- The United States notes that Articles 6.2 and 6.3 of the French A380 LA/MSF contract require Airbus to repay the loaned principal through per-aircraft levies on the [***] sales. The United States observes that if sales are fewer than expected, the French government has no other recourse to obtain repayment. According to the United States, these repayment provisions show that the French government conditioned the provision of LA/MSF on repayment over [***] sales, a level of sales that could not be achieved without substantial exports. In particular, on the basis of evidence it has submitted showing that Airbus had, in 2000, forecast a total size of the market segment for aircraft with more than 400 seats in "Europe" of 247 aircraft, the United States argues that it follows that the French government

³¹³² US, FWS, paras. 352-360 (A380), 372-375 (A340-500/600) and 383-386 (A330-200); US, FWS, HSBI Appendix, paras. 39-42, 50-53, 57-60; US, FNCOS, paras. 65-75; US, SWS, paras. 141-143, 161-192 (A380), 193-203 (A340-500/600) and 204-209 (A330-200); US SOS-HSBI Appendix paras. 2-7; US, Answer to Panel Questions 10, 144, 145 and 217; US, Comments on EC Answer to Panel Question 217.

BCI deleted, as indicated [***]

"tied" its grant of LA/MSF for the A380 to Airbus making at least [***] export sales. Indeed, the United States argues that Airbus' actual export requirements are even greater, noting that the Airbus 2000 Global Market Forecast defines the more than 400 seat market segment as including the A340-600 and the Boeing 747 and 777-300. Thus, when the French government [***] it necessarily [***].³¹³⁵ The European Communities asserts that the repayment provisions impose no obligation on the company to sell, let alone export, a single aircraft. According to the European Communities, the repayment provisions are origin-neutral, Airbus being free to repay from proceeds of any sale, regardless of destination. Airbus retains full commercial freedom and the choice of export versus domestic sale is made according to the demands of the market. Thus, the European Communities contends that the repayment provisions do not demonstrate that the terms of the LA/MSF contract vary at all by reference to the European Communities and the rest of the world.³¹³⁶

- The United States submits that other terms and conditions found in the French A380 LA/MSF contract corroborate the existence of the alleged "contingent" relationship between the grant of the subsidy and anticipated exportation or export earnings. In this regard, the United States points to:
 - (a) Article 6.1, which the United States asserts [***]. The United States submits that this obligation confirms that the contract represents a commitment on the part of the government in exchange for a commitment on the part of Airbus.³¹³⁷
 - (b) Article 1.3, which the United States argues stipulates that Airbus undertakes [***]. The United States submits that this provision further demonstrates the "tie" between the government's commitment to provide LA/MSF and Airbus' commitment to [***].³¹³⁸ The European Communities argues that a provision in a contract governing the terms of *development* financing, that requires the borrower to do its best to *develop*, is hardly surprising, and shows nothing more than the creditor's interest in the viability of its investment.³¹³⁹
 - (c) Article 8.2, which the United States asserts obligates Airbus to [***]. The United States submits that this shows that the French government did not simply provide LA/MSF in the hope that it would lead to export performance but that it was provided contingent upon performance by Airbus – to be demonstrated to the government through, *inter alia*, [***] – which performance necessarily involves exportation.³¹⁴⁰ The European Communities responds by stating that when governments ask Airbus companies to provide periodic progress reports, they are not implicitly (or "necessarily") asking whether Airbus has exported aircraft. Instead, they seek information on how *development* costs are being incurred, whether milestones in the *development* process have been reached, and whether the project remains viable. In this respect, governments are simply performing due diligence – like any market-based creditor.³¹⁴¹

BCI deleted, as indicated [***]

- (d) Article 9.1, which the United States contends stipulates that in the event that Airbus breaches its contractual obligations, the French government [***]. According to the United States, this provision further corroborates the link between the French government's performance and Airbus' performance.³¹⁴² The European Communities argues that this provision does not call for termination and discontinuation of LA/MSF funding if the company fails to *export*. Instead, it only states that if the company does not use the funding received to make best endeavours to develop the aircraft as planned, the government will cease providing LA/MSF. Thus, the European Communities contends that the only contingency established through this provision is between the continued receipt of LA/MSF and the obligation on the company to use best endeavours to develop an aircraft.³¹⁴³

German LA/MSF for the A380

- The United States notes that Section 7 of the German A380 LA/MSF contract requires Airbus to make repayments of the loaned principal through per-aircraft levies on the [***] sales. The United States observes that if sales are fewer than expected, the German government has no other recourse to obtain repayment. According to the United States, these repayment provisions show that the German government conditioned the provision of LA/MSF on repayment over [***] sales, a level of sales that could not be achieved without substantial exports. In particular, on the basis of evidence it has submitted showing that Airbus had, in 2000, forecast a total market size for aircraft with more than 400 seats in "Europe" of 247 aircraft, the United States argues that it follows that the German government "tied" its grant of LA/MSF for the A380 to Airbus making at least [***] export sales. Indeed, the United States argues that Airbus' actual export requirements are even greater, noting that the Airbus 2000 Global Market Forecast defines the more than 400 seat market segment as including the A340-600 and the Boeing 747 and 777-300. Thus, when the German government [***] it necessarily [***].³¹⁴⁴ The European Communities asserts that the repayment provisions impose no obligation on the company to sell, let alone export, a single aircraft. According to the European Communities, the repayment provisions are origin-neutral, Airbus being free to repay from proceeds of any sale, regardless of destination. Airbus retains full commercial freedom and the choice of export versus domestic sale is made according to the demands of the market. Thus, the European Communities contends that the repayment provisions do not demonstrate that the terms of the LA/MSF contract vary at all by reference to the European Communities and the rest of the world.³¹⁴⁵
- The United States submits that other terms and conditions found in the German A380 LA/MSF contract corroborate the existence of the alleged "contingent" relationship between the grant of the subsidy and anticipated exportation or export earnings. In this regard, the United States points to:
 - (a) Section 1, clause 5, which the United States submits identifies certain [***]. Moreover, the United States notes that the preamble to the contract reveals that the German government was in possession of [***]. The United States asserts that this [***] showed that the German government was [***]. In particular, the United States points to several pages in the [***] where it was stated that [***]; and which describe [***]. The United States also relies upon a [***].³¹⁴⁶ The European Communities

necessarily [***].³¹⁵⁴ The European Communities asserts that the repayment provisions impose no obligation on the company to sell, let alone export, a single aircraft. According to the European Communities, the repayment provisions are origin-neutral, Airbus being free to repay from proceeds of any sale, regardless of destination. Airbus retains full commercial freedom and the choice of export versus domestic sale is made according to the demands of the market. Thus, the European Communities contends that the repayment provisions do not demonstrate that the terms of the LA/MSF contract vary at all by reference to the European Communities and the rest of the world.³¹⁵⁵

- The United States submits that other terms and conditions found in the Spanish A380 LA/MSF contract corroborate the existence of the alleged "contingent" relationship between the grant of the subsidy and anticipated exportation or export earnings. In this regard, the United States points to:
 - (a) The Séptimo preambular paragraph, which the United States quotes as stating that [***]. According to the United States, this recognition in the preamble of the contract shows that the Spanish government [***] information in providing the LA/MSF. In its view, this statement demonstrates that the Spanish government's expectation [***].³¹⁵⁶
 - (b) The Primera clausula, which the United States asserts establishes an obligation on Airbus [***]. The United States submits that this obligation confirms that the contract represents a commitment on the part of the government in exchange for a commitment on the part of Airbus.³¹⁵⁷

UK A380 contract

- The United States notes that Schedule 3, paragraph 3, of the UK A380 LA/MSF contract requires Airbus to make repayments of the loaned principal through per-aircraft levies on the [***].³¹⁵⁸ The United States observes that if sales are fewer than expected, the UK government has no other recourse to obtain repayment. According to the United States, these repayment provisions show that the UK government conditioned the provision of LA/MSF on repayment over [***] sales, a level of sales that could not be achieved without substantial exports. In particular, on the basis of evidence it has submitted showing that Airbus had in 2000 forecast a total market size for aircraft with more than 400 seats in "Europe" of 247 aircraft, the United States argues that it follows that the UK government "tied" its grant of LA/MSF for the A380 to Airbus making at least [***]³¹⁵⁹ export sales. Indeed, the United States argues that Airbus' actual export requirements are even greater, noting that the Airbus 2000 Global Market Forecast defines the more than 400 seat market segment as including the A340-600 and the Boeing 747 and 777-300. Thus, when the UK government [***] it

³¹⁵⁴ US, FWS, paras. 353-357, citing Exhibits US-358 and US-73 (BCI).

³¹⁵⁵ EC, FWS, paras. 614, 616 and 637; EC, Comments on US Answer to Panel Question 145.

³¹⁵⁶ US, SWS, paras. 189-190.

³¹⁵⁷ US, SWS, para. 191.

³¹⁵⁸ In fact, the UK government sought full repayment of the principal plus interest loaned under the A380 LA/MSF contract over [***] sales. An additional [***] payment was required for sales between [***] to [***], with [***] being owed for sales in excess of [***]. EC, FWS, paras. 432-439.

³¹⁵⁹ We note that as the UK government sought full repayment of the principal loaned plus interest under the A380 LA/MSF contract over [***] sales, it could not have "tied" full repayment of LA/MSF to Airbus making at least [***] aircraft sales. Following the United States' logic, the UK government "tied" full repayment of LA/MSF to [***] A380 sales.

BCI deleted, as indicated [***]

necessarily [***].³¹⁶⁰ The European Communities asserts that the repayment provisions impose no obligation on the company to sell, let alone export, a single aircraft. According to the European Communities, the repayment provisions are origin-neutral, Airbus being free to repay from proceeds of any sale, regardless of destination. Airbus retains full commercial freedom and the choice of export versus domestic sale is made according to the demands of the market. Thus, the European Communities contends that the repayment provisions do not demonstrate that the terms of the LA/MSF contract vary at all by reference to the European Communities and the rest of the world.³¹⁶¹

- The United States submits that other terms and conditions found in the UK A380 LA/MSF contract corroborate the existence of the alleged "contingent" relationship between the grant of the subsidy and anticipated exportation or export earnings. In this regard, the United States points to:
 - (a) Article 3.1, which the United States asserts shows that BAE Systems (Operations) Ltd and its corporate parent (BAE Systems) made certain representations and warranties to the UK government. Among these was the representation and warranty that [***]. The United States submits that such an affirmation would be irrelevant if the relationship between the provision of LA/MSF and Airbus' commitment to performance (which cannot be fulfilled without exportation) were not one of conditionality or dependence.³¹⁶² In other words, according to the United States, the provision shows that in committing to provide LA/MSF, the UK government relied on [***].³¹⁶³ The United States contends that the same reliance can also be seen in [***].³¹⁶⁴
 - (b) Article 4.1, which the United States argues sets out a commitment by BAE Systems (Operations) Ltd to [***]. The United States notes that the [***]. Thus, according to the United States, to obtain LA/MSF, the company had to commit to [***].³¹⁶⁵ The European Communities argues that a provision in a contract governing the terms of *development* financing, that requires the borrower to do its best to *develop*, is hardly surprising, and shows nothing more than the creditor's interest in the viability of its investment.³¹⁶⁶
 - (c) Article 6, which the United States asserts provides that the UK government may [***]. The United States maintains that this further demonstrates that the UK government's performance (its provision of LA/MSF) is tied to Airbus' performance, which cannot be accomplished without exportation.³¹⁶⁷ The European Communities

³¹⁶⁰ US, FWS, paras. 353-357, citing Exhibits US-358 and US-79 (BCI); US, FWS, HSBI Appendix, para. 42.

³¹⁶¹ EC, FWS, paras. 614, 616 and 637; EC, Comments on US Answer to Panel Question 145.

³¹⁶² US, Answer to Panel Question 145.

³¹⁶³ US, SWS, paras. 169-171. The United States alleges that during the Annex V process, the European Communities refused to provide BAE Systems' [***]. However, it notes that on the basis of the Airbus Deutschland [***], the German government was well aware of, and relied upon, anticipated exportation in deciding to provide LA/MSF. In the light of the European Communities' alleged refusal to provide the a copy of BAE Systems' [***], the United States asks the Panel to draw the "logical inference .. that [***]". As we have previously observed, the questions asked by the Facilitator during the Annex V process did not specifically request the European Communities to provide copies of the A380 LA/MSF applications.

³¹⁶⁴ US, SWS, para. 171; US, FWS, HSBI Appendix, para. 30, referring to UK A380 "critical project appraisal" DS316-EC-HSBI-00121, at section 2.3 and pp. 35-36.

³¹⁶⁵ US, SWS, para. 172.

³¹⁶⁶ EC, SNCOS, para. 163.

³¹⁶⁷ US, SWS, para. 173.

BCI deleted, as indicated [***]

argues that this provision does not call for termination and discontinuation of LA/MSF funding if the company fails to *export*. Instead, it states only that if the company does not use the funding received to make best endeavours to develop the aircraft as planned, the government will cease providing LA/MSF. Thus, the European Communities contends that the only contingency established through the provision is between the continued receipt of LA/MSF and the obligation on the company to use best endeavours to develop an aircraft.³¹⁶⁸

- (d) Article 7.1(a), which the United States argues provides for the Company to [***]. The United States submits that this shows that the UK government did not simply provide LA/MSF in the hope that it would lead to export performance, but that it provided LA/MSF contingent upon performance by Airbus – to be demonstrated to the government through, *inter alia*, [***] – which performance necessarily involves exportation.³¹⁶⁹ The European Communities responds by asserting that when governments ask Airbus companies to provide periodic progress reports, they are not implicitly (or "necessarily") asking whether Airbus has exported aircraft. Instead, they seek information on how *development* costs are being incurred, whether milestones in the *development* process have been reached, and whether the project remains viable. In this respect, governments are simply performing due diligence – like any market-based creditor.³¹⁷⁰

French LA/MSF for the A340-500/600

- The United States notes that Articles 6.2 and 7 of the French A340-500/600 LA/MSF contract require Airbus to make repayments of the loaned principal through per-aircraft levies on the [***] sale. The United States observes that if sales are fewer than expected, the UK government has no other recourse to obtain repayment. According to the United States, the French government's project appraisal makes clear that [***].³¹⁷¹ The European Communities asserts that the repayment provisions impose no obligation on the company to sell, let alone export, a single aircraft. According to the European Communities, the repayment provisions are origin-neutral, Airbus being free to repay from proceeds of any sale, regardless of destination. Airbus retains full commercial freedom and the choice of export versus domestic sale is made according to the demands of the market. Thus, the European Communities contends that the repayment provisions do not demonstrate that the terms of the LA/MSF contract vary at all by reference to the European Communities and the rest of the world.³¹⁷²
- The United States submits that other terms and conditions found in the French A340-500/600 LA/MSF contract corroborate the existence of the alleged "tie". In this regard, the United States points to:
 - (a) Article 7, which the United States argues obligates Airbus [***]. According to the United States, this obligation confirms that the contract represents a commitment on the part of the government in exchange for a commitment on the part of Airbus.³¹⁷³

³¹⁶⁸ EC, SNCOS, para. 168.

³¹⁶⁹ US, SWS, para. 174.

³¹⁷⁰ EC, SNCOS, para. 164.

³¹⁷¹ US, FWS, para. 373, citing Exhibit US-36 (BCI); US, FWS, HSBI Appendix, paras. 50-53, referring to Exhibit DS316-EC-HSBI-0001143; US, SCOS, HSBI Appendix, paras. 2-7.

³¹⁷³ US, SWS, para. 194.

BCI deleted, as indicated [***]

- (b) Article 9, which the United States asserts obligates Airbus to [***]. The United States submits that this shows that the French government did not simply provide LA/MSF in the hope that it would lead to export performance, but that it provided it contingent upon performance by Airbus – to be demonstrated to the government through, *inter alia*, [***] – which performance necessarily involved exportation.³¹⁷⁴ The European Communities responds by asserting that when governments ask Airbus companies to provide periodic progress reports, they are not implicitly (or "necessarily") asking whether Airbus has exported aircraft. Instead, they seek information on how *development* costs are being incurred, whether milestones in the *development* process have been reached, and whether the project remains viable. In this respect, governments are simply performing due diligence – like any market-based creditor.³¹⁷⁵
- (c) Annex 5 of the Protocole, which the United States contends requires Airbus [***]. The United States argues that this requirement further reinforces the contractual tie between the provision of LA/MSF and Airbus' export performance.³¹⁷⁶ The European Communities argues that these provisions enable the government to verify, including through contact with the buyer if necessary, that the company is indeed making the required payments on each delivery. The European Communities emphasizes that the provisions do not require that the company repay a greater percentage of LA/MSF, or repay a higher interest rate, if the buyer happens to be in a domestic as opposed to an export market. Thus, the European Communities considers that the periodic statements of deliveries do not imply export contingency.³¹⁷⁷
- (d) Article 10, which the United States asserts requires that in the event that Airbus breaches its obligations, the French government [***] further corroborating the link between the government's performance and Airbus's performance.³¹⁷⁸ The European Communities argues that this provision does not call for termination and discontinuation of LA/MSF funding if the company fails to *export*. Instead, it states only that if the company does not use the funding received to make best endeavours to develop the aircraft as planned, the government will cease providing LA/MSF. Thus, the European Communities contends that the only contingency established through this provision is between the continued receipt of LA/MSF and the obligation on the company to use best endeavours to develop an aircraft.³¹⁷⁹

Spanish LA/MSF for the A340-500/600

- The United States notes that Octavo preambular paragraph and the Quinta clausula of the Spanish A340-500/600 LA/MSF contract require Airbus to make repayments of the loaned principal through per-aircraft levies. The United States recalls that all of the numbers from the LA/MSF agreement's repayment schedule were redacted, so it was not possible for it to determine over how many deliveries Airbus must repay the financing. However, it asserts that the contract anticipates [***] worldwide sales of the aircraft over a 20 year period. In the light of the European Communities' refusal to provide the actual information from the repayment schedule, the United States asks the Panel to draw the reasonable inference that

³¹⁷⁴ US, SWS, para. 195.

³¹⁷⁵ EC, SNCOS, para. 164.

³¹⁷⁶ US, SWS, para. 196.

³¹⁷⁷ EC, SNCOS, para. 165.

³¹⁷⁸ US, SWS, para. 197.

³¹⁷⁹ EC, SNCOS, para. 168.

BCI deleted, as indicated [***]

Airbus must repay the loan over a similar number of sales.³¹⁸⁰ The European Communities asserts that the repayment provisions impose no obligation on the company to sell, let alone export, a single aircraft. According to the European Communities, the repayment provisions are origin-neutral, Airbus being free to repay from proceeds of any sale, regardless of destination. Airbus retains full commercial freedom and the choice of export versus domestic sale is made according to the demands of the market. Thus, the European Communities contends that the repayment provisions do not demonstrate that the terms of the LA/MSF contract vary at all by reference to the European Communities and the rest of the world.³¹⁸¹

- The United States submits that other terms and conditions found in the Spanish A340-500/600 LA/MSF contract corroborate the existence of the alleged "tie". In this regard, the United States points to:
 - (a) The United States argues that, as in the Spanish LA/MSF contract for the A380, the contract for the A340-500/600 contains certain representations in the preamble evidencing the information on which the Spanish government relied in deciding to provide LA/MSF. In particular, the United States points to the statement that [***]. Thus, by making this statement, the United States notes that the Spanish government states explicitly that in providing LA/MSF for the A340-500/600 it is [***].³¹⁸²
 - (b) Article 1, pursuant to which the United States argues that Airbus commits [***]. According to the United States, this obligation confirms that the contract represents a commitment on the part of the government in exchange for a commitment on the part of Airbus.³¹⁸³

French LA/MSF for the A330-200

- The United States notes that Articles 6.2 of the French A330-200 LA/MSF contract requires Airbus to make repayments of the loaned principal through per-aircraft levies on the first [***] sales. The United States observes that if sales are fewer than expected, the French government has no other recourse to obtain repayment. According to the United States, the French government's project appraisal makes clear that [***].³¹⁸⁴ The European Communities asserts that the repayment provisions impose no obligation on the company to sell, let alone export, a single aircraft. According to the European Communities, the repayment provisions are origin-neutral, Airbus being free to repay from proceeds of any sale, regardless of destination. Airbus retains full commercial freedom and the choice of export versus domestic sale is made according to the demands of the market. Thus, the European Communities contends that the repayment provisions do not demonstrate that the terms of the LA/MSF contract vary at all by reference to the European Communities and the rest of the world.³¹⁸⁵

³¹⁸⁰ US, SWS, para. 373, citing Exhibit US-37 (BCI). In the light of the missing information on repayment terms, the United States requested the Panel to either use its authority under Article 13 of the DSU to request the European Communities and Spain to provide the necessary information or else draw the adverse inference that Airbus must repay the aid over [***] sales.

