, and British Aerospace (subsequently BAE Systems), and Airbus GIE *collectively*. Where we refer to the Airbus GIE as an entity distinct from the Airbus partners, we use the term "Airbus GIE".

(b) "Pass-through"

(i) *Arguments of the Parties*

European Communities

7.185 According to the European Communities, the United States has failed to establish that many of the alleged subsidies "in fact benefit the only EC producer of LCA, Airbus SAS".²⁰⁶² The European Communities contends that "the United States posits claims against "Airbus", which it defines as Airbus SAS, a company which has existed only since July 2001".²⁰⁶³ According to the European Communities, as Airbus SAS has existed only since 2001, subsidies allegedly granted prior to that date cannot possibly have been granted to Airbus SAS. The European Communities acknowledges the possibility that subsidies provided to predecessor producers of LCA in the European Communities (and their related companies), and to companies related to Airbus SAS, *might* provide a relevant benefit to Airbus SAS; however, the European Communities contends that this must be affirmatively demonstrated.²⁰⁶⁴ The European Communities argues that the United States has failed to make a *prima facie* case because it has not shown that alleged subsidies provided to the Airbus LCA operations of the Airbus partners, or to Airbus GIE prior to 2001 "passed through" to Airbus SAS when the Airbus partners restructured their relationships to one another and established Airbus SAS in 2001. The European Communities alleges that the United States has therefore failed to make a *prima facie* case in respect of the following claims:

(a) "Launch Aid"/"member State Financing" granted to the following entities: Airbus France S.A.S. (in respect of the A380); Airbus Deutschland GmbH (in respect of the A380); EADS Airbus S.L. (in respect of the A380); BAE Systems (in respect of the A380); Aérospatiale (in respect of the A340-500/600); CASA (in respect of the A340-500/600); and Aérospatiale (in respect of the A330-200);²⁰⁶⁵

manufacturing and production activities of the former Airbus Industrie consortium located in France, Germany, Spain and the United Kingdom (organized into French, German, Spanish and British operating subsidiaries) and all of their membership interests of the Airbus partners in Airbus GIE.

²⁰⁶¹ Deutsche Airbus AG was a subsidiary of MBB until MBB's merger with Daimler Benz's subsidiary Deutsche Aerospace AG (Dasa) in 1992, after which it was an indirect subsidiary of Daimler-Benz. Although Dasa was originally founded as Deutsche Aersopace AG in 1989, its name was changed to Daimler-Benz Aerospace AG in 1995, and then to DaimlerChrysler Aerospace AG in 1998 (following the merger of Daimler-Benz AG with Chrysler Corporation). We refer to this entity as "Dasa" throughout this report.

²⁰⁶⁵ EC, FNCOS, para. 67

BCI deleted, as indicated [***]

- (b) Loans for the development of new models of Airbus LCA provided by the European Investment Bank (EIB) to various Airbus partners between 1988 and 1993;²⁰⁶⁶
- (c) Research and technological development (R&TD) support provided to "Airbus" and "Airbus research consortia" under the European Communities' Second, Third, Fourth, Fifth and Sixth Framework Programmes, where the participant entities were entities other than Airbus SAS and its subsidiaries;²⁰⁶⁷
- (d) R&TD support provided by the German federal government and by the governments of Bavaria, Hamburg and Bremen to entities other than Airbus Germany, as the relevant subsidiary of Airbus SAS;²⁰⁶⁸
- (e) R&TD funding provided by the French government between 1986 to 2005 to entities other than Airbus France as the only relevant subsidiary of Airbus SAS;²⁰⁶⁹
- (f) Capital increases made by the French State in Aérospatiale between 1987 and 1994 and the French State's transfer of its interest in Dassault Aviation to Aérospatiale in 1998;²⁰⁷⁰ and
- (g) The 1998 settlement of outstanding payment obligations of Deutsche Airbus to the Federal German government, the 1989 KfW investment in Deutsche Airbus, and the 1992 transfer of KfW's interest in Deutsche Airbus to MBB.²⁰⁷¹

7.186 The European Communities argues that the United States has the burden of establishing, as part of its *prima facie* case, that alleged subsidies granted to the recipients pursuant to the above-referenced transactions "currently benefit Airbus SAS or have any causal connection to the adverse effects alleged by the United States."²⁰⁷² According to the European Communities, this requirement follows from the obligation contained in Article 5 of the SCM Agreement, not to cause adverse effects to the interests of other Members. The European Communities contends that the "adverse effects" which are the focus of Articles 5 and 6 are defined as particular types of competitive harm that are the *effect of the subsidy* and which are transmitted through a recipient company's *products*.²⁰⁷³ According to the European Communities, this explains why the Appellate Body has stated that a prerequisite to finding causation is that the challenged subsidy does, in fact, benefit the product identified by the complaining Member as subsidized.²⁰⁷⁴ In the context of the present dispute, the European Communities argues that the United States is thus required to establish (i) that the alleged subsidies

²⁰⁶⁶ EC, FWS, paras. 1056-1059. The EIB loans in question are those provided to: Aérospatiale in 1993 for the Super Transporteur programme; Aérospatiale in 1988 and 1992 for production of the A330/340; British Aerospace in 1988 and 1989 for the A320; British Aerospace in 1990 and 1991 for the A330/340; CASA in 1989 and 1990 for the A320 and A330/340; and Airbus GIE in 1990 for the A321.

²⁰⁶⁷ The European Communities requests the Panel to disregard grants made to entities other than Airbus SAS, Airbus Germany, Airbus France, Airbus Spain and Airbus UK under each of the Second, Third, Fourth, Fifth and Sixth Framework Programmes; EC, FWS, paras. 1233-1242.

are provided, or "passed through" to Airbus SAS, as the entity presently developing, producing and selling LCA, and (ii) that the challenged measures benefit the particular subsidized products.²⁰⁷⁵

United States

7.187 The United States argues that the concept of "pass-through" does not apply to the particular circumstances at issue in this dispute. According to the United States, "pass-through" is a concept that applies, for example, in the countervailing duty context, where the focus is on establishing the precise *ad valorem* rate of subsidization benefiting the recipient so that an offsetting or "countervailing" duty may be imposed on imports of the recipient's products.²⁰⁷⁶ The United States also considers the concept of pass-through to apply in the context of a claim under Part III of the SCM Agreement in circumstances where a subsidy is provided directly to an entity that does not produce (and is not related to an entity that produces) the product alleged to be involved in causing adverse effects. In such a case, it would be necessary to show that the subsidy "passed through" to the producer of the product at issue, in order to demonstrate that the product at issue is a "subsidized product".²⁰⁷⁷

7.188 According to the United States, the only basis on which the European Communities argues that "pass-through" is required to be demonstrated in the present dispute is that the legal form through which Airbus LCA were produced was restructured from a consortium to a company limited by shares.²⁰⁷⁸ The United States contends that there is nothing in the text of Article 5 that requires a complaining Member to show that subsidies provided to producers of the product at issue continue to benefit (or "pass through" to) a new corporate entity established by the restructuring and rationalization by the recipient producers of their existing legal relationship.²⁰⁷⁹

7.189 The United States argues that, for purposes of determining the existence of a subsidy within the meaning of Article 1 of the SCM Agreement, "nothing changed" with the creation of Airbus SAS. The subsidies that had been provided to the Airbus partners as members of the Airbus Industrie consortium benefit the development and production of various Airbus LCA models which continue to be produced and sold by Airbus SAS.²⁰⁸⁰ According to the United States, the reorganization in 2000 of the Airbus LCA activities of the four Airbus partners and Airbus GIE under EADS, and the subsequent integration of those activities under Airbus SAS in 2001, does not necessitate a "pass-through" analysis.

(ii) Evaluation by the Panel

7.190 In its request for the establishment of a Panel, the United States challenges certain measures provided "to the Airbus companies", which it defines to include:

"Airbus SAS, its predecessor Airbus GIE and current and predecessor affiliated companies, including each person or entity that directly, or indirectly through one or more intermediaries or relationships, controls or controlled, or is or was controlled by, or is or was under common control with Airbus SAS or Airbus GIE, such as parent companies, sibling companies and subsidiaries, including Airbus Deutschland GmbH, Airbus España SL, Airbus France S.A.S., Airbus UK Limited, European Defence and Space Company ("EADS"), and BAE Systems."²⁰⁸¹

BCI deleted, as indicated [***]

7.191 In its submissions, the United States indicates that it uses the term "Airbus" to refer "interchangeably to the various Airbus companies."²⁰⁸² Thus, we disagree with the European Communities that the "United States posits claims against "Airbus", which it defines as Airbus SAS".²⁰⁸³ It is clear from the United States' panel request that the United States' claims in this dispute relate to measures provided "to the Airbus companies", by which it means not only Airbus SAS, but also "its predecessor Airbus GIE and current and predecessor affiliated companies" of both Airbus SAS and Airbus GIE.

7.192 The United States presents its claims on the basis that the "subsidized product" at issue in this dispute is the family of Airbus LCA.²⁰⁸⁴ We consider that the "producer" of this subsidized product prior to 2001 was the consortium Airbus Industrie; *i.e.*, *each of* the Airbus partners and their respective affiliates, *and* Airbus GIE. We base this conclusion on the fact that, between 1970 and 2001, Airbus LCA were produced by a consortium of European aerospace manufacturers (the Airbus partners) whose LCA activities were integrated through Airbus GIE.²⁰⁸⁵ In other words, each of the Airbus partners was, through its participation in the Airbus Industrie consortium, a manufacturer of Airbus LCA. Based on the foregoing, we consider that, for purposes of our analysis of the United States' claims in this dispute, a financial contribution provided to any Airbus partner or affiliated entity, or to Airbus GIE, in relation to the development and/or production of an Airbus LCA, potentially confers a benefit on the Airbus Industrie consortium, as the "producer" of Airbus LCA. Indeed, we do not understand the European Communities to contend otherwise.

7.193 The European Communities argues, however, that the United States must demonstrate that financial contributions which conferred a benefit on the Airbus Industrie consortium (*i.e.*, financial contributions provided to any of the Airbus partners, their affiliates or to Airbus GIE) *currently benefit Airbus SAS*. According to the European Communities, "there is a threshold requirement for the complaining Member to establish that the *producers* alleged to be the source of the adverse effects actually enjoy a subsidy."²⁰⁸⁶ The European Communities argues, therefore, that the United States must establish that the alleged subsidies that were provided to the Airbus Industrie consortium "passed through" to Airbus SAS, the only entity that currently produces Airbus LCA in the European Communities. We have already rejected the European Communities' attempt to characterize the United States' claims as confined to subsidies that were granted to Airbus SAS, rather than Airbus SAS and its predecessor Airbus GIE and their respective affiliated companies. It will, of course, be necessary for us to be satisfied that any subsidies which we may find to exist, do in fact subsidize Airbus LCA, in order to find that the effects of such subsidies are the various forms of adverse effects alleged. However, we do not consider that Articles 5 and 6 of the SCM Agreement require that causation be demonstrated through the type of "pass-through" analysis that has been applied by panels in the specific context of Part V of the SCM Agreement. Nor do we consider that a "pass-through" analysis is necessary in the circumstances at issue here; namely, where the direct recipient of the financial contribution is the producer of the subsidized product.

7.194 The question whether it is necessary to conduct a "pass-through" analysis in WTO law has previously arisen in situations where a financial contribution is provided to an entity in respect of a product but the "benefit" is alleged to be conferred on an *unrelated entity* producing a *different product*. Article VI:3 of the GATT and footnote 36 of Article 10 of the SCM Agreement have been held to require an investigating authority in a countervailing duty investigation to conduct a pass-through analysis where the recipient of the subsidy is not the producer of the product under investigation, but a producer of a product upstream in the production process of the product under

BCI deleted, as indicated [***]

investigation.²⁰⁸⁷ The dispute in *US – Softwood Lumber IV* concerned countervailing duties levied by the United States on imports of softwood lumber, including remanufactured lumber, from Canada to offset subsidies granted to timber harvesters in relation to the harvesting of timber (*i.e.*, the input into the production of lumber). The Appellate Body upheld the panel's findings that Article 10 of the SCM Agreement and Article VI:3 of the GATT required the USDOC to conduct a pass-through analysis in circumstances in which a subsidy is received by a producer of an input product and the imported product subject to the countervailing duty investigation is a different, downstream product produced by an unrelated producer using the subsidized input.²⁰⁸⁸ We note that the source of the obligation to conduct a pass-through analysis in *US – Softwood Lumber IV* is Article VI:3 of the GATT and Article 10 of the SCM Agreement, provisions of Part V of the SCM Agreement, which are not directly relevant to our consideration of the United States' claims in this dispute.²⁰⁸⁹

7.195 More recently, in *Mexico – Olive Oil*, another dispute involving the provisions of Part V of the SCM Agreement, the panel rejected an argument that whenever there is any arm's length transaction between unrelated companies in the chain of production of an imported product subject to a countervailing duty investigation, a pass-through analysis must be conducted.²⁰⁹⁰ The panel in *Mexico – Olive Oil* noted that, given that the Appellate Body in *US – Softwood Lumber IV* found that where an input product and a further manufactured product are both covered by the definition of the product subject to the countervailing duty investigation, a pass-through analysis is *not* required, even if the producers of the respective products are *unrelated* and operating at arm's length, then *a fortiori*, the mere existence of an arm's length transaction between firms involving the product under investigation somewhere between the receipt of the subsidy and the export of the merchandise should not, by itself, give rise to an obligation to conduct a pass-through analysis under Article VI:3 of the GATT 1994 and Article 10 of the SCM Agreement.²⁰⁹¹

7.196 In *US – Upland Cotton*, a dispute involving the provisions of Part III of the SCM Agreement, the panel rejected the United States' argument that Brazil was required to establish the precise extent to which United States subsidies provided in respect of "upland cotton" production were actually "passed through" to the exporter, after "upland cotton" been processed and sold, before being traded.²⁰⁹² The panel considered that, given the textual differences between Parts III and V of the SCM Agreement, "pass-through" principles developed in the context of Part V of the SCM Agreement were not directly applicable to the panel's examination of serious prejudice under Articles 5(c) and 6.3(c) of the SCM Agreement.²⁰⁹³ The Appellate Body found that the panel had not

²⁰⁸⁷ GATT Panel Report, *United States – Countervailing Duties on Fresh, Chilled and Frozen Pork from Canada ("US – Canadian Pork")*, adopted 11 July 1991, BISD 38S/30; Panel Report, *United States – Final Countervailing Duty Determination with Respect to Certain Softwood Lumber from Canada ("US – Softwood Lumber IV")*, WT/DS257/R and Corr.1, adopted 17 February 2004, as modified by Appellate Body Report, WT/DS257/AB/R, DSR 2004:II, 641.

²⁰⁸⁸ Appellate Body Report, *United States – Final Countervailing Duty Determination with Respect to Certain Softwood Lumber from Canada ("US – Softwood Lumber IV")*, WT/DS257/AB/R, adopted 17 February 2004, DSR 2004:II, 571, para. 167. The Appellate Body reversed the Panel's finding that USDOC's failure to conduct a pass-through analysis in respect of arm's length sales of lumber by tenured harvesters/sawmills to unrelated remanufacturers was inconsistent with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.

²⁰⁸⁹ See, also, Panel Report, *Mexico – Definitive Countervailing Measures on Olive Oil from the European Communities ("Mexico – Olive Oil")*, WT/DS341/R, adopted 21 October 2008, para. 7.142.

²⁰⁹⁰ Panel Report, *Mexico – Olive Oil*, para. 7.143.

²⁰⁹¹ Panel Report, *Mexico – Olive Oil*, para. 7.143. The panel also considered that it is not necessary to identify the particular recipient or recipients of the benefit, and the particular manner in which the subsidy is bestowed, in order to determine that a "benefit" has been conferred, and therefore that a subsidy exists within the meaning of Article 1.1(b); para. 7.152.

²⁰⁹² Panel Report, *US – Upland Cotton*, para. 7.1180.

²⁰⁹³ Panel Report, *US – Upland Cotton*, para. 7.1181.

BCI deleted, as indicated [***]

erred in its assessment of the amount of the subsidies for the purpose of its analysis under Article 6.3(c) of the SCM Agreement.²⁰⁹⁴ The Appellate Body said:

"As we have already noted, the requirement in Article VI:3 of the GATT 1994 and Article 19.4 of the SCM Agreement that countervailing duties on a product be limited to the amount of the subsidy accruing to that product finds no parallel in the provisions on actionable subsidies and pertinent remedies under Part III of the SCM Agreement. Therefore, the need for a "pass-through" analysis under Part V of the SCM Agreement is not critical for an assessment of significant price suppression under Article 6.3(c) in Part III of the SCM Agreement. Nevertheless, we acknowledge that the "subsidized product" must be properly identified for purposes of significant price suppression under Article 6.3(c) of the SCM Agreement. And if the challenged payments do not, in fact, subsidize that product, this may undermine the conclusion that the effect of the subsidy is significant suppression of prices of that product in the relevant market."²⁰⁹⁵

7.197 We understand the Appellate Body to mean that, in order to demonstrate causation under Article 6 (in that dispute, that the effect of a subsidy which had been found to exist was significant price suppression within the meaning of Article 6.3(c)), it is necessary to link the subsidy to the product alleged to be involved in causing the serious prejudice. In situations where a subsidy is provided directly to an entity that does not produce, and is not related to an entity that produces, the product alleged to be involved in causing the serious prejudice, a complaining party will need to demonstrate how such a product is in fact, subsidized, for purposes of the causation analysis under Article 6.

7.198 In arguing that "subsidies paid to entities that no longer exist, much less manufacture and sell LCA, cannot be assumed to benefit Airbus SAS", the European Communities essentially asks the Panel to treat the Airbus Industrie consortium (and the various legal entities which comprised the consortium), as a different producer of Airbus LCA from Airbus SAS. We are unable to do so.

7.199 We acknowledge that the change in legal organization of the producer of Airbus LCA, from a *groupement d'intérêt économique* to a *société par actions simplifiée* is legally significant as a matter of corporate law. The legal rights and obligations of the Airbus partners (and their respective owners) changed from those of aerospace manufacturers and members of a consortium, to those of shareholders of a publicly listed company (EADS) which, through its subsidiary Airbus SAS, owned the LCA-related assets and conducted the LCA-related activities of the former Airbus partners and Airbus GIE. However, based on the economic realities of the production of Airbus LCA, we consider the Airbus Industrie consortium (*i.e.*, each of the Airbus partners, their respective affiliates and Airbus GIE) to be the *same producer* of Airbus LCA as Airbus SAS. In this regard, we recall that, in response to a question from the Panel, the European Communities indicated that all of the LCA operating assets and all of the LCA design, manufacturing and marketing activities of the former Airbus partners and Airbus GIE were grouped in Airbus SAS and its subsidiaries.²⁰⁹⁶ Moreover, in granting merger clearance to the proposed combination of Aérospatiale-Matra, Dasa and CASA to form EADS, the European Commission expressed the view that there was no indication that the operation would affect the *quality or nature of control* of Airbus Industrie, nor would it have any impact on the work share distribution between the Airbus partners.²⁰⁹⁷

BCI deleted, as indicated [***]

7.200 In other words, for purposes of our analysis of the United States' claims under Articles 5 and 6 of the SCM Agreement, we do not consider that the changes to the corporate structure of the producer of Airbus LCA are such as to require the United States to demonstrate, as part of its *prima facie* case, the "pass-through" to the entity Airbus SAS of benefits conferred by financial contributions that had been provided to the Airbus Industrie consortium. If we find that any of the alleged financial contributions provided to the Airbus Industrie consortium conferred a benefit within the meaning of Article 1.1(b), and thus constitute subsidies, we would be satisfied that those subsidies do, in fact, subsidize Airbus LCA for purposes of our adverse effects analysis under Articles 5 and 6.

7.201 We now turn to the European Communities' arguments that various transactions nonetheless had the effect of "extinguishing" a portion of any alleged subsidies that we may otherwise find to have been bestowed on Airbus SAS.

(c) Extinction of benefit

(i) *Arguments of the parties*

European Communities

7.202 The European Communities contends that, quite apart from the issue which it identifies as "pass-through", it has demonstrated that "most" of the alleged subsidies at issue in this dispute "have been extinguished, repaid, withdrawn or extracted in a series of arm's length, fair market value transactions" with the result that Airbus SAS does not "currently enjoy subsidies that could cause the adverse effects alleged by the United States."²⁰⁹⁸

7.203 According to the European Communities, WTO panels and the Appellate Body have consistently made clear that any benefit that may have been conferred by a financial contribution (and therefore a subsidy which is deemed to exist) is presumptively "extinguished" for purposes of the SCM Agreement when the recipient firm (or segments thereof) is sold at "arm's-length" and for "fair market value".²⁰⁹⁹ In this regard, the European Communities refers to the reports of the panels and Appellate Body in *US – Lead and Bismuth II* and *US – Countervailing Measures on Certain EC Products* as establishing the "principle" that the sale of a company at arm's-length and for fair market value presumptively "removes any benefit of prior subsidies" to the purchaser of that company.²¹⁰⁰ Although the above-referenced cases arose out of countervailing duty determinations challenged under Part V of the SCM Agreement, the European Communities argues that the "extinction principle" enunciated in those cases is based on the definition of "subsidy" in Article 1.1, and that it is therefore as relevant to Part III of the SCM Agreement as it is to Part V.²¹⁰¹ While also acknowledging that the aforementioned cases involved the privatization of formerly state-owned

²⁰⁹⁸ EC, FWS, paras. 196-197; SWS, para. 90.

²⁰⁹⁹ EC, FWS, para. 198. According to the European Communities, this "principle" is "rooted in the "benefit to the recipient" principle" and is part of the definition of "subsidy" in Article 1.1.; EC, SNCOS, para. 59; Answer to Panel Question 197, para. 222.

²¹⁰⁰ EC, FWS, paras. 198-202; Answer to Panel Question 197, para. 223; Panel Report, *United States – Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom ("US – Lead and Bismuth II")*, WT/DS138/R and Corr.2, adopted 7 June 2000, upheld by Appellate Body Report, WT/DS138/AB/R, DSR 2000:VI, 2623; Panel Report, *United States – Countervailing Measures Concerning Certain Products from the European Communities ("US – Countervailing Measures on Certain EC Products")*, WT/DS212/R, adopted 8 January 2003, as modified by Appellate Body Report, WT/DS212/AB/R, DSR 2003:I, 73; Panel Report, *United States – Countervailing Measures Concerning Certain Products from the European Communities, Recourse to Article 21.5 of the DSU by the European Communities ("US – Countervailing Measures on Certain EC Products (Article 21.5 – European Communities)")*, WT/DS212/RW, adopted 27 September 2005.

²¹⁰¹ EC, Answer to Panel Question 197, para. 222.

BCI deleted, as indicated [***]

enterprises, the European Communities contends that a statement of the Appellate Body in *US – Countervailing Measures on Certain EC Products* extends the application of the principle to private-to-private sales.²¹⁰²

7.204 Based on the "extinction" principle that the European Communities argues was established in the aforementioned cases, and the asserted extension of that principle to private-to-private sales, the European Communities argues that (i) the French State's sale of shares in Aérospatiale-Matra through a public offering in 2000; (ii) the combination of the LCA-related assets and activities of the Airbus partners to form EADS and the public offering of EADS shares in 2000; (iii) market sales of EADS shares by various EADS shareholders (including the French State) between 2001 and 2006; and (iv) the sale by BAE Systems of its interest in Airbus SAS to EADS in 2006, each effectively "extinguished" a portion of any subsidies currently enjoyed by Airbus SAS. The specific transactions which the European Communities alleges have resulted in the "extinction" of a portion of any subsidies to Airbus SAS are set forth below:²¹⁰³

Date	Transaction	Percentage Sold	Percentage of benefit extinguished
1999 and 2000	Alleged privatization of Aérospatiale through combination of Aérospatiale with Matra Hautes Technologies to form Aérospatiale-Matra and the sale by the French State of a portion of its shares in Aérospatiale Matra to the public	50%	50 % of benefit to Aérospatiale extinguished
2000	Combination of Aérospatiale-Matra, Dasa and CASA to form EADS and the public offering of EADS shares ²¹⁰⁴	16.42%	16.42 % of benefit to EADS extinguished
2001	Sales by both Lagardère and the French State of their respective direct shareholdings in EADS on the market	3%	3 % of benefit to EADS extinguished
2004	Hedged forward sale by DaimlerChrysler of its direct shareholdings in EADS	2.75%	2.20 % of benefit to Airbus SAS extinguished
2006	Irrevocable forward sale by DaimlerChrysler of indirect EADS shareholding	7.5%	6 % of benefit to Airbus SAS extinguished (80% of 7.5%)
2006	Issuance by Lagardère of mandatory exchangeable bonds (convertible into its	2.5% (2007) 2.5% (2008)	6 % of benefit to Airbus SAS

²¹⁰² EC, FWS, paras. 213-215; Answer to Panel Question 197, para. 223. The European Communities also contends that the compliance Panel in *US – Countervailing Measures on Certain EC Products (Article 21.5 – European Communities)* established the principle that a partial (rather than full) sale of a company may remove a corresponding part of the subsidy; EC, FWS, paras. 216-219; Panel Report, *US – Countervailing Measures on Certain EC Products (Article 21.5 – European Communities)*, at paras. 7.88-7.176.

²¹⁰³ EC, Answer to Panel Question 111, para. 316.

²¹⁰⁴ The combination of the French, German and Spanish Airbus partners to form EADS was preceded by the "extraction" of cash by DaimlerChrysler (as the owner of Dasa) and the Spanish government (as the owner of CASA). The European Communities argues that these "cash extractions" extinguished (or constituted repayment of) a portion of the benefits of subsidies received by Dasa and CASA, respectively. The "extraction" arguments are considered separately in Section VII.E.1(e) below.

BCI deleted, as indicated [***]

	indirect EADS shareholding on specified dates)	2.5% (2009)	extinguished (80% of 7.5%)
2006	Exercise of put option and sale by BAE Systems of its 20 % interest in Airbus SAS to EADS	20 %	20 % of benefit to Airbus SAS extinguished

United States

7.205 According to the United States, the European Communities' "extinction" argument is built on a flawed attempt to analogize the aforementioned transactions to the transactions at issue in *US – Lead and Bismuth II* and *US – Countervailing Measures on Certain EC Products*. The United States argues that the transactions identified by the European Communities as "extinguishing" a portion of the benefit of any subsidies currently enjoyed by Airbus SAS lack some or all of the features that were essential to the findings regarding subsidy extinction in those cases.²¹⁰⁵ The United States notes that *US – Lead and Bismuth II* and *US – Countervailing Measures on Certain EC Products* dealt with the effects of full privatizations on the extent to which subsidies granted to enterprises prior to their privatization may be countervailed under Part V of the SCM Agreement.²¹⁰⁶ According to the United States, an essential feature of the privatization transactions at issue in those disputes was that they involved the transfer of all or substantially all of the state's interest in an entity to a buyer at arm's length and for fair market value, including a complete transfer of control.

7.206 Second, the United States argues that the European Communities fails to address the significance of the fact that the cases on which it relies for the "principle" of extinction involved reviews of countervailing duty determinations by an investigating authority under Part V of the SCM Agreement.²¹⁰⁷ According to the United States, the European Communities has failed to take account of the differences between the nature of the inquiry in a countervailing duty dispute under Part V of the SCM Agreement and a dispute under Part III of the SCM Agreement.²¹⁰⁸

7.207 Specifically, the United States notes that an investigating authority in a countervailing duty proceeding is required to determine whether a countervailable subsidy exists and, if so, the amount of subsidy to be offset through countervailing duties. By contrast, a panel in a dispute under Part III of the SCM Agreement is required to determine whether the respondent Member, through the use of subsidies, has caused adverse effects to the interests of a complaining Member.²¹⁰⁹ The United States contends that, even if a transaction may (*arguendo*) result in a previously provided subsidy no longer being countervailable for purposes of Part V of the SCM Agreement, this does not necessarily mean that it is no longer capable of causing adverse effects under Part III of the SCM Agreement.²¹¹⁰

7.208 The United States further submits that the European Communities' arguments regarding the "extinction" and "extraction" of the alleged subsidies are completely irrelevant to the United States' causation argument.²¹¹¹ According to the United States, its causation case is essentially that the alleged subsidies in this dispute (namely, LA/MSF, together with other subsidies) distort the LCA market by (i) permitting the launch of LCA models that could not otherwise have been launched; (ii) enabling Airbus to invest in multiple LCA launches more quickly than it otherwise could; and (iii)

BCI deleted, as indicated [***]

enabling Airbus to use its limited funds to reduce prices for already launched LCA models.²¹¹² Therefore, according to the United States, at any given moment, the impact of the alleged subsidies includes both (i) the existence of Airbus LCA models that would not have been launched in the past without the alleged subsidies; and (ii) the present impact of subsidies that are currently being provided for the development of new Airbus LCA models on the financial constraints currently experienced by Airbus as a whole.²¹¹³

7.209 Finally, the United States argues that the European Communities has failed to demonstrate that the specific transactions which it contends "extinguished" a portion of prior subsidies to the Airbus partners and Airbus SAS were sales of shares that occurred at arm's length and for fair market value.²¹¹⁴

(ii) *Arguments of Third Parties*

Australia

7.210 Australia argues that the elements for establishing the existence of "benefit" are the same in the context of Part III and Part V of the SCM Agreement and that both Parts III and V rely on the continuing existence of benefit as the basis for establishing the further element of injury.²¹¹⁵ Consequently, Australia contends that the rebuttable presumption that a privatization on arm's-length terms and for fair market value results in the extinguishment of benefit, as recognized by the Appellate Body in *US – Countervailing Measures on Certain EC Products*, in the context of Part V of the SCM Agreement, likewise applies to the existence of benefit under Part III of the SCM Agreement.²¹¹⁶ Australia also argues that the question whether a subsidy is partially or completely extinguished upon the sale of shares in a subsidized entity depends on the nature and consequences of that sale.²¹¹⁷

Brazil

7.211 According to Brazil, the panel and Appellate Body findings in *US – Countervailing Measures on Certain EC Products* relate to the existence of a benefit for purposes of finding subsidization under Article 1.1 and applying countervailing duties under Part V of the SCM Agreement. Because the identification of the "subsidized product" (including the existence of benefit under Article 1.1) is also a necessary first step in an analysis of serious prejudice under Part III, Brazil contends that past

²¹¹² US, Answer to Panel Question 169, para. 222.

²¹¹³ US, Answer to Panel Question 169, para. 222. The United States also argues that the 2006 transactions, and DaimlerChrysler's 2004 hedged forward arrangement, which could not take place until 2007, occurred after the establishment of this Panel and therefore can have no bearing on the resolution of this dispute; US, SWS, paras. 529-530.

²¹¹⁴ In relation to this issue, the United States argues (i) that several of the transactions in question are not actual sales of shares; (ii) that several of the transactions were sales for between one percent and 9.95 percent of the entities concerned, and therefore involved significantly less than "all or substantially all" of the shares in the relevant entities; (iii) that none of the transactions resulted in the seller no longer having any controlling interest in the relevant companies; and (v) that several of the transactions occurred after the establishment of this Panel and therefore have no bearing on the resolution of this dispute; US, SWS, paras. 529-536.

²¹¹⁵ Australia Answers to Third Party Questions, 10 September 2007, at 2. Australia notes that the only real difference between Parts III and V is that nothing in Part III calls for a precise quantification or allocation of the benefit of the subsidy.

²¹¹⁶ Australia Answers to Third Party Questions, 10 September 2007, at 2.

²¹¹⁷ Australia Answers to Third Party Questions, 10 September 2007, at 2. In this regard, Australia contends that the Panel will need to examine all relevant facts, including provisions made in loan contracts between the governments and Airbus SAS in relation to the transfer obligations to successor entities; Australia, Third Party Submission, 7 May 2007, para. 57.

BCI deleted, as indicated [***]

interpretations of Article 1.1 in relation to determining subsidization would appear to be applicable in the context of any disputes under the SCM Agreement, including those relating to prohibited subsidies under Part II and actionable subsidies under Part III.²¹¹⁸

7.212 Brazil argues that the relevant transactions cited by the European Communities are not privatizations and thus do not appear to raise the presumption that the benefit of prior subsidies was extinguished.²¹¹⁹ Brazil also notes that the reports of the panel and Appellate Body in *US – Lead and Bismuth II* and *US – Countervailing Measures on Certain EC Products* addressed the question whether privatization of the recipient extinguished the benefit for purposes of imposing countervailing duties under Part V of the SCM Agreement. Brazil contends that Part V of the SCM Agreement requires the calculation of the precise amount of the subsidy in order to ensure that countervailing duties are not levied in excess of the amount of the subsidy under Article 19.4 of the SCM Agreement, while precise quantification of the amount of the subsidy is not required in cases under Parts II and III of the SCM Agreement.²¹²⁰ According to Brazil, given the absence of any requirement to precisely quantify the subsidy, and given the absence of any *de minimis* provision under Parts II and III of the SCM Agreement, a "partial" extinguishment of the benefit would still mean that the recipient is benefiting from the subsidies, albeit arguably to a lesser extent. Therefore, even assuming *arguendo* that partial share transfers may extinguish a portion of the benefit to the recipient in certain circumstances, such a finding should not affect the Panel's findings regarding the existence of benefit.²¹²¹

Japan

7.213 Japan submits that the Panel should closely examine whether the European Communities has demonstrated that the privatizations have been accomplished at arm's length and for fair market value, and that any alleged benefits have in fact been extinguished, based on the specific facts of the case.²¹²² Japan argues that there is no basis in the SCM Agreement, in the applicable jurisprudence, or in logic, for the proposition that a partial transfer of a firm should not be subject to the same rebuttable presumption of extinguishment as set forth by the Appellate Body in *US – Countervailing Measures on Certain EC Products*.²¹²³

(iii) *Evaluation by the Panel*

7.214 The European Communities argues that most of the alleged subsidies which the Panel may find to exist have been "extinguished" by a series of allegedly arm's length, fair market value transactions involving changes in ownership of Aérospatiale, or EADS, with the result that "Airbus SAS does not *currently enjoy* subsidies that could cause the adverse effects alleged by the United States."²¹²⁴ This argument raises a threshold question; namely, whether a subsidy which is found to exist must additionally be found to confer a present, or continuing, benefit on the recipient firm producing the subsidized product in order for that subsidy to be potentially capable of causing adverse effects for purposes of Article 5 of the SCM Agreement.

BCI deleted, as indicated [***]

7.215 We recall that Article 5 of the SCM Agreement provides, in relevant part:

"No Member should cause, through the *use of any subsidy referred to in paragraphs 1 and 2 of Article 1*, adverse effects to the interests of other Members, i.e....."²¹²⁵

The concept of "adverse effects" under Article 5 of the SCM Agreement is concerned with effects to the "interests of other Members". Paragraphs (a), (b) and (c) of Article 5, describe these effects as:

- (i) "injury to the domestic industry of another Member;
- (ii) nullification or impairment of benefits accruing directly or indirectly to other Members under GATT 1994 in particular the benefits of concessions bound under Article II of GATT 1994;
- (iii) serious prejudice to the interests of another Member."²¹²⁶

Article 6.3 provides that serious prejudice in the sense of paragraph (c) of Article 5 may arise in any case where one or several of the following apply:

- (a) "the effect of the subsidy is to displace or impede the imports of a like product of another Member into the market of the subsidizing Member;
- (b) the effect of the subsidy is to displace or impede the exports of a like product of another Member from a third country market;
- (c) the effect of the subsidy is a significant price undercutting by the subsidized product as compared with the price of a like product of another Member in the same market or significant price suppression, price depression or lost sales in the same market;
- (d) the effect of the subsidy is an increase in the world market share of the subsidizing Member in a particular subsidized primary product or commodity as compared to the average share it had during the previous period of three years and this increase follows a consistent trend over a period when subsidies have been granted."

7.216 Implicit in the European Communities' argument is the assumption that a "subsidy referred to in paragraphs 1 and 2 of Article 1" can only cause adverse effects pursuant to Article 5 if it can be shown to *presently* confer a "benefit" on a recipient. This assumption appears to rest on an analogy with the countervailing duty context, in which a Member's right to impose countervailing duties on a product is limited to the *amount* of the subsidy accruing to that product. The European Communities argues that the present existence of the benefit conferred by a financial contribution is likewise a prerequisite to a determination that a Member has caused, through the use of a subsidy, adverse effects to the interests of another Member pursuant to Article 5 of the SCM Agreement.

7.217 We do not agree. In order to make a successful claim under Article 5 of the SCM Agreement, a complaining Member must establish that a Member has caused, through the use of any subsidy referred to in paragraphs 1 and 2 of Article 1, one or more of the enumerated adverse effects to the interests of another Member. One element of a complaining Member's adverse effects claim will therefore be establishing the existence of a "subsidy referred to in paragraphs 1 and 2 of Article 1". We note the following statement by the Appellate Body in *Canada – Aircraft* regarding the definition of "subsidy" in Article 1.1 and the meaning of the term "benefit" in Article 1.1(b):

²¹²⁵ Emphasis added.

²¹²⁶ Footnotes omitted.

BCI deleted, as indicated [***]

"The definition of "subsidy" in Article 1.1 has two discrete elements: "a financial contribution by a government or any public body" and "a benefit is thereby conferred". The first element of this definition is concerned with whether the government made a "financial contribution", as that term is defined in Article 1.1(a). The focus of the first element is on the action of the government in making the "financial contribution". That being so, it seems to us logical that the second element in Article 1.1 is concerned with the "benefit... conferred" on the recipient by that governmental action. Thus, subparagraphs (a) and (b) of Article 1.1 define a "subsidy" by reference, first, to the action of the granting authority and, second, to what was conferred on the recipient....

We also believe that the word "benefit", as used in Article 1.1(b), implies some kind of comparison. This must be so, for there can be no "benefit" to the recipient unless the "financial contribution" makes the recipient "better off" than it would otherwise have been, absent that contribution. In our view, the marketplace provides an appropriate basis for comparison in determining whether a "benefit" has been "conferred", because the trade-distorting potential of a "financial contribution" can be identified by determining whether the recipient has received a "financial contribution" on terms more favourable than those available to the recipient in the market."²¹²⁷

7.218 Article 1.1 is phrased in the present tense; *i.e.*, a subsidy "shall be deemed to exist" where there "is a financial contribution" and "a benefit is thereby conferred". The grammatical construction of Article 1.1 suggests that the "financial contribution" and the "benefit" come into existence at the same time. This construction is supported by the adverb "thereby", the ordinary meaning of which is "by that means".²¹²⁸ As the Appellate Body in *Canada – Aircraft* made clear, the focus of the inquiry into the existence of a "benefit" pursuant to Article 1.1(b) is whether the financial contribution places the recipient in a more advantageous position than would have been the case but for the financial contribution. We therefore have difficulty understanding the coherence of a concept such as "continuing benefit" within the legal framework of Article 1 of the SCM Agreement. To the extent that a concept such as "continuing benefit" relates to how the *effect* of a subsidy is to be analyzed over time, we consider this to be an aspect of the causation analysis to be undertaken pursuant to Articles 5 and 6 of the SCM Agreement and part of the assessment of the "effects" of a subsidy under those provisions. If a financial contribution is provided on better terms than would have been available in the market, a benefit is "thereby" conferred, a subsidy is deemed to exist, and there is the possibility, which the complaining Member may proceed to establish, that the "use" of this subsidy has caused adverse effects to the interests of other Members.

7.219 The European Communities' concept of "continuing benefit" appears to conflate the concepts of "benefit", which relates to the terms on which a financial contribution was provided compared with a market benchmark, and "effects" which relate to the impact of the subsidy in the marketplace at a point in time which is typically subsequent to the time when the subsidy was granted. We note the observations of the panel in *US – Upland Cotton* on this interpretational error:

"The concept of "benefit" is a definitional element of a subsidy pursuant to Article 1.1(b) of the SCM Agreement. Inasmuch as we are not required to calculate an amount of "benefit", we cannot logically be required to conduct any sort of precise

²¹²⁷ Appellate Body Report, *Canada – Measures Affecting the Export of Civilian Aircraft* ("Canada – Aircraft"), WT/DS70/AB/R, adopted 20 August 1999, DSR 1999:III, 1377, paras. 156-157.

²¹²⁸ The *New Shorter Oxford English Dictionary* defines "thereby" as "by that means, as a result of that; through that"; *New Shorter Oxford English Dictionary*, Oxford University Press, Oxford, 1999, p. 3275. *Black's Law Dictionary* defines "thereby" as "by that means; in consequence of that"; *Black's Law Dictionary*, Sixth Edition, West Publishing Co., St. Paul, 1990, p. 1478.

BCI deleted, as indicated [***]

"expensing" of the "benefit". Moreover, we see no textual basis for reading the different terms – "benefit" and "adverse effects"/"serious prejudice" – synonymously. Were we to discern an identity between the concept of "benefit" to a recipient and the concept of "adverse effects" to another Member's interests, we would effectively reduce the provisions of Part III to redundancy. As a treaty interpreter, the Panel is precluded from doing so."²¹²⁹

7.220 We also recall the different context in which investigating authorities are required to demonstrate the existence, during the relevant period of investigation or review, of a continued benefit from a prior financial contribution, pursuant to Part V of the SCM Agreement. This requirement arises from Article VI:3 of the GATT and Article 10 of the SCM Agreement which permit offsetting, through countervailing duties, no more than the *ad valorem* amount of the subsidy determined to have been granted on the manufacture or production of a *product*.²¹³⁰ In addition, Articles 19.4 and 21.1 limit the imposition of countervailing duties to the *amount* of the subsidy found to exist, calculated in terms of the subsidization per unit of the subsidized and exported *product*. The provisions of Part V of the SCM Agreement thus give rise to a pragmatic need to link a subsidy to imported *products* in order to assess the effect of the subsidized imports. As the panel in *US – Upland Cotton* observed:

"In view of the contrast in the text, context, legal nature and rationale of the provisions in Part III of the SCM Agreement relating to a multilateral assessment as to whether a Member is causing, through the use of any subsidy, "adverse effects" in the form of "serious prejudice to the interests of another Member" and Part V of the Agreement relating to obligations of a Member in conducting unilateral countervailing duty investigations, we decline to transpose directly the quantitative focus and more detailed methodological obligations of Part V into the provisions of Part III of the SCM Agreement."²¹³¹

7.221 As we have explained, we do not suggest that, under Article 5 of the SCM Agreement, it is unnecessary to link a subsidy provided to a recipient to a particular product or products in order to demonstrate that a Member has caused, through the use of that subsidy, the asserted adverse effects to the interests of the complaining Member.²¹³² However, this does not mean that a complaining Member is required to establish that the "benefit" to the recipient is "current" or "continuing" in order to establish that link and demonstrate that use of that subsidy has caused adverse effects to the complaining Member's interests.²¹³³ There may well be circumstances where, given the nature of the subsidy, the passage of time between its receipt and the alleged adverse effects, the recipient's position in the market and exogenous market considerations, it is difficult to demonstrate more than a tenuous causal link between the subsidy and the alleged adverse effects. However, this is an inherent part of the causation analysis to be undertaken pursuant to Articles 5 and 6, and does not entail an obligation to demonstrate the "continuity of benefit" of a previously granted subsidy.

²¹²⁹ Panel Report, *US – Upland Cotton*, para. 7.1179 (footnotes omitted).

²¹³⁰ Article VI:3 of the GATT and footnote 36 of Article 10 of the SCM Agreement provide that the term "countervailing duty":

"{S}hall be understood to mean a special duty levied for the purpose of offsetting any bounty or subsidy bestowed, directly, or indirectly, upon the manufacture, production or export of any merchandise".

²¹³¹ Panel Report, *US – Upland Cotton*, para. 7.1177.

²¹³² See, paras. 7.194 - 7.200.

²¹³³ In this regard, we recall that the panel in *US – Upland Cotton* regarded the fact that the legal and regulatory provisions governing the payment of many of the subsidies at issue in that dispute had expired as immaterial to its serious prejudice analysis; Panel Report, *US – Upland Cotton*, para. 7.1201. See, also, Panel Report, *Indonesia – Certain Measures Affecting the Automobile Industry ("Indonesia – Autos")*, WT/DS54/R, WT/DS55/R, WT/DS59/R, WT/DS64/R and Corr.1 and 2, adopted 23 July 1998, and Corr. 3 and 4, DSR 1998:VI, 2201, para. 14.206.

BCI deleted, as indicated [***]

7.222 We conclude that, provided the United States, as the complaining Member, establishes (i) the provision of a financial contribution in accordance with Article 1.1(a)(1); (ii) which thereby confers a benefit, within the meaning of Article 1.1(b) and (iii) specificity, in accordance with Article 2, a subsidy that is actionable under Part III of the SCM Agreement will be "deemed to exist", and the United States will successfully make out a claim under Article 5; provided it is able to demonstrate that the European Communities and certain member States have caused, through the use of that subsidy, adverse effects to the interests of the United States. We can find nothing in Article 5 of the SCM Agreement that would require the United States to establish additionally that all or part of the "benefit" found to have been conferred by the provision of a financial contribution continues to exist, or presently exists.

7.223 We therefore dismiss the European Communities' arguments that particular alleged subsidies have been extinguished through a series of arm's length, fair market value transactions as unfounded, resting as they do upon a flawed interpretation of Article 5 of the SCM Agreement.

(d) Alternative findings

7.224 We consider that the foregoing findings are sufficient to resolve this issue. Nonetheless, and in the interest of ensuring a positive resolution of this dispute in the event the foregoing findings are reversed on appeal, we consider it appropriate to make alternative findings on the European Communities' arguments that, in the context of a claim under Part III of the SCM Agreement, the existence of a benefit conferred by a financial contribution provided to a recipient is presumptively extinguished by the subsequent sale of the recipient to an arm's-length purchaser for fair market value.

7.225 The European Communities asks us to interpret Article 5 as requiring a complaining Member to establish not only the existence of a subsidy pursuant to Article 1.1 of the SCM Agreement, but also that the financial contribution confers a "present" or "continuing" benefit on the recipient, as a prerequisite to demonstrating that a Member has caused, through the use of that subsidy, adverse effects to the interests of another Member. Had we accepted the European Communities' view, then it would be necessary for us to address the European Communities' arguments that it is possible to derive from the prior panel and Appellate Body reports in *US – Lead and Bismuth II* and *US – Countervailing Measures on Certain EC Products* the principle that sale of a producer on arm's-length terms and for fair market value presumptively removes the benefit of any prior subsidies to the purchaser of that producer. We would also have to consider the European Communities' argument that application of this principle to certain transactions involving changes in ownership of the Airbus partners, EADS and Airbus SAS results in the "extinction" of a portion of any subsidies to Airbus SAS. We consider these questions, in the alternative, below.

7.226 The disputes in *US – Lead and Bismuth II* and *US – Countervailing Measures on Certain EC Products* involved the WTO-consistency of countervailing duties imposed or maintained by the United States on products imported from formerly state-owned producers to offset subsidies received by those producers prior to their privatization. The European Communities argues that the reports of the panels and Appellate Body in these cases establish the "principle" that "the sale of a company at arm's length and for fair market value removes any benefit of prior subsidies to the buyer."²¹³⁴

7.227 According to the United States, the panel in *US – Countervailing Measures on Certain EC Products* found that a subsidy may be extinguished as the result of a sale of the subsidized entity where (i) the sale is at arm's length and for fair market value, and (ii) the sale involves *all or substantially all of the subsidized entity* and results in a *relinquishment of any controlling interest* the seller had in the entity.²¹³⁵ The United States contends that none of the transactions identified by the

BCI deleted, as indicated [***]

European Communities satisfies this second requirement, and that the European Communities, in purporting to apply the principle enunciated by the panel in that dispute, is actually formulating a new principle in which it is only necessary to satisfy the requirements in (i) above in order for a subsidy to be extinguished.

7.228 The European Communities, for its part, argues that the United States has confused the principle enunciated in *US – Countervailing Measures on Certain EC Products* with the facts to which that principle was applied in that dispute.²¹³⁶ The European Communities rejects the United States' assertion that the "Airbus governments" nevertheless retain controlling interests in Airbus SAS sufficient to enable them to exert control over the company.²¹³⁷ According to the European Communities, the transactions that it has identified (which are set forth in paragraph 7.204 of this Report) *cumulatively* have resulted in the transfer to private owners of 79.26 percent of Airbus SAS, with the result that none of Aérospatiale-Matra, Dasa, CASA nor BAE Systems today produces LCA or has a "controlling interest" in Airbus SAS.²¹³⁸ The European Communities argues that the Panel Report in *US – Countervailing Measures on Certain EC Products (Article 21.5 – European Communities)* extends the "principle of extinguishment" from single event changes of control to cover graduated sales undertaken in tranches over a period of time.²¹³⁹

7.229 Before beginning our evaluation of the European Communities' arguments, we set forth below our understanding of the issues in dispute and conclusions of the panels and Appellate Body in the two cases on which the European Communities relies.

7.230 In *US – Lead and Bismuth II*, the panel found that the changes in ownership of the subsidized, state-owned producer which lead to the creation of the privatized producers should have caused the USDOC to examine whether the production of leaded bars by those privatized producers, and not the state-owned producer, was subsidized.²¹⁴⁰ It therefore found that the countervailing duties imposed pursuant to the USDOC's 1995, 1996 and 1997 administrative reviews were not in accordance with Articles 19.1, 19.4 and 21.2 of the SCM Agreement, Article VI:3 of the GATT 1994 and the object and purpose of countervailing duties as expressed in footnote 36 to Article 10 of the SCM Agreement, and were therefore inconsistent with Article 10.²¹⁴¹

7.231 On appeal, the United States argued that subsidies are bestowed on production, and that a mere change in ownership of the recipient of a financial contribution does not have an automatic or immediate effect on production. Rather, legal successorship to a subsidized producer is sufficient to maintain the connection between the subsidies and the recipient. The Appellate Body rejected this

²¹³⁶ EC, Comments on US Answer to Panel Question 168, para. 313.

²¹³⁷ US, Answer to Panel Question 168, paras. 216-217. The European Communities notes that neither the United Kingdom nor German governments hold any shares in EADS or Airbus SAS, while the French and Spanish governments own minority stakes in EADS (15.2 percent and 5.54 percent, respectively), and can hardly be said to be in a position to exert control over EADS or Airbus SAS; European Communities, Comments on US, Answer to Panel Question 168, paras. 322-323.

²¹³⁸ EC, Comments on US, Answer Question 168, para. 320.

²¹³⁹ Panel Report, *US – Countervailing Measures on Certain EC Products (Article 21.5 – European Communities)*, paras. 7.119, 7.175.

²¹⁴⁰ Panel Report, *US – Lead and Bismuth II*, para. 6.70. The subsidies countervailed were equity infusions made by the British government to a state-owned entity, British Steel Corporation (BSC) between 1977 and 1986. BSC was privatized in 1988 and shares of the newly formed entity, British Steel plc (BSplc), were sold in a public offering that was agreed to be at arm's length, for fair market value and consistent with commercial considerations. The countervailing duty determinations were made against United Engineering Steels Limited (UES), an entity that was originally a joint venture between BSC and a privately-owned entity, and in 1995, became a wholly-owned subsidiary of BSplc. UES was renamed British Steel Engineering Steels (BSES) in 1995.

²¹⁴¹ Panel Report, *US – Lead and Bismuth II*, para. 6.86.

BCI deleted, as indicated [***]

argument, and affirmed the panel's finding that, given the changes in ownership leading to the creation of the privatized producers, in order to determine whether any subsidy was bestowed on production by these entities, it was necessary under Article 21.2 of the SCM Agreement to determine, based on information relating to the changes in ownership, whether a "benefit" accrued to each of the privatized producers.²¹⁴² The Appellate Body also found that, given the panel's factual findings that the privatized producers had each paid fair market value for the productive assets and goodwill they acquired from the state-owned producer, there was no error in the panel's conclusion that, in the specific circumstances of the case, the "financial contributions" that had been bestowed on the state-owned producer between 1977 and 1986 could not be deemed to confer a "benefit" on the privatized producers.²¹⁴³

7.232 In *US – Countervailing Measures on Certain EC Products*, the panel considered the WTO-consistency of 12 countervailing duty determinations against imports of certain steel products originating in the EC.²¹⁴⁴ The European Communities challenged the application by the USDOC of two different methodologies to determine whether non-recurring subsidies granted to state-owned recipients prior to their change in ownership (through privatization) remained countervailable against imports from the privatized producer.²¹⁴⁵ The panel noted that the changes of ownership in question concerned privatizations of state-owned companies, and that the privatizations involved full changes of ownership, in the sense that the governments had sold all, or substantially all, of their ownership interests and no longer had any controlling interests in the privatized producers.²¹⁴⁶

7.233 The United States argued that the relevant "recipient" for purposes of determining the existence of a "benefit" following a change in ownership is the legal person that received the financial contribution. According to the United States, if the privatized producer can properly be considered the successor entity to the state-owned producer, the benefit of subsidies conferred on the latter should be regarded as passed-through to the former.²¹⁴⁷ The United States argued that there was no reason why payment of fair market value for shares in the legal entity that was the recipient of the subsidy should be regarded as "extinguishing" the benefit of any subsidy conferred on the recipient legal entity. The United States based this argument on what it considered to be the fundamental distinction in corporate law between a company and its owners, a distinction which it contended was supported by the Appellate Body's reports in *Canada – Aircraft* and *US – Lead and Bismuth II*.²¹⁴⁸

7.234 The panel held that privatization at arm's length and for fair market value rebuts any presumption that the benefit from prior financial contributions (or subsidization) continues to accrue to the privatized producer.²¹⁴⁹ According to the panel, where subsidization improves a company's profitability, it thereby improves its ability to generate returns for its shareholders. In this sense, the panel could see no distinction between the advantage or benefit conferred by a financial contribution

²¹⁴² Appellate Body Report, *US – Lead and Bismuth II*, para. 62.

²¹⁴³ Appellate Body Report, *US – Lead and Bismuth II*, para. 68.

²¹⁴⁴ Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 2.1.

²¹⁴⁵ The methodologies were (i) the "gamma" methodology, under which the USDOC determines the extent (if any) to which the privatization transaction price can be considered to have repaid unamortized pre-privatization subsidies, and countervails the remainder; and (ii) the "same person" methodology, under which the USDOC first determines whether the state-owned producer and the privatized producer are distinct legal persons and if not, the benefit of the subsidy granted to the pre-privatization producer is presumed to reside in the post-privatization producer.

²¹⁴⁶ Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 2.3.

²¹⁴⁷ The United States argued that money taken out of the new owner's pocket should not be considered as coming out of the company, potentially eliminating subsidies that reside in that company; Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.49.

²¹⁴⁸ Panel Report, *US – Countervailing Measures on Certain EC Products*, paras. 7.35-7.36.

²¹⁴⁹ Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.82.

BCI deleted, as indicated [***]

provided to the company, and the benefit thereby enjoyed by the company's shareholders.²¹⁵⁰ The panel therefore rejected the relevance of the legal distinction between a company and its shareholders for purposes of determining the existence of benefit under the SCM Agreement. According to the panel:

"The concept of benefit is independent of the legal business structure established pursuant to national corporate law. This is so because the SCM Agreement is concerned with identified adverse trade effects of subsidization on the domestic industry producing the like product. The production and export of goods is done by a producer for the purpose of generating an economic benefit to its owners. When the existence of a subsidy improves the ability of a producer to produce and export a good, it necessarily impacts on its profitability, and, therefore, on the rate of return to shareholders."²¹⁵¹

7.235 On appeal, the United States argued that the panel's determination that the "recipient" of a benefit should be regarded as the company and its owners together contradicted the Appellate Body's findings in *Canada – Aircraft* and *US – Lead and Bismuth II*, which, according to the United States, established that the recipient of a subsidy cannot be both the legal person and its shareholders. Therefore, the United States argued, the sale of the shares of the recipient-producer can never extinguish the benefit of financial contributions provided to that producer because the producer and its shareholders are different persons.

7.236 The Appellate Body stated that the United States had misconstrued its reports in *Canada – Aircraft* and *US – Lead and Bismuth II*.²¹⁵² The Appellate Body explained that when, in *Canada – Aircraft*,²¹⁵³ it had described the "recipient" of a benefit as a "person, natural or legal, or a group of persons" it had not excluded the possibility that a "recipient" could include both a "firm" (*i.e.*, forms of business organizations including corporate associations, partnerships, limited liability partnerships, unincorporated entities) and its owner (*i.e.*, including shareholders, members, proprietors, partners and all other holders of equity interests in the relevant business organization). According to the Appellate Body:

"In sum, the legal distinction between firms and their owners that may be recognized in a domestic legal context is not necessarily relevant, and certainly not conclusive, for the purpose of determining whether a "benefit" exists under the SCM Agreement, because a financial contribution bestowed on those investing in a firm may confer a

²¹⁵⁰ Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.51. As we discuss in 7.241, we are unable to agree with the panel on this issue. Although an owner may indirectly "benefit" in a financial sense from its investment in a subsidized producer, we do not consider that this indirect "benefit" to an owner of a subsidized producer is the same as the "benefit" conferred by the provision of a financial contribution to the subsidized producer on better than market terms.

²¹⁵¹ Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.50.

²¹⁵² Appellate Body Report, *United States – Countervailing Measures Concerning Certain Products from the European Communities (US – Countervailing Measures on Certain EC Products)*, WT/DS212/AB/R, adopted 8 January 2003, DSR 2003:I, 5, para. 115.

²¹⁵³ Appellate Body Report, *Canada – Aircraft*, para. 154. The Appellate Body also noted that its statements in *US – Lead and Bismuth II* were made in the context of responding to the United States' arguments in that dispute that the analysis of the existence of a "benefit" should be on "legal or natural persons" and not on "productive operations"; Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, para. 110.

BCI deleted, as indicated [***]

benefit "upon the manufacture, production or export of any merchandise, as provided for in paragraph 3 of Article VI of GATT 1994."²¹⁵⁴

7.237 However, the Appellate Body also considered that the panel had gone too far in asserting that, for purposes of the benefit determination, no distinction should be made between a firm and its owners. The Appellate Body noted that the panel should have confined its findings to the specific circumstances before it, which involved one kind of change in ownership (*i.e.*, a privatization at arm's length and for fair market value where the government transfers all or substantially all the property and retains no controlling interest in the firm) and only one kind of benefit (*i.e.*, a benefit conferred by a non-recurring financial contribution to a state-owned enterprise before privatization).²¹⁵⁵ The Appellate Body also disagreed with the panel's finding that a privatization at arm's length and for fair market value necessarily always extinguished any benefit accruing to the privatized producer from prior financial contributions.²¹⁵⁶ Specifically, the Appellate Body disputed the implication that a benefit could never continue to exist for a new owner following a privatization at arm's length and for fair market value.²¹⁵⁷

7.238 In short, while the Appellate Body recognized, in the context of a dispute under Part V of the SCM Agreement, that there was a "rebuttable presumption" that a benefit ceases to exist following the privatization of a subsidized producer at arm's-length and for fair market value,²¹⁵⁸ the Appellate Body explicitly confined its analysis and findings (as well as those of the panel) to the specific facts and circumstances before it:

"As we explained, the "core legal question" before the Panel was to determine whether a "benefit", within the meaning of the SCM Agreement, continues to exist following privatization at arm's length and for fair market value. In considering this core legal question, the Panel examined a very precise set of facts and circumstances, namely, a benefit resulting from a prior non-recurring financial contribution bestowed on a state-owned enterprise where, following a privatization at arm's length and for fair market value, the government transfers all or substantially all the property and retains no "controlling interest in the privatized producer." The Panel did not examine other situations, for instance, situations where a "benefit" is conferred through recurring financial contributions, or where the seller retains a controlling interest in the firm following its change in ownership. The Panel had to consider only one kind of change in ownership (that is, a privatization at arm's length and for fair market value where the government transfers all or substantially all the property and retains no controlling interest in the firm) and only one kind of benefit (that is, a benefit originating from a non-recurring financial contribution bestowed to the state-

²¹⁵⁴ Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, para. 115 (footnote omitted).

²¹⁵⁵ Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, paras. 116-117. The Appellate Body was concerned that the panel's overly broad finding that a firm and its owners are, for all purposes of the SCM Agreement, virtually the same, could be interpreted as entitling investigating authorities to assume, in *all* cases that, where a subsidy is bestowed on a firm indirectly (*i.e.*, by providing a financial contribution to a firm's owners), the firm will receive a "benefit" equivalent to the full amount of the financial contribution, irrespective of the means and conditions imposed by a government for the provision of that financial contribution to owners of a firm; at para. 118.

²¹⁵⁶ Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, para. 121.

²¹⁵⁷ Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, para. 121. The Appellate Body considered that this is because market conditions may be such that the actual exchange value of the continuing benefit of past non-recurring financial contributions bestowed on a state-owned enterprise are not in fact reflected in the market price; at para. 122.

²¹⁵⁸ Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, para. 127.

BCI deleted, as indicated [***]

owned enterprise before privatization). The Panel should have confined its findings to those specific circumstances."²¹⁵⁹

7.239 Returning to the issues in the dispute before us, we recall that the European Communities asks us to recognize, on the basis of the reports discussed above, the existence of a "principle" that the sale of a producer at arm's-length and for fair market value presumptively extinguishes the "benefit" conferred by any financial contributions previously provided to that producer. In light of the Appellate Body's clear indication that the panel's findings in *US – Countervailing Measures on Certain EC Products* should be confined to the "very precise set of facts and circumstances" at issue in that dispute, we do not consider that it would be appropriate for us to do so.

7.240 Moreover, for reasons that we will proceed to explain, we are unable to agree with the reasoning underlying the panel's decision in *US – Countervailing Measures on Certain EC Products* and are likewise unable to find specific support for that reasoning in the Appellate Body's report. As we see it, the panel's assessment of the post-privatization "benefit" conferred by financial contributions provided to a state-owned producer prior to its privatization in *US – Countervailing Measures on Certain EC Products* was based on two core legal considerations. The first was that the privatized firm and its new owners *together* should be considered to be the "recipient" of the benefit to be assessed.²¹⁶⁰ The second was that the relevant inquiry for assessing the "benefit" to this "recipient" (*i.e.*, the privatized firm and its new owners, considered together) is to ask what this recipient "gets for free"; *i.e.*, the value of any subsidy that the new owners of the privatized firm cannot be considered to have "paid for" in the fair market price.²¹⁶¹

7.241 As to the first consideration, the panel appeared to explain its assessment of "benefit" from the perspective that the relevant "recipient" comprised the privatized firm and its new owners *together*, on the basis that (i) the value of a company is based on its ability to generate returns for its shareholders, and (ii) when a subsidy improves the profitability of a company, it thus improves the rate of return to its shareholders.²¹⁶² However, we can find nothing in the Appellate Body's reports in *Canada – Aircraft* or in *US – Lead and Bismuth II* to support the panel's contention that a firm and its owners must *necessarily* together be considered the "recipient" for purposes of evaluating the effect of a change of ownership of a firm on the existence of subsidies previously granted to that firm.²¹⁶³ A firm's general economic interests may be aligned with those of many other actors, but this does not mean that such other actors, along with the firm, should *necessarily* be considered to be the recipient for purposes of determining the benefit conferred by a financial contribution provided to the firm. For example, if we assume that a subsidy improves a firm's profitability, which in turn enhances its ability to meet its debt obligations (thereby lowering its risk of defaulting on its debt obligations), the firm's unsecured creditors might also be said to "benefit" from a subsidy granted to a firm. If a general alignment of economic interests between a firm and its owners were a sufficient basis for concluding that the benefit conferred by a financial contribution provided to a firm be *necessarily* assessed from the perspective of the firm and its owners together, as the recipient, then it would seem to follow that the general alignment of economic interests between a firm and its creditors (or any other actors whose economic interests are aligned with the firm) should likewise be relevant to assessing the benefit conferred by a financial contribution provided to a firm. In our view, nothing in the SCM Agreement or reports of the Appellate Body suggests that this would be appropriate.

²¹⁵⁹ Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, para. 117.

²¹⁶⁰ Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.54. We note that the panel in *US – Lead and Bismuth II* adopted a similar approach to the identity between a company and its owners in the context of determining the existence of "benefit" under Article 1.1(b); Panel Report, *US – Lead and Bismuth II*, para. 6.82.

²¹⁶¹ Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.72.

²¹⁶² Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.51.

²¹⁶³ Moreover, the Appellate Body in *US – Countervailing Measures on Certain EC Products* explicitly did not support this contention; at paras. 116-117.

BCI deleted, as indicated [***]

7.242 As to the second consideration; namely, that the "benefit" is to be measured according to what the subsidized producer *and its new owners*, considered together, "get for free", the panel explained:

"When a state-owned company/producer receives subsidies from the government, the advantage conferred by the subsidy should be reflected in the fair market value (sale price) of the state-owned enterprise to be privatized. Thus, if upon privatization, fair market value is paid for all productive assets, goodwill, etc. employed by the state-owned producer, the Panel fails to see how the subsidies bestowed to the state-owned producer could subsequently be considered to still confer a "benefit" on the privatized producer (in the sense of the company together with its owners) who has paid fair market value for all the shares and assets, reflecting, we must assume, the value of past subsidization."²¹⁶⁴

7.243 In our view, the fact that the purchaser of a subsidized producer pays fair market value to acquire that producer indicates that the acquisition transaction itself was not on terms more advantageous than those that would have been available to the purchaser on the market for comparable investment opportunities, and therefore did not involve a (new) subsidy to the purchaser. However, we fail to see the relevance of the fact that a purchaser of a subsidized producer pays fair market value to acquire that producer to the question of the continued existence of a benefit conferred by the original provision of a financial contribution to the subsidized producer. The panel indicates that the new owner, having effectively "paid for" the benefit of any financial contribution previously provided to the producer would, as a profit-maximizer, ultimately recoup its investment in the privatized producer by obtaining a "market return" on the entirety of its investment in the privatized producer.²¹⁶⁵ We do not see why the fact that new owners may cause a previously subsidized producer to compete in a market-oriented manner should necessarily eliminate the benefit which that producer may nonetheless enjoy from prior financial contributions that were provided on non-market terms. Much will depend on the nature of the prior subsidization and the markets in which the producer competes. Indeed, the fact that "the owners' investment in the privatized company will be *recouped* through the privatized company providing its owners a market return on the full amount of their investment" suggests that the "benefit" conferred by prior financial contributions is ultimately not in fact "paid for" by the new owner.