BCI deleted, as indicated [***]

- The United States submits that other terms and conditions found in the French A330-200 LA/MSF contract corroborate the existence of the alleged "tie". In this regard, the United States points to:
 - (a) Article 6, which the United States asserts obligates Airbus [***]. According to the United States, this obligation confirms that the contract represents a commitment on the part of the government in exchange for a commitment on the part of Airbus.³¹⁸⁶
 - (b) Article 7, which the United States argues requires Airbus to [***]. The United States argues that this shows that the French government did not simply provide LA/MSF in the hope that it would lead to export performance but that it provided LA/MSF contingent upon performance by Airbus – to be demonstrated to the government through, *inter alia*, [***] – which performance necessarily involves exportation.³¹⁸⁷ The European Communities responds by asserting that when governments ask Airbus companies to provide periodic progress reports, they are not implicitly (or "necessarily") asking whether Airbus has exported aircraft. Instead, they seek information on how *development* costs are being incurred, whether milestones in the *development* process have been reached, and whether the project remains viable. In this respect, governments are simply performing due diligence – like any market-based creditor.³¹⁸⁸
 - (c) The United States also points to Annex 5, which it argues requires Airbus [***]. The United States contends that this requirement further reinforces the contractual tie between the provision of LA/MSF and Airbus' export performance.³¹⁸⁹ The European Communities argues that these provisions enable the government to verify, including through contact with the buyer if necessary, that the company is indeed making the required payments on each delivery. The European Communities emphasizes that the provisions do not require that the company repay a greater percentage of LA/MSF, or repay a higher interest rate, if the buyer happens to be in a domestic as opposed to an export market. Thus, the European Communities considers that the periodic statements of deliveries do not imply export contingency.³¹⁹⁰
 - (d) Article 8, which the United States asserts shows that in the event that Airbus breaches its obligations, the French government [***]. According to the United States, this further corroborates the link between the government's performance and Airbus's performance.³¹⁹¹ The European Communities argues that this provision does not call for termination and discontinuation of LA/MSF funding if the company fails to *export*. Instead, it states only that if the company does not use the funding received to make best endeavours to develop the aircraft as planned, the government will cease providing LA/MSF. Thus, the European Communities contends that the only contingency established through this provision is between the continued receipt of LA/MSF and the obligation on the company to use best endeavours to develop an aircraft.³¹⁹²

Whether the sales-dependent repayment provisions of the challenged LA/MSF measures amount to exchanges of commitments that evidence contingency in fact upon anticipated exportation or export earnings

7.662 Apart from the above-mentioned arguments, the European Communities makes a series of additional submissions it considers demonstrate that the United States has failed to substantiate its claims. The first of these concerns what the European Communities considers to be the implications of the United States' alleged exchange of commitments theory for the types of subsidies that may be caught by the prohibition on export subsidies under Article 3.1(a) of the SCM Agreement.

7.663 The European Communities construes the United States' focus on the repayable nature of LA/MSF as the articulation of a "thesis ... that financial contributions that foresee a return (such as loans) are more susceptible to be found to contain a prohibited export contingent subsidy than financial contributions in the form of outright grants".³¹⁹³ However, the European Communities argues that Article 3.1(a) applies equally to all types of financial contributions, with no particular type of subsidy being more susceptible to either escaping or being caught by the prohibition.³¹⁹⁴ In the view of the European Communities, accepting the United States' thesis "would create an incentive for Members to make outright subsidy grants, rather than financial contributions that foresee a return, in order to avoid the prohibition" and thereby "encourage Members to depart from the market disciplines that the SCM Agreement meant to foster".³¹⁹⁵ Thus, the European Communities argues that the United States asks the Panel to adopt an interpretation of Article 3.1(a) of the SCM Agreement that is not only contrary to its text, but also "manifestly absurd and unreasonable".³¹⁹⁶

7.664 The United States rejects the European Communities' characterization of its arguments, emphasizing that it is "not the foreseeing of a return that makes {LA/MSF} export contingent but the conditioning of the provision of {LA/MSF} on a commitment by Airbus to repay {LA/MSF} over levels of sales that necessarily involve exportation".³¹⁹⁷ Thus, the United States explains that:

"In committing to provide {LA/MSF}, the Airbus governments could have insisted on any number of conditions or no conditions at all. They could have insisted on repayment over much smaller numbers of sales than actually are set out in the {LA/MSF} contracts (e.g., numbers that could be reached without necessarily exporting). They could have insisted on repayment over a fixed schedule, regardless of sales. They could have foregone repayment – effectively treating {LA/MSF} as a grant. But instead of taking any of these possible approaches, the Airbus governments took the approach of conditioning the provision of {LA/MSF} on repayment over levels of sales derived from Airbus's own Business Case and Global Market Forecasts and the governments' own project appraisals and other analyses, which levels of sales would necessarily involve exportation. Because the provision of {LA/MSF} is tied to export performance in this way it is a prohibited subsidy under Article 3.1(a) of the SCM Agreement."³¹⁹⁸

7.665 We do not understand the United States' argument to be based on the fact that the EC member States expected to obtain a return from their LA/MSF contributions. Rather, it is the nature of *how* the EC member States structured that return that is at the centre of the United States' claim. Therefore, it does not follow from the United States' exchange of commitments theory that "financial

BCI deleted, as indicated [***]

contributions that foresee a return (such as loans)" would be more susceptible to fall foul of the prohibition of export subsidies established under Article 3.1(a) of the SCM Agreement.

7.666 A second argument the European Communities advances challenges the United States' focus on sales-dependent repayment terms as the sole means available to Airbus to repay LA/MSF. According to the European Communities, each of the challenged LA/MSF contracts, either expressly or by implication, envisages the possibility of repayment via cash-flows generated through business activities other than sales of the aircraft.³¹⁹⁹ In particular, the European Communities notes that the contracts do not prevent the possibility of early repayment at any time. Moreover, the European Communities asserts that other related companies guaranteed Airbus' repayment obligations, implying that "{i}n all cases there are related companies or commercial activities that guarantee alternative sources of repayment".³²⁰⁰

7.667 Accelerated repayment provisions are expressly provided for under the German, Spanish and UK A380 LA/MSF contracts, and the Spanish A340-500/600 LA/MSF contract.³²⁰¹ The parties' arguments have focussed on the provisions appearing in two of these contracts – the German and UK A380 agreements. The German A380 contract allows Airbus to [***]. However, in this event, Airbus must pay [***].³²⁰² The right to make prepayments under the UK A380 contract is [***] of the funding received under the loan.³²⁰³ Should Airbus exercise this right, it would be required to [***].³²⁰⁴ The United States characterizes these as [***] that actually reinforce the "tie" between LA/MSF and export performance by [***].³²⁰⁵ The European Communities rejects this characterization, arguing that the provisions "ensure that the government does not face dilution of its return if the company elects to prepay", reflecting the government's aim to protect its return.³²⁰⁶ Although not defined in detail, the prepayment provisions under the German A380 contract appear to envisage that the German government [***]. At the very least, this suggests that the German A380 contract creates a [***].³²⁰⁷

7.668 In any case, we note that the accelerated repayment possibilities expressly provided for under the German, Spanish and UK A380 LA/MSF contracts, and the Spanish A340-500/600 LA/MSF contract, are only optional. On the other hand, the per-aircraft levies expressly called for under each of the challenged contracts are mandatory and therefore must be complied with after each and every relevant aircraft sale. Thus, we are doubtful about the extent to which the mere *possibility* of early repayment on the part of Airbus from an income stream unassociated with aircraft sales influenced the EC member State governments' decisions to provide LA/MSF. In this regard, we see some merit in the United States' contention that because "there is nothing uncommon about the possibility of accelerating repayment of a loan", were an option to voluntarily prepay a loan enough to sever a "tie" between the provision of a loan and export performance, "it would be virtually impossible to ever find

BCI deleted, as indicated [***]

a subsidy provided through a loan contract to be contingent upon export performance within the meaning of Article 3.1(a) of the SCM Agreement".³²⁰⁸

7.669 The European Communities states that the repayments of all of the relevant LA/MSF contracts were guaranteed, implying that sources of funding for the repayment LA/MSF other than revenue from aircraft sales were available. The European Communities focuses its analysis on the German and UK A380 contracts.³²⁰⁹ Under both contracts, the European Communities asserts that [***].³²¹⁰ The European Communities considers that these guarantees place Airbus in the same position as the Howe Leather company in *Australia – Leather*, where the European Communities argues the fact that the assets of Howe's parent company guaranteed a loan provided by the Australian government to Howe was an important factor relied upon by the panel to conclude that it was not a prohibited export subsidy.³²¹¹ The United States argues that because the guarantee under the UK A380 contract "does not ensure repayment of {LA/MSF} regardless of whether Airbus succeeds in delivering [***] copies of the A380, it does not sever the tie between the provision of {LA/MSF} and Airbus' commitment to a level of performance that necessarily involves exportation".³²¹² Moreover, it considers the European Communities' reliance on the *Australia – Leather* to be inapposite because in that dispute it alleges "the security provided by Howe's parent (in the form of a lien on assets and undertakings) was a true guarantee of repayment of the government loan, as opposed to a 'guarantee' to pay levies due to the government on a per sale basis".³²¹³

7.670 The guarantee provided under the UK A380 contract relates to [***].³²¹⁴ Similarly, under the German A380 contract, [***].³²¹⁵ The European Communities explains that both guarantees will operate when the borrowing Airbus entity [***]. We agree with the United States that this type of guarantee is different from the guarantee considered in *Australia – Leather*. In *Australia – Leather*, one of the factors that led the panel to find that a 15-year preferential loan from the Australian government to the Howe Leather company was not a prohibited export subsidy was that it was "secured by a lien on the assets and undertakings of ALH {Howe's parent company}, which is itself responsible for repayment of the loan, and not merely on the assets and undertakings of Howe."³²¹⁶ The guarantees provided under the German and UK A380 contracts are clearly of a different kind as they will only come into play if the loan recipients do not make a required repayment following delivery of an aircraft.

7.671 Finally, the European Communities identifies two "countervailing explanations" or "legitimate commercial reasons" that it submits explain why the challenged LA/MSF contracts contain delivery-dependent repayment provisions, which the European Communities submits "have nothing to do with export contingent subsidies".³²¹⁷ First, the European Communities notes that Airbus' revenues are generated by and large from LCA sales, with between 83% and 85% of the gross price paid on delivery. According to the European Communities, this makes aircraft deliveries the most reliable indication that sufficient cash-flow will be on hand to make repayments, giving both Airbus and the EC member States a strong commercial incentive to time repayments to coincide with delivery of LCA.³²¹⁸ Second, the European Communities submits that timing repayment with

deliveries allocates the risk between Airbus and the EC member State governments in accordance with the risk each party agreed to accept. A repayment schedule based on repayment dates fixed at the time when the contracts were concluded would result in a distribution of risk that is different from that agreed between the parties.³²¹⁹ Thus, the European Communities argues that the Airbus governments agreed to allow repayment upon delivery – "not to induce Airbus to export, but to accommodate the company's cash flow needs and allocate risk".³²²⁰

7.672 According to the European Communities, the commercial validity of both "countervailing explanations" it advances is confirmed by the fact that Airbus' risk-sharing suppliers use the same repayment term structure as the EC member State governments.³²²¹ The European Communities emphasizes that such market-based lenders "care only about securing their return, and not whether that return is secured via exports rather than domestic sales".³²²² In its view, the "fact that some deliveries involve exportation was not the parties' reason for constructing the repayment terms {of the LA/MSF contracts} by reference to deliveries. Rather, exports are an incidental feature that results from an exogenous factor – marketplace demand, which turns both Airbus and Boeing into export-oriented firms".³²²³ Thus, the European Communities submits that the EC member States' motivations for using deliveries as the trigger for repayment were based on the same legitimate commercial considerations that motivate market actors, and not any desire to grant export contingent subsidies.

7.673 The United States notes that neither of the European Communities' "countervailing explanations" address the level of sales over which LA/MSF is to be repaid, even though in its view this is an essential element of Airbus' contractual obligation that demonstrates that LA/MSF is provided in exchange for an undertaking by Airbus that can be fulfilled only if it exports. Moreover, the United States alleges that the European Communities has advanced no evidence to substantiate its assertions.³²²⁴ In any case, the United States submits that even if the EC member State governments had held non-export-related motivations when agreeing to the repayment terms of the LA/MSF contracts, the "possible existence of additional, non-export-related motivations that could (according to the EC) explain the design of Airbus' obligations ... does not sever the tie between the provision of {LA/MSF} and actual or anticipated exportation or export earnings".³²²⁵

7.674 Quoting from the Appellate Body Report in *Canada – Aircraft*, the United States recalls that "th{e} relationship of contingency, between the subsidy and export performance, must be *inferred* from the total configuration of the facts constituting and surrounding the granting of the subsidy, none of which is likely to be decisive in any given case".³²²⁶ According to the United States, "the total configuration of the facts" may include "official statements by governments indicating the intention behind the granting of the subsidies".³²²⁷ In the present dispute, the United States alleges that it has adduced ample evidence demonstrating that increasing exports is among the motivations of the Airbus governments for providing LA/MSF. In particular, the United States points to:

- (a) the statement by French Prime Minister Lionel Jospin that the French government "will give Airbus the means to win the battle against Boeing";³²²⁸

7.675 In our view, a government's motivation for granting a particular subsidy, to the extent it can be established from the evidence and arguments presented by the parties in dispute, will be highly relevant when evaluating whether a subsidy has been granted contingent in fact upon export performance within the meaning of Article 3.1(a) of the SCM Agreement. In the present instance, the United States has presented evidence of alleged motivations which, in light of all the facts and circumstances, it considers demonstrates that the challenged LA/MSF contracts were entered into contingent in fact upon anticipated export performance. We examine the probative value of this evidence in conjunction with the remainder of the evidence advanced by the United States in the paragraphs that follow.³²³⁶

7.676 Quite apart from our views on the relevance of the motivations behind the provision of LA/MSF, we do not consider the European Communities to have done enough to substantiate that the two "countervailing explanations" it has advanced actually explain why the EC member States required each of the challenged LA/MSF contracts to be repaid with revenue generated from LCA sales. First, we note that the European Communities has only specifically addressed the relevance of the two "countervailing explanations" in the context of the UK A380 contract,³²³⁷ stating that the same arguments apply *mutatis mutandis* to the other challenged LA/MSF contracts.³²³⁸ Second, even in the context of the UK A380 LA/MSF contract, the European Communities has pointed to no evidence that substantiates the "commercial reasons" it alleges were behind the UK government's provision of LA/MSF on sales-based repayment terms. The one document the European Communities does rely

upon is a French Senate Report concerning the French government's support for civil aircraft construction over the period 1996 to 1997, an extract of which was submitted by the United States in Exhibit US-337.³²³⁹ However, the particular passages of this Report cited by the European Communities in support of its allegations cannot be found in the extract contained in Exhibit US-337. In any case, the French Senate Report predates the French government's LA/MSF contracts for the A380 and A340-500/600. Third, the European Communities refers to evidence and arguments it has submitted in respect of the "nearly identical" financing arrangements between Airbus and its risk-sharing suppliers to show that the EC member States acted according to market principles. However, even if we were to accept that such contracts are sufficiently comparable to the LA/MSF contracts at issue (which we do not),³²⁴⁰ it does not automatically follow that the EC member States and the risk-sharing suppliers held the same objectives when they agreed to finance development of the A380 through sales-dependent repayment terms.

7.677 In any case, even assuming *arguendo* that the EC member State governments agreed to the particular repayment terms of LA/MSF for commercial reasons, this fact alone would not settle the question whether the LA/MSF subsidies were granted contingent in fact upon export performance, because such motivations would need to be considered together with all other relevant facts and circumstances. In this regard, we recall that "the relationship of contingency, between the subsidy and export performance, must be *inferred* from the total configuration of the facts constituting and surrounding the granting of the subsidy, none of which is likely to be decisive in any given case".³²⁴¹ Moreover, we note that Article 3.1(a) of the SCM Agreement provides that export contingency may be the sole condition governing the grant of a prohibited export subsidy or it may be "one of several other conditions".³²⁴² Thus, even if we were to accept the "countervailing explanations" advanced by the European Communities, this would not necessarily preclude a finding of export contingency, if it could be inferred from the "total configuration of the facts" that at least one of the conditions or reasons for the provision of LA/MSF was the anticipation of export performance.

7.678 Turning to the exchange of commitments themselves, we note that under each of the seven LA/MSF contracts at issue, Airbus was required to repay the loaned principal plus any interest from the proceeds of the sale of a specified number of LCA developed with the financing provided by the EC member States. Although the text of the repayment provisions is neutral as to the origin of the required sales, it is clear from various pieces of information that achieving the level of sales needed to fully repay each loan would require Airbus to make a substantial number of exports.³²⁴³ Exports were therefore not merely incidental to full repayment of the loans; and they could not be replaced with domestic sales in order to achieve the number of sales necessary to fully repay the loans. Moreover, while it is true that the contracts impose no obligation on Airbus to make any sales at all, the European Communities has explained that the EC member States expected their LA/MSF contributions would be fully repaid and achieve their target rate of return.³²⁴⁴ Indeed, it is on the basis

³²⁴⁴ EC, FWS, para. 638.

BCI deleted, as indicated [***]

of the EC member States' expectations of full repayment over the number of LCA sales predicted in the Airbus business cases for each of the relevant LCA models, that the European Communities argues the relevant contractual rates of return should be calculated.³²⁴⁵ The EC member States also knew that Airbus was a highly export-oriented company.³²⁴⁶ It follows that the EC member States must have been counting on Airbus to make LCA sales that necessarily included a substantial number of exports when concluding the LA/MSF contracts. This means that the EC member States, fully expecting to be repaid, must have held a high degree of certainty that the provision of LA/MSF would result in Airbus making those export sales. In our view, without being decisive, this evidence supports the view that the provision of LA/MSF on sales-dependent repayment terms was, at least in part, "conditional" or "dependent for its existence" upon the EC member States' anticipated exportation or export earnings.

Other "additional" evidence

7.679 We recall that in addition to the evidence demonstrating that each of the LA/MSF contracts involved an exchange of commitments between Airbus and the EC member States, the United States points to various other pieces of information and evidence it alleges corroborate the alleged "tie" between each of the subsidy measures and the EC member States' anticipated exportation or export earnings.

7.680 Starting with the A380, we find the additional evidence advanced by the United States in respect of the German LA/MSF to be compelling. In particular, the preamble to the LA/MSF contract shows that the German government was [***]. Moreover, Section 2.5 of the contract obligates Airbus Deutschland [***].³²⁴⁷ In addition, Section 12 of the LA/MSF contract provides that the German government would be entitled to [***]. Section 12 also envisages that the German government may [***]. We are satisfied that together with the evidence the United States has advanced concerning the exchange of commitments between Airbus and the German government, the evidence discussed in this paragraph demonstrates that the German A380 LA/MSF contract was, in fact, concluded at least in part on the *condition* or *because* of the German government's anticipation of exportation.³²⁴⁸

7.681 We also find persuasive the additional evidence the United States has pointed to in respect of the Spanish A380 contract. In particular, we note that the sixth preambular paragraph that is cited by the United States explicitly states that the Spanish government's support for the A380 project is [***].³²⁴⁹ The seventh preambular paragraph then goes on to identify that the [***].³²⁵⁰ We are satisfied that together with the evidence the United States has advanced concerning the exchange of commitments between Airbus and the Spanish government, the evidence discussed in this paragraph

³²⁴⁵ See, also, paras. 7.404-7.406 above.

³²⁴⁶ In making this point, we recognize that pursuant to footnote 4 of the SCM Agreement, "{t}he mere fact that a subsidy is granted to enterprises which export shall not for that reason alone be considered to be an export subsidy within the meaning of {Article 3.1(a)}". Thus, we take Airbus' export orientation into account in conjunction with the other evidence that is before us.

³²⁴⁷ Exhibit US-72 (BCI) (emphasis added).

³²⁴⁸ In arriving at this conclusion, we have reviewed and considered all of the facts and circumstances surrounding the granting of the German A380 LA/MSF subsidies to Airbus that were presented and argued by the parties. We have also taken into account the United States' observation that the European Communities did not provide a copy of any German government "critical project appraisal" for the A380, despite being asked to provide a copy of "any 'critical project appraisal' documents in Facilitator Question 13(f) during the Annex V process. To the extent that any such evidence is not explicitly referred to in this paragraph as support for our conclusion, we consider that it does not detract from the United States' case or our findings in respect of this LA/MSF measure.

³²⁴⁹ Exponen Sexto.

³²⁵⁰ Exponen Séptimo.

BCI deleted, as indicated [***]

demonstrates that the Spanish A380 LA/MSF contract was, in fact, concluded at least in part on the *condition* or *because* of the Spanish government's anticipation of exportation.³²⁵¹

7.682 As regards the UK A380 contract, the United States identifies various pieces of other evidence it argues supports its case. Among these is a statement reportedly made by Prime Minister Blair in January 2005 when speaking at the public unveiling of the A380 where he stated that "{t}he export gains will run into the billions of pounds".³²⁵² In addition, the United States points to a press release published by the UK Department of Trade and Industry in March 2000 announcing that the UK government had agreed to invest GBP 530 million in the A380 project, explaining that "{w}ithin 25 years Airbus has grown to take 55% of the civil aircraft production market and contributes GBP 1 billion to the UK's trade balance".³²⁵³ On their own, we consider these reported statements to have only a relatively low probative value. Having committed large amounts of public monies to the A380 project, it is in our view only natural to find public officials emphasizing the perceived benefits of government participation in the Airbus project in their public statements, which in the present case, the UK government expected would involve exports. Thus, when read in isolation, the above two statements provide only little support for the United States' submissions.

7.683 The United States also relies upon the representation and warranty made by BAE Systems in Article 3 of the UK LA/MSF contract that [***].³²⁵⁴ The United States alleges that the European Communities refused to provide a copy of BAE Systems' [***]. However, it notes that on the basis of the Airbus Deutschland [***], the German government was well aware of, and relied upon, anticipated exportation in deciding to provide LA/MSF. In the light of the European Communities' alleged refusal to provide a copy of BAE Systems' [***], the United States asks us to draw the "logical inference ... that [***]".³²⁵⁵ In our view, the warranty provided by BAE Systems is significant as it shows that the UK government placed contractual reliance on the accuracy of the representations (and in particular [***]) made by BAE Systems in its LA/MSF application when entering the A380 LA/MSF. Thus, overall, although not as clear as in the case of the German and Spanish A380 contracts, we are satisfied that together with the evidence the United States has advanced concerning the exchange of commitments between Airbus and the UK government, the contractual warranty and the two above-mentioned statements demonstrate that the UK A380 LA/MSF contract was, in fact, concluded at least in part on the *condition* or *because* of the UK government's anticipation of exportation.³²⁵⁶

³²⁵¹ In arriving at this conclusion, we have reviewed and considered all of the facts and circumstances surrounding the granting of the Spanish A380 LA/MSF subsidies to Airbus that were presented and argued by the parties. We have also taken into account the United States' observation that the European Communities did not provide a copy of any Spanish government "critical project appraisal" for the A380, despite being asked to provide a copy of "any 'critical project appraisal' documents in Facilitator Question 13(f) during the Annex V process. To the extent that any such evidence is not explicitly referred to in this paragraph as support for our conclusion, we consider that it does not detract from the United States' case or our findings in respect of this LA/MSF measure.

³²⁵² Exhibit US-361.

³²⁵³ Exhibit US-360.

³²⁵⁴ Article 3.1.4, UK A380 LA/MSF contract, Exhibit US-79 (BCI).

³²⁵⁵ US, SWS, paras. 169-171. As we have previously observed, the questions asked by the Facilitator during the Annex V process did not specifically request the European Communities to provide copies of the A380 LA/MSF applications.

³²⁵⁶ In arriving at this conclusion, we have reviewed and considered all of the facts and circumstances surrounding the granting of the UK A380 LA/MSF subsidies to Airbus that were presented and argued by the parties. To the extent that any such evidence is not explicitly referred to in this paragraph as support for our conclusion, we consider that it does not detract from the United States' case or our findings in respect of this LA/MSF measure.

BCI deleted, as indicated [***]

7.684 Finally in respect of the A380, the United States refers to four provisions of the French A380 contract and one statement reportedly made by French Prime Minister, Lionel Jospin in March 2000, as additional evidence supporting its case that the French A380 LA/MSF contract is a prohibited export subsidy. The first of the contractual provisions relied upon by the United States is Article 6.1. This basically establishes Airbus' repayment obligations, stipulating that Airbus has to make repayments [***]. We find it difficult to see what more this adds to Articles 6.2 and 6.3, which the United States relies upon to demonstrate the exchange of commitments. The other contractual provisions the United States submits support its complaint require Airbus to [***] (Article 1.3); [***] (Article 8.2); and provide the government with the right to [***] if Airbus breaches its obligations (Article 9.1). In our view, these provisions are to be understood as concerning the proper advancement of the A380 programme, in the sense of developing the A380 and bringing the project to the point where the particular aircraft is ready for commercial production and sale. The evidence and argument presented by the United States has not persuaded us that the [***] should be given a broader meaning, encompassing the attainment or maintenance of any level of LCA deliveries or exports. Thus, we agree with the European Communities that the provisions in the French A380 contract the United States relies upon do not support its complaint.

7.685 The only other specific piece of additional evidence the United States relies upon is the statement reportedly made by French Prime Minister, Lionel Jospin in March 2000 when, responding to questions in French Parliament, he said "{w}e will give Airbus the means to win the battle against Boeing".³²⁵⁷ The question posed to the Prime Minister is not disclosed. However, the report goes on to say that "{w}ith the creation of ... EADS, Jospin and his government and its European partners had made a commitment to build a strong European aerospace industry". It also explains that Airbus was "currently in the process of securing government support, in the form of low-interest loans" for the A380. We do not believe this statement adds much in the way of support to the United States export contingent subsidy allegations. Thus, overall, on the basis of the total configuration of the facts constituting and surrounding the provision of French LA/MSF for the A380, including the evidence the United States has advanced on the exchange of commitments between Airbus France and the French government, we find that the United States has failed to demonstrate that the French government provided LA/MSF, even in part, on the *condition* or *because* of its anticipation of exports.

7.686 Moving on to the French government's provision of LA/MSF for the A340-500/600, the United States identifies four provisions of the French A340-500/600 contract and certain information found in the French government's critical project appraisal as additional evidence supporting its case that this measure is a prohibited export subsidy. Three of these provisions are very similar to Articles 6.1, 1.3 and 9.1 of the French A380 contract to the extent they establish repayment and reporting obligations on Airbus and grant the French government the right to terminate the contract in the event of breach. In particular, Article 7 requires Airbus to [***]; pursuant to Article 9 Airbus must [***]; and under Article 10, the government is given the right to [***] if Airbus breaches its obligations. We tend to agree with the European Communities that these three provisions do not support the United States' position. The United States also relies upon Annex 5 of the A340-500/600 contract, which requires Airbus [***]. Again, we find it difficult to see how this obligation, alone or taken together with evidence on exchange of commitments, demonstrates that the French government provided LA/MSF for the A340-500/600 on the *condition* or *because* of its anticipated export performance. Similarly, we are not persuaded by the information referred to by the United States in the HSBI Appendix to its first written submission on the French government's critical project appraisal. In our view, this information does not advance the United States' case on the question of contingency. Thus, on the basis of the total configuration of the facts constituting and surrounding the provision of French LA/MSF for the A340-500/600, including the evidence the United States has advanced on the exchange of commitments between Aérospatiale and the French government, we find

³²⁵⁷ Exhibit US-1.

BCI deleted, as indicated [***]

that the United States has failed to demonstrate that the French government provided LA/MSF for the A340-500/600, even in part, on the *condition* or *because* of its anticipation of exports.

7.687 The United States relies on two references in the Spanish A340-500/600 contract as additional evidence supporting its case that this measure is a prohibited export subsidy. In particular, the United States relies upon the first preambular paragraph, which in relevant part reads [***]. The United States points out that the same preambular paragraph goes on to state: [***]. The United States argues that this latter statement means that in providing LA/MSF for the A340-500/600, the Spanish government is [***].³²⁵⁸ In our view, when read together as a whole, the two statements made in the first preambular paragraph are close (but not identical) to those made in the Spanish A380 contract. One particular difference is that unlike the statements referred to by the United States in the Spanish A380 contract, they do not explicitly identify the Spanish governments' justification for entering into the A340-500/600 contract. Moreover, it is apparent that the information referred to is [***] for the purpose of arriving at the conclusion that [***]. In addition to the preambular language, the United States relies upon Article 1 of the Spanish A340-500/600 contract. However, as we read it, this simply repeats CASA's obligation to [***]. Again, we find it difficult to see how this obligation, alone or taken together with evidence on exchange of commitments, demonstrates that the Spanish government provided LA/MSF for the A340-500/600 on the *condition* or *because* of its anticipated export performance. Thus, on the basis of the total configuration of the facts constituting and surrounding the provision of Spanish LA/MSF for the A340-500/600, including the evidence the United States has advanced on the exchange of commitments between CASA and the Spanish government, we conclude that the United States has failed to establish that the Spanish government provided LA/MSF for the A340-500/600, even in part, on the *condition* or *because* of its anticipation of exports.

7.688 Finally in respect of the provision of French LA/MSF for the A330-200, the United States identifies four provisions of the French contract and certain information contained in the French government's critical project appraisal as additional evidence supporting its case that this measure is a prohibited export subsidy. The provisions set out essentially the same obligations the United States relies upon in the context of the French A340-500/600 contract. In particular, Article 6 requires Airbus to [***]; pursuant to Article 7 Airbus must [***]; under Article 8, the government is given the right to [***] if Airbus breaches its obligations; and pursuant to Annex 5, Airbus must [***]. As with the appearance of these provisions in the French A340-500/600 contract, we tend to agree with the European Communities that they do not support the United States' position, whether considered alone or together with the evidence on the exchange of commitments. The information referred to by the United States in the HSBI Appendix to its first written submission on the French government's critical project appraisal also does not advance its case on the question of contingency. Thus, on the basis of the total configuration of the facts constituting and surrounding the provision of French LA/MSF for the A340-500/600, including the evidence the United States has advanced on the exchange of commitments between Aérospatiale and the French government, we find that the United States has failed to demonstrate that the French government provided LA/MSF for the A330-200, even in part, on the *condition* or *because* of its anticipation of exports.

Conclusion

7.689 Having carefully reviewed and considered the evidence and related arguments advanced by the parties as they concern each of the challenged LA/MSF measures, we find that the United States has demonstrated that the German, Spanish and UK A380 contracts amount to prohibited export subsidies within the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement. However, we consider that the United States has not shown that the granting of the other challenged LA/MSF

³²⁵⁸ US, SWS, paras. 200 and 201.

BCI deleted, as indicated [***]

subsidies was contingent in fact upon anticipated export performance, within the meaning of the same provisions.

7.690 The European Communities has argued in this dispute that if the United States' "interpretation of the legal standard {were} accepted, then findings of export contingent subsidies would be more likely in the case of small or export dependent economies ... or in the case of global markets, such as the various types of LCA commercialized by both Airbus and Boeing".³²⁵⁹ However, we note that the United States has been clear in explaining that it does not consider the concept of export contingency to vary according to the size of an economy, its dependency on exports or the degree to which the market for the allegedly subsidized product is globalized.³²⁶⁰ Moreover, we do not accept that the scenario advanced by the European Communities is a consequence of our findings in respect of the German, Spanish and UK A380 LA/MSF measures. Indeed, although all of the seven challenged LA/MSF contracts were concluded for the purpose of financing the development of a globalized product manufactured by an export-oriented company for primarily a global market, and subject to sales-dependent repayment terms that could only be satisfied through Airbus making an important number of exports, we have found that the United States has demonstrated that only three of the challenged measures constitute subsidies granted contingent in fact upon anticipated export performance. Our conclusion that the German, Spanish and UK A380 LA/MSF contracts were prohibited export subsidies is based on what we have objectively inferred from the "total configuration of the facts constituting and surrounding the granting of the subsidy".³²⁶¹ These facts included not only evidence showing that compliance with the sales-dependent contractual repayment terms would necessarily involve exportation, but also evidence of the three governments' anticipation of export performance, the fact that they counted upon and expected Airbus to fully repay the loaned principal plus interest, as well as other contractual provisions and information advanced by the United States that revealed at least part of the respective government's motivation for entering into each contract.³²⁶²

7.691 We now turn to examine the United States' second claim in respect of these measures, namely that the LA/MSF contracts for the A380, A340-500/600 and A330-200 constitute subsidies contingent *in law* upon anticipated export performance, within the meaning of Article 3.1(a) of the SCM Agreement.

(iii) *Whether the LA/MSF Measures Amount to Subsidies that are Contingent In Law upon Anticipated Export Performance*

7.692 In addition to claiming that the provision of LA/MSF for the A380, A340-500/600 and A330-200 was contingent *in fact* upon anticipated export performance, within the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement, the United States claims that the same measures were also contingent *in law* upon anticipated export performance, within the meaning of the same legal provisions. The United States presents this additional claim making essentially the same legal argument used to advance its *in fact* export contingency claims, namely, that each of the seven LA/MSF measures is a prohibited export subsidy because it involved (i) the granting or maintenance of a subsidy; (ii) that is tied to; (iii) anticipated exportation or export earnings.³²⁶³

7.693 The United States recalls that the Appellate Body in *Canada – Aircraft* noted that the legal standard expressed by the term "contingent" in Article 3.1(a) of the SCM Agreement is the same for subsidies that are contingent in law and those that are contingent in fact, but that the type of evidence

³²⁶³ US, FWS, para. 343.

BCI deleted, as indicated [***]

that can be employed to demonstrate the two types of export contingency is different.³²⁶⁴ Thus, in advancing its claim that each of the challenged LA/MSF measures was granted contingent *in law* upon anticipated export performance, the United States relies upon essentially the same evidence we have reviewed above to establish that the provision of LA/MSF involved the granting of a subsidy, and that the relevant EC member States anticipated exportation or export earnings at the time LA/MSF was provided.³²⁶⁵ However, reflecting the nature of its *in law* contingency claim, the United States focuses particular attention on the terms and conditions of the challenged LA/MSF contracts to support its submission that the granting of the subsidies was contingent *in law* upon anticipated export performance. In this regard, the United States argues that the terms and conditions of each of the challenged LA/MSF contracts implicitly substantiate its claim because, when considered in the light of the number of LCA sales the EC member State governments expected would be achieved in Europe and abroad, they demonstrate that the "words actually used" in those contracts – in particular, the contractual terms tying the provision of LA/MSF to repayment over a specific number of LCA sales – give rise to the "necessary implication" that the provision of LA/MSF is contingent *in law* upon anticipated export performance.³²⁶⁶

7.694 The European Communities rejects the United States' claim, relying upon many of the same legal and factual arguments raised in the context of the United States' *in fact* export contingency claim. In addition, to the extent that the United States pursues its complaint in reliance on documents and information that cannot be found in the text of the challenged measures, the European Communities asks the Panel to dismiss the United States' allegations on the ground that they are not properly constituted *in law* contingency claims.³²⁶⁷

7.695 As we have understood it, the United States' complaint raises two threshold questions that we believe must be resolved before we can turn to evaluate its substantive merits. These two questions are: (i) whether Article 3.1(a) and footnote 4 envisage the possibility of bringing a claim of subsidization contingent in law upon *anticipated* export performance; and (ii) whether the United States is entitled to rely upon more than just the text of the instrument granting the LA/MSF subsidies in order to demonstrate that they were granted contingent *in law* upon anticipated export performance.

Contingency in law upon anticipated export performance

7.696 We recall that Article 3.1(a) and footnote 4 of the SCM Agreement provide as follows:

"3.1 Except as provided in the Agreement on Agriculture, the following subsidies, within the meaning of Article 1, shall be prohibited:

(a) subsidies contingent, in law or in fact⁴, whether solely or as one of several other conditions, upon export performance, including those illustrated in Annex I⁵;

⁴ This standard is met when the facts demonstrate that the granting of a subsidy, without having been made legally contingent upon export performance, is in fact tied to actual or anticipated exportation or export earnings. The mere fact that a subsidy is granted to enterprises which export shall not for that reason alone be considered to be an export subsidy within the meaning of this provision.

³²⁶⁴ US, FWS, para. 327, citing Appellate Body Report, *Canada – Aircraft*, para. 167.

³²⁶⁵ US, FWS, paras. 344-351; 361-371; 377-382; US, SWS, paras. 137-140.

³²⁶⁶ See, para. 7.585.

³²⁶⁷ See, para. 7.592.

BCI deleted, as indicated [***]

⁵ Measures referred to in Annex I as not constituting export subsidies shall not be prohibited under this or any other provision of this Agreement.³²⁶⁸

7.697 Article 3.1(a) speaks in general terms of subsidies "contingent, in law or in fact, ... upon export performance". Footnote 4, which is placed after the word "fact" in Article 3.1(a), clarifies that "{t}his standard is met when the facts demonstrate that the granting of a subsidy, without having been made legally contingent upon export performance, is in fact tied to actual or anticipated exportation or export earnings".³²⁶⁹ In our view, when read in isolation, the language of footnote 4 suggests that the concept of "anticipated" exportation or export earnings is limited to claims of "in fact" export contingency.

7.698 Relying upon certain Appellate Body observations in *Canada – Autos*, both parties have expressed the view that the legal standard for the determination of whether a subsidy is contingent in fact or in law upon export performance is the same, and that only the type of evidence that may be relied upon differs. According to the United States, this means that the text of Article 3.1(a) and footnote 4 equate the concepts of "contingent upon" and "tied to", as well as "export performance" and "actual or anticipated exportation or export earnings" for the purpose of both types of claims.³²⁷⁰ The European Communities appears to agree with the United States.³²⁷¹

7.699 The particular passage from the Appellate Body Report in *Canada – Autos* that both parties rely upon explains:

"Although we are not examining whether the subsidy in this case is contingent 'in fact' upon export performance, we note that footnote 4 to Article 3.1(a) uses the words 'tied to' as a synonym for 'contingent' or 'conditional'. As the legal standard is the same for *de facto* and *de jure* export contingency, we believe that a 'tie', amounting to the relationship of contingency, between the granting of the subsidy and actual or anticipated exportation meets the legal standard of 'contingent' in Article 3.1(a) of the SCM Agreement."³²⁷²

7.700 In our view, this Appellate Body statement was more directed to explaining that the legal standard for "contingency" does not vary between an in fact or in law contingency claim, than to affirming that the notion of anticipated exportation or export earnings in footnote 4 applies equally to in law and in fact contingency claims. Nevertheless, when read in the context of footnote 4, we agree with the parties that the concept of export performance described in Article 3.1(a) can be properly understood to refer to actual or *anticipated* exportation or export earnings.