7.244 In this regard, in assessing the existence of benefit on the basis of what a particular "recipient" can be said to "get for free", the panel appears to us to conflate the two different financial contributions (the financial contribution originally provided to the producer and the financial contribution involved in the sale of an interest in that firm to the new owner) and the two relevant markets according to which the benefit conferred by the respective financial contributions is to be assessed. As the Appellate Body has indicated, a financial contribution will only confer a "benefit" if it is provided on terms that are more advantageous than those that would have been available in the market.²¹⁶⁶ Article 14 of the SCM Agreement provides guidance as to how the relevant market should be identified.²¹⁶⁷ It is clear from the terms of Article 14 that the "relevant market" is related to the type of the financial contribution under consideration.²¹⁶⁸ A conclusion that, on a change in

²¹⁶⁴ Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.72.

²¹⁶⁵ Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.60.

²¹⁶⁶ Appellate Body Report, *Canada – Aircraft*, para. 149.

²¹⁶⁷ Appellate Body Report, *Japan – Countervailing Duties on Dynamic Random Access Memories from Korea ("Japan – DRAMs (Korea)")*, WT/DS336/AB/R and Corr.1, adopted 17 December 2007, para. 173.

²¹⁶⁸ For example, Article 14(b) provides that a financial contribution in the form of a loan shall not be considered as conferring a benefit on the recipient firm unless there is a difference between the amount that the firm receiving the loan pays on the government loan and the amount the firm would pay on a *comparable commercial loan* which the firm could actually *obtain on the market*. In other words, the terms of Article 14(b) suggest that the relevant "market" for assessing whether a benefit was conferred by a financial contribution in the form of a loan is a commercial loan market.

BCI deleted, as indicated [***]

ownership of a subsidized producer, the "benefit" conferred by previous financial contributions is to be re-evaluated on the basis of whether the new owner acquired the producer on arm's length terms and for fair market value, appears to us to involve a re-evaluation of the benefit conferred by the original financial contribution provided to the producer based on a different market that is unrelated to that financial contribution; *i.e.*, the market in which the new owners compete, with other potential investors, to acquire the producer. It is not clear to us why, simply as a result of a change of ownership of the producer, the "relevant market" for re-assessing the benefit conferred by earlier financial contributions to a producer, whatever their original form and the original market benchmarks, should become the market of potential investors in the producer's equity securities or assets.²¹⁶⁹ The approach adopted by the panel in *US – Countervailing Measures on Certain EC Products* to determining the benefit in such circumstances therefore appears to us to be at odds with the approach to benefit contemplated in Article 14 of the SCM Agreement.

7.245 The United States argues that the consequence of accepting the European Communities' argument would be the constant extinction of subsidies provided to publicly traded corporations, opening a major loophole in the SCM Agreement that Members could not possibly have contemplated.²¹⁷⁰ The European Communities notes that it has not claimed that public trading in EADS shares has reduced the amount of any subsidy; it has instead, confined its extinction arguments to "significant sales by government, industry or institutional shareholders, analogous to the kinds of sales which have already been found to extinguish or reduce benefit from past financial contributions."²¹⁷¹ The European Communities argues that the question whether sales of shares in a publicly traded corporation will reduce the amount of "benefit" conferred on that corporation for purposes of the SCM Agreement will depend on factors such as: whether the price of the shares fully reflects the residual value of any subsidy; whether the sellers and purchasers form part of an economic unit with the corporation or are revenue seeking investors; whether the sellers completely exit the corporation or continue to share ownership of the economic unit; and whether the former or new owners have other economic activities to which the benefit could be transferred.²¹⁷²

7.246 We agree with the United States that, if one accepts the "principle" for which the European Communities argues; namely, that the sale of a producer at arm's-length and for fair market value presumptively removes any benefit conferred by financial contributions previously provided to that producer, there is no meaningful basis for distinguishing the transactions which the European Communities alleges have resulted in the extinction of a portion of the benefit conferred by financial contributions provided to the various Airbus-related entities in this dispute, on the one hand, from daily trading in the shares of a subsidized producer, on the other.²¹⁷³ Recognition of a principle according to which changes in the underlying ownership of a subsidized producer automatically or presumptively eliminate the benefit conferred by prior financial contributions to that producer where

²¹⁶⁹ We are therefore unable to agree with the panel in *US – Countervailing Measures on Certain EC Products* that the market conditions under which privatizations occur "serve as a benchmark for assessing the benefit to the privatized producer, as envisaged by Article 14."; para. 7.72.

²¹⁷⁰ US, Comments on EC Answer to Panel Question 197, para. 177. The implications of re-evaluating the existence of "benefit" in the case of a partial change in ownership were discussed by the United States and the European Communities in *US – Countervailing Duties on Certain EC Products*, however, the panel in that case did not consider it necessary to address the issue; Panel Report, *US – Countervailing Duties on Certain EC Products*, para. 7.62.

²¹⁷¹ EC, Answer to Panel Question 197, para. 225.

²¹⁷² EC, Answer to Panel Question 197, para. 225. The European Communities notes that the Panel is not called upon to solve all possible problems or to promulgate general rules on these matters.

²¹⁷³ US, Answer to Panel Question 168, para. 214. Although the United States had raised the issue of changes in ownership of publicly traded corporations before the panel in *US – Countervailing Measures on Certain EC Products*, the panel considered it unnecessary to address the issue because all of the challenged determinations before it involved sales by a government of all or substantially all of their ownership interests in the relevant subsidized producers; at para. 7.62.

BCI deleted, as indicated [***]

the new owners can be said to have acquired their interest in the producer on arm's-length terms and for fair market value would, in our view, potentially eviscerate the subsidies disciplines of the SCM Agreement. This is particularly evident where the subsidized producer is a corporation whose shares are publicly traded.

7.247 For the foregoing reasons, we are unable to agree with the reasoning adopted by the panel in *US – Countervailing Measures on Certain EC Products*. Moreover, we do not consider that the reasoning of the panel in this respect was endorsed by the Appellate Body, beyond the specific facts and circumstances that were before it; namely, "a benefit resulting from a prior non-recurring financial contribution bestowed on a state-owned enterprise where, following a privatization at arm's length and for fair market value, the government transfers all or substantially all the property and retains no "controlling interest in the privatized producer."²¹⁷⁴

7.248 Therefore, in the context of these alternative findings, to the extent that prior reports of the Appellate Body support the conclusion that, in a dispute under Part III of the SCM Agreement, changes in the ownership of a subsidized producer give rise to a rebuttable presumption that the benefit conferred by prior subsidies is extinguished, we consider that this would only be where (i) benefits resulting from a prior non-recurring financial contribution, (ii) are bestowed on a state-owned enterprise, and (iii) following a privatization at arm's length and for fair market value, (iv) the government transfers all or substantially all the property and retains no controlling interest in the privatized producer.

7.249 The European Communities does not argue that the transactions that it alleges have resulted in the "extinction" of subsidies bestowed on Airbus SAS fulfil all of the above criteria. For example, the European Communities does not argue, much less demonstrate, that the transactions in question (with the exception of the stock exchange sales of EADS shares) were on arm's length terms.²¹⁷⁵ More significantly, none of the transactions in question involved transfers by a government of all or substantially all of a state-owned producer, including a complete relinquishment of control. It is clear that the public offerings of shares in Aérospatiale-Matra and EADS were not transactions in which the governments in question retained "no controlling interest in the privatized producer."²¹⁷⁶

7.250 We are unable to agree with the European Communities' argument that the compliance Panel in *US – Countervailing Measures on Certain EC Products (Article 21.5 – EC)* extended the extinction "principle" to "graduated and partial sales undertaken in tranches rather than single-event changes of

²¹⁷⁴ Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, para. 117; Panel Report, *US – Countervailing Measures on Certain EC Products*, para. 7.62.

²¹⁷⁵ The concept of "arm's length" is not defined in the SCM Agreement. However, the compliance panel in *US – Countervailing Measures on Certain EC Products (Article 21.5 – EC)* considered various dictionary definitions of the term, all of which highlighted the independence of parties in arm's length transactions; paras. 7.133-7.134. We are not persuaded, on the basis of the evidence presented to us, that any of the transactions to which the European Communities refers in paragraph 7.204 (other than the stock exchange sales of EADS shares) were "arm's length" transactions.

²¹⁷⁶ Although the French government sold a portion of its shares in Aérospatiale-Matra to the public in 1999, it retained (directly or indirectly) a shareholding of approximately 48 percent. Moreover, the French government exercised control over Aérospatiale-Matra through a shareholders' agreement with Lagardère (which held 33 percent of the shares of Aérospatiale-Matra immediately after the public offering) in addition to holding a so-called "Golden Share" (*action spécifique*) giving it special veto rights. Similarly, the French government and DaimlerChrysler continued to control the operations of Airbus Industrie following the public offering of shares in the newly formed EADS in 2000. Immediately following the public offering of shares in EADS, 60 percent of the share capital of EADS was held in equal proportions by SOGEADE (in which the French state held a 50 percent interest) and DaimlerChrysler, which jointly controlled EADS through a contractual partnership, in which the Spanish government (through SEPI) also exercised voting rights; EADS Offering Memorandum, Exhibit EC-24, p. 132.

BCI deleted, as indicated [***]

control".²¹⁷⁷ We recall that the compliance Panel in *US – Countervailing Measures on Certain EC Products (Article 21.5 – EC)* considered the consistency of the USDOC's new privatization methodology and its application to three sunset review re-determinations with Article VI:3 of GATT 1994 and Articles 10, 14, 19.4, 21.1 and 21.3 of the SCM Agreement. One of the privatizations at issue was the French government's privatization of Usinor, which occurred in incremental stages over a three year period through four types of share offerings to four different classes of purchasers.²¹⁷⁸ The USDOC had separately considered the sales transactions pertaining to the four different categories of share offerings, and applied its new privatization methodology to each of the four categories of share offerings in order to evaluate whether the sales transactions in each share offering occurred at arm's-length and for fair market value. In response to the European Communities' argument that the original panel had discussed the arm's length and fair market value factors in the context of the privatization of a firm as a whole, the compliance panel found that there was nothing in the original panel's report that would require an investigating authority to examine the conditions of a privatization by looking at the *company as a whole*.²¹⁷⁹ The compliance panel concluded that it did not consider the USDOC's segmented analysis of the French government's privatization to be unreasonable given the circumstances of the privatization and found that it was applied in a transparent manner.²¹⁸⁰ We are unable to find anything in the compliance panel's reasoning or report that purports to extend or modify the express holding of the Appellate Body by suggesting that transactions in which a government transfers less than all of substantially all of the privatized producer or retains a controlling interest in the privatized producer are presumed to extinguish the benefit conferred by financial contributions provided to that producer.²¹⁸¹

²¹⁷⁷ EC, SNCOS, para. 59.

²¹⁷⁸ *US – Countervailing Measures on Certain EC Products (Article 21.5 – EC)*, paras. 7.107. The offerings were to each of the following groups (i) French resident nationals and European Communities or European Economic Area nationals in France; (ii) current and qualifying former employees of Usinor throughout the world; (iii) stable shareholders comprising various institutional investors, both public and private; and (iv) the general public in the French and international financial markets. The USDOC had determined that the Usinor privatization was at arm's length and for fair market value with the exception of the employee/former employee offering, which constituted 5.16 percent of the sale.

²¹⁷⁹ *US – Countervailing Measures on Certain EC Products (Article 21.5 – EC)*, paras. 7.117-7.118.

²¹⁸⁰ *US – Countervailing Measures on Certain EC Products (Article 21.5 – EC)*, paras. 7.119, 7.122.

²¹⁸¹ We note that the reasoning of the panel in *US – Countervailing Measures on Certain EC Products* itself does not support the extension of the "extinction" principle for which the European Communities contends to cases of partial, rather than full, changes of ownership of a subsidized producer. We recall that the panel's analysis was based on the following legal conclusions: First, the benefit conferred by a financial contribution provided to the subsidized firm (which translates into increased profitability) is commensurate with the benefit conferred by that financial contribution on the subsidized firm's owners (in the form of improved returns on the investment in the subsidized firm), so the existence of "benefit" should be based on an assessment of the benefit to the "recipient" (in the sense of the owners of the subsidized firm and the subsidized firm *together*); and second, the new owner of the subsidized firm has effectively paid for the value of the subsidy as part of the fair market price paid, so there can be no "benefit" remaining in the "recipient" owner-firm unit. The second conclusion can only be valid where there has been a complete sale of a subsidized firm; *i.e.*, where new owners *replace* old owners. This is because, in the case of a "partial" sale of a firm, the "recipient" in the above analytical framework would, presumably, be the subsidized producer *plus* the new owner *plus* the existing (selling) owner, as this existing owner would continue to be an owner (although with a reduced interest in the firm) following the transaction. From the perspective of this "recipient" owner-firm unit, there would be no change in the net benefit when a new owner purchases a part of a firm for fair market value because the fair market value paid by the new owner for its interest in the firm (a sum which would include a proportionate value of the subsidization) is paid to the selling owner and thus remains with the "recipient" owner-firm unit. Where there is a new issuance of shares in a subsidized firm, rather than the sale by an owner of less than all of its equity in a producer, the fair market value of the equity interests paid by new subscribers (a sum which, according to the analytical framework adopted by the panel in *US – Countervailing Measures on Certain EC Products*, includes a proportionate value of the subsidization) is paid to the firm, and thus also remains with the "recipient" owner-firm unit.

BCI deleted, as indicated [***]

7.251 Moreover, certain of the transactions identified by the European Communities at paragraph 7.204 were not transfers of ownership interests by a government, but by private persons. The European Communities contends that the "extinction" principle applies equally in the case of private-to-private sales. In particular, the European Communities refers to a statement by the Appellate Body in *US – Countervailing Measures on Certain EC Products* that the fact that a sale is a privatization *weakens* the conclusion that the benefit of prior subsidies is always extinguished, noting that while a conclusion that a benefit has been extinguished "may be defensible in the context of transactions between two private parties taking place in reasonably competitive markets", it should not give rise to an irrebutable presumption in the context of a privatization.²¹⁸² According to the European Communities, the Appellate Body's statement suggests that in private-to-private sales, where it is less likely that the sale price could be influenced by the seller's intervention in the market, an arm's-length sale for fair market value *can* be irrebutably presumed to extinguish the benefit of prior subsidies.

7.252 We do not consider that this can be what the Appellate Body intended. As we have already discussed, a principle that subsidies bestowed on a producer are extinguished whenever there is a change in ownership of the producer would potentially eviscerate the subsidies disciplines of the SCM Agreement. Moreover, we have difficulty understanding, in the abstract, how a government's capacity to influence the market in which the sale of the subsidized producer occurs impacts the question of the continued existence of the "benefit" conferred by a financial contribution previously provided to that producer. The former pertains to the question whether the sale transaction is actually for "fair market value" and thus whether any financial contribution provided by the transaction in which the government sold its interest in the subsidized producer conferred a benefit on the purchaser.

7.253 What arguably distinguishes privatizations from private-to-private sales, however, is the implications of a change from state to private ownership. As the panel in *US – Countervailing Measures on Certain EC Products* observed, a privatization is a very particular and complex change in ownership, which involves a fundamental transformation of a government-owned and controlled entity into a privately-owned, market-oriented company.²¹⁸³ Following a privatization, there is no longer an identity (in a legal or economic sense) between the authority bestowing the subsidy on the producer, the owner of the subsidized producer and the subsidized producer itself.

7.254 It may even be possible to characterize a privatization as the "realization" by a Member of the market value of its "investments" in a particular enterprise. We note that the panel in *US – Countervailing Duties on Certain European Communities Products*, recognized the unique nature of privatizations in this regard:

"Furthermore, since the fair market value paid to the state-owned producer is deemed to include (*de facto*) the value of the advantage or benefit already received, the Panel considers that the privatization transaction for fair market value includes the repayment to the government of the subsidy as valued by the market at the time of privatization."²¹⁸⁴

7.255 We would, therefore, reject the European Communities' argument that the reports of the panels and Appellate Body in *US – Lead and Bismuth II* and *US – Countervailing Duties on Certain European Communities Products* established a "principle" that an arm's-length, fair market value sale of all or part of a subsidized producer, whether by a government or private owner, presumptively extinguishes the benefit (or a portion thereof) conferred by prior financial contributions provided to that entity. Accordingly, we consider that there is no basis for finding that the transactions specified

BCI deleted, as indicated [***]

in paragraph 7.204 of this Report extinguish or otherwise reduce the "benefit" to Airbus SAS conferred by financial contributions provided to Airbus Industrie or Airbus SAS.

7.256 We now turn to the European Communities' related argument, that the "extraction" of cash from a subsidy recipient can, in certain circumstances, "extinguish" a portion of the "benefit" conferred by financial contributions previously provided to the recipient, and the additional argument that such "extractions" nonetheless amount to the withdrawal of a subsidy pursuant to Articles 4.7 and 7.8 of the SCM Agreement.

(e) Extraction of benefit and withdrawal of subsidies

(i) *Introduction*

7.257 The European Communities argues that two transactions that occurred in conjunction with the formation of EADS in 2000 had the effect of "extracting" or removing a portion of the benefit conferred by any financial contributions that may have been provided to Dasa and CASA. The European Communities also argues that the cash "extracted" as a result of these two transactions can be regarded as "withdrawals" of the equivalent value of previously provided subsidies for purposes of Articles 4.7 and 7.8 of the SCM Agreement.

7.258 The transactions that involved the so-called "cash extractions" are (i) the retention by DaimlerChrysler, as shareholder of Dasa, of cash and cash equivalents immediately prior to the transfer by Dasa of its LCA-related assets and activities to EADS;²¹⁸⁵ and (ii) the retention by SEPI (as the shareholder of CASA) of cash and cash equivalents immediately prior to CASA's combination in EADS.²¹⁸⁶ The so-called "extractions" formed part of the series of transactions leading to the combination of Aérospatiale-Matra, Dasa and CASA in 2000 to form EADS and were a consequence of the Airbus partners' agreement that the activities of Aérospatiale-Matra, Dasa and CASA in the aeronautics, space and defence sectors would be contributed to EADS in return for shares representing agreed proportions of interests in EADS.²¹⁸⁷ By way of background, the European Communities explains that the transactions occurred because the "value" of Dasa's LCA-related assets and

²¹⁸⁵ The United States challenges the accuracy of the European Communities' assertion that the Dasa "cash extraction" amounted to EUR [***]; US, Comments on EC's Answer to Panel Question 200, para. 207. The United States notes that the EADS Offering Memorandum states that, as part of the implementation of the agreements regarding the creation of EADS, "Dasa cash and cash equivalents" of EUR 1,749 million were to be "retained by DaimlerChrysler"; Exhibit EC-24, pp. F-12 (Note G) and F-79. According to the United States, the figure of EUR [***] appears to be based on a description in the EADS Offering Memorandum of the internal reorganization of Dasa in which all of the assets and liabilities of Dasa, other than certain excluded assets, were contributed to a Dasa subsidiary which Dasa would then contribute to EADS. One group of "excluded assets" (*i.e.*, assets retained by *Dasa*) was "a cash amount of Euro 3,133 million"; Exhibit EC-24, p. 142.

²¹⁸⁶ According to the EADS Offering Memorandum, SEPI extracted an amount of EUR 340 million from CASA "by way of distribution of reserves and reduction of capital". The cash extraction corresponding to CASA's shareholders other than SEPI amounted to EUR 2.45 million; EADS Offering Memorandum, dated 9 July 2000, Exhibit EC-24, p. 143.

²¹⁸⁷ The legal steps through which the LCA operations conducted by the Airbus partners through Airbus Industrie were consolidated under EADS and then reorganized under Airbus SAS are set forth in Section VII.E.1 Attachment, following para. 7.289. Although the European Communities refers to the "contribution of Dasa to EADS", the evidence before us indicates that the entity Dasa was not itself contributed to EADS. Dasa remained a subsidiary of DaimlerChrysler and a *shareholder* of EADS; EADS Offering Memorandum, dated 9 July 2000, Exhibit EC-24, p. 143. Prior to the EADS combination, the LCA-related assets and activities of Dasa were reorganized into various subsidiaries, including (i) a subsidiary called DaimlerChrysler Aerospace Beteiligungs GmbH, which held 99.99 percent of the shares in DaimlerChrysler Aerospace Airbus GmbH, which in turn held 37.9 percent of the membership rights in Airbus GIE; and (ii) a subsidiary called EADS Deutschland GmbH, to which various other assets and liabilities of Dasa were contributed. These Dasa subsidiaries were then contributed to EADS.

BCI deleted, as indicated [***]

activities, and of CASA, each as contributed to EADS, needed to reflect the corresponding percentage interests that DaimlerChrysler and the Spanish government were to hold in EADS.²¹⁸⁸ As a result, DaimlerChrysler (as the shareholder of Dasa) and SEPI (as the shareholder of CASA) retained cash and cash equivalents of Dasa and CASA, respectively, so that the adjusted values of the Dasa and CASA contributions to EADS reflected the respective proportionate interests of DaimlerChrysler and the Spanish government in EADS (*i.e.*, 37.3 percent and 6.2 percent) that had been agreed upon by the Airbus partners.

(ii) *Arguments of the Parties*

European Communities

7.259 The European Communities submits that an economically analogous situation to one in which the benefit or advantage conferred by a financial contribution is "extinguished" by the arm's-length, fair market value purchase of a subsidized producer, is where cash is "extracted" from a subsidized producer "in a manner that ensures that it is no longer used to advantage production in the industry at issue".²¹⁸⁹ In support of this argument, the European Communities submits that the decisions of the panels and Appellate Body in the *US – Lead and Bismuth II* and *US – Countervailing Measures on Certain EC Products* are founded on "economic common sense – that a company's value reflects the residual value of any subsidies it may have received"²¹⁹⁰ and that, based on this proposition, where the residual value of a subsidy is removed from a company, the value of that subsidy is correspondingly reduced.²¹⁹¹ According to the European Communities:

"In economic terms, the position of the entity from which cash is extracted is no longer improved in any sense by the prior subsidization. As such, it no longer enjoys the enhanced ability to compete or to generate returns for its shareholders. Consistent with economic common sense, such 'cash extraction' from a recipient such that it no longer enjoys prior advantage, is necessarily also a form of elimination of benefit within the meaning of the SCM Agreement."²¹⁹²

7.260 The European Communities argues that the transactions in which cash from Dasa and CASA was "extracted" by their respective shareholders (DaimlerChrysler and SEPI) prior to the contribution of Dasa and CASA to EADS, "reduce any subsidy benefits in CASA and Dasa up to the full amount of the extraction".²¹⁹³ According to the European Communities, it is appropriate to regard those transactions as involving "value drawn away" from those entities and therefore cash retained by the shareholders of those entities for activities unrelated to LCA production. Specifically, the European Communities argues that (i) the extraction by DaimlerChrysler of [***] from Dasa, by way of the retention of cash and cash equivalents;²¹⁹⁴ and (ii) the extraction by SEPI (the entity through which the Spanish government held its stake in CASA) of EUR 342 million from CASA, by way of distribution of reserves and reduction of capital,²¹⁹⁵ reduced by a corresponding amount any subsidy "benefit" that Dasa and CASA, respectively, may have enjoyed as of July 2000.²¹⁹⁶

²¹⁹⁴ As previously indicated, the United States considers the relevant amount to be only EUR 1,749 million; US, Comments on European Communities' Answer to Panel Question 200, para. 207.

²¹⁹⁵ A further EUR 2.4 million was retained and distributed to CASA's shareholders other than SEPI.

²¹⁹⁶ EC, FWS, para. 255.

BCI deleted, as indicated [***]

7.261 The European Communities contends that, prior to these transactions, DaimlerChrysler was the sole shareholder of Dasa, and the Spanish government (through its holding company SEPI) was the sole shareholder of CASA. According to the European Communities, following the transactions, DaimlerChrysler and SEPI effectively became minority owners of the assets of Dasa and CASA respectively, because their interests in those assets came to be held indirectly through their shareholding in EADS, which (from 2001 onwards) held interests in Airbus SAS, which in turn, held the interests in the LCA-related assets and activities of Dasa and CASA (as Airbus Deutschland and Airbus España, respectively).²¹⁹⁷ The European Communities contends that DaimlerChrysler and SEPI thus "had a strong disincentive to re-inject the extracted cash into EADS, because doing so would require that they share it with each other and all other EADS shareholders, rather than keeping it to themselves."²¹⁹⁸

7.262 In addition, the European Communities argues that the repayment or "extraction" of a subsidy constitutes a withdrawal of a subsidy for purposes of Articles 4.7 and 7.8 of the SCM Agreement. The European Communities contends that, although the Dasa cash extraction did not "repay" to the German government subsidies that had been provided to Dasa or Deutsche Airbus by the German government or other German government granting authorities, the "benefit" of those subsidies has, nonetheless, been removed or taken away. The European Communities argues that such removal or taking away, while not a "repayment" as such, is a form of "withdrawal" of a subsidy under Articles 4.7 and 7.8 of the SCM Agreement.²¹⁹⁹

7.263 On the other hand, the European Communities argues that the CASA "extraction" is clearly a repayment to the Spanish government of previously conferred subsidies and therefore constitutes a withdrawal of those subsidies pursuant to Articles 4.7 and 7.8.²²⁰⁰ The European Communities contends that it does not matter whether the Spanish government specifically received the cash from CASA as the "repayment" of prior alleged subsidies as such (*i.e.*, in its capacity as grantor of those alleged subsidies), or as a distribution of dividends (*i.e.*, in its capacity as a shareholder of CASA). According to the European Communities, "drawing subsidized value away from CASA still amounts to withdrawal of prior subsidies, because it amounts to "removing" or "taking away" the incremental contribution of alleged prior subsidies to the value of the company."²²⁰¹

United States

7.264 The United States argues that the European Communities' "extraction" theory is inconsistent with one of the basic tenets of the decisions of the panels and Appellate Body in *US – Lead and Bismuth II* and *US – Countervailing Measures on Certain EC Products*, which is that subsidized entities and shareholders should ordinarily be considered as a single "recipient" for purposes of the SCM Agreement. The United States contends that the European Communities' argument that cash is removed from the subsidized entity when it is paid to that entity's shareholder shows that the European Communities is actually treating the subsidized entity and its shareholder as distinct from each other.²²⁰² The United States contends that the European Communities' "unsubstantiated assertion" that the Spanish government and DaimlerChrysler would have a strong disincentive, as minority shareholders in EADS, to re-inject the extracted cash into EADS is insufficient justification for breaking the shareholder-company unit for purposes of this aspect of the subsidy analysis.²²⁰³ Moreover, the United States argues that accepting the European Communities' argument would make

BCI deleted, as indicated [***]

it a relatively simple matter to artificially "extract" subsidies in connection with a non-arm's length sale of a company in which the selling shareholder retains a controlling interest. This would be accomplished by the shareholder attributing more cash to the subsidized entity before "extracting" it.²²⁰⁴

7.265 The United States also disputes the European Communities' assertion that the transfer of funds or other assets by the recipient of a subsidy to an entity other than the granting authority can constitute the "withdrawal" of the subsidy for purposes of the SCM Agreement. According to the United States, Articles 4.7 and 7.8 are not drafted in the passive voice; they do not require merely that the subsidies shall be withdrawn. Rather, they require that the *subsidizing Member* withdraw the subsidy in the sense that the "Member must affirmatively do something by "remov{ing}" or "taking away" the subsidy."²²⁰⁵

(iii) *Evaluation by the Panel*

Cash "extractions" and the extinction of benefits conferred by prior financial contributions

7.266 The European Communities' argument that the "extraction" of cash from Dasa and CASA prior to the contribution of those entities to EADS extinguished a portion of the benefit conferred on Airbus SAS by financial contributions provided to those entities rests on the same approach to Article 5 of the SCM Agreement as the European Communities' extinction argument; namely, that in order for a subsidy to be potentially capable of causing adverse effects within the meaning of Article 5, a complaining Member must have demonstrated that a subsidy which is found to exist additionally confers a present or "continuing" benefit on a recipient. We have already indicated that we reject this approach to evaluating claims of adverse effects under Article 5 of the SCM Agreement.²²⁰⁶ We consider our findings in this regard sufficient to resolve the issue. Nonetheless, and in the interest of ensuring a positive resolution of this dispute in the event our findings are reversed on appeal, we consider it appropriate to make alternative findings on the European Communities' arguments that, in the context of a claim under Part III of the SCM Agreement, the existence of a benefit conferred by a financial contribution provided to a recipient may, under certain conditions, be extinguished by a demonstration that the residual value of prior subsidization has been "extracted" from the subsidized recipient.

7.267 Accordingly, we set forth below our alternative findings on the basis of an interpretation of Article 5 that would require a complaining Member to establish not only the existence of a subsidy pursuant to Article 1.1 of the SCM Agreement, but also that the financial contribution confers a "present" or "continuing" benefit on the recipient, as a prerequisite to demonstrating that a Member has caused, through the use of that subsidy, adverse effects to the interests of another Member.

Alternative finding on cash "extractions"

7.268 We therefore consider whether the cash and cash equivalents retained by DaimlerChrysler and SEPI, the parent companies of Dasa and CASA, respectively, prior to the combination of Dasa's

²²⁰⁴ US, Comments on EC Answer to Panel Question 199, para. 199. The United States also notes that the European Communities' extraction theory offers no reason why the value of the subsidies should be assumed to have been extracted (on a Euro for Euro basis) when cash is transferred to the shareholder. The United States notes that the European Communities' argument implicitly assumes that each Euro of cash extracted by DaimlerChrysler and CASA eliminates a Euro's worth of LCA subsidies, even though the value of Dasa and CASA prior to their contributions to EADS included more than the alleged subsidies they received (*e.g.*, retained earnings, non-subsidized contributions to capital, appreciated assets); US, Comments on EC Answer to Panel Question 199, paras. 200-202.

²²⁰⁵ US, Answer to Panel Question 222, para. 292.

²²⁰⁶ *See*, paras. 7.194 - 7.200.

BCI deleted, as indicated [***]

aerospace-related assets and activities, and the shares of CASA, in EADS, can be considered to have "removed the incremental contribution of alleged prior subsidies to the value of" Dasa and CASA, and can be regarded as "extinguishing" the benefit to Airbus SAS conferred by prior financial contributions provided to Dasa and CASA.

7.269 The European Communities does not argue that every time cash leaves a company for reasons other than expenditure on production (*e.g.*, through payments of dividends to shareholders) it is appropriate to consider the benefit of prior financial contributions to that company to have been correspondingly diminished. Indeed, the European Communities posits that there are circumstances in which a cash extraction would not remove the benefit of a subsidy; namely, where the cash distribution would have occurred in the absence of the subsidy, or where the distribution constitutes nothing more than a "transfer of resources between a company and its sole owner, forming an economic entity", especially where the owner does not have other businesses to which the benefit could be transferred.²²⁰⁷

7.270 While agreeing with the United States that money that is simply moved from the company to the owner's pocket has not really left the company-shareholder unit, the European Communities observes that the Appellate Body in *US – Countervailing Measures on Certain EC Products* had rejected the panel's conclusion that, for purposes of the benefit determination under the SCM Agreement, no distinction should be drawn between a company and its owners.²²⁰⁸ According to the European Communities, there may be instances where a shareholder's interest in a company changes to such an extent that, although it remains a shareholder, an extraction of cash from the company in favour of the shareholder "effectively moves the money beyond the reach of the "company-shareholder unit."²²⁰⁹

7.271 We understand the European Communities to argue that, in order for a cash disbursement to reduce the benefit of prior financial contributions to a company, (i) there must be a causal relationship of some sort between the cash "extraction" and the subsidy and (ii) the "extraction" must effectively move the money beyond the reach of the "company-shareholder unit".²²¹⁰ We have difficulty accepting the proposition that a cash disbursement by a company reduces the benefit conferred by prior financial contributions to that company in the circumstances described by the European Communities. However, even if we were to accept, *arguendo*, that the benefit conferred by prior financial contributions could be reduced or eliminated by "extractions" of cash in the circumstances suggested by the European Communities, we do not consider that the Dasa and CASA "extractions" fall within those circumstances, and we would therefore reject the European Communities' arguments in any case.

7.272 The European Communities argues, in accordance with the two requirements it posits as relevant to determining when subsidy benefits will be extinguished by cash "extractions" that: (i) the incremental value of Dasa and CASA depended on the alleged subsidies (and could not have been extracted in the absence of those alleged subsidies); and (ii) the cash was removed from the company-shareholder unit in both cases because the interests of both DaimlerChrysler and the Spanish government in EADS following the combination were as minority shareholders in a larger entity (in which they could be presumed to have a "strong disincentive" to re-inject the extracted cash).

7.273 However, the European Communities has not provided any evidence to substantiate its assertion that the incremental value of Dasa and CASA could not have been extracted in the absence of the alleged subsidies. We are unconvinced by the European Communities' argument that, when

BCI deleted, as indicated [***]

cash was withdrawn from those entities in advance of their contribution to EADS, the payments "served necessarily to extract from the company any value it otherwise may have enjoyed, ensuring that any financial contribution at issue assuredly no longer conferred a benefit within the meaning of Article 1.1 of the SCM Agreement."²²¹¹ As the United States observes, this reasoning assumes that the "extracted" cash represented the subsidies previously provided to Dasa and CASA, rather than contributions to a company's cash position from other (non-subsidized) sources.²²¹²

7.274 As regards the second criterion, the European Communities argues that DaimlerChrysler and the Spanish government extracted the cash from Dasa and CASA while each was the sole shareholder of the relevant entity.²²¹³ Moreover, the European Communities argues that after extracting the cash, DaimlerChrysler and the Spanish government each sold the remaining assets of Dasa and CASA to EADS and "were no longer the sole shareholders of those assets".²²¹⁴ The European Communities contends that as minority shareholders of EADS (with DaimlerChrysler owning 30 percent of EADS and the Spanish government owning 5.5 percent of EADS), DaimlerChrysler and the Spanish government had a "strong disincentive to re-inject the extracted cash into EADS, because doing so would require that they share it with each other and all other EADS shareholders, rather than keeping it to themselves."²²¹⁵

7.275 We consider this to be an incomplete and inaccurate assessment of the economic realities of the two transactions. Although the European Communities characterizes DaimlerChrysler as a "minority shareholder" in EADS following the contribution of Dasa's aerospace-related assets and activities to EADS, DaimlerChrysler and a grouping of the French government, Lagardère and French financial institutions were to jointly control EADS through a contractual partnership, to which the Spanish government, through SEPI, was also a party.²²¹⁶ The former "owners" of the aeronautics-related assets and activities of Dasa and CASA (*i.e.*, DaimlerChrysler and the Spanish government, respectively), were to jointly control the new "owner" of those assets and activities (EADS and subsequently Airbus SAS) through the EADS contractual partnership, to which both Dasa and SEPI were parties.²²¹⁷ Although the EADS transaction altered the legal ownership of the aeronautics-related assets and activities of Dasa and CASA, it was structured so as to maintain the overall interests of DaimlerChrysler and the Spanish government *in Airbus Industrie as a whole*.²²¹⁸ Therefore, considered from the perspective of the economic unit engaged in the production of Airbus LCA, we reject as a factual matter the assertion that the cash "extractions" by DaimlerChrysler and the Spanish government moved the cash out of the "company-shareholder unit".

²²¹¹ EC, Answer to Panel Question 112, para. 320.

²²¹² US, SWS, para. 542.

²²¹³ As a factual matter, the evidence presented to us indicates that the Spanish government was not the sole shareholder of CASA. At the time of the EADS transaction, Dasa owned 0.71 percent of the shares in Casa, which it contributed to EADS; EADS Offering Memorandum, 9 July 2000, Exhibit EC-24, page. 142.

²²¹⁴ EC, Answer to Panel Question 199, para. 242. We assume that the European Communities uses the term "assets" in a general sense to refer to the LCA-related assets and operations of Dasa and CASA. The evidence before us indicates that the Spanish government exchanged its *shares* in CASA (not assets of CASA) for shares in EADS, while Dasa (rather than DaimlerChrysler) contributed shares in Dasa's reorganized subsidiaries and Dasa's shareholding in CASA to EADS in exchange for shares in EADS; EADS Offering Memorandum, 9 July 2000, Exhibit EC-24, page. 140.

²²¹⁵ EC, Answer to Panel Question 199, para. 243.

²²¹⁶ EADS Offering Memorandum, 9 July 2000, Exhibit EC-24, pp. 132-133.

²²¹⁷ *See*, Section VII.E.1 Attachment, following para. 7.289.

²²¹⁸ Rather than holding and exercising their membership interests in Airbus Industrie directly through subsidiaries such as Dasa and CASA, DaimlerChrysler (through Dasa) and the Spanish government (through SEPI) were members of a contractual partnership that exercised voting rights in respect of 65.48 percent of the outstanding shares of EADS. As a practical matter, the nature of control that DaimlerChrysler and the Spanish government exercised over the LCA activities of Airbus through EADS was substantially the same as the control that they had previously exercised over the LCA activities of Airbus as members of the Airbus Industrie consortium.

BCI deleted, as indicated [***]

7.276 Thus, even assuming *arguendo* that a cash disbursement by a subsidy recipient could potentially reduce the benefit conferred by prior financial contributions to that recipient under the conditions specified by the European Communities, we do not consider that the Dasa and CASA "extractions" satisfy those conditions. As a result, we would ultimately reject the European Communities' "extraction" arguments even if we were to accept the European Communities' more general arguments as to the conditions under which the benefit conferred by prior financial contributions provided to a subsidized producer could be reduced or eliminated by "extracting" cash from that producer.

7.277 It is not necessary for us to decide on the merits of the European Communities' more general arguments as to whether, and if so, the conditions under which, the benefit conferred by prior financial contributions provided to a subsidized producer could be considered to have been reduced or eliminated by "extracting" cash from that entity. However, we make the final observation that in *US – Countervailing Measures on Certain EC Products*, the Appellate Body acknowledged that a financial contribution provided to the owners of a firm may nonetheless confer a benefit upon the manufacture, production or export of any merchandise, as provided for in Article VI:3 of the GATT 1994.²²¹⁹ This being so, it is difficult to see how a firm could eliminate a subsidy simply by transferring funds to its owners.²²²⁰

Cash "extractions" and the "withdrawal" of subsidies within the meaning of Articles 4.7 and 7.8 of the SCM Agreement

7.278 We now consider whether the cash and cash equivalents retained by DaimlerChrysler and SEPI, respectively, prior to the combination of Dasa's aerospace-related assets and activities, and the shares of CASA, in EADS, can be treated as being equivalent to the "withdrawal" of subsidies to Dasa or CASA within the meaning of Articles 4.7 and 7.8 of the SCM Agreement.²²²¹

7.279 In relation to the so-called "extraction" of cash from Dasa which the European Communities contends is equivalent to the withdrawal of a subsidy, we note that the cash and cash equivalents were retained by DaimlerChrysler (*i.e.*, Dasa), and were not transferred to the German government. The European Communities indicates that it is not arguing that the cash "extraction" by DaimlerChrysler constitutes the "repayment" of subsidies granted to Dasa and Deutsche Airbus by the granting authority; *i.e.*, the German government.²²²² However, the European Communities contends that there are circumstances in which the transfer of funds or other assets by the recipient of a subsidy to an entity *other than the granting authority* could nevertheless constitute "withdrawal" of the subsidy for purposes of the SCM Agreement.²²²³ Such circumstances would include, the European Communities contends, distributions of cash from a previously-subsidized firm to the owners of that firm, provided the transfer results in the removal of the "incremental value contributed to the recipient by the subsidy."²²²⁴

7.280 According to the United States, "withdrawal" of a subsidy requires the subsidizing *Member* to affirmatively act to remove or take away the subsidy. The United States notes that, although the Panel in *Australia – Automotive Leather II (Article 21.5 – US)* found that repayment of a subsidy by the recipient was one way to "effectuate withdrawal of the subsidy by a subsidizing Member", the

²²¹⁹ Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, para. 115.

²²²⁰ In this regard, the United States observes, correctly in our view, that to find that subsidies are "extracted" by a transfer of money from a subsidized firm to its owner would be to create opportunities for the laundering of subsidies; US, SWS, para. 549.

²²²¹ EC, FWS, paras. 253-254; EC, Answer to Panel Question 200, paras. 248-249.

²²²² European Communities, confidential oral statement at the second meeting with the Panel ("EC, SCOS"), para. 5.

²²²³ EC, Answer to Panel Question 222, para. 558.

²²²⁴ EC, Answer to Panel Question 222, para. 559.

BCI deleted, as indicated [***]

"repayment" in question was a payment back to the granting government, with the government providing nothing in return.²²²⁵ The United States notes also that its interpretation of "withdraw" for purposes of Article 4.7 and 7.8 does not exclude other ways in which Members may come into compliance with the SCM Agreement; for example, under 7.8 of the SCM Agreement, a Member whose use of subsidies has been found to cause adverse effects may also "take appropriate steps to remove the adverse effects." In addition, the United States contends that the sale of a subsidized entity at arm's length for fair market value involving all or substantially all of the entity could result in the "extinction" of subsidies, and thus be a situation which would "obviate the need for a Member to take further action to come into compliance with its SCM Agreement obligations."²²²⁶

7.281 The "withdrawal" of a subsidy is the remedy envisaged by Article 4.7 (in relation to prohibited subsidies) and one of two possible remedies available under Article 7.8 (in relation to actionable subsidies). In *Australia – Automotive Leather II (Article 21.5 – US)*, the Panel found that a recommendation to "withdraw the subsidy" provided for in Article 4.7 of the SCM Agreement is not limited to prospective action, and may encompass repayment of the prohibited subsidy.²²²⁷

7.282 In *Brazil – Aircraft (Art. 21.5 – Canada)*, the Appellate Body analysed the meaning of the term "withdraw" in Article 4.7 of the SCM Agreement as follows:

"{W}e observe first that this word has been defined as "remove", or "take away", and as "to take away what has been enjoyed; to take from." This definition suggests that "withdrawal" of a subsidy, under Article 4.7 of the SCM Agreement, refers to the "removal" or "taking away" of that subsidy."²²²⁸

In *Australia – Automotive Leather II (Article 21.5 – US)*, the Panel determined that the ordinary meaning of "withdraw the subsidy" in Article 4.7 could encompass "taking away" or "removing" the financial contribution that had been found to give rise to a prohibited subsidy.²²²⁹

7.283 We do not consider it necessary to address in detail the United States' arguments as to situations that would constitute the "withdrawal" of a subsidy for purposes of Articles 4.7 and 7.8 of the SCM Agreement. We are not persuaded by the European Communities' contention that a "withdrawal" of a subsidy could arise where a previously subsidized firm distributes cash to its owners *provided* the transfer results in the removal of the "incremental value contributed to the recipient by the subsidy". In any case, we do not consider that, as a factual matter, the Dasa cash "extraction" can be said to have "removed the incremental value" of subsidies granted to Dasa and therefore Airbus Industrie. As discussed earlier, given the circumstances surrounding the contribution of the LCA-related assets and activities of Dasa to EADS, and more particularly, the relationship between DaimlerChrysler, Dasa and Airbus Industrie prior to the "extraction", and DaimlerChrysler, Dasa, and EADS, immediately following the "extraction" and EADS contributions, we can see no basis for concluding that the "incremental value" of any subsidy granted to Dasa and therefore Airbus Industrie was removed by the cash "extraction".

²²²⁵ US, Answer to Panel Question 222, para. 293.

²²²⁶ US, Answer to Panel Question 222, para. 292, footnote 382.

²²²⁷ Panel Report, *Australia – Subsidies Provided to Producers and Exporters of Automotive Leather, Recourse to Article 21.5 of the DSU by the United States ("Australia – Automotive Leather II (Article 21.5 – US)")*, WT/DS126/RW and Corr.1, adopted 11 February 2000, DSR 2000:III, 1189, para. 6.39.

²²²⁹ Panel Report, *Australia – Subsidies Provided to Producers and Exporters of Automotive Leather ("Australia – Automotive Leather II")*, WT/DS126/R, adopted 16 June 1999, DSR 1999:III, 951, para. 6.27.

BCI deleted, as indicated [***]

7.284 We also reject the European Communities' withdrawal argument as regards the cash and cash equivalents retained by SEPI (as shareholder of CASA) prior to the contribution of CASA to EADS. The European Communities has acknowledged that a transfer of funds to a granting authority by the recipient of a subsidy should not be considered to be the "repayment" or withdrawal of a subsidy where: (i) "a granting authority provides something of equal value in exchange for cash or other assets from the recipient of a subsidy"; or (ii) the granting authority owns the subsidized entity and has not "left the company-shareholder unit".²²³⁰ We consider that the CASA cash extraction clearly falls within *both* of the specific circumstances that the European Communities has itself identified as not resulting in the withdrawal of a subsidy for purposes of Articles 4.7 or 7.8.

7.285 First, the so-called "extraction" of EUR 340 million from CASA was made by SEPI in return for a reduction in the equity of CASA (in order to value CASA appropriately for purposes of its combination into EADS). In other words, the Spanish government (through SEPI) "provided something of equal value" (*i.e.*, the reduction of capital in its subsidiary CASA) in exchange for the cash from CASA. Second, based on the circumstances of the consolidation of the French, German and Spanish Airbus partners under EADS (in which SEPI continued to exercise the same control through the contractual partnership controlling EADS as it did through its membership interest in Airbus GIE held by CASA) we do not regard the "extracted" cash as having "left the company-shareholder unit" in any economically meaningful sense.

(f) Conclusion

7.286 In summary, for purposes of our assessment of the United States' claims under Article 5 of the SCM Agreement, we consider Airbus SAS to be the same producer of Airbus LCA as the consortium Airbus Industrie. We do not consider it necessary for the United States to affirmatively demonstrate the "pass-through" to Airbus SAS of the benefit conferred by financial contributions that had been provided to Airbus Industrie (including the Airbus partners and Airbus GIE and their affiliates) prior to 2001 in order to make out a *prima facie* case under Article 5 of the SCM Agreement.

7.287 Nor do we consider it necessary for the United States to demonstrate the "continuity" of benefits conferred by prior financial contributions provided to Airbus Industrie or Airbus SAS as a prerequisite to establishing that the European Communities has caused, through the use of a subsidy referred to in paragraphs 1 and 2 of Article 1, adverse effects to the interests of the United States, pursuant to Article 5 of the SCM Agreement.

7.288 We therefore reject the European Communities' arguments (i) that the benefits conferred by certain financial contributions provided to Airbus Industrie or Airbus SAS have been extinguished by the series of allegedly arm's-length, fair market value transactions set forth in paragraph 7.204 of this Report; and (ii) that the so-called "extractions" of cash and cash equivalents of Dasa and of CASA, by DaimlerChrysler and SEPI, respectively, effectively extinguished a portion of the benefits previously conferred by financial contributions that had been provided to Dasa and CASA.

7.289 Finally, we reject the European Communities' argument that the retention of cash and cash equivalents of Dasa and CASA, by DaimlerChrysler and SEPI, respectively, constituted a "withdrawal" or "repayment" of subsidies previously provided to those entities within the meaning of Articles 4.7 and 7.8 of the SCM Agreement.

BCI deleted, as indicated [***]

SECTION VILE.1 ATTACHMENT: CORPORATE HISTORY OF AIRBUS

1. The Airbus Industrie consortium: 1970 - 2000²²³¹

1. From its inception in 1970 until the creation of Airbus SAS in 2001, the "Airbus companies" were organized as a consortium of national European aerospace manufacturers. The Airbus consortium (Airbus Industrie) was originally established in 1970 as a *Groupement d'intérêt économique* (Airbus GIE) between the French aerospace manufacturer, Aérospatiale Société Nationale Industrielle (Aérospatiale)²²³² and the German aerospace manufacturer, Deutsche Airbus GmbH (Deutsche Airbus).²²³³ The Spanish aerospace manufacturer, Construcciones Aeronáuticas S.A. (CASA) became a member of Airbus Industrie in 1971.²²³⁴ British Aerospace Corporation, a United Kingdom aerospace manufacturer, subsequently joined the consortium in 1979.²²³⁵

2. Airbus Industrie was registered under French law as a "*Groupement d'intérêt économique*" (GIE) which is a French legal framework that allows its members to carry out collectively certain

²²³¹ For purposes of the following discussion, the term "Airbus Industrie" refers to the Airbus consortium; *i.e.*, Airbus GIE and the Airbus partners collectively. Where we refer to the legal entity Airbus GIE, separately from the Airbus partners, we use the term "Airbus GIE".

²²³² Aérospatiale was founded in 1970 through the merger of three French aerospace companies, Sud Aviation, Nord Aviation and Société d'Etudes et de Réalisation d'Engins Balistiques. It was owned directly and indirectly by the French government until its merger with Matra Hautes Technologies in 1998 to form Aérospatiale-Matra S.A. (Aérospatiale-Matra). The French government sold a portion of its shares in Aérospatiale-Matra in a public offering in 1999. In 2000, Aérospatiale-Matra joined with Dasa and CASA to form EADS. In connection with the formation of Airbus SAS in 2001, the LCA business of Aérospatiale-Matra was transferred to an Airbus SAS subsidiary, Airbus France SAS. Therefore, from 1998 until its liquidation in 2001, the French Airbus partner was Aérospatiale-Matra S.A. (Aérospatiale-Matra); EC, FWS, paras. 52-53.

²²³³ Deutsche Airbus was founded in 1967 to assume work for the development of a European widebody aircraft that had originally begun in 1965 as a joint venture among five German companies: Blohm-Hamburger Flugzeugbau GmbH, Messerschmitt AG, Vereinigte Flugtechnische Werke (VFW), Siebel and Dornier. By 1969, the first three of these companies had merged to form Messerschmitt-Bölkow-Blohm GmbH (MBB); Exhibit EC-26. MBB originally held 60 percent of the interests in Deutsche Airbus, with Dornier and VFW each holding 20 percent. MBB took over VFW in 1981. Prior to Daimler-Benz AG acquiring control of MBB in 1989, the German federal states of Bavaria, Hamburg and Bremen held 52.3 percent of the capital stock of MBB; *Monopolkommission* Report, Exhibit US-30, para. 138. In late 1989, as part of the German government's plans to restructure Deutsche Airbus, Daimler-Benz A.G. acquired control of MBB by merging its subsidiary Deutsche Aerospace AG (Dasa) with MBB. Deutsche Airbus has been a wholly owned subsidiary of Dasa since 1992. In 2000, Dasa merged with Aérospatiale-Matra and CASA to form EADS. In 2001, EADS transferred Dasa's LCA operations to an Airbus SAS subsidiary, Airbus Deutschland GmbH; EC, FWS, paras. 54-56.

²²³⁴ CASA was founded in 1923 and was Spain's largest aerospace and defence manufacturer. CASA was 99 percent owned by Sociedad Estatal de Participaciones Industriales (SEPI), a Spanish government holding company entrusted with the management and privatisation of certain Spanish government controlled companies. In 2000, CASA was merged into the EADS structure. In 2001, CASA's LCA activities were transferred to an Airbus SAS subsidiary, Airbus España SL; EC, FWS, paras. 57-58.

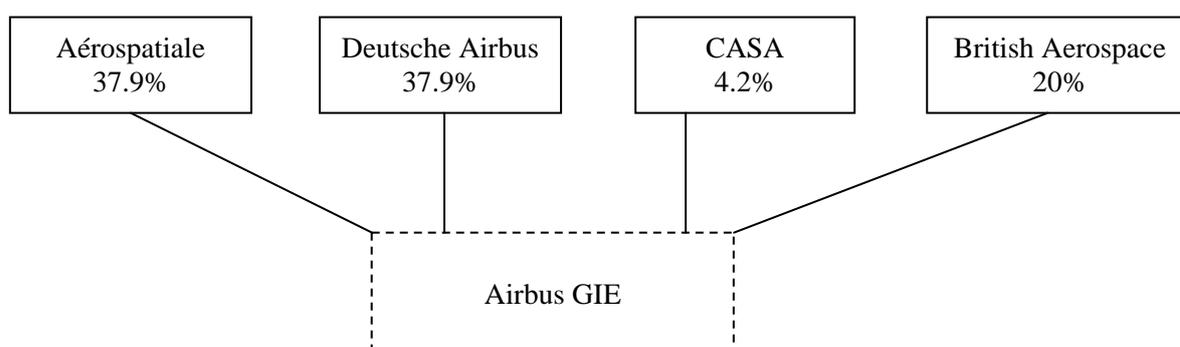

²²³⁵ British Aerospace Corporation was formed in 1977 as a Crown corporation without shares, wholly owned by the United Kingdom government. Its formation was the result of the merger of the United Kingdom aerospace companies Hawker Siddeley Aviation Ltd, Hawker Siddeley Dynamics Ltd, Scottish Aviation Ltd and the British Aircraft Corporation (Holdings) Ltd. In 1981, the assets and business of the British Aerospace Corporation were transferred to the newly incorporated British Aerospace PLC, a United Kingdom publicly limited company. The United Kingdom government sold 51.57 percent of its shares in British Aerospace PLC in a public offering in 1981 and, subject to retaining a share to ensure that the company remained under United Kingdom control, sold the remainder of its shares in British Aerospace PLC in 1985. In 1999, British Aerospace PLC merged with Marconi Electronic Systems to become BAE Systems PLC (BAE Systems). In 2001, BAE Systems placed its LCA business into Airbus UK Limited in exchange for a 20 percent share in Airbus SAS; EC, FWS, paras. 59-61.

BCI deleted, as indicated [***]

economic activities while maintaining their separate legal identities, and which does not have as its goal the retaining of profits. A GIE has a separate legal personality from its members, although in other respects, it resembles a partnership. For example, the sharing of Airbus Industrie's profits and losses among the Airbus partners is based on their membership rights.²²³⁶ Through this partnership arrangement, the Airbus partners in France, Germany, Spain and the United Kingdom produced specific parts of Airbus LCA, which were then assembled in France by Aérospatiale.²²³⁷ The entity Airbus GIE did not carry out any production activities; rather, it coordinated the production efforts of the Airbus partners, allocated revenues and profits to each of the partners and assumed responsibility for areas such as marketing, sales, aircraft delivery and customer service.

3. Between 1979 and 2000, the four members of Airbus Industrie (hereafter, the Airbus partners) held the following interests in the Airbus Industrie consortium (directly or indirectly, through various entities incorporated in the jurisdictions of the Airbus partners): Aérospatiale (37.9 percent); Deutsche Airbus AG (37.9 percent); CASA (4.2 percent); and British Aerospace PLC (20 percent).²²³⁸ The structure of Airbus GIE from 1979 until 2000 is illustrated in the diagram below.

Corporate structure of Airbus Industrie from 1979 to 2000²²³⁹

²²³⁶ See, GATT Panel Report, *German Exchange Rate Scheme for Deutsche Airbus ("EEC – Airbus")*, 4 March 1992, unadopted, *SCM/142*, para. 2.6.

²²³⁷ By 1999, Aérospatiale was the partner responsible for flight control systems, cockpits, power plant integration, ground and flight testing, complex structural sections, equipped subassemblies and technical publications. DASA produced the major fuselage sections containing hydraulic equipment, secondary flight control systems, wing assemblies and commercial furnishing, as well as equipping the wings furnished by BAE Systems. DASA also carried out final assembly of A321 and A319 aircraft, as well as some cabin outfitting and customization of the cabins of the A300/A310 and the A320 family. BAE Systems was the partner in charge of the wings for the entire Airbus product line, and equipped wings for the A320 family by installing hydraulic, electrical and environmental control system hardware. CASA's role in the Airbus consortium was to produce the carbon fibre horizontal tails used in all Airbus aircraft, including integrated fuel tanks. CASA also designed fuselage panels and interior panels for the A320 family and produced nose and landing gear doors for the A300/A310 family and passenger doors for the A330/A340 family; see *Aérospatiale-Matra Offering Memorandum*, 25 May 1999, Exhibit EC-53, pp. 90-91.

²²³⁸ Two other European aerospace companies, Fokker and Belairbus, participated in certain Airbus programmes as associated manufacturers, although they did not become partners in Airbus GIE.

²²³⁹ In 1998, Aérospatiale merged with Matra Hautes Technologies to form Aérospatiale-Matra S.A.; see footnote 2054. In 1989, Daimler-Benz acquired control of Deutsche Airbus' parent company, MBB; see footnote 2055. In 1999, British Aerospace merged with Marconi Electronic Systems to become BAE Systems; see footnote 2057.

BCI deleted, as indicated [***]

2. Consolidation of the activities of the Airbus partners under EADS in 2000

4. In July 2000, the French, German and Spanish Airbus partners merged their activities in the aeronautic, space and defence sectors by contributing all of the shares of the subsidiaries of Aérospatiale-Matra and Dasa, respectively, and all of the shares of CASA, to the newly formed European Aeronautic Defence and Space Company EADS N.V. (EADS), a public limited liability company (*naamloze vennootschap*) organized under the laws of the Netherlands.²²⁴⁰ Prior to these contributions, Aérospatiale-Matra and Dasa had each conducted internal reorganizations of the subsidiaries in which they held the assets and liabilities related to their Airbus-related and non-Airbus-related activities.²²⁴¹ The contributions were made in exchange for shares in EADS issued in proportion to the relative values of the respective contributions of Aérospatiale-Matra, Dasa and SEPI.²²⁴² Immediately following these transactions, approximately 60 percent of the share capital of EADS was held in equal proportions by DaimlerChrysler and SOGEADE,²²⁴³ which jointly controlled EADS through a Dutch law contractual partnership.²²⁴⁴

5. Immediately following these transactions, EADS owned all of the subsidiaries of Aérospatiale-Matra and Dasa that had previously conducted the Airbus-related design, engineering, manufacturing and production activities located in France and Germany, and all of the shares of former Spanish Airbus partner, CASA. EADS also held (through its subsidiaries) the membership interests in Airbus GIE that had previously been held by Aérospatiale-Matra, Dasa and CASA. EADS in turn, was controlled, through a contractual partnership, by the former owners of Aérospatiale-Matra, Dasa and CASA. BAE Systems continued to hold its 20 percent interest in Airbus GIE.

²²⁴⁰ Shares of EADS are listed on the Paris, Frankfurt and Spanish Stock Exchanges.

²²⁴¹ Aérospatiale Matra Airbus was the Aérospatiale-Matra subsidiary which held Aérospatiale Matra's Airbus-related assets and liabilities, including its 37.9 percent membership interest in Airbus GIE. Other Aérospatiale-Matra subsidiaries held assets that were not related to Aérospatiale-Matra's LCA activities, such as Aérospatiale-Matra's helicopter, defence, space transport, satellite and telecommunications businesses. Dasa's Airbus-related activities had been grouped into a subsidiary called DaimlerChrysler Aerospace Airbus Beteiligungs GmbH, which held a 99.99 percent of the shares of DaimlerChrysler Aerospace Airbus GmbH, which in turn held a 37.9 percent membership interest in Airbus GIE. Dasa separately held a direct 0.71 percent interest in CASA, which it also contributed to EADS pursuant to the combination transactions. Assets and liabilities relating to activities other than the Airbus-related activities were grouped into other Dasa subsidiaries, with the exception of (i) liabilities relating to Dornier aircraft; (ii) all claims and liabilities relating to the Fokker group; (iii) Dasa AG's participating interests in MTU, Temic Telefunken microelectronic GmbH and debis AirFinance B.V.; and (iv) a cash amount of Euro 3,133 million; EADS Offering Memorandum, 9 July 2000, Exhibit EC-24, pp. 140-144.

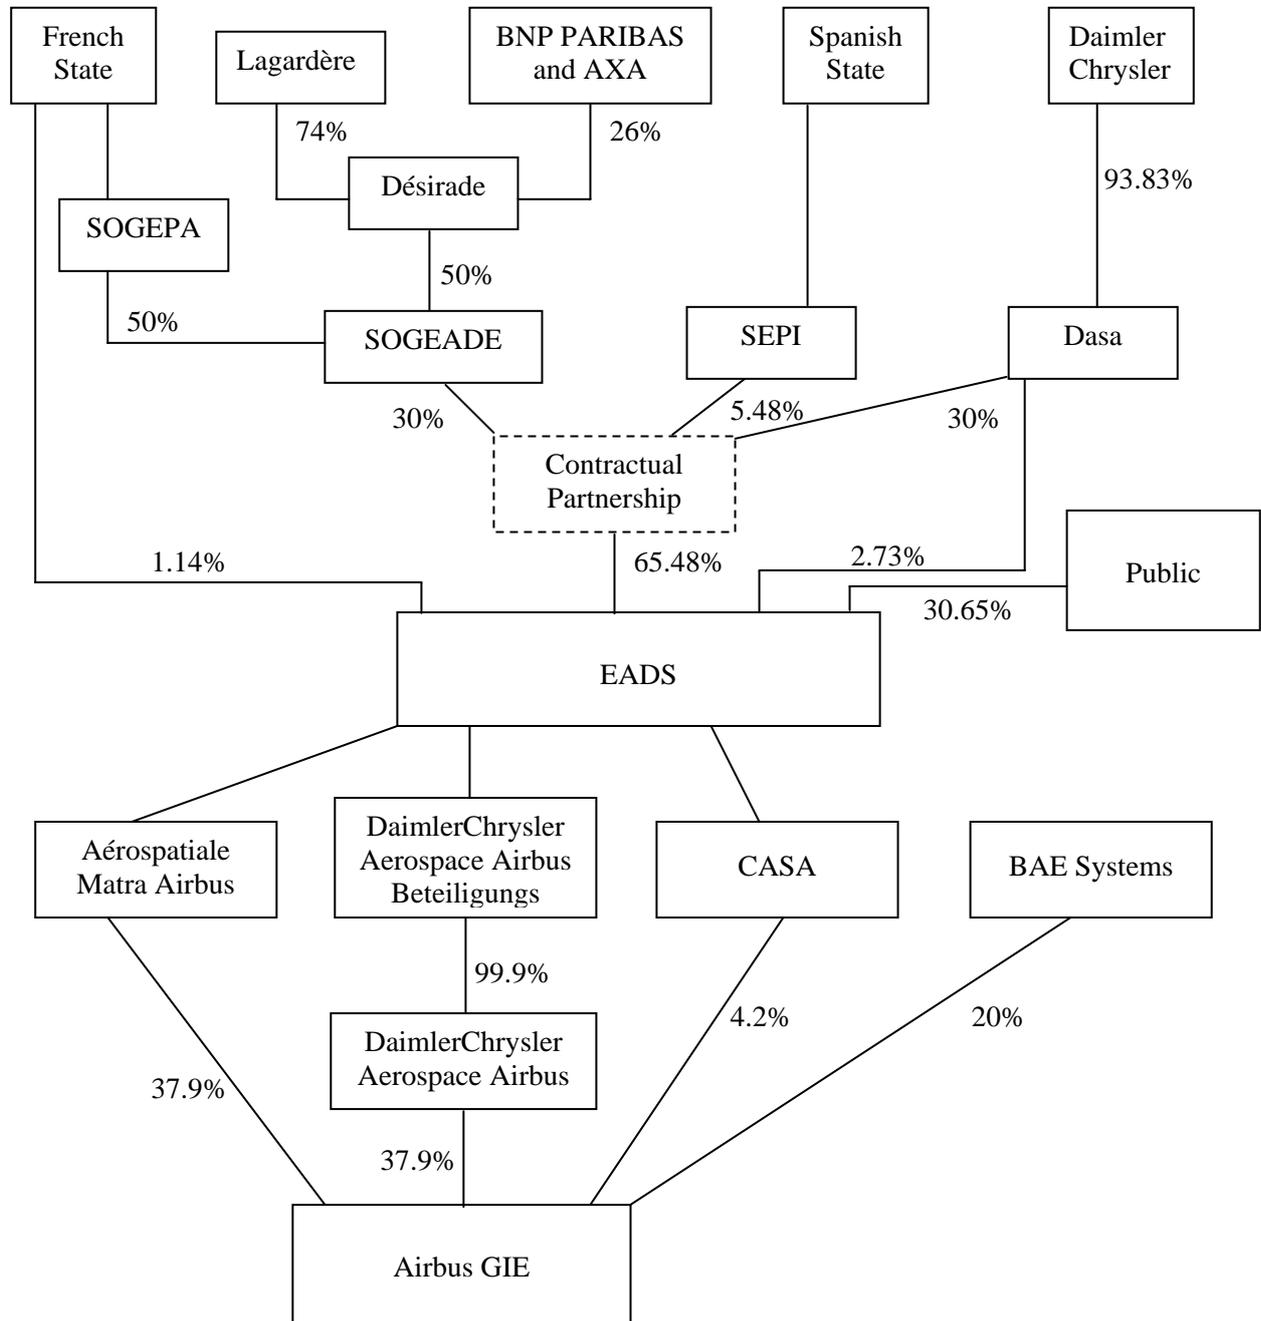

²²⁴² Aérospatiale-Matra was subsequently wound up, so that the EADS shares issued to Aérospatiale-Matra were distributed by Aérospatiale-Matra to its own shareholders simultaneously with the liquidation of Aérospatiale-Matra on the basis of one EADS share for every one Aérospatiale-Matra share. Simultaneously with these transactions, EADS issued shares, and the French government, Lagardère and the French financial institutions BNP PARIBAS and AXA sold EADS shares, in a public offering; EADS Offering Memorandum, 9 July 2000, Exhibit EC-24, pp. 140-144.

²²⁴³ Société de gestion de l'aéronautique, de la défense et de l'espace (SOGEADE) is a French partnership limited by shares (*société en commandite par actions*). SOGEADE is 50 percent owned by the French government (through a French government-owned holding company, Société de Gestion de Participations Aéronautique (SOGÉPA)) and 50 percent owned by Lagardère Group; EADS Offering Memorandum, 9 July 2000, Exhibit EC-24, pp. 137-138.

²²⁴⁴ SEPI's voting rights in respect of its 5.48 percent interest in EADS were also exercised through this contractual partnership; EADS Offering Memorandum, 9 July 2000, Exhibit EC-24, p. 132.

BCI deleted, as indicated [***]

6. The ownership structure of EADS, and of the former Airbus partners and Airbus GIE, immediately following these transactions is represented below.²²⁴⁵

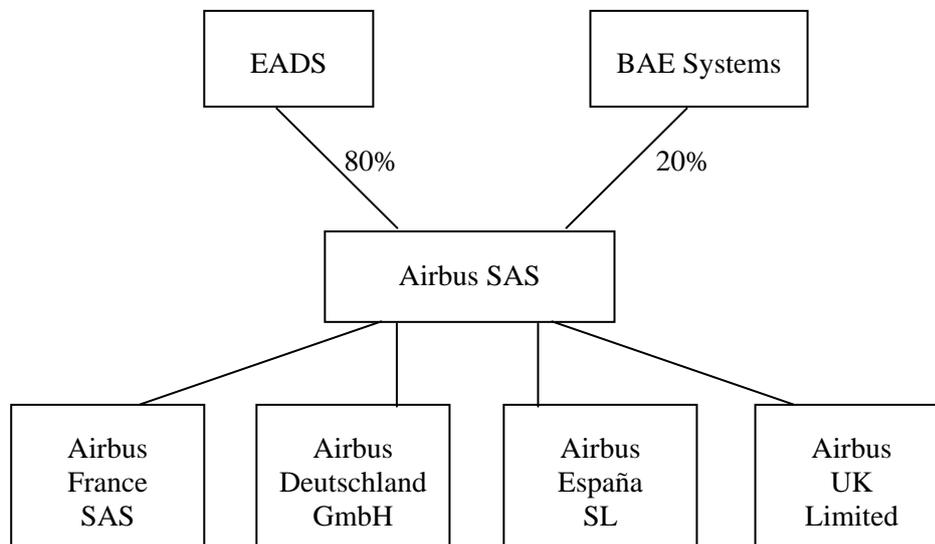

²²⁴⁵ EADS Offering Memorandum, 9 July 2000, Exhibit EC-24, p. 132. The portion of the diagram illustrating the ownership interests in Airbus GIE is compiled from information presented in the EADS Offering Memorandum, 9 July 2000, Exhibit EC-24, at pp. 38, 65, 74, 141 and 142.

BCI deleted, as indicated [***]

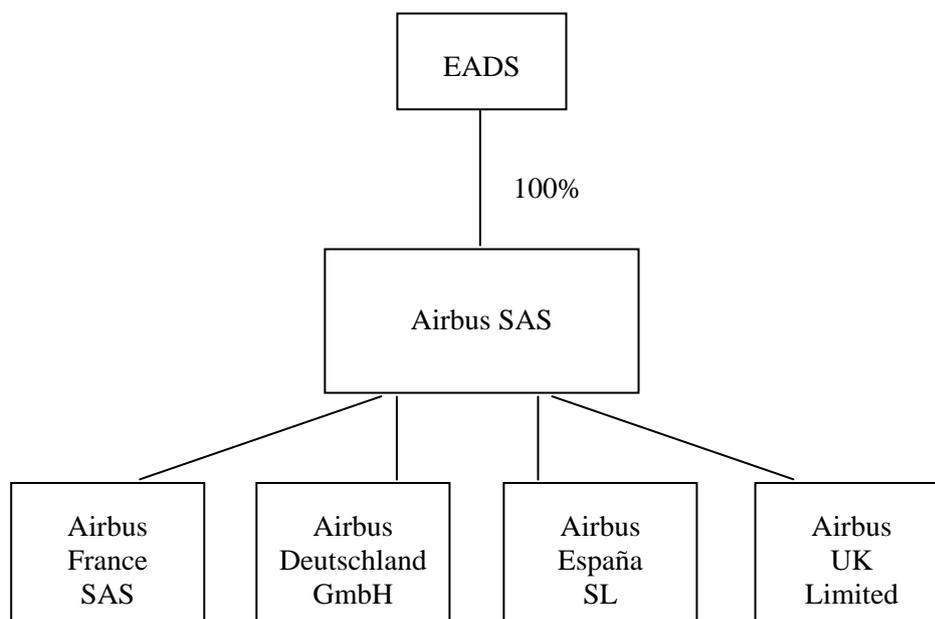

3. Termination of Airbus Industrie and integration of the activities of Airbus Industrie in Airbus SAS in 2001

7. In 2001, EADS and BAE Systems placed their Airbus-related design, engineering, manufacturing and production activities located in France, Germany, Spain and the United Kingdom (organized into French, German, Spanish and British operational companies, respectively), and all of their membership rights in Airbus GIE, under the common control of a newly-created holding company, Airbus SAS, a *société par actions simplifiée* under French law. EADS held an 80 percent interest in Airbus SAS (and had effective control over its operations) while BAE Systems, with the remaining 20 percent interest, enjoyed specific minority rights. Finally, in October 2006, EADS purchased BAE Systems' 20 percent interest in Airbus SAS, so that Airbus SAS became a wholly owned subsidiary of EADS.

Corporate structure of Airbus SAS from 2001 to 2006

Corporate structure of Airbus SAS since 2006

2. Launch Aid / member State Financing

(a) Introduction

7.290 The United States challenges a form of LCA development funding, which it calls "Launch Aid" ("LA"), allegedly provided by four member States of the European Communities to Airbus over a period of 37 years from 1969 to 2006. According to the United States, LA is a form of highly preferential financing that amounts to a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement. The United States challenges the alleged provision of LA for the development of seven different models and three variants of Airbus LCA, as well as an alleged LA Programme implemented by the same EC member States. The alleged product-specific LA measures that are the subject of the United States' complaint are:

(i) LA for the A300, as evidenced by *inter alia*, the -

Agreement of 29 May 1969 between the Government of the Republic of France and the Government of the Federal Republic of Germany regarding the realization of the Airbus A-300-B ("1969 A300 Agreement");²²⁴⁶

Agreement of 23 December 1971 between the Governments of the Spanish State, the French Republic, the Federal Republic of Germany, and the Kingdom of the Netherlands concerning the realization of the Airbus A300B ("1971 A300 Agreement");²²⁴⁷

(ii) LA for the A310, as evidenced by *inter alia*, the -

Agreement between the Governments of the Federal Republic of Germany, the French Republic, the United Kingdom of Great Britain and Northern Ireland, and Spain concerning the Airbus programme (the "1981 A310 Agreement");²²⁴⁸

(iii) LA for the A320, as evidenced by *inter alia*, the -

²²⁴⁶ Exhibit US-11.

²²⁴⁷ Exhibit EC-992 (BCI). Other documents evidencing LA/MSF for the A300 include: (i) 29 separate Agreements, Protocols and Conventions, and amendments thereto, between the French government and Aérospatiale, Exhibit EC-603 (BCI); and (ii) 16 separate Contracts and amendments thereto, between the Spanish government and Construcciones Aeronáuticas S.A., Exhibit EC-605 (BCI). Initially, the European Communities submitted a series of (German language) contracts, and amendments thereto, entered into between the German government and Deutsche Airbus GmbH, in respect of LA/MSF granted for the A300. Because of the amount of time the European Communities alleged it would take to translate all 661 pp. of these documents into English, the European Communities withdrew its original submission and replaced it with a shorter "model contract". EC Letter to the Panel of 15 May 2007. We understand the contract contained in this new Exhibit (EC-601 (BCI)) to be representative of the German LA/MSF contracts for the A300, including relevant amendments.

²²⁴⁸ Exhibit EC-942 (BCI). Other documents evidencing LA/MSF for the A310 include: (i) 10 separate Protocols and Conventions between the French government and Aérospatiale, Exhibit EC-604 (BCI); and (ii) eight separate Contracts and amendments thereto, between the Spanish government and Construcciones Aeronáuticas S.A., Exhibit EC-606 (BCI). Initially, the European Communities submitted a series of (German language) contracts, and amendments thereto, entered into between the German government and Deutsche Airbus GmbH, in respect of LA/MSF granted for the A310. Because of the amount of time the European Communities alleged it would take to translate all 357 pp. of these documents into English, the European Communities withdrew its original submission and replaced it with a shorter "model contract". EC Letter to the Panel of 15 May 2007. We understand the contract contained in this new Exhibit (EC-602 (BCI)) to be representative of the German LA/MSF contracts for the A310, including relevant amendments.

BCI deleted, as indicated [***]

Final Contract for the termination and liquidation of the cooperation agreements between the Ministry of Industry, Trade and Tourism and Construcciones Aeronáuticas, S.A. relating to the provision of repayable funds for the financing of development costs for the Airbus A320, 1 September 1992 ("Spanish 1992 A320 contract");²²⁴⁹

Memorandum of Understanding between the French State and Aérospatiale Société Nationale Industrielle concerning the development of the Airbus A320, 8 July 1987 ("French A320 contract");²²⁵⁰

(viii) LA for the A350.²²⁶⁵

7.291 The European Communities contests the United States' claims of subsidization on various grounds. In doing so, it asks the Panel not to refer to the challenged measures as "Launch Aid". According to the European Communities, the term "Launch Aid" is "suggestive and oversimplifying" and should therefore be replaced with what it considers is a more neutral term – "member State Financing" ("MSF").²²⁶⁶ We have decided that for the purpose of evaluating the United States' claims, it is not necessary for us to take a view on the appropriateness of using one or other of the nomenclatures advanced by the parties. Thus, in the analysis that follows we refer to the challenged measures as "LA/MSF" or, when referring to a specific contract or measure, we use the relevant short titles, e.g., the "UK A380 contract" or the "A380 contract".

7.292 The parties' submissions on the question whether the challenged LA/MSF measures amount to specific subsidies give rise to two matters that we believe it is useful to resolve before proceeding to decide the merits of the United States' complaint under the provisions of the SCM Agreement.

7.293 The first matter relates to the question whether an alleged LA/MSF measure for the A350 existed at the time this panel was established. As noted in our preliminary ruling, we see this issue as involving a disputed question of fact that should be resolved in the context of our evaluation of the substance of the United States' claims.²²⁶⁷ Thus, in the sections that follow, we begin our assessment of the United States' complaint by first turning to examine whether the alleged LA/MSF measure for the A350 existed at the time of the establishment of this panel, and whether any such measure amounts to a subsidy within the meaning of Article 1 of the SCM Agreement.

7.294 The second matter relates to another issue that was also, in part, addressed in our preliminary ruling, namely, the question whether it is appropriate to evaluate the legitimacy of LA/MSF contracts concluded prior to 1995 under the rules of the SCM Agreement. In our preliminary ruling, we rejected two of the arguments advanced by the European Communities in the context of this question, in particular, the submissions that LA/MSF measures pre-dating the entry into force of the SCM Agreement cannot be evaluated in terms of their compliance with the SCM Agreement because they: (i) do not fall within the temporal scope of Article 5 of the SCM Agreement; and (ii) were "grandfathered" under the 1992 Agreement.²²⁶⁸ A third argument, that was not advanced in the European Communities' request for a preliminary ruling, is taken up after our assessment of the question relating to the alleged LA/MSF measure for the A350. This argument concerns the relevance of the 1979 Tokyo Round Subsidies and Countervailing Measures Code to our assessment of the legality of a number of LA/MSF measures pre-dating the entry into force of the SCM Agreement.

7.295 Thereafter, and with a view to evaluating the merits of the United States' claims on a measure-by-measure basis, we turn to examine the parties' arguments in respect of the extent to which the challenged LA/MSF measures are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement.

²²⁶⁴ Exhibit US-79 (BCI).

²²⁶⁵ The evidence the United States contends demonstrates the existence of a LA contract for the A350 is described and evaluated in the following section of this report.

(b) The alleged LA/MSF Measure for the A350

7.296 Airbus launched the newest of its models of LCA, the A350, in December 2004.²²⁶⁹ Press reports described the A350 as a "long-range, fuel-efficient version of Airbus' A330 airliner and a rival to the {Boeing} 7E7" (*i.e.*, the Boeing 787).²²⁷⁰ The development cost of the A350 was initially budgeted at approximately EUR 4 billion.²²⁷¹ On 1 December 2006, just over one year after the industrial launch of the A350,²²⁷² Airbus launched a redesigned version of the A350. This new model of LCA was called the A350XWB, and like the A350, it was designed to be a long-range, fuel-efficient aircraft (featuring advanced technologies such as a "Carbon Fibre Reinforced Plastic panelled fuselage") intended to compete with Boeing's 777 and 787.²²⁷³ Press reports indicated that the A350XWB would cost Airbus approximately EUR 10 billion.²²⁷⁴

7.297 The United States argues that, prior to the establishment of this panel, the French, German, Spanish and UK governments had each individually agreed to support the development of the A350 by lending Airbus "at least" USD 1,700 million in the form of LA/MSF.²²⁷⁵ The United States characterizes LA/MSF as a particular form of long-term preferential financing granted to Airbus by the above-mentioned four EC member State governments for the development of each new Airbus model of LCA on unsecured, back-loaded, success-dependent and below-market interest rate repayment terms.²²⁷⁶ The United States claims that the alleged A350 LA/MSF measure amounts to a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement.

7.298 To substantiate its assertions in respect of the alleged A350 LA/MSF measure, the United States relies upon numerous press Articles and statements attributed to Airbus, the European Commission and government Ministers and officials reported in publicly available media sources, as well as a copy of the German government's "Federal Budget Plan" for 2005 and EADS' Financial Statements. These include the following examples:

a report published by Bloomberg on 3 December 2004, quoting the German Economy and Labour Minister, Wolfgang Clement, as responding to a question asking "whether state subsidies for the Airbus A350 are already included in the budget" by answering "Yes, of course."²²⁷⁷

7.299 The United States recalls that the European Communities refused to provide any information or documents on the alleged LA/MSF measure for the A350 during consultations or in response to the Facilitator's questions during the Annex V Process. It describes this refusal as an attempt by the European Communities to shield its measure from panel review.²²⁹⁰ Nevertheless, the United States asserts that the publicly available information it has presented is sufficient to establish the existence of a challengeable measure for the A350 in the form of a "financial contribution" that "confers a benefit" upon Airbus, thereby constituting a subsidy within the meaning of Article 1.1 of the SCM Agreement. In particular, the United States submits that each of the alleged commitments to provide LA/MSF for the A350 is a "potential direct transfer of funds", within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement,²²⁹¹ which "confers a benefit" because: (i) "the very moment that the Airbus governments commit the Launch Aid, Airbus knows it will receive below-market financing for at least 33 percent of its development costs ... {and it} can then take that knowledge into account in its pricing decisions"; (ii) the commitment to provide LA/MSF "demonstrates to customers that the Airbus product line will be further extended"; and (iii) it "affects the perceptions of credit rating agencies, assuring them that a source of financial support is readily available".²²⁹²

BCI deleted, as indicated [***]

7.300 The European Communities rejects the United States' claim, arguing that no commitment of the kind alleged to exist by the United States was in place at the time of the establishment of this panel. At most, the European Communities submits that the only commitment that existed at the relevant time was a general in principle agreement to negotiate the terms of LA/MSF for the A350.²²⁹³ However, the European Communities emphasizes that no interest rates, repayment schedules or other terms were ever actually agreed or committed and no funding contracts ever concluded.²²⁹⁴ Furthermore, the European Communities asserts that not a single EUR of LA/MSF has been disbursed or scheduled for future disbursement in support of A350 development. Absent any agreement on the "price" at which A350 LA/MSF would be provided, the European Communities argues that "there is no basis for asserting that this hypothetical funding could have conferred a benefit".²²⁹⁵

7.301 A "subsidy" is defined in Article 1.1 of the SCM Agreement by reference to two discrete elements: a "financial contribution by a government or any public body within the territory of a Member" (Article 1.1(a)(1)) and the conferral of a "benefit" (Article 1.1(b)).²²⁹⁶ It follows that in order for the United States' claim of subsidization to succeed, it must in the first instance establish that each of the alleged LA/MSF commitments for the A350 existed in the form of a "financial contribution" at the time that this panel was established, that is on 20 July 2005.²²⁹⁷ Second, the United States must show that any such financial contribution "confers a benefit" upon Airbus. Thus, we start our evaluation of the United States' claim by reviewing the definition of "financial contribution" contained in Article 1.1(a)(1)(i) of the SCM Agreement, which reads:

"For the purpose of this Agreement, a subsidy shall be deemed to exist if:

(a)(1) there is a financial contribution by a government or any public body within the territory of a Member (referred to in this Agreement as "government"), *i.e.*, where:

(i) a government practice that involves a direct transfer of funds (e.g., grants, loans, and equity infusion), potential direct transfers of funds or liabilities (e.g., loan guarantees)".

7.302 The United States considers that each the alleged financing commitments made by the four EC member State governments amounts to a "potential direct transfer{ } of funds". Article 1.1(a)(1)(i)

²²⁹³ EC, FWS, para. 358; EC, SWS, para. 132.

²²⁹⁴ EC, FWS, para. 358.

²²⁹⁵ EC, SWS, para. 132 and footnote 111.

²²⁹⁶ It is also defined as "any form of income or price support in the sense of Article XVI of GATT 1994" (Article 1.1(a)(2)) that confers a "benefit" (Article 1.1(b)).

²²⁹⁷ In *EC – Chicken Cuts*, the Appellate Body stated that "{t}he term 'specific measures at issue' in Article 6.2 suggests that, as a general rule, the measures included in a panel's terms of reference must be measures that are in existence at the time of the establishment of the panel. However, measures enacted subsequent to the establishment of the panel may, in certain limited circumstances, fall within a panel's terms of reference." Appellate Body Report, *EC – Chicken Cuts*, para. 156. We do not understand there to be any disagreement between the parties on the relevance of the general principle pronounced by the Appellate Body to the present set of circumstances. Indeed, the United States' claim against the alleged A350 measure involves arguments and factual circumstances that are distinctly different from those that confronted the Appellate Body in *EC – Chicken Cuts*, which focussed on the question whether two subsequent measures taken by the European Communities amended two original measures that fell clearly within the panel's terms of reference. Appellate Body Report, *EC – Chicken Cuts*, para. 158. Similarly, in *Chile – Price Band System*, an original measure was found to have been merely amended by a subsequent measure in such a way that did not change "its essence", thereby bringing the subsequent measure (adopted after the establishment of the panel) within the panel's terms of reference. Appellate Body Report, *Chile – Price Band System and Safeguard Measures Relating to Certain Agricultural Products* ("*Chile – Price Band System*"), WT/DS207/AB/R, adopted 23 October 2002, DSR 2002:VIII, 3045 (Corr.1, DSR 2006:XII, 5473), para. 139.

BCI deleted, as indicated [***]

defines a financial contribution as including "potential direct transfers of funds or liabilities (*e.g.*, loan guarantees)". The explicit identification of "loan guarantees" as an example of "potential direct transfers of funds or liabilities" is instructive for the purpose of understanding the types of measures that may constitute "potential direct transfers of funds or liabilities". A loan guarantee may be described as a legally binding promise to repay the outstanding balance of a loan when the loan recipient defaults on its repayments. Thus, it is the promise to repay an outstanding loan in the event of default that is the financial contribution (*i.e.*, the potential direct transfer of funds), not the funds that may be transferred in the future in the event of default.

7.303 Article 14(c) of the SCM Agreement establishes guidelines for calculating the amount of a subsidy in terms of the benefit conferred by a loan guarantee for the purpose of countervailing duty investigations. Although not intended to define the circumstances when a loan guarantee will confer a benefit in disputes involving Part III of the SCM Agreement, Article 14(c) does provide useful context for the present analysis. This provision describes the benefit of a loan guarantee as the difference in the amount that a recipient pays for a loan guaranteed by the government and a comparable commercial loan absent the loan guarantee:

"a loan guarantee by a government shall not be considered as conferring a benefit, unless there is a difference between the amount that the firm receiving the guarantee pays on a loan guaranteed by the government and the amount that the firm would pay on a comparable commercial loan absent the government guarantee. In this case the benefit shall be the difference between these two amounts adjusted for any differences in fees;"

7.304 In our view, the fact that a loan guarantee will confer a benefit on a recipient when it enables that recipient to obtain the guaranteed loan at a below market price implies that the benefit of a potential direct transfer of funds arises from the *mere existence* of an obligation to make a direct transfer of funds in the event of default. Thus, when assessing whether a transaction involves a "potential direct transfer of funds", the focus should be on the existence of a government practice that involves an obligation to make a direct transfer of funds which, *in and of itself*, is claimed and capable of conferring a benefit on the recipient that is separate and independent from the benefit that might be conferred from any future transfer of funds. This can be contrasted with financial contributions in the form of direct transfers of funds, which will result in a benefit being conferred on a recipient when there is a government practice that involves a direct transfer of funds.

7.305 We recall that the United States considers that the alleged LA/MSF commitment for the A350 "confers a benefit" because (i) "the very moment that the Airbus governments commit the Launch Aid, Airbus knows it will receive below-market financing for at least 33 percent of its development costs ... {and it} can then take that knowledge into account in its pricing decisions"; (ii) the commitment to provide LA/MSF "demonstrates to customers that the Airbus product line will be further extended"; and (iii) it "affects the perceptions of credit rating agencies, assuring them that a source of financial support is readily available".²²⁹⁸ In other words, the United States considers that it is the *commitment* to provide the alleged LA/MSF, and not the LA/MSF itself, which confers a benefit upon Airbus.²²⁹⁹ As we see it, such a commitment (if it could be established as a matter of fact) might

²²⁹⁸ US, Answer to Panel Question 2.

²²⁹⁹ We note that, in its FWS, the United States' focus appeared to be on the alleged benefit accruing to Airbus from an actual grant of LA/MSF for the A350, as opposed to the benefit associated with a *commitment* to provide the alleged LA/MSF. US, FWS, paras. 308 and 309, where it states and refers to examples it contends demonstrate that "Airbus officials have already confirmed that the A350 Launch Aid will confer a benefit on Airbus". However, the United States clarified its position in its answers to Panel Questions 2 and 4, indicating that its complaint, including its arguments in respect of benefit, was focused on the alleged *commitment* to provide LA/MSF on the same essential terms and conditions as previous grants of LA/MSF.

BCI deleted, as indicated [***]

well amount to a potential direct transfer of funds in terms of Article 1.1(a)(1)(i) of the SCM Agreement. However, the facts advanced by the United States do not persuade us that a commitment to provide LA/MSF for the A350 *on the terms and conditions* asserted by the United States actually existed at the relevant time.

7.306 The evidence submitted by the United States to support its claim includes no letters of intent, loan contracts or other legally binding documents attesting to the alleged commitments or their content. Although one of the media reports the United States relies upon quotes Airbus' then CEO as stating in October 2005 that it had received "legally binding" pledges of government aid to develop its new A350 plane", the same report also quoted the Airbus CEO as adding that "the details of this support should be and will be negotiated throughout the next two months".²³⁰⁰ Likewise, the evidence relating to the provision made in the German government's 2005 budget plan suggests that it had made a commitment to support the development of the A350 with LA/MSF. However, it also makes clear that the precise terms and conditions of the financing were subject to negotiation, stating that the maximum "amount of the loan ... *under discussion*" at the time would be 33% of the "assumed" total development costs.²³⁰¹ We believe the message conveyed through the entry found in EADS' 2005 Financial Statements and Corporate Governance document indicating that "certain EU countries have already committed to fund the development of the A350 commercial aircraft program" should be understood in the same vein.²³⁰² In other words, at some point during 2005 (which the European Communities appears to accept pre-dated the establishment of this panel), the relevant EC member State governments each agreed to support the development of the A350, but the precise details and content of this support were still to be finalised in October 2005 and remained subject to negotiations. This is consistent with other evidence we have reviewed such as the report in the 9 October 2005 edition of *Aviation Week* that "{a}ll four 'Airbus governments' – Britain, France, Germany and Spain – have set aside funds for such loans and expressed backing for the project in writing".²³⁰³ Thus, although a commitment on the part of the relevant EC member States to support the development of the A350 appears to have existed prior to 20 July 2005, the *precise details and content* of this support remained to be settled.

7.307 We recall that it is not merely an alleged commitment to provide government support of any kind that is the subject of the United States' complaint, but a commitment to provide a specific sum of money through LA/MSF granted for the development of Airbus LCA on unsecured, back-loaded, success-dependent and below-market interest rate repayment terms. To substantiate its assertion that it was LA/MSF of this kind that was committed by the EC member State governments, the United States advances evidence of reports and statements describing the support being considered as "reimbursable loans"²³⁰⁴, "launch investment"²³⁰⁵, "loans"²³⁰⁶, "repayable loans"²³⁰⁷ or "refundable

²³⁰⁰ Exhibit US-48.

²³⁰¹ Exhibit US-17MM (English translation, emphasis added).

²³⁰² Exhibit US-77.

²³⁰³ Robert Wall, *Airbus Gets Go-Ahead for A350*, *Aviation Week & Space Technology* (9 October 2005) Exhibit US-47. While the industrial launch of the A350 took place on 7 October 2005, Airbus was reported on 10 December 2004 to have already "won approval from its shareholders" to seek orders for the A350; and on 23 May 2005, it was reported that Airbus Chief Commercial Officer, John Leahy, had said that orders for the A350 would be approaching 200 by the end of 2005. The commercial launch of the A350 had therefore taken place well in advance of 20 July 2005, implying that all of the relevant EC member States governments were aware of Airbus' intentions and therefore in a position to provide commitments of in principle financial support before the establishment of this panel. Jean-Michel Belot and Tim Hopher, *Airbus A350 Unleashes New War with Boeing*, *Reuters* (10 December 2004) Exhibit US-139. BCI deleted, as indicated [***]

launch investment".²³⁰⁸ In addition, it is apparent that the United States relies upon the arguments and evidence it has presented in respect of LA/MSF provided for Airbus' other models of LCA.²³⁰⁹ However, in our view, this evidence is not enough to establish that, *as a matter of fact*, prior to 20 July 2005 the EC member States had committed to providing Airbus with the funding amounts identified by the United States on unsecured, back-loaded, success-dependent and below-market interest rate repayment terms. At most, the facts that are before us at most demonstrate that the EC member States had in principle agreed to provide Airbus with financial assistance for the A350 in the form of LA/MSF on terms and conditions *to be negotiated*.

7.308 As we explain in more detail in the following Sections of our Report,²³¹⁰ although the other instances of LA/MSF challenged by the United States in this proceeding share a number of key features, their terms and conditions are not identical. Moreover, there is nothing inherent in the nature of LA/MSF that renders it a form of financing that will *always* involve below-market interest rates. Indeed, for each of the individual grants of LA/MSF challenged by the United States for models of LCA other than the A350, the United States has presented a considerable volume of argument and evidence to support its claims on a *measure-by-measure* basis. The United States has not simply suggested that all such grants of LA/MSF involve below-market interest rates by their very nature.²³¹¹ It follows that a commitment to provide LA/MSF on terms and conditions subject to negotiation, cannot be automatically equated, *as a matter of fact*, with a commitment to provide long-term financing on unsecured, back-loaded, success-dependent and below-market interest rate repayment terms. This implies that not only has the United States misunderstood the commitments made by the EC member State governments prior to 20 July 2005, but also that the commitments actually made could not have conferred the first of the three benefits alleged by the United States, namely, the assurance that Airbus "will receive below-market financing for at least 33 percent of its development costs".²³¹² Obviously, in the absence of knowing the precise interest rate terms applicable on whatever LA/MSF was finally agreed, Airbus could not have known with certainty that it would have obtained below-market interest rate financing at the time of the commitments. Indeed, on the basis of the evidence before us, there is nothing to suggest that Airbus could have even been certain that the negotiations on the provision of LA/MSF would have been fruitful.²³¹³ In our view, a commitment to provide LA/MSF on undisclosed interest rate terms cannot, alone, confer a benefit of the kind the United States asserts to exist.

²³⁰⁷ Exhibit US-133.

²³⁰⁸ Exhibit US-449.

²³⁰⁹ We address the United States' claims of subsidization in respect of each of the individual LA/MSF grants for all models of Airbus LCA preceding the A350 in the next section of our Report.

²³¹⁰ See, paras. 7.372, 7.375 and 7.525 below.

²³¹¹ The United States has, however, argued that the European Communities applies a LA/MSF Programme (that involves the granting of long-term loans to Airbus for the development of each new model of LCA on unsecured, backloaded, success-dependent and below market interest rate terms) and that the existence of this alleged Programme amounts to a subsidy. We address this claim below at paras. 7.498 *et seq.*

²³¹² In addition, we question whether mere knowledge that a loan will be issued at below-market interest rates is sufficient to establish that a commitment to provide the loan confers a benefit for the purpose of Article 1.1(b) of the SCM Agreement.

²³¹³ In this regard, we note it was reported on 1 December 2006 that Airbus was "expected" to obtain financing for the A350XWB (which replaced the A350 project) without accessing LA/MSF. Ross Tieman, *Airbus finds Pounds 6.7bn for wide-body jet*, The Evening Standard, (1 December 2006) Exhibit EC-671. Moreover, the European Communities has argued that British Aerospace did not avail itself of LA/MSF offered by the UK government for the A340-500/600 because of the "restrictive" number of aircraft sales over which UK authorities demanded repayment. Instead, British Aerospace chose to finance its share of the work tasks for this derivative model of LCA by taking out a loan with a private bank. See, e.g., EC, FWS, paras. 474 and 505-506.

BCI deleted, as indicated [***]

7.309 The United States considers that the commitment to provide LA/MSF also conferred a benefit upon Airbus, within the meaning of Article 1.1(b), because it "demonstrates to customers that the Airbus product line will be further extended"; and it "affects the perceptions of credit rating agencies, assuring them that a source of financial support is readily available". We have doubts about whether such effects, even if they could be substantiated, demonstrate that the commitment to provide LA/MSF for the A350, *subject to negotiation*, conferred a benefit.

7.310 Article 1.1(b) of the SCM Agreement does not define the notion of "benefit". However, it is well established that a "financial contribution" will confer a "benefit" upon a recipient when it places that recipient in a more advantageous position compared with the position of that recipient in the absence of the "financial contribution".²³¹⁴ In *Canada – Aircraft*, both the panel and the Appellate Body considered that the basis for making this comparison was the market. Thus, the panel observed that:

"a financial contribution will only confer a 'benefit', *i.e.*, an advantage, if it is provided on terms that are more advantageous than those that would have been available to the recipient on the market".²³¹⁵

7.311 Similarly, the Appellate Body explained that:

"the marketplace provides an appropriate basis for comparison in determining whether a 'benefit' has been 'conferred', because the trade distorting potential of a 'financial contribution' can be identified by determining whether the recipient has received a 'financial contribution' on terms more favourable than those available to the recipient on the market."²³¹⁶

7.312 Thus, when examining whether the commitment to provide Airbus with LA/MSF on terms to be negotiated conferred a benefit, a comparison must be made between Airbus' situation with the commitment, and the situation that Airbus would have faced in the absence of the commitment. Although we can accept that it is highly probable that a commitment on the part of the EC member State governments to finance the development of the A350 on terms and conditions subject to negotiation signals "to customers that the Airbus product line will be further extended", the United States has not explained why such a demonstration might not also be probable in the light of a comparable financing commitment from the market. In this regard, we note that the United States does not suggest that Airbus could not have obtained financing for the A350 from the market. Indeed, as we have already noted in footnote 2313, a December 2006 press Article reported that at the time Airbus was "expected" to obtain financing for the A350XWB (which was to replace the A350) without accessing LA/MSF.²³¹⁷

7.313 With respect to the perception of credit rating agencies, the United States has presented evidence in the form of a report published by Fitch Ratings agency in November 2006 which states that "launch aid {for the A350XWB} would be viewed favourably from a credit perspective". The first point to note about this statement is that it refers to "launch aid", without any explanation. It is

²³¹⁴ Panel Report, *Canada – Measures Affecting the Export of Civilian Aircraft* ("Canada – Aircraft"), WT/DS70/R, adopted 20 August 1999, as upheld by Appellate Body Report WT/DS70/AB/R, DSR 1999:IV, 1443 para. 9.112, cited with approval in Appellate Body Report, *Canada – Aircraft*, para. 149.

²³¹⁵ Panel Report, *Canada – Aircraft*, para. 9.112; Appellate Body Report, *Canada – Aircraft*, paras. 157-158.

²³¹⁶ Appellate Body Report, *Canada – Aircraft*, para. 157.

²³¹⁷ In addition, we note that a 15 November 2006 report by FitchRatings indicates that Airbus was considering issuing "hybrid bonds" in order to finance the A350XWB project. Fitch Ratings, *Special Report – Diverging Flight Paths: Boeing and Airbus, Large Commercial Aircraft Update*, 15 November 2006, p. 6. Exhibit US-451.

BCI deleted, as indicated [***]

therefore less than clear that Fitch Ratings is referring to a commitment to provide LA/MSF, *subject to negotiation*. In any case, in the same paragraph, Fitch Ratings reserves its view on the credit rating effect of another form of financing apparently being considered by Airbus at the time (hybrid bonds) because of a lack of information about the particular structure and amount of any such bonds. In other words, Fitch Ratings does not automatically discount the possibility that market financing (in the form of hybrid bonds) for the purpose of funding the development of the A350 might also have had a positive effect on EADS' credit rating.

7.314 Thus, in conclusion, after carefully reviewing the evidence and arguments advanced by the parties, we are not convinced that a clear and identifiable commitment to provide LA/MSF on the terms and conditions specified by the United States existed on the date of establishment of this panel. While the evidence we have examined does suggest that an in principle commitment on the part of the four EC member State governments to support the development of the A350 through LA/MSF did exist, this commitment did not take the form of LA/MSF on backloaded, success-dependent and below market interest rate repayment terms, as the United States alleges, but rather LA/MSF on terms and conditions subject to negotiation. The United States has therefore failed to demonstrate that the LA/MSF measure it challenges existed at the time of the establishment of this panel. Moreover, for the reasons we have outlined above, we consider that the commitments which did exist, did not confer any of the benefits the United States asserts were enjoyed by Airbus. Accordingly, we dismiss the United States' complaint against the alleged USD 1,700 million LA/MSF measure for the A350.

(c) Consistency of LA/MSF with the 1979 Tokyo Round Subsidies and Countervailing Measures Code

(i) *Arguments of the Parties*

European Communities

7.315 The European Communities submits that, pursuant to the inter-temporal rules of international law, a fact can only be properly assessed in the light of the law contemporaneous to it.²³¹⁸ It follows, according to the European Communities, that the legality of the LA/MSF contracts for the A320 and A330/A340, which were concluded between 1985 and 1993, must be determined in the light of the international subsidy disciplines in force at the time of their conclusion, namely, the 1979 Tokyo Round Subsidies and Countervailing Measures Code ("Tokyo Round Subsidies Code"). The European Communities maintains that the same inter-temporal rule is reflected in Articles 14(a) and 14(b) of the SCM Agreement, which it argues require that the existence and amount of subsidies must be established on an *ex-ante* basis, not an *ex-post* basis. In particular, the European Communities notes that Article 14(a) prescribes that the government provision of equity capital shall not be considered to confer a benefit unless the investment decision can be regarded as inconsistent with the usual investment practice *at the time the decision is made*, not at the time the investment decision is reviewed in dispute settlement proceedings. Similarly, the European Communities observes that the assessment envisaged under Article 14(b) requires a comparison between the cost of a government loan to a recipient and the cost of a comparable commercial loan *at the time the government loan is granted*.²³¹⁹ Thus, the European Communities contends that should any of the relevant LA/MSF

²³¹⁸ EC, Answer to Panel Question 61; EC, SWS, para. 145, referring in both cases to the pronouncement of Judge Huber in the *Island of Palmas Arbitration* that "{a} juridical fact must be appreciated in the light of the law contemporary with it, and not of the law in force at the time when a dispute with regard to it arises or falls to be settled", 2 R. Int'l Arb. Awards (1928) 829 at 845. Exhibit EC-672.

²³¹⁹ EC, Answer to Panel Question 61. (Emphasis added).

BCI deleted, as indicated [***]

measures "fall into the temporal scope of the SCM Agreement", they should "at least be assessed against the standards of the Tokyo Round Subsidies Code".²³²⁰

7.316 The European Communities recalls that the Tokyo Round Subsidies Code did not explicitly define a subsidy. However, the European Communities argues that guidance for understanding the types of measures that amounted to subsidies at the relevant time could be found in the "Illustrative List of Export Subsidies" contained in Code's Annex. In particular, the European Communities asserts that the general principle that could be drawn from the "Illustrative List" was that, at the time of the conclusion of the LA/MSF contracts for the A320 and A330/A340, a subsidy was limited to measures involving a cost to the granting government.²³²¹ The European Communities argues that such a measure cannot be found in the LA/MSF contracts for the A320 and A330/A340, which it contends were agreed on terms that secured returns to the governments that were not "manifestly inadequate" to cover their costs.²³²² Thus, according to the European Communities, the LA/MSF contracts for the A320 and A330/A340 complied with the relevant international subsidy disciplines that were in force at the time of their conclusion.

7.317 The European Communities submits that the Tokyo Round Subsidies Code remains in effect between the parties and is applicable to the assessment of the existence of subsidies in the civil aircraft sector granted prior to 1 January 1995 because of the cross-reference to Articles 8.3 and 8.4 of the Code that is found in Article 6.1 of the 1979 Agreement on Trade in Civil Aircraft.²³²³ Moreover, although the European Communities recognizes that the Tokyo Round Subsidies Code is not a "covered agreement", the European Communities argues that it is nevertheless relevant to the present dispute because it falls within the scope of the "agreements" that parties are entitled to cite under the terms of Article 7.2 of the DSU.²³²⁴ In any case, according to the European Communities, if the only international agreements that could be properly brought before a panel were the "covered agreements", all of the disputes in which the Appellate Body has referred to non-covered agreements would have been erroneously decided.²³²⁵

United States

7.318 The United States submits that there is no legitimate basis for the European Communities' assertion that the Panel must evaluate the relevant LA/MSF measures under the terms of the Tokyo Round Subsidies Code. The United States recalls that the Panel's task in this dispute is defined by its terms of reference, and that these require the Panel to examine the United States' claims in the light of the "covered agreements" cited in the panel request, which do not include the Tokyo Round Subsidies Code.²³²⁶

7.319 According to the United States, the "covered agreements" provide not only the basis for seizing the WTO dispute settlement system, but also the basis for resolving disputes. Thus, compliance with any non-covered agreement cannot be the subject of a panel's work in a dispute under the DSU. The United States maintains that this principle is expressed in Articles 7.1 and 11 of the DSU, which direct the Panel to resolve the matter before it on the basis of the relevant "covered agreements", not non-covered agreements.²³²⁷ Moreover, the United States notes that it is panel findings and recommendations under the "covered agreements" that are envisaged under Articles 3.2,

²³²⁰ EC, Answer to Panel Question 61.

²³²⁷ US, SWS, para. 30.

BCI deleted, as indicated [***]

3.4 and 19.1 of the DSU, not findings and recommendations in respect of non-covered agreements.²³²⁸ Finally, the United States notes that the only place in the DSU that recognizes the relevance of non-covered agreements for the purpose of dispute settlement is Article 3.11. This provision stipulates that disputes for which consultation requests were made under the "GATT 1947 or any other predecessor agreement to the covered agreements" must be resolved through application of "the relevant dispute settlement rules and procedures in effect immediately prior to the date of entry into force of the WTO Agreement".²³²⁹ According to the United States, the absence of any reference to non-covered agreements or "predecessor agreements" elsewhere in the DSU (apart from Article 8.1, which refers to "predecessor agreements" in the context of describing persons "well qualified" to serve on panels), confirms that such agreements are not relevant other than in the circumstances referred to in Article 3.11.²³³⁰

(ii) *Evaluation by the Panel*

7.320 The European Communities maintains that, pursuant to the inter-temporal rules of international law, the LA/MSF contracts for the A320 and A330/A340 cannot be assessed for compliance with the SCM Agreement, but must instead be measured against the standards of the Tokyo Round Subsidies Code, the international legal framework it asserts was in force when the challenged measures were adopted. When considered in this light, the European Communities contends that the LA/MSF contracts were in full conformity with the obligations on the European Communities and the relevant member States at the time of their conclusion. Thus, the European Communities asks the Panel to dismiss the United States' complaint. On the other hand, the United States argues that the European Communities' request finds no support in the DSU, which it submits makes clear that a panel can only rule on the consistency of challenged measures with the provisions of the WTO covered agreements. Because the Tokyo Round Subsidies Code is not a WTO covered agreement, the United States contends that there is no legal basis for any evaluation of the consistency of the relevant LA/MSF measures with the provisions of the Code.

7.321 The main question that is raised by the European Communities' defence is whether, in our evaluation of the United States' claims, we must, pursuant to the inter-temporal rules of international law, apply international subsidy disciplines that were in force at the time of the conclusion of the challenged contracts (the Tokyo Round Subsidies Code), or apply the rules in existence at the time of the present dispute (the SCM Agreement).

7.322 As we understand it, the doctrine of inter-temporal application of international law, as it was pronounced in the *Island of Palmas Arbitration*, has two elements: first, that acts should be judged in the light of the law contemporary with their creation; and second, that rights acquired in a valid manner according to the law contemporaneous with their creation may be lost if not maintained in accordance with changes in international law.²³³¹ Although doubts have been expressed about the status of the second element as a principle of international law,²³³² the first element, which is the

²³²⁸ US, SWS, para. 31.

²³²⁹ US, SWS, para. 32.

²³³⁰ US, SWS, para. 32.

²³³¹ *Island of Palmas Arbitration*, 2 R. of Int'l Arb. Awards (1928) 829, 845. The doctrine, in one or more of its manifestations, also appears to have been applied in e.g., *The Grisbadarna Case*, 11 R. Int'l Arb. Awards 155 (1909); *The North Atlantic Coast Fisheries Case*, 11 R. Int'l Arb. Awards 167 (1910); *The Fisheries Case*, (United Kingdom v Norway), ICJ Reports 1951, p. 116; *The Minquiers and Encrehos case*, ICJ Reports 1953, p. 47; and *The Aegean Sea Continental Shelf Case*, ICJ Reports 1978, p. 3.

²³³² See, e.g., A. D'Amato, *International Law, Intertemporal Problems* in Encyclopaedia of Public International Law, 1992, pp. 1234-1236 at 1235; and P. C. Jessup, *The Palmas Island Arbitration*, (1928) 22 AJIL pp. 735-752, p. 740.

BCI deleted, as indicated [***]

foundation of the European Communities' argument, appears to have obtained wide acceptance.²³³³ However, in the circumstances of the present case, we find the European Communities' reliance on this aspect of the doctrine to be misguided.

7.323 We recall that in our preliminary ruling, we concluded that Article 5 of the SCM Agreement establishes an obligation on Members not to cause adverse effects to the interests of other Members through the use of subsidies. In doing so, we dismissed the European Communities' contention that Article 5 does not apply to subsidies granted prior to 1 January 1995. In this light, the European Communities' reliance on the doctrine is misconceived.²³³⁴ The very fact that Article 5 addresses adverse effects caused by the use of subsidies, which may have been granted prior to 1 January 1995, means that such measures must necessarily fall within the scope of the SCM Agreement and therefore be assessed on the basis of the rules of that agreement. In other words, because Article 5 of the SCM Agreement applies to pre-1995 subsidies that cause adverse effects after entry into force of the WTO Agreement, the doctrine of inter-temporal application of international law cannot operate to preclude the application of the SCM Agreement to such subsidies.

7.324 We are also not convinced by the European Communities' argument that the Tokyo Round Subsidies Code is relevant to the panel's evaluation of the United States' claims because, even though it is not a WTO covered agreement, it nevertheless falls within the scope of the "agreements" referred to in Article 7.2 of the DSU. In the first instance, we recall that the Tokyo Round Subsidies Code was terminated one year after the entry into force of the SCM Agreement.²³³⁵ Second, it is clear to us that the word "agreements" in Article 7.2, which is joined to the words "covered agreement" that immediately precede it by the conjunction "or", refers to the plural of a "covered agreement". Therefore, it should not, as the European Communities suggests, be understood as referring to international agreements that are not WTO covered agreements. As we have already noted in our preliminary ruling, Article 7.2 does not give us jurisdiction to determine the rights and obligations of the parties under non-covered agreements for the purpose of the recommendations or rulings envisaged under Article 11 of the DSU.²³³⁶ Such recommendations or rulings must relate to the parties' rights and obligations under the WTO covered agreements, not the rights and obligations of parties under international agreements that are not WTO covered agreements. Additional support for this view is found in Articles 3.2, 3.4 and 19.1 of the DSU, which, as noted by the United States, also envisage panel findings and recommendations in respect of WTO covered agreements, not non-covered agreements. There is therefore no legal basis to support the European Communities' contention that, in the context of the present dispute, the challenged measures must be evaluated under the terms of the Tokyo Round Subsidies Code.²³³⁷

²³³³ See, e.g., T.O. Elias, *The Doctrine of Intertemporal Law*, (1980) 74 AJIL 2 pp 285-307; A. D'Amato, *International Law, Intertemporal Problems* in Encyclopaedia of Public International Law, 1992, pp. 1234-1236 at 1235; I. Brownlie, *Principles of Public International Law*, 5th Ed. 1998, pp. 126-128.

²³³⁴ See, para. 7.64-7.65 above.

²³³⁵ See, Article 3, *Decision on the Transitional Co-Existence of the Agreement on Interpretation and Application of Articles VI, XVI and XXIII of the General Agreement on Tariffs and Trade and the Marrakesh Agreement Establishing the World Trade Organization*, adopted by the GATT Committee on Subsidies and Countervailing Measures on 8 December 1994 (SCM/186); subsequently taken note of in the WTO Committee on Subsidies and Countervailing Measures at its meeting of 22 February 1995 (G/SCM/M/1).

²³³⁶ See, 7.89 - 7.105 above.

²³³⁷ In reaching this conclusion, we are not saying that non-covered agreements cannot be relied upon for the purpose of interpreting the rights and obligations of parties under the WTO covered agreements. (See, e.g., Appellate Body Report, *EC – Chicken Cuts*, paras. 195-199, where the Harmonized System was used as context for interpreting the European Communities' Schedule of tariff commitments.) However, in the present instance, the European Communities is not asking us to use the Tokyo Round Subsidies Code as interpretative context for one or more provisions of a WTO covered agreement. Rather, it considers that the Panel should

BCI deleted, as indicated [***]

7.325 Accordingly, for all of the above reasons, we dismiss the European Communities' submission that the LA/MSF contracts for the A320 and A330/A340 cannot be assessed for compliance with Article 5 of the SCM Agreement, but must instead be examined in the light of the 1979 Tokyo Round Subsidies Code.

(d) Whether each of the individual grants of LA/MSF for the A300, A310, A320, A330/A340, A330-200, A340-500/600 and A380 models of LCA constitutes a subsidy within the meaning of Article 1 of the SCM Agreement

(i) *Arguments of the Parties*

United States

7.326 The United States asserts that the governments of France, Germany, Spain and the UK have provided LA/MSF to Airbus for each new model and major derivative of Airbus LCA developed since 1969 – in particular, the A300, A310, A320, A330/A340,²³³⁸ A330-200, A340-500/600²³³⁹ and A380. The United States describes LA/MSF as a highly preferential form of loan financing that the EC member States designed and use to offset the costs and risks associated with the development of Airbus LCA. It submits that the "face value" of the combined amount of funding made available to Airbus through LA/MSF between 1969 and 2002 is approximately USD 15 billion.²³⁴⁰ According to the United States, each one of the challenged LA/MSF grants evidences a "financial contribution" that confers a "benefit" on Airbus, and therefore amounts to a subsidy, within the meaning of Article 1.1 of the SCM Agreement.

Financial Contribution

7.327 The United States argues that each of the individual LA/MSF contracts involves a financial contribution in the form of a direct transfer of funds or a potential direct transfer of funds, within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.²³⁴¹ Specifically, the United States argues that the LA/MSF contracts for the A300, A310, A320, A330/340, A330-200 and the A340-500/600 constitute direct transfers of funds inasmuch as the funding amounts foreseen under those contracts have today been disbursed.²³⁴² As regards the LA/MSF contracts for the A380, the United States contends that these contracts evidence both direct transfers of funds and, to the extent that certain committed funding amounts have yet to be disbursed, potential direct transfers of funds.²³⁴³

apply the substantive disciplines of the Tokyo Round Subsidies Code in order to determine the legality of the challenged measures for the purpose of this dispute.

²³³⁸ The European Communities has explained that the notwithstanding the different characteristics and market profile of the A330 and A340, the basic versions of these LCA models are sometimes referred to collectively as the "A330/A340", reflecting the fact that they were launched at the same time. EC, FWS, footnote 53.

²³³⁹ The European Communities points out that the A340-500/600 are in fact two different variants of the A340. However, because of their similarities, they are often referred to collectively as "A340-500/600". EC, FWS, footnote 53.

Benefit

7.328 Recalling certain observations of the Appellate Body in *Canada – Aircraft* and *US – Lead and Bismuth II*,²³⁴⁴ the United States submits that a financial contribution will confer a benefit on a recipient, within the meaning of Article 1.1(b) of the SCM Agreement, when provided on terms better than those available to the same recipient in the market. The United States asserts that the financial contributions made available through the LA/MSF contracts confer a benefit on Airbus because they involve loans at interest rates that are substantially below what the market would demand for financing with similar characteristics.

7.329 The particular loan characteristics that are the focus of the United States' allegations are what it describes as the success-dependent, unsecured and back-loaded repayment terms that can be found in each of the challenged LA/MSF contracts. The United States argues that these particular features of LA/MSF transfer a large part of the "substantial risks"²³⁴⁵ or "extremely high risks"²³⁴⁶ associated with LCA development from Airbus to the EC member States; a transfer of risks which it contends is not properly accounted for in the level of interest rates charged for this type of financing.

7.330 The United States explains that, under the LA/MSF contracts, Airbus is required to make repayments through a levy on each delivery of the financed product. This levy is established as a fixed amount per aircraft over a specified number of deliveries. For example, a government providing EUR 1 billion for a new aircraft model might require Airbus to repay the financing, plus any return on the financing, via levies on the first 400 deliveries of the aircraft in question. Full repayment of the loan is therefore dependent on Airbus making 400 sales. However, according to the United States, because each loan is success-dependent and unsecured, the government has no recourse to obtain repayment if the expected 400 deliveries fail to materialize. Repayment is entirely dependent on the success of the particular LCA model to which the funding applies.²³⁴⁷ The United States argues that this means that Airbus receives financing with the obvious benefit of no down-side risk. In other words, when Airbus launches a new aircraft programme, it knows from the outset that it is the government – and not itself – that is assuming the risk that the project will not generate enough sales to repay the government funds. If actual sales are less than expected, Airbus has no obligation to repay the government money.²³⁴⁸

7.331 Likewise, the United States argues that the LA/MSF lender governments assume a large part of the risks associated with LCA development by back-loading loan repayments. According to the United States, the EC member States back-load LA/MSF repayments in the following three ways: (i) by tying repayments to aircraft delivery; (ii) by allowing Airbus to make relatively small levy repayments on early deliveries of aircraft and progressively larger repayments on later deliveries; and (iii) by sometimes foregoing levies entirely on an initial tranche of deliveries. The United States argues that the effect of such repayment terms is to initially remove, and then subsequently minimize, the debt service burden on Airbus in the early years of its LCA programmes when costs are still high and revenues from first deliveries – typically highly discounted – are relatively low. In other words, the effect of back-loaded repayment terms is to delay repayment to a moment in the LCA business cycle that best suits Airbus' competitive needs.²³⁴⁹

BCI deleted, as indicated [***]

7.332 The United States presents a simulation it argues quantifies the effect of the success-dependent and back-loaded repayment terms of LA/MSF on the profitability of LCA programmes.²³⁵⁰ The United States argues that the results of this simulation demonstrate the extent to which such terms alter the risk/reward trade-off faced by an aircraft manufacturer by transforming net present value losses for an aircraft programme in scenarios in which fewer than the forecast number of deliveries are achieved, into net present value profits for the same programme. The United States maintains that the same simulation shows that, even in cases where the programme remains loss-making, LA/MSF significantly reduces the magnitude of the net present value loss suffered as a consequence of the failed programme.²³⁵¹ Furthermore, the United States submits that the simulation also indicates that the net present value of an aircraft programme supported by LA/MSF rises as repayments are increasingly back-loaded (both in terms of minimum numbers of deliveries before repayment obligations commence, and in terms of the "progressivity" of the repayment schedule). Thus, according to the United States, the further repayment is pushed out in time, the greater the commercial and financial benefit to Airbus.²³⁵²

7.333 Relying upon the conclusions reached in two studies commissioned from NERA Economic Consulting,²³⁵³ the United States contends that the rates of return that a commercial investor would demand for project-specific loans with success-dependent, unsecured, back-loaded repayment terms comparable to those contained in the challenged LA/MSF contracts, would be well above what it asserts were the rates of return associated with each of the challenged measures. In particular, the United States submits that the interest rate differentials between the challenged LA/MSF measures and comparable market financing fall within the range of [***] and 24.52 percentage points.²³⁵⁴ According to the United States, the European Communities' own market interest rate benchmarks arrive at the same conclusion, identifying only marginally smaller interest rate differentials.²³⁵⁵

7.334 The United States finds support for its view that the challenged LA/MSF measures confer a benefit on Airbus in the *Canada – Aircraft* dispute, where, the United States submits, financing that was virtually identical to LA/MSF was found to confer a benefit because of the non-commercial interest rates charged to the recipient.²³⁵⁶ Moreover, the United States argues that both Airbus and the Airbus governments have conceded that LA/MSF confers a benefit. For instance, the United States identifies a line in [***].²³⁵⁷ The United States also quotes a number of government statements that it suggests explain the advantages of LA/MSF to Airbus.²³⁵⁸ Finally, the United States contends that the view that LA/MSF confers a benefit upon Airbus is also substantiated by a series of EC State Aid

decisions, which reviewed funding provided by the French and Spanish governments, respectively, to CASA and Aérospatiale for aircraft development projects.²³⁵⁹

European Communities

7.335 The European Communities rejects the United States' claim that each of the disputed LA/MSF measures amounts to a subsidy within the meaning of Article 1 of the SCM Agreement. However, in doing so, it does not contest the United States' allegations in respect of LA/MSF being a "financial contribution", within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. Rather, the focus of the European Communities' rejection of the United States' complaint against the challenged LA/MSF measures is the question whether each confers a "benefit" upon its recipient, within the meaning of Article 1.1(b) of the SCM Agreement. In this context, the European Communities has advanced several lines of defence.

Benefit

Article 4 of the 1992 Agreement

7.336 The European Communities submits that the assessment of whether LA/MSF measures concluded after the entry into force of the SCM Agreement confer a "benefit" must be informed by Article 4 of the 1992 Agreement. According to the European Communities, Article 4 of the 1992 Agreement established the parties' agreed benchmark for levels of acceptable government LCA development support at the time the relevant LA/MSF contracts were concluded.²³⁶⁰ The European Communities maintains that this alleged benchmark must be taken into account as relevant context when interpreting the notion of "benefit" under Article 1.1(b) of the SCM Agreement,²³⁶¹ because it considers the 1992 Agreement to be an instrument containing rules of international law applicable between the parties, within the meaning of Article 31(3)(c) of the VCLT.²³⁶² Thus, the European Communities argues that any financial contributions provided through the post-1995 LA/MSF measures may be found to have conferred a "benefit" on Airbus only if incompatible with Article 4 of the 1992 Agreement. In this regard, the European Communities alleges that each of the challenged LA/MSF measures complied with the terms of domestic support established under Article 4 of the 1992 Agreement, and therefore did not confer a benefit upon Airbus, within the meaning of Article 1.1(b) of the SCM Agreement.²³⁶³

"Reasonableness of repayment forecasts"

7.337 According to the European Communities, the Appellate Body in *US – Countervailing Measures on Certain EC Products* explained that "fair" market transactions are not always the appropriate benchmarks for the purpose of establishing the existence of subsidies under the SCM Agreement. Quoting from the Appellate Body's ruling, the European Communities argues that in particular situations, it is necessary when considering whether a financial contribution confers a benefit to take account of "the ability of governments to obtain certain results from markets by

²³⁵⁹ US, FWS, paras. 158-163, referring to Decision 97/807/EC of 30 April 1997, OJ (1997) L 331/10, *Aid granted by Spain to the Aerospace Company Construcciones Aeronáuticas, SA*, (Spanish government funding for development of a new 70/80 seat turboprop aircraft), Exhibit US-81; Press Release, *The Commission Approves a French R&D Scheme for the Aeronautics Sector*, IP/96/665 of 18 July 1996, (French government funding for Aérospatiale's development of the A330-200), Exhibit US-89; and Letter from Karel Van Miert to Hubert Vedrine, *Reimbursable Advance to Aérospatiale for the Airbus A340-500/600 Program*, Aid No. N369/98, (French government funding for Aérospatiale's development of the A340-500/600), Exhibit US-3.

shaping the circumstances and conditions in which markets operate" and to remember that markets can be "severely affected" by government policies.²³⁶⁴ Because of the LCA industry's alleged close association with heavy government intervention and international regulation,²³⁶⁵ the European Communities suggests that it is a sector where considerations of the kind expressed by the Appellate Body need to be taken into account when evaluating whether government support in the form of LA/MSF amounts to subsidization under the SCM Agreement. Thus, the European Communities submits that the appropriate methodology for determining whether LA/MSF for the A330-200, A340-500/600 and A380 confers a "benefit", within the meaning of Article 1.1(b) of the SCM Agreement, should not involve assessing whether each of the challenged contracts conforms to "'perfect' market conditions".²³⁶⁶ Rather, the European Communities argues that this determination should be made by testing the reasonableness of the forecast number of sales over which repayments are intended to secure the rate of return agreed to in each of the relevant contracts.²³⁶⁷

7.338 The European Communities finds "indirect" support for its view that the reasonableness of the repayment forecasts is the "decisive factor"²³⁶⁸ for determining whether LA/MSF constitutes a subsidy in footnote 16 of the SCM Agreement. Although attached to an expired provision (Article 6.1), the European Communities considers that it provides relevant context for understanding whether LA/MSF amounts to a subsidy within the meaning of Article 1 of the SCM Agreement. In particular, the European Communities argues that the text of footnote 16 envisages a situation where there is less than full repayment of a royalty-based financing instrument – a situation where actual sales fall below the level of forecast sales. According to the European Communities, footnote 16 provides that the failure to achieve the sales forecast envisaged under a royalty-based financing instrument (*i.e.*, less than full repayment of royalty-based financing) cannot in itself be deemed to cause serious prejudice.²³⁶⁹ By implication, the European Communities submits, it follows that when actual sales match or exceed the level of forecast sales under a royalty-based financing instrument, there can be no finding of serious prejudice.²³⁷⁰ The European Communities maintains that this result represents a recognition by the drafters of the SCM Agreement that the relevant test for determining whether LA/MSF constitutes a subsidy is the reasonableness of the repayment forecast.²³⁷¹ Thus, to the extent that a repayment forecast is reasonable, the European Communities argues that full repayment of LA/MSF will be achieved, thereby generating its targeted rate of return. It is only when the repayment forecast is not a reasonable one that, according to the European Communities, a benefit will be conferred.²³⁷²

²³⁶⁴ EC, FWS, para. 445, referring to Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, paras. 123-124.

²³⁶⁵ The European Communities maintains that this is reflected not only in the alleged "billions of dollars" of government support (allegedly including royalty-based financing) enjoyed by Boeing, the only other credible producer of LCA, but also in Article 6.1 of the *1979 Trade in Civil Aircraft Agreement*, which reads: "They [*i.e.*, the Signatories] shall take into account the special factors which apply in the aircraft sector, in particular the widespread governmental support in this area, their international economic interests, and the desire of producers of all signatories to participate in the expansion of the world civil aircraft market." EC, FWS, paras. 444-447.

BCI deleted, as indicated [***]

7.339 In the European Communities' view, the United States shares its interpretation of Article 1, citing the following extract from a communication made by the United States to the WTO Negotiating Group on Rules on 19 March 2003 as support for the proposition that the United States considers LA/MSF would be a subsidy only if the market forecasts on which repayment obligations are based are not reasonable:

"As to the definition of subsidy, more explicit rules are needed as to royalty-based schemes. These programmes provide government funds with a repayment obligation based on future sales. Similar to the granting of government loans or the government purchase of equity, these schemes need to be judged against a market or commercial standard. Obviously, if royalty-based financing is based on assumptions and sales projections that would be rejected by the market a benefit has been bestowed."²³⁷³

7.340 The European Communities asserts that all of the LA/MSF granted for the A330-200, A340-500/600 and A380 was provided on the basis of "very prudent" sales forecasts, with full repayment of principal plus interest, set at least 25 basis points above the government cost of funds, being required from a number of sales that was less than Airbus' expectations over a maximum of 17 years (consistent with Article 4 of the 1992 Agreement).²³⁷⁴ The European Communities explains that while the Airbus business case informed and set the outer limits of the returns expected by the EC member States over the life of each aircraft,²³⁷⁵ it was not automatically reflected in the terms of the contracts. Moreover, the European Communities maintains that because Airbus had to fund 67% of the A330-200, A340-500/600 and A380 projects itself, its business case for each of these LCA projects was "realistic and sober", implying that the EC member States' forecasts were "conservative" and intended to ensure faster repayment.²³⁷⁶ This allowed the EC member State governments to "agree to a structure of levies and repayment schedules that ensures adequate recoupement of ... contributions plus a real return at rates which would not be rejected at the market".²³⁷⁷

"Alternative Legal Argument"

7.341 In a final set of submissions, the European Communities presents what it characterizes as an "alternative legal argument", that it asks the Panel to consider in the event that it were to dismiss all of its other arguments on the question whether LA/MSF amounts to a subsidy.²³⁷⁸ Pursuant to this "alternative" argument, the European Communities proceeds on the "hypothesis" that the Panel were to find that the market provides the appropriate benchmark for determining the existence of a "benefit" under Article 1.1(b) of the SCM Agreement. In this context, the European Communities argues that the financing provided under the challenged LA/MSF measures does not involve subsidization within the meaning of the SCM Agreement because the cost of such financing to Airbus was at least the same, if not greater, than the cost of similar financing available on the market.²³⁷⁹

7.342 The European Communities describes LA/MSF as repayable, project-specific debt financing granted to Airbus for the purpose of developing LCA. According to the European Communities, the terms and conditions of the challenged LA/MSF contracts vary considerably, both within and between the relevant EC member States, depending upon the particular Airbus LCA project supported.²³⁸⁰

²³⁷³ EC, FWS, paras. 457-458; and EC, SNCOS, para. 80, both submissions quoting *Subsidies Disciplines Requiring Clarification and Improvement*, Communication from the United States dated 19 March 2003, TN/RL/W/78, p. 5.

BCI deleted, as indicated [***]

However, it recognizes that in general, a number of similarities can be identified in terms of the type or form of financing provided under each contract. For instance, the European Communities explains that repayments under each of the LA/MSF contracts are, in general, linked to aircraft deliveries in the sense that they are made through the application of graduated, per-aircraft, levies that increase over the course of the repayment period.²³⁸¹ Moreover, the European Communities asserts that for certain LA/MSF contracts, royalty payments are required once the full amounts of principal and interest have been amortized through the operation of the per-aircraft repayment levies. Thus, the European Communities explains that through the operation of per-aircraft levies and/or royalties, the repayment mechanism established in the LA/MSF contracts does not depend upon Airbus making profits but relies on there being a sufficient number of deliveries of the financed LCA.

7.343 The European Communities recognizes that these features of LA/MSF result in member States assuming a portion of the risk that would otherwise fall on the aircraft manufacturer. However, the European Communities notes that, in contrast to the manufacturers themselves, the lender governments do not face the risks associated with securing profitable sales in a competitive market. In other words, instead of the risk of a return dependent on profits, the lenders of LA/MSF face only the risk that the borrower will fail to build and deliver a sufficient number of aircraft to repay the agreed principal and interest. The European Communities describes this as "development risk" and "market risk", and argues that it is no different from the type of risk faced by Airbus "risk-sharing suppliers".²³⁸²

7.344 The European Communities presents its own economic studies, addressing all but the LA/MSF contracts for the A300 and A310, which it contends dismiss the conclusions reached in the studies presented by the United States. The European Communities argues that the studies commissioned from Professor Robert Whitelaw of New York University's Stern School of Business and International Trade Resources LLC,²³⁸³ show that the United States both underestimates the rate of return associated with each instance of financing and inflates the appropriate market interest rate benchmarks for loans comparable to LA/MSF.²³⁸⁴ According to the European Communities, the effective rate of return associated with each of the challenged measures should be properly determined as a function of the delivery forecasts contained in Airbus' business case as well as taxation, considerations which together did not play a role in the calculations of the rates of return advanced by the United States.²³⁸⁵ Moreover, the European Communities asserts that the appropriate market interest rate benchmark for all LA/MSF contracts should apply a project-specific risk premium derived from "risk-sharing supplier" contracts for the A380 that is less than half the value used by the United States.²³⁸⁶ Nevertheless, the European Communities recognizes that even accepting the entirety of the conclusions reached in the economic studies it has presented, the effective rates of return associated with the LA/MSF contracts are, in most cases, below the market benchmark for comparable financing. However, it argues that when the costs associated with the public policy

BCI deleted, as indicated [***]

obligations of each contract are taken into account, the difference between the effective rates of return and market interest rate benchmarks set out in its own economic studies is eliminated.²³⁸⁷ Thus, the European Communities concludes that any financial contributions made through the challenged LA/MSF measures do not confer a "benefit" on Airbus, within the meaning of Article 1.1(b) of the SCM Agreement.