7.701 As we have noted above, footnote 4 clarifies the circumstances when the granting of a subsidy will be contingent in fact upon export performance for the purpose of Article 3.1(a). This contingent relationship is described in terms of the granting of a subsidy being in fact "tied to" actual or anticipated exportation or export earnings. Thus, in the context of a claim that a subsidy is granted contingent in fact upon export performance, footnote 4 equates "tied to" with "contingent", and "actual or anticipated exportation or export earnings" with "export performance". The Appellate Body has noted that footnote 4 does not alter the contingency standard between in fact and in law contingent subsidy claims.³²⁷³ In other words, although not directly applicable to in law contingent

BCI deleted, as indicated [***]

subsidy claims,³²⁷⁴ the Appellate Body has read footnote 4 as informing the notion of what amounts to contingency for the purpose of an in law contingent subsidy claim. In our view, it is equally appropriate to read footnote 4 as informing the meaning of "export performance" for the purpose of in law contingent subsidy claims under Article 3.1(a). Accordingly, we see no obstacle to the United States raising its in law export contingency complaint against the seven LA/MSF measures under Article 3.1(a) of the SCM Agreement.

Evidence the United States asserts demonstrates that the LA/MSF subsidies were granted contingent in law upon anticipated export performance

7.702 To a large extent, the evidence the United States relies upon when making its claim of in law export contingency overlaps with the evidence it presents for the purpose of its in fact export contingency claim. As already noted above, the United States uses essentially the same evidence to argue that the provision of LA/MSF involved the granting of a subsidy, and that the relevant EC member States anticipated exportation or export earnings at the time LA/MSF was provided. In addition, under both sets of claims the United States relies upon the sales-dependent repayment terms of the LA/MSF contracts, in conjunction with Airbus' Global Market Forecasts and the project appraisals prepared by the Airbus governments, to establish the elements of in law contingency.³²⁷⁵ For example, the United States notes that Airbus' 2000 Global Market Forecast projected that orders for aircraft with more than 400 seats by European airlines would total only 247.³²⁷⁶ Yet, the UK A380 LA/MSF contract requires Airbus to make repayments over [***] sales; the German contract requires Airbus to repay over [***] sales; the French contract requires Airbus to repay over [***] sales; and the Spanish contract requires Airbus to repay over [***] sales.³²⁷⁷ Given a forecast of 247 European sales for all aircraft with more than 400 seats (a segment the United States submits includes not only the A380, but also the Boeing 747 and 777-300), the United States asserts that these numbers translate into UK subsidies tied to at least [***] export sales; German subsidies tied to at least [***] export sales; French subsidies tied to at least [***] export sales; and Spanish subsidies tied to at least [***] export sales.³²⁷⁸ The United States presents similar evidence and arguments in respect of the challenged A340-500/600 and A330-200 contracts.³²⁷⁹ Thus, the United States submits that, when read in the light of the Airbus Global Market Forecasts and the government project appraisals, the sales-dependent repayment provisions of each of the LA/MSF contracts necessarily imply a tie to export performance.

7.703 The United States argues that its reliance on documents extraneous to the challenged LA/MSF measures is supported by the Appellate Body observations in *Canada – Autos*. In particular, the United States recalls that in *Canada – Autos*, the Appellate Body stated that a subsidy is contingent in law upon export performance not only when "the existence of that condition can be demonstrated on the basis of the very words of the relevant legislation, regulation or other legal instrument constituting the measure", but also "where the condition to export is clearly, though implicitly, in the instrument comprising the measure."³²⁸⁰ In that case, the Appellate Body concluded that "for a subsidy to be *de jure* export contingent, the underlying legal instrument does not always have to provide *expressis verbis* that the subsidy is available only upon fulfilment of the condition of export performance. Such conditionality can also be derived by necessary implication from the words actually used in the

³²⁷⁴ We recall in this regard that footnote 4 explicitly confines its direct relevance to situations when "the facts demonstrate that the granting of a subsidy, *without having been made legally contingent upon export performance*, is in fact tied to actual or anticipated export performance ...".

³²⁷⁵ US, Answer to Panel Question 10.

BCI deleted, as indicated [***]

measure".³²⁸¹ Thus, the United States argues that when examining whether a subsidy has been granted contingent in law upon export performance, it is appropriate to consider not only the text of the measure, but also how the measure "actually work{s}".³²⁸² Therefore, according to the United States, reliance on the Global market forecast and the government project appraisals, to the extent they help to understand how the LA/MSF measures actually work, is permissible for the purpose of substantiating its claim of in law export contingency.

7.704 In *Canada – Autos*, the European Communities and Japan brought a complaint against an import duty exemption regime applied by Canada to certain imports of motor vehicles. Two aspects of the regime that were challenged by the complainants concerned: (i) a limitation on imports eligible for duty exemption that was set according to the ratio between a manufacturer's domestic vehicle production and its sales in Canada; and (ii) a requirement that each manufacturer meet certain levels of Canadian value added ("CVA") in order to obtain the duty exemption. The first aspect was challenged as constituting a subsidy granted contingent in law upon export performance within the meaning of Article 3.1(a) of the SCM Agreement; whereas the second was challenged as a prohibited import substitution subsidy under the terms of Article 3.1(b) of the SCM Agreement.³²⁸³

7.705 Under the prohibited export subsidy claim, the panel was asked to rule upon whether an import duty exemption, granted under the Motor Vehicles Tariff Order ("MVTO") and a number of Special Remission Orders ("SROs"), was contingent in law upon export performance. The MVTO and the SROs established a series of domestic production-to-domestic sales ratios that served to identify the extent to which companies were entitled to import motor vehicles into Canada duty-free. Pursuant to these ratios, car manufacturers were entitled to import cars duty-free to the extent that their domestic production fell short of their domestic sales. Thus, for example, a manufacturer with a production-to-sales ratio of 75:100 would be entitled to import cars duty-free to a value of 25. However, a manufacturer with a 100:100 production-to-sales ratio was not entitled to import cars duty-free. The only way such a manufacturer could take advantage of the duty-free treatment was to export cars, thereby reducing the number of sales of Canadian-made cars in Canada and simultaneously filling this difference with the imported cars.³²⁸⁴ The panel concluded that the subsidy granted pursuant to the ratio requirements established under the MVTO and the SROs was contingent in law on export performance, noting that:

"... it is the *law* ... that creates this construct, *i.e.*, an import duty exemption upon condition of meeting certain ratio requirements. It is the *law* that determines what a particular manufacturer beneficiary's ratio requirement will be. And, in the case of a ratio requirement lower than 100:100, although the manufacturer beneficiary has a choice as to the amount of the import duty exemption it wishes to access, it is the *law* that determines the consequences of that choice for the manufacturer beneficiary, or, otherwise put, it is the *law* that then establishes contingency upon export performance."³²⁸⁵

³²⁸¹ Appellate Body Report, *Canada – Autos*, para. 100.

³²⁸² US, Answer to Panel Question 146, citing Appellate Body Report, *Canada – Autos*, para. 128.

³²⁸³ In fact, the CVA requirements were also challenged by the European Communities under Article 3.1(a). However, the panel did not make any findings in respect of this claim.

³²⁸⁴ Panel Report, *Canada – Certain Measures Affecting the Automotive Industry* ("*Canada – Autos*"), WT/DS139/R, WT/DS142/R, adopted 19 June 2000, as modified by Appellate Body Report WT/DS139/AB/R, WT/DS142/AB/R, DSR 2000:VII, 3043, paras. 10.184-10.189.

³²⁸⁵ Panel Report, *Canada – Autos*, para. 10.192.

BCI deleted, as indicated [***]

In agreeing with the panel, the Appellate Body explained:

"We start with what we have held previously. In our view, a subsidy is contingent 'in law' upon export performance when the existence of that condition can be demonstrated on the basis of the very words of the relevant legislation, regulation or other legal instrument constituting the measure. The simplest, and hence, perhaps, the uncommon, case is one in which the condition of exportation is set out expressly, in so many words, on the face of the law, regulation or other legal instrument. We believe, however, that a subsidy is also properly held to be *de jure* export contingent where the condition to export is clearly, though implicitly, in the instrument comprising the measure. Thus, for a subsidy to be *de jure* export contingent, the underlying legal instrument does not always have to provide *expressis verbis* that the subsidy is available only upon fulfilment of the condition of export performance. Such conditionality can also be derived by necessary implication from the words actually used in the measure."³²⁸⁶

The Appellate Body went on to conclude that "for the amount exceeding the duty-free 'allowance' there is ... a clear relationship of contingency between the import duty exemption and export performance"³²⁸⁷, finding, *inter alia*, that:

"Regardless of the actual ratio specified for a particular manufacturer, the MVTO ... and the SROs operate, as a matter of law, in such a manner that the more motor vehicles a manufacturer exports, the more motor vehicles the manufacturer is entitled to import duty-free"³²⁸⁸

7.706 Under the prohibited import substitution subsidy claim, the panel was asked to determine whether the CVA requirements rendered the availability of the same import duty exemption a subsidy contingent upon the use of domestic over imported goods within the meaning of Article 3.1(b) of the SCM Agreement.³²⁸⁹ The CVA requirements were a second condition that beneficiaries had to satisfy in order to qualify for the import duty exemption on motor vehicles. They were prescribed for certain manufacturers in the MVTO and the SROs, and defined to include parts and materials of Canadian origin, direct labour costs, manufacturing overheads, general and administrative expenses and depreciation. The panel found that "depending upon the factual circumstances, a manufacturer might well be willing and able to satisfy a CVA requirement without using any domestic goods whatsoever".³²⁹⁰ On this basis, the panel concluded that the CVA requirements did not render the measure a prohibited import substitution subsidy.

7.707 The Appellate Body found the panel to have erred in its assessment. In doing so, it first recalled that:

"In our discussion of Article 3.1(a) in Section VI of this Report, we recalled that in *Canada – Aircraft* we stated that 'the ordinary connotation of 'contingent' is 'conditional' or 'dependent for its existence on something else'.' Thus, a subsidy is prohibited under Article 3.1(a) if it is 'conditional' upon export performance, that is, if it is 'dependent for its existence on' export performance. In addition, in *Canada –*

³²⁸⁶ Appellate Body Report, *Canada – Autos*, para. 100.

³²⁸⁷ Appellate Body Report, *Canada – Autos*, para. 105.

³²⁸⁸ Appellate Body Report, *Canada – Autos*, para. 106 (underline added).

³²⁸⁹ Article 3.1(b) of the SCM Agreement reads: "Except as provided in the Agreement on Agriculture, the following subsidies, within the meaning of Article 1, shall be prohibited: ... (b) subsidies contingent, whether solely or as one of several other conditions, upon the use of domestic over imported goods."

³²⁹⁰ Panel Report, *Canada – Autos*, para. 10.216.

BCI deleted, as indicated [***]

Aircraft, we stated that contingency 'in law' is demonstrated 'on the basis of the words of the relevant legislation, regulation or other legal instrument.' (emphasis added) As we have already explained, such conditionality can be derived by necessary implication from the words actually used in the measure. We believe that this legal standard applies not only to 'contingency' under Article 3.1(a), but also to 'contingency' under Article 3.1(b) of the SCM Agreement."³²⁹¹

7.708 It went on to conclude that:

"The Panel's failure to examine fully the legal instruments at issue here and their implications for individual manufacturers vitiates its conclusion that the CVA requirements do not make the import duty exemption contingent 'in law' upon the use of domestic over imported goods. In the absence of an examination of the operation of the applicable CVA requirements for individual manufacturers, the Panel simply did not have a sufficient basis for its finding on the issue of 'in law' contingency. Thus, we conclude that the Panel erred in conducting its 'in law' contingency analysis."³²⁹²

7.709 The United States argues that the Appellate Body's findings in respect of the panel's assessment of the claim against the CVA requirements supports its reliance upon Airbus' Global Market Forecasts and other evidence (including the French and UK government's critical project appraisals) to show that the challenged LA/MSF contracts constitute subsidies granted contingent in law upon export performance because their repayment terms are linked to a number of LCA deliveries that cannot be achieved without substantial exportation.³²⁹³ The European Communities argues that the United States is not entitled to rely upon any documents other than the legal instruments pursuant to which the subsidies at issue were granted.³²⁹⁴ In its view, the Appellate Body's findings in *Canada – Autos* do not support the United States' position.

7.710 The starting point of the Appellate Body's examination of the appeals against the panel's findings under both Articles 3.1(a) and 3.1(b) of the SCM Agreement in *Canada – Autos* was the same, namely, that "contingency 'in law' is demonstrated 'on the basis of the words of the relevant legislation, regulation or other legal instrument.'"³²⁹⁵ It then went on to note that "such conditionality can be derived by necessary implication from the words actually used in the measure".³²⁹⁶

7.711 As we read it, the Appellate Body's confirmation of the panel's findings in respect of the in law export contingency claim under Article 3.1(a) did not involve looking into facts extraneous to the text of the ratio requirements. The panel and the Appellate Body both established the operation of the ratio requirements by looking to the text of the challenged measure. Likewise, in the context of the prohibited import substitution subsidy claim under Article 3.1(b), the Appellate Body focussed on the panel's failure to fully examine "the specific CVA requirements for specific manufacturer beneficiaries",³²⁹⁷ "the legal instruments at issue ... and their implications for individual manufacturers".³²⁹⁸ Thus, the Appellate Body observed:

"Although the Panel did explain what *types* of costs could be used to satisfy the CVA requirements, the Panel did not, for any MVTO manufacturer or for particular SRO

manufacturers (with the exception of CAMI), make any findings as to the *actual level* of CVA required. The Panel's statement that 'value-added requirements' are 'not synonymous' with a condition to use domestic over imported goods seems to have been based on 'value-added requirements' considered *in the abstract* as opposed to the actual CVA requirements for the MVTO and SRO manufacturer beneficiaries.

... the Panel reached its conclusion here without examining the specific CVA requirements in the MVTO 1998 and the SROs. The Panel simply speculated that 'depending upon the factual circumstances', a manufacturer '*might well be* willing and *able* to satisfy a CVA requirement *without using any domestic goods whatsoever*'. (emphasis added) The Panel did not, however, scrutinize the actual CVA requirements for MVTO and SRO manufacturers to see whether they could indeed be satisfied without using domestic goods.

... It seems to us that whether or not a particular manufacturer is able to satisfy its specific CVA requirements without using any Canadian parts and materials in its production depends very much on the *level* of the applicable CVA requirements. For example, if the level of the CVA requirements is very high, we can see that the use of domestic goods may well be a necessity and thus be, in practice, required as a *condition* for eligibility for the import duty exemption. By contrast, if the level of the CVA requirements is very low, it would be much easier to satisfy those requirements *without* actually using domestic goods; for example, where the CVA requirements are set at 40 per cent, it might be possible to satisfy that level simply with the aggregate of other elements of Canadian value added, in particular, labour costs. The multiplicity of *possibilities* for compliance with the CVA requirements, when these requirements are set at low levels, may, depending on the specific level applicable to a particular manufacturer, make the use of domestic goods only one *possible* means (means which might not, in fact, be utilized) of satisfying the CVA requirements."³²⁹⁹

7.712 Thus, the Appellate Body faulted the panel's failure to consider what could be necessarily implied from the *actual CVA requirements prescribed* for each of the beneficiary entities. Notably, in making this finding, the Appellate Body at no stage referred to the panel's failure to take into account any facts extraneous to the instrument being challenged. Indeed, the Appellate Body emphasizes at the beginning of its analysis that a claim under Article 3.1(b) may involve reviewing not only the words of the challenged measure, but also what *those words* necessarily imply.

7.713 We note that the arguments the United States has advanced in support of its claims are based on more than simply the text of the LA/MSF contracts, or the implications that can be necessarily drawn from *that text*. The United States clearly relies upon facts that are extraneous to the LA/MSF contracts themselves, most notably, information contained in the Global Market Forecasts and the government project appraisals. In our view, by relying upon such facts, the United States' claim strays from a complaint about what can be understood from the legal obligations written into the LA/MSF contracts, to a complaint about how those legal obligations can be understood *in the light of relevant facts and circumstances*. Whereas the former represents what we consider to be the essence of an in law export contingency claim, the latter, in our view, defines the contours of a claim that a subsidy measure is contingent in fact upon export performance. Thus, we agree with the European Communities that the United States' claims of in law export contingency against the challenged LA/MSF measures are improperly constituted. Accordingly, we dismiss the United States' claim that the provision of LA/MSF for the A380, A340-500/600 and A330-200 was contingent *in law* upon

³²⁹⁹ Appellate Body Report, *Canada – Autos*, paras. 128-130.

BCI deleted, as indicated [***]

anticipated export performance, within the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement.

7.714 In any case, as we explain in the following section, even assuming we were incorrect in our assessment of the types of evidence that may be relied upon for the purpose of bringing a claim of in law export contingency under Article 3.1(a) and footnote 4, we would nevertheless dismiss the United States' claims as, even taking into account the evidence it has adduced that is extraneous to the LA/MSF contracts, we do not believe it has established that the subsidies were granted contingent in law upon anticipated export performance.

Whether the evidence the United States relies upon demonstrates that the LA/MSF subsidies were granted contingent *in law* upon anticipated export performance

7.715 We recall that by entering into each of the challenged LA/MSF contracts, the EC member States provided Airbus with a financial contribution that conferred a benefit. In other words, the subsidy made available under the LA/MSF contracts was granted when each EC member State provided the LA/MSF. It follows that for the United States' claim to succeed, it must demonstrate that the provision of LA/MSF was, as a matter of law, conditional or dependent, at least in part, upon the EC member States' anticipation of export performance.

7.716 The text of the challenged LA/MSF contracts provides no explicit support for the United States' claim. Moreover, after examining how the contractual repayment provisions were intended to operate in the light of the evidence adduced by the United States, the EC member States' anticipated export performance does not, as a matter of law, appear to have been a condition for the granting of the subsidies. In this regard, we recall that while it is true that the EC member States must have been counting on Airbus to make LCA sales that necessarily included an important number of exports when concluding the LA/MSF contracts, the fact that Airbus was under no legal obligation to actually sell any LCA means that, on the basis of how the repayment terms were intended to operate, the EC member States could have at most held only a high degree of certainty that each grant of LA/MSF would induce Airbus to make an important number of export sales. The other contractual provisions which the United States appears to rely upon do not add anything to this understanding of how the repayment provisions operate.³³⁰⁰ Thus, on the basis of the evidence the United States has advanced, the way the LA/MSF repayment provisions were intended to operate shows that, as a matter of law, the EC member States provided the LA/MSF on the basis of their expectation (but not the condition) that Airbus would export. Accordingly, even assuming that the United States was entitled to bring its case relying upon evidence that is extraneous to the LA/MSF contracts, we find that it has failed to demonstrate that the LA/MSF subsidies were granted contingent in law upon anticipated export performance.

³³⁰⁰ The United States appears to rely upon the same additional contractual provisions described above in the context of the in fact contingency claim for the purpose of its in law contingency claim. US, SWS, paras. 163-209.

BCI deleted, as indicated [***]

5. Whether certain European Investment Bank loans to Airbus are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement

(a) Introduction

7.717 The United States claims that at least 12 loans provided by the European Investment Bank ("EIB") to various Airbus entities between 1988 and 2002 constitute specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement. The 12 loans at issue are:³³⁰¹

- (i) the 2002 loan to EADS for research and development activities related to the A380 (No. 21650/FR);³³⁰²
- (ii) the 1993 loan to Aérospatiale for production of the Super Transporteurs (No. 6832/FR);³³⁰³
- (iii) the 1992 loan to Aérospatiale for the construction of buildings and installation of industrial equipment for the A330/A340 (No. 16086);³³⁰⁴
- (iv) the 1991 loan to British Aerospace for the design, development and manufacture of wing boxes for the A330/A340 (No. 15119/UK);³³⁰⁵
- (v) the 1990 loan to CASA for the design and production of various parts of the A320 and A330/A340 (Loan No. 1.4711/ES);³³⁰⁶

³³⁰¹ The United States had also challenged a thirteenth loan, the 1997 loan to Aérospatiale for the Super Transporteurs. However, the US withdrew its complaint against this measure after the European Communities confirmed in its first written submission and Exhibit EC-154 (BCI) that the loan at issue was never granted. US, Answer to Panel Question 12; EC, FWS, footnote 807.

³³⁰² Contrat de Financement entre La Banque Européenne d'investissement et European Aeronautic Defence and Space Company, EADS N.V., Munich, le 2 août 2002 US-158 (BCI), as amended by Avenant Relatif au Contrat de Financement en date du 2 août 2002 entre La Banque Européenne d'investissement et European Aeronautic Defence and Space Company, EADS N.V., Paris, le 5 mai 2004, Luxembourg le 10 mai 2004 Exhibit EC-879 (BCI).

BCI deleted, as indicated [***]

7.718 The European Communities contests the United States claims on various grounds. In a first series of arguments, the European Communities asks the Panel to dismiss the United States claims in respect of certain loans because it contends that: (i) the loans granted between 1988 and 1993 are outside the temporal scope of the SCM Agreement; (ii) the loans granted between 1988 and 1993 were granted to Airbus entities other than Airbus SAS or its subsidiaries and the United States has failed to demonstrate that the alleged benefits of these loans "passed through" to Airbus SAS; (iii) eight of the loans have been fully repaid, and therefore do not constitute "existing measures"; and (iv) in respect of one of the loans (to British Aerospace), an entity that is no longer active in the production of Airbus LCA or that is not part of Airbus SAS [***]. The European Communities also disputes the United States' specific subsidization claims by arguing that the loans at issue did not confer a benefit on Airbus, and that in any case, the alleged subsidies were not specific within the meaning of the SCM Agreement.

7.719 Elsewhere in this report, we have examined and dismissed the first two of the European Communities' arguments relating to the temporal scope of the SCM Agreement and the issue of "pass through".³³¹⁴ In the evaluation that follows, we begin by addressing the two remaining EC arguments that do not relate to the question whether the challenged loans are specific subsidies, before turning to consider the merits of the United States specific subsidy claims under Articles 1 and 2 of the SCM Agreement.

(i) *Loans Already Repaid*

7.720 The European Communities asks the Panel to reject the United States claims in respect of all but three of the EIB loans due to the fact that they have already been fully repaid, in many cases before the establishment of this panel.³³¹⁵ According to the European Communities, in order to challenge loans that have been fully repaid, the United States must explain why the Panel should examine them, and how it could make recommendations and findings, when they are measures that no longer exist. In addition, the European Communities argues that the United States must explain how the non-existing loans cause present adverse effects to its interests.³³¹⁶

7.721 Recalling the Appellate Body's statement in *US – Upland Cotton* where it observed that "there could be a time-lag between payment of a subsidy and any consequential adverse effects"³³¹⁷, the United States argues that a subsidized loan may continue to provide a benefit or cause adverse effects after it is repaid, just as a subsidy grant may continue to provide a benefit or cause adverse effects after it is granted.³³¹⁸

7.722 In essence, the European Communities' arguments raise two questions: whether alleged subsidy measures that have expired may be challenged under Article 5 of the SCM Agreement, and whether the United States has done enough to demonstrate that any such expired subsidy measures (*i.e.*, the relevant EIB loans) cause present adverse effects to its interests. In respect of the first question, we understand the European Communities to argue that once a subsidized loan has been fully repaid, the subsidy no longer exists as a measure and therefore cannot cause adverse effects

³³¹³ Projet Aérospatiale Gramont A330/340, Contrat de Financement entre La Banque Européenne d'investissement et Aérospatiale Société Nationale Industrielle, Paris, le 21 décembre 1988, EC-693 (BCI); and Projet Aérospatiale Gramont A330/340, Accord 1 entre La Banque Européenne d'investissement et European Aeronautic Defence and Space Company, EADS France, GIE Saint Martin Bail, GIE Gramont Bail, Paris, le 7 novembre 2002, EC-697 (BCI).

³³¹⁴ See, paras. 7.44 - 7.65 setting out Panel's findings on temporal scope arguments and paras. 7.192 - 7.200 setting out Panel's findings on the pass-through argument.

³³¹⁵ The three loans that have not been fully repaid are the [***], the [***] and the [***].

³³¹⁶ EC, FWS, para. 1001; EC, FNCOS, para. 96; EC, SWS, paras. 481-482.

³³¹⁷ Appellate Body Report, *US – Upland Cotton*, para. 273.

³³¹⁸ US, Answer to Panel Question 18; US, SWS, footnote 301.

BCI deleted, as indicated [***]

under Article 5 of the SCM Agreement. This line of argument implies that subsidized loans cannot cause adverse effects beyond the date on which they have been fully repaid. We are unable to accept the European Communities' contention. As the Appellate Body has observed:

"... Article 7.8 of the SCM Agreement provides that, where it has been determined that 'any subsidy has *resulted* in adverse effects to the interests of another Member', the subsidizing Member must 'take appropriate steps *to remove the adverse effects* or ... withdraw the subsidy'. (emphasis added) The use of the word 'resulted' suggests that there could be a time-lag between the payment of a subsidy and any consequential adverse effects. If expired measures underlying past payments could not be challenged in WTO dispute settlement proceedings, it would be difficult to seek a remedy for such adverse effects. Further—in contrast to Articles 3.7 and 19.1 of the DSU—the remedies under Article 7.8 of the SCM Agreement for adverse effects of a subsidy are (i) the withdrawal of the subsidy *or* (ii) the removal of adverse effects. Removal of adverse effects through actions other than the withdrawal of a subsidy could not occur if the expiration of a measure would automatically exclude it from a panel's terms of reference."³³¹⁹

Similarly, the panel in *Indonesia – Autos* noted:

"If we were to consider that past subsidies were not relevant to our serious prejudice analysis as they were 'expired measures' while future measures could not yet have caused actual serious prejudice, it is hard to imagine any situation where a panel would be able to determine the existence of actual serious prejudice."³³²⁰

7.723 Although the subsidies that were the focus of the above statements did not involve the granting of loans,³³²¹ the observations of the Appellate Body and the panel are, in our view, of equal application and relevance to the EIB loans at issue in the present dispute. Thus, while the European Communities may be correct in characterizing a fully repaid EIB loan as a measure that no longer exists, the nature of an adverse effects claim does not preclude the possibility of finding that it may have a consequential impact on the relevant market after its full repayment and, as such, cause adverse effects within the meaning of Article 5 of the SCM Agreement. There is therefore no legal basis to support the European Communities' submission that fully repaid loans that are alleged to be subsidies cannot be challenged under Article 5 of the SCM Agreement. Thus, in light of the above, and consistent with our findings in respect of the temporal scope of this dispute, we reject the European Communities' request to exclude all but three of the EIB loans at issue from our consideration of the United States' claims on the grounds that they are expired measures.

7.724 The second question raised by the European Communities relates to whether the United States has demonstrated that any EIB loans found to be specific subsidies cause present adverse effects to its interests. We will address the European Communities' concerns, to the extent necessary, in the section of our Report that examines the merits of the United States' adverse effects claims.³³²²

³³¹⁹ Appellate Body Report, *US – Upland Cotton*, para. 273. (Footnote omitted, emphasis original).

³³²⁰ Panel Report, *Indonesia – Autos*, para. 14.206.

³³²¹ The Appellate Body's statement in *US – Upland Cotton* was made in the context of Brazil's claims against subsidy payments to United States cotton farmers under the "production flexibility contract" and "market loss assistance" programmes. The panel's statement in *Indonesia – Autos* related to subsidies provided under the National Car programme in the form of an import duty tax exemption and a luxury sales tax exemption.

³³²² Section VII.F of this Report.

BCI deleted, as indicated [***]

(ii) *1991 Loan to British Aerospace*

7.725 The European Communities asserts that [***] continues to [***], even after it transferred all Airbus LCA-related design, engineering, manufacturing and production activities to Airbus SAS subsidiaries in 2001 and sold its 20% shareholding in Airbus SAS to EADS in October 2006. Thus, according to the European Communities, it follows that any benefit conferred by this loan could not have been transferred to Airbus SAS and be causing present adverse effects to United States interests.³³²³

7.726 The United States contends that the European Communities' assertion shows only that Airbus received the entire benefit of a subsidy provided for the A330/A340, while the [***]. The United States argues that to assess whether the alleged subsidy caused adverse effects to its interests within the meaning of Article 5 of the SCM Agreement, it suffices to show that the recipient of the loan enjoyed a benefit, thus conferring a subsidy, and that the subsidy was for the development and production of LCA. In any case, the United States notes that even assuming that [***], it must be recalled that [***]. Thus, whatever the current [***] of the 1991 EIB loan, the United States contends that the loan is properly before the Panel; that Airbus and the A330/A340 in particular have benefited from below-market EIB borrowing rates for 15 years; and that throughout that period, the loan's beneficial terms have contributed to the causation of adverse effects to the interests of the United States' producers.³³²⁴

7.727 We recall that we have already dismissed the European Communities' argument that the United States must demonstrate that any benefit conferred to entities forming part of the Airbus Industrie consortium via the challenged financial contributions was "passed through" to Airbus SAS or any of its subsidiaries for the purpose of establishing adverse effects.³³²⁵ In doing so, we concluded that the European Communities' reliance on the concept of "pass-through", in the light of the facts of this dispute, was misplaced. In particular, we found that based on the economic realities of Airbus LCA production, the Airbus Industrie consortium is the same producer of Airbus LCA as Airbus SAS. We therefore concluded that it was unnecessary for the United States to show that any benefit of each of the alleged financial contributions to entities forming part of the Airbus Industrie consortium was passed through to Airbus SAS. Thus, for the period from 1991 to October 2006, when either British Aerospace or its successor BAE Systems continued to be involved in Airbus LCA production, it is clear to us that any benefit (in the form of below market interest rates) of the 1991 EIB loan was conferred on the same producer of Airbus LCA.

7.728 We note that publicly available information indicates that the funds obtained by British Aerospace for the A330/A340 under the 1991 EIB loan amounted to EUR 141,274,864.³³²⁶ Moreover, according to the European Communities, as of January 2007, [***] of the loaned principal [***].³³²⁷ Thus, to the extent that the EIB loan conferred any benefit, it was for the most part enjoyed between 1991 and October 2006, and can therefore be directly connected with Airbus LCA. As we understand it, the United States argues further that the fact that BAE Systems currently [***] means that Airbus received the entire benefit of the EIB loan subsidy provided for the A330/A340. Although we believe that it would not be unreasonable to view the [***] of the EIB loan by BAE Systems

³³²⁶ Exhibit US-157.

³³²⁷ Exhibit EC-154 (BCI). This Exhibit contains an overview prepared by the EIB of the status of the loans challenged by the United States, as of January 2007. It reveals information including the relevant loan contract numbers, disbursement dates, loan currencies, interest rates and outstanding principal amounts. We do not understand the United States to challenge the accuracy or reliability of the information set out in this Exhibit as it relates to the amount of principal outstanding on the 1991 EIB loan to British Aerospace as of January 2007.

BCI deleted, as indicated [***]

after October 2006 as at least suggesting that Airbus SAS received the amount of loan principal outstanding at the time of BAE Systems' withdrawal from Airbus SAS free of charge (*i.e.*, transforming this portion of the loan into a grant of funds), we do not consider it necessary to come to a firm conclusion on the merits of the United States' position. In our view, the fact that any benefit conferred by the loan would have been enjoyed for the most part between 1991 and October 2006, and therefore directly connected with Airbus LCA, is enough to dispose of the European Communities' argument that any benefit conferred by the 1991 EIB loan to British Aerospace could not have been transferred to Airbus SAS and therefore be causing present adverse effects to the United States interests. Accordingly, we reject the European Communities' request to dismiss the United States' complaint against the 1991 EIB loan to British Aerospace because of the fact that BAE Systems has [***] while no longer taking part in Airbus LCA production.

(b) Whether Each of the Challenged EIB Loans Amounts to a Subsidy within the Meaning of Article 1 of the SCM Agreement

(i) *Are the Loans "Financial Contributions"?*

7.729 The United States argues that all of the challenged EIB loans involve direct or potential direct transfers of funds within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement, and are therefore financial contributions.³³²⁸ The European Communities does not dispute the United States' contention that all of the measures at issue involve financial contributions in the form of loans. However, in respect of the 2002 loan to EADS for the A380, the European Communities contests the amount of the financial contribution that is at stake. Before turning to examine the European Communities' assertions in respect of the 2002 loan to EADS, we recall that Article 1.1(a)(1)(i) of the SCM Agreement explicitly identifies a "loan" as an example of a "government practice {that} involves a direct transfer of funds", and therefore a financial contribution. Thus, we agree with the parties that to the extent that the EIB finance contracts evidence the existence of loans they are financial contributions within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.

- The 2002 loan to EADS

7.730 The finance contract entered into between the EIB and EADS on 2 August 2002 opened a EUR 700 million ("crédit") credit line for the purpose of research and development activities related to the A380 project.³³²⁹ Under the terms of this contract, EADS was entitled to request the EIB to provide it with all or part of the credit line in loan amounts no smaller than [***] over a period of two years.³³³⁰ The essential terms and conditions of any eventual disbursement of funds, including the interest rate charged on repayments, were described in the same contract.³³³¹ EADS requested one disbursement of [***], which it received on [***].³³³² The remaining credit of [***] was cancelled on [***].³³³³

7.731 According to the European Communities, the financial contribution provided to EADS under the 2002 finance contract is the one disbursement obtained in [***], which was provided in the form of a loan of [***]. The European Communities argues that the remaining undisbursed credit line of [***] is irrelevant because it was cancelled in [***].³³³⁴ On the other hand, the United States argues that the relevant amount should not be limited to the [***] disbursement, and that it should include the

BCI deleted, as indicated [***]

EUR 700 million credit line. In this regard, the United States identifies two alleged benefits of the finance contract, one arising from the "eventual use of the loan" (by which we understand the United States to be referring to the [***] loan), and the other from the "ability to draw on a Euro 700,000,000 line of credit" (*i.e.*, the EUR 700 million credit line).³³³⁵

7.732 The United States argues that the latter benefit arises from "the very fact"³³³⁶ that the EIB provided EADS with a EUR 700 million credit line. In particular, the United States argues that "EADS ability to draw on a Euro 700,000,000 line of credit gave it valuable liquidity".³³³⁷ Consequently, the United States considers that the European Communities errs when it suggests that the relevant value of the financial contribution at issue should be limited to the amount of funds ultimately disbursed under the 2002 finance contract. The United States argues that the European Communities' approach is contradicted by the SCM Agreement's reference to "potential direct transfers of funds" as a category of "financial contribution" that may confer a "benefit" and thereby constitute a subsidy. The United States observes that a specificity analysis of a subsidy consisting of a potential direct transfer of funds necessarily occurs in advance of any knowledge as to how much of the funds (if any) will actually be disbursed.³³³⁸ Thus, when referring to the alleged benefit arising from EADS' "ability to draw on a Euro 700,000,000 line of credit", we understand the United States to focus on the alleged benefit conferred by what it considers to be a potential direct transfer of funds in the form of the [***] credit line.

7.733 Article 1.1(a)(1)(i) defines a financial contribution as including "potential direct transfers of funds or liabilities (*e.g.*, loan guarantees)". As we have previously explained,³³³⁹ the explicit identification of "loan guarantees" as an example of a "potential direct transfers of funds or liabilities" is instructive for the purpose of understanding the types of measures that may constitute "potential direct transfers of funds or liabilities". A loan guarantee may be described as a legally binding promise to repay the outstanding balance of a loan when the loan recipient defaults on its repayments. Thus, it is the promise to repay an outstanding loan in the event of default that is the financial contribution (*i.e.*, the potential direct transfer of funds), not the funds that may be transferred in the future in the event of default.

7.734 Article 14(c) of the SCM Agreement establishes guidelines for calculating the amount of a subsidy in terms of the benefit conferred by a loan guarantee for the purpose of countervailing duty investigations. We have previously noted that although not intended to define the circumstances when a loan guarantee will confer a benefit under Article 1.1(b) in disputes involving Part III of the SCM Agreement, Article 14(c) does provide useful context.³³⁴⁰ This provision describes the benefit of a loan guarantee as the difference in the amount that a recipient pays for a loan guaranteed by the government and a comparable commercial loan absent the loan guarantee:

"a loan guarantee by a government shall not be considered as conferring a benefit, unless there is a difference between the amount that the firm receiving the guarantee pays on a loan guaranteed by the government and the amount that the firm would pay on a comparable commercial loan absent the government guarantee. In this case the benefit shall be the difference between these two amounts adjusted for any differences in fees;"

³³³⁹ *See*, para. 7.302 above.

³³⁴⁰ *See*, para. 7.303 above.

BCI deleted, as indicated [***]

7.735 In our view, the fact that a loan guarantee will confer a benefit on a recipient when it enables that recipient to obtain the guaranteed loan at a below market price implies that the benefit of a potential direct transfer of funds arises from the *mere existence* of an obligation to make a direct transfer of funds in the event of default. Thus, as we have concluded elsewhere in this Report,³³⁴¹ when assessing whether a transaction involves a "potential direct transfer{} of funds", the focus should be on the existence of a government practice that involves an obligation to make a direct transfer of funds which, *in and of itself*, is claimed and capable of conferring a benefit on the recipient that is separate and independent to the benefit that might be conferred from any future transfer of funds. This can be contrasted with financial contributions in the form of direct transfers of funds, which will result in a benefit being conferred on a recipient when there is a government practice that involves a direct transfer of funds.

7.736 It is not entirely clear to us whether the United States intended that its arguments should be understood as suggesting that the 2002 finance contract between the EIB and EADS evidences the existence of two types of financial contributions – a direct transfer of funds (the [***] loan) and a potential direct transfer of funds (the EUR 700 million credit line). However, in our view, this appears to be the natural implication of what it is saying when it alleges that the finance contract results in EADS receiving two very different types of benefit.

7.737 We recall that between 2 August 2002 (the date of the conclusion of the contract) and [***] (the date of the [***] disbursement), EADS was entitled to draw down on the EUR 700 million credit line. The United States has argued that the very existence of this credit facility provided EADS with a benefit. In other words, the United States claims that the EIB's obligation to lend money to EADS, *in and of itself*, conferred a benefit upon EADS. From this perspective, we agree with the United States that the finance contract, at least until [***], evidences the existence of a potential direct transfer of funds in the amount of EUR 700 million.³³⁴² Similarly, the United States has argued that the "eventual use of the loan", that is, the actual disbursement of [***] on the terms and conditions set out in the finance contract, conferred a different benefit upon EADS. Thus, as with the European Communities, the United States is also of the view that the finance contract evidences the existence of a financial contribution in the form of a loan amounting to [***]. We agree that the [***] disbursement amounts to a loan, and therefore a financial contribution within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.

7.738 Thus, in the light of the foregoing analysis, we find that the 2002 finance contract between the EIB and EADS evidences the existence of a financial contribution, in the form of a loan, within the meaning of Article 1.1(a)(1)(i) in the amount of [***]. In addition, in the light of the United States' characterisation of the alleged benefit resulting from the mere existence of the EUR 700 million credit line, we also find that the 2002 finance contract evidences the existence of a potential direct transfer of funds within the meaning of Article 1.1(a)(1)(i). We now turn to consider whether these and other financial contributions provided by the EIB to Airbus conferred a benefit within the meaning of Article 1.2 of the SCM Agreement.