(ii) *Arguments of Third Parties*

Australia

7.345 Australia agrees with Brazil that other Airbus risk sharing suppliers are not appropriate as an element in determining a commercial benchmark for assessing benefit because the terms for risk-sharing suppliers may be distorted by the government finance contributed for the underlying project.²³⁸⁸

7.346 Australia rejects Korea's argument about market failure situations. The major implication of accepting Korea's statement for Australia, is to allow different standards for establishing subsidisation within narrowly defined goods markets that have been distorted by widespread market intervention. Therefore, Australia does not agree that because a market is distorted, a government measure may not constitute a financial contribution conferring a benefit.²³⁸⁹

7.347 Australia contends that the Panel should avoid reading additional requirements into the text of Article 14(b) and defining the market too narrowly. Article 14(b) establishes benefit based on a "comparable commercial loan" actually obtainable on the market. It further contends that in the narrowly defined market of LCA production in Europe, government intervention has distorted the terms and conditions of loans available to Airbus companies, so that most transactions are not purely commercial. However, Australia argues that it may be possible to find comparable commercial loans in the market for engineering projects involving long term, high-risk loans for large amounts of capital and that operate on a commercial basis. Australia specifically refers to the Panel Report in *Japan – DRAMs (Korea)* which provides some guidance on the evidentiary standard for determining the existence of "benefit" in circumstances where there are no comparable commercial loans which could actually be obtained on the market.²³⁹⁰

Brazil

7.348 Brazil first observes that in this proceeding, the European Communities refused to consent to three requests by the United States to initiate the procedures under Annex V of the SCM Agreement, and that it also failed to respond fully to questions and "follow-up" questions from the Annex V Facilitator. This, according to Brazil, severely prejudiced the rights of third parties to protect their interests in this proceeding within the meaning of Article 10 of the DSU.²³⁹¹

7.349 Brazil submits that in the interest of the timely and efficient resolution of disputes and consistent with the text of Annex V, Members should consent to the initiation of Annex V procedures and should fully cooperate in providing requested information, particularly because information about subsidies is often only available to the subsidizing Members. Thus, Brazil encourages the Panel to use

BCI deleted, as indicated [***]

its discretion under paragraph 7 of Annex V of the SCM Agreement to draw adverse inferences where appropriate and thereby adopt effective sanctions to ensure that Annex V remains an effective tool for the resolution of disputes under the SCM Agreement.²³⁹²

7.350 Brazil submits that, through "LA/MSF", Airbus governments provide below-market interest rates loans for the development of new Airbus aircraft or new models of existing aircraft.²³⁹³ It contends that the repayment of principal (and possibly repayment of interest) on the LA/MSF loans is contingent on the successful sale of a specified number of the finished aircraft.²³⁹⁴

7.351 Brazil submits that repayment schedules for LA/MSF are back-loaded by the Airbus governments, which assume Airbus's risks by allowing smaller levy payments on earlier deliveries and progressively larger payments on later deliveries. In some cases, the Airbus governments have allowed Airbus to forego levies entirely on an initial tranche of deliveries. This, according to Brazil, minimizes the debt service during the early years of Airbus's programmes. In addition, Brazil argues that the tie between repayments and deliveries results in a significant lag between the granting of the LA/MSF and the first repayment. Thus, LA/MSF confers a "grace period" to the beneficiary during the crucial and costly stages of development. Moreover, if the expected delivery schedule slips and further repayment is pushed out in time, the commercial and financial benefits to Airbus increase.²³⁹⁵

7.352 Brazil asserts that LA/MSF is a subsidy that is particularly distortive to competition²³⁹⁶ because it shifts the up-front expense and commercial risk of developing new aircraft to taxpayers, allowing its beneficiary to move more aggressively forward on investment and production decisions that would otherwise be abandoned or postponed, and to offer discounted commercial terms to customers.²³⁹⁷

7.353 Brazil rejects the European Communities' contention that the special characteristics of the LCA industry justify subsidies inconsistent with a Member's WTO obligations. It asserts that LA/MSF is not a necessary condition for participation in the aircraft market and should not be sanctioned when it violates the SCM Agreement.²³⁹⁸ Instead, Brazil acknowledges that an aircraft that is developed with assistance provided by LA/MSF would not necessarily, in the counterfactual situation, be introduced in the market without the subsidy, because the aircraft market without the existence of LA/MSF would *not* be the same as the market which is severely distorted by this type of subsidy.²³⁹⁹

7.354 Brazil agrees with the United States that a benefit corresponds to some form of advantage and that it can be identified by determining whether the recipient has received a financial contribution on terms more favourable than those available to the recipient in the commercial market.²⁴⁰⁰ However, Brazil finds no support in the SCM Agreement for the European Communities' proposition that

²³⁹² Brazil, Third Party Submission, para. 5 and 7.

²³⁹⁶ Brazil, Third Party Submission, paras. 26-27.

²³⁹⁷ Brazil, Third Party Submission, para. 27.

²³⁹⁸ Brazil generally observes that subsidies are not a requirement for the development and launch of new aircraft, even if a producer is located in a developing country. By way of an example, it notes that, to finance the design and development of its 70-118 seat family of aircraft, EMBRAER did not rely on government support, but funded the USD 1 billion in development costs with an initial public offering of stock, contributions from risk-sharing partners, and its retained earnings. Brazil, Third Party Submission, para. 28.

²³⁹⁹ Brazil, Third Party Submission, para. 28.

²⁴⁰⁰ US, FWS, para. 110.

BCI deleted, as indicated [***]

assessment of benefit be based solely on the reasonableness of sales forecasts.²⁴⁰¹ Brazil considers that the European Communities' proposition that the recipient does not receive any benefit because "his repayment obligations (...) provide the government with sufficient guarantees of return", does not address the correct standard to determine the existence of a benefit.²⁴⁰²

7.355 According to Brazil, the Panel should find that LA/MSF confers a benefit if the terms and conditions on which it is provided, are more favourable than available in the commercial market, or if no such aid would, in fact, be available in the commercial market.²⁴⁰³ For Brazil, the terms set out in Article 4 of the 1992 Agreement may give an indication of the cost to the granting government only, but cannot be taken as context for the interpretation of the term "benefit" in Article 1 of the SCM Agreement. In addition, Brazil finds nothing in the text of Article 4 (like Article 14 of the SCM Agreement, for example) that could, according to the WTO jurisprudence, have a bearing on the interpretation of the term "benefit".²⁴⁰⁴

7.356 Brazil maintains that the terms and conditions of LA/MSF are not comparable to commercially available financing²⁴⁰⁵ because they do not reflect the risks associated with the development of new aircraft, particularly the risks in deciding whether to launch a new aircraft family.²⁴⁰⁶ In fact, Brazil considers that the United States has presented a *prima facie* case that LA/MSF granted without any interest obligation confers a benefit on Airbus. Specifically, Brazil argues that LA/MSF confers a benefit because the Airbus governments do not require Airbus to pay a commercial rate of interest giving due consideration to the credit risk of Airbus, the development risk, *i.e.*, the risk that Airbus will fail in its attempt to design and build the new aircraft, and the market risk, *i.e.*, the risk that Airbus will fail to deliver enough completed aircraft to repay principal and interest. Given the nature of LA/MSF, the commercial benchmark, according to Brazil, should take into consideration the risks inherent in the development and marketing of new aircraft, the nature of the LA/MSF (including its success-dependent and back-loaded features and lack of security), the relevant interest rates (including the nature of any obligation to pay interest), the fact that credit ratings are affected by the expectation of continuing government support, and any other preferential features, including the waiver of normal fees.²⁴⁰⁷

7.357 Brazil further argues that when the LA/MSF does require the payment of interest or royalties, that aid confers a benefit on Airbus. Brazil considers that the additional statements by officials from

²⁴⁰¹ Brazil, Third Party Submission, para. 29 citing to the European Communities Oral Statement, para. 61.

²⁴⁰² Brazil, Third Party Submission, para. 29 citing to the European Communities Oral Statement, para. 61. For Brazil, "sufficient guarantees of return" for a government may not be – and most likely are not – sufficient guarantees of return for an institution constrained by market disciplines. Brazil, Third Party Submission, paras. 26-27.

²⁴⁰³ Brazil, Third Party Submission, para. 29.

²⁴⁰⁴ Brazil, Third Party Submission, para. 30. To this end, Brazil relies on the Appellate Body finding in *Canada – Aircraft*, that Article 14 of the SCM Agreement provides relevant context for determining whether a benefit was conferred within the meaning of Article 1.1(b) of the SCM Agreement. Appellate Body Report, *Canada – Aircraft I*, paras. 153, 155, and 158. Brazil also agrees with the Panel's finding in *Canada – Aircraft I* that a financial contribution in the form of LA/MSF confers a benefit if the provider of such aid "neither seeks nor earns a commercial rate of return." Panel Report, *Canada-Aircraft*, para. 9.314.

²⁴⁰⁵ Brazil, Third Party Submission, para. 29.

²⁴⁰⁶ Brazil notes that the development of LCA is risky and expensive, requiring significant up-front investments to be undertaken with returns contingent on sales far in the future. Moreover, there is a risk that the predicted manufacturing costs, performance criteria, and sales prices will not be achieved. If the project fails, the initial up-front investments or non-recurring costs are lost. Brazil, Third Party Submission, para. 31.

²⁴⁰⁷ Brazil, Third Party Submission, para. 34.

BCI deleted, as indicated [***]

member States of the European Communities and by Airbus further demonstrate that LA/MSF confers a benefit on Airbus.²⁴⁰⁸

7.358 Brazil takes issue with Korea's argument that in determining what is the appropriate market benchmark against which to measure whether a given financial contribution confers benefit, "it is necessary to acknowledge that under particular circumstances, the general market may encounter a systematic failure or {that} an undistorted commercial market does not exist in a particular sector".²⁴⁰⁹ It contends that market failure occurs where, for example, a market cannot operate because the goods or services cannot be provided on a commercial basis or where the market, left to its own, yields an allocation of resources that is sub-optimal. It explains, relying on the general economic theory, that in the former situation, the government takes on the role of provider of the goods or services involved, and, in the latter, the private sector may provide the goods or services, with the government intervening as regulator to ensure that resource allocation becomes optimal.²⁴¹⁰

7.359 Brazil maintains that there is no "market failure" in the aircraft industry, and points that the parties do not allege it either. Thus, even if the existence of "market failure" has any relevance under the SCM Agreement as Korea posits, the Panel does not need to address the possible implications of this issue in the present dispute.

7.360 In Brazil's view, the existence of a benefit should be determined based on a comparison of the financial contribution to a comparable benchmark available in the commercial market, normally of the subsidizing Member. Where a comparable commercial benchmark, does not exist, for example, the domestic market may be so distorted by government intervention that an objective, comparable commercial benchmark is not available, this, according to Brazil, should not be prejudicial for the recipient of the challenged financial contribution (and should not, in and of itself, lead to an affirmative benefit determination). Rather, under these circumstances, a panel may rely on a reasonable and unbiased estimate of a comparable commercial benchmark, including based on a benchmark available in the international market.²⁴¹¹

Canada

7.361 Canada rejects the Brazil's argument that subsidies for the underlying project distort the terms and conditions for risk-sharing suppliers such that they cannot be considered appropriate as an element in determining a commercial benchmark for assessing the question of benefit with respect to LA/MSF, as this approach is not supported by the text of the SCM Agreement. If followed, it would leave WTO Members with little, if any, guidance as to how they should benchmark public sector financing if they wish to ensure it does not provide a subsidy. Canada recalls that a similar argument was advanced by the United States in *US – Softwood Lumber IV*, that the term "market conditions" as used in Article 14(d) necessarily implies a market undistorted by the government's financial contribution. In that dispute the Appellate Body stated: "In our view, the United States' approach goes too far. We agree with the Panel that "{t}he text of Article 14 (d) {of the} SCM Agreement does not qualify in any way the 'market' conditions which are to be used as the benchmark ...

²⁴⁰⁸ Brazil, Third Party Submission, para. 35 referring to US, FWS, paras. 152-157.

²⁴⁰⁹ In its Third Party Submission, Korea argues that when a panel is confronted with the factual circumstances of market failure, "the benchmark to determine whether a government action at that particular time confers a benefit should be different from one that is based on the action of a private investor operating in a normal and fully functional market. ... {and} As a result, a government measure may not constitute a financial contribution conferring a benefit in that particular context, as it might otherwise do." Korea, Third Party Submission, para. 63.

²⁴¹⁰ Brazil, Answer to Third Party Panel Question 2, para. 1 referring to Brian R. Binger and Elizabeth Hoffman, *Microeconomics With Calculus* (Glenview: Illinois, 1988), p. 542 (stating that "competitive markets do not allocate externalities and public goods efficiently").

²⁴¹¹ Brazil, Answer to Third Party Panel Question 2, para. 2-4.

BCI deleted, as indicated [***]

{a}s such, the text does not explicitly refer to a 'pure' market, to a market 'undistorted by government intervention', or to a 'fair market value'.²⁴¹²

Korea

7.362 Korea relies on the Appellate Body report in *Canada – Aircraft*, and the Panel report in *Brazil – Aircraft* in arguing that, in order to demonstrate that a contribution confers a benefit, the contribution must be (1) provided to the recipient (2) on terms more advantageous than (3) those available on the market. All three criteria must be fulfilled separately and individually.²⁴¹³ With regard to the first element, Korea considers that a benefit exists only where an enterprise targeted by an investigation is the actual beneficiary. It considers that the second element requires a detailed inquiry, which would include examination of the circumstances under which a financial contribution is provided. With regard to the third element, Korea generally considers that the commercial market will provide an appropriate benchmark for the comparison of the terms available for a certain investment or transaction, unless, as acknowledged by the Appellate Body in *US – Certain Products from the EC*, in particular circumstances, the general market encounters a systematic failure, or an undistorted commercial market does not exist in a particular sector.²⁴¹⁴

7.363 Korea argues that in determining what is the appropriate market benchmark against which to measure whether a given financial contribution confers benefit, it is necessary to acknowledge that under particular circumstances, the general market may encounter a systematic failure or that an undistorted commercial market does not exist in a particular sector. It asserts that when a panel is confronted with such factual circumstances, the benchmark to determine whether a government action at that particular time confers a benefit should be different from one that is based on the action of a private investor operating in a normal and fully functional market. As a result, a government measure may not constitute a financial contribution conferring a benefit in that particular context, as it might otherwise do.²⁴¹⁵

7.364 Accordingly, Korea argues that the United States cannot plainly state that a benefit is conferred, rather the Panel should closely examine whether the United States has established a *prima facie* case as to three criteria set forth by the Appellate Body in *Canada – Aircraft*.²⁴¹⁶

(iii) *Evaluation by the Panel*

7.365 As we have previously noted, a "subsidy" is defined in Article 1.1 of the SCM Agreement by reference to two discrete elements: a "financial contribution by a government or any public body within the territory of a Member" (Article 1.1(a)(1)) and the conferral of a "benefit" (Article 1.1(b)).²⁴¹⁷ Although the United States has addressed both elements of this definition in presenting its complaint, the European Communities has focused its defence entirely upon the question whether LA/MSF confers a "benefit". Thus, the European Communities has not contested the United States' allegation that each of the challenged LA/MSF measures involves a "financial contribution" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.

7.366 We are mindful that pursuant to Article 11 of the DSU, we are required to make an objective assessment of the matter identified in our terms of reference. This includes assessing whether the

²⁴¹² Canada, Answer to Third Party Panel Questions, para. 1-2, referring to Appellate Body Report, *US – Softwood Lumber IV*, para 87.

²⁴¹³ Korea, Third Party Submission, para. 54-58.

²⁴¹⁴ Korea, Third Party Submission, para. 62.

²⁴¹⁵ Korea, Third Party Submission, para. 63.

²⁴¹⁶ Korea, Third Party Submission, para. 66.

²⁴¹⁷ It is also defined as "any form of income or price support in the sense of Article XVI of GATT 1994" (Article 1.1(a)(2)) that confers a "benefit" (Article 1.1(b)).

BCI deleted, as indicated [***]

United States has presented a *prima facie* case demonstrating that the challenged LA/MSF measures are subsidies within the meaning of the SCM Agreement, irrespective of whether the European Communities contests any one or more of the United States' allegations.²⁴¹⁸ Thus, we begin our evaluation of the merits of the United States' complaint by examining whether it has established a *prima facie* case that the challenged LA/MSF measures are "financial contributions". In this context, we recall that "a *prima facie* case is one which, in the absence of effective refutation by the defending party, requires a panel, as a matter of law, to rule in favour of the complaining party presenting the *prima facie* case".²⁴¹⁹ Thereafter, we examine whether the United States has demonstrated that each of the "financial contributions" we find to exist confers a "benefit" on the recipients, within the meaning of Article 1.1(b) of the SCM Agreement. However, before embarking upon this evaluation, we believe it is useful to first provide a brief overview of the economic and competitive context in which LCA are developed as well as the key features of LA/MSF.²⁴²⁰

Overview of LCA Development and Key Features of LA/MSF

7.367 Both parties agree that an outstanding feature of LCA development is that significant start-up costs must be incurred a long time before revenues from the projects associated with those costs are generated.²⁴²¹ Consequently, bringing a new LCA model to market requires long-term planning and advance assessment of a wide variety of factors, including future manufacturing needs, market trends, customer demand and prices. This means that at the time a decision is taken to develop a new LCA model and to incur start-up costs, the eventual success of the project remains subject to a high degree of uncertainty. According to the European Communities, the fortunes of a new LCA project may be affected by unexpected market slow-downs, exogenous price movements of complementary goods (e.g., fuel), exchange rate fluctuations, political developments, terrorist attacks, war and other security issues and even human health risks such as SARS.²⁴²² Thus, the development of LCA is an endeavour that requires "huge up-front investments"²⁴²³ and a commitment of "tremendous resources"²⁴²⁴ in the face of a business environment that is shaped by factors "whose very foreseeability is impossible by definition".²⁴²⁵ The European Communities asserts that these "unique" features of the LCA industry have made it susceptible to a high degree of government intervention both in terms of financial support and international regulation. Indeed, the European Communities suggests that given the nature of the LCA industry, such levels of government intervention "may even be considered natural".²⁴²⁶

7.368 At present, the worldwide market for LCA is divided between essentially two manufacturers – Airbus and Boeing.²⁴²⁷ This effective duopoly has existed since 1997 when Boeing merged with

²⁴¹⁸ See, Panel Report, *United States – Anti-Dumping Measure on Shrimp from Ecuador ("US – Shrimp (Ecuador)")*, WT/DS335/R, adopted on 20 February 2007, paras. 7.1-7.11.

²⁴¹⁹ Appellate Body Report, *EC – Hormones*, para. 104, citing Appellate Body Report, *US – Wool Shirts and Blouses*, p.14.

²⁴²⁰ A more detailed exposition of the LCA industry's economic and competitive landscape is set out at paras. 7.367-7.372 and in Section VII.F of this Report, where we evaluate the United States' claims of adverse effects under Article 5 of the SCM Agreement.

²⁴²¹ US, FWS, paras. 112-115; EC, FWS, paras. 27-32; Dorman Report, Exhibit US-70 (BCI), pp. 1-2. Airbus launched the A380 on 19 December 2000 and made its first delivery on 15 October 2007.

²⁴²² EC, FWS, paras. 28 and 32.

²⁴²³ US, FWS, para. 112.

²⁴²⁴ EC, FWS, para. 31.

²⁴²⁵ EC, FWS, para. 30.

²⁴²⁶ EC, FWS, para. 33.

²⁴²⁷ The United States asserts that although limited LCA production has continued in Russia, Russian LCA producers do not seriously compete with Airbus and Boeing for sales outside of the former Soviet bloc, leaving Airbus and Boeing as the only credible competitors operating in the LCA market. US, FWS, para. 711,

BCI deleted, as indicated [***]

McDonnell Douglas, one of two other United States' companies active in the manufacture of LCA over the past 30 years.²⁴²⁸

7.369 As we have previously noted, Airbus has existed, in one corporate form or another, as a single economic entity active in the LCA business for over 35 years.²⁴²⁹ Since its establishment in 1970, the governments of France, Germany, Spain and the UK have to varying degrees entered into LA/MSF agreements with Airbus for the purpose of funding the development of six new models of LCA (the A300, A310, A320, A330, A340 and A380) as well as three variants (the A330-200 and A340-500/600).²⁴³⁰ The proportion of development costs financed through LA/MSF has diminished over the years, from close to 100% for the early projects (the A300 and A310)²⁴³¹ down to a maximum of 33% of development costs for LCA projects financed after the entry into force of the 1992 Agreement (the A330-200, A340-500/600 and A380).²⁴³²

7.370 Initially, funding for Airbus' first LCA models (the A300 and A310 – respectively launched in 1969 and 1978²⁴³³) was contracted at the inter-governmental level through a series of agreements between participating EC member States.²⁴³⁴ These first inter-governmental agreements not only expressed the relevant EC member States' commitment to fund the development of the A300 and A310, but also some of the key terms and conditions attached to the provision of financing, such as the amount of funds to be disbursed and the mode of repayment.²⁴³⁵ Separate contracts implementing the agreements, in the context of one or more different aspects or phases of the two LCA projects, were entered into at the national level between each financing EC member State and the Airbus "associated manufacturer" located within its territory.²⁴³⁶ Similarly, LA/MSF for the A320 and

footnote 875. A more detailed description of the conditions of competition in the LCA market and the competitive positions of Airbus and Boeing is set out in Section VII.F of this Report.

²⁴²⁸ Apart from McDonnell Douglas, the only other credible United States' manufacturer of LCA was Lockheed, which abandoned its LCA activities in 1981. US, FWS, para. 711.

²⁴²⁹ See, Section VII.E.1(a), para. 7.183 and Attachment to Section VII.E.1 of this Report, following para. 7.289 above.

²⁴³⁰ Other variants of Airbus LCA models that we understand are not the subject of the United States' complaint against LA/MSF include the A318, A319 and A321.

²⁴³¹ The French and Spanish governments funded approximately 100%, and the German government 90%, of the development costs of the A300 and A310 (basic versions). The same three governments funded between 64% and 85% of the development costs of the derivatives of these two models of LCA. EC, Answer to Panel Question 254. See, also, ITC Hearing, Inv-No. 332-332, *Global Competitiveness of US Advanced Technology Manufacturing Industries: Large Civil Aircraft*, testimony of Michel Dechelotte, Director of International Affairs, Airbus G.I.E., at 208 (15 April 1993), lines 11, 12 and 20-23, Exhibit US-46; 1997 Sénat Report, at 63, 68, Exhibit US-18; and Boletín Oficial de las Cortes Generales, Congreso de los Diputados, Cuenta General del Estado de 1992, Serie A, Núm. 34, at 122 (13 January 1997), Exhibit US-19.

²⁴³³ US, FWS, paras. 169-171; EC, FWS, para. 76.

²⁴³⁴ 1969 A300 Agreement, Exhibit US-11; 1971 A300 Agreement, Exhibit EC-992 (BCI); 1981 A310 Agreement, Exhibit EC-942 (BCI).

²⁴³⁵ 1969 A300 Agreement, Articles 6 and 7, Exhibit US-11; 1971 A300 Agreement, Exhibit EC-992 (BCI); 1981 A310 Agreement, Articles 8 and 9, Exhibit EC-942 (BCI). A more detailed description of the provisions found in these Agreements is set out at paras. 7.533 - 7.554 below.

²⁴³⁶ In Answer to Panel Question 78 asking it to submit copies of the LA/MSF contracts for the A300 and the A310, the European Communities submitted copies of: (i) 29 separate Agreements, Protocols and Conventions, and amendments thereto, between the French government and Aérospatiale relating to the A300, Exhibit EC-603 (BCI), and 10 separate Protocols and Conventions between the same parties relating to the A310, Exhibit EC-604 (BCI); (ii) two "model contracts" evidencing the German government's provision of LA/MSF to Deutsche Airbus GmbH for the A300, Exhibit EC-601 (BCI), and the A310, Exhibit EC-602 (BCI);

BCI deleted, as indicated [***]

A330/A340 projects, respectively launched in 1984 and 1987,²⁴³⁷ was agreed between the participating governments,²⁴³⁸ and implemented at the national level through separate contracts between each relevant EC member State and the Airbus "associated manufacturer" located within its territory.²⁴³⁹ However, unlike the inter-governmental agreements for the A300 and A310, the inter-governmental agreements for the A320 and A330/A340 were less prescriptive. For instance, they did not specify precise repayment terms, leaving these to be determined through the individual contracts negotiated at the national level.²⁴⁴⁰

7.371 No inter-governmental agreements were concluded in the context of the LA/MSF provided by the governments of France and Spain for the A330-200 and A340-500/600 projects (respectively launched in 1995 and 1997²⁴⁴¹), nor in the context of the LA/MSF provided by the governments of France, Germany, Spain and the UK for the A380 (launched in 2000).²⁴⁴² Instead, for these projects it appears that the EC member States entered into separate national-level contracts, setting forth all relevant terms and conditions, with Aérospatiale and CASA (in respect of the A330-200 and A340-500/600 projects) and with Airbus France, Airbus Deutschland GmbH, EADS Airbus S.L. (Spain), BAE Systems (Operations) Ltd and British Aerospace PLC (in respect of the A380).²⁴⁴³

and (iii) 16 separate Contracts and amendments thereto, between the Spanish government and Construcciones Aeronáuticas S.A. relating to the A300, Exhibit EC-605 (BCI), and eight separate Contracts between the same parties relating to the A310, Exhibit EC-606 (BCI). We note that some of the national-level contracts were entered into, and involved the transfer of funding to Airbus, before the formal launch of the respective LCA models or conclusion of the relevant inter-governmental agreement.

²⁴³⁷ US, FWS, paras. 189 and 211; EC, FWS, paras. 79, 82 and 84.

²⁴³⁸ 1991 A320 Agreement, Exhibit US-16; 1995 A330/A340 Agreement, Exhibit US-28 (BCI).

²⁴³⁹ The national-level contracts include: the French A320 contract, Exhibit EC-83 (BCI); the German A320 contract, Exhibit EC-95 (BCI); the 1992 Spanish A320 contract, Exhibit EC-93 (BCI); the UK A320 contract, Exhibit EC-94 (BCI); the French A330/A340 contract, Exhibit EC-96 (BCI); the 1988 Spanish 1988 A330/A340 contract, Exhibit EC-84 (BCI); and the UK A330/A340 contract, Exhibit EC-86 (BCI). As we have previously noted (footnote 2257 above), the European Communities has recognized that the German government entered into a LA/MSF contract with Deutsche Airbus GmbH for the A330/A340 project. Although asked by the Panel to submit a copy of this contract (Panel Question 253), the European Communities did not do so. In addition, we note that in at least one instance – French LA/MSF for the A320 – funding was provided to Airbus for "preliminary work" undertaken in the context of the A320 before it was actually launched and prior to the conclusion of the relevant inter-governmental agreement.

²⁴⁴⁰ See, 1991 A320 Agreement, Artículo 8, Exhibit US-16; 1995 A330/A340 Agreement, Artículo 8, Exhibit US-28 (BCI).

²⁴⁴¹ US, FWS, paras. 234 and 243; Exhibit EC-597 (HSBI).

²⁴⁴² US, FWS, para. 260; EC, FWS, para. 85. The United States suggests that the four EC member States financing the A380 entered into an inter-governmental agreement concerning the A380 in June 2003 – the Agreement of 16th June 2003 signed at Paris-Le Bourget between the Ministers of the Four Principal Airbus Countries and Airbus, Exhibit US-122 (BCI). US, FWS, paras. 271, 280, 288 and 297. However, we note that the Agreement cited by the United States does not deal with the A380 project in the same way that previous inter-governmental agreements specifically addressed the development of Airbus' predecessor LCA models. To begin with, Airbus is a party to the 2003 Agreement, whereas it was not party to the previous inter-governmental agreements. Moreover, no specific obligation to fund Airbus projects is actually undertaken by the governments. The recitals of the Agreement only express the governments' "willingness ... to continue to provide support to Airbus such as launch investment, research and technology investment and aircraft export sales financing". The same recitals also reveal Airbus' "willingness to provide information to {the governments} for the purpose of enabling them to formulate policy relating to Airbus and to ensure that obligations incurred when support is provided are met". Thus, we do not consider it appropriate to characterize the 2003 Agreement as an "inter-governmental agreement" of the same kind as the inter-governmental agreements that existed in respect of the previous models of Airbus LCA. See, further, paras. 7.549 - 7.554 below.

²⁴⁴³ French A330-200 contract, Exhibit US-78 (BCI); French A340-500/600 contract, Exhibits US-35 (BCI) and EC-91 (BCI); French A340-500/600 convention, Exhibit US-36 (BCI); and Spanish A340-

BCI deleted, as indicated [***]

7.372 Thus, in summary, the contractual framework of the challenged LA/MSF measures takes essentially two forms: (i) inter-governmental agreements implemented through individual national-level contracts or other legal instruments entered into by each relevant EC member State government in favour of the Airbus entity located in its territory; or (ii) individual contracts between each relevant EC member State government and the Airbus entity located in its territory. Although the terms and conditions of each of the legal instruments making up the contractual framework of the challenged LA/MSF measures can vary significantly, we agree with the parties that numerous similarities in the type and form of financing can be found.²⁴⁴⁴

7.373 In terms of the disbursement of funds, the contracts that are before us appear to envisage two mechanisms. First, in many cases, funds are transferred in advance of actual development costs being incurred, usually on the basis of projected expenditure. When funds are disbursed in advance, costs actually incurred may be subsequently audited or reviewed by the governments and the funding amounts adjusted to ensure that total borrowing does not exceed the level of development costs it was agreed would be financed.²⁴⁴⁵ Second, disbursements up to the agreed amounts may be made after actual costs have been incurred.²⁴⁴⁶

7.374 Repayment of LA/MSF takes essentially the same form under each contract.²⁴⁴⁷ In almost all cases, Airbus is required to reimburse all funding contributions, plus any interest at the agreed rate, exclusively from revenues generated by deliveries of the LCA model that is financed.²⁴⁴⁸ Such repayments are made in the form of per-aircraft levies and follow a pre-established repayment schedule.²⁴⁴⁹ Usually, repayments start with the delivery of the first aircraft. However, in some instances, repayment begins only after Airbus has made a specified number of aircraft deliveries.²⁴⁵⁰

The German government's repayment claims in respect of LA/MSF provided for the A300, A310, A320 and A330/A340 were [***] under a Settlement Agreement that was negotiated in 1989 between the German government, Daimler Benz, MBB and Deutsche Airbus. As we read it, this Settlement Agreement [***] the German government's outstanding repayment claims at the time [***]. Article 12, EC-887 (BCI) and Articles 14(1) and 14(2), EC-887 (HSBI).

²⁴⁴⁹ In addition to repayment through progressive per-aircraft levies, the UK A320 contract [***].

²⁴⁵⁰ Spanish A380 contract, [***]; UK A380 contract, [***]. In addition, we note that one of the Spanish A330/A340 contracts required repayments to the Spanish government [***]. Spanish 1990 A330/A340 contract, Article 5, Exhibit EC-947 (BCI). Evidence before us suggests that this was also the case in respect of the Spanish A320 contract. See, *Boletín Oficial de las Cortes Generales, Congreso de los Diputados, Cuenta*

BCI deleted, as indicated [***]

Although the amount of the per-aircraft levies varies between the different contracts, it appears in all cases to be graduated, such that repayment amounts at the beginning of the repayment period are lower than at the end.²⁴⁵¹ In addition, for [***] of the contracts, royalty payments on a per-aircraft basis are called for on deliveries made in excess of the number needed to secure repayment of the disbursed principal plus any interest.²⁴⁵²

7.375 LA/MSF is provided without any guarantee of repayment in the event that Airbus fails to make the number of deliveries needed to reimburse the full amount of financing obtained from the EC member States. In other words, the scheduled repayments are not secured by any lien on Airbus assets nor are they guaranteed by any third party. The European Communities points out that the governments' claims on revenues generated from the delivery of LCA are, in some cases, guaranteed by one of the companies forming part of the Airbus economic entity.²⁴⁵³ However, notwithstanding this form of guarantee there is no obligation on Airbus (or any company forming part of the Airbus economic entity) to fully (and sometimes even partially) repay LA/MSF in the event that the delivery targets stipulated in the contractual repayment schedules are not achieved.²⁴⁵⁴ Thus, we agree with the United States that Airbus' obligation to fully repay the loans provided under the challenged LA/MSF measures is entirely dependent upon the success of the particular LCA project. The fact that it is possible, under certain contracts,²⁴⁵⁵ for Airbus to make voluntary repayments notwithstanding the number of sales achieved, does not, in our view, alter this conclusion.

Do the Challenged Measures involve a "Financial Contribution"?

7.376 The United States argues that each of the challenged LA/MSF measures involves a "financial contribution" in the form of either a direct transfer of funds or both direct and potential direct transfers of funds, within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. In particular, the United States argues that the LA/MSF contracts for the A300, A310, A320, A330/340, A330-200 and the A340-500/600 constitute *direct* transfers of funds inasmuch as the funding amounts foreseen under those contracts have been disbursed as of the date of the establishment of this panel.²⁴⁵⁶ As far as the LA/MSF contracts for the A380 are concerned, the United States contends that these measures evidence both *direct* transfers of funds and, to the extent that certain committed funding amounts have yet to be disbursed, *potential direct* transfers of funds.²⁴⁵⁷ The United States has submitted various pieces of evidence it argues substantiate these assertions.²⁴⁵⁸ As we have already observed, the

European Communities does not dispute the United States' contention that the challenged measures involve "financial contributions". Moreover, we note that the evidence the European Communities relies upon for the purpose of establishing the amounts of funding provided under several of the challenged measures is identical to that submitted by the United States.²⁴⁵⁹

7.377 On the basis of the arguments and evidence that both parties have presented, it appears to us that all of the funds committed under the A300, A310, A320, A330/A340, A330-200, A340-500/600 and the UK A380 contracts have already been provided to Airbus. To this extent, we believe there is no doubt that, as the United States argues, these measures involved *direct* transfers of funds, and therefore, the provision of a "financial contribution by a government or any public body", within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.

7.378 However, we note that not all of the funds committed under the French, German and Spanish A380 contracts have been paid out. In particular, the French A380 contract envisages that certain specific funding amounts would be transferred to Airbus [***].²⁴⁶⁰ Similarly, the German and Spanish A380 contracts both provide for [***].²⁴⁶¹ In all three cases, the outstanding instalments reflect the expected development costs of the A380 at the time of the conclusion of the contracts, subject to [***] in the year of disbursement.²⁴⁶² In other words, the outstanding instalments represent a part of the total (and maximum) amount of funding that it was agreed and planned would be transferred to Airbus for the A380 project. Thus, although the payments under the three contracts have not all been made, it is clear that it was envisaged that the specified funding amounts would be transferred and that Airbus maintains a contractual right to receive them at a predetermined moment in the future so long as it continues to develop the A380.

7.379 The United States argues that the French, German and Spanish A380 contracts exhibit the characteristics of both *direct* transfers of funds (to the extent that funds committed have already been disbursed) and *potential direct* transfers of funds (to the extent that a commitment exists for funds to be disbursed in the future). However, in our view, although a number of the disbursements have not yet been effected, it is more appropriate to characterize the relevant LA/MSF contracts as direct transfers of funds (and in particular "loans") within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. On the basis of the facts that are before us, it is apparent that the undisbursed

BCI deleted, as indicated [***]

funding amounts formed part of the total amount of principal that it was envisaged under the French, German and Spanish A380 contracts would be directly transferred (loaned) to Airbus over a set period of time, as agreed and planned when the respective contracts were concluded. In this sense, the relevant A380 LA/MSF contracts can be contrasted with an open line of credit. A line of credit is not an *ex ante* agreement about the disbursement of specific funding amounts at a pre-determined moment in the future, but rather a lending facility in the form of a promise on the part of a lender to make funding available (in possibly one or more instalments) to a borrower in the event it is requested.²⁴⁶³ Thus, irrespective of whether all of the funds committed under the French, German and Spanish A380 contracts have been paid out, it is in our view clear from the particular facts that are before us that each of the LA/MSF contracts evidences the existence of a "government practice {that} involves a direct transfer of funds" in amounts and at moments agreed and planned at the conclusion of each contract.²⁴⁶⁴ Therefore, we find that the French, German and Spanish A380 contracts are "financial contributions", within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.

7.380 In terms of the amount of the relevant "financial contributions", there is very little difference between the parties' positions,²⁴⁶⁵ which we summarize in the following table:

²⁴⁶³ One such example is the EUR 700 million credit line granted by the European Investment Bank to EADS in 2002. The salient features of this particular credit line are described further at paras. 7.730 - 7.738, where we examine the United States' claim that it amounted to a subsidy within the meaning of Article 1 of the SCM Agreement.

²⁴⁶⁴ We note that this finding is consistent with how the European Communities has itself treated the undisbursed funding amounts under the French, German and Spanish A380 contracts for the purpose of determining the internal rate of return of each contract. *See*, paras. 7.404-7.406 below; and Exhibit EC-597 (HSBI).

²⁴⁸⁴ The European Communities asserts that the actual amount of the "financial contribution" provided for under the Spanish A380 contract was only EUR [***]. EC, Answer to Panel Question 259. According to the European Communities, the maximum amount of EUR [***] set out in the Spanish A380 contract was set on the basis of: (i) a development cost estimate that was greater than the actual estimate assessed by Airbus GIE after conclusion of the contract; and (ii) an expected share in the development costs for CASA that was greater than what was allegedly agreed subsequently. However, in making these factual assertions, the European

BCI deleted, as indicated [***]

7.381 We next turn to consider whether the above "financial contributions" confer a "benefit" upon Airbus, within the meaning of Article 1.1(b) of the SCM Agreement.

Do the Challenged Measures confer a "benefit"?

7.382 We recall that Article 1.1(b) of the SCM Agreement does not define the notion of "benefit". However, it is well established that a "financial contribution" will confer a "benefit" upon a recipient when it places that recipient in a more advantageous position compared with the position of that recipient in the absence of the "financial contribution".²⁴⁸⁶ In *Canada – Aircraft*, both the panel and the Appellate Body considered that the basis for making this comparison was the market. Thus, the panel opined that:

"a financial contribution will only confer a 'benefit', *i.e.*, an advantage, if it is provided on terms that are more advantageous than those that would have been available to the recipient on the market".²⁴⁸⁷

Similarly, the Appellate Body explained that:

"the marketplace provides an appropriate basis for comparison in determining whether a 'benefit' has been 'conferred', because the trade distorting potential of a 'financial contribution' can be identified by determining whether the recipient has received a 'financial contribution' on terms more favourable than those available to the recipient on the market".²⁴⁸⁸

7.383 In essence, the United States' argues that each of the "financial contributions" made available through the challenged LA/MSF measures confers a "benefit" on Airbus, within the meaning of Article 1.1(b) of the SCM Agreement, because each was provided on interest rate terms that are more advantageous than would otherwise be the case if financing on the same or similar terms and conditions had been sought by Airbus from a market lender. In other words, the United States contends that LA/MSF confers a "benefit" because market lenders faced with a request to finance Airbus LCA projects on the same or similar terms and conditions as LA/MSF would demand that Airbus pay a higher rate of interest than did the EC member State governments.

7.384 The European Communities has presented several lines of defence to the United States' allegations. In the first instance, the European Communities rejects the view that the appropriate standard against which to measure whether LA/MSF confers a "benefit" may be found in the interest rates associated with market financing on the same or similar terms and conditions as LA/MSF. For all LA/MSF measures post-dating the entry into force of the 1992 Agreement, the European Communities argues that the question of "benefit" should be resolved by testing whether each relevant LA/MSF contract involves government support that is consistent with Article 4 of the 1992 Agreement. In addition, for all instances of LA/MSF challenged by the United States, with the exception of LA/MSF for the A300 and A310, the European Communities submits that the

Communities refers to no evidence that supports its stated position. Therefore, we have no choice but to reject the European Communities' factual assertion and rely on the *maximum* amount of funding actually prescribed in the Spanish A380 contract.

²⁴⁸⁵ US, FWS, para. 290; UK A380 contract, Article 5, Exhibit US-79 (BCI); Exhibit EC-949 (BCI).

²⁴⁸⁶ Panel Report, *Canada – Aircraft*, para. 9.112, cited with approval in Appellate Body Report, *Canada – Aircraft*, para. 149.

²⁴⁸⁷ Panel Report, *Canada – Aircraft*, para. 9.112; Appellate Body Report, *Canada – Aircraft*, paras. 157-158.

²⁴⁸⁸ Appellate Body Report, *Canada – Aircraft*, para. 157.

BCI deleted, as indicated [***]

reasonableness of the repayment forecasts used to establish the repayment terms of each contract should be the focus of our "benefit" analysis.

7.385 Second, and in the alternative, the European Communities contends that, assuming the market is the appropriate benchmark against which to measure whether LA/MSF confers a "benefit", the interest rates advanced by the United States for this purpose overestimate the rates of interest associated with market financing that is comparable with LA/MSF. According to the European Communities, when the full cost of LA/MSF is compared with appropriate market interest rate benchmarks, the challenged LA/MSF measures do not confer a "benefit" upon Airbus.

Article 4 of the 1992 Agreement

7.386 For LA/MSF measures adopted after the entry into force of the 1992 Agreement (17 July 1992), the European Communities contends that the notion of "benefit" under Article 1.1(b) must be interpreted in the light of Article 4 of the 1992 Agreement. According to the European Communities, the 1992 Agreement is an instrument containing relevant rules of international law applicable between the parties, within the meaning of Article 31(3)(c) of the VCLT, and therefore must be taken into account in the present dispute as relevant context when interpreting the notion of "benefit" under Article 1.1(b) of the SCM Agreement.²⁴⁸⁹ The European Communities characterizes Article 4 of the 1992 Agreement as a rule prescribing the extent to which the United States and the European Communities agreed that "development support" could be legitimately provided to their domestic LCA manufacturers. The European Communities contends that this rule "influences in particular the interpretation of the appropriate benchmark when determining whether a financial contribution has conferred a benefit on the recipient".²⁴⁹⁰ To this end, the European Communities argues that compliance with the "development support" standards established under Article 4 is dispositive of the question whether LA/MSF provided to Airbus after 17 July 1992 conferred a "benefit", within the meaning of Article 1.1(b) of the SCM Agreement.²⁴⁹¹

7.387 Article 4 of the 1992 Agreement reads as follows:

"4.1. Government shall provide support for the development of a new large civil aircraft programme only where a critical project appraisal, based on conservative assumptions, has established that there is a reasonable expectation of recoupment, within 17 years from the date of first disbursement of such support, of all costs as defined in Article 6(2) of the Aircraft Agreement, including repayment of governments supports on the terms and conditions specified below.

4.2. As of entry into force of this Agreement, direct government support committed by a Party for the development of a new large civil aircraft programme or derivative shall not exceed:

(a) 25 % of that programme's total development costs as estimated at the time of commitment (or of actual development costs whichever is lower); royalty payments on this tranche shall be set at the time of commitment of the development support so as to repay this support at an interest rate no less than the cost of borrowing to the government within no more than 17 years from first disbursement; plus

²⁴⁸⁹ A more detailed description of the European Communities' arguments in this regard is set out in our preliminary ruling, at paras. 7.70 - 7.76 above.

²⁴⁹⁰ EC, FWS, para. 399.

²⁴⁹¹ EC, FWS, paras. 394-441.

BCI deleted, as indicated [***]

(b) 8 % of that programme's total development cost as estimated at the time of commitment (or of actual development costs, whichever is lower); royalty payments on this tranche shall be set at the time of commitment of the development support so as to repay such support at an interest rate no less than the cost of borrowing to the government plus 1 % within no more than 17 years from disbursement.

These calculations shall be made on the basis of the forecast of aircraft deliveries in the critical project appraisal.

4.3. Royalty payments per aircraft shall be calculated at the time of commitment of the development support to be repaid on the following basis:

(a) 20 % of aggregate payments calculated in accordance with Article 4.2 is payable on the basis of the delivery of a number of aircraft corresponding to 40 % of forecast deliveries;

(b) 70 % of aggregate payments calculated in accordance with Article 4.2 is payable on the basis of the delivery of a number of aircraft corresponding to 85% of forecast deliveries.¹²⁴⁹²

7.388 Although the European Communities argues that Article 4 serves as relevant context for the *interpretation* of the notion of "benefit", it has not explained exactly how it informs the *meaning* that must be given to this term. Rather, a large part of the European Communities' submissions on this subject are devoted to demonstrating that the post-1992 LA/MSF measures *comply* with the terms of Article 4 of the 1992 Agreement.²⁴⁹³ In this light, it is not entirely clear to us how the European Communities believes the *meaning* of the word "benefit" in Article 1.1(b) of the SCM Agreement is informed by Article 4 of the 1992 Agreement.

7.389 As we have previously noted, Article 4 establishes a set of qualitative and quantitative parameters for the provision of support for the development of new LCA or derivative programmes.²⁴⁹⁴ It identifies the dividing line that was agreed between the United States and the European Communities for acceptable and prohibited "development support" under that Agreement. It contains no definition of a "subsidy" nor does it make any reference to the notion of "benefit". Thus, we see nothing in the language of Article 4 to suggest that it informs the meaning of Article 1.1(b) of the SCM Agreement. Moreover, we cannot simply assume, on the basis of the arguments presented by the European Communities, that "development support" measures taken in compliance with Article 4 of the 1992 Agreement do not have the characteristics of "financial contributions" that confer a "benefit", within the meaning of Article 1.1 of the SCM Agreement. Thus, even assuming that the 1992 Agreement were an instrument containing relevant rules of international law applicable between the parties, within the meaning of Article 31(3)(c) of the VCLT (and once again, we emphasize that on this question, we express no view),²⁴⁹⁵ we are not convinced that Article 4 of that Agreement provides any guidance on how to interpret the concept of "benefit" under Article 1.1(b) of the SCM Agreement. Consequently, we dismiss the European Communities'

²⁴⁹² Agreement between the European Economic Community and the Government of the United States of America concerning the Application of the GATT Agreement on Trade in Civil Aircraft on Trade in Large Civil Aircraft, *Official Journal of the European Communities* of 17.10.1992, No. L 301, p. 32, EC, Request for Preliminary Ruling, 26 October 2005, Exhibit EC-4 (submitted with Request Preliminary Ruling).

²⁴⁹³ EC, FWS, paras. 405-441.

²⁴⁹⁵ See, para. 7.100 above.

BCI deleted, as indicated [***]

argument that the benchmark to be applied when assessing whether LA/MSF confers a "benefit" should, in effect, be Article 4 of the 1992 Agreement.

"Reasonableness of the repayment forecasts"

7.390 The European Communities asserts that the "decisive factor" for determining whether LA/MSF measures for the A330-200, A340-500/600 and the A380 confer a benefit is the reasonableness of the repayment forecasts. Although, initially, the European Communities advanced this argument in respect of only the LA/MSF measures for the A330-200, A340-500/600 and the A380, it subsequently declared that it could be of equal relevance to certain pre-1995 LA/MSF measures (specifically, the A320 and A330/A340 contracts) if the Panel were to reject its specific defences advanced in relation to these measures based on the temporal scope of the SCM Agreement and the relevance of the Tokyo Round Subsidies Code.²⁴⁹⁶ Because we have dismissed these two defences, the following evaluation should be understood as addressing the European Communities' arguments as they relate to all of these measures, namely, LA/MSF for the A320, A330/A340, A330-200, A340-500/600 and the A380.

7.391 The European Communities contends that the reasonableness of the repayment forecasts used to establish the repayment terms in each of the challenged LA/MSF contracts is the most relevant benchmark for assessing the question of benefit because it has a direct impact on the extent to which repayments will be made. Thus, if the repayment terms of LA/MSF are based on a reasonable forecast of LCA sales, it is more likely that it will be repaid in full, and consequently, that the target rate of return will be achieved. It is only when the repayment forecast is not a reasonable one – that is, unreasonably optimistic, spreading repayment over an unreasonably large number of sales, and thereby delaying the point at which the target rate of return is achieved – that a benefit will be conferred.²⁴⁹⁷ According to the European Communities, this view is indirectly supported by footnote 16 of the SCM Agreement, which it argues suggests that the drafters of the SCM Agreement were aware of the fact that royalty-based financing in the LCA sector needs to be assessed against the reasonableness of the sales forecast used to establish its terms of repayment. Thus, the European Communities submits that the reasonableness of the repayment forecast contained in the LA/MSF contracts should be "at the heart of any legal assessment [***] under the SCM Agreement".²⁴⁹⁸

7.392 The United States disputes the European Communities' contentions. In the view of the United States, the argument that the reasonableness of repayment forecasts is the appropriate benchmark for determining whether LA/MSF confers a benefit ignores the fact that a subsidy may exist irrespective of the reasonableness of a government's expectations about the number of sales needed to secure full repayment of LA/MSF. In particular, the United States argues that if the rate of return obtained by the government for the financing of an LCA project is set at, for example, its own borrowing rate, a LA/MSF recipient will receive an advantage notwithstanding the fact that the repayment terms may be based on a reasonable estimate of the number of sales needed to achieve full repayment of that LA/MSF.²⁴⁹⁹ Moreover, according to the United States, footnote 16 of the SCM Agreement does not support the European Communities' argument. In its view, if anything, the very fact that the drafters of the SCM Agreement saw a need to clarify that a particular circumstance involving the implementation of royalty-based financing "does not in itself" constitute deemed serious prejudice, suggests that they presumed the provision of LA/MSF confers a benefit and therefore constitutes a

BCI deleted, as indicated [***]

subsidy. The United States considers that there would have been no need to make the clarification otherwise.²⁵⁰⁰

7.393 The United States also notes that footnote 16 is no longer in effect, and in any case that it "explicitly deals not with 'benefit' but with one category of adverse effects – serious prejudice – and then only 'for the purposes of this subparagraph'".²⁵⁰¹ Thus, the United States argues that any relevance of footnote 16 is limited to the specific context in which it is found – the question of "serious prejudice" under Article 6.1(d) of the SCM Agreement. Had the drafters of footnote 16 also intended it to be relevant to the question of "benefit", the United States submits that they could have easily included a footnote to Article 1.1(b) of the SCM Agreement making that point.²⁵⁰² However, the drafters did not; and according to the United States, the European Communities' interpretation of the lack of any footnote or cross-reference amounts to a "distortion of customary rules of interpretation of international law".²⁵⁰³

7.394 Finally, the United States rejects the European Communities' assertion that its Communication to the Negotiating Group on Rules in March 2003 indicates that it supports the European Communities' interpretation of Article 1. The United States explains that the Communication did not purport to identify the "only" circumstance in which royalty-based financing would bestow a benefit, but rather, only one such circumstance where that result would be "obvious". Moreover, the United States notes that its statement referred to "assumptions and sales projections", which it explains encompass "the very factors the EC ignores: the rate of return and other key terms" of LA/MSF.²⁵⁰⁴

7.395 We believe it is useful to start our evaluation of the European Communities' defence by examining the text of footnote 16 in the immediate context in which it appears, that is, in the light of Article 6.1(d) of the SCM Agreement. The relevant language reads:

"6.1 Serious prejudice in the sense paragraph (c) of Article 5 shall be deemed to exist in the case of:

...

(d) direct forgiveness of debt, *i.e.*, forgiveness of government-held debt, and grants to cover debt repayment.¹⁶

¹⁶ Members recognize that where royalty-based financing for a civil aircraft programme is not being fully repaid due to the level of actual sales falling below the level of forecast sales, this does not in itself constitute serious prejudice for the purposes of this subparagraph."

Thus, Article 6.1(d) identifies one form of government action that is deemed to cause serious prejudice within the meaning of Article 5(c) – direct debt forgiveness. Although the legal effect of this provision, including footnote 16, has lapsed, we do not preclude that it could nevertheless be useful to understanding the different types of measures that the SCM Agreement was intended to address.²⁵⁰⁵

²⁵⁰⁰ US, SWS, para. 62.

²⁵⁰¹ US, FNCOS, para. 38.

²⁵⁰² US, FNCOS, para. 38.

²⁵⁰³ US, SWS, para. 59.

²⁵⁰⁴ US, SWS, para. 61.

²⁵⁰⁵ We recall that we have already noted that paragraph 7 of Annex IV of the SCM Agreement (which like Article 6.1(d) is no longer in force) provides an important indication of the intended scope of Article 5. *See*, para. 7.64 above.

BCI deleted, as indicated [***]

7.396 When read together with Article 6.1(d), footnote 16 indicates a recognition on the part of Members that, in the context of royalty-based financing for civil aircraft programmes, the mere fact that actual aircraft sales may fall below the level of forecast sales cannot, in itself, be taken as evidence of direct debt forgiveness, and therefore cannot be deemed to cause serious prejudice for the purposes of Article 6.1(d). In other words, the fact that royalty-based financing for civil aircraft programmes may not be fully repaid because of a shortfall in actual aircraft sales compared with sales forecasts is not, on its own, enough to characterise lower than expected levels of royalty payments as a form of direct debt forgiveness that must be deemed to cause serious prejudice. To the extent that the effect of footnote 16 is expressly limited to the purposes of Article 6.1(d) – that is, determining whether direct debt forgiveness can be deemed to cause serious prejudice – it is clear that it was not intended to inform the meaning of "benefit" under Article 1.1(b). This is confirmed by the absence of any cross-reference to footnote 16 (or any other text) qualifying the language of Article 1.1(b). In this regard, we note that elsewhere in the SCM Agreement, where Members considered it was necessary to modify the language of a particular obligation to account for civil aircraft, they did so by inserting appropriate footnotes.²⁵⁰⁶

7.397 At most, we consider that the language of footnote 16 may be read to imply that when actual aircraft sales do not fall below the level of forecast sales under a royalty-based financing instrument (*i.e.*, the situation the European Communities suggests evidences the existence of a "reasonable repayment forecast"), it would be inaccurate to characterise that instrument as providing for direct forgiveness of debt. However, this is not the same as saying that all instances of royalty-based financing granted on the basis of a "reasonable repayment forecast" do not confer a benefit within the meaning of Article 1.1(b) of the SCM Agreement. In our view, a reasonable repayment forecast, in the terms advanced by the European Communities – *i.e.*, a reasonable number of sales over which a market lender could expect full repayment of loaned principal plus interest²⁵⁰⁷ – cannot alone be determinative of whether a royalty-based financing instrument (in this case LA/MSF²⁵⁰⁸) confers a benefit for the purpose of the SCM Agreement. While we can accept that an *unreasonable* repayment forecast may signal that a loan confers a benefit,²⁵⁰⁹ we do not believe the opposite will necessarily be the case when LA/MSF is grounded on a reasonable repayment forecast. This is because the number of sales over which full repayment is expected says little, if anything, about the appropriateness of the rate of return that will be achieved by the lender.

7.398 As we see it, the rate of return attached to a LA/MSF contract may be viewed as the "price" the contractual parties agreed to pay/receive for the particular rights and obligations established thereunder, including those defined by the repayment schedule. Therefore, the rate of return earned on each LA/MSF contract represents not only the envisaged financial gain for the lender (the EC member State governments), but also the apparent financial cost for Airbus. Bearing in mind that it is now well established that the question of benefit under Article 1.1(b) of the SCM Agreement should be resolved by comparing the situation of the recipient of a financial contribution with and without

²⁵⁰⁶ The SCM Agreement contains two other footnotes that refer to civil aircraft – footnotes 15 and 24. Footnote 15 reads: "Since it is anticipated that civil aircraft will be subject to specific multilateral rules, the threshold in this subparagraph does not apply to civil aircraft." Footnote 24 reads: "Since it is anticipated that civil aircraft will be subject to specific multilateral rules, the provisions of this subparagraph do not apply to that product." Together with footnote 16, these are the only parts of the SCM Agreement that make specific reference to civil aircraft.

²⁵⁰⁷ EC, Answer to Panel Question 73.

²⁵⁰⁸ We note that neither party has distinguished the challenged LA/MSF measures from "royalty-based financing" falling within the scope of footnote 16. However, strictly speaking, not all of the LA/MSF contracts at issue in this dispute envisage the payment of "royalties" in the sense that we have described at para. 7.374 above, and analysed in more detail at paras. 7.410 below *et seq.*

²⁵⁰⁹ For instance, where full repayment is expected over an unrealistically high number of LCA sales, such that no market lender would be willing to agree to make a loan on the same or similar repayment conditions.

BCI deleted, as indicated [***]

that contribution,²⁵¹⁰ we believe that it makes sense to focus the assessment of whether LA/MSF confers a benefit on whether the rate of return of the challenged measures is lower than the rate of return that would be sought by a market lender for financing on the same or similar terms and conditions, taking into account a comparable schedule of repayment. So, for example if a government LA/MSF contract envisaged a zero rate of return on the basis of a reasonable repayment forecast, it would obviously confer a benefit, if in the absence of the zero-interest loan, Airbus could only obtain the same or similar financing from a market lender at a rate of interest of 3%.

7.399 However, the European Communities submits that in the context of LA/MSF, the question of benefit should not be determined through a strict comparison of LA/MSF rates of return with the rates of return attached to comparable market financing instruments. As we understand it, under this line of argument, the European Communities considers reliance on a "'perfect' market"²⁵¹¹ benchmark for this purpose would be inappropriate because of the heavy government intervention and international regulation it alleges is found in the LCA industry. The European Communities draws support for its position from certain observations made by the Appellate Body in *US – Countervailing Measures on Certain EC Products*, which the European Communities argues stand for the proposition that "fair" market transactions may not always be the most appropriate benchmarks for the purpose of establishing the existence of subsidies under the SCM Agreement, particularly where the market for those transactions has been distorted by government action.²⁵¹² According to the European Communities, the LCA industry is one sector of the economy where the Appellate Body's observations find considerable relevance.

7.400 We are not persuaded by the European Communities' arguments on this point. Even assuming that the particular observations of the Appellate Body relied upon by the European Communities were directly applicable to the present factual circumstances,²⁵¹³ the European Communities has provided no evidence or explanation of how alleged government intervention in the LCA industry distorts the behaviour of market lenders such that it renders the rate of return they would ask for financing comparable to LA/MSF an inappropriate benchmark upon which to base a benefit analysis. While we recognize that the LCA industry has particular features that sets it apart from many other industrial sectors,²⁵¹⁴ in the absence of clear arguments and evidence of government action distorting non-government loan markets, we cannot accept the European Communities' assertion that the "reasonableness of repayment forecasts" used to construct LA/MSF contracts is the "decisive factor"²⁵¹⁵ for determining whether a LA/MSF contract confers a benefit and constitutes a subsidy under the SCM Agreement. We therefore dismiss the European Communities' contention.

7.401 Having closely reviewed and considered the arguments and evidence submitted by the parties, we believe that it is appropriate to resolve the question whether LA/MSF confers a benefit by

²⁵¹⁰ See, paras. 7.310-7.312 and 7.382.

²⁵¹¹ EC, Answer to Panel Question 73.

²⁵¹² EC, FWS, para. 445, referring to Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, paras. 123-124.

²⁵¹³ The particular observations at issue were made by the Appellate Body in *US – Countervailing Measures on Certain EC Products* in the context of a case where, as we have already explained, the "core legal question" before the panel was whether the benefit resulting from a prior non-recurring financial contribution bestowed on a state-owned enterprise continued to exist following its privatization at arm's length and at fair market value, the government having transferred all or substantially all property and controlling interest. Appellate Body Report, para. 117. Given this "very narrow set of facts and circumstances", it is not apparent to us that the guidance of the Appellate Body the European Communities relies upon is as directly relevant to the question we are faced with under the present set of arguments (*i.e.*, whether the rate of return for comparable market financing is an appropriate benchmark for determining whether LA/MSF confers a benefit) as the European Communities contends.

²⁵¹⁴ See, paras. 7.367-7.368 and paras. 7.1883 - 7.1893.

²⁵¹⁵ EC, Answers to Panel Questions 62 and 63.

BCI deleted, as indicated [***]

examining whether the cost of the challenged LA/MSF contracts to Airbus is less than the cost that Airbus would be faced with if it sought financing on the same or similar terms and conditions as LA/MSF from the market. We therefore begin our benefit analysis by examining whether the rate of return obtained by the relevant EC member State governments when providing LA/MSF is less than the rate of return that would be asked by a market-based lender for financing on the same or similar terms and conditions as each provision of LA/MSF. It is to this question that we next turn our attention.

Whether the Rates of Return of the LA/MSF Measures are less than the Rates of Return of comparable Market-Based Financing

7.402 The parties have made extensive arguments and submitted much detailed evidence, including expert studies and reports, on the question whether the rates of return obtained by the EC member State governments for the provision of LA/MSF are less than the rates of return that would be required by a market lender for financing on the same or similar terms and conditions as LA/MSF. In doing so, they have presented two very different perspectives and conclusions.

LA/MSF Rates of Return

7.403 In its first written submission, the United States identified what it considers to be the "actual"²⁵¹⁶ rates of return that each EC member State government expected to obtain from each provision of LA/MSF in the event that it was fully repaid. The United States explains that in a number of instances, it derived these rates from information contained in the LA/MSF contracts themselves. However, where the United States did not have access to the relevant LA/MSF contracts, it estimated the rates of return on the basis of information obtained during the Annex V process or information publicly available.²⁵¹⁷ As we understand it, the United States did not factor potential royalty payments foreseen under any of the contracts into its calculations. The rates of return advanced by the United States are the following:²⁵¹⁸

²⁵¹⁶ The United States argues that "its determination of the benefit conferred by Launch Aid relies on a comparison between a market benchmark and the actual interest rates set out in the Launch Aid contracts". US, SWS, para. 121. (Underline added).

²⁵¹⁷ The United States recalls that during the Annex V process, the European Communities refused to provide any information at all, including copies of the LA/MSF contracts, in respect of the challenged A300, A310, A320 and A330/A340 LCA projects. The United States argues that the logical inference that should be drawn from this failure to provide information, in the light of paragraph 7 of Annex V of the SCM Agreement, is that the missing contracts would demonstrate that each grant of LA/MSF is a subsidy. US, FWS, paras. 167-168. We note that the European Communities subsequently submitted copies of what it considered to be all of the relevant contracts and business cases as Exhibits to its first written submission and in Answer to Panel Questions 78, 246, 248, 249, 252 and 262.

²⁵¹⁸ Ellis Report, Table 4, p. 25. Exhibit US-80 (BCI).

BCI deleted, as indicated [***]

Table 2 – LA/MSF rates of return proposed by the United States

Aircraft Model	France	Germany	Spain	UK
A300	0%	0%	0%	-
A310	0%	0%	0%	-
A320	0% or below market	0% or below market	0%	[***]
A330/A340	[[HSBI]]	0%	0%	[***]
A330-200	[[HSBI]]	-	-	-
A340-500/600	[***]	-	[***]	-
A380	[***]	[***]	[***]	[***]

7.404 The European Communities rejects the rates of return established by the United States, arguing that they underestimate the actual returns anticipated by the EC member State governments. In the European Communities' view, the rates of return that the EC member State governments expected to obtain from each of the challenged LA/MSF measures must be determined taking into account the contractual repayment terms, including any anticipated royalty payments that would be due over the life of the financed aircraft, and, where relevant, the effects of taxation.²⁵¹⁹ The European Communities describes this as the "implicit rate of return" of each of the LA/MSF contracts – *i.e.*, the percentage rate of return the EC member State governments anticipated from the projected LA/MSF cash-flows at the time the LA/MSF contracts were concluded.²⁵²⁰ The European Communities calculated an "implicit rate of return" for each of the A320, A330/A340, A330-200, A340-500/600 and A380 LA/MSF contracts.²⁵²¹

Implicit Rates of Return Before Taxation

7.405 The European Communities explains that the first step in arriving at the "implicit rates of return" of the LA/MSF measures involves determining each contract's internal rate of return ("IRR").²⁵²² The European Communities calculated an IRR for each of the challenged LA/MSF contracts (with the exception of the A300 and A310 contracts) by identifying the interest rate that sets at zero the net present value ("NPV") of actual or anticipated LA/MSF receipts²⁵²³ (*i.e.*, LA/MSF-inflows) and expected repayments (including any lump sum payments and royalties) (*i.e.*, LA/MSF-outflows) on the basis of the aircraft delivery forecasts contained in the relevant Airbus business case.

7.406 In particular, for LA/MSF contracts that did not foresee the payment of royalties,²⁵²⁴ the European Communities identified the IRR as the discount rate that set the NPV of all programmed

²⁵¹⁹ EC, FWS, paras. 537-541; EC, Answer to Panel Question 69; EC, Comment on United States Answer to Panel Question 142.

²⁵²¹ ITR LLC Report, pp. 4-5, Exhibits EC-13 (BCI) and EC-13 (HSBI); and Table presented in Exhibit EC-597 (HSBI). The European Communities has not submitted any calculation of the rates of return associated with the challenged A300 and A310 LA/MSF measures.

²⁵²² EC, Answer to Panel Question 69.

²⁵²³ The European Communities appears to have relied upon what it asserts were the actual LA/MSF receipts in respect of the UK A320 contract ([***]), the UK A330/A340 contract ([***]) and the Spanish A380 contract ([***]). Compare Exhibit EC-597 (HSBI) with Exhibits EC-94 (BCI), EC-86 (BCI) and US-73 (BCI). In the case of the two UK contracts, [***], and in any case the European Communities appears to have taken account of the slight variances by adjusting the repayment schedules applied in its analyses. However, in the case of the Spanish A380 contract, we consider the difference to be significant and recall that the European Communities has failed to substantiate its assertion that the amount originally provided for under the relevant contract [***] was not in fact transferred to Airbus. *See*, footnote 2484.

²⁵²⁴ The LA/MSF contracts that *do not* contain any royalty provisions are the [***].