³³⁴¹ See, para. 7.304 above.

³³⁴² Once EADS obtained the disbursement of [***], the amount of the credit line made available under the contract was [***]. The United States has not explained whether its claim extends to this residual amount of the credit line.

BCI deleted, as indicated [***]

(ii) *Do the Challenged EIB Loans Confer a "Benefit" on Airbus?*

Arguments of the United States

7.739 The United States argues that the very purpose of the EIB is to provide financing on terms more favourable than those available for comparable financing in the market.³³⁴³ In particular, the United States notes that Article 18 of EIB Statute explicitly limits EIB lending to situations where "funds are not available from other sources on reasonable terms". Moreover, the United States submits that the EIB operates by using the EC member States' AAA credit rating to obtain large amounts of funds from the money market at advantageous rates, and then passing these rates onto non-AAA credit rated loan recipients. Thus, the United States argues that, like the Technology Partnerships Canada Programme that was at issue in *Canada – Aircraft*, the EIB "neither seeks nor earns a commercial rate of return"³³⁴⁴ on the loans it provides. Like the panel in that dispute, the United States urges the Panel in the present dispute to find that all of the EIB loans at issue confer a benefit on Airbus.³³⁴⁵

7.740 The United States argues that the interest rate charged by the EIB on each of the relevant loans confirms that they were more advantageous than comparable loans offered by a commercial bank. For two of the loans at issue – the 2002 EIB loan to EADS and the 1992 loan to Aérospatiale – the United States has submitted its own market interest rate benchmark analysis and compared this to the interest rate charged by the EIB. In both cases, the United States concludes that the interest rates for comparable commercial financing would be less advantageous than the interest rates charged on the loans from the EIB.³³⁴⁶ In respect of the remaining loans, the United States did not have access to the actual interest rates charged by the EIB until it received the European Communities' first written submission, when the European Communities submitted a one page overview of the status of the relevant loans.³³⁴⁷ The European Communities submitted copies of the loan contracts in its second written submission, together with its own analysis of whether the loans were provided at non-commercial interest rates.³³⁴⁸ Prior to the European Communities' disclosures, the United States had presented information in its first written submission showing that the average annual interest rates charged by the EIB to its customers, as published in the EIB's annual reports from 1996 to 2004, were lower than the contemporaneous market-based corporate borrowing rates determined in the Ellis Report.³³⁴⁹ The United States argued that in the light of the European Communities' refusal to provide the actual terms of the loans during the Annex V process, the reasonable inference for the Panel to draw is that the nine remaining EIB loans, provided to Airbus between 1988 and 1993, were similarly beneficial.³³⁵⁰

7.741 In addition to the interest rate benefit that the EIB allegedly provides to recipients of its loans, the United States submits that the EIB's loans confer another benefit, because the EIB does not charge

³³⁴⁴ Panel Report, *Canada – Aircraft*, para. 9.314.

³³⁴⁵ US, FWS, para. 400.

³³⁴⁶ In particular, the United States asserts that the interest rates charged on the 2002 EIB loan to EADS and the 1992 loan to Aérospatiale were, respectively, [***] and [***] basis points below the level of interest that would be charged by a commercial lender on comparable loans. BCI deleted, as indicated [***]

its borrowers "commitment fees" to compensate for committing to the loans, nor "non-utilization fees" in cases where the borrowers do not use the credit lines the EIB has provided.³³⁵¹ Moreover, the United States argues that the EUR 700 million credit line opened for EADS in 2002 confers a benefit because in the view of the United States, the "ability to draw on a Euro 700,000,000 line of credit gave {EADS} valuable liquidity".³³⁵² Finally, the United States contends that all of the loans at issue granted prior to 1999 conferred a benefit upon Airbus because the EIB did not impose a risk premium.³³⁵³

Arguments of the European Communities

7.742 The European Communities rejects the United States contention that, by its very nature, EIB lending confers a benefit on loan recipients, and in this case, Airbus. The European Communities points to Articles 19(1) and 24 of EIB Statute, which it explains require the EIB to set interest rates at a level enabling it "to meet its obligations, to cover its expenses and to build up a reserve fund" that is 10% of the prescribed capital. In addition, the European Communities notes that pursuant to Article 19(2) of the EIB Statute, "the bank shall not grant any reduction in interest rates". Thus, according to the European Communities, the EIB does not pass on to borrowers financing that it borrowed in the capital markets "at cost".³³⁵⁴ Moreover, any suggestion that the EIB's lending results in subsidization due to its operations being run on a not-for-profit basis should be dismissed because profitability is irrelevant to the question whether a measure is a financial contribution that confers a benefit within the meaning of Article 1.1 of the SCM Agreement.³³⁵⁵

7.743 The European Communities argues that, contrary to the United States' assertions, the EIB does not structure its loans in a way that confers a benefit on recipients. The European Communities explains that the EIB uses standard form loan agreements and a standard methodology for the calculation of interest rates. In respect of the latter, the European Communities indicates that the EIB establishes interest rates for each loan that it grants on the basis of three separate elements: a base rate (reflecting the EIB's cost of refinancing on the capital markets); a "mark-up" (in order to meet its obligations to cover expenses and build up a reserve fund); and, as of 1999, a risk premium (reflecting a loan's credit risk and replacing the formal requirement of providing a guarantee).³³⁵⁶ Moreover, the European Communities contends that the fact that the EIB does not charge commitment fees or non-utilization fees is justified because *inter alia*, (i) for "open-rate" contracts (*i.e.*, contracts where the rates are not fixed *ex ante*), there is no certainty as to the timing of availability of funds, and the EIB does not commit to a precise interest rate; and (ii) for "single disbursement" contracts, there is no open commitment as such because the contract is signed and one or more disbursements typically take place a few days later.³³⁵⁷ The European Communities notes that if a borrower cancels a requested disbursement, then it must pay compensation to the EIB.

7.744 The European Communities argues that the approach taken by the panel in *Canada – Aircraft* should not be applied in the present instance because in that dispute, Canada had refused to provide relevant information on the terms and conditions of the challenged contracts. In contrast, the European Communities points out that in the present dispute, it has disclosed all of the relevant contractual terms and conditions.³³⁵⁸

³³⁵⁸ EC, Answer to Panel Question 86.

BCI deleted, as indicated [***]

7.745 The European Communities rejects the interest rate benchmark analyses presented by the United States for various reasons,³³⁵⁹ and presents its own analysis showing that in most instances, the EIB loans at issue were not granted at below-market interest rates, when adjusted for the cost of certain alleged additional obligations present in EIB loan contracts.³³⁶⁰ Where the European Communities' own analysis shows that certain EIB loans were granted at below-market interest rates, the European Communities contends that the Panel should assess whether such loans conferred a benefit by checking whether the interest rate differences fall within the range of 20-50 basis points above or below the relevant benchmark. In the European Communities' view, a benefit could only exist if the interest rates requested by the EIB were convincingly outside of this spread of rates.³³⁶¹

7.746 Finally, the European Communities argues that the general operations of the EIB are similar to those of the World Bank to the extent that the latter can allegedly only lend if it "is satisfied that in the prevailing market conditions the borrower would be unable otherwise to obtain the loan under conditions which in the opinion of the bank are reasonable for the borrower".³³⁶² The European Communities contends that the same type of provisions define the lending operations of other international lending institutions such as the Asian Development Bank, the European Bank for Reconstruction and Development, the International Bank for Reconstruction and Development, the Inter-American Development Bank and the International Finance Corporation. Thus, the European Communities submits that to find that the EIB's lending operations involve subsidization would mean that loans from all of these other international lending institutions would also, by definition, amount to subsidies.

Evaluation by the Panel

7.747 The United States' allegations in respect of the question of benefit are grounded in essentially two lines of argument: First, that the nature of the EIB's lending operations demonstrates that it grants loans on the basis of non-commercial considerations; and second, that the actual terms and conditions attached to the EIB's loans to Airbus show that they were more favourable to Airbus than comparable market financing because granted at lower interest rates and with no requirement to pay commitment or non-utilization fees. As regards the EUR 700 million credit line opened for EADS in 2002, the United States also considers that a benefit was conferred because it provided EADS with "valuable liquidity".³³⁶³ We evaluate each of the United States' lines of argument in turn.

The EIB's lending operations

7.748 The EIB was established in 1957 pursuant to Article 266 of the Treaty of Rome ("EC Treaty") as the long-term lending arm of the European Communities. As described in Article 267 of that Treaty, the EIB's task is:

"... to contribute, by having recourse to the capital markets and utilising its own resources, to the balanced and steady development of the common market in the interest of the Community. For this purpose the Bank shall, operating on a non-profit-making basis, grant loans and give guarantees which facilitate the financing of the following projects in all sectors of the economy:

³³⁵⁹ EC, FWS, paras. 1073-1089 and EC, SWS, paras. 494-499 (as regards the interest rate benchmarks based on the Ellis Report); EC, SNCOS, paras. 188-189 and Exhibit EC-857 (BCI) (as regards the interest rate benchmarks derived in the NERA Economic Consulting Report).

BCI deleted, as indicated [***]

- (a) projects for developing less-developed regions;
- (b) projects for modernising or converting undertakings or for developing fresh activities called for by the progressive establishment of the common market, where these projects are of such a size or nature that they cannot be entirely financed by the various means available in the individual member States;
- (c) projects of common interest to several member States which are of such a size or nature that they cannot be entirely financed by the various means available in the individual member States.

In carrying out its task, the Bank shall facilitate the financing of investment programmes in conjunction with assistance from the Structural Funds and other Community Financial Instruments."³³⁶⁴

7.749 The Statute of the EIB further provides:

"Article 2

The task of the Bank shall be that defined in Article 267 of {the EC Treaty}.

Article 18

1. Within the framework of the task set out in Article 267 of this Treaty, the Bank shall grant loans to its members or to private or public undertakings for investment projects to be carried out in the European territories of member States, to the extent that funds are not available from other sources on reasonable terms.
2. As far as possible, loans shall be granted only on condition that other sources of finance are also used.
3. When granting a loan to an undertaking or to a body other than a Member State, the Bank shall make the loan conditional either on a guarantee from the Member State in whose territory the project will be carried out or on other adequate guarantees.
4. The Bank may guarantee loans contracted by public or private undertakings or other bodies for the purpose of carrying out projects provided for in Article 267 of this Treaty.
5. The aggregate amount outstanding at any time of loans and guarantees granted by the Bank shall not exceed 250% of its subscribed capital.
6. The Bank shall protect itself against exchange risks by including in contracts for loans and guarantees such clauses as it considers appropriate.

³³⁶⁴ Exhibit EC-157. The European Communities notes that the objective set out in subparagraph (b) "has progressively been abandoned as measures to create the EC Single Market were of a transitory nature". The European Communities explains that "it has been used for the last time in Spain, during the first years of its accession to the EC". EC, FWS, footnote 809.

BCI deleted, as indicated [***]

Article 19

1. Interest rates on loans to be granted by the Bank and commission on guarantees shall be adjusted to conditions prevailing on the capital market and shall be calculated in such a way that the income therefrom shall enable the Bank to meet its obligations, to cover its expenses and to build up a reserve fund as provided for in Article 24.

2. The Bank shall not grant any reduction in interest rates. ...³³⁶⁵

7.750 Thus, the EIB may be characterised as a public purpose supranational banking institution that acts to further EU policy objectives by providing loans across a broad array of economic sectors, "to the extent that funds are not available from other sources on reasonable terms", at interest rates that cover its expenses and enable it to build up a reserve fund. The EIB has described its lending activities in the following terms:

"{B}acking by the member states gives the EIB the highest possible credit rating (AAA) on the money markets, where it can therefore raise very large amounts of capital on very competitive terms. This in turn enables the Bank to invest in projects of public interest that would otherwise not get the money – or would have to borrow it more expensively."³³⁶⁶

"With an excellent 'AAA' credit reputation and operating as a major international borrower on financial markets, EIB is able to raise funds at advantageous rates. Being a not-for-profit institution, the Bank passes on the benefits to its clients in the form of loans at fine rates. Interest rates are based on EIB's borrowing cost and a small margin to cover administrative expenses and other costs."³³⁶⁷

7.751 In practice, the funds lent by the EIB are therefore first obtained on the money market by the EIB at interest rates reflecting its AAA credit rating. These funds are then passed on to borrowers at a marked-up interest rate which enables the EIB "to meet its obligations, to cover its expenses and to build up a reserve fund". We understand that the interest rate charged to borrowers has also, since 1999, included a risk premium to reflect the perceived level of a loan's "expected loss".³³⁶⁸ Prior to the introduction of this risk premium, the European Communities asserts that a loan's credit risk was in general taken into account by the EIB through a requirement for loan guarantees.³³⁶⁹

7.752 The United States argues that these features of the EIB's lending operations demonstrate that EIB loans are non-commercial and therefore, in the same way that the non-commercial nature of the loans at issue in *Canada – Aircraft* were found to confer a benefit to their recipients, the EIB loans that are at issue in the present dispute must also confer a benefit on Airbus, within the meaning of Article 1.1(b) of the SCM Agreement. On the other hand, the European Communities rejects the view that the general nature of the EIB's lending activities necessarily means that the EIB did not earn a rate of return on its loans to Airbus that is similar to the rate that would be sought by commercial banks. The European Communities argues that a determination of whether a measure is a subsidy should not be made by focussing on whether the grantor "as an abstract matter 'seeks' a certain rate of

BCI deleted, as indicated [***]

return", but rather through "a comparison of the terms on which the challenged financial contribution was extended with the terms available for the recipient at market".³³⁷⁰

7.753 We recall that in order to understand whether a financial contribution, in the form of a loan, confers a benefit, an assessment must be made of whether that loan places the recipient in a more advantageous position compared to the position it would have been in had a comparable loan been obtained from a commercial lender.³³⁷¹ In making this assessment, we see the non-profit-making nature of the EIB's operations and its mandate to provide financing to the extent funds are not otherwise available "on reasonable terms" as features of the EIB's lending activities that suggest its loans are granted for projects that would be more difficult to successfully realize, or simply unfeasible, on the basis of commercial financing. To this extent, we believe that the evidence we have reviewed on the nature of the EIB's lending activities (especially its non-profit-making nature) indirectly supports the view that the rate of return it obtains on the loans it grants to borrowers (including those challenged by the United States in this dispute) is below the rate of return that would be demanded by a commercial lender, thereby conferring a benefit within the meaning of Article 1.1(b) of the SCM Agreement. However, the parties have submitted other evidence that goes directly to the terms and conditions that the parties assert commercial lenders would have asked Airbus to agree to in order to obtain loans comparable to the EIB loans at issue. The United States has submitted this evidence for the purpose of *confirming* that the EIB loans confer a benefit on Airbus; whereas the intention behind the European Communities' submission is to rebut the United States' allegations and demonstrate that the loans *do not* confer a benefit. We evaluate the parties' submissions in the following sections.

Terms and conditions of the loans to Airbus

The 2002 loan to EADS

7.754 The 2002 EIB loan to EADS was granted for the purpose of one particular project – the development of the A380. It was effected through one disbursement of USD [***] at an interest rate of [***], payable annually, on a non-amortizing loan with a final maturity of [***] years (*i.e.*, loaned capital plus final year interest payment due on [***]).³³⁷² The United States alleges that the loan to EADS conferred a benefit for two reasons: (i) because it was granted on interest rate terms that were more advantageous than comparable market financing; and (ii) because EADS did not have to pay any commitment fees or non-utilization fees. We examine each of the United States' allegations in turn.

Interest rate terms

7.755 Initially, the market interest rate benchmarks presented by the United States for all of the EIB loans were based on the country-specific general corporate borrowing rates determined in the Ellis Report.³³⁷³ For the 2002 EIB loan to EADS, the United States asserted that the risk-adjusted commercial borrowing rate that the market would have charged EADS in 2002 on an equivalent long-term loan would have been "in the range of [***] percent, plus applicable commitment and non-utilization fees".³³⁷⁴ In its second written submission, the United States submitted a revised market interest rate benchmark analysis for this loan, prepared by NERA Economic Consulting (the "NERA EIB Report").³³⁷⁵ On the basis of this revised analysis, the United States concludes that "the commercial rate for a loan with the characteristics of the 2002 EIB loan to EADS (European

borrower, rated A3/A-, loan in Eurodollars, 10-year maturity) would have been 5.68 percent in [***].³³⁷⁶

7.756 The European Communities criticises the United States' market interest rate benchmark on various grounds. In an assessment of the findings of the NERA EIB Report, the European Communities alleges that the United States' benchmark for the 2002 loan to EADS suffers from numerous deficiencies making it unreliable:

"In relation to the 2002 EIB loan, the EIB has identified the following crucial errors affecting NERA's assessment:

- the entire 57 basis points 'benefit' claimed by NERA is wholly based on {the} NERA assert{ion}, without evidence, that the USD capital market is so inefficient that it would have cost EADS approximately 63 basis points more to borrow USD than an equivalently rated US corporation{ }.
- NERA assumes that EADS would have chosen what NERA claims to be the most expensive option to borrow USD (the Eurobond market) even though, according to NERA, it would have been cheaper for a European corporation such as EADS to borrow in the so-called Yankee market.
- NERA ascribes {a} wrong credit rating to EADS – in [***], EADS was rated A by S&P, and not A-.
- the 57 basis points 'benefit' claimed by NERA simply does not stand up to any analysis with pricing achieved by other comparable European corporate borrowers at the time of the 2002 EIB loan or, indeed, pricing levels that EADS could have achieved in the swap market or through the USD syndicated loan market.³³⁷⁷

7.757 As we understand it, the market interest rate benchmark identified in the NERA EIB Report for the 2002 loan to EADS is based on the interest rate that a non-United States corporate borrower with allegedly the same credit rating as EADS would have had to pay on a 10 year "Eurodollar" bond issued on [***].³³⁷⁸ Eurodollar bonds are USD bonds issued by companies outside of the United States. They may be compared with either "Yankee" bonds, which are USD bonds issued within the United States by companies that are not domiciled in the United States, or domestic USD corporate bonds, which are issued by United States companies in the United States. NERA asserts that in August 2004, the yield on A rated 10 year Eurodollar bonds exceeded Yankee bonds by around 30 basis points; while the yield on A rated Yankee bonds exceeded domestic 10 year USD corporate bonds by about 33 basis points.³³⁷⁹ In other words, the NERA EIB Report submits that in August 2004, 10 year USD denominated bonds were approximately 63 basis points more expensive for non-United States A rated corporations to issue outside of the United States than A rated United States corporations issuing within the United States. This price difference is explained by NERA as a function of factors such as "cross-border risks (the fact that a foreign company borrowing in USD is exposed to currency risk, plus that if the borrower is outside of the U.S., it may be more

³³⁷⁶ US, SWS, para. 275.

BCI deleted, as indicated [***]

difficult to enforce provisions of the bond indenture, etc) and liquidity differences in the three markets".³³⁸⁰

7.758 The first EC criticism of the NERA EIB Report goes to the appropriateness of using the yield associated with a 10 year Eurodollar bond index in August 2004 as the basis of the appropriate market interest rate benchmark. The European Communities notes that NERA does not cite any specific evidence or data sources to substantiate its assertion in respect of the levels of the 10 year Eurodollar or Yankee bond yields on [***]. In addition, the European Communities argues that if the indices used by NERA were the Bloomberg 10 year Single A USD Yankees Industrial index and the 10 year Single A EuroDollar EMU index, NERA's assessment cannot be relied upon because the two indices represent "a sort of interpolation between existing bonds" that are not homogeneous.³³⁸¹ The European Communities explains that the 10 year Single A USD Yankees Industrial index includes bonds issued by "the State of Israel, Bank of China, the National Bank of Hungary, Poland and BHP". Reflecting the heterogeneity of these bond issuers, the European Communities notes that the range in the spread between 10 year USD bonds issued by A rated domestic industrial issuers and 10 year USD Yankee bonds issued by A rated industrial users showed "extreme volatility with a minimum value of 21 bps and a max value of 35 bps". Likewise, the European Communities observes that the 10 year Eurodollar bond index "currently contains issuers such as the Republic of Italy, the Italian Regione Campania, the Greek subsidiary of Coca Cola and some special entity vehicles related to Transneft, the Russian oil pipeline provider".³³⁸² The spread between 10 year USD Yankee bonds issued by A rated industrial users and the 10 Year Eurodollar bond issued by EMU A rated industrial users is equally "very volatile with a range of between – 19 bps and 39 bps". Given that the issuers of the bonds used to compile these indices are not all industrial corporations, the European Communities argues that they are unreliable proxies for assessing what the market would have asked a corporation such as EADS to pay in 2004 for USD financing similar to the EIB loan.³³⁸³

7.759 We agree with the European Communities that the use of a USD bond index that is derived from information about the yields of bonds issued in August 2004 by entities that include governments and other non-industrial corporations does not provide a perfect benchmark for assessing the precise interest rate that a company, like EADS, would have had to pay for this type of USD bond financing in August 2004.³³⁸⁴ However, in our view, the Eurodollar bond index that the United States appears to have relied upon is not entirely irrelevant.³³⁸⁵ First, we note that Eurodollar bonds are a form of USD financing available to entities that like EADS are domiciled and operate outside of the United States.³³⁸⁶ Therefore, Eurodollar bond financing was an option available to EADS at the time

³³⁸⁰ NERA EIB Report, footnote 5, Exhibit US-542 (BCI). *See, also*, US, Comments on EC Answer to Panel Question 180, where the United States notes that the fact that Eurodollar bonds are not registered with the United States Securities and Exchange Commission means that new issues cannot immediately be sold in the United States, making them less liquid.

³³⁸¹ EIB Analysis of NERA EIB Report, p. 3.

³³⁸² EIB Analysis of NERA EIB Report, p. 3.

³³⁸³ EIB Analysis of NERA EIB Report, p. 3.

³³⁸⁴ We note that the Eurodollar bond index that the European Communities suggests was relied upon in the NERA EIB Report included companies active in the consumer (non-cyclical), consumer (cyclical), communications, utilities and financial industry sectors. Only two of the 13 borrowing entities included in the index were public administrations – the Republic of Italy and the Italian region of Campania. EIB Analysis of NERA EIB Report, Annex I.

³³⁸⁵ Although NERA did not attach a copy of the Eurodollar bond price information it relies upon in the EIB Report, it did explicitly note that the information was drawn from Bloomberg. NERA EIB Report, p.7, Exhibit US-542 (BCI). The United States has not contested the assertion in the EIB Analysis of the NERA EIB Report that NERA relied upon the Bloomberg 10 year Single A EuroDollar EMU index to establish its benchmark.

³³⁸⁶ "Eurodollar bonds are 1. Denominated in U.S. dollars 2. Issued and traded outside the jurisdiction of any single country 3. Underwritten by an international syndicate 4. Issued in bearer (unregistered) form".

BCI deleted, as indicated [***]

the EIB loan was disbursed. Second, although not specific to EADS, the Eurodollar bond index might nevertheless be viewed as representing the average cost of Eurodollar bonds for the group of similarly rated entities that make up that index, only two of which were public administrations.³³⁸⁷ In other words, the 10 year Single A EuroDollar EMU index which the United States appears to have relied upon acts as a signal of the average cost of 10 year Eurodollar bond financing on the market for A rated entities at the relevant moment.³³⁸⁸

7.760 The second EC criticism relates more specifically to the question whether the United States' revised market interest rate benchmark overstates the cost of financing that would have been available to EADS on 20 August 2004. In particular, the European Communities argues that by relying on data from a Eurodollar bond index, the United States assumes that EADS would have chosen what the NERA EIB Report recognizes was the more expensive USD funding option available to EADS compared with Yankee bonds.³³⁸⁹ The United States explains that NERA used a Eurodollar bond index because it represents "a loan denominated in the same currency as the EIB loan and provided under comparable market circumstances in the same place as the EIB loan was issued", and therefore achieves an "apples-to-apples comparison" with the 2002 loan to EADS.³³⁹⁰ Thus, the United States argues that "like the EIB loan to EADS, the U.S.- proposed benchmark is a [***] loan provided by a non-U.S. lender to a non-U.S. borrower."³³⁹¹

7.761 Fabozzi and Mann describe the Yankee bond market as encompassing "those foreign-domiciled issuers who register with the SEC and borrow dollars via issues underwritten by a U.S. syndicate for delivery in the United States."³³⁹² In other words, Yankee bonds involve USD financing *in the United States* for entities that are not domiciled in the United States. This compares with Eurodollar bonds, which involve USD financing *outside of the United States* for entities that are not domiciled in the United States.³³⁹³ It is clear to us that the 2002 EIB loan to EADS, as a non-amortizing USD loan issued to a European corporate outside of the United States, bears closer resemblance to the latter than the former. In addition, we note that Eurodollar bonds pay interest (coupons) annually, like the EIB loan; whereas Yankee bonds pay interest semi-annually.³³⁹⁴ Thus, while we recognize that Yankee bond financing may have been available to EADS in August 2004, we agree with the United States that financing through a Eurodollar bond would be a better proxy for the 2002 EIB loan to EADS.

Frank J. Fabozzi and Steven Mann: *The Handbook of Fixed Income Securities*, Seventh Edition, McGraw-Hill, pp. 396-397. Exhibit US-673.

³³⁸⁷ See, footnote 3384 above.

³³⁸⁸ Furthermore, we note that the EIB has been declared to be "consistently among the top borrowers" in the Eurodollar bond market (Fabozzi and Mann, p. 397, Exhibit US-673). The EIB described its USD borrowing activities for 2004 (the year in which the loan to EADS was disbursed) in the following terms: "In USD, the Bank was unique among international borrowers in issuing {bonds} in all key benchmark maturities, involving six new global issues for USD 14.5 bn in total, via benchmark transactions in 2, 3, 5 and 10-year maturities and a callable bond. The EIB remained the largest and most frequent USD issuer among supranationals and is the only issuer in its class to offer such a comprehensive yield curve, with maturities ranging from 2005 to 2014". EIB, Activity Report 2004, p. 39, Exhibit EC-714. Recalling that the EIB operates by borrowing funds from the money market and on-lending these to its borrowers, it is possible to speculate on the basis of this information (although we emphasize that there is no evidence before us to confirm) that the Eurodollar bond market might well have been the source of the USD funds disbursed to EADS under the 2002 loan contract.

BCI deleted, as indicated [***]

7.762 The third EC criticism is that the United States' benchmark applies a Standard & Poors credit rating for EADS of A-, when in fact, on [***], EADS had a Standard & Poors credit rating of A. According to the European Communities, the difference means that the United States' proposed benchmark overstates the market interest rate by 6.5 basis points.³³⁹⁵ The United States responds by noting that even accepting the European Communities' factual assertion and proposed adjustment, the revised market interest rate benchmark would be 5.6138%, still [***] basis points [***] the interest rate paid on the EIB loan.³³⁹⁶ We agree with the European Communities that EADS' credit rating on the date of the EIB loan disbursement ([***]) should be used when identifying the appropriate market interest rate benchmark.

7.763 Finally, the European Communities argues that the United States Eurodollar bond-based benchmark "does not stand up to any comparison with pricing achieved by other comparable European corporate borrowers at the time of the 2002 EIB loan" in alternative USD financing markets.³³⁹⁷ The European Communities presents these alternatives as appropriate market interest rate benchmarks, and argues that when properly adjusted and examined together, they demonstrate that the interest rate attached to the 2002 loan to EADS fell within the range of commercial financing options available to EADS at the time and, therefore, did not confer a benefit.

7.764 Initially, the European Communities proposed a market interest rate benchmark of 5.10%, constructed using the value, on [***], of the 10 year Constant Maturity Treasury rate from the United States Treasury Yield Curve (4.24%) (representing the risk-free rate for borrowing in USD at the time when EADS drew down on the EIB loan) and adding to this the "Reuters' 10 year Corporate Bond Spread for Industrials" with the same A3 credit rating as EADS (0.86%) (reflecting the general credit risk of the specific borrower).³³⁹⁸ Subsequently, the European Communities added an additional 5 basis points to this rate in order "to take into account the valid comment contained in the {NERA EIB Report} with regard to the frequency of interest payments" on US Treasury bonds.³³⁹⁹ In addition, the European Communities presented three other possible market interest rate benchmarks based on: (i) the interest rate paid by a comparable European corporate borrower (Norsk Hydro A/S) on the USD Yankee bond market; (ii) the interest rate paid by a comparable European corporate borrower (Pearson Plc) in the USD syndicated loan market; and (iii) the interest rate that could have been paid by EADS on the corporate bond "swap market".³⁴⁰⁰ Finally, the European Communities adjusted three of these benchmarks to reflect "additional finance-related project cost/obligations" that are "expressly acknowledged by the ratings agencies" to affect the market prices of bonds and loans,³⁴⁰¹ arriving at the following result:

³³⁹⁵ EIB Analysis of NERA EIB Report, p. 4, Exhibit EC-857 (BCI). *See, also*, EC, Answer to Panel Question 180.

³³⁹⁸ EC, FWS, paras. 1097-1099; Exhibit EC-168 (BCI). The European Communities did not submit a copy of the relevant "Reuters' 10 year Corporate Bond Spread for Industrials" Index. In subsequent submissions, the European Communities states that it used the "Moody's index for A3 rated corporates" to determine the relevant spread, Exhibit EC-722 (BCI) or that it relied upon the "relevant Merrill Lynch index" (EC, Answer to Panel Question 180). However, we understand that the credit spread actually used by the European Communities was based on the "Reuters' 10 year Corporate Bond Spread for Industrials" index for corporations with an A3 credit rating, reflecting the fact that Moody's had assigned EADS an A3 credit rating on 15 March 2002. Exhibit EC-168 (BCI).

³⁴⁰¹ EC, Answer to Panel Question 176, referring to a Moody's publication which states *inter alia*, that "{i}n order to equalize losses across similarly rated loans and bonds, upward adjustments on loan ratings {of

BCI deleted, as indicated [***]

Table 8 – EC Benchmark Analysis for the 2002 EIB Loan

Benchmark	EIB Rate	Benchmark Rate	Adjusted Benchmark Rate
USD Treasury Bond plus Relevant Spread for A3 Corporations	[***]	5.15%	5.08%
Norsk Hydro Yankee Bond	[***]	5.26%	5.20%
Pearson USD Syndicated Loan	[***]	LIBOR/Swaps plus 35.5 basis points	No adjustment
EADS EUR bonds swapped into USD bonds	[***]	5.20%	5.14%

7.765 The European Communities asserts that the above four interest rates represent "EADS' alternative cost of funding for a loan equivalent" to the 2002 loan from the EIB, and should therefore all be considered relevant to the benchmarking exercise.³⁴⁰² In this regard, the European Communities argues that "the commercial reality is that it is simply not possible to argue credibly that for any one borrower at any point in time there exists (to the nearest one hundred of one percent) a market benchmark consisting of" one single interest rate.³⁴⁰³ Thus, in recognition of this alleged reality, the European Communities concludes that all of the four funding options it has identified must be taken into account. When this is done, the European Communities notes that the difference between the interest rate charged by the EIB and the various (adjusted) commercial market interest rate benchmarks, is between minus three and plus nine basis points – on average, a difference of plus 1.5 basis points or 0.015%.³⁴⁰⁴

7.766 The European Communities also considers that any assessment of whether the EIB loans to EADS confer a benefit must take into account what it alleges are the additional costs of various project-related and administrative obligations found in the EIB loans that would not normally be present in the bond instruments used by the United States or the European Communities for benchmarking.³⁴⁰⁵ The European Communities describes at least nine such project-related obligations,³⁴⁰⁶ and identifies where each is found in each of the EIB loans in dispute.³⁴⁰⁷ The European Communities explains that costs of this kind are not typically found in bond instruments because, as illustrated by an EADS bond issued in 2005, bond financing is not project-specific, but for "general corporate purposes".³⁴⁰⁸ In respect of administrative costs, the European Communities argues that the main additional administrative cost faced by a borrower taking an EIB loan is time – the time needed to undertake the additional procedural steps, most importantly project appraisal, that

about 0.5 to 1.5 alpha-numeric rating notches}, rather than downward adjustments on bond ratings, appear more appropriate". Moody's Investor Service, *Special Comment 'Credit Loss Rates on Similarly Rated Loans and Bonds'*, December 2004, Summary, Exhibit EC-878.

are not required when funding is sought from the bond market.³⁴⁰⁹ Taking all such additional costs into account, the European Communities submits that the interest rate offered by the EIB for the 2002 loan to EADS fell within the range of market interest rates at EADS' disposal on [***], and therefore, did not confer a benefit.³⁴¹⁰

7.767 The United States rejects the benchmarks established by the European Communities for various reasons. As we understand it, the United States' particular criticism of the first of the European Communities' benchmarks is focussed on the appropriateness of using the Reuters' Corporate Bond Spread for Industrials with an A3 credit rating. According to the NERA EIB Report, the European Communities erred in the construction of its first benchmark because it used the "yield on A-3 rated bonds issued by US *domestic* borrowers, not European borrowers."³⁴¹¹ Thus, we understand the United States to argue that the use of the Reuters' Corporate Bond Spread for Industrials with an A3 credit rating in the construction of the market interest rate benchmark means that it is less useful as a proxy for the EIB loan to EADS (which was a USD loan granted by a lending institution outside of the United States to a non-United States corporation) than its own benchmark.

7.768 We recall that the European Communities has not submitted a copy of the "Reuters' 10 year Corporate Bond Spread for Industrials" index that was allegedly used to construct the first of its market interest rate benchmarks for the 2002 loan to EADS. Neither has it explained the extent to which the spread data relied upon was limited (or not) to USD bonds issued in the United States. Moreover, although asked to specifically respond to the United States' criticism of its benchmark, the European Communities did not contest the assertion that it relied upon the "yield on A-3 rated bonds issued by US domestic borrowers".³⁴¹² In this light, we find the European Communities' benchmark to be less relevant to the benchmarking exercise than information on the yields attached to USD bonds issued by European A3-rated companies outside of the United States.

7.769 The second benchmark presented by the European Communities was derived from the yield, on [***], of a Yankee bond issued by Norsk Hydro A/S, maturing in 2014. The European Communities adjusted this yield (5.145%) three times: (i) adding 6.5 basis points to account for the fact that EADS had a "slightly lower" credit rating than Norsk Hydro (which at the time was a single A rated European corporation); (ii) adding a further 5 basis points to reflect the fact that Yankee bonds pay interest semi-annually, whereas the EIB loan to EADS required annual interest payments; and (iii) deducting 6.5 basis points as the cost of the "additional finance-related project cost/obligations" "expressly acknowledged by the ratings agencies" to affect the market prices of bonds and loans.³⁴¹³

7.770 In our view, the European Communities' reliance on data from the Yankee bond market renders its second proposed benchmark a less appropriate commercial proxy for the EIB loan to EADS than the benchmark advanced by the United States. We recall that Yankee bonds are USD bonds issued in the United States to non-United States entities that pay interest semi-annually. In addition, according to Fabozzi and Mann, Yankee bonds are usually issued by high credit quality sovereign and sovereign-guaranteed issuers – whereas Eurodollar bonds are issued mostly by corporations.³⁴¹⁴ Thus, we see interest rates associated with Yankee bond financing to be less appropriate as a proxy for the EIB's USD loan to EADS than bonds issued in the Eurodollar market. Although we recognize the merits of seeking to establish a market interest rate benchmark on the

BCI deleted, as indicated [***]

basis of actual Yankee bond financing with the same maturity as the 2002 loan to EADS obtained by a European corporation having a similar credit rating to EADS, we consider the European Communities' benchmark to be a less appropriate proxy for the interest rate that a commercial lender would have charged EADS in August 2004 for a loan having the same characteristics as the 2002 EIB loan to EADS than the revised benchmark advanced by the United States.

7.771 The third European Communities benchmark is based on a syndicated USD loan to a BBB+ rated European publishing company, Pearson Plc, in July 2004, adjusted to account for EADS better credit rating and the 5 year duration of the loan (compared with the 10 year loan to EADS).³⁴¹⁵ The United States argues that the features of this benchmark, like that derived from Yankee bond information, differ from the EIB loan to EADS to the extent that it involves USD lending by United States lenders.³⁴¹⁶ The European Communities has not disclosed the source of the information on the Pearson Plc syndicated loan. Therefore, we cannot verify whether the syndicate involves only United States lenders. However, in our view, there are several other features of the Pearson syndicated loan which render it less appropriate to use as a commercial proxy for the 2002 EIB loan to EADS than the revised benchmark proposed by the United States. In particular, the recipient of the syndicated loan is a publishing company, whose activities are by their nature very different from those of EADS and Airbus. In this regard, we recall that the 2002 EIB loan to EADS was granted for the purpose of the A380 development programme, a project of largely unprecedented proportions in the field of LCA development. Furthermore, the Pearson loan was syndicated, meaning that the risks were spread between different lenders; and as the European Communities has itself noted,³⁴¹⁷ the Pearson loan involved revolving credit of five years, whereas the EIB loan to EADS involved a "10-year bullet". These features render the syndicated loan quite different from the EIB loan to EADS for the A380. This leads us to conclude that it is a less appropriate proxy for the EIB loan at issue than the revised benchmark proposed by the United States.

7.772 The last commercial interest rate benchmark the European Communities proposes for the 2002 EIB loan to EADS is based on what the European Communities submits it would have cost EADS to "swap" (convert) a Euro denominated bond issued on [***] into US dollars. Using historical secondary market trading data for two Euro denominated bonds issued by EADS that were outstanding on [***] – one maturing in 2010 and another in 2018 – the European Communities arrives at an approximate market price "for a theoretical spread to swaps of a 10-year EADS bond issue as at the date on which the EIB interest rate was fixed".³⁴¹⁸ It then converts this spread into "an approximate spread to USD swaps by subtracting the relevant cross country swap level and adding an estimated level of transaction costs". Because no data were available on USD to EUR cross currency swaps for 10 year maturities on [***], the European Communities derived the relevant cross currency swap from historical "ICAP" data available on Bloomberg.³⁴¹⁹ Transaction costs were estimated on the basis of "ICAP" information to be "half of the bid offer spread on a 10 yr basis swap".³⁴²⁰ Thus, the European Communities concludes that "EADS USD funding through a hypothetical EUR issue {on [***]} would have cost 5.205%".³⁴²¹

³⁴¹⁵ EIB Analysis of NERA EIB Report, Exhibit EC-857 (BCI), pp. 4-5.

³⁴¹⁶ US Comments to EC, Answer to Panel Question 180.

³⁴¹⁷ EIB Analysis of NERA EIB Report, Exhibit EC-857 (BCI), footnote 8.

³⁴¹⁸ The European Communities defines "spread to swaps" as "the differential between the yield of the bond and the corresponding swap". EIB Analysis of NERA EIB Report, Exhibit EC-857 (BCI), footnote 9.

³⁴¹⁹ The European Communities describes "ICAP" as "a major broker in the derivatives business and has a strong presence in interest rate swaps and cross currency swaps". EIB Analysis of NERA EIB Report, Exhibit EC-857 (BCI), footnote 13.

³⁴²⁰ EIB Analysis of NERA EIB Report, Exhibit EC-857 (BCI), footnote 15. The European Communities describes the "bid offer spread" as "the difference between the price at which the financial intermediary is willing to purchase – sell the swap".