BCI deleted, as indicated [***]

disbursements over time and all repayments at zero, taking into account the number and timing of deliveries projected in the relevant Airbus business case. Essentially the same methodology was applied to those measures containing royalty provisions,²⁵²⁵ with the only difference being that the value of royalty payments anticipated in the light of the number, timing and (for some contracts) the forecast prices of deliveries²⁵²⁶ projected by Airbus in its business case were taken into account. For instance, the European Communities explains that the UK A330/A340 contract requires full repayment of LA/MSF contributions [***].²⁵²⁷ However, according to the European Communities, the Airbus business case for this aircraft projects fewer than this number of deliveries over the entire life of the aircraft.²⁵²⁸ In this light, the European Communities calculated the IRR for the UK A330/A340 contract on the basis of the total repayments (including royalties) anticipated over the number and timing of aircraft deliveries projected in the Airbus business case.²⁵²⁹ On this basis, the European Communities determined the following IRRs:²⁵³⁰

Table 3 – LA/MSF implicit rates of return before taxation proposed by the EC

Aircraft Model	Alleged LA/MSF Rates of Return Before Taxation (EC)			
	France	Germany	Spain	UK
A320	[***]	[***]	[***]	[***]
A330/A340	[***]	[***]	[***]	[***]
A330-200	[***]	-	-	-
A340-500/600	[***]	-	[***]	-
A380	[***]	[***]	[***]	[***]

7.407 Although the United States contests the European Communities' view that the rates of return expected by member States from each of the challenged LA/MSF measures must be determined taking into account the IRR for each LA/MSF contract,²⁵³¹ we do not understand the United States to contest the general NPV of cash-flows methodology applied by the European Communities to determine these IRRs. Indeed, where it had access to information on LA/MSF disbursements and repayments, the United States appears to have relied upon a similar methodology to derive the values of the interest rates it submits were actually charged by the EC member States for LA/MSF.²⁵³² Moreover, we note that the United States has itself identified the same rates of return as the European Communities for the Spanish A320, A330/A340 and A380 contracts. Nevertheless, the United States does take issue with at least two particular aspects of the European Communities' calculation. The first is its reliance on projected aircraft deliveries, as opposed to actual deliveries, in order to establish

²⁵³⁰ ITR LLC Report, pp. 4-5, Exhibit EC-13 (BCI); and Table presented in Exhibit EC-597 (HSBI). We recall that the European Communities did not undertake any such calculation for the A300 and A310 LA/MSF measures.

²⁵³¹ US, SWS, paras. 120-130; US, Comments on EC Answer to Panel Question 249.

²⁵³² The Ellis Report explains that the interest rate identified for the UK A320 contract was calculated on the basis of "disbursements and repayments until the end of 1999"; the UK A330/A340 contract on the basis of "available disbursements, repayments and delivery data"; and the UK A380 contract on the basis of "initially estimated delivery schedule disclosed in association with the Launch Aid Agreements and interest rates as defined" in the contract. Ellis Report, p.26, Exhibit US-80 (BCI).

BCI deleted, as indicated [***]

the amount and timing of LA/MSF repayments; and the second is the European Communities' consideration of royalty payments.²⁵³³

7.408 To the extent that the IRRs determined by the European Communities are based on the number, timing and (for some contracts) the forecast prices of deliveries projected in the relevant Airbus business case, they are entirely dependent upon the credibility of the Airbus business plan, and therefore inherently contain an element of speculation. Thus, as the United States appears to note,²⁵³⁴ the IRRs calculated by the European Communities do not result from an absolute legal obligation on Airbus to make repayments over a set period of time at a given interest rate. Rather, they are based on a repayment obligation that is conditional upon Airbus' business plan actually being met.

7.409 As regards the European Communities' consideration of royalty payments,²⁵³⁵ the United States argues that the royalties foreseen under the LA/MSF contracts are [***] – between [***] – and are due only after a large number of deliveries have been made. Because of what the United States argues is "the very substantial uncertainty attached to any royalties due this far out into the future and depending entirely on Airbus successfully selling more planes than the specified royalty-based thresholds",²⁵³⁶ it contends that royalty payment expectations must have played only a marginal role, at most, in the government lenders' financing decisions.²⁵³⁷ Thus, the United States does not argue that royalty payment expectations are irrelevant, but merely that they must play only a marginal role in determining the rate of return that the EC member State governments anticipated at the moment of concluding the LA/MSF contracts. Moreover, for the United States, a commercial investor would be unlikely to take into account the prospects of any such potential royalty returns, but would instead look to recover its investment and make a commercial return over a much shorter period of time.²⁵³⁸

7.410 Royalty payments were factored into the European Communities' IRR calculations for the [***] contracts, the [***] contracts, and the [***] contract. As we understand it, the royalties foreseen under these contracts represent a share in the revenues generated from sales of the financed LCA, *after* the full amount of LA/MSF has been repaid. In our view, the fact that such payments were expressly provided for in these contracts indicates that the EC member State governments to some degree anticipated they could enhance the rate of return that would otherwise be achieved on their LA/MSF investment. However, exactly how much the EC member State governments expected their returns to improve depends upon the number and timing of aircraft deliveries they anticipated would attract the specified royalty payments.

²⁵³³ The United States also asserts that the European Communities has not properly substantiated its calculations because it: (i) failed to disclose the calculations on which its alternative rates were based and the underlying data; (ii) redacted the delivery schedules used in its calculations; and (iii) refused to provide the underlying business cases. According to the United States, such information would have been essential for the United States and the Panel to critically examine its calculations. US, FNCOS, paras. 56-57; US, Comments on EC Answer to Panel Question 249. We recall that the European Communities submitted copies of what it considered to be all of the relevant contracts and business cases as Exhibits to its FWS and in its Answer to Panel Questions 78, 246, 248, 249, 252 and 262. While we consider that the information submitted by the European Communities to support its calculations of the IRR should have been presented in its entirety with the European Communities' first written submission, when the European Communities first revealed its analysis on the LA/MSF rates of return; and although the information the European Communities submitted throughout this proceeding was not as complete as we would have liked, overall it was sufficient to permit us to verify and evaluate the European Communities' assertions in respect of the appropriate IRRs. See, paras. 7.408 - 7.424.

²⁵³⁸ US, Answer to Panel Question 142.

BCI deleted, as indicated [***]

7.411 The European Communities argues that the answer to this question lies in the aircraft delivery forecast that the Airbus business case predicts would be achieved over the life of the particular LCA project.²⁵³⁹ This is because, according to the European Communities, Airbus' business case delivery forecasts informed the parties' repayment expectations in respect of each of the relevant LA/MSF measures, an assertion the European Communities considers can be substantiated by comparing the IRR calculated for the UK A320 and A330/A340 contracts on the basis of the Airbus delivery forecasts (as we understand it, not including royalty payments), with the rate of return actually specified in those contracts. The European Communities explains that both the UK A320 and A330/A340 contracts explicitly envisage a rate of return to the UK government, after full repayment of its LA/MSF contributions, of [***]. When the per-aircraft levies specified under these contracts are considered in the light of the delivery forecasts contained in the relevant Airbus business cases, the European Communities argues that the resulting IRRs are virtually identical.²⁵⁴⁰

7.412 As we see it, even if the European Communities were correct in its factual assertion,²⁵⁴¹ the extent to which the repayment terms of the LA/MSF contracts were set by reference to Airbus' business case delivery forecasts is not the only factor that must be taken into account when considering whether royalty payments should form part of the actual rate of return anticipated by the EC member State governments. Another important factor to consider is the credibility of the Airbus business case. Because of the graduated levy-based and success-dependent nature of LA/MSF repayments, Airbus has an economic incentive to stretch the life of each aircraft project as much as possible. The greater the number of sales over which principal repayments and royalties must be paid, the less likely it is that Airbus will have to make those payments if the business plan estimates prove to be optimistic. Thus, although ostensibly required by the terms of the LA/MSF agreements, royalty payments may never be made if attached to a number of aircraft sales, which although identified in the business plan that formed the basis of the parties' expectations on concluding the LA/MSF contracts, cannot realistically ever be achieved.²⁵⁴²

7.413 The European Communities argues that the Airbus business case is the product of "an exhaustive internal analysis of the programme's technical and commercial prospects" and "relies on a host of conservative assumptions and methodologies".²⁵⁴³ In addition, because Airbus has had to find its own sources of funding for the majority (67%) of LCA development costs since the entry into force of the 1992 Agreement, the European Communities submits that its business case delivery forecasts have been, by definition, "realistic and sober".²⁵⁴⁴ So much so that they have been "often

²⁵³⁹ EC, FWS, paras. 537-541; EC, Answer to Panel Questions 68 and 69.

²⁵⁴⁰ EC, FWS, para. 549; EC, Answer to Panel Question 69, where it asserts that the IRRs would be [***] and [***], respectively.

²⁵⁴¹ We note that apart from the question whether the EC member States actually relied upon the Airbus business cases when developing their own repayment expectations, it is not entirely clear to us that the schedule of forecast deliveries used by the European Communities in its calculations, Exhibit EC-597 (HSBI), matched the information on projected deliveries contained in the Airbus business cases submitted for the A330-200 and the A330/A340. The A330/A340 business case identified the same number of total forecast deliveries over the same years as Exhibit EC-597 (HSBI), but differed in respect of the numbers of deliveries expected in individual years. The business case for the A330-200 identified a slightly lower number of total forecast deliveries, and did not contain a delivery forecast for individual years. Compare Exhibits EC-597 (HSBI) with EC-775 (HSBI), EC-776 (HSBI), EC-944 (HSBI) and EC-956 (HSBI). Nevertheless, for the purpose of the present analysis, we have assumed that the schedules of forecast deliveries used by the European Communities are approximately accurate and therefore reasonably reliable.

²⁵⁴² Moreover, for certain contracts, the payment of royalties is limited in time, meaning that even a delay in meeting the business plan sales objectives could result in Airbus not having to make any royalty payments. For instance, Airbus' obligation to pay royalties under the French and German A380 contracts is limited in time to [***]. German A380 contract, Section 10.1, Exhibit US-72 (BCI); French A380 contract, Article 7.3, Exhibit US-75 (BCI).

²⁵⁴³ EC, FWS, para. 466.

²⁵⁴⁴ EC, FWS, paras. 465 and 467.

BCI deleted, as indicated [***]

met, and indeed exceeded."²⁵⁴⁵ Nevertheless, the European Communities does not suggest that Airbus' business case delivery forecasts are infallible. Indeed, the European Communities recognizes that forecasts are, by their very nature, "informed judgements about how events that have not yet occurred will unfold in the future", and therefore not always reliable.²⁵⁴⁶

7.414 In our view, the further in time the events that are the subject of a forecast are anticipated to take place, the more likely it is that one or more intervening events may impede their fulfilment. In the specific context of the LCA industry, where, as the European Communities notes, the business environment is shaped by factors "whose very foreseeability is impossible by definition",²⁵⁴⁷ the element of uncertainty that is attached to aircraft delivery forecasts that sometimes projected events over multiple decades²⁵⁴⁸ cannot be ignored. In this regard, we note that like the IRRs determined for contracts that did not provide for royalties, the IRRs established on the basis of royalty payments are inherently speculative and depend upon achieving the number, timing and (for some contracts) the forecast prices of deliveries projected in the relevant Airbus business case. Thus, while we recognize that the inclusion of royalty payment provisions into the LA/MSF contracts is itself evidence of a certain expectation that royalties would be paid, we nevertheless consider that the IRRs established by the European Communities, taking royalty payments into account, could only represent, at most, the outer limit of what the EC member State governments could have reasonably expected at the time of concluding the contracts.

7.415 Subject to this understanding, and notwithstanding certain deficiencies in the evidence the European Communities has presented to substantiate its submissions,²⁵⁴⁹ we believe that for the purpose of the present analysis all but two of the IRRs established by the European Communities may serve as reasonable proxies for the *maximum* rates of return that the EC member State governments could have reasonably anticipated when entering into the LA/MSF agreements. The two IRRs calculated by the European Communities that we cannot accept are those it determined for the Spanish A340-500/600 contract, and the French A330/A340 contract. Before setting out our reasons for rejecting these IRRs, we first address an additional criticism the United States has advanced in respect of the European Communities calculation of the IRR for the French A340-500/600 contract.

7.416 In its first written submission, the European Communities explained that in return for French government LA/MSF funding for the A340-500/600, Airbus was required to pay "a levy for the MSF (including interest) invested in the variant [***]".²⁵⁵⁰ The European Communities' IRR calculations for this LA/MSF measure identified [***] in the cash-outflows column of its calculations, [***].²⁵⁵¹ In other words, the European Communities took [***] into account when identifying the IRR for the French A340-500/600 LA/MSF contract – [***]. The United States argues that the European Communities' inclusion of the [***] repayment stream in its calculations of the IRR for the A340-500/600, instead of the IRR for the A330/A340, is erroneous.²⁵⁵² We disagree.

7.417 That revenues from the sale of derivatives of the A330/A340 would [***] French LA/MSF for this aircraft is provided for in Article 6.2 of the French A330/A340 contract. This provision

²⁵⁴⁵ EC, FWS, para. 467. For instance, as of 31 December 2006 Airbus had sold approximately 3000 A320 aircraft, well above the original business case projections. EC, FWS, para. 331.

²⁵⁵² US, Answer to Panel Question 42.

BCI deleted, as indicated [***]

prescribes that for each [***] Airbus must make a repayment equivalent to [***].²⁵⁵³ Article 6.4 of the French A340-500/600 contract recalls this obligation²⁵⁵⁴ and identifies the [***].²⁵⁵⁵ Thus, reading the provisions of the French A340-500/600 and A330/A340 LA/MSF contracts together, it can be inferred that [***] were envisaged under the French A340-500/600 contract – [***]. Although the [***] repayment stream was formally intended to [***], it was not specifically known how much this repayment would be, if any, at the time that the French A330/A340 LA/MSF contract was concluded. As already noted, Article 6.2 of the French A330/A340 contract sets out [***]. Thus, the French A330/A340 contract does not specify precisely how much the [***] would be, making such repayment entirely speculative at the time the contract was concluded. It follows that the government of France could not have had a clear expectation of how much any derivative aircraft would contribute to the return it received for the A330/A340 contract when it was concluded. Indeed, no consideration of the amount of any expected contribution to repayment of the A330/A340 contract from sales of the A340-500/600 derivative can be found in the A330/A340 cash-flow analysis.²⁵⁵⁶

7.418 In our view, it would be incorrect to include the repayment amounts foreseen only in 1998 (when the French A340-500/600 contract was concluded) in the calculation of the IRR expected by the French government on the A330/A340 contract *at the time it was concluded in 1993*. We are therefore not persuaded by the United States' argument that the [***] repayment stream envisaged under the A340-500/600 contract should form part of the calculation of the returns associated with the French A330/A340 contract. While we can see the merit of this position for the purpose of determining the IRR associated with the French A330/A340 contract at the time of the conclusion of the A340-500/600 LA/MSF contract, we consider that it would not make sense when identifying the IRR expected by the French government at the time of the conclusion of the A330/A340 LA/MSF contract.

7.419 The [***] prescribed in Article 6.4 of the French A340-500/600 contract was not formally earmarked to repay the principal loaned under that contract. However, the funds were clearly a return for the French government that was specifically provided for in the A340-500/600 financing contract. In other words, it was agreed at the time the loan contract was concluded that the French government would receive [***]. In our view, it could be argued that, in practice, a market-based lender in a similar situation to the French government would have included [***] into its calculation of the *overall return* it expected from its participation in the A340-500/600 project at the time of the conclusion of the loan contract. However, it could equally be argued that because the [***] was not strictly intended to be used to repay the funding provided for the A340-500/600 project, a market-based lender would not have taken it into account when calculating the returns it expected to achieve from *that specific loan* at the time of the conclusion of the contract.

7.420 For present purposes, it is not necessary for us to come to a definitive conclusion about which of these two arguments should prevail, because in either case, our findings in respect of whether the French A340-500/600 LA/MSF measure amounts to a subsidy would not change. Moreover, had the United States raised the same criticism in respect of the European Communities' calculation of the IRR for the French A330-200 contract, (which we note was also based on cash-outflows derived from [***]²⁵⁵⁷), we would have come to the same conclusion for the same reasons. Thus, while not rejecting the IRRs calculated by the European Communities for the French A330-200 and A340-500/600 LA/MSF contracts, we will take them into account in the evaluation that follows bearing in mind the views we have expressed about their appropriateness in the preceding paragraphs.

²⁵⁵³ Article 6.2 [***]. The A340-500/600 is not listed in Annexes 1 and 1 *bis* of this contract. Exhibit EC-96 (BCI).

²⁵⁵⁴ Article 6.4 [***] Exhibit EC-91 (BCI).

²⁵⁵⁵ Article 6.4 [***] Exhibit EC-91 (BCI).

²⁵⁵⁶ Exhibit EC-944 (HSBI).

²⁵⁵⁷ EC, FWS, para. 335; Exhibit EC-13 (BCI).

BCI deleted, as indicated [***]

7.421 We next set out our reasons for rejecting the IRRs the European Communities calculated for the French A330/A340 and Spanish A340-500/600 LA/MSF contracts.

7.422 When determining the IRR for the French A330/A340 contract, the European Communities used the repayment schedule set out in the 1988 contract submitted as Exhibit EC-948 (BCI). However, Articles 1 and 6 of this contract indicate that its repayment terms were provisional.²⁵⁵⁸ The final repayment provisions for the French A330/A340 LA/MSF contract were established in a Protocole d'Accord concluded in 1993, which the European Communities submitted as Exhibit EC-96 (BCI). The schedule of repayment that was finally agreed involved an initial repayment levy that was about 50% lower than the one used by the European Communities in its calculations. For this reason, we cannot accept the IRR advanced by the European Communities and instead rely upon the interest rate submitted by the United States, which represents the rate of return specified in a 1997 Note prepared by the French Direction des Programmes Aéronautiques Civils, without taking into account possible royalty payments.²⁵⁵⁹ We note that this interest rate is marginally above the IRR calculated by the European Communities in Exhibit EC-597 (HSBI).

7.423 Finally, as regards the Spanish A340-500/600 contract, the European Communities explains that it calculated an IRR of [***] for this contract by using the methodology it asserts was applied in the contract. In particular, the European Communities identified the relevant [***] and added to this [***].²⁵⁶⁰ Thus, contrary to what the European Communities has previously stated,²⁵⁶¹ the IRR of the Spanish A340-500/600 contract it relies upon was not determined by identifying the IRR that set the NPV of anticipated LA/MSF inflows and outflows at zero, but rather it was calculated on the basis of an interest rate formula which the European Communities asserts was applied in the contract. The relevant interest rate formula reads:

[***]²⁵⁶²

7.424 When averaged over the entire amount of the loan, it is our understanding that this formula results in an overall interest rate that is equivalent to the [***]. The United States seems to contend that the application of this formula results in an interest rate of [***].²⁵⁶³ On the other hand, relying on estimates of the cost of Spanish government borrowing at the time of the *launch* of the A340-500/600 in the Ellis Report, the European Communities arrives at an IRR of [***].²⁵⁶⁴ In our view, both parties' submissions are inappropriate. We note that the Spanish A340-500/600 contract was concluded on 28 December 1998, therefore the relevant government cost of borrowing should be that which existed in 1998, not 1997 when the A340-500/600 was launched.²⁵⁶⁵ The Ellis Report estimates this to have been 4.83%.²⁵⁶⁶ Adding a premium of [***] to this figure results in an interest

²⁵⁵⁸ Exhibit EC-948 (BCI), Article 1 ("The terms relating to this financing are of a provisional nature") and Article 6 ("Reimbursement shall be obtained by [***]).

²⁵⁵⁹ Exhibit EC-HSBI-0001143, p. 25, submitted during the Annex V proceedings; cited by the United States in the Ellis Report, Exhibit US-80 (HSBI).

²⁵⁶⁰ EC, Answers to Panel Questions 249 and 251.

²⁵⁶¹ EC, Answer to Panel Question 69.

²⁵⁶² Spanish A340-500/600 contract, Quinta Clausula, Exhibit EC-87 (BCI).

²⁵⁶³ Ellis Report, Table 5, Exhibit US-80 (BCI).

²⁵⁶⁴ EC, Answer to Panel Question 249.

²⁵⁶⁵ We note that the first disbursement covered by the Spanish A340-500/600 contract was made in 1998. Tercera Clausula, Spanish A340-500/600 contract. In the absence of clear contractual language supporting the European Communities' position, it is difficult to accept that the Spanish government agreed on 28 December 1998 to provide LA/MSF for the A340-500/600 at an interest rate calculated on the basis of its cost of borrowing in the previous year. The European Communities has provided no particular justification for its approach.

²⁵⁶⁶ Ellis Report, Exhibit 3, Exhibit US-80 (BCI). On the other hand, the Spanish government's cost of borrowing for 1997 that was used by the European Communities was estimated in the Ellis Report to be 6.40%.

BCI deleted, as indicated [***]

rate of only [***], more than 150 basis points below the interest rate advanced by the European Communities; and approximately 30 basis points above the rate advanced by the United States. Thus, on the basis of our own assessment of the facts, we cannot accept the IRR submitted by the European Communities, nor the interest rate advanced by the United States. In our view, the appropriate interest rate to use for the Spanish A340-500/600 contract is [***].

Implicit Rates of Return After Taxation

7.425 The European Communities argues that the effects of taxation on both LA/MSF contributions and repayments must be taken into account when arriving at the "implicit rate of return" associated with all instances of LA/MSF that preceded development of the A380. The European Communities explains that prior to the launch of the A380, the EC member State governments classified LA/MSF as taxable income. According to the European Communities, this meant that the EC member State governments not only received interest repayments on the principal of their LA/MSF contributions, but also that they received an additional return through taxation. Conversely, the European Communities argues that this increased the cost of LA/MSF to Airbus and "considerably" decreased the amount of available funds to dedicate to aircraft development. Thus, in arriving at the "implicit rate of return" for the LA/MSF contracts pre-dating the A380, the European Communities argues that the diminished LA/MSF receipts for Airbus, and the increased returns to the governments must be taken into account.²⁵⁶⁷ Accordingly, the European Communities determined the following "implicit rates of return", adjusted for tax effects:

Table 4 – LA/MSF implicit rates of return after taxation proposed by the EC

Aircraft Model				
A320	[***]	[***]	[***]	[***]
A330/A340	[***]	[***]	[***]	[***]
A330-200	[***]	-	-	-
A340-500/600	[***]	-	[***]	-
A380	[***]	[***]	[***]	[***]

7.426 The United States argues that the European Communities' submission on taxation effects is seriously flawed for both factual and legal reasons.²⁵⁶⁸ From a factual perspective, the United States argues that the European Communities has failed to substantiate its assertion with any real evidence, characterizing its answer to the Panel's specific request for evidence of the alleged taxation effects as a "non-response". As a legal matter, the United States contends that taxation effects have no bearing on whether a financial contribution confers a benefit, because the standard that must be applied is the market. In this regard, the United States explains that market-based lenders set interest rates without regard to taxes that recipients may subsequently pay to their governments. Moreover, the United States contends that the EC member State governments could not be aware of the precise tax effects of LA/MSF because factors affecting future levels of taxation, such as depreciation and the carrying forward of losses from prior years, could not be known at the time the LA/MSF contracts are concluded. Therefore, according to the United States, it would be inappropriate to adjust the actual LA/MSF rates of return upwards to account for the effects of taxation. The United States considers that this conclusion is also supported by the European Communities' own practice of not taking taxation effects into account when conducting CVD investigations. To this end, the United States

²⁵⁶⁷ EC, FWS, paras. 542-545; EC, Answer to Panel Questions 69 and 71; EC, Comment on the United States Answer to Panel Question 141.

²⁵⁶⁸ US, SWS, paras. 124-131; US, Answer to Panel Question 141.

BCI deleted, as indicated [***]

cites the following passage from the EU Commission's findings in a 2004 CVD case explaining why taxation effects should be disregarded:

"According to the information available, it can indeed not be excluded that these grants, at a later stage, may increase a company's overall tax liability. However, this would be a future event, and will depend on many factors, most of which are influenced by commercial decisions made by the company itself. Such factors do not only relate to pricing and sales issues, but also concern other issues that determine overall tax liability, such as decisions concerning depreciation rates, the carrying forward of losses and many other factors. All these decisions influence the tax bracket that will finally be applied to the company in a specific tax year. It is therefore not possible to determine exactly to what extent benefits obtained from DEPB sales have contributed to the applicable tax rate".²⁵⁶⁹

7.427 The implication of the European Communities' argument is that the EC member State governments (and Airbus) knew at the time they entered into the LA/MSF contracts that part of the disbursed principal would be returned to the governments through taxation, thereby effectively diminishing the amount of funds available to Airbus. However, there is little, if any, evidence that demonstrates that this was the case. First, the European Communities has pointed to no clause in any of the relevant LA/MSF contracts to indicate that the EC member State governments and Airbus contemplated the effect of taxation on the costs of the LA/MSF arrangements. Moreover, had Airbus believed taxation to be a genuine issue, one would expect that it would have been highlighted in the one document addressing the aircrafts' commercial viability – the Airbus business case. However, the European Communities has pointed to no such concern being expressed in any of the Airbus business cases that have been submitted.

7.428 Second, in response to the Panel's request that it provide evidence of the alleged taxation requirements and payment by Airbus,²⁵⁷⁰ the European Communities furnished the taxation rates allegedly applied in the EC member States at the time of the relevant contracts and a statement from an Airbus executive responsible for taxation matters confirming that Airbus paid all corporate taxes "that were due" in the relevant tax periods.²⁵⁷¹ In our view, this is insufficient to demonstrate that Airbus paid all of the taxes on the *amounts of LA/MSF* which the European Communities argues were subject to taxation. In other words, the European Communities has not substantiated its assertion that the relevant tax rates were applied directly to the *amounts of LA/MSF at issue*, and that Airbus made a corresponding tax payment. In any case, even acknowledging that corporate taxes were paid by Airbus, we understand that they were of a general nature and not specifically attached to LA/MSF. Thus, we agree with the United States²⁵⁷² that the extent to which the LA/MSF amounts received had any impact on Airbus' tax burden cannot be determined through the straightforward application of the corporate tax rates in force at the time of the relevant LA/MSF contributions. Although it may well be that some part of the funds received through LA/MSF measures would return to the EC member State governments through the effect of general corporate taxation, identifying this amount would seem to be a more complicated endeavour than implied by the methodology used by the European Communities to derive the tax-adjusted "implied rates of return".

²⁵⁶⁹ Council Regulation (EC) No. 74/2004 of 13 January 2004 imposing a definitive countervailing duty on imports of cotton-type bed linen in India, recital 50, (emphasis added by the United States), Exhibit US-538, referred to in US, SWS, para. 129.

²⁵⁷⁰ Panel Question 71.

²⁵⁷¹ See, also, EC, Comments on the United States Answer to Panel Question 142, and Exhibit EC-658 (BCI).

²⁵⁷² US, SWS, para. 129.

BCI deleted, as indicated [***]

7.429 Finally, even if we were to understand the European Communities' argument on taxation effects differently, that is, as the argument that the taxation of income generated through economic activity facilitated by LA/MSF must be taken into account, we would also reject it. In our view, there is no basis in the SCM Agreement to support the view that the amount of a financial contribution may be reduced for any tax payments made to the government on income generated from economic activity that is facilitated by that financial contribution.

7.430 We are therefore not convinced by the argument that the taxation effects described by the European Communities should be taken into account in setting the "implicit rate of return" for the relevant LA/MSF contracts pre-dating the A380. Consequently, we reject the tax-adjusted "implicit rates of return" determined by the European Communities, and find that they cannot be relied upon to identify the actual rates of return associated with the challenged LA/MSF measures.

7.431 In the light of the foregoing, the LA/MSF interest rates that we will consider in the remainder of our benefit analysis, and which we believe may serve as reasonable proxies for the *maximum* rates of return that the EC member State governments could have reasonably anticipated when entering into the LA/MSF agreements, are the following:

Table 5 – LA/MSF Rates of Return²⁵⁷³

Aircraft Model	France	Germany	Spain	UK

Rates of Return of Comparable Market-Based Financing

7.432 Relying on separate studies prepared specifically for the purpose of this dispute by different economic experts,²⁵⁷⁷ the parties have submitted their own individual estimates of the rates of return they consider a market lender would have required to provide financing to Airbus on the same terms and conditions as the relevant provisions of LA/MSF. According to the United States, such rates should reflect both the risks associated with Airbus' general borrowing activities and the specific risks associated with LCA development and the features of LA/MSF. Thus, the United States submits that the commercial rates of return for financing which is comparable to LA/MSF may be constructed on the basis of: (i) ten-year long-term government borrowing rates (representing the general risk-free cost of capital); (ii) ten-year company-specific general borrowing rates (representing the general level of risk associated with lending to Airbus); and (iii) a project-specific risk premium (representing the risk

²⁵⁷³ Unless otherwise indicated, the maximum rates of return identified in this table are sourced from Exhibit EC-597 (HSBI) (see "IRR Without the Effects of Taxation").

²⁵⁷⁴ See above, Table 2. See also further below, paragraph 7.484.

²⁵⁷⁵ See above, paragraph 7.422.

²⁵⁷⁶ See above, paragraphs 7.423 - 7.424.

²⁵⁷⁷ The studies the United States has presented for this purpose are: The Ellis Report, Exhibits US-80 (BCI) and US-80 (HSBI), and Ellis Answer to Whitelaw, Exhibits US-534 (HSBI) and US-534a BCI. The studies the European Communities has presented for this purpose are the Whitelaw Report, Exhibit EC- 11 (BCI/HSBI) and the Whitelaw Rebuttal Report, Exhibit EC- 656 (BCI/HSBI).

BCI deleted, as indicated [***]

profile of LCA development and the features of LA/MSF).²⁵⁷⁸ The borrowing rates established by the United States in this manner are identified in the following table. For various reasons, the United States argues that they are based on conservative assumptions and therefore understate what it considers would be the true level of market borrowing rates for financing comparable to LA/MSF.²⁵⁷⁹

Table 6 – Market Rates of Return Proposed by the United States

Aircraft Model	France	Germany	Spain	UK
A300	16.52%	15.18%	16.60%	-
A310	18.88%	13.99%	18.88%	-
A320	20.49%	15.95%	24.52%	19.59%
A330/A340	17.86%	14.52%	21.19%	17.97%
A330-200	17.22%	-	-	-
A340-500/600	14.47%	-	15.29%	-
A380	13.89%	13.75%	14.07%	13.54%

7.433 The European Communities does not reject the entirety of the United States' construction of the proposed interest rate benchmarks, and applies the same general government and corporate borrowing rates used in the United States' calculations when deriving its own proposed market-based rates of return.²⁵⁸⁰ However, the European Communities does take issue with the value that the United States proposes for the project-specific risk premium, arguing that it is overstated because, in the European Communities' view, it is based on the returns that would be expected from equity-based financing. The European Communities presents its own alternative project-specific risk premium based on what it asserts are the returns expected by the risk-sharing suppliers participating in the A380 project. The European Communities argues that this benchmark is more appropriate than the one advanced by the United States because it more closely reflects the debt-like characteristics of LA/MSF. Accordingly, the European Communities established its own estimates of the rates of return for market financing comparable to LA/MSF on the basis of HSBI.²⁵⁸¹ All of the European Communities' proposed market rates of return are lower than those advanced by the United States; in some cases the difference between the two parties' submissions is considerable.

7.434 Thus, although the parties have presented different overall views on the appropriate rates of return that a market lender would demand when providing financing to Airbus on the same or similar terms and conditions as LA/MSF, their disagreement in terms of the overall levels of the relevant market interest rate benchmarks is focused on the value of the project-specific risk premium. It is to this aspect of their calculations that we next turn our attention.

²⁵⁷⁸ Ellis Report, pp. 1-23.

²⁵⁷⁹ For instance, one of the conservative assumptions that the United States asserts has been adopted in the Ellis Report analysis is the use of government and corporate borrowing rates with a maturity of ten years. The United States argues that the use of a ten year maturity understates the actual credit spreads associated with the LA/MSF contracts, which are open-ended or have a maturity that is significantly longer than ten years. Ellis Report, pp. 7-8, 11.

²⁵⁸⁰ EC, FWS, paras. 489-490.

BCI deleted, as indicated [***]

Project-specific risk premium advanced by the United States

7.435 The United States submits that LA/MSF is a "hybrid" finance instrument that has characteristics of both debt and equity.²⁵⁸² According to the United States, LA/MSF is debt-like in that it contains a schedule of promised repayments, and in some cases a stated interest rate. However, the United States explains that like equity and unlike debt, LA/MSF does not entitle the EC member State governments to repayment with interest over a specified period of time; it has no fixed maturity, and repayments depend entirely on sales which may or may not occur according to a scheduled forecast. Moreover, like shareholders and unlike ordinary creditors, the United States asserts that in the event that Airbus fails, the EC member State governments have no recourse to obtain repayment, whereas corporate bondholders may declare the debtor company to be in default and pursue whatever remedies they have to recover their initial investment. In addition, the United States notes that while LA/MSF is dependent upon the success of a single project, typical corporate debt is dependent upon the success of the whole company. It is because of precisely this type of repayment structure that the United States contends Fitch Ratings agency has declared that it "does not treat launch aid as debt".²⁵⁸³

7.436 Given its alleged "hybrid" nature, the United States argues that the most appropriate market interest rate benchmark for LA/MSF is one that reflects both its debt-like and equity-like characteristics. The United States submits that the benchmarks presented in the Ellis Report reflect precisely these characteristics.

7.437 The market interest rate benchmarks identified in the Ellis Report are constructed by adding a 700 basis point project-specific risk premium to the sum of the relevant Airbus entity's cost of debt calculated in the Ellis Report for each of the challenged LA/MSF contracts. This risk premium was derived from the results of a 2004 empirical study of venture capital investments undertaken by Kerins, Smith and Smith ("KSS Study").²⁵⁸⁴ Ellis explains that the KSS Study found returns on venture capital investments to range from 16.7% to 57.5%, depending on the diversification of the investor. The project-specific risk premium of 700 basis points was derived from the lowest return in this range (*i.e.*, 16.7%), which represents the return obtained by a "well diversified investor in both venture capital projects and other, less risky, equity investments represented by a stock market index".²⁵⁸⁵ The United States characterizes the Ellis Report project-specific risk premium as the opportunity cost of capital for a well-diversified portfolio of venture capital investments including both debt and equity instruments.²⁵⁸⁶ In its view, the risk premium is itself "hybrid", which not only matches the essential characteristics of LA/MSF, but also means that the overall Ellis Report market interest rate benchmark "if anything, is biased towards debt and thus too conservative".²⁵⁸⁷

7.438 According to the United States, reliance on the risk associated with venture capital funding for the purpose of establishing the project-specific risk premium for LA/MSF is appropriate for

²⁵⁸⁵ Ellis Answer to Whitelaw Report, p.7, Exhibit US-534a (BCI).

²⁵⁸⁶ US, Answer to Panel Questions 8 and 9.

²⁵⁸⁷ US, Answer to Panel Question 9. In its SWS, the United States explains that the Ellis Report interest rate benchmark is conservative for two additional reasons: because Ellis selected the lowest risk premium indicated in the KSS Study and because it used the corporate debt rate rather than the equity rate or weighted average cost of capital, US, SWS, para. 90. *See, also*, Ellis Answer to Whitelaw Report, p.7, Exhibit US-534a (BCI).

BCI deleted, as indicated [***]

various reasons. In particular, the United States considers LA/MSF to be comparable with venture capital financing because of its project-specific and highly speculative nature.²⁵⁸⁸ In this regard, the Ellis Report points to a July 2000 press Article quoting Airbus' then Executive Vice President of Strategy, Philippe Delmas, as saying that: "{g}overnment support for the A3XX should be thought of as 'venture capital'".²⁵⁸⁹ The Ellis Report also asserts that "like a provider of {LA/MSF}, {a provider of venture capital} is willing to assume a significant part of the business risk of a project or company ... {and} will provide a significant proportion of the required start-up funds without the certainty or security of a certain level of return".²⁵⁹⁰ Moreover, referring to an article appearing in the Review of Economic Studies and an economic finance textbook, the Ellis Report affirms that "venture capital may also take the form of high-yield loans or even levy-based financing comparable to {LA/MSF} loans provided to Airbus".²⁵⁹¹

7.439 The United States advances a number of confirmations or cross-checks to corroborate the order of magnitude of the 700 basis point project-specific risk premium used in the Ellis Report. First, the proposed 700 basis point risk premium is compared with Ibbotson Associates data on the historical average risk premia associated with investments in the equity of large United States companies.²⁵⁹² According to Ellis, Ibbotson Associates is a widely used source of data on equity market risk premia that is accepted and taught in business schools and economics curricula.²⁵⁹³ Ellis explains that the Ibbotson data show that between 1926 and 2005 the market risk premium for investments in low-risk large company stocks over returns on long-term government bonds has averaged 7.08%.²⁵⁹⁴

7.440 A second cross-check advanced by the United States is the 1997 European Commission State Aid Decision concerning support provided to CASA, allegedly in the form of LA/MSF, by the Spanish government for the development of a regional 70-80 seat aircraft.²⁵⁹⁵ According to the United States, in its assessment of the alleged State Aid, the European Commission identified a comparable market interest rate benchmark by applying a risk premium of at least 8% over the ten year Spanish government (risk-free) borrowing rate for a financing package for a project to develop commercial aircraft the repayment of which, as in the case of LA/MSF for LCA, was success dependent.²⁵⁹⁶ A third cross-check the United States identifies is the range of discount rates that [***]. The United States shows that its own benchmark (including the 700 basis point risk premium) is in the lower portion of this range of discount rates.²⁵⁹⁷

BCI deleted, as indicated [***]

7.441 Relying on HSBI, the United States argues that the [***] analysis undertaken by the Department of Trade and Industry ("DTI") in the UK government's critical project appraisal for the A380 also confirms the Ellis Report project-specific risk premium and United States' market interest rate benchmarks.²⁵⁹⁸ In addition, again relying upon HSBI, the United States submits that the discount rates employed in the Airbus business case for the A380 confirm its proposed project-specific risk premium.²⁵⁹⁹

7.442 The European Communities does not accept the project-specific risk premium proposed by the United States. Relying upon the arguments, analyses and conclusions described in two studies commissioned from Professor Robert Whitelaw,²⁶⁰⁰ the European Communities argues that the proposed 700 basis point project-specific risk premium is grossly inflated, and cannot be supported by the United States' cross-checks.²⁶⁰¹

7.443 The European Communities characterizes LA/MSF as project-specific debt, rather than equity or a hybrid between debt and equity, implying that the risk premium advanced by the United States is inapposite. In the European Communities' view, the fact that LA/MSF loans are project-specific does not render them equity-like.²⁶⁰² The project risk associated with LA/MSF is a function of development risks and market risks – both insignificant in the European Communities' view – which are qualitatively different from the risk borne by equity holders.²⁶⁰³ The European Communities notes that equity returns depend on the profitability of the company as a whole, which is subject to wide fluctuations. By comparison, the European Communities asserts that LA/MSF contracts involve amortizing loans repaid out of project revenue. Thus, in the view of the European Communities, equity is generally riskier than debt. Moreover, the European Communities argues that LA/MSF creditors are not guaranteed a share in the upside rewards afforded to equity holders when profits are high, nor are they required to bear losses when the market is weak. According to the European Communities, these and other differences between LA/MSF and equity investments confirm that LA/MSF is a form of debt that is distinct from equity.²⁶⁰⁴ In support of its view, the European Communities quotes several market analysts who have characterized LA/MSF loans as a form of debt, and distinguished them from equity.²⁶⁰⁵ For instance, in a 2003 report, Morgan Stanley observed that "{o}nce aircraft start to be delivered, launch aid is repayable. It has no sensitivity to the profitability of the deliveries. It looks like debt; correspondingly, we treat it as such."²⁶⁰⁶

7.444 In any case, the European Communities contends that the United States' project-specific risk premium fails to reflect the characteristics of hybrid financing instruments because it relies upon the KSS Study, which the European Communities alleges uses data relating to returns from risky venture capital investments in the form of Initial Public Offerings ("IPOs") by high-tech firms.²⁶⁰⁷ According to the European Communities, venture capital returns do not reflect the risk profile of LA/MSF. Professor Whitelaw asserts that the launch of an Airbus LCA bears risk that is several orders of

BCI deleted, as indicated [***]

magnitude lower than venture capital investment.²⁶⁰⁸ In support of this assertion, Professor Whitelaw quotes an economic study that describes venture capital projects as "high-risk, potentially high-reward projects";²⁶⁰⁹ and refers to a paper by Cochrane, cited by the United States in support of its venture-capital-based risk premium, who notes that the "average arithmetic return to IPO or acquisition is 698% with a standard deviation of 3282%" and that "{v}enture capital investments are like options; they have a small chance of a huge payoff."²⁶¹⁰ Professor Whitelaw recalls that Airbus and Boeing have never experienced a significant commercial failure, asserting that to date, Airbus has never failed to repay an EC member State due to the failure of an aircraft programme.²⁶¹¹

7.445 Professor Whitelaw also argues that the Ellis Report risk premium suffers from severe methodological flaws. According to Professor Whitelaw, the Ellis Report appears to have derived the venture capital risk premium by deducting the estimated market cost of capital identified in the KSS Study from the *gross* return achieved by a venture capital fund *before fees and expenses*. However, Professor Whitelaw submits that the premium embedded in the 16.7% gross return identified in the KSS Study is not a risk premium, noting that the KSS Study authors describe it as a fee "to compensate for investment of effort" by the venture capital fund managers.²⁶¹² In Professor Whitelaw's view, this fee applies to venture capital funds that require the expertise and effort of a fund manager – but it would not apply to commercial borrowing rates. Thus, Professor Whitelaw concludes that not only is the fee not project-specific (that is, the fee is applied at the fund level, not the project level), but it is also not a risk premium at all.²⁶¹³

7.446 In his rebuttal report, Professor Whitelaw also denies that the combination of a debt-based general corporate risk premium and an equity-based project-specific risk premium reflects the hybrid character of LA/MSF loans. In particular, Professor Whitelaw argues that the concept of deconstructing the relevant interest rate into compensation for general corporate risk and project-specific risk works only for debt-like securities.²⁶¹⁴ According to Professor Whitelaw, this approach cannot work in the context of equity financing because no project-specific risk premium will exist in a required return on equity.²⁶¹⁵

7.447 Furthermore, the European Communities argues that the evidence submitted by the United States to corroborate its proposed project-specific risk premium does not "cure the fatal deficiencies in the Ellis report", nor call into question its own proposed market interest rates benchmarks.²⁶¹⁶ The European Communities first criticizes the United States' reliance on Ibbotson Associates' historical measure of the risk premium associated with investments in equity. Professor Whitelaw argues that these data fail to support the project-specific risk premium advanced in the Ellis Report because they are drawn entirely from equity returns and measure market risk associated with equity investments, while the Ellis Report risk premium is not a risk premium at all because it represents a fee to investment managers.²⁶¹⁷ Professor Whitelaw also notes that even if one were to consider the cost of equity investment to be an appropriate cross-check for the project-specific risk premium associated with LA/MSF, the Ibbotson Associates data would not be suitable because they substantially overstate the equity investment risk premium. Professor Whitelaw alleges that there are three reasons for this:

BCI deleted, as indicated [***]

(i) that Ibbotson's historical equity investment risk premium is based on a simple average of widely fluctuating historical returns, which implies the existence of an error rate that is "enormous"²⁶¹⁸; (ii) that Professor Aswath Damodaran, who is described by the European Communities as "a world-renowned scholar whom Ellis and the United States repeatedly cite",²⁶¹⁹ concludes that based on ex-post data of the type Ibbotson uses, the historical equity risk premium should be 4.8%;²⁶²⁰ and (iii), that current academic literature identifies a variety of reasons why the historical difference between the return on equity investment and the risk-free rate is not an appropriate measure of the expected market equity investment risk premium.²⁶²¹ In particular, referring to 15 different academic studies, Professor Whitelaw argues that a substantial body of research now confirms that historical measures such as those used in the Ibbotson Associates data systematically overstate the equity risk premium.²⁶²²

7.448 Similarly, the European Communities contests the United States' reliance on the discount rates proposed by [***] for the purpose of the [***] to confirm the magnitude of its proposed risk premium, the so-called "[***] measure". According to the European Communities, the Ellis Report concedes that the [***] measure captures the risk of equity rather than debt, which Professor Whitelaw considers is an inappropriate measure of the risk associated with LA/MSF.²⁶²³ Moreover, even if one were to consider that a measure of the risk of equity investment were appropriate, the European Communities contends that the [***] measure overstates the cost of equity. The European Communities notes that in identifying the appropriate discount rate, [***] relied upon the Capital Assets Pricing Model ("CAPM"). Professor Whitelaw explains that this model equates the expected return on a proposed investment with the interest rate attached to a risk-free security (such as a government security or a treasury bill) plus a risk premium calculated as the market risk premium multiplied by a "beta" factor.²⁶²⁴ The market risk premium is defined in the Whitelaw Report as an estimate of the difference between the expected return investors demand to invest in the so-called market portfolio and the return they would obtain on risk-free government bonds; and the "beta" factor is defined as the relative perceived risk of the particular investment in question.²⁶²⁵ Professor Whitelaw argues that in applying the CAPM, [***] used a market risk premium from Ibbotson Associates, which for reasons already explained, the European Communities considers to overstate the equity risk premium. In addition, according to Professor Whitelaw, the "beta" factor applied by [***] was also too high for reasons explained using HSBI.²⁶²⁶ Finally, the European Communities rejects the [***] measure on the basis that it was proposed by [***] in a negotiation where [***] had an interest in adopting an inflated discount rate, which an auditing firm rejected as excessive and which [***] itself decided to abandon at a later stage.²⁶²⁷

7.449 The European Communities is also critical about the United States' reliance on the [***] analysis conducted by the DTI in the UK critical project appraisal for the A380 project. The European Communities rejects the view that this appraisal confirms the United States' project-specific risk premium on various grounds. First, Professor Whitelaw alleges that the Ellis Report misunderstands the [***] analysis carried out in the UK critical project appraisal.²⁶²⁸ Second, according to Professor Whitelaw, the Ellis Report's assessment of the [***] analysis carried out in the UK critical project appraisal fails to take into account how the distinctive repayment characteristics of

LA/MSF loans affect the recovery rate. Professor Whitelaw submits that, together with the expected default rate, a loan's recovery rate enters the calculation of the expected loss which is the critical determinant of relative bond yields across rating categories.²⁶²⁹ Professor Whitelaw argues that the Ellis Report implicitly assumes that LA/MSF has a recovery rate equal to the historical averages for bonds in certain rating categories. However, Professor Whitelaw argues that in reality there is no reason to expect LA/MSF to have the same recovery rate as a bond with a similar probability of default. For bonds, the entire principal balance falls due at maturity. If a bond defaults one day before maturity, the principal is lost, except for what may eventually be recovered in bankruptcy or settlement proceedings. By contrast, Professor Whitelaw asserts that LA/MSF is typically repaid incrementally on each delivery of an aircraft. If Airbus defaults by ending a project after making 95% of the anticipated deliveries, the loss to a member State is trivial.²⁶³⁰ Thirdly, the European Communities argues that because of the context in which it was prepared, the UK government's critical project appraisal employs very conservative forecasting methodologies. The European Communities submits that the approach chosen reflects a desire to ensure that the UK government would structure LA/MSF loans for the A380 so as to comply with the terms of the 1992 Agreement, which the European Communities recalls requires governments to prepare a critical appraisal of the project based on conservative assumptions. The European Communities asserts that the critical project appraisal was also intended to assist the UK government in its negotiations with BAE over the structure and terms of this financing.²⁶³¹ Fourthly, the European Communities observes that, as noted by the United States itself, the UK government ultimately "disregarded" the advice in the appraisal regarding how to structure the repayment schedule.²⁶³² In any case, the European Communities emphasizes that the delivery projections in the appraisal have no bearing on the French, German and Spanish LA/MSF agreements for the A380.²⁶³³ Finally, in the light of certain HSBI, the European Communities argues the [***] analysis found in the UK critical project appraisal, once correctly modified and reinterpreted by Professor Whitelaw, does not in fact support the United States' project-specific risk premium or its market interest rate benchmarks.²⁶³⁴

7.450 The European Communities disputes the United States' contention that the CASA State Aid Decision supports its project-specific risk premium, arguing that the 8% risk premium applied by the European Commission in its decision is *obiter dicta*, in the sense that it was irrelevant to the outcome of the case.²⁶³⁵ More generally, the European Communities argues that the risk premium used in that case was specific to the particular facts before the European Commission and would not necessarily be applied by the European Commission for the purpose of evaluating LA/MSF for LCA activities.²⁶³⁶ The European Communities submits that the 8% risk premium applied to the CASA loan also reflects the crisis in the regional aircraft industry during the early-to-mid 1990s. According to the European Communities, extreme market conditions prompted the European Commission to propose an elevated risk premium.²⁶³⁷

7.451 The European Communities also criticizes the United States' assertion that the similarity between the discount rates used in the Airbus business case for the A380 and the Ellis Report benchmark confirm the credibility of the United States' proposed project-specific risk premium. In this regard, the European Communities' main argument is that the discount rates used in the business

²⁶²⁹ Professor Whitelaw explains that the recovery rate for bonds is the percent of the principal that an investor recovers (through bankruptcy or other means of settlement) when a bond issuer defaults on its obligation. Whitelaw Report, Exhibit EC-11 (HSBI), para. 31.

case reflect the risks borne by shareholders, which differ in kind from the risks borne by LA/MSF lenders.²⁶³⁸

7.452 Other evidence the European Communities relies upon to support its view that the project-specific risk premium applied by the United States is inflated includes a [***].²⁶³⁹ According to the European Communities, the repayment terms of this contract were, like LA/MSF, tied to aircraft deliveries. The European Communities explains that the agreed interest rate for this loan was [***] basis points above the London Interbank Offered Rate ("LIBOR"). Thus, the European Communities submits that if a loan had been granted to Airbus by a market lender at the time of the launch of the [***], the interest rate would have been no higher than [***].²⁶⁴⁰ This is less than the 15.41% benchmark predicted by the Ellis Report for this model. Moreover, when in 2003, the parties to the contract agreed to eliminate the risk sharing provision and converted the instrument into an instalment loan with a fixed repayment schedule, the loan margin was [***] from [***] to [***] basis points. According to the European Communities, the difference between these two margins, *i.e.*, [***] basis points, corresponds to the project-specific risk premium charged by the [***], and represents only a fraction of the 700 basis point risk premium advanced by the United States.

7.453 Moreover, the European Communities asserts that even if one were to assume that the cost of equity were an appropriate basis from which to derive the project-specific risk premium for market financing comparable to LA/MSF, the risk premium advanced by the United States would still overstate the true value of what such a premium should be for LA/MSF.²⁶⁴¹ Relying on the CAPM the Whitelaw Report arrives at an upper limit (a "ceiling") for the cost of equity, which the European Communities considers the United States' benchmark should not exceed.²⁶⁴² In particular, the Whitelaw Report presents three different estimates of the equity market risk premium drawn from recent academic literature, coming to the conclusion that taken together, they suggest a conservative estimate of the equity market risk premium of approximately 4.5%.²⁶⁴³ The Whitelaw Report argues that as illustrated by the KSS Study, beta factors for projects or firms that are undiversified and have high total risk are not necessarily high. Using a beta factor of one and an equity market risk premium of 4.5%, Professor Whitelaw finds a total risk premium of 450 basis points, which he adds to the country-specific risk free rates in the Ellis Report to arrive at country-specific costs of equity capital

for the aerospace industry. In the European Communities' view, these values are not suitable benchmarks for LA/MSF but they can be viewed as reliable upper bounds.²⁶⁴⁴

7.454 The United States refutes all of the European Communities' criticisms of the evidence it advances to confirm the value of its proposed 700 basis points project-specific risk premium.²⁶⁴⁵ The United States rejects the European Communities' argument that LA/MSF is project-specific debt, rather than a hybrid between debt and equity on the grounds that LA/MSF has equity-like qualities. The United States recalls that repayment of LA/MSF depends entirely on sales and the providers of LA/MSF hold a shareholder's risk with respect to non-repayment. The United States considers the European Communities' claim that the [***] contract illustrates that financing comparable to LA/MSF is properly characterized as debt to be inapposite.²⁶⁴⁶ According to the United States, the [***] contract has many more debt-like characteristics than LA/MSF so that if it were characterized as debt, it would have no bearing on the proper characterization of LA/MSF. The United States also rejects the European Communities' assertion that it has added an equity risk premium to the cost of debt, which the European Communities argues would be inappropriate. The United States recalls that its proposed project-specific risk premium is a hybrid itself, not a pure equity premium, and that for this reason it reflects the hybrid nature of LA/MSF.²⁶⁴⁷

7.455 Additionally, the United States defends its reliance on the project-specific risk premium derived from the KSS Study on various grounds. In the United States' view, LA/MSF has equity like qualities and thus its risk profile is comparable to that of venture capital investments.²⁶⁴⁸ The United States argues that the results of the KSS Study are relevant to estimating the cost of capital for private venture capital investment whether in the form of debt, equity or hybrid financing.²⁶⁴⁹ According to the United States, this is confirmed in the KSS Study itself where it states that the authors used "a database of high tech IPOs to estimate opportunity cost of capital for venture capital investors and entrepreneurs".²⁶⁵⁰ The United States contests the European Communities' attempt to suggest that the returns on venture capital investments are too extreme to serve as the basis for establishing a risk premium for LA/MSF. In this respect, the United States argues that the calculation of the Ellis Report project-specific risk premium relies on the returns to well-diversified portfolios that contain venture capital investments. The United States asserts that such portfolios generate much lower returns – on average about 16.7% – than the 698% average arithmetic return to IPO or acquisition quoted by the EC.²⁶⁵¹ Finally, although recognizing that the 16.7% figure identified in the KSS Study represents a gross return on an investment in a venture capital fund, including fees paid to the fund managers, the United States nevertheless argues that it is appropriate to derive the project-specific risk premium from this figure, noting that KSS defined this return as "... the cost to an entrepreneurial venture of raising capital from a venture capital fund".²⁶⁵²

7.456 The United States also rejects the European Communities' criticisms of its confirmatory analyses. With regard to the Ibbotson Associates data, the United States contends that the project-specific, delivery-contingent and non-recourse nature of LA/MSF gives it equity-like risk exposure which is certainly higher than the risk associated with investing in the large, established United States

companies surveyed in the Ibbotson Associates data.²⁶⁵³ The United States also rejects the academic literature which the European Communities relies upon to argue that the Ibbotson Associates data overstate the equity risk premium. In the view of the United States, the literature advanced by the European Communities is extremely recent and thus would not have been known to managers when the LA/MSF was provided. In addition the United States argues that it does not represent a consensus approach to measuring equity risk. The United States rejects the European Communities' criticisms of the [***] measure because of its equity-like nature and reliance on Ibbotson Associates data for essentially the same reasons.²⁶⁵⁴ The United States also defends its comparison of the Ellis Report project-specific risk premium with the [***] measure on the ground that it reflects a methodology relied upon by an actual market participant in an actual transaction. Moreover, the United States argues that the European Communities' point concerning the rejection of the [***] measure by an auditing firm is irrelevant, because the question resolved by the auditing firm was whether the figure was an appropriate discount rate for the German government not whether the same value was appropriate in the context of LA/MSF to Airbus.²⁶⁵⁵ The United States also responds to Professor Whitelaw's criticism of the beta factor used in its analysis relying on HSBI.²⁶⁵⁶

7.457 In terms of the CASA State Aid Decision, the United States considers that the European Communities is not only wrong to dismiss the 8% risk premium on the ground that it was "obiter dicta",²⁶⁵⁷ but also that the European Communities grossly overstates the relative risk associated with regional aircraft projects compared to projects for new LCA.²⁶⁵⁸ The United States also rejects the European Communities' criticisms of its cross-check based on the UK government's critical project appraisal of the A380 project.²⁶⁵⁹

7.458 As regards the [***] contract, the United States does not consider it to be an example of commercial, success-dependent financing that is comparable to LA/MSF.²⁶⁶⁰ In the United States' view, the risk premium in the [***] case is lower than in the case of LA/MSF because [***] did not accept the same level of risk as the governments did under the LA/MSF contracts. According to the United States, this is borne out by many key differences between the terms of the [***] contract and the terms of LA/MSF granted by the governments of France and Spain for the same project. These include: (a) that the participants in the [***] pledged only [***], in contrast to the French government which provided EUR 321 million for the same project; (b) that the [***] required repayment over [***] deliveries, almost [***] deliveries less than the French government accepted; (c) on the day when the [***] contract was signed, [***] knew that Airbus had already sold enough A340-500/600 to repay the loan over the [***] scheduled deliveries; (d) [***] the back-loaded repayment terms which are typical of the LA/MSF contracts; (e) the repayment schedule in the [***] was structured so that [***] would receive full repayment after [***] years instead of [***] years under the French and Spanish LA/MSF contracts; (f) the interest rate on the [***] is substantially [***] than the interest rate on the corresponding French and Spanish contracts; (g) the [***] contract contained [***]; and (h) the [***] provides for a significant step up in the [***].²⁶⁶¹

7.459 The European Communities denies the correctness of the United States' assertion that the [***] loan agreement had little or no downside risk, arguing that it did in fact incur delivery risk. According to the European Communities, Airbus had only [***] firm orders at the time it entered into

BCI deleted, as indicated [***]

the [***] contract. Thus it had no guarantee that [***] deliveries would ultimately be made.²⁶⁶² However, the European Communities does recognize that the risk incurred by the [***] is not fully comparable with the risk incurred by the EC member State governments granting LA/MSF for the A380, identifying two differences – fewer technological advances in the A340-500/600 as compared with the A380, and repayment over fewer deliveries under the [***] contract. Nevertheless, the European Communities considers these distinctions do not explain the large disparity between the risk premium applied to the [***] and the one calculated in the Ellis Report.²⁶⁶³

7.460 Finally, the United States criticizes the cost of equity ceiling advanced by the European Communities because, in its view: (i) the equity ceiling wrongly assumes that the risk of a single project cannot exceed the risk of a company's equity; (ii) the beta factors used in the calculation of the equity ceiling are based on the risk associated with a sample of diversified companies engaged in multiple projects or of companies not primarily engaged in the commercial aircraft business, as opposed to LCA-focused companies or projects; and (iii) the European Communities' determination of an equity risk premium is largely based on very recent research that does not represent a consensus approach to measuring equity risk.²⁶⁶⁴ Furthermore, the United States argues that the European Communities is incorrect in assuming that debt cannot have a risk level greater than the Whitelaw equity ceiling. For its part, the European Communities objects to the United States' criticism of the sample of companies used for the purpose of deriving the beta factors, arguing that there is in excess of 40% overlap between the basket of aerospace companies Professor Whitelaw employs and the companies the Ellis Report uses in support of the [***] cross-check.²⁶⁶⁵ Moreover, the European Communities notes that while it may be possible to locate instances in which debt could be riskier than equity when considering firms with different risk profiles, Airbus SAS' risk profile is similar to that of the companies used to calculate the ceiling.²⁶⁶⁶

7.461 Having closely reviewed and carefully considered the parties' detailed arguments, counter-arguments and the various expert economic studies and opinions that have been submitted, we believe there are a number of deficiencies with the project-specific risk premium advanced by the United States which, in our view, imply that it probably overstates the appropriate level of project-specific risk that may be reasonably associated with LA/MSF provided for at least a number of the challenged Airbus LCA projects.

7.462 In essence, the project-specific risk premium advanced by the United States is based on the alleged risk associated with holding a diversified portfolio of venture capital investments. While it would not be inaccurate to characterize LA/MSF, because of its unsecured, success-dependent and graduated repayment terms, as a form of financing that is inherently speculative, we do not consider this renders it *entirely* comparable with venture capital investments. There are several reasons to believe that the level of risk associated with venture capital financing is typically higher than the risk associated with LA/MSF. We find that Professor Whitelaw has convincingly argued that virtually all venture capital financing consists of equity or equity-like instruments,²⁶⁶⁷ which we believe do not entirely match the characteristics of LA/MSF. As Professor Whitelaw explains, venture capitalists typically provide financing through instruments that are convertible to equity because they are interested in the high equity returns associated with successful ventures. Such instruments ensure an equity return in the event the financed venture is successful, leaving the investor in a preferential position in case the venture fails.²⁶⁶⁸ By contrast, while LA/MSF may be considered to have some

BCI deleted, as indicated [***]

equity-like qualities, such as the fact that lender governments have no recourse in the event of non-repayment, LA/MSF contracts are generally conceived as amortizing loans repaid out of project revenue.

7.463 Moreover, as explained in an Article appearing in the Journal of Economic Perspectives, venture capital is provided to firms that are "typically small and young, plagued by high levels of uncertainty and large differences between what entrepreneurs and investors know. ... {T}hese firms typically possess few tangible assets and operate in markets that change very rapidly. Venture capital organizations finance these high-risk, potentially high-reward projects, purchasing equity or equity-linked stakes while the firms are still privately held."²⁶⁶⁹ By contrast, by the time of the launch of the A380, Airbus had developed into a relatively large firm with over 30 years experience, substantial capital assets and revenues, and a track record of successful LCA development, sometimes even exceeding expectations (although it is equally apparent that it is not entirely clear yet whether several of the Airbus LCA models developed immediately prior to the A380 will be as successful as initially expected).^{2670,2671}

7.464 One of the reasons the United States advances to support its assertion that the project-specific risk premium identified in the Ellis Report is conservative is that it reflects the risk associated with holding a well-diversified venture capital portfolio as opposed to the risk associated with financing individual venture capital projects. However, as we have already noted, there are reasons to believe that venture capital financing is inherently more risky than LA/MSF, even when considered in the form of a portfolio. In addition, it is not entirely clear to us that the figure of 700 basis points the United States derives from the "cost of venture capital financing"²⁶⁷² identified in the KSS Study captures *only* the risk associated with venture capital financing. As the European Communities points out, KSS describe this "cost" to include "management fees".

7.465 The United States views the various cross-checks it has presented as evidence supporting the alleged conservative nature of its proposed project-specific risk premium. However, we are not convinced that they fully corroborate the 700 basis points advanced by the United States.

7.466 First, we note that there appear to be good reasons to believe that the Ibbotson Associates historical risk premium for investing in large company stocks is overstated. We recall that Ibbotson Associates' data was not only used by the United States to cross-check its proposed project-specific risk premium, but it was also relied upon in the construction of the [***] measure. Estimates based on ex-post data of the type Ibbotson Associates uses in its database show that the risk premium associated with an investment in equity may be below 7.08%.²⁶⁷³ Moreover, Professor Whitelaw points out that current academic literature identifies a variety of reasons why the historical difference between the market return for an investment in equity and the risk-free rate may not be an appropriate

²⁶⁶⁹ P.Gompers and J. Lerner, "The venture capital revolution", Journal of Economic Perspectives, 15-2, (2001), Exhibit EC-677, at 145, quoted in Whitelaw Rebuttal Report, Exhibit EC-656 (BCI), para. 18.

²⁶⁷⁰ EC, SCOS paras. 47-48; EC, Answer to Panel Question 171; EC, Comments on US, Answer Panel Question 142.

²⁶⁷¹ US, Comments on EC Answer to Panel Question 171, indicating that the Airclaims CASE database shows that, by end of 2006, Airbus had made 419 deliveries of the A330/A340 and 95 deliveries of the A340-500/600. However, according to the forecast delivery information submitted by the European Communities, Exhibit EC-597 (HSBI), there is a significant difference between Airbus' delivery expectations at the time these LCA were launched and the position which in reality was achieved in 2006, with actual deliveries falling far short of expectations.

²⁶⁷² Underline added.

²⁶⁷³ Professor Aswath Damodaran concludes that based on ex post data, the equity risk premium should be 4.8%. Aswath Damodaran, *Damodaran on Valuation*, Exhibit EC-678.

BCI deleted, as indicated [***]

measure of the expected equity investment risk premium.²⁶⁷⁴ According to the European Communities, a substantial body of research also confirms that historical measures such as Ibbotson Associates systematically overstate the premium above the risk-free interest rate that should be paid for equity investment.²⁶⁷⁵ Second, we are inclined to agree with the European Communities that the 8% risk premium identified in the CASA State Aid Decision is context specific, as it relates to financing for regional aircraft development at a particular moment in time. The European Communities convincingly argues that the risk premium identified in that Decision was elevated because of the severe overcapacity and low demand confronted by the European regional aircraft industry in the early 1990s.²⁶⁷⁶ Third, turning to the United States reliance on the [***] analysis undertaken in the UK government's critical project appraisal for the A380, we agree with the European Communities that the UK government's failure to take into account how the distinctive repayment characteristics of LA/MSF affect its recovery rate undermines the United States' submission that the appraisal supports its market interest rate benchmark and project-specific risk premium.²⁶⁷⁷

7.467 We also note that the equity risk premium used in the European Communities' calculation of the equity ceiling, which is based on relatively recent scientific evidence, supports the view that the Ellis Report estimate may be on the higher side. We are also not persuaded that the differences identified by the United States between the [***] loan and LA/MSF explain the entirety of the [***] basis points difference between the 700 basis points Ellis Report project-specific risk premium and the [***] basis points risk premium applied in the [***] contract.

7.468 Finally, we note that the United States seeks to apply one and the same project-specific risk premium to construct the market interest rate benchmarks associated with all models of LCA

BCI deleted, as indicated [***]

developed by Airbus. Although the European Communities has not disputed this aspect of the Ellis Report project-specific risk premia, we are not convinced that it is the best approach to identifying the most appropriate project-specific risk premium for *each* of the challenged LA/MSF contracts. Various pieces of evidence and arguments presented by the parties indicate that the risk associated with LCA development will vary over time depending upon a variety of factors. These factors include the conditions of competition in the aircraft industry and differences in the levels of technology associated with developing different models of LCA.²⁶⁷⁸ In our view, a project-specific risk premium may even vary over time because of the levels of risk that the finance industry is willing to accept at different moments in its own economic cycle. Moreover, if the project-specific risk premium is intended to relate to the risk of default attached to LA/MSF for a particular LCA development project, it would seem to follow that, all things being equal, it should be greater for earlier LCA development projects, when Airbus had relatively less experience – or conversely, the risk premium associated with development of a later model of LCA should be lower in the light of successful prior experience. The Ellis Report appears to recognize this when it explains that the 700 basis points project-specific risk premium relates to LA/MSF in the aggregate, asserting that "a 40 percent risk premium or something of that order of magnitude would probably be quite appropriate for the earlier years of Airbus' existence given the high-risk of LA/MSF and the project-specific repayment during the early life of the company".²⁶⁷⁹

7.469 All of the above considerations lead us to conclude that the United States' proposed project-specific risk premium may not be an appropriate proxy for the project-specific risk premium that a market lender would ask Airbus to pay in return for financing on the same or similar terms and conditions as LA/MSF for *all* of the challenged LA/MSF contracts. In our view, in order to evaluate the suitability of the United States' proposed project-specific risk premium, it is important to bear in mind the nature of and circumstances surrounding each of the different LCA development projects financed under the challenged LA/MSF measures. Thus, in respect of the earliest models of Airbus LCA, namely, the A300 and A310, when Airbus was in its very early stages of existence, a project-specific risk premium derived from the risk associated with investing in a well-diversified portfolio of venture capital investments, appeals to us as a reasonable proxy for the *minimum* project-specific risk premium that it would be appropriate to associate with market financing comparable with LA/MSF. However, for subsequent models of Airbus LCA, and in particular, the A320, A330/A340, A330-200 and A340-500/600, the project-specific risk premium proposed by the United States' probably overstates the *maximum* that we believe the evidence before us suggests would be appropriate; whereas, because of the acknowledged technological challenges associated with the A380 project, our sense is that the United States' project-specific risk premium could be reasonably accepted to represent the *outer limit* of the risk premium that a market lender would ask Airbus to pay for financing on the same or similar terms and conditions as the A380 LA/MSF contracts.

Project-specific risk premium advanced by the EC

7.470 The European Communities presents its own project-specific risk premium, constructed by Professor Whitelaw on the basis of the returns the Airbus "risk-sharing suppliers" expected to achieve on the financing they provided for the purpose of developing the A380.²⁶⁸⁰ According to the European Communities, WTO jurisprudence confirms that the Panel should prefer a more specific market interest rate benchmark over one that is of a more general nature. Thus, the European

²⁶⁷⁸ See, e.g., EC, FWS, paras. 305 and 484 (identifying "development risk" – "the risk that Airbus will fail to design and build the aircraft" and "market risk" – "the risk that Airbus will not deliver enough completed aircraft to repay {LA/MSF} principal and interest"); and EC, SWS, paras. 195-198 (discussing risk factors that apparently affected the European regional aircraft industry between 1991 to 1993).

BCI deleted, as indicated [***]

Communities calls upon the Panel to reject the more general project-specific risk premium advanced by the United States in favour of its own proposed project-specific risk premium, derived from the returns expected by Airbus' "risk-sharing suppliers" from their financial participation in the same project (A380) undertaken by the same company (Airbus) in the same market (LCA).²⁶⁸¹ Like the United States, the European Communities proposes one and the same project-specific risk premium for each of the challenged LA/MSF measures, with the exception of the A300 and A310, for which the European Communities has presented no market interest rate benchmark. The value of the European Communities' proposed project-specific risk premium is less than [***] the 700 basis points proposed by the United States.

7.471 The European Communities advances various reasons to justify reliance on the Airbus A380 risk-sharing supplier contracts for the purpose of identifying an appropriate project-specific risk premium for LA/MSF, including because, in its view, they are widely used in the LCA industry, contain similar terms and conditions and involve comparable risk. In particular, the European Communities asserts that "financing through risk-sharing suppliers is an important funding source for the development of Airbus and Boeing aircraft", allegedly covering an "estimated 60 percent of the development costs for the Boeing 787."²⁶⁸² Moreover, the European Communities notes that in the case of both LA/MSF and risk-sharing supplier financing, one party finances a fraction of development costs in return for repayment with revenues generated from the delivery of aircraft, not profits.²⁶⁸³ Indeed, in this respect, Professor Whitelaw asserts that "the terms of the risk-sharing supplier agreements are similar to those of the member states" LA/MSF contracts,²⁶⁸⁴ noting however that risk-sharing suppliers face two sources of risk not faced by the EC member States, namely, uncertainty in respect of their own development costs; and uncertainty on the timing of repayments.²⁶⁸⁵

7.472 The methodology used by Professor Whitelaw to construct the proposed project-specific risk premium involved the following steps: (i) computing the internal rate of return anticipated for each contract in a selected sample of A380 risk-sharing supplier contracts; (ii) calculating the weighted average internal rate of return of the sampled contracts; and (iii) subtracting the interest rate associated in the Ellis Report with average risk-free government borrowing and the average Airbus general corporate borrowing risk premium for the year 2001, thereby arriving at the project-specific risk premium.²⁶⁸⁶ Thus, Professor Whitelaw first selected a sample of risk-sharing supplier contracts. For each selected contract, Professor Whitelaw calculated the internal rate of return as the discount rate that equates the present value of the risk-sharing supplier's investment in the development work on the A380 and the present value of Airbus' anticipated repayment of those development costs. Professor Whitelaw then computed the weighted average return for the selected contracts, arriving at a single overall benchmark rate of return for the A380. Professor Whitelaw justifies a single rate of return for all of the A380 LA/MSF on the following basis:

"{b}y the time of the launch of the A380, Airbus was controlled 80% by EADS, and the Airbus GIE was in the process of combining into the single entity, Airbus S.A.S. Therefore, country-specific rates are less justified. Also, due to the creation of the Euro and the European Central Bank, the risk-free rates of France, Germany and

BCI deleted, as indicated [***]

Spain were converging and that of the UK was virtually identical to the average of the other three.²⁶⁸⁷

7.473 To finally arrive at the project-specific risk premium, Professor Whitelaw subtracted the Ellis Report risk-free rate and the Ellis Report average general Airbus corporate borrowing rate from the single rate of return calculated for all A380 LA/MSF contracts.

7.474 The European Communities advances three alternative cross-checks to confirm its proposed project-specific risk premium. The European Communities' arguments in respect of two of these, the [***] financing agreement and the cost of equity ceiling, have already been set out and discussed.²⁶⁸⁸ The third cross-check is the [***] analysis performed by the DTI in the UK critical project appraisal for the A380, as modified and reinterpreted by Professor Whitelaw.²⁶⁸⁹ This measure is presented and discussed by the parties in their HSBI submissions.²⁶⁹⁰

7.475 The United States considers the European Communities' proposed project-specific risk-premium to be unreliable for several reasons. First, the United States argues that the European Communities has failed to provide sufficient evidence to support its proposed risk premium, noting that the European Communities submitted only five pages from one single contract between one risk-sharing supplier and Airbus.²⁶⁹¹ Second, the United States argues that the sample of risk-sharing supplier contracts used by Professor Whitelaw is selective, biased and too small, and for this reason renders Professor Whitelaw's calculation subject to errors.²⁶⁹² For instance, the Ellis Report declares that the "s ample selection bias due to the particular business environment for these suppliers of the A380 is enough to disqualify the use of the Whitelaw analysis, let alone the substantial inclusion in that small sample of subsidized suppliers."²⁶⁹³ Third, according to the Ellis Report, the limited information provided by the European Communities on the repayment terms of one of the risk-sharing supplier contracts, though not strictly sufficient to satisfactorily assess its relative risk, shows that it involves significantly lower risk than LA/MSF contracts. Thus, the Ellis Report argues that the lower risk attached to the supplier contracts results in a sharp downward bias in Professor Whitelaw's project-specific risk premium.²⁶⁹⁴

7.476 Apart from different repayment terms, the Ellis Report identifies another alleged feature of the risk-sharing supplier contracts that indicates acceptance of a lower level of risk compared with LA/MSF, namely, minimum purchase obligations undertaken by Airbus. To support this contention, the Ellis Report relies on a report by Fitch Ratings agency suggesting that many of the Airbus suppliers are shielded from risk by contractual commitments requiring Airbus to make minimum purchases of supplies, thus assuming some of the risk from delays or project failure.²⁶⁹⁵ The Ellis Report also argues that for various reasons, the internal rates of return on the supplier contracts are typically lower than the true expected rates of return to the suppliers. The Ellis Report bases this view on the assertion that the expected return on a manufacturing project typically includes a number of potential sources of return, such as future business opportunities that increase the expected return of the project above the calculated internal rate of return and reduce its risk. Firms also engage in bidding strategies such that the price bid for a particular contract may reflect other opportunities with the same customer. Also, unlike the capital provided by banks or financial institutions, a supplier's

BCI deleted, as indicated [***]

capital is tied up to the input that the supplier is manufacturing. Because suppliers have a narrower range of choices than investors, their required rate of return will be lower than that of investors.²⁶⁹⁶ Ellis also suggests that many suppliers received government funding to underwrite their cost of participating in the A380 project, implying that the returns on their contracts cannot be viewed as fully commercial.²⁶⁹⁷ Finally, the United States adopts Brazil's argument that LA/MSF reduces the risk associated with Airbus itself, and therefore, for this reason alone, distorts the risk-sharing supplier benchmark.²⁶⁹⁸

7.477 The United States rejects the proposition that the European Communities' cross-checks substantiate its project-specific risk-premium. The United States' arguments against the [***] financing agreement and the cost of equity ceiling have been set out and discussed previously.²⁶⁹⁹ The United States also advances two objections to the revised UK [***] analysis presented in Professor Whitelaw's Rebuttal Report.²⁷⁰⁰ In particular, the United States argues that in presenting this information, the European Communities was offering new factual evidence not as a rebuttal, but as an attempt to bolster its flawed criticism of the United States' benchmark. The United States considers the introduction of this evidence contravenes paragraph 15 of the Panel's Working Procedures, and accordingly asks the Panel to reject both the new evidence and the argument the European Communities has made in reliance on that new evidence. The second United States' objection relates to its inability to verify the accuracy of the new information submitted in the Whitelaw Rebuttal Report.²⁷⁰¹

7.478 The European Communities rejects the United States' criticisms.²⁷⁰² Professor Whitelaw responds to the United States' criticisms regarding the sampling of risk-sharing supplier contracts, asserting that the sample used comprised 100% of the contracts for which an internal rate of return could be calculated. In addition, Professor Whitelaw notes that the total agreed amount of A380 development costs assumed by the risk-sharing suppliers included in the sample represents 42.09 percent of total value of development costs for all A380 risk-sharing suppliers contracts.²⁷⁰³ Second, referring mostly to HSBI evidence, the European Communities argues that there are only modest differences between the repayment terms of the risk-sharing supplier contracts and LA/MSF, and that these differences are offset by two sources of risk not faced by the member States: *i.e.*, the risk of cost overruns and the risk in the timing of their receipts.²⁷⁰⁴ The European Communities also dismisses the United States' reliance on the Fitch Ratings agency report, arguing that the latter did not know whether the A380 suppliers received minimum purchase commitments.²⁷⁰⁵ Third, the European Communities rejects the idea that the risk-sharing suppliers are not fully-fledged market actors. Moreover, according to the European Communities, the notion that the risk-sharing suppliers have fewer options for their investment capital than investors such as banks and pension funds is irrelevant. In the view of the European Communities, what matters is that risk-sharing suppliers provide alternative sources of market financing. Similarly, the European Communities does not see any reason to believe that the prospect of obtaining future contracts with Airbus would have affected the terms of the supply agreements. In this regard, the European Communities alleges that the United States does not offer any evidence for this argument and the European Communities does not see any aftermarket for the sort of products sold by the risk-sharing suppliers nor any incentive for them to

reduce their returns.²⁷⁰⁶ Fourth, the European Communities argues that the United States has offered no evidence that government financing for the risk-sharing suppliers affects the terms of the finance contracts agreed with Airbus. Moreover, the European Communities argues that even if this were the case, the resulting change to the benchmark rate would be negligible.²⁷⁰⁷ Fifth, with regard to the argument that LA/MSF reduces the risk associated with Airbus, the European Communities argues that there is no evidence to support the hypothesis that the risk-sharing suppliers would accept lower returns based on the possibility that Airbus would receive LA/MSF on terms and amounts unknown to them.²⁷⁰⁸

7.479 Having closely reviewed and carefully considered the parties' detailed arguments, counter-arguments and the various expert economic studies and opinions that have been submitted, we believe there are a number of deficiencies with the project-specific risk premium advanced by the European Communities which, in our view, imply that it under-estimates the appropriate level of project-specific risk that may be reasonably associated with LA/MSF for all of the challenged measures.

7.480 In principle, we agree with the view that the returns associated with market financing actually provided to Airbus for the same project as LA/MSF would serve as an appropriate basis from which to derive the relevant project-specific risk premium. Indeed, such an approach would be preferable to the one used by the United States to calculate its own proposed project-specific risk premium. However, we are not persuaded that the project-specific risk premium advanced by the European Communities is derived from data having these characteristics. In the first instance, we note that Professor Whitelaw used information from only a sample of the risk-sharing supplier contracts to construct the proposed project-specific risk premium.²⁷⁰⁹ Although Professor Whitelaw asserts that the contracts used amounted to 100% of those for which an internal rate of return could be calculated, we have no way of verifying this assertion because the European Communities has submitted little if any of the underlying data used in Professor Whitelaw's calculations. Specifically, the European Communities has provided a table summarizing various pieces of information that appear to be taken and derived from the sampled risk-sharing supplier contracts, and five pages of one of those contracts.²⁷¹⁰ Even on the basis of only the number of risk-sharing supplier contracts actually sampled we find this to be clearly insufficient to substantiate the European Communities' assertions in respect of the appropriate project-specific risk premium. Moreover, we note that the one contract that the European Communities has submitted shows that there is at least one major difference between the repayment terms under this contract and LA/MSF which we believe reduces its relative level of risk.²⁷¹¹ We are also of the view that there is some logical merit to the United States' arguments suggesting that the risk-sharing suppliers had incentives to lower their expected rates of return.²⁷¹² We furthermore agree with the view expressed by Brazil and the United States that government support for the A380 in the form of LA/MSF reduces the level of risk associated with risk-sharing supplier financing, thereby limiting its comparability with LA/MSF. Moreover, there is information

BCI deleted, as indicated [***]

contained in the Airbus A380 business case which suggests that the risk-sharing participants' involvement in the A380 project may not have been on strictly market terms for all participants.²⁷¹³

7.481 Thus, notwithstanding its potential, the shortcomings in the evidence relied upon by Professor Whitelaw to derive the European Communities proposed project-specific risk premium and the notable differences between the risks assumed by the risk-sharing suppliers compared with the EC member State governments, lead us to conclude that the European Communities' project-specific risk premium for the A380 is unreliable and understates the risk premium that a market operator would have reasonably demanded Airbus pay for financing on the same or similar terms as LA/MSF for this particular model of LCA. In addition, we note that as with the United States, the European Communities seeks to apply one and the same project-specific risk premium to construct the market interest rate benchmarks associated with all models of LCA developed by Airbus. For reasons already explained, we are not convinced that this is the best approach to identifying the most appropriate project-specific risk premium for each of the challenged LA/MSF contracts.²⁷¹⁴ As we observed in the context of our evaluation of the proposed project-specific risk premium advanced by the United States, in order to assess the suitability of a project-specific risk premium for market financing comparable to LA/MSF, it is important to bear in mind the nature of and circumstances surrounding each of the different LCA development projects financed under the challenged LA/MSF measures. Thus, while we consider it reasonable to conclude that the earliest models of Airbus LCA, namely, the A300 and A310, would have attracted a project-specific risk premium at least matching the project-specific risk premium advanced by the United States, for subsequent models of Airbus LCA, and in particular, the A320, A330/A340, A330-200 and A340-500/600, the project-specific risk premium proposed by the United States' probably overstates the maximum project-specific risk premium we believe the evidence before us suggests would be appropriate. Conversely, we find that the project-specific risk premium advanced by the European Communities for the same models underestimates the reasonable project-specific risk premium that a market lender would have asked Airbus to pay for financing on the same or similar terms and conditions as LA/MSF for all of these models of LCA, as well as the A380.

Conclusion on Whether the Financial Contributions Confer a Benefit

7.482 We recall that in order to determine whether the financial contributions made under the LA/MSF agreements confer a benefit on Airbus, within the meaning of Article 1.1(b) of the SCM Agreement, we must focus on whether LA/MSF places Airbus in a more advantageous position than would otherwise be the case if it were left to find financing on the same or similar terms and conditions on the market. In the light of the parties' arguments and the particular circumstances of this dispute, we consider it appropriate to resolve this question by examining whether the cost of the challenged LA/MSF contracts to Airbus is less than the cost that Airbus would be faced with if it sought financing on the same or similar terms and conditions as LA/MSF from market lenders.²⁷¹⁵

7.483 In terms of the cost of LA/MSF to Airbus, we have found that the estimates advanced by the European Communities, before alleged taxation effects, are in almost all cases an appropriate basis for conducting the required comparison, bearing in mind that we consider they represent the *maximum* rate of return that the EC member State governments could have reasonably expected at the time they entered into the LA/MSF contracts. In one instance, we have relied upon the rates of return proposed

²⁷¹³ Exhibit EC-362 (HSBI), p. 29. Similarly, the Ellis Answer to Whitelaw Report asserts that a number of the suppliers used in the Whitelaw analysis received "launch aid-like financing or other government subsidies which reduces their cost of capital and therefore the returns required on contracts with Airbus". Ellis Report to Whitelaw Report, Exhibit US-534 (HSBI), p. 24.

²⁷¹⁴ See, para. 7.468 above.

²⁷¹⁵ See, para. 7.401 above.

BCI deleted, as indicated [***]

by the United States,²⁷¹⁶ and in one other case, we have identified the most appropriate value ourselves.²⁷¹⁷

7.484 For the six A300 and A310 LA/MSF measures for which the European Communities did not submit an estimate of the relevant rates of return, we believe the estimates of [***] for each contract advanced by the United States accurately reflect the EC member State governments' expectations in respect of these contracts. In this regard, we note that although the European Communities has presented extensive, multi-layered, arguments on the questions surrounding the actual rates of return associated with LA/MSF, at no stage has it specifically contested the [***] interest rate allegation advanced by the United States for these contracts. Moreover, we have found nothing in the relevant agreements that undermines the argument that the EC member State governments did not expect to obtain any particular return on the full repayment of their LA/MSF contributions for the A300 and A310 at the time they concluded the respective contracts.²⁷¹⁸

7.485 However, as far as the cost of market financing comparable to LA/MSF is concerned, we have found that neither of the proposals made by the parties on the appropriate project-specific risk premium can be reasonably applied as the perfect standard against which to measure whether all of the challenged LA/MSF contracts confer a benefit. Starting with LA/MSF provided for the A300 and A310, we have found that the project-specific risk premium advanced by the United States represents a reasonable proxy for the *minimum* project-specific risk premium that it would be appropriate to associate with market financing comparable to LA/MSF. We recall that the European Communities has not advanced any alternative project-specific risk premium for these Airbus LCA models. It follows that the appropriate market interest rate for determining whether the French, German and Spanish government LA/MSF contracts for these Airbus LCA models confer a benefit is the market interest rate benchmark advanced by the United States, which we view as representing a reasonable estimate of the lowest interest rate that a commercial lender would have demanded in return for financing the same LCA projects on comparable terms and conditions to LA/MSF.

7.486 In terms of the models of LCA developed between the A310 and the A380, our findings on the appropriate project-specific risk premium lead us to conclude that the most appropriate market interest rate benchmarks against which to measure whether the challenged LA/MSF measures conferred a benefit lie in the range of interest rates advanced by both of the parties – that is, above the interest rate benchmarks proposed by the European Communities but below the benchmark levels submitted by the United States.

7.487 Finally, we recall that we have found the United States' project-specific risk premium for the A380 could be reasonably accepted to represent the outer limit of the risk premium that a market lender would ask Airbus to pay for financing comparable with LA/MSF; whereas, we consider the project-specific risk premium advanced by the European Communities to understate the appropriate level of risk associated with financing such a project on terms and conditions comparable with LA/MSF. Accordingly, we find that the most appropriate market interest rate benchmarks against which to measure whether the challenged A380 LA/MSF contracts conferred a benefit lie in the range of interest rates above those submitted by the European Communities and up to the values advanced by the United States.

7.488 Our specific findings may be illustrated in tabular form as follows:

²⁷¹⁶ See, paras. 7.416-7.422 above.

²⁷¹⁷ See, paras. 7.423-7.424 above.

²⁷¹⁸ See, 1969 A300 Agreement, Articles 6 and 7; French A300 Protocole D'Accord, Article 5, Exhibit EC-603 (BCI); 1981 A310 Agreement, Article 9, Exhibit EC-942 (BCI). We note that the latter Agreement envisaged royalty payments after repayment of the loan principal.

7.489 According to the United States, all of the LA/MSF contributions provided to Airbus at a zero rate of interest do not seek a commercial rate of return, and therefore must confer a benefit.²⁷²⁷ Although it is not necessary, for the purpose of resolving this dispute, to decide whether the United States is correct as a general matter,²⁷²⁸ it is possible to confirm from the above table that in the cases where LA/MSF was provided to Airbus at no interest cost, the same financing could have been obtained from the market only at positive rates of interest. Thus, we find that the financial contributions made available through the A300 and A310 agreements, and the Spanish A320 and A330/A340 contracts, conferred a benefit upon Airbus and therefore constitute subsidies within the meaning of Article 1.1 of the SCM Agreement.

7.490 We come to the same conclusion in respect of all of the other challenged LA/MSF measures. Indeed, even relying on the European Communities' own estimates of the rates of return and market interest rate benchmarks, it is clear that the financial contributions provided in the form of LA/MSF conferred a benefit on Airbus.²⁷²⁹ Moreover, had we not rejected the taxation-adjusted LA/MSF rates of return advanced by the European Communities, the same would also be true for all but the French A330-200 LA/MSF contract.

7.491 The European Communities argues that the fact that the interest rates associated with the challenged LA/MSF measures might be less than those that would be attached to comparable market-based financing instruments does not automatically imply that they confer a benefit. According to the

²⁷²⁶ 6.54% plus the European Communities' proposed project-specific risk premium, minus [***].

²⁷²⁷ US, FWS, paras. 184 (A300 and A310 contracts), 198 and 200 (Spanish 1992 A320 contract), 223 and 225 (Spanish A330/A340), asserting that such a result follows from the panel's finding in *Canada – Aircraft* that loans made under the Technology Partnership Canada programme conferred a benefit because, "as a matter of policy, {they did} not seek a commercial rate of return". Panel Report, *Canada – Aircraft*, paras. 9.313-315.

²⁷²⁸ Nevertheless, in our view, a situation where market-based financing for LCA development is provided at a zero rate of return to the lender would be extraordinary and highly unlikely.

²⁷²⁹ Compare the third column of Table 7 with Exhibit EC-597 (HSBI).

BCI deleted, as indicated [***]

European Communities, the public policy obligations attached to "most"²⁷³⁰ of the relevant contracts must also be taken into account. In particular, the European Communities contends that the challenged LA/MSF measures may contain public policy obligations that are not present in commercial loans.²⁷³¹ Thus, the European Communities explains that "to enable an 'apples-to-apples' comparison between a MSF loan and a commercial loan, the effective price paid under the MSF loan must reflect the additional obligations for the recipient that would not be present in a commercial loan. In return for accepting these obligations, Airbus Ams/NatCos, as commercial operators, would logically expect to pay less for other elements of the MSF contract."²⁷³² When the costs associated with such public policy obligations are taken into account, the European Communities submits that the rates of return associated with the challenged LA/MSF contracts would need to be significantly adjusted to a level that would "call into question the existence of the *de minimis* benefit indicated" by the values found in Whitelaw and ITR Reports.²⁷³³

7.492 The United States argues that the European Communities' reliance on the alleged existence of public policy obligations to increase the effective rates of return associated with the LA/MSF contracts is "extremely vague and not supported by any evidence".²⁷³⁴ In addition, the United States submits that even if there were a theoretical justification for the European Communities' position, it would be inappropriate to take account of supposed obligations associated with LA/MSF while ignoring other obligations and costs associated with commercial financing (e.g., bank fees, regulatory and credit agency fees, and costs associated with employees engaged on an ongoing basis in financing related activities).²⁷³⁵

7.493 It is a well established principle in WTO dispute settlement that the party asserting a particular fact, claim or defence must prove that assertion with evidence and/or legal argument.²⁷³⁶ In the present case, the European Communities states that it has "substantiated its position on the matter",²⁷³⁷ noting that it has provided copies of all of the challenged LA/MSF contracts to the Panel. Thus, the European Communities urges the Panel to take the alleged public policy obligations into account when performing the benefit analysis.²⁷³⁸ In our view, the European Communities' arguments are clearly not enough to fulfil its burden of proof on this matter.

7.494 The European Communities asks the Panel to accept that "public policy obligations", that would not be found in comparable market-based financing instruments, were contained in "most" of the challenged LA/MSF contracts and that these imposed a level of costs on Airbus that at least cancels out the difference between the LA/MSF rates of return and market interest rate benchmarks presented in the economic studies it relies upon. However, apart from the case of one draft contract,²⁷³⁹ it does not specifically indicate which of the relevant contracts contains such obligations, nor where they might be found. Neither does it quantify or even suggest how to quantify the resulting

²⁷³⁹ The European Communities discusses the alleged [***] imposed on British Aerospace by the UK government in the draft LA/MSF contract for the A340-500/600, Exhibit EC-874 (BCI). It is less than clear to us that an obligation to provide the UK government with [***] amounts to a "public policy obligation". In any case, we note that the particular draft LA/MSF contract discussed by the European Communities was never concluded and is not the subject of the United States' complaint.

BCI deleted, as indicated [***]

adjustment it argues must be made to the LA/MSF rates of return, stating only that this "would be a matter for commercial negotiation or an independent assessment".²⁷⁴⁰ Furthermore, the only description it provides of the type of obligations it is talking about is that they are "e.g., requirements for Airbus to maintain employment levels and to accept rather burdensome reporting requirements".²⁷⁴¹ Thus, in effect, the European Communities urges us to review each of the over 20²⁷⁴² relevant LA/MSF contracts that have been submitted in this dispute and: (i) determine which ones contain the type of "public policy obligations" it has described; (ii) come to a view about how much additional cost such obligations would impose on Airbus; and (iii) determine whether this additional cost would be enough to demonstrate that the financial contributions made available through those LA/MSF measures do not confer a benefit. In our view, such a task would amount to the Panel making the case for the European Communities. Therefore, even assuming that we were to accept the premise that any public policy obligations contained in the challenged LA/MSF contracts should be taken into account when considering the question of benefit (a premise upon which we make no ruling),²⁷⁴³ we find that the European Communities has failed to adduce sufficient factual arguments to persuade us that it has reasonably substantiated its assertion.

7.495 In any case, we note that the European Communities raises the costs of public policy obligations as a factor that may alter the benefit analysis solely in the context of the (tax adjusted) LA/MSF rates of return it has relied upon. Because we have rejected these rates, we question the continued relevance of the European Communities' argument. Finally, we agree with the United States that if our benefit analysis were to take the costs associated with public policy obligations into account, we would also need to consider whether to factor costs that are unique to market-based financing into our determination.

7.496 For all of the above reasons, we therefore dismiss the European Communities' contention that the costs of public policy obligations contained in "most" of the challenged LA/MSF measures are enough to call into question the existence of a benefit indicated by our comparison of LA/MSF rates of return with the rates of return associated with market financing on the same or similar terms as LA/MSF.

Whether the LA/MSF subsidies are specific within the meaning of Article 2 of the SCM Agreement

7.497 The United States considers that each of the subsidies conferred upon Airbus through the LA/MSF contracts is specific, within the meaning of Article 2 of the SCM Agreement because *inter alia*, each individual grant of LA/MSF is made pursuant to a specific contract between the relevant EC member State government and Airbus.²⁷⁴⁴ The European Communities has not contested the

²⁷⁴⁰ EC, Answer to Panel Question 170.

²⁷⁴¹ EC, Answer to Panel Question 170; EC, SWS, para. 166. Again, the European Communities also discusses certain [***] appearing in the draft UK LA/MSF contract for the A340-500/600 in the same context. However, as we have previously noted, it is less than clear to us how such obligations amount to "public policy obligations". In any case, we note that the particular draft LA/MSF contract discussed by the European Communities was never concluded and is not the subject of the United States' complaint.

²⁷⁴² Excluding the over 45 LA/MSF contracts for the A300 and A310 submitted by the EC.

²⁷⁴³ The extent to which the cost of public policy obligations should be taken into account when identifying a market interest rate benchmark for the purpose of determining whether a loan granted by a public entity amounts to a subsidy under the SCM Agreement is a matter that merits serious reflection. This is particularly so in the case of public policy obligations connected with the establishment or continuation of economic activity that impacts international trade. In our view, subsidies containing public policy obligations of this kind may be precisely the types of measures that the adverse effects provisions of the SCM Agreement are intended to address. Thus, to take such "public policy costs" into account when establishing the existence of a subsidy would seem to be incompatible with the objectives of Part III of the SCM Agreement.

²⁷⁴⁴ US, FWS, paras. 186-188, 206-210, 229-233, 251, 258, 271, 280, 288 and 297.

BCI deleted, as indicated [***]

United States' submission. We agree with the United States. Each of the challenged LA/MSF contracts involves a unique transfer of funds at below-market interest rates to one particular company, Airbus. It follows that the subsidies granted under each of the contracts are explicitly limited to Airbus – explicitly limited to "certain enterprises" within the meaning of Article 2.1(a) of the SCM Agreement. We therefore find that each of the subsidies granted pursuant to the challenged LA/MSF contracts is specific within the meaning of Article 2 of the SCM Agreement, and can therefore be challenged under Part III of the Agreement.

3. Whether LA/MSF as a Programme is a Subsidy Within the Meaning of Article 1 of the SCM Agreement

(a) Arguments of the United States

7.498 The United States alleges that the governments of France, Germany, Spain and the UK (the "Airbus governments")²⁷⁴⁵ have maintained a formal and institutionalized industrial policy towards Airbus, a central part of which has been the "systematic and coordinated" provision of LA/MSF subsidies to assist Airbus develop a family of LCAs.²⁷⁴⁶ The United States considers that this record of support evidences the existence of a LA/MSF Programme, which as a distinct measure, separate from the individual grants of LA/MSF that it challenges, is a subsidy that causes adverse effects to the United States' interests within the meaning of Articles 5 and 6 of the SCM Agreement.²⁷⁴⁷ To this end, the United States argues that the alleged LA/MSF Programme is a "financial contribution" (in the form of "a government practice {that} involves ... direct transfers of funds or potential direct transfers of funds") that confers a benefit, "for example by enhancing {Airbus'} credit rating". According to the United States, this alleged subsidy causes adverse effects to its interests by enabling Airbus to launch new aircraft more quickly and simultaneously reduce prices to gain market share.²⁷⁴⁸

7.499 The United States recognizes that there is no single written instrument that sets forth the alleged LA/MSF Programme. However, it asserts that the existence of the LA/MSF Programme can be established on the basis of several alleged facts, which considered together demonstrate that the Airbus governments have systematically provided Airbus with a significant portion of the capital needed and sought by Airbus to develop each and every new LCA model through unsecured loans granted on back-loaded and success-dependent repayment terms, at below-market interest rates.²⁷⁴⁹ The alleged facts the United States relies upon include: (i) the existence of institutional apparatus established under various inter-governmental agreements to support the systematic application of LA/MSF; (ii) the provision of LA/MSF on essentially the same terms and conditions in respect of each new model of LCA developed by Airbus; (iii) statements by officials of the Airbus governments expressing their alleged commitment to the continuity of the LA/MSF Programme, (iv) statements by executives of Airbus and EADS allegedly evidencing reliance on LA/MSF; and (v) the perceptions of LA/MSF held by different credit rating agencies.²⁷⁵⁰

7.500 The United States considers that the alleged LA/MSF Programme is a measure with "normative value", possessing the qualities of the types of unwritten measures that the Appellate Body in *US – Zeroing (EC)* found can be challenged "as such" in WTO dispute settlement proceedings.²⁷⁵¹ However, the United States does not challenge the alleged LA/MSF Programme "as such", asserting

²⁷⁴⁵ US, FWS, para. 1.

BCI deleted, as indicated [***]

that nothing in the Appellate Body report suggests that an unwritten measure with "normative value" may only exist in the context of an "as such" challenge.²⁷⁵² Moreover, the United States argues that it need not necessarily establish the existence of the alleged LA/MSF Programme by satisfying the test identified by the Appellate Body in that dispute.²⁷⁵³ In its view, like the panels in *Japan – Apples* and *EC – Biotech*, the Panel in the present controversy should examine the merits of its claim in accordance with Articles 3.2 and 11 of the DSU – that is, by interpreting the ordinary meaning of the word "measure" in context and in the light of the object and purpose of the WTO Agreement, and by conducting an objective assessment of the evidence submitted in support of the alleged measure's existence.²⁷⁵⁴ In any case, the United States considers that even assuming that the test set out by the Appellate Body in *US – Zeroing (EC)* were relevant, it has established the existence of the alleged measure, having demonstrated: (i) the precise content of the alleged LA/MSF Programme; (ii) that it is attributable to the four Airbus governments; and (iii) that it is of general and prospective application in the sense that whenever Airbus seeks LA/MSF to support the development of a new model of LCA, the Airbus governments provide it on the same core terms.²⁷⁵⁵

7.501 The United States describes the precise content of the alleged LA/MSF programme as consisting of "the consistent, up-front provision by the Airbus governments of a significant portion of the capital that Airbus needs to develop each new LCA model through loans that are (a) unsecured, (b) repayable on a success-dependent basis (*i.e.*, through per sale levies), (c) with the levy amounts greater for later sales than earlier sales (*i.e.*, back-loaded), and (d) with interest accruing at rates below what the market would demand for the assumption of similar risk".²⁷⁵⁶ According to the United States, each and every LA/MSF contract has featured these core characteristics. While accepting that differences exist among the specific terms and conditions of the various LA/MSF contracts, the United States argues that these do not mean that the LA/MSF Programme does not have a precise content because, in its view, differences in the details of one LA/MSF contract compared with another have only a marginal impact on the benefit conferred by the particular subsidy at issue, and in any case, do not change the core content and essence of the alleged LA/MSF Programme.²⁷⁵⁷

7.502 The United States asserts that the alleged LA/MSF Programme is incontestably attributable to the Airbus governments - France, Germany, Spain and the UK - pointing to the relatively sophisticated intergovernmental institutions and national bureaucracies allegedly set up by these countries to oversee the funding and development of Airbus, as well as various statements made by government representatives and heads of State.²⁷⁵⁸

7.503 The United States argues that the alleged LA/MSF programme is of general and prospective application, and that this is demonstrated not only by the consistent funding of Airbus LCA development on the same core terms and conditions, but also by the "A380 Launch Aid Agreement", certain statements made by the member State governments and the European Commission, and the actions of market analysts such as Moody's and Fitch Ratings, that the United States asserts, in responding to the statements of the member State governments, have put a value on the alleged LA/MSF Programme and rely on its availability in making their projections of Airbus' financial health.²⁷⁵⁹

BCI deleted, as indicated [***]

7.504 Finally, the United States submits that even if the Panel disagreed with its view that the alleged LA/MSF Programme has general and prospective value, it should still find, on the basis of the totality of the evidence, that the alleged Programme constitutes a challengeable measure.²⁷⁶⁰

(b) Arguments of the European Communities

7.505 The European Communities rejects the United States' contention that the four Airbus governments have maintained an unwritten LA/MSF Programme pursuant to which development funding for each new model of Airbus LCA has been provided on the same essential terms and conditions. According to the European Communities, the facts do not support the existence of such a Programme because they show that: (i) LA/MSF has not always been sought to finance development of Airbus LCA; (ii) when development financing has been sought, it has not always been in the form of LA/MSF; (iii) when LA/MSF has been sought, it has not always been provided; and (iv) when LA/MSF has been provided, it has been on terms and conditions that vary widely both as between member States and as between the different Airbus LCA projects.²⁷⁶¹

7.506 The European Communities submits that given the nature of its claim, in order for the United States to make out its case, it must establish: (i) that the EC member States concerned did, in fact, adopt a "Launch Aid Program"; and (ii) the precise content of the challenged programme, including its alleged prospective application. The European Communities argues that the United States has failed to make any such demonstration.²⁷⁶²

7.507 In terms of the evidence advanced by the United States for the purpose of substantiating the first element, the European Communities considers that it has, at most, referred to certain inter-governmental agreements concerning co-operation and co-ordination in respect of new Airbus LCA models. However, the European Communities points out that none of these agreements contain any undertakings committing the four EC member State governments to granting subsidized LA/MSF, either for the LCA models covered under the individual agreements or any future models of Airbus LCA. The European Communities considers that neither of the two inter-governmental agreements whose text it alleges was discussed by the United States (the 1969 Agreement and the 2003 Agreement) advances its claim. In particular, the European Communities characterizes the contents of the 2003 Agreement as evidence of merely a general expression of support, not any commitment on the part of the Airbus governments to provide LA/MSF loans for any existing or future LCA development programme on subsidized terms. Similarly, the European Communities notes that the governments of Spain and the UK were not party to the 1969 Agreement, implying that it cannot speak to concerted action involving all four Airbus governments. Moreover, the European Communities recalls that under that Agreement, France and Germany affirmed their commitment to "European cooperation in the field of aeronautics" only in "very general terms". According to the European Communities, such a "vague commitment to cooperate in unspecified ways" does not represent an expression of the two governments' joint intention to grant LA/MSF loans on particular terms and conditions. In any case, the European Communities submits that any affirmation made in 1969 by the two governments does not constitute *prima facie* evidence of the same two governments' joint intention with respect to aeronautics today.²⁷⁶³

7.508 The European Communities argues that the evidence advanced by the United States in respect of the alleged inter-governmental institutional structures does not establish any "grand" structure surrounding and supporting past grants of LA/MSF. The European Communities explains that

BCI deleted, as indicated [***]

although the four governments meet in various frameworks to discuss a range of matters relating to the aerospace industry, none of the institutions identified by the United States is dedicated to LA/MSF. According to the European Communities, none of the institutions are responsible for granting LA/MSF or fixing its terms and conditions. Neither is the provision of LA/MSF or its terms and conditions ever discussed by the EC member States in these fora.²⁷⁶⁴ In any case, even if an inter-governmental institutional structure did once exist, the European Communities asserts that its past use for the purpose of discussing LA/MSF does not infer that the member States have collectively adopted an overarching general rule in the form of a LA/MSF Programme.²⁷⁶⁵

7.509 Similarly, the European Communities submits that the statements made by private actors the United States refers to in support of its claim do not show that the EC member State governments have collectively adopted a general rule governing the provision of LA/MSF. In particular, the European Communities characterizes one of the statements made by Moody's Ratings agency as being merely an expression of its expectation that past individual instances of "government support" might be repeated in the future. However, according to the European Communities, neither the repetition of governmental action over time nor private expectations regarding that action prove that the government has adopted a general rule governing its future conduct. Moreover, the European Communities contends that the statement made by Moody's does not suggest that the terms of any "government support" would be below-market. In any case, the European Communities argues that the United States overstates the importance of private parties' expectations in assessing the existence of an unwritten rule of general application, suggesting in the light of *US – OCTG from Argentina*, that such evidence may be probative when concerned with a written statement of government policy.²⁷⁶⁶

7.510 On the question whether the United States has demonstrated the precise content of the alleged LA/MSF Programme, the European Communities considers the evidence advanced by the United States does not support its position. First, the European Communities points to what it contends are significant differences between the LA/MSF contracts, arguing that this undermines the United States' assertion that LA/MSF was granted on the same four uniform "core terms".²⁷⁶⁷ In addition, the European Communities contends that the "core" contractual terms and conditions identified by the United States cannot support the existence of an unwritten norm to provide LA/MSF because, in its view, they are too generic. Thus, the European Communities argues that "there is nothing 'precise' about a description that is generic enough, and at a high enough level of abstraction, to apply to many different forms of financing other than MSF".²⁷⁶⁸

7.511 The European Communities considers that the United States has failed to demonstrate how the alleged LA/MSF Programme actually operates, and what conduct it requires of the four governments. Without demonstrating these and other key elements of the alleged unwritten LA/MSF Programme, the European Communities submits that the United States cannot be found to have established its existence.²⁷⁶⁹ Moreover, the European Communities notes that three models of LCA, the A321, A319 and A318, were developed without LA/MSF; and that Airbus' rejection of the UK government's offer to finance development of the A340-500/600 shows that, contrary to what the United States argues, LA/MSF is not automatic, but subject to terms and conditions negotiated separately with each of the four member State governments. In the European Communities' view,

²⁷⁶⁹ EC, Comments on US Answer to Panel Questions 136 and 137.

BCI deleted, as indicated [***]

these facts also undermine the existence of the unwritten LA/MSF Programme that is defined by the United States.²⁷⁷⁰

7.512 Finally, the European Communities submits that the reality of how the EC member States may provide LA/MSF to Airbus for any future LCA projects is very different from what is implied by the United States' alleged unwritten LA/MSF Programme. If Airbus were to seek LA/MSF in the future from one or more of the four governments, the European Communities argues that each of the governments would consider the request on its own merits, in light of the situation at the time, and according to criteria to be developed by each government. Thus, the European Communities asserts that there are no general and prospective rules governing the provision of LA/MSF by the four governments, and therefore that the United States has failed to prove its case.²⁷⁷¹

(c) Evaluation by the Panel

7.513 The United States claims that the alleged LA/MSF Programme is a measure with "normative value" that satisfies the definition of a "subsidy" found in Article 1 and causes adverse effects to its interests within the meaning of Article 5 of the SCM Agreement.²⁷⁷² However, the United States does not challenge the alleged LA/MSF Programme "as such", explaining that the focus of its claim is not "on something about a measure that mandates or necessarily results in a breach each time the measure is applied, which is the essence of an 'as such' claim".²⁷⁷³ Indeed, the United States questions whether "it is even possible to successfully claim that a measure 'as such' breaches Article 5 of the SCM Agreement, as that would require showing that the measure will mandate particular effects in the future, such as displacement and impedance, which involve marketplace factors independent of the measure".²⁷⁷⁴ Thus, as we understand it, the United States' claim is rooted in the very existence of the alleged LA/MSF Programme, which it contends, *in and of itself*, constitutes a subsidy to Airbus that causes adverse effects. For this claim to succeed, we consider that the United States must demonstrate: (i) the existence of the alleged LA/MSF Programme; (ii) that the alleged Programme is a subsidy within the meaning of Article 1 of the SCM Agreement; and (iii) that the subsidy causes adverse effects within the meaning of Article 5 of the SCM Agreement. We start our evaluation by addressing the first of these elements.

(i) *Does the alleged LA/MSF Programme exist?*

7.514 The United States describes the alleged measure at issue as a "Programme" operated by the Airbus governments that involves the systematic and coordinated provision of unsecured long-term loans covering a significant amount of the capital that is needed and sought by Airbus for the development of each and every new model of LCA on back-loaded and success-dependent repayment terms and at below-market interest rates.²⁷⁷⁵ Although it acknowledges that there is no single written document that attests to the existence of such a deliberate system of financing, the United States argues that the alleged measure's existence is nevertheless evidenced by a series of alleged facts or "individual components that could themselves be considered measures".²⁷⁷⁶ These include the alleged existence of institutional apparatus established under various inter-governmental agreements to support the systematic application of LA/MSF, the provision of LA/MSF on essentially the same terms and conditions in respect of each new model of LCA developed by Airbus, various statements

BCI deleted, as indicated [***]

made by officials of the Airbus governments and executives of Airbus and EADS, and the perceptions held by different credit rating agencies and one bank.²⁷⁷⁷

7.515 It is now well established that "In principle, any act or omission attributable to a WTO Member can be a measure of that Member for purposes of dispute settlement proceedings."²⁷⁷⁸ Thus, the fact that the alleged existence of the LA/MSF Programme is not evidenced in any single written document does not mean that it cannot amount to a "measure" that may be challenged in WTO dispute settlement proceedings. Indeed, as the United States points out, acts attributable to WTO Members not expressed in written form have previously been the subject of WTO dispute settlement.

7.516 In *Japan – Apples*, the panel treated nine inter-related and cumulative legal and administrative requirements imposed by the government of Japan on the importation of United States' apple fruit as comprising one single sanitary and phytosanitary measure for the purpose of evaluating the United States' complaint against those requirements.²⁷⁷⁹ In following the same approach, the implementation panel explained that the original panel had treated "the requirements imposed by Japan as several elements of one single measure, essentially because all the requirements were presented as part of a systemic approach".²⁷⁸⁰ Similarly, in *EC – Biotech*, the panel agreed with the complainants that the European Communities had applied a "general *de facto* moratorium on the approval of biotech products between June 1999 and August 2003". Notwithstanding the absence of any single document explicitly establishing its existence, the panel found that the alleged *de facto* moratorium existed as "a measure which is the result of other measures (decisions)".²⁷⁸¹ It arrived at this conclusion after conducting a detailed assessment (covering approximately 190 pages) of various facts the complainants had argued demonstrated the existence of the alleged moratorium. These included the operation of the European Communities' relevant approval procedures, documents and statements made by European Communities and EC member State officials, and the histories of individual applications for the approval of biotech products over the period in question.²⁷⁸²

7.517 In *US – Zeroing (EC)*, the panel found that the United States' "zeroing methodology", which was not expressed in written form, represented a well-established and well-defined norm that was challengeable as a measure in WTO dispute settlement proceedings, and that this measure was "as such" inconsistent with the United States' obligations under the Anti-Dumping Agreement.²⁷⁸³ The panel reached this conclusion after closely examining the parties' arguments and various pieces of evidence on the existence and application of the zeroing methodology over time, including the United States' recognition that it had been unable to identify an instance where the USDOC had not applied the methodology, the standard computer programmes used by the USDOC to calculate margins of dumping in investigations, and expert opinions regarding the use and the content of the zeroing methodology. The panel also noted that the United States had not contested that the zeroing

BCI deleted, as indicated [***]

methodology was a deliberate policy.²⁷⁸⁴ On appeal, the Appellate Body upheld the panel's finding, concluding *inter alia*, that the evidence before the panel was sufficient to establish that the "zeroing methodology" was a "measure" that could be challenged "as such". In doing so, the Appellate Body made the following observations:

" ... a panel must not lightly assume the existence of a 'rule or norm' constituting a measure of general and prospective application, especially when it is not expressed in the form of a written document. If a panel were to do so, it would act inconsistently with its obligations under Article 11 of the DSU to 'make an objective assessment of the matter' before it.

When an 'as such' challenge is brought against a 'rule or norm' that is expressed in the form of a written document—such as a law or regulation—there would, in most cases, be no uncertainty as to the existence or content of the measure that has been challenged. The situation is different, however, when a challenge is brought against a 'rule or norm' that is *not* expressed in the form of a written document. In such cases, the very existence of the challenged 'rule or norm' may be uncertain.

In our view, when bringing a challenge against such a 'rule or norm' that constitutes a measure of general and prospective application, a complaining party must clearly establish, through arguments and supporting evidence, at least that the alleged 'rule or norm' is attributable to the responding Member; its precise content; and indeed, that it does have general and prospective application. It is only if the complaining party meets this high threshold, and puts forward sufficient evidence with respect to each of these elements, that a panel would be in a position to find that the 'rule or norm' may be challenged, as such. This evidence may include proof of the systematic application of the challenged 'rule or norm'. Particular rigour is required on the part of a panel to support a conclusion as to the existence of a 'rule or norm' that is *not* expressed in the form of a written document. A panel must carefully examine the concrete instrumentalities that evidence the existence of the purported 'rule or norm' in order to conclude that such 'rule or norm' can be challenged, as such.²⁷⁸⁵

7.518 We recall that the United States has explicitly described the alleged LA/MSF Programme as a measure with "normative value" in the sense that it "creates expectations among the public and among private actors",²⁷⁸⁶ a measure that "possesses the qualities the Appellate Body identified in *US – Zeroing (EC)*".²⁷⁸⁷ To this extent, we believe that the situation before us is similar to that faced by the panel and the Appellate Body in *US – Zeroing (EC)*, in the sense that as with the European Communities in *US – Zeroing (EC)*, the United States in the present controversy complains about the existence of an alleged unwritten measure with "normative value" that it considers to be WTO-inconsistent *independent of its application*. However, the United States explains that unlike the claim at issue in *US – Zeroing (EC)*, its complaint against the LA/MSF Programme is not based on the typical subject of an "as such" complaint, namely, something about a measure that mandates or

²⁷⁸⁴ Panel Report, *US – Zeroing (EC)*, paras. 7.103.

²⁷⁸⁵ Appellate Body Report, *US – Zeroing (EC)*, paras. 196-198, (footnote omitted).

²⁷⁸⁷ US, SNCOS, para. 36. See also US, FWS, para. 106, where the United States concludes that "{i}n the light {of the evidence}, the specific content of {the} Launch Aid program and **the future conduct it will entail** is clear". (Emphasis added).

BCI deleted, as indicated [***]

necessarily results in WTO-inconsistent conduct. Rather, the United States' claim is focussed on a breach "resulting from the Launch Aid Program itself".²⁷⁸⁸

7.519 We are mindful that the distinction between "as such" and "as applied" claims "does not define exhaustively the types of measures that may be subject to challenge in WTO dispute settlement".²⁷⁸⁹ A measure "need not fit squarely within one of these two categories" in order to be susceptible to WTO dispute settlement.²⁷⁹⁰ However, in order to be the proper subject of WTO dispute settlement proceedings, a challenged measure must first be shown to actually exist. Given the United States' explicit characterisation of the alleged LA/MSF Programme as a measure with "normative value" in the sense that it "creates expectations among the public and among private actors";²⁷⁹¹ a measure that "possesses the qualities the Appellate Body identified in *US – Zeroing (EC)*",²⁷⁹² we find the Appellate Body's guidance in that case on how to establish the existence of such a measure to be particularly instructive. As both parties appear to recognize, the existence of a challenged measure must be established on the basis of an objective assessment of all relevant facts and circumstances;²⁷⁹³ and as we read it, the Appellate Body's guidance in *US – Zeroing (EC)* explains how to undertake such an assessment for the purpose of demonstrating the existence of an unwritten measure that is claimed to have general and prospective application in the sense of a "rule or norm".

7.520 It follows that regardless of the nature of a complaint, when challenging the WTO-consistency of an alleged *unwritten measure* that is alleged to have *normative value*, the criteria laid down by the Appellate Body in *US – Zeroing (EC)* will be relevant to determining whether any such measure actually exists. Therefore, when confronted with a complaint against an unwritten measure that is considered to have general and prospective application, as we are here faced with in respect of the alleged LA/MSF Programme, a panel must not lightly assume its existence. The arguments and evidence advanced by the complaining party to demonstrate its existence must be carefully and rigorously examined with a view to assessing whether the complainant has clearly established at least the precise content of the alleged unwritten measure, that it is attributable to the responding Member and that it has general and prospective application. It is only by satisfying this "high threshold" that a complainant will succeed in establishing the existence of the challenged measure. Conversely, where any one of the above elements cannot be established, the complaining party will have failed to make its case.

7.521 We recall that the United States describes the precise content of the alleged unwritten LA/MSF Programme as consisting of the consistent up-front provision, by the Airbus governments, of a significant portion of the capital that is needed and sought by Airbus to develop each new LCA model, through unsecured loans granted on back-loaded and success-dependent repayment terms and at interest rates below what the market would demand for the assumption of similar risk.²⁷⁹⁴ The United States considers that the alleged unwritten LA/MSF Programme is incontestably attributable to four EC member States – France, Germany, Spain and the UK²⁷⁹⁵ – and that it has general and prospective application in the sense that "whenever an Airbus company seeks Launch Aid from an Airbus government for development of a new LCA model, it receives Launch Aid consisting of the same essential terms."²⁷⁹⁶ According to the United States, the evidence that confirms the existence of

BCI deleted, as indicated [***]

an unwritten measure of this kind includes the challenged LA/MSF contracts, inter-governmental institutional structures and national bureaucracies allegedly charged with supporting the operation of the alleged LA/MSF Programme, various statements made by European Communities, EC member State and Airbus officials, and the alleged perceptions of different credit rating agencies and one bank that the challenged LA/MSF Programme is an established part of the financial landscape in which Airbus operates.²⁷⁹⁷ We review each of these categories of evidence together with the parties' arguments in the following sections.

The LA/MSF contracts

7.522 One of the main EC criticisms of the United States' description of the alleged LA/MSF Programme is that it is not "precise" enough to confirm its status as an unwritten measure.²⁷⁹⁸ The European Communities notes that significant differences exist between the terms and conditions of the challenged LA/MSF contracts, both as between the various LCA projects that received LA/MSF, as well as between the various EC member States that funded them.²⁷⁹⁹ In its view, these differences serve to undermine the United States' submission that all LA/MSF contracts included the same four "core terms", and therefore that the alleged Programme exists.²⁸⁰⁰ Similarly, the European Communities argues that the four "core terms" of LA/MSF that are the focus of the United States' description are too generic to support the existence of an unwritten measure as the "very same attributes are displayed by market-based instruments such as development financing offered by Boeing and Airbus risk-sharing suppliers, as well as by loans secured from commercial banks".²⁸⁰¹ According to the European Communities, "there is nothing 'precise' about a description that is generic enough, and at a high enough level of abstraction, to apply to many different forms of financing other than MSF".²⁸⁰² The European Communities maintains that the content of a subsidy programme would usually include some or all of a series of "key elements", including information on "how and when requests for support must be made"; "the terms and conditions governing eligibility for support"; and "how satisfaction of these conditions must be demonstrated".²⁸⁰³ It argues that the United States' description of the alleged LA/MSF Programme fails to identify any of these elements.

7.523 We do not consider there to be any generally applicable standard or particular set of facts that define the precise content of a "subsidy programme". The "key elements" identified by the European Communities may usefully circumscribe the general contours of one or more subsidy programmes, but not even the European Communities contends that all subsidy programmes must exhibit such features. Thus, the fact that the United States' description of the precise content of the LA/MSF Programme does not explicitly refer to the "key elements" identified by the European Communities does not, for that reason, render it inadequate.

7.524 In principle, we see no reason why the precise content of an unwritten measure alleged to have "normative value" has to arrive at a certain level of specificity in order to be susceptible to challenge in WTO dispute settlement under the SCM Agreement. If a WTO Member considers in good faith that a measure exists that nullifies or impairs benefits that accrue to it under the SCM Agreement, then regardless of how generic its content may be, the WTO Member is entitled to

²⁷⁹⁷ US, SNCOS, paras. 39-66.

²⁸⁰³ EC, Comments on US Answer to Panel Question 136. The other "key elements" identified by the European Communities are: "the nature and duration of any support granted"; "the purposes for which any support can be used by the recipient"; "the terms and conditions governing any repayments"; and "whether the government is obliged to provide support when eligibility conditions are met".

BCI deleted, as indicated [***]

seek redress through WTO dispute settlement.²⁸⁰⁴ Of course, it may be more difficult to establish that a measure which possesses a generic content breaches a WTO obligation compared with a measure that is more specific. However, we see no reason to exclude the possibility that even measures with generic content might be WTO-inconsistent. In any case, the United States' description of the precise content of the alleged LA/MSF Programme includes more than just a reference to LA/MSF contracts granted on the same four "core terms". Rather, it is the Airbus governments' consistent up-front provision of a significant portion of the capital that is needed and sought by Airbus to develop each new LCA model, in the form of long-term loans on the same four "core terms", that defines the precise content of the alleged LA/MSF Programme at the centre of the United States' complaint. In our view, this description is sufficiently detailed to permit a clear understanding of the precise content the United States asserts defines the alleged unwritten LA/MSF Programme measure. Indeed, were such a Programme described in a written document, we would have no doubt about its existence as a matter of fact.

7.525 As to the differences that exist between the terms and conditions of the various LA/MSF contracts, it is true that the EC member States did not adopt a standard approach or apply the same contractual template when entering into LA/MSF agreements. Overall, the vast majority of terms and conditions of each LA/MSF contract are different, reflecting not only the individual characteristics of the Airbus entity and LCA development project being funded, but also the policy objectives, legal culture and particular demands of the relevant EC member State funding the project. For instance, the financing provided under the first series of LA/MSF contracts represented a much larger proportion of development costs compared with the LA/MSF contracts entered into after the entry into force of the 1992 Agreement.²⁸⁰⁵ Not all of the EC member State governments required the payment of royalties; and when royalties were called for, they were envisaged in different forms and over varying periods of time.²⁸⁰⁶ Moreover, the structure of the back-loaded and success-dependent repayment terms found in each contract was not always the same,²⁸⁰⁷ and in terms of interest rates, where these were identified in the contracts, they were usually set at different levels, at times through the application of different formulas.²⁸⁰⁸ There are other terms and conditions that vary between the contracts. However, in the light of our findings in respect of the individual LA/MSF measures, there is no doubt that all of the challenged LA/MSF contracts may be characterised as unsecured loans granted to Airbus on back-loaded and success-dependent repayment terms, at below-market interest rates, for the purpose of developing various new models of LCA. While not demonstrating that the LA/MSF

²⁸⁰⁴ Article 3.3 of the DSU provides that the WTO dispute settlement system exists to address "situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member". In *US – Corrosion-Resistant Steel Sunset Review* the Appellate Body addressed the scope of "measures" that may be subject to WTO dispute settlement, observing that "in principle, any act or omission attributable to a WTO Member can be a measure of that Member for purposes of dispute settlement proceedings. The acts or omissions that are so attributable are, in the usual case, the acts or omissions of the organs of the state, including those of the executive branch." Appellate Body Report, *US – Corrosion-Resistant Steel Sunset Review*, para. 81. Article 7.1 of the SCM Agreement provides that "{e}xcept as provided in Article 13 of the Agreement on Agriculture, whenever a Member has reason to believe that any subsidy referred to in Article 1, granted or maintained by another Member, results in injury to its domestic industry, nullification or impairment or serious prejudice, such Member may request consultations with such other Member."

²⁸⁰⁵ See, paras. 7.369, 7.2100, 7.2102, 7.2104 and 7.2106.

²⁸⁰⁶ See, para. 7.410.

²⁸⁰⁷ See, para. 7.374. Thus, for example, each of the four LA/MSF contracts for the A380 requires repayment in different ways and amounts. The German A380 contract appears to require Airbus to make interest payments [***]. In addition to those payments, [***]. The French A380 contract fixes a [***]. The Spanish A380 contract envisages repayment of [***]. The UK A380 contract identifies [***].

²⁸⁰⁸ For example, compare Spanish A380 contract, Septima Clausula, with the UK A380 contract, Schedule 3, German A380 contract, Article 6.

BCI deleted, as indicated [***]

Programme described by the United States actually exists, the contracts do show that every time LA/MSF was provided in the past, it involved the four "core terms" the United States identifies.

7.526 The European Communities argues that another reason why the United States cannot demonstrate the existence of the alleged LA/MSF Programme is that Airbus has not always sought LA/MSF to finance the development of LCA.²⁸⁰⁹ In particular, the European Communities notes that "for example" no LA/MSF was sought from any of the Airbus governments for the A318, A319 and A321 models; that no German, Spanish and UK LA/MSF was requested for the A330-200; and that no German government LA/MSF was asked for in order to develop the A340-500/600.²⁸¹⁰

7.527 Although we consider that the United States' description of the precise content of the alleged LA/MSF Programme has not always been crystal clear, it is apparent from the entirety of its arguments and submissions that the United States characterizes the precise content of the alleged LA/MSF Programme in the terms we have expressed above, that is, as the consistent provision of LA/MSF on the same essential conditions whenever *sought* by Airbus.²⁸¹¹ Because LA/MSF was not *sought* by Airbus from the above-mentioned EC member State governments for the relevant LCA projects,²⁸¹² it follows that the absence of LA/MSF for these models from the same Airbus governments does not undermine the existence of the LA/MSF Programme described by the United States. However, we note that the UK government did not conclude a LA/MSF agreement with British Aerospace for the purpose of developing the A340-500/600, even though British Aerospace had initially requested LA/MSF from the UK government.

7.528 According to the United States, the absence of UK LA/MSF for the A340-500/600 does not detract from its assertion that an alleged LA/MSF Programme exists, because LA/MSF for this derivative was in fact *offered* by the UK government. Thus, according to the United States, the fact that British Aerospace ultimately declined to avail itself of the LA/MSF offered by the UK government "does not change the fact that the government made the commitment".²⁸¹³

7.529 The Heads of Terms Agreement the European Communities has submitted as evidence of the draft contract negotiated between British Aerospace and the UK government offered financial support

²⁸⁰⁹ EC, SWS, paras. 121 and 128.

²⁸¹⁰ EC, SWS, para. 121. In addition, we note that LA/MSF for the first model of Airbus LCA, the A300, was provided by only the French, German and Spanish governments, but not the UK government. *See*, para. 7.369. We have also found that as of 20 July 2005 no LA/MSF had been committed by the Airbus governments for the A350, notwithstanding the fact that it had been launched.

²⁸¹¹ When asked to explain what conclusions it considered could be drawn about the existence of the alleged LA/MSF Programme from the absence of German, Spanish and UK LA/MSF for the A330-200 (Panel Question 3), the United States argued that French government LA/MSF for the A330-200 was essentially additional French government LA/MSF for the A330/A340. We are unclear as to why the United States did not point out, or at least suggest, that Airbus had not *sought* or *asked for* LA/MSF for this model, (which would have been consistent with its overall description of the content of the alleged LA/MSF Programme), given that it has challenged this contract as a LA/MSF measure that is separate and distinct from the LA/MSF provided for the A330/A340.

²⁸¹² In its answer to Panel Question 173, the European Communities suggests that Deutsche Airbus "turned to a risk-sharing supplier" financing for the A340-500/600 only after it realized that it could not obtain LA/MSF from the German government. However, the European Communities has submitted no specific evidence demonstrating that Deutsche Airbus had actually requested the German government to provide LA/MSF for the A340-500/600.

²⁸¹³ US, Answer to Panel Question 3, referring to various pieces of evidence including House of Commons Hansard Written Answers, 2 February 1998, (statement of Mrs. Beckett), Exhibit US-467; and House of Commons Hansard Written Answers, 15 December 1998, (statement of Mr. Battle) ("the Government agreed on 2 February 1998 to invest up to GBP 123 million in a public-private partnership with British Aerospace on the development of the Airbus A340-500/600") Exhibit US-468.

BCI deleted, as indicated [***]

for the A340-500/600 on unsecured, back-loaded and success-dependent repayment terms.²⁸¹⁴ Moreover, although nothing in the Heads of Terms Agreement suggests that the [***] internal rate of return²⁸¹⁵ requested by the UK government represented a below-market interest rate for the risk being assumed under the proposed contract, when compared with a market interest rate benchmark constructed on the basis of the same methodology applied by the European Communities to identify appropriate market benchmarks for other LA/MSF contracts, it is evident that the [***] rate of interest was non-commercial.²⁸¹⁶ The European Communities has emphasized that the [***] interest rate charged by the UK government was equivalent to the interest rate obtained by British Aerospace on the [***] commercial loan that was ultimately used to finance the A340-500/600 project. However, as we have previously noted, the level of risk taken on by the commercial lender under this contract was less than that assumed generally under the Airbus governments' LA/MSF contracts.²⁸¹⁷ It follows that the Heads of Terms Agreement drafted for the purpose of British Aerospace's participation in the A340-500/600 project featured the same four "core terms" found in other LA/MSF contracts.

7.530 Thus, while we understand that the Airbus governments did not provide LA/MSF for each and every model of LCA developed by Airbus, the evidence we have reviewed does show that whenever Airbus *sought* LA/MSF it was offered by each of the Airbus governments on the same four "core terms", and in all but one case, the terms and conditions of that LA/MSF were agreed between the parties.

7.531 It is important to note, however, that although it was possible to establish on the basis of the express terms of each of the LA/MSF contracts that they were granted on unsecured, back-loaded and success-dependent repayment terms, it was not equally apparent from the face of each contract that the rate of return asked by the relevant EC member State government was below-market. The non-commercial nature of the interest rates charged for the LA/MSF contracts was a fact we established only after reviewing the extensive evidence and arguments submitted by the parties on appropriate market interest rate benchmarks for the LA/MSF contracts. In other words, below-market interest rates are not an *explicit* feature of the LA/MSF contracts. Moreover, we see nothing inherent in the LA/MSF contracts which, in and of itself, renders them a form of financing that by definition will *always* involve below-market interest rates. Indeed, it is clear that the interest rate advantage obtained by Airbus varied across the different LA/MSF contracts, in general diminishing with every new model of LCA, suggesting that LA/MSF is not synonymous with any particular degree of subsidy intensity (or level of below-market interest rates). In our view, this fact undermines the existence of the alleged unwritten LA/MSF Programme because it shows that to the extent that past instances of LA/MSF might be argued to evidence a broader co-ordinated financing programme, they do not support a conclusion that such a programme would necessarily involve the provision of loans in the future at below-market interest rates.

7.532 In any case, even if LA/MSF were granted in the future on the same four "core terms" identified by the United States, this would not, on its own, demonstrate the existence of the unwritten LA/MSF Programme. We agree with the European Communities that past governmental action may

²⁸¹⁴ Exhibit EC-874 (BCI), Heads of Terms Agreement for the A340-500/600.

²⁸¹⁵ Exhibit EC-874 (BCI), Article 10.2 and Schedule 5.

²⁸¹⁶ As we have previously explained, the market interest rate benchmarks proposed by the European Communities for the purpose of determining whether the LA/MSF contracts involved subsidization were constructed by adding the individual project-specific risk premium identified by the European Communities to the general corporate borrowing rate identified in the Ellis Report for the relevant Airbus borrowing entity. *See*, paras. 7.433 and 7.470 - 7.473 above. In 1998, the year in which the Heads of Terms Agreement was prepared, the Ellis Report identified the general corporate borrowing rate for British Aerospace as 6.24%. Adding the project-specific risk premium proposed by the European Communities to this interest rate brings it above [***], therefore showing that even by the European Communities' own standards, the UK government's proposed LA/MSF for the A340-500/600 was at non-commercial interest rates.

²⁸¹⁷ *See*, paras. 7.452, 7.458 and 7.467 above.

BCI deleted, as indicated [***]

be repeated in the future simply because, on the individual merits of a future case, the government reaches the same decision as it did in the past. The repetition of government action over time does not necessarily prove that the government has adopted a general rule governing its future conduct.²⁸¹⁸ Thus, even assuming *arguendo* that it could be concluded from the LA/MSF contracts we have reviewed that each LA/MSF contract is by definition a form of financing that involves below-market interest rates, something more than the repeated conduct evidenced by the provision of LA/MSF to Airbus each time it sought support for LCA development would be needed to prove the existence of the unwritten LA/MSF Programme that is the subject of the United States' complaint.

Inter-governmental Institutional Structures

7.533 The United States asserts that its description of the alleged LA/MSF Programme is supported by the existence of "entire institutional structures that have been created and that continue to operate with the sole and express purpose of administering the Launch Aid Program".²⁸¹⁹ The United States identifies the "core" institutions forming part of these alleged structures as the "Airbus Inter-governmental Committee", the "Airbus Executive Committee" and the "Airbus Executive Agency". It also points to the "Airbus Ministers Conference" and the "Permanent Working Group for Sales Financing" as other relevant institutions. According to the United States, the alleged structures were first established under the 1969 A300 Agreement, in order to "work with Airbus to ensure the success of each new LCA model, including through the provision of Launch Aid";²⁸²⁰ a "mission" which the United States contends was reinforced and continued through the conclusion of successive inter-governmental agreements and decisions.

The 1969 Agreement

7.534 As its title and preamble suggest, the 1969 Agreement evidences an intention on the part of the governments of France and Germany to co-operate in the field of aeronautics and, in particular, to support Sud-Aviation²⁸²¹ and Deutsche Airbus GmbH ("Associated Manufacturers") in the development of a single LCA, the Airbus A300-B. This intention is given effect over thirteen Articles addressing various aspects of the development and production of the A300, including its financing.²⁸²² The 1969 Agreement envisaged that the French and German governments would provide a specified amount of funding for the development of the A300 in the form of loans ("avances remboursables") to be repaid through a series of graduated levies on the sale of each aircraft, the value of which (as a percentage of sales revenue) was explicitly identified.²⁸²³ Both development and production of the A300 was to be divided between the two Associated Manufacturers involved, in proportion to each government's respective contribution to development costs through "avances remboursables".²⁸²⁴ However, the costs of A300 series production were not financed under the Agreement, which explicitly provided that these would be the responsibility of each of the Associated Manufacturers.²⁸²⁵ The Agreement left the choice of engines subject to the approval of the Parties²⁸²⁶

and envisaged that outsourcing to enterprises in third countries would be possible.²⁸²⁷ It also required the "Work Coordinator"²⁸²⁸ to invite all competent suppliers based in the Signatory countries to participate in possible equipment supply opportunities.²⁸²⁹

7.535 An organisational apparatus was established to oversee the Agreement's implementation. This consisted of three bodies: the Inter-governmental Committee ("AIC"); the Executive Committee ("AEC"); and the Executive Agency ("AEA"). The management of the governments' participation in the project was delegated to the AIC, which was specifically tasked with informing the parties of the "technical, industrial, commercial and financial developments in the project and to guard over or ensure the application of the provisions of {the} agreement, defining when needed the necessary procedures and examining with the companies the problems that occur during the life of the programme".²⁸³⁰ The AIC was also mandated with establishing the AEC, a body "composed of one member per country and charged with those responsibilities that the parties delegate to it".²⁸³¹ It was envisaged that both committees would be supported by the AEA, established within the French government administrative service, which would act as the Committees' executive arm and source of information regarding "any part of the programme".²⁸³² One of the main tasks specifically attributed to the AEA was to enter into a Framework Agreement with the Work Coordinator implementing all relevant provisions of the Agreement.²⁸³³ The Work Coordinator was directed to enter into a similar agreement with each of the Associated Manufacturers assuring their functions *vis-à-vis* the AEA and defining, in particular, the division of work and responsibilities, mutual pricing rules, risk sharing conditions between the Associated Manufacturers and joint profits.²⁸³⁴

7.536 Other particular tasks identified in the Agreement for the relevant Committees included monitoring that a balanced division of work was achieved²⁸³⁵, declaring the final amounts of "avances remboursables" transferred by each government for the purpose of identifying the final sums to reimburse²⁸³⁶, agreeing with the Work Coordinator on the "modalities" for supervising implementation of the repayment provisions²⁸³⁷, and the preparation of an annual report to the parties, including an analysis of the financial situation.²⁸³⁸

7.537 The 1969 Agreement was extended to the government of the Netherlands on 28 December 1970, and the government of Spain on 23 December 1971.²⁸³⁹ The latter agreement indicates that the entry of both governments into the A300 project resulted in them receiving a representative on the AIC.²⁸⁴⁰ It also indicates that the government of Spain was represented on the AEC.²⁸⁴¹ Apart from three specific questions considered to directly affect the interests of the Spanish government and its industry, the vote of the Spanish government representative on the AIC was limited to consultation ("voix consultative").²⁸⁴² In terms of substance, the 1971 A300 Agreement *inter alia*, declared CASA²⁸⁴³ to be an Associated Manufacturer, and conferred upon it both a portion of A300 series production and, [***].²⁸⁴⁴ The Agreement also indicated that any "avances remboursables" from the government of Spain would be repaid with [***] of the repayments identified in Article 7 of the 1969 Agreement.²⁸⁴⁵ Finally, another element of note is that the Agreement [***].²⁸⁴⁶

The 1981 Agreement

7.538 The governments of France, Germany, Spain and the UK entered into an agreement on 28 September 1981 confirming the continued relevance of the 1969, 1970 and 1971 Agreements for the development and production of the A300 and extending the key principles of those agreements to the development and production of the A310.²⁸⁴⁷ The 1981 Agreement comprised fourteen Articles addressing essentially the same matters contained in the 1969 Agreement.²⁸⁴⁸ As with the financing provided for development of the A300, the 1981 Agreement envisaged that certain specified amounts of funding would be made available for the development of the A310 in the form of loans to be repaid through a series of graduated levies on the sale of each aircraft, the value of which (as

The parties have not submitted a copy of the former 1970 Agreement between the governments of France, Germany and the Netherlands.

²⁸⁴⁰ 1971 A300 Agreement, Article 2, para. 4 ("The representatives of the four Contracting Parties on the Intergovernmental Committee ...").

²⁸⁴¹ 1971 A300 Agreement, Article 2, para. 7. As the parties have not submitted a copy of the 1970 A300 Agreement, we cannot confirm whether the government of the Netherlands was also granted representation on the AEC. However, an organisational chart submitted by the United States as Exhibit US-49 (BCI) suggests that this may have been the case. The 1981 A310 Agreement (discussed below) appears to confirm this.

²⁸⁴² Article 2. As the parties have not submitted a copy of the 1970 A300 Agreement, we cannot confirm whether it contained the same or a similar provision in respect of the voting rights of the government of the Netherlands.

²⁸⁴³ At the time, CASA was a publicly-owned enterprise of the Spanish government. *See*, footnote 2234.

²⁸⁴⁴ Article 4. As the parties have not submitted a copy of the 1970 A300 Agreement, we cannot confirm whether it contained the same or a similar provision.

²⁸⁴⁵ Article 5.

²⁸⁴⁶ Article 6.

²⁸⁴⁷ *The Agreement between the Governments of the Federal Republic of Germany, the French Republic, the United Kingdom of Great Britain and Northern Ireland, and Spain concerning the Airbus programme* (the "1981 Agreement"), Exhibit EC-942 (BCI).

²⁸⁴⁸ The Agreement is structured around the following seven chapter headings: "General"; "Organisation"; "Pursuit of the Airbus A300 Programme and Distribution of Work in the Airbus A310 Programme"; "Financing of the A310 Programme"; "Equipment"; "Participation of Third Country Industries"; "Final Provisions".

BCI deleted, as indicated [***]

a percentage of sales revenue) was explicitly identified.²⁸⁴⁹ It also provided that a specified amount of the development costs of the A310 would be assumed by the governments of Belgium and the Netherlands (carried out respectively by Belairbus and Fokker), and that an agreement would be signed with the two governments in due course.²⁸⁵⁰ An agreement was concluded with the governments of Belgium and the Netherlands in 1982.²⁸⁵¹

7.539 Development work was divided in proportion to each government's respective contribution to development costs through "avances remboursables".²⁸⁵² The Associated Manufacturers (which now included British Aerospace²⁸⁵³) were given responsibility for series production of the element of the A310 each had developed.²⁸⁵⁴ However, again, the costs of A310 series production were not financed under the Agreement, which explicitly provided that these would be the responsibility of each of the Associated Manufacturers.²⁸⁵⁵ As with the previous agreements, the 1981 Agreement also envisaged that outsourcing to enterprises in third countries would be possible.²⁸⁵⁶ Moreover, Airbus Industrie was required to invite all competent suppliers based in the Signatory countries to participate in possible equipment supply opportunities and to provide a list of the invited suppliers and the reasons underlying their eventual selection to the AEA.²⁸⁵⁷

7.540 The same organisational apparatus consisting of the AIC, AEC and AEA that was established under the previous agreements was maintained.²⁸⁵⁸ The UK government's participation in the AIC and AEC was recalled;²⁸⁵⁹ and the AEA was opened to include representation from not only the French government, but also the governments of Germany and the UK.²⁸⁶⁰ The French, German and UK governments were given full voting rights in the committees. However, the Spanish government's voting rights were limited to four specific areas that essentially mirrored those found in the 1971 Agreement.²⁸⁶¹

7.541 As the implementing agency, the AEA was once again tasked with entering into a Framework Agreement ("Accord Cadre") with Airbus Industrie GIE in order to give effect to all relevant provisions of the Agreement. The Framework Agreement was required to stipulate: that Airbus Industrie and the Associated Manufacturers undertook to satisfactorily complete the development of the A310 and obtain the necessary certificates; that all additional development costs would be borne by Airbus Industrie and the Associated Manufacturers; and that Airbus Industrie would conclude a contract with each of the Associated Manufacturers, by virtue of which the latter would share responsibility of Airbus Industrie before the AEA, and which would define division of work and

responsibilities.²⁸⁶² Other particular tasks identified in the Agreement for the relevant committees included: reporting on progress in respect of various phases of the project;²⁸⁶³ declaring the final amounts of the "avances reemborsables" transferred by each government for the purpose of identifying the final sums to reimburse;²⁸⁶⁴ and agreeing with Airbus Industrie GIE on the "modalities" for supervising implementation of the repayment provisions.²⁸⁶⁵ The Permanent Working Group on Sales Finance was reconfirmed (having been established by Decision of the AIC in 1973), and opened to participation of the Spanish and UK governments.²⁸⁶⁶

The 1991 Agreement

7.542 On 6 February 1991, the governments of France, Germany, Spain, the UK and Belgium concluded another agreement concerning the development, production and sales financing of the A320.²⁸⁶⁷ This Agreement comprised seventeen Articles addressing essentially the same matters contained in the previous agreements relating to the A300 and A310, but with respect to the A320, and with the addition of a more detailed obligation on support for export sales financing and a provision on the possibility of extending the Agreement to the A321 and other derivatives of the A320.²⁸⁶⁸ Each government's expected financial contribution ("aportaciones nacionales") to the Associated Manufacturers (which now included Belairbus²⁸⁶⁹) for the purpose of developing the A320 was identified,²⁸⁷⁰ and it was prescribed that repayments would be made from aircraft sales revenues.²⁸⁷¹ However, unlike the previous agreements, the 1991 Agreement did not specify the form or value of such repayments.

7.543 Development work and production was divided between the five national actors, in proportion with the work undertaken in each territory and each government's respective contribution to development costs.²⁸⁷² However, again, the costs of production of the A320 were not financed under the Agreement, but left to the Associated Manufacturers.²⁸⁷³ As with the previous agreements, it was envisaged that outsourcing to enterprises in third countries would be possible.²⁸⁷⁴ Moreover, Airbus Industrie and the Associated Manufacturers were required to invite all competent suppliers, especially those based in the Signatory countries, to participate in possible equipment supply opportunities and to provide a list of the invited suppliers and the reasons underlying their eventual selection to the AEA.²⁸⁷⁵ The Agreement also prescribed that the governments of France, Germany, Spain and the UK would support A320 export financing (the Spanish government's obligation being limited to

purchases made by Spanish airlines).²⁸⁷⁶ The responsibilities of the Permanent Working Group on Sales Financing were extended to include the A320.²⁸⁷⁷

7.544 The AIC, AEC, AEA and Permanent Working Group on Sales Financing were maintained and their mandate and responsibilities extended to cover the A320.²⁸⁷⁸ The government of Belgium was granted representation on the AIC and AEC for the purpose of the A320 project; while it was clarified that the government of the Netherlands would not be represented in committee meetings for the purpose of the A320.²⁸⁷⁹ Once again, the French, German and UK governments were given full voting rights in the committees; whereas the Spanish and Belgian government's voting rights were limited to four specific areas.²⁸⁸⁰

7.545 Finally, the AEA was once again tasked with entering into a Framework Agreement ("Acuerdo Marco") with Airbus Industrie GIE in order to give effect to all relevant provisions of the Agreement. The Framework Agreement was required to contain: a commitment from Airbus Industrie and the Associated Manufacturers that they undertook to satisfactorily complete the development of the A320 and to obtain the necessary certificates; a definition of development work, costs and technical stages; an explanation of how reimbursement amounts would be made by Airbus Industrie to the Associated Manufacturers, and a plan of these repayments; a commitment from Airbus Industrie that it would conclude a contract with each of the Associated Manufacturers, by virtue of which the latter would share responsibility of Airbus Industrie before the AEA; and a commitment from Airbus Industrie that it would immediately inform the AEA in the event of any change to the development work.²⁸⁸¹ Other particular tasks identified in the Agreement for the relevant committees included monitoring the progress of the various phases of the project,²⁸⁸² and discussion of compensation proposals in the event that a balanced division of production was not achieved.²⁸⁸³

The 1994 Agreement

7.546 The same five governments concluded a very similar agreement concerning the development, production and sales financing of the A330/A340 on 25 and 26 April 1994.²⁸⁸⁴ The Agreement comprised fourteen Articles covering essentially the same matters set out in the 1991 Agreement, but applying them to the A330/A340.²⁸⁸⁵ It identified each government's maximum expected financial contribution to the development project,²⁸⁸⁶ and prescribed that final amounts would be determined by the AIC, in the light of estimates obtained from Airbus Industrie.²⁸⁸⁷ Like all previous agreements, the 1994 Agreement stipulated that repayments of the amounts advanced by the governments would

be made from aircraft sales revenues.²⁸⁸⁸ However, it did not specify the form or value of such repayments.

7.547 Production was divided between the five national industries, to the extent possible, in proportion with each government's respective contribution to development costs.²⁸⁸⁹ However, again, the costs of production of the A330/A340 were not financed under the Agreement, but left to the Associated Manufacturers.²⁸⁹⁰ As with the previous agreements, it was envisaged that outsourcing to enterprises in third countries would be possible.²⁸⁹¹ Moreover, Airbus Industrie and the Associated Manufacturers were required to invite all competent suppliers, especially those based in the Signatory countries, to participate in possible equipment supply opportunities and to provide a list of the invited suppliers and the reasons underlying their eventual selection to the AEA.²⁸⁹² The Agreement also prescribed that the governments of France, Germany, Spain and the UK would support A330/A340 export financing (the Spanish government's obligation being limited to purchases made by Spanish airlines).²⁸⁹³ Finally, the Agreement explained that consultations would be undertaken to decide the modalities for extending its provisions to derivatives of the A330/A340.²⁸⁹⁴

7.548 In terms of organisational apparatus, the same committees identified in the 1991 Agreement were maintained for the purpose of implementing the governments' participation in the A330/A340 project.²⁸⁹⁵ The AEA was again tasked with entering into a Framework Agreement ("Acuerdo Marco") with Airbus Industrie GIE in order to give effect to all relevant provisions of the Agreement. The Framework Agreement was required to contain: a commitment from Airbus Industrie that, together with the Associated Manufacturers, it undertook to satisfactorily complete the development of the A330/A340 and to obtain the necessary certificates; a definition of development work and technical stages so that the AEA could supervise and evaluate the project's implementation; a commitment from Airbus Industrie to provide a document, agreed with the Associated Manufacturers, which would define respective national contributions to the development costs, as well as a calendar of predicted expenses; a commitment from Airbus Industrie to provide various pieces of information including all information necessary for the supervision over the development programme, including its financial statement; a commitment from Airbus Industrie that it would immediately inform the AEA in the event of any change to the development work; and the conclusion as soon as possible of contracts between Airbus Industrie and each of the Associated Manufacturers, by virtue of which the latter would share responsibility of Airbus Industrie before the AEA.²⁸⁹⁶ Other particular tasks identified in the Agreement for the relevant committees included monitoring the progress of the various phases of the project,²⁸⁹⁷ and consideration of claims relating to unbalanced distribution of production work.²⁸⁹⁸

The 2003 Agreement

7.549 The French, German, Spanish and UK governments entered into an agreement with Airbus SAS on 16 June 2003 setting out certain principles and obligations applicable to the four

governments' continued support for Airbus LCA programmes.²⁸⁹⁹ The Agreement's preamble describes its context in the following three recitals:

"Having regard to the change in the structure of Airbus to an integrated company and the investment of the Four Principal Airbus Countries in Airbus national companies;

Having regard to the willingness of the Four Principal Airbus Countries to continue to provide support to Airbus such as launch investment, research and technology investment and aircraft export sales financing; {and}

Having regard to Airbus' willingness to provide information to the Four Principal Airbus Countries for the purpose of enabling them to formulate policy relating to Airbus and to ensure that obligations incurred when support is provided are met".

7.550 It then sets out an obligation on Airbus, upon request, to provide the AIC and/or AEC with various pieces of information "relating to Airbus and to the Airbus Programmes", defined as "the A380 programme, programmes launched on or after the date of this Agreement and their derivatives, and any other Airbus programmes not covered by specific Framework Agreements with Airbus".²⁹⁰⁰ The Agreement states that the purpose of the information transfer is to enable "each of the Four Principal Airbus Countries to formulate policy in relation to Airbus and to ensure that obligations incurred when support is provided are met".²⁹⁰¹ A non-exhaustive list of ten pieces of information that must be provided on request is included, describing information such as "financial updates relating to each Airbus Programme and to the financial status of Airbus", "reports on Airbus Programmes technical developments", "forecasts and effective aircraft sales detailed by customers and comparisons with aircraft sales of Airbus' competitors", and "Airbus' business and product development strategy".²⁹⁰² A series of provisions are also included relating to confidentiality.²⁹⁰³

7.551 Unlike previous inter-governmental agreements, the 2003 Agreement does not concern any one particular Airbus LCA development project. Its main focus is the A380, but other unspecified projects launched on or after the date of the Agreement and their derivatives were also covered. In addition, other Airbus projects not dealt with under specific Framework Agreements concluded prior to the 2003 Agreement also fell within its scope.²⁹⁰⁴ The Agreement takes note of the four governments' willingness to continue to support Airbus LCA development with "launch investment". While it does not define "launch investment", the references to past Airbus LCA development projects strongly suggests that what is intended is LA/MSF in the terms we have previously described. However, it is clear that no commitment is made by the governments to provide "launch investment" for any particular model of LCA.

7.552 As far as the A380 is concerned, the United States asserts that the Airbus governments had already decided at the end of 2000 to support its development by means of LA/MSF. To substantiate its assertion, the United States points to a press release dated 15 March 2002 issued by the French *Ministre de l'Equipelement, des Transports et du Logement*. This press release in part reads:

²⁸⁹⁹ *Agreement of 16th June 2003 signed at Paris-Le Bourget between the Ministers of the Four Principal Airbus Countries and Airbus*, Exhibit US-122 (BCI).

²⁹⁰⁰ Articles 1 and 3.

²⁹⁰¹ Article 3.1.

²⁹⁰² Article 3.2.

²⁹⁰³ Article 6.

²⁹⁰⁴ We understand the latter to be a reference to the Framework Agreements that were called for under prior inter-governmental agreements between the AEA and Airbus Industrie.

BCI deleted, as indicated [***]

"Agreement on the financing of the Airbus A380

Jean-Claude Gayssot welcomes the signing of the protocol under which the State will advance EUR 1,213 million to Airbus France for the development of the future A380 LCA.

For France, this signature is the realization of the decision taken at the end of the year 2000 by the various European countries concerned to support this programme in proportion to their respective industries' involvement in the development of the new aircraft.

The advance is granted at market rate and will be repayable as the aircraft are delivered. This financing therefore complies with all the provisions of the European/US agreement of July 1992 governing support for over-100-seater aircraft programmes ...".²⁹⁰⁵

7.553 The United States considers that the underlined part of the above press release evidences the existence of an accord between the Airbus governments on the provision of LA/MSF for the A380. The United States notes that during the Annex V process, the European Communities denied the existence of any such agreement, and "did not attempt to resolve the discrepancy between their assertion and the French Transport Ministry's press release".²⁹⁰⁶

7.554 In terms of the A350, the United States argues that the Airbus governments committed to providing LA/MSF for this project by the time this panel had been established. However, we have concluded elsewhere that the United States' assertion cannot be substantiated on the basis of the evidence and arguments before us.²⁹⁰⁷

Airbus Ministers Conference

7.555 The United States argues that the Airbus Ministers Conference is part of the inter-governmental institutional structure established "to operate for the sole and express purpose of administering the Launch Aid Program".²⁹⁰⁸ However, the United States has advanced no evidence or additional arguments to explain exactly how it considers this body operates as a matter of fact. According to the European Communities, the Airbus Ministers Conference is a "meeting held at the annual aircraft shows in Le Bourget, Berlin and Farnborough" where Ministers from France, Germany, Spain and the UK meet "to discuss a range of topics with Airbus officials – such as the company's financial condition, the status of existing LCA programmes, and plans for future Airbus LCA".²⁹⁰⁹ While the European Communities has also not submitted any evidence to substantiate its factual assertions, the United States appears to accept this aspect of the European Communities' explanation of the Airbus Ministers Conference functions.²⁹¹⁰ On the other hand, the United States does not accept the European Communities' contention that neither the provision of LA/MSF nor its terms and conditions are discussed or coordinated in this body.²⁹¹¹

BCI deleted, as indicated [***]

Overall assessment of the inter-governmental institutional structures

7.556 The European Communities asserts that none of the inter-governmental institutions identified by the United States provide LA/MSF or fix its terms.²⁹¹² Moreover, according to the European Communities, the provision of LA/MSF or its terms and conditions are never discussed by the EC member States governments in the various fora. The European Communities describes the present-day function of the AIC, which it notes meets twice per year, as a "forum for Airbus GIE/SAS and the member States to exchange information on a range of issues" including Airbus' financial status, sales financing, technical developments, export credits, aviation emissions and air traffic. It explains that "in some cases, the AIC may work with Airbus GIE/SAS to allocate development work (known as 'work share') with respect to specific LCA programmes."²⁹¹³ It also asserts that the role of the AEC has steadily declined since the late 1980s, and that its functions have now largely been subsumed within the AIC.²⁹¹⁴ As regards the AEA, the European Communities discloses that it is today "defunct", and that the Framework Agreements it used to negotiate with Airbus Industrie on behalf of the AEC are no longer concluded. Similarly, the European Communities describes the Airbus Ministers Conference as a meeting held once a year between Ministers from the France, Germany, Spain and the UK, to discuss "a range of topics with Airbus officials – such as the company's financial conditions, the status of existing LCA programmes, and plans for future Airbus LCA".²⁹¹⁵ Finally, the European Communities alleges that the Permanent Working Group for Sales Financing has no nexus with LA/MSF loans, as it addresses issues relating to aircraft sales financing and export credits.²⁹¹⁶

7.557 According to the United States, the functions of the institutional fora identified by the European Communities support the existence of a LA/MSF Programme with the precise content it has defined because they all "facilitate the ultimate decisions by the Airbus governments to provide Launch Aid and on what terms".²⁹¹⁷ The United States emphasizes that "{e}ven if the EC were correct in its assertions {that the inter-governmental entities do not decide whether to grant LA/MSF or its terms}", the European Communities has itself confirmed that they "provide the support necessary for the responsible officials to make" such decisions, thereby supporting the existence of the alleged LA/MSF Programme.²⁹¹⁸

7.558 We are not persuaded by the United States' arguments. Since their creation in 1969, the inter-governmental institutions have played a role in administering the EC member States' participation in Airbus LCA development projects. However, this role has varied between different LCA projects in both substance and form, becoming increasingly limited. For instance, whereas the Committees' functions in respect of the earliest projects covered aspects including entering into Framework Agreements and the establishment of "modalities" through which to monitor the execution of specific repayment provisions; by the time of the A380, the role of the Committees that continued to exist²⁹¹⁹ was reduced to essentially the exchange of information. Indeed, the role of the Committees in the development of the A380 was not prescribed in any inter-governmental agreement because no inter-governmental agreement was ever concluded for the A380. Instead, an agreement requiring the exchange of information between Airbus and the AIC and/or AEC was concluded between the Airbus governments and Airbus SAS.

²⁹¹⁹ We note that the United States has not contested the European Communities' assertion that the AEA is "now defunct".

BCI deleted, as indicated [***]

7.559 Over time, participation in the Committees has also fluctuated. Although invited,²⁹²⁰ the UK government did not initially participate in the Committees for the purpose of the A300 project. The UK government was only afforded representation on the Committees in 1979, when it joined the governments of Spain and the Netherlands, each respectively represented in the AIC since 1970 and 1971. Subsequently, the government of Belgium joined the A310, A320 and A330/A340 projects, contributing development funds on the same terms agreed with other participants in the respective inter-governmental agreements, and accordingly receiving representation on at least two of the three Committees. On the other hand, the government of the Netherlands did not participate in projects after the A310, and its representation on the Committees was limited accordingly. Thus, at most, the evidence before us suggests that if the Committee's operations point to the existence of any "Programme" of support, it would be a Programme involving the governments of Belgium (which was granted essentially the same voting rights as Spain in respect of the A320 and A330/A340 projects) and the Netherlands.

7.560 The agreements at issue say nothing about whether the three Airbus Committees were involved in the development of the A330-200 and the A340-500/600, two models which received LA/MSF, and therefore according to the United States' own description, models that must fall within the scope of the alleged LA/MSF Programme.²⁹²¹ Likewise, there is no evidence indicating that the Committees or the Airbus Ministers Conference were involved in Airbus' launch of the A350. Indeed, we have already concluded that the United States has failed to demonstrate that any commitment to provide LA/MSF for this LCA model had been made by the Airbus governments by the time of the establishment of this Panel.²⁹²²

7.561 Like the European Communities, we see no apparent connection between the Permanent Working Group for Sales Financing and the provision of LA/MSF or the existence of the alleged LA/MSF Programme. Moreover, on the basis of the evidence that is before us, we cannot conclude that the Airbus Ministers Conference is more than what the European Communities says it is – a forum where information is exchanged between the Airbus governments and Airbus executives. While we have some sympathy with the United States' view that "it is implausible that the governments and Airbus meet at least three times each year to discuss matters including 'the company's financial status' but never discuss the provision of billions of Euros of government financing representing one-third of the cost of developing an LCA model",²⁹²³ the United States has pointed to no evidence that directly substantiates its position. In any case, even if there were evidence demonstrating that the Airbus governments "discuss" the provision of LA/MSF loans in the Airbus Ministers Conference, the weight given to such evidence would depend upon to extent to which it could substantiate the precise content of the alleged unwritten LA/MSF Programme. In other words, evidence of mere discussions on the provision of LA/MSF would not alone establish the existence of the unwritten LA/MSF Programme defined by the United States.

7.562 Finally, we note that the scope of the inter-governmental agreements that were the source of the Airbus Committees' existence, mandates and operations, went beyond the provision of LA/MSF for the purpose of LCA development. The Agreements also covered LCA production, outsourcing of development and production work, equipment supplies, sales financing, and in some cases, rules on the purchase of engines and commitments to purchase LCAs. Thus, contrary to the submission of the United States, the Airbus Committees were not created or continued for "the sole and express purpose of administering the Launch Aid Program". If, in fact, the Committees do have a "sole" purpose, it

²⁹²⁰ See, preamble of the 1969 A300 Agreement.

²⁹²¹ Although Article 13 of the 1994 Agreement provided that consultations would be undertaken to decide the modalities for extending its provisions to derivatives of the A330/A340, the United States has not argued or advanced any evidence suggesting that any such consultations or extension actually took place.

²⁹²² See, para. 7.314 above.

²⁹²³ US, Comments on EC Answer to Panel Question 172.

BCI deleted, as indicated [***]

could perhaps be better characterized as the general management and administration of the varying participation of individual EC member States in Airbus LCA development on a project-by-project basis.

National Bureaucracies

7.563 The United States asserts that the Airbus governments maintain "dedicated bureaucracies" that perform the administrative tasks involved in maintaining the LA/MSF "system" and which coordinate the provision of LA/MSF to Airbus. In the case of France, the United States argues that "a special unit" exists (the "cellule d'avions de transport de plus de 100 places") in the "Direction des Programmes Aéronautiques Civils", which monitors Airbus and the LA/MSF "system"; participates in the inter-governmental institutions; and administers the provision of LA/MSF to Airbus.²⁹²⁴ In Germany, the United States asserts that the office of the Coordinator for the Aerospace Industry and for Aeronautics Research, within the Federal Ministry of Economics and Technology, is responsible for administering the LA/MSF "system".²⁹²⁵ In Spain, the United States points to the Ministry of Science and Technology, which it contends is responsible for administering the "system of reimbursable advances" and participating in the "Council of Ministers of the four countries, the {Airbus} Executive Committee and the other bodies that manage and coordinate the system".²⁹²⁶ Finally, the United States argues that the "UK Launch Aid system" is administered by the "aerospace team" located within the Aerospace and Defence Unit of the Department of Trade and Industry. The United States contends that this Unit is responsible for "relations with civil aerospace companies, and launch investment".²⁹²⁷

7.564 According to the European Communities, the "cellule d'avions de transport de plus de 100 places" that exists within the Direction des Programmes Aéronautiques Civils ("DPAC") consists of one staff member. DPAC functions within the Direction Générale de l'Aviation Civile, and is responsible for international co-operation in aeronautics and civil aviation, air safety, air traffic management, R&T for the aerospace sector and external communications. The European Communities asserts that the single staff member working in the "cellule d'avions de transport de plus de 100 places" passes 40% of his time on matters relating to LA/MSF loans for Airbus, with the remainder being devoted to a range of policy and other issues relating to the LCA industry.²⁹²⁸ In Germany, the European Communities explains that the "aerospace industry and technology" unit within the Coordinator for Aeronautics and Space, is responsible for various tasks including evaluating requests for government financing such as LA/MSF and export credits, providing information to Parliament and the public on aeronautics matters, administering existing financing instruments, implementing the federal R&T programme, and addressing an array of issues relating to national and international air transport. The European Communities states that 10 staff members work in this unit, with two devoting approximately 30% of their time to the LA/MSF loans provided to Airbus and other entities.²⁹²⁹ In Spain, the European Communities asserts that approximately 50% of the work carried out by one of eight staff members in the Aeronautics Department of the Centre for the Development of Industrial Technology ("CDIT"), located within the Ministry of Industry, Tourism and Trade, relates to LA/MSF loans for Airbus. The European Communities notes that the CDIT is responsible for the promotion of R&D activities in all sectors of the economy.²⁹³⁰ Finally, the European Communities explains that out of a total of 18 staff working for the Aerospace, Marine and Defence unit of the UK Department of Business, Enterprise and Regulatory Reform, the

²⁹³⁰ EC, Answer to Panel Question 172.

BCI deleted, as indicated [***]

equivalent time of 1.4 staff members is spent on LA/MSF loans for Airbus, and 1 staff member on LA/MSF loans for other entities. In addition to various forms of government support to the aerospace industry, the Aerospace, Marine and Defence unit is responsible for aviation emission issues, military and marine procurement, industrial and strategic planning and aerospace research.²⁹³¹

7.565 The European Communities considers that it is not surprising to find that the member States act through "bureaucrats" when fulfilling their obligations under the LA/MSF contracts. In this sense, the European Communities describes the role of the national bureaucrats as "no different than that of the 'dedicated' loan officers at a bank", declaring that "the fact that banks have employees dedicated to considering loan requests and reviewing the ongoing performance of existing loans does not say anything about the terms on which those loans are provided, or suggest that future loans will be conferred to the same recipient".²⁹³² Thus, the European Communities explains that the essence of the functions of the national bureaucrats is to administer and monitor LA/MSF loans to all recipients, not only those provided to Airbus. According to the European Communities, this involves reviewing requests for development cost reimbursement; ensuring that disbursements occur on time and in accordance with contractual terms; processing repayments; and analyzing technical and commercial information provided by recipients, in line with the loan contracts. The European Communities emphasizes that the bureaucrats serve only to undertake these functions, conduct analyses and make recommendations. They do not decide whether to provide LA/MSF to Airbus.²⁹³³

7.566 The evidence and arguments submitted by the parties on the existence and functions of the alleged "dedicated bureaucracies" makes clear that each of the four Airbus governments currently direct a limited amount of resources within their national civil service to the task of managing their participation in Airbus' LCA development projects through LA/MSF. In our view, it is not surprising to find civil servants managing and monitoring the implementation of the LA/MSF contracts. As the lending contractual party, each government providing LA/MSF will want to ensure that its decisions are well informed, obligations maintained and rights enforced. The fact that each of the four Airbus governments go about doing so by engaging their respective national civil servants does not, in our view, provide support for the existence of the unwritten LA/MSF Programme the United States describes. The resources the four EC member States have allocated are not exclusively dedicated to LA/MSF for Airbus, and it is clear that this is not the focus of the administrative entities housing the relevant bureaucracies. Moreover, there is nothing in the evidence to indicate that the relevant civil servants co-ordinate their actions, or assist in co-ordinating the actions of their governments, in respect of LA/MSF provided to Airbus. Neither is it apparent from the evidence and arguments that they participate in any "system" of LA/MSF. Thus, while the existence of bureaucrats involved in managing each government's participation through LA/MSF in Airbus' LCA development activities does not contradict the existence of the alleged unwritten LA/MSF Programme, we consider that, on its own, this fact provides little, if any, support for the United States' position.

Statements by EC, EC member State and Airbus officials and employees

7.567 The United States submits that various statements made since 2000 by the EC member States, the European Commission and Airbus officials confirm the existence of the challenged LA/MSF Programme.²⁹³⁴ In particular, the United States identifies the following statements by:

against American pressure", reported by AFX News Limited, 24 May 2005.²⁹⁴¹

EADS spokesman, Rainer Ohler, June 2006 –

"As far as we can see, the negotiations have not led to anything,' ... He stopped short of saying that Airbus would request the aid – which could run into billions of euros – but called the money 'indispensable' for establishing what he called a level playing field with Boeing. 'Launch aid is the only available system right now', he said", reported in International Herald Tribune, 19 June 2006.²⁹⁴²

Airbus Ministers, 24 July 2006 –

"reaffirmed their agreement to support Airbus to continue to innovate and to develop programmes in the context of international competition."²⁹⁴³

French Prime Minister, Dominique de Villepin, 2006 –

On the role of the state in EADS, "{the state is there} to defend a strategic long term vision, which is guarantor of jobs and economic dynamism of the company. I can ensure you that the State will fully play its part", reported in La Dépêche du Midi, 14 November 2006.²⁹⁴⁴

Airbus CEO, Louis Gallois, March 2007 –

"We are not putting away refundable launch investment" (in the context of the A350XWB), reported by AFP.²⁹⁴⁵

7.568 The European Communities rejects the United States' reliance on these statements, arguing that they do not demonstrate the four EC member State governments adopted any rules of general and prospective application governing the grant of LA/MSF, and thus any unwritten LA/MSF Programme.²⁹⁴⁶

7.569 A first observation that may be made in respect of the above statements is that none contains any explicit reference to the existence of any type of unwritten LA/MSF Programme. Second, the particular context of each statement is, for the most part, either the A380 or the possibility of LA/MSF for the A350. So, for example, the statements made by the UK Secretary of Trade and Industry, Stephen Byers, and the French Minister for Transport, Gilles de Robien, relate to the respective government's decisions to provide LA/MSF for one project – the A380.²⁹⁴⁷ Likewise, the statements made by President Chirac, Prime Minister Blair and the European Commission referring to "European

²⁹⁴¹ Exhibit US-61.

²⁹⁴⁴ Exhibit US-638, English translation provided by the United States.

²⁹⁴⁵ Exhibit US-449.

²⁹⁴⁶ EC, Comments on US Answer to Panel Questions 136 and 137.

²⁹⁴⁷ The declaration made by Louis Gallois, Airbus CEO, that Airbus was "not putting away refundable launch investment" can be viewed in a similar light, namely, as a statement that Airbus considered LA/MSF to be a possible source of financing for one project – the A350.

BCI deleted, as indicated [***]

industrial policy", "unprecedented co-operation between the four countries"²⁹⁴⁸ and "the fruit of European state-level co-operation"²⁹⁴⁹ do not suggest the existence of any coordinated system of LA/MSF funding for Airbus LCA projects. Rather, they simply disclose that four EC member State governments co-operated with each other for the purpose of realizing one project – the A380. Moreover, these statements do not single out the provision of LA/MSF by each individual member State as the tool through which they cooperated. Indeed, given the variety of support measures taken for the A380 by each of the four EC member States²⁹⁵⁰, it is quite plausible that what the authors of the statements had in mind was co-operation in the sense of support, in all its guises, for the A380. We see the reaffirmation of the Airbus governments' "agreement to support Airbus to continue to innovate and to develop programmes in the context of international competition" in essentially the same light, that is, as a statement expressing ongoing support, in general, for Airbus LCA development projects. Thus, at most, the above statements seem to reflect only a shared desire to support the A380 and A350 projects and Airbus' LCA business in general.

7.570 The European Commission's 2003 observation that "member States will retain a crucial responsibility for providing support in terms of R&D programmes, repayable launch aid and contributions to ESA programmes, as well as remaining the industry's major customers through defence procurement"²⁹⁵¹ was made in the context of a Communication expressing the Commission's point of view on how the EU could play a role in fostering an improved environment for the purpose of enhancing the operation of the EC aerospace industry in general. In terms of LA/MSF, the Communication notes only that, in the Commission's vision, the EC member States would "retain a crucial responsibility for providing" "repayable launch aid". To read this statement as support for the existence of the unwritten LA/MSF Programme described by the United States would, in our view, be stretching its intended meaning beyond what may be reasonably inferred from its plain language and context. Similarly, the statement made by French Prime Minister, Dominique De Villepin, quoted by the United States, was made in response to a question asking him whether, in the light of recent setbacks, the French government would use its representative on the board of EADS to exercise more rigorous control.²⁹⁵² In this light, it is difficult to understand the French Prime Minister's statement as providing any support at all for the existence of the alleged unwritten LA/MSF Programme measure.

7.571 Finally, the statements that perhaps do lend a degree of support to the United States' factual assertion, in the sense that they could be understood to be consistent with the existence of an unwritten LA/MSF Programme measure, without substantiating its existence, are those made by the EC Commission and the EADS spokesman identifying LA/MSF as "part of the commercial landscape for aircraft development in the EU" or "the only available system right now". However, because the time horizon of the "commercial landscape" or "system" considered in these statements is not revealed, it is difficult to attribute to them any positive probative value for the purpose of substantiating the United States' allegations.

Perceptions of Credit Rating Agencies

7.572 The United States submits that the existence of the LA/MSF Programme is also evidenced by what it asserts is the fact that credit rating agencies see it as an established feature of the financial

²⁹⁴⁸ Exhibit US-44.

²⁹⁴⁹ Exhibit US-43.

²⁹⁵⁰ Apart from LA/MSF for the A380, other support measures applied by the four EC member States that are the subject of this dispute include various research and development grants, the provision of infrastructure and one loan from the European Investment Bank. The United States complaint against these measures is evaluated in the following sections of this Report.

²⁹⁵¹ Exhibit US-59.

²⁹⁵² Exhibit US-638 ("In the light of recent setbacks, will the State use its representative on the board of the aeronautic and defence group to exercise more rigorous control over EADS?")

BCI deleted, as indicated [***]

landscape that informs their projections of Airbus' financial health.²⁹⁵³ In particular, the United States points to the following statements made by:

Moody's, 15 March 2002 –

"The new rating also reflects the forecast that Government support in the form of refundable advances will continue for the development programs of Airbus for up to 1/3 of the development cost of each new aircraft program; thus offsetting some of the pressure on the company's cash flows over the near-term".²⁹⁵⁴

Moody's, 6 February 2003 –

"EADS's A3 long-term debt rating reflects the leading worldwide market positions held by several of its businesses, as well as the company's strong balance sheet, which should remain solid during the current severe downcycle in the commercial aircraft market. The rating also considers the expectation for continuing government support, which is primarily in the form of refundable advances for up to 1/3 of the development cost of each new aircraft program on the Airbus level."²⁹⁵⁵

Moody's, 9 March 2007 –

"Moody's considers EADS as a Government Related Issuer (GRI) and as part of its rating review has increased the level of support for EADS to High from Medium. The change in the support assessment reflects the higher degree of government support for EADS that has become evident in the course of the company's current financial challenges. ..."²⁹⁵⁶

Moody's, 12 March 2007 –

"Moody's has raised the level of potential support from medium-high to high to reflect the accumulation of indices that Airbus is perceived as economically, socially and politically critical for a wide range of stakeholders" noting "an entrenched inclination for state protection".²⁹⁵⁷

Fitch Ratings, 15 November 2006 –

"With the A380 delays significantly reducing cash generation, and the deferrals and cancellations to further reduce it, combined with the buyout of BAE and the increased costs associated with designing the all-new A350XWB versus the original A350 concept, Airbus may be forced to seek additional launch aid for the A350XWB. In a vacuum, additional launch aid would be viewed favourably from a credit

²⁹⁵⁴ Exhibit US-57.

²⁹⁵⁵ Exhibit US-56.

²⁹⁵⁶ Exhibit US-464.

²⁹⁵⁷ Exhibit US-450.

BCI deleted, as indicated [***]

perspective, as well. Unfortunately, the continuing trade dispute between the United States and the EU regarding Boeing and Airbus subsidies continues, and additional launch aid to Airbus would only increase tensions and reduce the likelihood of a negotiated settlement".²⁹⁵⁸

Credit Suisse, 15 June 2006 –

"Airbus is the second largest civil aircraft manufacturer after Boeing, with a market share within the range of 50% and rising. Supported by a European government launch aid, Airbus has developed an extremely competitive product range, competing with Boeing in all segments..."²⁹⁵⁹

7.573 The European Communities argues that the credit rating agencies' statements do not support the existence of the unwritten LA/MSF Programme defined by the United States because they do not take into account the specific terms of individual LA/MSF contracts. In its view, the credit rating agencies' statements represent broad assessments of LA/MSF without any consideration of its precise details,²⁹⁶⁰ that express an expectation that past individual instances of "government support" might be repeated in the future.²⁹⁶¹ However, the European Communities considers that an expectation that past government action might be repeated in the future does not demonstrate the existence of a general rule taking the form of the unwritten LA/MSF Programme challenged by the United States.

7.574 We find the above statements provide little, if any, support for the existence of the unwritten LA/MSF Programme defined by the United States. First, we note that two of the statements do not even mention LA/MSF. In particular, the two Moody's statements made in 2007 indicate only a general expectation of government *support* for EADS and Airbus. As we have previously noted, LA/MSF is but one of the instruments used by the EC governments to support Airbus' LCA business. Moreover, it would not be unreasonable to read the Moody's statements as referring to support from all EU public entities, not only the governments of France, Germany, Spain and the UK. Certainly, there is no indication that their focus was limited to support provided only by these four governments. To the extent that the other statements do mention LA/MSF, we agree with the European Communities that the fact that the credit rating agencies and Credit Suisse could not have been aware of its precise details, and in particular, the extent to which any contract may involve below-market interest rate terms, reduces their probative value. Because LA/MSF does not involve non-commercial financing by definition, it does not automatically follow that the statements should be understood as referring to LA/MSF on the same four "core" terms identified by the United States. In any case, as regards the two Moody's statements from 2002 and 2003, the perception articulated is that LA/MSF would continue for "each *new* aircraft program".²⁹⁶² It is a forward looking assessment, that does not address whether or not instances of LA/MSF received in the past were part of a broader unwritten LA/MSF Programme. Similarly, the Fitch Ratings statement speculates only that *additional* LA/MSF might be a possibility for the A350. Finally, the statement from Credit Suisse simply observes that the Airbus family of LCA was developed with the support of LA/MSF. The statement does not reveal or suggest whether LA/MSF support was provided individually by the relevant EC member States or through the application of any kind of LA/MSF Programme. Thus, we do not consider the Credit Suisse statement to demonstrate a perception that the four relevant EC member States have acted through the unwritten LA/MSF Programme measure that is challenged by the United States.

(ii) *Conclusion*

7.575 We have explained that in order to establish the existence of the alleged unwritten LA/MSF Programme it has described, the United States must demonstrate at least its precise content, that it is attributable to governments of France, Germany, Spain and the UK, and that it has general and prospective application.²⁹⁶³ Although the United States argues that the Panel need not necessarily find that the alleged LA/MSF Programme has general and prospective application in order to establish its existence,²⁹⁶⁴ we recall that the United States has explicitly described the challenged LA/MSF Programme as a measure that "creates expectations among the public and among private actors", demonstrating that it has "normative value".²⁹⁶⁵ In other words, the alleged "normative value" of the challenged LA/MSF Programme is a central element of the alleged measure that the United States describes. In our view, this alleged "normative value" must therefore be demonstrated as a matter of fact in order for us to find in favour of the United States.

7.576 Overall, having carefully reviewed and considered the evidence and arguments advanced by the United States, we are not convinced that the United States has met the "high threshold" that must be overcome in order to establish the existence of the alleged unwritten LA/MSF Programme.

7.577 Individually, no piece or category of evidence relied upon by the United States positively demonstrates the existence of the alleged unwritten LA/MSF Programme. Some pieces of evidence appear not to be inconsistent with the existence of an unwritten Programme of the kind described by the United States. However, other evidence is clearly contradictory. Thus, while the facts surrounding the development of Airbus LCA show a history and general policy to support Airbus through LA/MSF, this support has not always been expressed by the same four EC member States or for the same LCA projects. Likewise, the institutions created under the first inter-governmental agreements to manage the different Members' participation in various Airbus LCA projects have at different times involved fewer or more countries than the four EC member States the United States asserts systematically operated the unwritten LA/MSF Programme. Importantly, the functions of these institutions evolved over the years, becoming more limited by the time of the A380. Apparently the institutions were not used at all to manage LA/MSF provided for the A330-200 and A340-500/600 projects.

7.578 As we have previously explained, the evidence and arguments advanced by the parties do not lead us to conclude that LA/MSF, by definition, involves below-market financing. Therefore, in our view, it cannot be concluded with the degree of certainty needed to overcome the "high" evidentiary threshold that the United States must satisfy that any LA/MSF granted in the future will involve non-commercial interest rates. In addition, we note that several of the statements relied upon by the United States evidence a general perception that Airbus has been and will be supported in its LCA operations by the EC member States. However, in our view, a perception that government support will be available for Airbus does not prove that this support will be implemented by means of the unwritten LA/MSF Programme described by the United States. Moreover, it is less than clear that the temporal horizon of many of the statements referred to by the United States covered all Airbus LCA projects since 1969. Indeed, many of the statements were expressly focussed on only the A380 or the A350.

²⁹⁶³ See, paras. 7.514 - 7.521 above.

²⁹⁶⁴ US, Answer to Panel Question 136.

²⁹⁶⁵ US, FNCOS, para. 25, citing Appellate Body Report, *US – Oil Country Tubular Goods Sunset Reviews*, para. 187. See also US, SNCOS, para. 36, and US, FWS, para. 106, where the United States concludes that "in the light of the evidence, the specific content of the Launch Aid program and **the future conduct it will entail** is clear". (Emphasis added).

BCI deleted, as indicated [***]

7.579 Thus, for all of the above reasons, we find that the totality of the evidence and arguments the United States has advanced does not demonstrate the existence of the alleged unwritten LA/MSF Programme.

7.580 Had we found that the United States did not have to establish the general and prospective application of the alleged unwritten LA/MSF Programme, our conclusion would be the same – namely, that the United States has not demonstrated that such an unwritten LA/MSF Programme exists. First, we note that in general terms, a "programme" may be described as a planned series of events. Thus, we query whether a "programme" of any kind can exist without having general and prospective application. Second, it is not entirely clear to us what the United States means when it argues that the evidence it has adduced supports the existence of an unwritten LA/MSF Programme that is not of general and prospective application. If the focus of the United States' position is the repetition of the same government action over a limited period of time, (*i.e.*, the Airbus governments' provision of LA/MSF to Airbus, whenever sought, on the same four core terms between 1969 and 2002), we recall our view that the mere repetition of the same government action over time does not necessarily demonstrate that the government acted pursuant to a rule that applied generally over that same period.²⁹⁶⁶ Moreover, there is evidence that points to the non-existence of any such unwritten LA/MSF Programme, including: the fact that between 1969 and 2002 the same four EC member States did not always participate, or participated with other EC member States, in Airbus LCA projects funded through LA/MSF; the evolving role and function of the inter-governmental institutions; and the fact that the latter were not apparently used for the purpose of the LA/MSF provided for the A330-200 and A340-500/600. Thus, on the basis of our understanding of the United States' argument, we find that the facts do not substantiate its claim.

7.581 Having concluded that the United States has not demonstrated the existence of the alleged unwritten LA/MSF Programme, we need not evaluate the United States' claims that the alleged Programme is a subsidy that causes adverse effects to its interests within the meaning of Article 5 of the SCM Agreement. Accordingly, we dismiss the United States' complaint against the alleged unwritten LA/MSF Programme.

4. Whether LA/MSF for the A380, A340-500/600 and the A330-200, constitutes, in each case, a prohibited export subsidy within the meaning of Article 3 of the SCM Agreement

(a) Arguments of the United States

7.582 The United States claims that the LA/MSF contracts for the A380, the A340-500/600 and the A330-200 constitute prohibited subsidies under Article 3 of the SCM Agreement. In particular, the United States submits that each of these instances of LA/MSF involves a subsidy that is contingent, both in law and in fact, upon anticipated export performance within the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement, and therefore, pursuant to Article 3.2 of the SCM Agreement, must not be granted or maintained. According to the United States, irrespective of whether its claim is viewed as one of in law or in fact export contingent subsidies, the elements are the same: the EC member State governments provide subsidies in the form of financing for the development of LCA models on terms that are better than what Airbus could obtain in the market; these subsidies are provided through contracts in which funding is tied to Airbus making repayments over a specified number of sales of the LCA model being financed; and, in each case, the number of sales that must be made for Airbus to fulfil its repayment commitment cannot be reached without exporting.²⁹⁶⁷

7.583 Relying on the Appellate Body's findings in *Canada – Aircraft*, the United States argues that a determination that a subsidy is contingent upon export performance involves proving three

²⁹⁶⁶ See, para. 7.532 above.

²⁹⁶⁷ US, FWS, paras. 343-386; US, Answer to Panel Question 10.

BCI deleted, as indicated [***]

elements: (i) the "granting" of a subsidy; (ii) that is "tied to"; (iii) "actual or anticipated exportation or export earnings".²⁹⁶⁸ To the extent that it has demonstrated that each of the challenged LA/MSF measures amount to subsidies within the meaning of Article 1 of the SCM Agreement, the United States asserts that the first element of this test has been satisfied.²⁹⁶⁹ As regards the third element, the United States submits that for each of the challenged LA/MSF measures, the EC member State governments anticipated that the financed projects would result in exportation or export earnings because they were fully aware of the global nature of the LCA market and the fact that Airbus is a highly export-oriented company, as evidenced by, *inter alia*, information contained in Airbus' Global Market Forecasts, Airbus' LA/MSF applications and the governments' own market appraisals.²⁹⁷⁰

7.584 In terms of establishing the second element – the existence of contingency between the granting of a subsidy and actual or anticipated export performance – the United States argues that the legal standard that must be applied is the same for subsidies that are alleged to be contingent in law, or contingent in fact, upon export performance. Thus, recalling certain observations of the Appellate Body in *Canada – Aircraft*, the United States submits that when examining whether the grant of a subsidy is "tied to" export performance, either in law or in fact, it is necessary to assess whether it is "conditional" on export performance or "dependent for its existence" on export performance. Consistent with the views of the Appellate Body, the United States notes that the type of evidence that may be employed to demonstrate the two types of contingency will be different.²⁹⁷¹

7.585 In respect of *in law* contingency, the United States concurs with the views it asserts were expressed by the Appellate Body in *Canada – Autos*, where it found that contingency in law upon export performance may be established "when the existence of that condition can be demonstrated on the basis of the very words of the relevant legislation, regulation or other legal instrument constituting the measure".²⁹⁷² The United States recalls, however, that the Appellate Body explained that this did not mean that in law contingency could only be established *expressis verbis*, but that it could also be found "by necessary implication from the words actually used in the measure".²⁹⁷³ Thus, the United States argues that the terms and conditions of each of the challenged LA/MSF contracts demonstrate in law contingency because, when read in the light of the number of LCA sales the EC member State governments expected would be achieved in Europe and abroad, the "words actually used" in those contracts – in particular, the contractual terms tying the provision of LA/MSF to repayment over a specific number of LCA sales – give rise to the "necessary implication" that the provision of LA/MSF is contingent, in law, upon export performance.²⁹⁷⁴

7.586 In contrast, the United States notes that a finding that a subsidy is *in fact* contingent upon export performance must be "*inferred* from the total configuration of facts constituting and surrounding the granting of the subsidy, none of which is likely to be decisive in any given case".²⁹⁷⁵ The United States observes that pursuant to footnote 4 of the SCM Agreement, such facts must establish that "the granting of a subsidy, without having been made legally contingent upon export

BCI deleted, as indicated [***]

performance, is in fact tied to actual or anticipated exportation or export earnings".²⁹⁷⁶ In this regard, the United States notes that the existence of a "tie" between the granting of a subsidy and export performance may be demonstrated when there is a relationship of "conditionality" or "dependence" between the subsidy and exports.²⁹⁷⁷ The United States submits that such a relationship can be found in the facts surrounding the decisions to provide the challenged LA/MSF measures, and in particular: (i) the existence of a contractual tie between the provision of LA/MSF and Airbus' commitment to repay LA/MSF through revenues generated from LCA sales necessarily involving exports; and (ii) the EC member State governments' anticipation of export performance.²⁹⁷⁸

(b) Arguments of the European Communities

7.587 The European Communities rejects the United States' claims, contesting both the United States' legal argument and the inferences it has drawn from the facts it asserts and evidence it adduces. According to the European Communities, in order to find that a measure is a prohibited export subsidy within the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement, the following three elements must be established: (i) the required condition (export performance); (ii) the required consequence (grant of a subsidy); and (iii) the required contingent relationship (contingency).²⁹⁷⁹

7.588 In respect of the first element – the required condition of export performance – the European Communities considers that when it comes to assessing whether the EC member State governments "anticipated exportation or export earnings", within the meaning of footnote 4 of the SCM Agreement, the term "anticipated" must be understood as meaning "an export that has not yet taken place at the moment when the subsidy is deemed to exist, but {that} will take place in the future".²⁹⁸⁰ Thus, contrary to what the European Communities alleges the United States to have argued, the European Communities contends that an "anticipated" export is not a "potential" export, but one that will take place in the future.²⁹⁸¹ According to the European Communities, if this were not the case, the export performance condition would be fulfilled on the basis of the mere "consideration by the granting Member that exports *might* occur in the future".²⁹⁸² Therefore, were the United States correct, it would be possible to apprehend subsidies simply because they have *effects* in a global market, even though the object and purpose of Article 3.1 is to prohibit subsidies that create an incentive for companies to *favour* exports and thereby distort international trade. In this regard, the European Communities notes that the SCM Agreement addresses the adverse *effects* of subsidies on the interests of other Members, including export interests, under Part III, not Part II.²⁹⁸³ Thus, the European Communities contends that the United States has based its claim on an erroneous understanding of what "anticipated exportation or export earnings" is intended to mean. In any case, the European Communities argues that the evidence the United States relies upon to prove the existence of the required export performance condition, including the terms of the disputed LA/MSF contracts and the market forecasts contained in various documents, shows only a concern with performance, not *export* performance.²⁹⁸⁴

BCI deleted, as indicated [***]

7.589 As far as the required consequence – the grant of a subsidy – is concerned, the European Communities submits that in order to demonstrate the existence of a subsidy contingent upon export performance, that subsidy must be granted as a consequence, that is, as a result of, export performance. The European Communities argues that the United States has failed to establish that any such subsidy was granted through the LA/MSF measures because "the consequence of the condition being fulfilled is that {Airbus} agrees to pay" the EC member State governments. In other words, according to the European Communities, the consequence of any export sale under the terms of the LA/MSF contracts is not the grant of a subsidy, but "the reverse ... a 'negative subsidy'".²⁹⁸⁵ Thus, the European Communities argues that the United States has failed to demonstrate the required consequence because its legal argument is "ill conceived". Moreover, the European Communities submits that the United States errs because it allegedly bases its claim on the notion that the subsidy at issue is the LA/MSF contract itself, when it is instead "the difference between the terms of the loan and the relevant benchmark".²⁹⁸⁶ The European Communities finds support for this view in the fact that Article 4.7 of the SCM Agreement requires Members found to have granted an export contingent subsidy to withdraw the subsidy without delay. The European Communities argues that in the case of a subsidy provided through a loan at below-market interest rates, Article 4.7 does not require the withdrawal of the financial contribution transferred as the loan, but only the amount represented by the subsidy "benefit".²⁹⁸⁷

7.590 On the third element – contingency between the required condition (export performance) and the required consequence (the grant of a subsidy) – the European Communities, like the United States, submits that the legal standard that must be applied is the same for subsidies that are alleged to be contingent, either in law or in fact, upon export performance. The European Communities also agrees with the United States that when examining whether the grant of a subsidy is contingent upon export performance, it is necessary to assess whether it is "conditional" on export performance.²⁹⁸⁸ Moreover, like the United States, the European Communities notes that while the legal standard for proving contingency doesn't change, the evidence required to demonstrate in fact or in law export contingency may be different.²⁹⁸⁹ In this regard, the European Communities emphasizes that demonstrating the existence and precise content of an in fact contingency claim is "a much more difficult task" compared with an in law claim.²⁹⁹⁰

7.591 The European Communities contends that the United States has, for various reasons, failed to demonstrate the required *in fact* contingency between the condition (export performance) and the consequence (the grant of a subsidy). First, the European Communities submits that contrary to what it alleges is argued by the United States, the existence of sales-dependent repayment terms that are neutral as to the origin of those sales, or the fact that the EC member State governments envisaged a return from their LA/MSF investment, cannot prove the existence of any contingency.²⁹⁹¹ Second, the European Communities argues that unlike the position it contends is advanced by the United States, the anticipation of export sales, the export orientation of Airbus, or the fact that Airbus operates in a

BCI deleted, as indicated [***]

global market, are all factors that do not demonstrate contingency.²⁹⁹² Moreover, the European Communities argues that all of these factors taken together cannot prove the existence of contingency because, *inter alia*, the United States' assertion that full repayment of the LA/MSF contributions can only be obtained by making the required number of sales specified in the contracts (which themselves can only be achieved through exports) is false due to the possibility of early repayment.²⁹⁹³ In this regard, the European Communities submits that the sales-dependent delivery terms of the LA/MSF contracts "have nothing to do with export contingent subsidies", but rather reflect two "legitimate commercial" considerations: (i) that deliveries of aircraft provide the most reliable indication that sufficient cash-flow will be on hand to make repayments;²⁹⁹⁴ and (ii) that timing repayment with deliveries allocates the risk between Airbus and the EC member State government in accordance with the parties' agreement.²⁹⁹⁵ Thus, the European Communities concludes that the fact that "some deliveries will be exports is not the result of any condition imposed by {the EC member State governments}, but is instead the result of the particular sources of demand in the marketplace. Any 'choice' {Airbus} has between export versus domestic sales is driven not by the measure but instead by the location of the customers".²⁹⁹⁶ In any event, the European Communities notes that none of the provisions that the United States relies upon as evidence of a commitment to export oblige Airbus to make any sales at all, let alone export sales. According to the European Communities, Airbus' right to retain the funds advanced under each of the LA/MSF contracts is not subject to any condition that it sell aircraft. Thus, the European Communities submits there can be no export contingency.²⁹⁹⁷

7.592 The European Communities relies upon many of the same legal and factual arguments when contesting the United States' *in law* export contingent subsidy claims.²⁹⁹⁸ Thus, the European Communities contends that the United States has failed to demonstrate that the language of the LA/MSF contracts, either on its own or by necessary implication,²⁹⁹⁹ proves the existence of: (i) the required export performance condition, because the terms of the relevant measures "refer only to sales, without favouring either domestic or export sales";³⁰⁰⁰ (ii) the required consequence, because the contract terms secure repayment of the loan, and therefore do not amount to a subsidy, but rather a "negative subsidy";³⁰⁰¹ and (iii) the required contingency, because there is no obligation on Airbus to repay LA/MSF,³⁰⁰² and in any case, repayments may be made on an accelerated basis with income that is not generated from LCA sales.³⁰⁰³ In addition, to the extent that the United States pursues its complaint in reliance on documents and information that cannot be found in the text of the challenged

BCI deleted, as indicated [***]

measures, the European Communities asks the Panel to dismiss the United States' allegations on the ground that they are not properly constituted *in law* contingency claims.³⁰⁰⁴

7.593 Finally, the European Communities asks the Panel to dismiss several allegedly "new claims" made by the United States after the first substantive meeting of the parties. According to the European Communities, the United States, for the first time in its second written submission and then again in its answer to Panel Question 144, referred to various provisions of the challenged LA/MSF contracts in support of its new "claim{ } that a commitment to provide {LA/MSF} was given in return for a commitment on the part of Airbus to export, and that for this reason the measure should be construed as a subsidy contingent upon export".³⁰⁰⁵ The European Communities submits that the Panel is not "entitled, at this stage of the proceedings, to re-arrange the evidence, and change or broaden the seven distinct claims set out in the US first written submission, which the European Communities has rebutted".³⁰⁰⁶ Thus, the European Communities asks the Panel to set these allegedly new claims aside on the grounds that they are inconsistent with: (i) "Article 4 of the DSU (as regards the inadequacy of consultations)"; (ii) "Article 6.2 of the DSU (as regards the inadequacy of the panel request)"; and (iii) "paragraphs 5, 6 and 15 of the Working Procedures, according to which the United States is deemed to have already presented the facts of the case and its arguments, no good cause being even asserted let alone shown for the attempt at such a radical enlargement of the case at this late stage".³⁰⁰⁷

(c) Arguments of Third Parties

(i) *Australia*

7.594 In Australia's view, the focus by the United States on the export propensity of the LCA product leads to a misapplication of the Appellate Body guidance on export contingency and the Panel's findings in *Australia – Automotive Leather II*. Recalling the three elements necessary to establish export contingency, Australia notes that evidence of the export nature of a product *supports* the establishment of a relationship of conditionality but is not conclusive of this second element.³⁰⁰⁸ It further submits that the second sentence of footnote 4 to Article 3.1(a) explicitly states that the mere fact that a subsidy is granted to enterprises which export cannot by itself support a finding of export contingency. This, according to Australia, means that export propensity is only one of several facts to be taken into account. Careful consideration needs to be given in the present case to the evidence used to support export contingency and the weight it should be accorded. Australia submits that if disproportionate emphasis is given to export propensity, this would undermine the second sentence of footnote 4.³⁰⁰⁹

7.595 According to Australia, there are two main deficiencies with the United States' analysis of in fact export contingency in the present case. First, by focusing on export propensity the United States conflates product sales generally with export sales, which leads to the erroneous conclusion that sales performance is export performance. Second, the United States focuses on the contractual requirement to repay the loan and its connection with sales performance.³⁰¹⁰ Australia notes that the United States relied, *inter alia*, on the findings on the grant contract in *Australia – Automotive Leather II* to support

BCI deleted, as indicated [***]

its claim that contingency has been established. In Australia's view, the United States has misapplied the panel's findings in *Australia – Automotive Leather II*.³⁰¹¹

7.596 Australia argues that it is not clear on the facts presented the extent to which the repayment of LA/MSF is mandatory. Instead, it appears that Airbus receives payment of LA/MSF whether or not there are any sales. Therefore, the United States has failed to explain why a link between the requirement to repay the loan and sales performance establishes a tie between the grant of an alleged subsidy and export performance.³⁰¹²

7.597 Australia further contends that in fact export contingency must be inferred from the total configuration of the facts constituting and surrounding the granting of the subsidy.³⁰¹³ Such relevant facts could include, among other things, the motivations or reasons for granting a subsidy, once objectively ascertained. For instance, according to Australia, the motivation or reason of the government in granting the loan with a repayment requirement linked to sales performance may be a relevant fact in determining whether any production targets in the loan contracts are linked to exports. Hence, for Australia, the weight that should be accorded to motivations or reasons should be assessed on the basis of where they sit in relation to all the other evidence relating to whether subsidies were in fact export contingent.³⁰¹⁴

(ii) *Brazil*

7.598 Brazil agrees with the panel and the Appellate Body in *Canada-Aircraft I*. The Panel's analysis of *de facto* export contingency should be based on the total configuration of the facts constituting and surrounding the granting of the subsidy. For Brazil, to the extent supported by relevant evidence, the motivations or reasons for granting the subsidies should be taken into consideration by the Panel as part of this total configuration of the facts.³⁰¹⁵

(iii) *Canada*

7.599 Canada submits that the United States has failed to accurately apply the test for *de facto* export contingency set out in footnote four of the SCM Agreement.³⁰¹⁶ In Canada's opinion, instead of applying this test, the United States attempts to establish only that repayment of the financing was tied to actual or anticipated exportation or export earnings.³⁰¹⁷

7.600 Canada considers that the United States has obscured the locus of the inquiry when it paraphrased the test and inserted the word "that" into it, *i.e.*: (1) the 'granting' of a subsidy; (2) that is 'tied to' (3) 'actual or anticipated exportation or export earnings'. Canada argues that the text is clear in establishing the locus of the "tied to" inquiry as "the granting of the subsidy". Therefore, according to Canada, the relevance of repayment is limited to the light it sheds on whether the granting of the subsidy was export contingent, and that repayment is not dispositive.³⁰¹⁸

7.601 Canada maintains that the reason why the SCM Agreement locates the "tied to" inquiry in the granting of the subsidy rather than its repayment is because a tie between repayment of a subsidy and sales can provide governments with an effective mechanism for establishing when repayments are due without creating any incentive to export. It contends that requiring repayment of a subsidy only when

BCI deleted, as indicated [***]

export sales are made could be a device for using subsidies to develop domestic sales *in preference to* export sales.³⁰¹⁹

7.602 Canada rejects United States' attempt to associate its approach with the approach taken by the panel in *Australia – Leather*. For Canada, the facts surrounding the two cases are different because the contract at issue in the *Australia – Leather* conditioned *continuing grants* to the beneficiary on the satisfaction of sales targets, which were effectively export performance targets, whereas in this case, continuing grants are not conditioned on meeting export performance targets. Canada contends that the United States errs in conflating the terms "export performance", "exportation" and "export earnings" with the term "sales". By conflating these terms, the United States would have it that any subsidy provided in the form of royalty-based financing is prohibited if the level of anticipated repayment factored in even a single export sale. Canada maintains that this nullifies the final sentence of footnote four.³⁰²⁰

7.603 Canada submits that the United States has provided no evidence that the granting of the financing was conditioned on full repayment. Even if such evidence was provided, for Canada, it would be "absurd" to characterize a full repayment requirement as an export contingency. Canada argues that every prior finding of a prohibited export subsidy was based on a positive, direct correlation between subsidization and exportation. Here, the correlation is the inverse: repayments triggered by export sales only reduce any benefit to Airbus.³⁰²¹

7.604 In addition, Canada submits that inferring motivations can be a highly subjective matter, particularly when the motivations at issue are those of a government. It refers in this context to the Appellate Body in *Japan – Alcoholic Beverages II*.³⁰²² It contends that it may be extremely difficult for a panel to weigh the relative significance of those reasons to establish legislative or regulatory intent and a panel should exercise great care in trying to do so. According to Canada, a panel should consider many relevant factors in assessing whether a subsidy is in fact contingent upon export performance, depending on the circumstances of a particular case, based on "the total configuration of the facts constituting and surrounding the granting of the subsidy".³⁰²³

(iv) *China*

7.605 China contends that the finding of in fact export subsidies in the form of loans, pursuant to footnote 4 to Article 3.1(a) of the SCM Agreement, must focus on the "*granting*" - instead of the "*repayment*" - of the loans, and that it must be shown, based on the total configuration of the facts, that there is a conditionality between the *granting* of a subsidy and the actual or anticipated export. In this connection, China refers the Panel to the Appellate Body Report in *Canada – Aircraft*, which clarified the three elements relevant to the finding of an in fact export contingency.³⁰²⁴

7.606 China adds that in case of a loan, in order to determine whether the loan constitutes a subsidy in fact contingent upon export, it must be established that the granting authority imposes a condition based on export performance when *providing* the loan. Therefore, according to China, Article 3.1(a) is not intended to prohibit the repayment of a loan contingent upon export performance. In any event, the manner in which a debtor will repay the loan subsequently is not relevant to the consideration of

³⁰²⁴ China, Third Party Submission, paras. 5-13.

BCI deleted, as indicated [***]

in fact export contingency of a granted loan. Rather, this issue is more relevant to the finding of a benefit, and is not to be blurred with the granting of a loan.³⁰²⁵

7.607 Lastly, China submits that the relevant facts of a particular case must sufficiently prove the "tie" between the "granting of a subsidy" and the "actual or anticipated exportation" and that the export orientation of a subsidy recipient alone does not sufficiently demonstrate the existence of in fact export contingency.³⁰²⁶

(v) *Japan*

7.608 Japan contends that mere anticipation of future exports at the time of subsidy bestowal does not, by itself, prove that the subsidy is contingent upon export performance. It notes that while the term "contingent" in Article 3.1(a) has the same meaning as applied to both *de jure* and *de facto* export contingency, demonstrating the latter is inherently more difficult.³⁰²⁷

7.609 Japan argues that footnote 4 to SCM Agreement Article 3.1(a) is central to the Panel's analysis in determining whether the alleged export subsidies are contingent in fact upon export performance. It refers to the Appellate Body Report in *Canada – Aircraft*, noting that the footnote 4 test for *de facto* export contingency requires proof of three different substantive elements,³⁰²⁸ each of which must be independently applied to the relevant facts.³⁰²⁹

7.610 Finally, Japan observes that the *de facto* export contingency analysis is necessarily fact-intensive, and will differ based on the unique facts of each case. It notes that the Appellate Body in *Canada – Aircraft* cautioned that, in performing the analysis required by footnote 4, "there can be no general rule as to what facts or what kinds of facts *must* be taken into account,"³⁰³⁰ none of which facts had been given undue emphasis.³⁰³¹ Hence, Japan submits that a similarly broad approach is warranted in this dispute and that the Panel should examine the specific factual elements pertinent to this case.³⁰³²

(vi) *Korea*

7.611 Korea recalls that panels and the Appellate Body have previously addressed the issue of *de facto* export subsidy on various occasions. In particular, the Appellate Body in *Canada – Aircraft* set out a three element test for demonstrating *de facto* export contingency. Accordingly, (1) the "granting of a subsidy" must be (2) "tied to" (3) "actual or anticipated exportation or export earnings". Korea is of the view that, in order to establish that the LA/MSF is "tied to" export performance, the United States has to prove that the LA/MSF would *not* have been granted to Airbus, if the Airbus Governments had known that no export sales may ensue from the LA/MSF. In other words, the

United States has to prove that the grant of a subsidy is contingent upon *export* sales, and not mere sales.³⁰³³

(d) Evaluation by the Panel

(i) *The European Communities' Request to Dismiss Certain Allegedly New Claims made in the United States' Second Written Submission*

7.612 The European Communities asks the Panel to disregard a series of allegedly "new claims" made by the United States over a series of paragraphs of its second written submission³⁰³⁴ as well as its answer to Panel Question 144 because it considers them to be incompatible with the United States' obligations under Article 4 of the DSU (as regards the inadequacy of consultations), Article 6.2 of the DSU (as regards the inadequacy of the panel request), and paragraphs 5, 6 and 15 of our Working Procedures. It is not entirely clear to us whether the European Communities' submissions in respect of Articles 4 and 6.2 of the DSU are grounded in the view that the United States' has advanced "new claims" not already set out in its request for consultations and panel request, or (in the case of Article 6.2 of the DSU) the alleged absence of any indication in the United States' panel request of the precise evidence it relies upon to make out its in fact export contingency claims.³⁰³⁵ For the reasons articulated in the following sections, we decline the European Communities' request on either of these grounds. Moreover, we are also not persuaded by the European Communities' contention that the relevant passages of the United States' second written submission and answer to Panel Question 144 contravene paragraphs 5, 6 and 15 of our Working Procedures.

New claims allegedly not identified in the request for consultations and the panel request

7.613 We find it useful to begin our analysis by recalling how "claims" and "arguments" have been defined and distinguished in previous dispute settlement proceedings. In *Korea – Dairy*, the Appellate Body explained that:

"By '*claim*' we mean a claim that the respondent party has violated, or nullified or impaired the benefits arising from, an identified provision of a particular agreement. Such a *claim of violation* must, as we have already noted, be distinguished from the *arguments* adduced by a complaining party to demonstrate that the responding party's measure does indeed infringe upon the identified treaty provision. Arguments supporting a claim are set out and progressively clarified in the first written submissions, the rebuttal submissions and the first and second panel meetings with the parties. ...

... Both '*claims*' and '*arguments*' are distinct from the '*evidence*' which the complainant or respondent presents to support its assertions of fact and arguments."³⁰³⁶

7.614 The Appellate Body has also observed that it has:

³⁰³³ Korea, Third Party Submission, para. 69-74, referring to Appellate Body Report, *Canada – Aircraft*, para. 169 and 173.

³⁰³⁴ In particular, paragraphs 163 to 209. EC, SNCOS, paras. 148 and 153.

³⁰³⁵ EC, Comments on US Answer to Panel Question 144 where it states: "Just as a panel request must include the identification of the measure, so, in the case of an 'in fact' claim, it must include the identification of the precise evidence on which the in fact claim is based."

³⁰³⁶ Appellate Body Report, *Korea – Definitive Safeguard Measure on Imports of Certain Dairy Products* ("*Korea – Dairy*"), WT/DS98/AB/R, adopted 12 January 2000, DSR 2000:I, 3, para. 139 (footnotes omitted).

BCI deleted, as indicated [***]

"... consistently distinguished between the *claims* of a Member regarding the application of the various provisions of the *WTO Agreement*, and the *arguments* presented in support of those claims. Claims, which are typically allegations of violation of the substantive provisions of the *WTO Agreement*, must be set out clearly in the request for the establishment of a panel. Arguments, by contrast, are the means whereby a party progressively develops and supports its claims. These do not need to be set out in detail in a panel request; rather, they may be developed in the submissions made to the panel."³⁰³⁷

7.615 In its second written submission, the United States introduces the paragraphs which the European Communities asserts present "new claims", describing them as "an extended discussion of the actual U.S. argument {on export contingency} to eliminate any confusion that may have been engendered by the European Communities' response to the U.S. first written submission".³⁰³⁸ It then explains its view that LA/MSF involves an exchange of performance commitments on the part of the parties, whereby "the government commits to disburse Launch Aid according to a set schedule in exchange for which the company commits to repay the Launch Aid amounts on the basis of a specified levy per sale over an agreed-to number of sales".³⁰³⁹ Finally, the United States proceeds to "elaborate on the demonstration in its first written submission that the provision of the Launch Aid subsidy is contractually tied to anticipated exportation".³⁰⁴⁰ For each of the seven LA/MSF measures the United States claims to be export subsidies, it first recalls how in its first written submission, it discussed their respective repayment provisions, demonstrating how by conditioning the provision of LA/MSF on a specific number of LCA sales that could not be achieved without exporting, the governments "necessarily tied the aid to substantial exports". Thereafter, the United States identifies and discusses various contractual terms and conditions it asserts "corroborate the existence of this tie".³⁰⁴¹

7.616 The United States' answer to Panel Question 144 explains the extent to which it relies upon the same evidence to demonstrate "anticipated exportation or export earnings" and in fact contingency upon export performance. In doing so, the United States repeats its view that the exchange of performance commitments in the LA/MSF contracts demonstrates the existence of a "tied to" relationship, and therefore export contingency. It also refers to the discussion in its second written submission of various contractual provisions of the seven challenged LA/MSF contracts.

7.617 In our view, the passages that are the focus of the European Communities' concern do not introduce new *claims*, but merely expand and explain the United States' arguments on the issue of contingency by further articulating the United States' theory of contingency and discussing various aspects of the evidence submitted with its first written submission. The United States does not, in the relevant paragraphs, complain that the European Communities "has violated, or nullified or impaired the benefits arising from, an identified provision of a particular agreement" that was not previously mentioned in its consultations request or its panel request. Indeed, the United States makes no reference at all in the relevant passages to any provision of any WTO covered agreement. Thus, to the extent that the European Communities' concern with the contents of paragraphs 163 to 209 of the United States' second written submission and its answer to Panel Question 144 is that it introduces "new claims" not identified in the United States' request for consultations and its panel request, we find that it cannot be sustained.

³⁰³⁷ Appellate Body Report, *Dominican Republic – Measures Affecting the Importation and Internal Sale of Cigarettes* ("Dominican Republic – Import and Sale of Cigarettes"), WT/DS302/AB/R, adopted 19 May 2005, DSR 2005:XV, 7367, para. 121 (footnote omitted).

BCI deleted, as indicated [***]

United States' alleged failure to identify in its panel request the precise facts relied upon to make out its in fact export contingency claims

7.618 It is now well established that Article 6.2 explains how a complainant wanting to bring a matter to WTO dispute settlement is required to request the establishment of a panel. In particular, Article 6.2 imposes an obligation on a complaining Member to ensure that its panel request: (i) is made in writing; (ii) indicates whether consultations were held; (iii) identifies the specific measures at issue; and (iv) provides a brief summary of the legal basis of the complaint sufficient to present the problem clearly.³⁰⁴²

7.619 Apart from requiring the identification of the specific measures at issue, Article 6.2 does not call upon a complainant to additionally set out or describe the precise facts relied upon for the purpose of establishing the merits of its claim(s).³⁰⁴³ The precise facts a complainant relies upon to substantiate its claims will typically constitute the evidence submitted in support of its complaint during the course of a panel proceeding. Article 6.2 of the DSU is not concerned with how or when such evidence must be presented, but only the proper identification of "claims" and "measures" for the purpose of ensuring that a panel request is "sufficient to present the problem clearly". In this light, we see no legal basis to support the European Communities' allegation that the United States' panel request failed to comply with Article 6.2 of the DSU because, in respect of its claims under Article 3.1(a) of the SCM Agreement, the United States did not identify in this document the precise facts it considers demonstrate that the alleged subsidies are in fact contingent upon export performance.

New facts and arguments allegedly introduced in contravention of the Working Procedures

7.620 The European Communities considers that the United States' discussion in paragraphs 163 to 209 of its second written submission and in its answer to Panel Question 144 introduced new arguments and factual evidence in contravention of its obligations under paragraphs 5, 6 and 15 of our Working Procedures. These paragraphs read:

"5. Before the first substantive meeting of the Panel with the parties, the parties to the dispute shall transmit to the Panel written submissions in which they present the facts of the case, their arguments and their counter-arguments, respectively. Third parties may transmit to the Panel written submissions after the first written submissions of the parties have been submitted.

6. At its first substantive meeting with the parties, the Panel shall ask the United States to present its case. Subsequently, and at the same meeting, the European Communities will be asked to present its point of view. Third parties will be asked to present their views thereafter at the separate session of the same meeting set aside for that purpose. The parties will then be allowed an opportunity for final statements, with the United States presenting its statement first.

15. Parties shall submit all factual evidence to the Panel no later than during the first substantive meeting, except with respect to evidence necessary for purposes of rebuttals or answers to questions. Exceptions to this procedure will be granted upon a

³⁰⁴² For example, Appellate Body Report, *Korea – Dairy*, para. 120; Appellate Body Report, *US – Carbon Steel*, para. 125; Appellate Body Report, *European Communities – Selected Customs Matters* ("EC – Selected Customs Matters"), WT/DS315/AB/R, adopted 11 December 2006, DSR 2006:IX, 3791, para. 129.

³⁰⁴³ This is in contrast to the provisions of Article 4.2 of the SCM Agreement, which require a Member to include a "statement of available evidence" with a request for consultations regarding such a subsidy. We note the European Communities makes no claim under Article 4.2.

BCI deleted, as indicated [***]

showing of good cause. The other party shall be accorded a period of time for comment, as appropriate, on any new factual evidence submitted after the first substantive meeting."

7.621 The Panel's Working Procedures used in this dispute were adopted, in accordance with Article 12.1 of the DSU, after consultations with both the United States and the European Communities. Apart from the references to third parties, paragraphs 5 and 6 broadly follow the provisions set out in the Working Procedures contained in Appendix 3 of the DSU, explaining what is expected of the parties (and third parties) in terms of the submissions that must be made leading up to and during the first substantive meeting of the parties. Neither of the two paragraphs requires the parties to make all arguments and counter-arguments and present all supporting facts by the time of the first substantive meeting of the parties. Whether complaining or responding party, the arguments and counter-arguments in respect of the claims at issue will be first set out in the parties' first written submission and explained orally through the statements made during the first substantive meeting of the parties. However, as paragraphs 8 and 9 of our Working Procedures make clear, the parties' submissions do not end with the first substantive meeting of the parties, and arguments will continue to be progressively clarified and developed in the rebuttal submissions, the parties' oral statements made at the second substantive meeting of the parties and in response to the Panel's questions. These paragraphs read:

"8. Formal rebuttals shall be made at a second substantive meeting of the Panel. The European Communities shall have the right to take the floor first, to be followed by the United States. The parties shall submit, prior to that meeting, written rebuttals to the Panel.

9. The Panel may at any time put questions to the parties and to the third parties and ask them for explanations either in the course of the substantive meeting or in writing. Answers to questions shall be submitted in writing by the date(s) specified by the Panel. Answers to questions after the first meeting shall be submitted in writing at the same time as the written rebuttals, unless the Panel specifies a different deadline."

7.622 There is therefore no basis in the Working Procedures of this Panel proceeding to support the European Communities' contention that the United States was required to present all of its arguments by the time of the first substantive meeting of the parties.

7.623 Paragraph 15 of our Working Procedures establishes certain rules and a precise deadline for the submission of factual evidence. In particular, it stipulates that "all factual evidence" must be submitted no later than during the first substantive meeting, with the exception of evidence necessary for the purpose of rebuttals or answers to questions, and any other instance where "good cause" can be shown. Moreover, where any new evidence is admitted after the first substantive meeting on showing "good cause", an appropriate period of time must be set aside for the party that did not submit that evidence to provide its comments. One of objectives of paragraph 15 is to secure both parties' due process rights by: (i) setting a deadline for the submission of "all factual evidence" supporting or rebutting either party's claims and arguments; (ii) allowing for the possibility that new factual evidence may be accepted after this deadline if "good cause" is shown; and (iii) clarifying that the acceptance of any new evidence will give rise to an appropriate period of time being afforded to the other party to comment.

7.624 We recall that the passages in the United States' second written submission and answer to Panel Question 144 that are at the centre of the European Communities' concern expand and explain certain arguments first presented by the United States in its first written submission by discussing various aspects of evidence already submitted with its first written submission. In particular, the

BCI deleted, as indicated [***]

focus of the United States' discussion in the relevant passages is on various contractual provisions of each of the LA/MSF contracts it considers to be a prohibited export subsidy. There is therefore no doubt that the factual evidence discussed by the United States had already been submitted by the time of the first substantive meeting of the parties. Moreover, while it is true that the United States did not refer to or discuss precisely the same contractual provisions in submissions made prior to its second written submission, this does not amount to the presentation of new factual evidence, but rather the elaboration of arguments in the light of different aspects of evidence already submitted. In our view, the process of highlighting, examining and testing different aspects of duly submitted evidence by either party for the purpose of supporting or rebutting each other's claims and arguments is a central and indispensable element of the panel process. We can see no reason why parties should be precluded from developing their arguments over the course of a panel proceeding on the basis of different aspects of evidence submitted in good time.

7.625 In any case, paragraph 8 of our Working Procedures makes clear that "rebuttals" include the parties' second written submission presented prior to the second substantive meeting of the parties. It follows that even assuming *arguendo* that it were incorrect to conclude that the relevant passages of the United States' second written submission and answer to Panel Question 144 did not refer to evidence already submitted by the first substantive meeting of the parties, the United States would not have acted inconsistently with paragraph 15 of our Working Procedures because it was entitled to introduce factual evidence after the first substantive meeting of the parties "with respect to evidence necessary for purposes of rebuttals".

7.626 Finally, we note that the European Communities did in fact respond to the United States' discussion of the various contractual provisions in its second written submission when making its oral statement at the second substantive meeting of the parties. Moreover, it also had occasion to do so when commenting on the United States' answer to Panel Question 144.

7.627 For all of the above reasons, we therefore decline the European Communities' request to set aside and disregard the arguments presented and evidence referred to by the United States in paragraphs 163 to 209 of its second written submission and its answer to Panel Question 144.

(ii) *Whether the LA/MSF Measures Amount to Subsidies that are In Fact Contingent upon Anticipated Export Performance*

7.628 Although the United States makes both in law and in fact export contingent subsidy claims, it describes its complaint as "principally a claim of *de facto* contingency".³⁰⁴⁴ In addition, the United States has explained that it is not pursuing claims based on the allegation of contingency upon *actual* export performance. Accordingly, we begin our evaluation of the United States' challenge by focusing on the claim that the LA/MSF measures for the A380, A340-500/600 and A330-200 amount to subsidies that are *in fact* contingent upon *anticipated* export performance.

7.629 The prohibition on subsidies that are contingent upon export performance is contained in Article 3.1(a) of the SCM Agreement. This Article reads:

"3.1 Except as provided in the Agreement on Agriculture, the following subsidies, within the meaning of Article 1, shall be prohibited:

(a) subsidies contingent, in law or in fact⁴, whether solely or as one of several other conditions, upon export performance, including those illustrated in Annex I⁵ ...

³⁰⁴⁴ US, Answer to Panel Question 10.

BCI deleted, as indicated [***]

⁴ This standard is met when the facts demonstrate that the granting of a subsidy, without having been made legally contingent upon export performance, is in fact tied to actual or anticipated exportation or export earnings. The mere fact that a subsidy is granted to enterprises which export shall not for that reason alone be considered to be an export subsidy within the meaning of this provision.

⁵ Measures referred to in Annex I as not constituting export subsidies shall not be prohibited under this or any other provision of this Agreement."

7.630 In *Canada – Aircraft*, the Appellate Body held that the language of footnote 4 indicates that "satisfaction of the standard for determining *de facto* export contingency ... requires proof of three different substantive elements: first, the '*granting*' of a subsidy; second, 'is ... *tied to ...*'; and third, 'actual or anticipated exportation or export earnings'.³⁰⁴⁵ The United States relies on this guidance as the starting point of its legal argument.³⁰⁴⁶ Although the European Communities presents its own interpretation of the obligations contained in Article 3.1(a) and footnote 4 using slightly different terminology,³⁰⁴⁷ it shares the view that a finding of *de facto* export contingency requires proof of the three elements identified by the Appellate Body. Thus, there appears to be no disagreement between the parties as to the legal standard that must be applied when determining whether a subsidy is contingent *in fact* upon export performance.³⁰⁴⁸ However, the parties' views diverge when it comes to explaining what it means to satisfy this standard, and therefore, what the United States must demonstrate in order to prove its case. Whereas the position advanced by the United States appears to us, in general, to follow the findings and observations made by the Appellate Body in previous dispute settlement proceedings,³⁰⁴⁹ in certain respects, the European Communities' analysis proposes a somewhat different picture of how the obligations set out in Article 3.1(a) and footnote 4 of the SCM Agreement must be understood and applied.

7.631 In its second non-confidential oral statement, the European Communities presented what it described as "a succinct and simple re-statement of how the European Communities sees the overall design and architecture of Article 3.1(a) and footnote 4". The European Communities expressed the "hope{ } that the Panel may return to this statement as a point of reference to guide it in its future deliberations".³⁰⁵⁰ The European Communities drew from the contents of this oral statement to answer Panel Question 175. The salient passages from these submissions are reproduced below:

"The European Communities invites the Panel to consider first the case of an 'ad hoc' subsidy contingent *in law* upon export performance. The evidence consists of the text of the measure. The text of the measure provides that a subsidy is granted contingent upon export performance. In other words, the text of the measure provides that *if* there is export performance, *then* a subsidy is granted. That is the essence of contingency. The measure itself constitutes the *initial grant* of the subsidy. The fact of export fulfils the condition and thus *completes the grant*. The export occurs after the initial grant. At the time of the initial grant, the export is an 'anticipated' export, in the sense that it is in the future.

³⁰⁴⁵ Appellate Body Report, *Canada – Aircraft*, para. 169.

³⁰⁴⁶ US, FWS, para. 343.

³⁰⁴⁷ As described above at paras. 7.587 to 7.590, the European Communities argues that Article 3.1(a) and footnote 4 contain three "requirements" – "the required condition: actual or anticipated export performance, exportation or export earnings; the required consequence: the grant of a subsidy; and the required contingent relationship (or contingency) between condition and consequence". See also, EC, FWS, paras. 567, 570-582; EC, FNCOS, paras. 68 and 73; EC, Answer to Panel Question 79.

³⁰⁴⁸ EC, FWS, paras. 567-583.

³⁰⁴⁹ See, paras. 7.583-7.586 above; and, in particular, US, FWS, paras. 325-333; US, SWS, paras. 132-136 and 148-160.

³⁰⁵⁰ EC, SNCOS, para. 116.

BCI deleted, as indicated [***]

As soon as such measure exists (that is, the initial grant is in place), it could be the subject of panel proceedings, and would be found to be a prohibited subsidy in law. It would be immaterial whether or not export had occurred."³⁰⁵¹

"... At the moment when the measure is enacted (that is, the initial grant is made) the export might already exist or have occurred (that is, be actual), or the export might be expected in the future (that is, be anticipated). In either case, if there is a subsidy contingent in law upon export, it is prohibited, and this already from the moment of initial grant. This remains so even if the export is anticipated, but never occurs. Faced with such a prohibited measure, a complaining Member does not have to wait for the measure to be used before commencing panel proceedings.

Thus, the European Communities is not saying that the export must occur before there is a prohibited measure and panel proceedings are brought. Rather, the European Communities is saying that the measure enacting the initial grant must provide that the subsidy is granted contingent upon export, and that the measure must also provide that it is only export (whether in the past or in the future) that completes the grant and triggers the right to receive or retain the funds unconditionally. That is what contingency ("ifness") means. Anticipation or consideration or motivation (that is, the Member grants the subsidy *because* it anticipates exports) is not contingency. "Beauseness" is not "ifness" and is not to be confused with it."³⁰⁵²

In order to fully appreciate the European Communities "re-statement" of its interpretation of Article 3.1(a) and footnote 4, it is important to understand the meaning it gives to "actual or anticipated" export performance. The European Communities submitted a detailed exposition of its view on the meaning of this term in its second written submission, where *inter alia* it stated:

"... the term "actual" means an export that exists (that is, has already taken place) at the moment when the subsidy is deemed to exist within the meaning of Article 1 of the *SCM Agreement*; whilst the term "anticipated" (also juxtaposed to the meaning of the term "actual") means an export that has not yet taken place at the moment when the subsidy is deemed to exist, but will take place in the future.

...

Dictionary meanings do not by themselves determine, but are relevant to, assessing ordinary meaning. The *Shorter Oxford English Dictionary (fifth edition 2002)* provides two non-obsolete meanings of the term "actual" (when used as an adjective, as in footnote 4) : "Existing in act or fact; real" and "In action or existence at the time; present, current.". The second of these unequivocally confirms the European Communities' interpretation. As regards the first meaning, the United States might attempt to glean support for its position from the term "real", but the term "existing", especially when read together with the second meaning, also brings the first meaning closer to the European Communities' position. On balance, therefore, the dictionary meanings of the term "actual" support the European Communities, not the United States : an "actual" export is one that already exists at the moment when the subsidy is deemed to exist.

The same dictionary does not contain an entry for the precise term "anticipated" (including when used as an adjective, as in footnote 4 of the *SCM Agreement*). It does

³⁰⁵¹ EC, SNCOS, paras. 117 and 118.

³⁰⁵² EC, Answer to Panel Question 175 (footnote omitted).

BCI deleted, as indicated [***]

contain entries for the term "anticipate" (when used as a verb) and "anticipation" (when used as a noun).²¹⁹ All of the several dictionary meanings under the entries "anticipate" and "anticipation" indicate a temporal connotation : "before the due time"; "too soon"; "in advance of the time"; "future event"; "beforehand"; "earlier"; "look forward to"; "in advance of the expected time". This strongly supports the view that an "anticipated" export is one that has not yet occurred at the moment when the subsidy is deemed to exist, and by definition is therefore envisaged to be one that will occur subsequently.

²¹⁹ These two dictionary entries must be treated with caution in the context of the present dispute, because footnote 4 does not provide that the required condition is that the granting authorities "anticipate"; or that there is "anticipation" by the granting authorities; but rather that the required condition is "export", whether "actual or anticipated" (see further below).³⁰⁵³

7.632 Thus, the European Communities argues that an anticipated export is one that has not yet occurred but will take place in the future. According to the European Communities, an anticipated export cannot be an export that a granting authority expects will take place in the future or sees as a mere future possibility because in its view, "footnote 4 does not provide that the required condition is that the granting authorities 'anticipate' or that there is anticipation by the granting authorities, but rather that the required condition is export, whether actual or anticipated." It follows that for the European Communities, the grant of a subsidy that is contingent upon anticipated export performance should be understood to mean a subsidy granted contingent upon an export that has not yet occurred at the time of the grant of the subsidy but that will occur in the future.

7.633 Reading the entirety of the European Communities' submissions together leads us to conclude that it is arguing that a subsidy will be contingent, in fact, upon anticipated export performance when the total configuration of the facts show that the measure granting a subsidy *requires* the recipient to satisfy a performance condition that cannot be achieved without exports, irrespective of whether those exports (or that performance) actually takes place. Where a subsidy is granted subject to such an obligation to perform, it is legally certain at the time of the grant of the subsidy that the recipient must perform in order to obtain the subsidy. If it can then be inferred from the total configuration of the facts that the granting authority, at the same moment, anticipated that the satisfaction of the performance obligation would involve exports, then the subsidy would be contingent *in fact* upon that *anticipated* export performance. In the light of the European Communities' rejection of the possibility that an "anticipated" export may be one that is *expected* by the granting authority, we find it difficult to see how else an export that has "not yet taken place at the moment when the subsidy is deemed to exist, but {that} will take place in the future" can be demonstrated to exist at the time of the granting of a subsidy. In this regard, we observe that in its own submissions, the European Communities states:

"By arguing that the required condition is the "anticipating of" exports – whether or not the "anticipated" export ever "actually" (as that term is understood by the United States) takes place - the United States is arguing that the requirement of contingency that is at the heart of the provision can be replaced by mere consideration – that is, consideration by the granting Member that exports *might* occur in the future, **rather**

³⁰⁵³ EC, SWS, paras. 235 and 237-238.

BCI deleted, as indicated [***]

than imposition by the granting Member of a requirement that the recipient export in order to obtain the subsidy.³⁰⁵⁴

Thus, we understand the European Communities to argue that contingency *in fact* upon *anticipated* export performance arises when the measure granting a subsidy *legally requires* the recipient to satisfy a performance condition that cannot be achieved without exports, irrespective of whether those exports (or that performance) actually takes place. In our view, this interpretation of the relevant legal standard finds no basis in the language of Article 3.1(a) or footnote 4 or the jurisprudence of previous panels and the Appellate Body.

7.634 The ordinary meaning of the word "contingent" has been held in previous dispute settlement proceedings to be "conditional" or "dependent for its existence on something else".³⁰⁵⁵ Likewise, the expression "tied to" has been interpreted as connoting to "limit or restrict as to ... conditions".³⁰⁵⁶ In our view, these meanings do not suggest that a relationship of contingency between the granting of a subsidy and anticipated exportation can *only* be demonstrated, in fact, when a subsidy recipient is *required* to satisfy a performance obligation that cannot be achieved without exports. To put it another way, we see nothing in the ordinary meaning of the word "contingent" to support the view that the required link between the anticipation of export performance and the granting of a subsidy can *only* be established by proving the existence of a *requirement* to achieve that anticipated performance. In this regard, it is instructive to recall that the subsidies found to be contingent *in fact* upon *anticipated* export performance in the *Canada – Aircraft* and *Australia – Leather* cases were *not* granted based on a requirement that exports take place in the future.

7.635 In *Canada – Aircraft*, the panel was asked to determine whether the "actual application" of the Technology Partnerships Canada ("TPC") programme constituted a subsidy contingent in fact upon export performance. The "TPC assistance" at issue involved the provision of royalty-based financing for a number of "high technology" projects in the Canadian regional aircraft sector. The royalty-based repayment terms of the financing contracts before the panel required the recipients to make repayments only if they made sales. The contracts *did not require* the recipients to achieve any particular level of sales performance. Nevertheless, even in the absence of any such legal performance obligations, the panel found that the "TPC assistance" constituted a subsidy contingent *in fact* upon *anticipated* export performance. In doing so, it relied upon 16 considerations derived from the materials and arguments submitted by the parties, none of which included the existence (or not) of any *requirement or obligation* to make sales.³⁰⁵⁷ Similarly, in *Australia – Leather*, the panel was asked to determine whether three subsidy payments made under a grant contract to Howe, an Australian automotive leather manufacturer, were contingent in fact upon export performance. Under the grant contract, payments were scheduled to occur in three instalments, with the first payment upon conclusion of the contract and subsequent payments to be made on the basis of Howe meeting performance targets, including a "best endeavours" sales target. Thus, again, the subsidies at issue in *Australia – Leather* did not involve a *requirement* to achieve any particular sales performance. Nevertheless, the panel found, on the basis of all the facts before it (none of which pointed to the existence of any *requirement* to make sales), that the grants were contingent *in fact* upon *anticipated* exportation.³⁰⁵⁸

7.636 In our view, limiting the scope of the prohibition on subsidies that are contingent *in fact* upon *anticipated* exportation to only those subsidies that are granted subject to the existence of a

BCI deleted, as indicated [***]

performance obligation that can only be achieved through export sales, would create significant potential for circumvention. It would mean that so long as Members did not include any legal performance obligation in a contract granting a subsidy, they could escape the disciplines of the prohibition in Article 3.1(a), even if it could be established on the basis of the facts that the grant of the subsidy *depended* upon the granting authority's anticipation of export performance – that is, when it is clear from the facts surrounding the granting of the subsidy that it was provided to a particular enterprise precisely *because* of the granting authority's anticipation of exportation. For instance, a government subsidy programme that is ostensibly open to all businesses may provide subsidies only to those applicants indicating in their application that exports are likely to arise. Such a programme would not involve subsidization contingent upon any export performance requirement. However, the fact that subsidies would be granted to only those entities holding export performance expectations shows that the anticipation of export performance was in fact a condition for the granting of each subsidy. Under the European Communities' theory of contingency, such a subsidy programme would escape the prohibited subsidy disciplines of the SCM Agreement. In our view, the text of Article 3.1(a) and footnote 4 does not envisage such an outcome.

7.637 Thus, we find that the European Communities' interpretation of the legal standard for determining whether a subsidy is contingent *in fact* upon *anticipated* export performance pursuant to Article 3.1(a) and footnote 4 cannot be sustained.

7.638 The United States has advanced a second interpretation of the European Communities' theory of contingency, which it argues is "deeply flawed". The United States explains:

"... the EC's theory of the two steps involved in the granting of a subsidy tied to anticipated exportation amounts to a different legal standard for *de jure* export contingency and *de facto* export contingency ... The EC asserts that 'if there is a subsidy contingent in law upon export, it is prohibited, and this already from the moment of initial grant'. However, following the EC's reasoning, a subsidy contingent in fact upon export performance – in particular, a subsidy tied to anticipated exportation or export earnings – would be prohibited only on the basis of the 'completing {of} the grant'. This is because it would be impossible to determine, solely on the basis of what the EC calls the 'initial grant', whether any consequence will flow from the occurrence or non-occurrence of exportation; therefore, it would be impossible to determine whether the subsidy is, in fact, tied to exportation that 'will occur'.

By contrast, an interpretation of 'anticipated exportation' according to its ordinary meaning, in context, and in light of the object and purpose of the SCM Agreement is consistent with a single legal standard for *de jure* and *de facto* export contingency. Following that interpretation, there simply is a 'granting of a subsidy' – not an initial, conditional grant followed by a 'completing' of the grant, whereby the grant is made unconditional. Based on the granting of a subsidy, the subsidy may be found to be contingent, either in law or in fact, upon export performance. At that point, it is possible to determine whether the granting of the subsidy is tied to 'anticipated exportation' – *i.e.*, exportation that is 'expected' – whether as a matter of law or as a matter of fact. There is no need to wait for the subsequent occurrence or non-occurrence of exportation to determine whether the subsidy is in fact tied to exportation that 'will occur'.³⁰⁵⁹

7.639 Thus, according to the United States, the European Communities' theory of what must be demonstrated in order to prove contingency in fact upon anticipated exportation would require it to

³⁰⁵⁹ US, Comments on EC Answer to Panel Question 175 (footnotes omitted).

BCI deleted, as indicated [***]

demonstrate that the challenged LA/MSF measures each involve the granting of a subsidy only once any anticipated export performance is realized. In effect, the United States argues that the European Communities' "if-then"³⁰⁶⁰ standard of contingency may be understood to mean contingency in the following sense: *if* anticipated export performance is realized, *then* a subsidy will be granted. We are not convinced that this is how Article 3.1(a) and footnote 4 of the SCM Agreement are intended to operate.

7.640 In *Canada – Aircraft* the Appellate Body held that the standard of contingency set out in footnote 4 requires a demonstration of "a relationship of conditionality or dependence"³⁰⁶¹ between the granting of a subsidy and export performance. One way of describing this standard may well be in terms of an "if-then" relationship between export performance (either actual or anticipated exportation or export earnings) and the granting of a subsidy. However, it would be wrong to conclude that this means that the contingency standard focuses on a relationship between the *realization* of anticipated export performance and the granting of a subsidy.

7.641 Among the meanings of the verb "anticipate" is "{t}ake into consideration before due time", "{o}bserve ... before due time", "look forward to",³⁰⁶² "be aware of (a thing) in advance and act accordingly" and "expect, foresee, regard as probable".³⁰⁶³ In our view, all of these meanings suggest the same thing: to "anticipate" exportation means to consider, expect or foresee that exports will take place in the future. Thus, in the specific context of footnote 4 of the SCM Agreement, "anticipated" exportation may be understood to be exportation that a granting authority considers, expects or foresees will occur *after* it has granted a subsidy. We find support for this interpretation in *Canada – Aircraft*, where the Appellate Body observed that:

"The dictionary meaning of the word 'anticipated' is 'expected'. The use of this word, however, does *not* transform the standard for 'contingent ... in fact' into a standard merely for ascertaining 'expectations' of exports on the part of the granting authority. Whether exports were anticipated or 'expected' is to be gleaned from an examination of objective evidence. This examination is quite separate from, *and should not be confused with*, the examination of whether a subsidy is 'tied to' actual or anticipated exports. A subsidy may well be granted in the knowledge, or with the anticipation, that exports will result. Yet, that alone is not sufficient, because that alone is not proof that the granting of the subsidy is *tied to* the anticipation of exportation."³⁰⁶⁴

7.642 In our view, this passage confirms that the relationship of "conditionality or dependence" that must be established is not a relationship between the granting of a subsidy and *the realization of* anticipated export performance, but rather a relationship of "conditionality or dependence" between the granting of a subsidy and those expectations themselves. In this regard, we note that the subsidies found to be contingent in fact upon anticipated export performance in the *Canada – Aircraft* and *Australia – Leather* cases were not granted as a *consequence* of the actual realization of anticipated exportation. In both cases, the subsidies found to be prohibited under Article 3.1(a) existed in advance of any *actual* export performance being achieved.³⁰⁶⁵ Thus, contrary to what is implied by

³⁰⁶⁰ EC, NCSOS, para. 127.

³⁰⁶⁴ Appellate Body Report, *Canada – Aircraft*, para. 172 (footnote omitted, emphasis original).

³⁰⁶⁵ In *Canada – Aircraft*, the panel determined that the "assistance" provided under the Technology Partnerships Canada ("TPC") programme amounted to subsidization that was contingent in fact upon anticipated export performance after examining whether "the factual evidence adduced ... demonstrate{d} that had there been no expectation of export sales (*i.e.*, no 'exportation' or 'export earnings') 'ensuing' from the subsidy, the subsidy would not have been granted". The panel rejected Canada's argument that no export contingency existed because TPC assistance was "not conditional on exports taking place" by stating that "{w}hile this

BCI deleted, as indicated [***]

the United States' characterization of the European Communities' legal argument, it is not necessary to show that expected exportation or export earnings have *actually materialized* in order to establish a relationship of contingency in fact between the granting of a subsidy and *anticipated* export performance. What must be demonstrated for this purpose is that the grant of a subsidy is "conditional" to, or "dependent" upon, the granting authority's export performance *expectations*. Thus, the legal theory the United States considers to be advanced by the European Communities can find no basis in the language of footnote 4.

7.643 The European Communities contends that an interpretation of footnote 4 that results in finding that anticipated exportation may be established on the basis of mere "consideration by the granting Member that exports *might* occur in the future"³⁰⁶⁶ would "effectively convert a prohibition based on contingency into one based on some sort of 'motivation' or 'effects' based test".³⁰⁶⁷ According to the European Communities, the Uruguay Round negotiators rejected the "United States' attempts ... to secure a prohibition on subsidies having *effects* on exports" in Part II of the SCM Agreement, agreeing instead to regulate the adverse effects of subsidies on the interests of Members, "notably via exports", under Part III of the SCM Agreement.³⁰⁶⁸ Moreover, the European Communities submits that such a reading "would render findings of prohibition more likely in the case of global markets or small or export dependent economies, because exports would appear to loom larger in the set of potential considerations".³⁰⁶⁹

7.644 We disagree. In our view the European Communities is confusing the question of what contingency means with the question of what the subsidy is contingent upon. In concluding that the reference to "anticipated exportation or export earnings" in footnote 4 means to consider that exports will take place before they actually do, or to envisage that exports may take place in the future, we are not saying that the required *contingency* between the granting of a subsidy and anticipated exportation or export earnings may be demonstrated by merely showing that a granting authority anticipated export performance. Rather, we are saying that the required contingency may be demonstrated where the subsidy was granted *because* the granting authority anticipated export performance. As the Appellate Body noted in the *Canada – Aircraft*, the meaning of anticipated exportation "does *not* transform the standard for 'contingent ... in fact' into a standard merely for ascertaining 'expectations'

argument may be relevant in determining whether a subsidy would not have been granted but for actual exportation or export earnings, we find this argument insufficient to rebut a *prima facie* case that a subsidy would not have been granted but for anticipated exportation or export earnings." Panel Report, *Canada – Aircraft*, paras. 9.339 and 9.343, respectively, (emphasis original).

In *Australia – Automotive Leather II*, the panel's finding related to three grant payments provided for under a contract between the Australian government and Howe. The first payment was made at the time the contract was concluded (*i.e.*, before any actual exportation). The remaining two payments were to be made subsequently on the condition that Howe satisfy a "best endeavours" obligation to meet certain specific sales performance targets. Australia accepted that each of the payments provided for under the contract was a subsidy, and the panel found that each subsidy had been granted contingent in fact upon anticipated export performance. Panel Report, *Australia – Automotive Leather II*, paras. 9.45 and 9.71. In coming to this conclusion, the panel noted that it was "clear ... that continued exports, that is, anticipated exportation, was an important condition in the provision of" the subsidies. In addition, it observed that

"{a}t the time the contract was entered into, the government of Australia was aware of {Howe's necessity to continue and probably increase exports}, and thus anticipated continued and possibly increased exports by Howe. In our view, these facts effectively transform the sales performance targets into export performance targets. We thus consider that Howe's anticipated export performance was one of the conditions for the grant of the subsidies."

of exports on the part of the granting authority".³⁰⁷⁰ It is clear to us, as it was to the Appellate Body in *Canada – Aircraft*, that establishing whether a granting authority anticipates export performance, or whether a relationship of "conditionality" or "dependence" exists between the grant of a subsidy and any such anticipation, involves two separate inquiries. We do not understand the United States to argue anything different. Indeed, the United States has expressly stated that it "does not argue that the governments' expectations of exportation or export earnings alone make the provision of {LA/MSF} contingent upon export performance".³⁰⁷¹

7.645 Finally, another aspect of the European Communities' legal argument that we do not find convincing is the view that the *subsidy* provided through the challenged LA/MSF contracts is the difference between the interest rate charged under each contract and the interest rate that would be demanded by a market lender offering financing on the same or similar terms and conditions.³⁰⁷² The European Communities relies on this argument to allege that the United States cannot "demonstrate that the consequence of the anticipated export" is the granting of a "subsidy" (as opposed to the measure itself or the principal amount of the loan).³⁰⁷³ According to the European Communities, the United States cannot make out this case because the consequence of any anticipated export performance is the *repayment* of the financial contributions, which does not amount to the granting of a subsidy, but is instead a "negative subsidy".³⁰⁷⁴

7.646 We recall that Article 1.1 of the SCM Agreement defines a "subsidy" as a financial contribution that confers a benefit.³⁰⁷⁵ A "subsidy" is, therefore, constituted by *both* a financial contribution *and* a benefit. In the first section of our Report, we concluded that the United States has demonstrated that each of the challenged LA/MSF measures constitute a subsidy within the meaning of Article 1.1.³⁰⁷⁶ In other words, we have already found that by entering into the LA/MSF agreements with Airbus, the EC member State governments provided Airbus with a subsidy. Therefore, for the purpose of Article 3.1(a), the "granting of a subsidy" refers to the provision of LA/MSF by the EC member State governments. It does not refer to the moment when, pursuant to the LA/MSF contracts, Airbus is required to make loan repayments.

7.647 Thus, to the extent it is grounded in a conception of contingency and anticipated export performance, and a notion of what it means to grant a subsidy (in the context of a loan), that is not contemplated in the text of Article 3.1(a) and footnote 4, the European Communities' interpretation of the legal standard for determining whether a subsidy is contingent in fact upon anticipated export performance cannot be sustained.

7.648 Correctly interpreted, the legal standard set out in footnote 4 indicates that a subsidy may be found to be contingent *in fact* upon *anticipated* export performance, and therefore prohibited under Article 3.1(a), when there is evidence demonstrating the existence of three distinct elements: (i) the granting of a subsidy; (ii) that is tied to; (iii) anticipated exportation or export earnings. At the heart of this legal standard is the second element, which reflects the notion of contingency set out in Article 3.1(a).³⁰⁷⁷ The meaning of "contingent" in Article 3.1(a) is "conditional" or "dependent for its existence upon".³⁰⁷⁸ Thus, in order to qualify as a prohibited export subsidy, the grant of the subsidy must be *conditional* or *dependent upon* actual or anticipated export performance; or as we have put it above, a subsidy must be granted *because* of actual or anticipated export performance. Article 3.1(a)

BCI deleted, as indicated [***]

further provides that such export contingency may be the sole condition governing the grant of a prohibited subsidy or it may be "one of several other conditions".³⁰⁷⁹ However, it is clear that mere anticipation of export performance on the part of a granting authority – that is, the expectation or consideration that exportation or export earnings will take place in the future – is not enough to show that a subsidy was granted *contingent* upon anticipated export performance. Similarly, the language of the last sentence of footnote 4 indicates that the mere fact that an enterprise exports cannot, alone, be used to establish the required contingency. Nevertheless, the fact that a company is export-oriented "may be taken into account as a relevant fact, provided it is one of several facts which are considered and is not the only fact supporting a finding" of export contingency.³⁰⁸⁰ Finally, we note that for the purpose of establishing a case of *in fact* contingency, each of the three elements identified above must be separately "*inferred* from the total configuration of facts constituting and surrounding the granting of the subsidy, none of which is likely to be decisive in any given case".³⁰⁸¹

7.649 With this legal standard in mind, we now turn to examine the United States' factual assertions in respect of each of the challenged LA/MSF contracts on a measure-by-measure basis.

"Granting of a subsidy"

7.650 We have already found that in entering into each of the challenged LA/MSF agreements with Airbus, the EC member State governments provided Airbus with a subsidy. The United States has therefore established the first of the three elements it must demonstrate in order to make out its case under Article 3.1(a). For its claim to succeed, the United States must also show that the provision of LA/MSF by each of the relevant EC member State governments (*i.e.*, the "granting of a subsidy") was contingent in fact upon anticipated exportation or export earnings.

Whether the EC member State governments "anticipated exportation or export earnings"

A380

7.651 The United States argues that the evidence surrounding the decisions of the EC member State governments to provide LA/MSF for the A380 demonstrates not only that the governments anticipated or expected that exportation or export earnings would result from the project, but also that the governments knew Airbus was developing the A380 primarily for the export market, and that export sales would be critical to the project's success.³⁰⁸² The evidence the United States relies upon to support its assertions,³⁰⁸³ and the European Communities' responses thereto,³⁰⁸⁴ are set out below:

- The United States argues that in 1999 and 2000, at the time it asserts the Airbus governments were discussing A380 LA/MSF with Airbus, Airbus was stating publicly in its Global Market Forecast ("GMF") that it was developing the A380 primarily for the export market by, for example, asserting that the Asia-Pacific region would account for 55% (1999) and 57%

BCI deleted, as indicated [***]

(2000) of orders, while "Europe" would account for 23% (1999) and 20% (2000).³⁰⁸⁵ The United States considers that essentially the same message was communicated in the Third Quarter 1999 edition of the Airbus A3XX Briefing, which noted that "{t}he market for large passenger aircraft will be concentrated: both geographically, with over half the projected deliveries expected to go to airlines domiciled in the Asia-Pacific region, and in terms of customers, with 20 airlines taking more than 75% of the aircraft."³⁰⁸⁶ Moreover, the United States submits that Airbus repeated the assertions made in the 1999 GMF in [***], noting in particular, that [***].³⁰⁸⁷ Finally, the United States identifies "other relevant information" in the French government's "critical project appraisal".³⁰⁸⁸ The European Communities argues that the GMF is "simply an analytical global market forecast, regularly prepared as part of the company's normal commercial operations, and for reasons entirely unrelated to the matter at hand". Moreover, the European Communities points out that the GMF refers to "Europe" (a broader market than the "EC"). According to the European Communities, it is impossible to infer from the GMF that the terms of any of the A380 LA/MSF contracts vary by reference to geographical region. The European Communities explains that the same observations are applicable in respect of the United States' reliance on the Third Quarter 1999 edition of the Airbus A3XX Briefing. Finally, the European Communities notes that the 2000 GMF post-dates the conclusion of the UK A380 LA/MSF contract.³⁰⁸⁹

- The United States argues that the repayment provisions of the four LA/MSF contracts anticipate a level of A380 sales substantially exceeding the 247 sales Airbus predicted in the 2000 GMF for aircraft with more than 400 seats in Europe between 2000 and 2019. Thus, the United States notes that an annex to the German A380 contract refers to [***] forecast A380 deliveries in 20 years;³⁰⁹⁰ and that the Spanish A380 contract refers to the expectation that there will be deliveries of [***] passenger versions of the A380, and [***] cargo versions.³⁰⁹¹ The United States also identifies [***] set out in the French and UK A380 "project appraisals", as well as the Airbus business case for the A380.³⁰⁹² Moreover, the United States also notes that the French, German, Spanish and UK LA/MSF contracts required Airbus to make full repayment over, respectively, [***], [***], [***] and [***].³⁰⁹³ A380 sales.³⁰⁹⁴ The European Communities argues that the repayment provisions are origin-neutral, the company being free to repay from the proceeds of any sale, regardless of destination, or from other sources, and even in advance of delivery. Moreover, the European Communities argues that there is no requirement under the LA/MSF contracts for any sales performance at all.³⁰⁹⁵ In responding to the United States reliance on the "critical project appraisals", the European

Communities points out that the exercise of each government's judgment as to the market prospects of a particular investment is exactly the sort of market discipline that the SCM Agreement is in place to encourage.³⁰⁹⁶

- According to the United States', the EC member State governments "specifically referenced the global nature of the A380 project and Airbus' export sales" in various documents.³⁰⁹⁷ In particular, the United States refers to: (i) language in the Spanish contract revealing the [***];³⁰⁹⁸ (ii) a DTI press release stating that "{w}ithin 25 years Airbus has grown to take 55% of the civil aircraft production market and contributes £1 billion to the UK's trade balance";³⁰⁹⁹ and (iii) the statement reportedly made by Prime Minister Blair at the ceremony unveiling the first A380 to the public "{t}he export gains will run into the billions of pounds".³¹⁰⁰ The European Communities argues that the media sources cited by the United States are of low reliability (the European Communities does not admit the accuracy of any of the press statements relied upon by the United States). The European Communities points out that the reports cite only certain components (wings) destined for other parts of the European Communities, *i.e.*, not exported outside of the European Communities, and that the statement from Prime Minister Blair post-dates the contracts. As with the other documents submitted as evidence by the United States, the European Communities argues that it is impossible to infer from the two media releases that the terms of the A380 LA/MSF contracts vary by reference to the European Communities and the rest of the world.³¹⁰¹
- The United States submits that when Airbus was seeking LA/MSF, "it pointed to potential export earnings and stressed the importance of the export sales to the project's success".³¹⁰² In support of this submission, the United States asserts that [***];³¹⁰³ that Airbus Senior Vice President for Marketing John Leahy was reported in February 2000 as stating that "{a}bout half the demand for the A3XX will come from Asia. ... I am sure that we would not be launching it if there were not key Asian airlines on board";³¹⁰⁴ and that a March 2000 Article in *The Economist* noted Leahy's view that Asia would account for around half of the sales of the A380, reporting that Leahy hoped "to win launch orders from two Asian carriers, one European or Middle Eastern airline and one American. ... encouraged by the responses from Singapore Airlines, Cathay Pacific, Malaysia Air Lines and Emirates."³¹⁰⁵ The European Communities argues that the cited report is of low reliability (the European Communities does not admit the accuracy of any of the press statements relied upon by the United States), and that it is impossible to infer from it any differentiation in the terms of the LA/MSF contracts between the European Communities and the rest of the world.³¹⁰⁶
- The United States contends that the A380 is an export-oriented project and that Airbus itself is a "highly export-oriented company", with over 84% of total 1992-2005 sales going to

export.³¹⁰⁷ In support of this assertion, the United States submits a chart prepared on the basis of information derived from the Airclaims CASE database showing that between 1992 and 2005 an average of 84% of total Airbus sales of aircraft of all sizes have been export sales.³¹⁰⁸ In addition, the United States refers to the 2000 Airbus GMF, which it asserts indicated that "the biggest share (35 per cent) of deliveries will go to airlines in North America. European airlines will take 30 per cent, and Asia-Pacific (including PRC) airlines 24 per cent, leaving just 11 per cent for airlines in Latin America, Africa and the Middle East."³¹⁰⁹ The United States also points to a position paper prepared by the External Advisory Group for Aeronautics which states that the aeronautics industry in Europe "employs a huge workforce and, through exports, contributes strongly to Europe's ability to fund other changes and to develop the quality of life of its citizens."³¹¹⁰ The European Communities argues that even the United States recognizes that export-orientation is insufficient to demonstrate contingency. Moreover, in respect of the position paper, the European Communities notes that it post-dates the UK A380 contract, and the United States has not demonstrated how its contents are imputable to the European Communities. And, finally, the European Communities submits that it is impossible to infer from the documents submitted by the United States any differentiation in terms of the LA/MSF contracts between the European Communities and the rest of the world.³¹¹¹

7.652 Having carefully reviewed and considered the evidence and related arguments advanced by the parties, as they concern each of the challenged LA/MSF measures, we have no doubt that at the time that Airbus and the EC member State governments concluded the A380 LA/MSF contracts, the latter were fully aware that Airbus was a global company operating in a global market, and that the A380 project would involve Airbus selling much if not most of its production in export markets. This is most apparent from the publicly available market forecasts cited by the United States,³¹¹² the Airbus A3XX Briefing, the A380 business case, the French and UK government's "critical project appraisals", Deutsche Airbus' A380 LA/MSF application, the sales expectations described in the German and Spanish A380 contract, the language in the Spanish contract revealing the [***], and the repayment schedules of the contracts themselves, which clearly envisaged that repayment would be made over a number of sales that exceeded the Airbus market forecasts for "Europe" over a comparable period of time. The Airclaims data showing that the vast majority of Airbus sales between 1992 to 2005 were made on export markets provides further support for our conclusion.

7.653 One of the main arguments made by the European Communities in responding to the evidence advanced by the United States is that the challenged A380 LA/MSF contracts contained no obligation on Airbus to make any export sales, or any sales at all. In addition, the European Communities has repeatedly argued that it is impossible to infer from the evidence that the terms of the LA/MSF measures varied in any way as a function of whether a sale is destined for the European Communities or elsewhere. We do not consider this line of argument to be directly relevant to whether the EC member State governments "anticipated exportation or export earnings", but rather whether the subsidy granted under those contracts was *contingent* on that anticipation.

³¹⁰⁷ US, FWS, para. 350.

³¹⁰⁸ Airclaims CASE database.

³¹⁰⁹ Exhibit US-358.

³¹¹⁰ Exhibit US-364.

³¹¹¹ EC, FWS, paras. 626-629.

³¹¹² Although the European Communities notes that the 2000 GMF post-dated the conclusion of the UK A380 contract, we note that the French, German and Spanish A380 contracts were concluded respectively in 2002, 2002 and 2001. Moreover, we recall that the United States also relies upon market forecast information contained in the 1999 GMF that was similar to that in the 2000 GMF, and that the former document was published in advance of the UK entering into the A380 LA/MSF contract with Airbus.

BCI deleted, as indicated [***]

7.654 Thus, even accepting that the GMF 2000 post-dated the conclusion of the UK A380 contract, and assuming, *arguendo*, that the press reports and media Articles relied upon by the United States have a relatively low probative value given that the European Communities does not accept their accuracy, we nevertheless conclude that the evidence advanced by the United States clearly establishes that at the time each of the A380 LA/MSF contracts were entered into, each of the EC member State governments "anticipated exportation or export earnings", within the meaning of footnote 4 of the SCM Agreement, in the sense that they expected or considered that exportation or export earnings would result from the development of the A380.

A340-500/600

7.655 As with the A380, the United States argues that the evidence surrounding the decisions of the French and Spanish governments to provide LA/MSF for the A340-500/600 demonstrates that the governments anticipated or expected that exportation or export earnings would result from the project.³¹¹³ The evidence the United States relies upon to support its assertions,³¹¹⁴ and the European Communities' responses thereto,³¹¹⁵ are set out below:

- The United States asserts that the Spanish A340-500/600 LA/MSF contract [***].³¹¹⁶ Similarly, the United States argues that the French government's "critical project appraisal" contained other relevant information, for example, with respect to sales projections and customer lists.³¹¹⁷
- According to the United States, in 1997-1998, Airbus was predicting that the substantial majority of its sales of aircraft of all types over the next 20 years would be for export. In support of this assertion, the United States points to the 1997 and 1998 GMFs, which, respectively, predicted that European airlines would represent 25 to 29 percent of its total orders during the period 1997 to 2016, and 25 to 28 percent of its total orders during the period 1997 to 2017.³¹¹⁸
- The United States notes that on the date of the LA/MSF contracts for the A340-500/600 were signed, almost half of the firm orders that Airbus had already received were export sales: Virgin Atlantic, Lufthansa and Swissair had ordered a total of 29 A340-500/600s; and Air Canada, Emirates, ILFC (based in the United States), and Egyptair had ordered a total of 23 aircraft.³¹¹⁹ The United States points to other relevant information in the French government's "critical project appraisal".³¹²⁰
- The United States also refers to an EC State Aid decision concerning the French government's LA/MSF for the A340-500/600, arguing that this decision noted the French government's expectation that the development of the aircraft would allow Airbus to compete for sales throughout the world. In particular, the United States cites the following passage from that decision: "{f}rom a global standpoint, the A340-500/600 program will have only one

competitor- Boeing. The A340-500/600 will be able to compete with the 747-400 and 777-300. The A340-500 will be able to compete with the Boeing 777-200GW."³¹²¹

- Finally, the United States argues, once again, that Airbus is an export-oriented company, noting that the table of orders derived from the Airclaims database shows that in the 1992 to 1997 period (*i.e.*, the period predating the French and Spanish decisions to provide LA/MSF for the A340-500/600) 86% of total Airbus sales of aircraft were export sales.³¹²²
- The European Communities argues that the United States has provided no evidence to demonstrate that the number of A340-500/600 deliveries needed to fully repay principal and interest exceeds projections of demand in the European Communities for the aircraft. According to the European Communities, the United States has introduced no evidence whatsoever regarding potential demand in the European Communities for this aircraft. The European Communities submits that for this reason alone, the United States' claims in respect of the A340-500/600 must be rejected.³¹²³

7.656 Having carefully reviewed and considered the evidence and related arguments advanced by the parties, as they concern the two challenged LA/MSF measures, we have no doubt that at the time that Airbus and the French and Spanish governments concluded the A340-500/600 LA/MSF contracts, the latter were fully aware that Airbus was a global company operating in a global market, and that the A340-500/600 project would involve Airbus selling much if not most of its production in export markets. This is most apparent from the Spanish LA/MSF contract which as the United States has noted, [***]; and information from the French government's "critical project appraisal" referred to and discussed by the United States in the HSBI Appendix to its first written submission. The market forecasts for "Europe" (compared with other regions) made in the 1997 and 1998 GMFs and the Airclaims data showing that the vast majority of Airbus sales between 1992 to 1997 were made on export markets provides further support for our conclusion.

7.657 The European Communities submits that the United States has failed to establish "anticipated exportation or export earnings" because it has advanced no data to demonstrate that the number of deliveries needed to fully repay principal and interest under the LA/MSF loans exceeds projections of demand in the European Communities for the A340-500/600. Although the United States has not specifically advanced this information, the evidence discussed in the previous paragraph, in our view, clearly demonstrates that at the time each of the A340-500/600 LA/MSF contracts were entered into, each of the EC member State governments "anticipated exportation or export earnings", within the meaning of footnote 4 of the SCM Agreement, in the sense that they expected or considered that exportation or export earnings would result from the development of the A340-500/600.

A330-200

7.658 Again, the United States argues that the evidence surrounding the decision of the French government to provide LA/MSF for the A330-200 demonstrates that it anticipated or expected that exportation or export earnings would result from the project.³¹²⁴ The evidence the United States relies upon to support its assertions,³¹²⁵ and the European Communities' responses thereto,³¹²⁶ are set out below:

³¹²¹ US, FWS, para. 368 citing from Exhibit US-3.

³¹²² US, FWS, para. 369, referring to information derived from the Airclaims CASE database.

³¹²³ EC, FWS, para. 675.

³¹²⁴ US, FWS, para. 382.

³¹²⁵ US, FWS, paras. 378-382; US, FWS, HSBI Appendix, paras. 55-56; US, SWS, paras. 137-140; US, Answer to Panel Questions 10 and 144.

BCI deleted, as indicated [***]

- The United States points to certain information in the French government's "critical project appraisal" for the A330-200, which it argues shows that the French government expected that LA/MSF for the A330-200 would lead to substantial exportation or export earnings.³¹²⁷
- In addition, the United States notes that in 1995 and 1996, Airbus was already predicting that the substantial majority of its sales of aircraft of all types over the next 20 years would be for export. In this connection, the United States refers to the 1995 GMF where it was predicted that European airlines would represent only 28 percent of its total orders during the 1995-2014 period.³¹²⁸
- Moreover, the United States asserts that on the date that the French government signed the A330-200 LA/MSF contract, 100 percent of the firm orders that Airbus had already received for the A330-200 were export sales.³¹²⁹
- The United States also includes, as evidence it submits shows that Airbus is an export oriented company, the evidence it presented in the context of its claim against the A380. In particular, this evidence is that over 84% of total Airbus sales between 1992 and 2005 were export sales.³¹³⁰
- The European Communities argues that the United States has provided no evidence to demonstrate that the number of A330-200 deliveries needed to fully repay principal and interest exceeds projections of demand in the European Communities for the aircraft. According to the European Communities, the United States has introduced no evidence whatsoever regarding potential demand in the European Communities for this aircraft. The European Communities submits that for this reason alone, the United States' claims in respect of the A330-200 must be rejected.³¹³¹

7.659 Our conclusion in respect of the evidence submitted to support the contention that the French government "anticipated exportation or export earnings" at the time it entered into the A330-200 LA/MSF contract with Airbus is the same as our conclusion in respect of the LA/MSF contracts for the A380 and A340-500/600. After careful review and consideration of the evidence and the parties' arguments, we have no doubt that at the time that Airbus and the French government concluded the A330-200 LA/MSF contract, the French government was fully aware that Airbus was a global company operating in a global market, and that the A330-200 project would involve Airbus selling much if not most of its production in export markets. This is most apparent from the information contained in the French government's "critical project appraisal" highlighted by the United States in the HSBI Appendix to its first written submission. The market forecasts for "European airlines" made in the 1995 GMF and the Airclaims data showing that the vast majority of Airbus sales between 1992 to 2005 were made on export markets provides further support for our conclusion.

7.660 Again, the European Communities submits that the United States has failed to establish "anticipated exportation or export earnings" because it has adduced no data to demonstrate that the number of deliveries required under each contract to fully repay principal and interest under the LA/MSF loans exceeds projections of demand in the European Communities for the A330-200. Although the United States has not specifically advanced this information, the evidence discussed in

³¹²⁶ EC, FWS, paras. 678-679; EC, SWS, paras. 322-324.

BCI deleted, as indicated [***]

the previous paragraph, in our view, clearly demonstrates that at the time the A330-200 LA/MSF contract was concluded, the French government "anticipated exportation or export earnings", within the meaning of footnote 4 of the SCM Agreement, in the sense that it expected or considered that exportation or export earnings would result from the development of the A330-200.

Whether the granting of the LA/MSF was "tied to" anticipated exportation or export earnings

7.661 The United States submits that various provisions of the challenged LA/MSF contracts, when considered in the light of other relevant information, demonstrate that the grant of each subsidy measure was in fact "tied to" anticipated exportation or export earnings, within the meaning of footnote 4 of the SCM Agreement. The main argument advanced by the United States in support of this submission is focussed on an alleged exchange of commitments between Airbus and the EC member States that necessarily involves Airbus having to make "substantial" exports. In particular, the United States asserts that each time Airbus contracted with the EC member States under the challenged LA/MSF measures, the two parties exchanged performance commitments, pursuant to which the EC member States agreed to provide Airbus with development funding in accordance with a set schedule, and in return Airbus agreed to make repayments with revenue generated from a specified number of LCA sales that could only be achieved through exports. The United States argues that other information corroborates this alleged "tie" between the subsidy measures and the EC member States' anticipated exportation or export earnings. This includes: the preambular language of a number of the LA/MSF contracts; various provisions in the LA/MSF contracts setting out Airbus' repayment obligations, representations and warranties, and reporting requirements; contractual termination and adjustment provisions; Airbus' contractual undertaking to complete the development projects; various statements reportedly made by government officials; and information contained in the UK and French governments' "critical project appraisals" for a number of the aircraft models.³¹³² The European Communities argues that the United States grossly distorts the terms of the LA/MSF contracts and latches onto a host of irrelevant provisions that have no conceivable connection to export performance, much less establish a "necessary" relationship between the alleged subsidy and export. At most, according to the European Communities, these provisions confirm the member States' concern with ensuring the commercial and technical viability of the programme they are financing.³¹³³ The evidence identified by the United States, and the European Communities' specific responses thereto,³¹³⁴ are set out below:

French LA/MSF for the A380