³⁴²¹ EIB Analysis of NERA EIB Report, Exhibit EC-857 (BCI), pp. 5-6.

BCI deleted, as indicated [***]

7.773 In commenting on this benchmark, the United States notes that "a hypothetical 'swap' into [***] bonds issued by EADS ... bears no resemblance to the loan actually issued by the EIB."³⁴²² We are also not convinced that the proposed benchmark is an appropriate commercial proxy for what the cost of USD financing comparable with the 2002 EIB loan would have been for EADS.

7.774 Brealey and Myers explain that a typical cross currency swap transaction involving the issuance of a bond would result in the exchange of a series of cash-flows between two parties. In the first instance, the bond issuer would swap funds obtained in one currency on the bond market at a set interest rate with an equivalent amount of financing from a counterpart in another currency. Each year until the bond reaches maturity, the counterpart would provide the bond issuer with the funds needed to make interest payments to the bondholders in the bond currency. In return, the bond issuer would make interest payments in the swap currency on the funds swapped with its counterpart. On maturity of the bond, the counterpart would transfer a sufficient amount of funds in the bond currency to enable the bond issuer to make the final payment of interest and principal to its bondholders. Likewise, the bond issuer would make the last payment of interest and principal in the swap currency to the counterpart.³⁴²³

7.775 Thus, in essence, as we understand it, the benchmark proposed by the European Communities is based on a theoretical agreement between two parties (EADS and a counterpart) to exchange principal and interest payments in separate currencies. It would involve the exchange of principal denominated in EUR (obtained by EADS from a bond issue) for an equivalent amount in USD. In each year until the bond issue reaches maturity, EADS and the counterpart would exchange interest payments – EADS would make USD interest payments to the counterpart at the rate of interest attached to the USD "swap"; and the counterpart would make EUR interest payments to EADS in an amount to cover the interest payments required on the bond. At maturity, the final interest payments would be made and the principals would be re-exchanged between the two parties. In our view, these features of the European Communities' fourth proposed benchmark show that it is a very different type of financing instrument than the 2002 EIB loan to EADS. We are therefore not convinced that it represents a better proxy for the commercial interest rate that EADS would have been asked to pay for USD financing with the same characteristics as the 2002 loan from the EIB than the revised commercial benchmark advanced by the United States.

7.776 The parties' submissions show that establishing an appropriate market interest rate benchmark for the 2002 loan to EADS is a complex exercise. While we accept that EADS would have had a range of options available to it in August 2004 to obtain funding in USD from the market, the options that the parties have advanced involve financial instruments offering different levels of comparability with the loan from the EIB. We recall that in order to determine whether the 2002 loan to EADS conferred a benefit, we must identify which, if any, of the interest rate benchmarks proposed by the parties can serve as the most appropriate proxy for the interest rate that a commercial lender would charge Airbus for financing having *the same or similar characteristics as the 2002 loan to EADS*. Thus, contrary to what is suggested by the European Communities, the fact that EADS may have sought USD financing in August 2004 from a variety of market sources does not necessarily mean that all such sources represent a range of commercial financing options that are *equally comparable* with the 2002 loan to EADS.

7.777 Overall, on the basis of the arguments and evidence submitted by the parties, we consider that the market interest rate proxy that comes closest in terms of key characteristics and features to the 2002 EIB loan to EADS, and which would be appropriate to use as a commercial benchmark for the purpose of our benefit analysis, should be based on the 10 year Eurodollar bond interest rate advanced

³⁴²² US, Comments on EC Answer to Panel Question 180.

BCI deleted, as indicated [***]

by the United States, adjusted to account for EADS' credit rating on [***]. As we have already observed, this benchmark represents the average annual interest rate cost of 10 year USD bond financing outside of the United States on [***] for entities with the same credit rating as EADS that are not domiciled in the United States. It therefore bears close resemblance to the 2002 EIB loan to EADS, which was a 10 year non-amortizing USD loan attracting annual interest payments granted outside of the United States to a European company. In contrast, to the extent that the two bond-based benchmarks presented by the European Communities were based on the cost of USD bond financing obtained (i) *within the United States by United States corporations*; or (ii) *within the United States* by a European company (Yankee bond), they represent USD financing options that have less in common with the EIB loan to EADS than Eurodollar bond market financing.

7.778 The differences between the 2002 EIB loan to EADS and the European Communities' two other proposed market benchmarks are more pronounced. As we have noted, the USD syndicated loan option would involve multiple banks taking on the risk of EADS' default; whereas the EIB loan to EADS involves only one bank. Moreover, it is unclear whether the USD financing under the syndicated loan would be provided from within the European Communities or elsewhere. Likewise, compared with the EIB loan to EADS, a EUR denominated bond swapped into USD is a relatively complex finance instrument that would be given effect through a two step process: first, EADS would need to issue a EUR denominated bond; and second, EADS would have to enter into an agreement with a counterpart to exchange principal and interest payments connected with the EUR denominated bond into USD. Thus, whereas the EIB loan to EADS involves one core contractual relationship (between the EIB and EADS), the hypothetical EUR bond USD swap transaction would involve at least two core contractual relationships – one between EADS and its bondholders and another between EADS and its swap counterpart. In our view, this type of financial instrument bears little resemblance to the 2002 EIB loan to EADS. It is therefore a less reliable proxy, compared with the United States Eurodollar bond benchmark, for the interest rate that a commercial lender would charge EADS for USD financing having the same characteristics as the loan from the EIB.

7.779 Having concluded that the most appropriate commercial interest rate benchmark against which to measure whether the 2002 EIB loan to EADS conferred a benefit is the Eurodollar bond interest rate advanced by the United States adjusted to account for EADS' credit rating in [***], we believe that it is not necessary for us to make any definitive findings on whether further adjustments are required to account for the three types of additional costs the European Communities asserts were incurred under the EIB loan contract, but not in connection with the bond instruments used to derive the parties' interest rate benchmarks. This is because even accepting the entirety of the European Communities' arguments and adjusting the United States' market interest benchmark accordingly, our overall assessment is that the EIB loan to EADS would still be advantageous compared with comparable commercial financing.

7.780 The first of the alleged additional costs are the so-called "additional finance-related project cost/obligations". According to the European Communities, "additional finance-related project cost/obligations" reflect "the fact that different financial instruments have different features and that these features are reflected in the market-pricing of these financial instruments".³⁴²⁴ The European Communities explains that:

"It is, for example, generally accepted that loans are priced cheaper than bonds. This is because, *inter alia*, (i) lenders have a direct relationship with, and have much greater information on, a borrower, whereas bond investors invest through a financial intermediary (typically an investment bank) (ii) a bilateral loan agreement allows lenders to maintain a constant dialogue with their borrowers, something that a bond issuer does not and cannot do with potentially tens of thousands of bondholders (iii)

³⁴²⁴ EC, Answer to panel Question 176.

BCI deleted, as indicated [***]

loan documentation tends to have many more protective covenants than bond documentation and (iv) ultimately, recovery rates in the event of default are typically higher in the case of a loan than in the case of a bond."³⁴²⁵

7.781 Relying on Moody's assessment of the differences in three-year cumulative loss rates between similarly rated loans and bonds, the European Communities submits that it is possible to quantify the "pricing impact of using bonds to benchmark a loan that has more stringent terms and conditions than the benchmark bonds"³⁴²⁶, and calls for a 6.5 basis point reduction in the benchmark interest rates derived from bond market information.

7.782 The United States does not specifically contest the European Communities' reliance or interpretation of the Moody's information. However, it notes that even after making the adjustment to the European Communities' benchmarks to account for the alleged "additional finance-related project cost/obligations" between bonds and the EIB loan, two of the European Communities benchmark's continue to show that the 2002 EIB loan to EADS was non-commercial.³⁴²⁷

7.783 We agree with the European Communities that, in general, the differences between loan and bond instruments may well translate into differences in the price of borrowing that should be taken into account in the present benefit analysis. However, even assuming that the European Communities is correct in asking for a 6.5 basis point adjustment to be made to the parties' bond-based benchmarks, the interest rate attached to the EIB loan to EADS (5.11%) would still be below the level of the United States' adjusted interest rate benchmark (5.5488%). Thus, even accepting the European Communities' submission that "additional finance-related project cost/obligations" must be taken into account in order to identify an appropriate commercial interest rate benchmark against which to measure whether the EIB loan to EADS conferred a benefit, the interest rate attached to the EIB loan to EADS would still be non-commercial, confirming that it confers a benefit within the meaning of Article 1.1(b) of the SCM Agreement.

7.784 The two further cost adjustments called for by the European Communities are to account for what it alleges are the "additional project specific costs/obligations" and "additional administrative-related project costs/obligations" incurred by EADS under the EIB loan. The European Communities recognizes that such costs are not easily quantified. Nevertheless, in the benchmark analyses presented in Exhibit EC-722 (BCI), the European Communities estimates what it considers they might have been, when added to the alleged cost of additional financial obligations, for a number of the challenged EIB loans. For instance, in respect of the 1988 EIB loan to Aérospatiale for the A330/A340,³⁴²⁸ the European Communities submits that the "additional project obligations, financial obligations and administrative obligations" would have cost Airbus at least [***] basis points. Conversely, the European Communities considers that the "additional project obligations, financial obligations and administrative obligations" connected with the 1993 EIB loan to Airbus for the Super Transporteurs³⁴²⁹ (a contract sharing the same type of "project-related additional obligations" as the 1988 loan to Aérospatiale for the A330/A340³⁴³⁰) would have cost Airbus less than [***] basis points.³⁴³¹ For another contract, the European Communities notes that "{e}ven if the other {non-financial} additional obligations are difficult to value precisely, they can definitely be valued at over [***] basis point".³⁴³² Thus, it is clear to us that whatever their precise value, the European

BCI deleted, as indicated [***]

Communities is not suggesting that the alleged additional project and administrative costs incurred by EADS under the 2002 EIB loan for the A380 project were significant in terms of basis points, and certainly not sufficient to reduce a margin of approximately [***] basis points to zero – the difference between the actual interest rate charged on the EIB loan (5.11%) and the United States' adjusted benchmark (5.5488%).

7.785 Moreover, in order to properly take into account the cost of the alleged additional project-related or administrative obligations imposed on EIB borrowers, we believe that it would also be necessary to take into account any similar types of project-related or administrative costs associated with market financing that are not incurred when borrowing from the EIB. The United States submits that seeking to take all such alleged differences into account "would make a benefit analysis virtually impossible". The United States asks how "would one compare the burden associated with applying for EIB loans with the burden (including the efforts of lawyers, bankers, and others) associated with obtaining financing from the market? Or ... how would one compare project-specific 'costs/obligations' identified by the European Communities with the 'costs/obligations' of a borrower having dedicated personnel to maintain relations with investment banks for purposes of regular bond issuances?"³⁴³³ In any event, the United States notes that the European Communities merely asserts that the alleged additional costs "would not normally be present" in the market finance instruments referred to by the United States. According to the United States, had the European Communities undertaken a comparison of the actual "costs/obligations" incurred under the individual EIB loans compared with commercial financing, it would have found that, in fact, the actual costs a company incurs in issuing bonds or raising capital through other market channels do not support its assertions. In this regard, the United States not only points to Boeing's own alleged experience in respect of bond issues,³⁴³⁴ but also a 2003 study of allegedly several thousand issues between 1990 and 1994 cited in the NERA EIB Report, showing total costs ranging from 0.475% to 1.75% for bond offerings and even higher for other types of commercial financing.³⁴³⁵ Given this latter evidence, which the European Communities has not contested, we are not convinced that it would be appropriate to take the alleged additional project-related and administrative costs into account in the manner that is suggested by the European Communities. However, as noted above, even if we were to accept the European Communities' proposition, the interest rate charged on the 2002 EIB loan to EADS would still be below the interest rate charged for comparable market funding.

7.786 The European Communities contends that because a borrower will typically consider the terms and conditions offered by different finance providers before taking out a loan, a market interest rate benchmark should be a spread of rates and not a single interest rate. According to the European Communities, it follows that "a difference of 20 to 50 basis points above or below the single benchmark rate" should not be taken as a sign of benefit.³⁴³⁶ Thus, it would only be where the EIB rate were "convincingly outside this spread of rates" that it could be found to confer a benefit within the meaning of Article 1.1(b) of the SCM Agreement.³⁴³⁷

7.787 We agree with the European Communities that it would not be unreasonable to expect that two or more different commercial lenders may charge slightly different rates of interest for loans having the same terms and conditions. There are many factors that might affect the level at which a

BCI deleted, as indicated [***]

commercial lender will set its interest rates to customers. These might include the level of any reserve requirements, differences between lenders in the assessment of the risk associated with a particular loan, access to liquidity, the lender's desired risk exposure and business model, as well as the commercial relationship it has or wants to build with the potential customer. Because these factors might be valued differently by different commercial lenders, it would not be unreasonable to expect to find different lenders offering comparable loans to the same customer at a different interest rate. In a given set of circumstances, all such offers might represent an appropriate range of market interest rates for a comparable loan.³⁴³⁸ However, in our view, when such a contention is made in WTO dispute settlement, it is up to the party that advances the existence of a range of relevant market interest rates to present credible evidence and convincing argument to establish its parameters. In this instance, we believe the European Communities has failed to make any such presentation. First, the European Communities appears to suggest that the benchmark it has advanced should be considered to be the middle-point in a range of available market interest rates that oscillates "20 to 50 basis points above or below the single benchmark rate". However, it has failed to explain why we should accept this proposition, instead of considering that the benchmarks advanced by the European Communities may fall at the high or low end of the range. Second, the European Communities has not explained exactly why the range of market interest rates that competing lenders would offer for a loan that is comparable with the 2002 EIB loan to EADS should be between 20 and 50 basis points, instead of another set of values. In the absence of any justification for its contention, and in particular, in the light of our findings on the nature of the EIB's lending activities³⁴³⁹, we are not convinced that it would be appropriate to accept that market lenders would have offered a loan to EADS that is comparable with the loan obtained from the EIB in 2002 at an interest rate as much as 50 basis points below the adjusted United States' benchmark.

Commitment fees and non-utilization fees

7.788 We recall that the United States asserts that EADS benefited from the 2002 loan not only because of the below market interest rates charged by the EIB, but also because it did not have to pay any commitment fees or non-utilisation fees. In support of this assertion, the United States refers to the following statement made by the EIB in a document published on its website:

"In addition to its usually advantageous lending rates, the EIB charges neither commitment fees nor non-utilization fees, but may charge fees for a project's appraisal and required legal services in appropriate cases."³⁴⁴⁰

7.789 The United States, argues that when a lender commits to provide a borrower with funding at a later date (as the EIB did in respect of the 2002 loan to EADS) it is giving the borrower a "valuable option".³⁴⁴¹ According to NERA, this "valuable option" manifests itself as the right of a borrower to "access ... funds on agreed terms regardless of whether its credit worthiness deteriorates or market conditions change".³⁴⁴² NERA submits that in return for tying up its capital in this way, a lender will

³⁴³⁸ That a range of interest rates may be charged on comparable commercial loans appears to also have been recognized by the Appellate Body in *Brazil – Aircraft*, where in addressing an alleged claim of export subsidization within the meaning of item (k) of Annex I of the SCM Agreement, it observed that "{i}n any given case, whether or not a government payment is used to secure a 'material advantage', as opposed to an 'advantage' that is not 'material', may well depend on where the *net* interest rate applicable to the particular transaction at issue in that case stands in relation to the range of commercial rates available." Appellate Body Report, *Brazil – Aircraft*, para. 182 (italics original, underline added).

require compensation which will usually take the form of a "commitment fee", quoted as an annual percentage rate paid on the same basis as the loan (annual, semi-annual etc), and calculated on the amount of the loan facility not yet drawn down.³⁴⁴³ The United States estimates that by not paying commitment fees, Airbus saved "an amount of up to USD 910,000 annually".³⁴⁴⁴

7.790 The European Communities accepts that commitment fees are typically charged by banks on the unused amounts of credit lines granted to borrowers "at a fixed spread over the general level of interest rates".³⁴⁴⁵ However, it asserts that the challenged EIB loans did not involve the kind of "valuable option" that would normally attract the payment of such fees.³⁴⁴⁶ The European Communities explains that the EIB enters into two types of loan contracts: (i) "single disbursement" contracts, which provide for one disbursement of a fixed amount of funds in a currency, at an interest rate and on a date that is agreed at the time of signature; and (ii) "open-rate" contracts, where the borrower is granted a loan facility with the right to request disbursements within a certain period, in different currencies, maturities, interest rate regimes (fixed or floating) and amounts, pursuant to a framework that is pre-defined in the contract.³⁴⁴⁷ The European Communities submits that to charge a commitment fee for the first type of loan contract would not be standard market practice because, given that such contracts involve the disbursement of funds typically within a few days of signature, there is no "open" commitment. With regard to "open-rate" contracts, like the 2002 loan contract with EADS, the European Communities argues that the EIB does not offer the kind of contractual assurances that would merit the application of a commitment fee. This is because "open-rate" contracts do not guarantee entities access to funds at a fixed level of interest, irrespective of whether or not a borrower's "credit worthiness deteriorates" or the "cost of credit rises".³⁴⁴⁸ Moreover, the European Communities notes that under such contracts the EIB does not guarantee immediate access to its disbursements.³⁴⁴⁹

7.791 In the particular case of the 2002 EIB loan to EADS, the European Communities explains that the EIB committed to provide EADS with funds at an interest rate to be determined by the EIB in accordance with its internal rules at the time of disbursement, not at the time of signature. The European Communities states that these internal rules require the EIB's board of directors to comply with Article 19.1 of the EIB Statute, which provides that interest rates shall be set to "enable the Bank to meet its obligations, to cover its expenses and to build up a reserve fund". Thus, according to the European Communities, on entering the 2002 loan contract with the EIB, EADS had no certainty or protection in respect of the interest rate that would be charged on any requested disbursement because it had no knowledge of what the EIB's cost of funds, administrative expenses or the level of the EIB's reserve fund, would be at the time of disbursement. Moreover, the European Communities notes that the EIB did not commit to provide EADS with any requested funds within a matter of "one or two days", but expressly reserved the right to take up to 120 days.³⁴⁵⁰

7.792 The European Communities contrasts the above features of the 2002 loan to EADS with a credit facility obtained by EADS in [***] from a syndicate of commercial banks which did charge a commitment fee. This credit facility involved a EUR [***] revolving credit line to be [***] at an interest rate set at a [***] notwithstanding any changes in the relevant banks' cost of funds or the interest rate setting methodology. In addition, pursuant to the credit facility, the bank syndicate was

BCI deleted, as indicated [***]

required to provide funding within three business days of a request from EADS.³⁴⁵¹ The European Communities argues that these differences show that the "valuable option" that the United States contends is the reason why banks charge a commitment fee was not present in the 2002 EIB loan to EADS.³⁴⁵²

7.793 Under the terms of the original loan contract,³⁴⁵³ the EIB agreed to lend EADS a maximum of EUR 700 million, in up to [***] tranches of no less than EUR [***] each, at an interest rate to be determined at the time of EADS' request for disbursement, in accordance with the particular interest rate regime chosen by EADS.³⁴⁵⁴ EADS was granted the right to choose between three different interest rate regimes: a fixed interest rate ("Taux Fixe"), and two types of variable rates ("Taux Variable – Ecart Variable", "Taux Variable – Ecart Fixe").³⁴⁵⁵ The regime chosen by EADS was the fixed rate regime. Article 3.01A of the original contract describes the methodology that would be employed to arrive at the fixed rate of interest charged by the EIB in the following terms:

[***]

7.794 This provision was subsequently modified by amendment of May 2004 (before EADS had requested its first disbursement), which replaced Article 3.01A(ii) with the following text:

"(ii) increased by a margin of 20/100 percentage points (0.20%) if the Tranche in question is a 'Tranche A' ".³⁴⁵⁶

7.795 The original contract further stipulated that after requesting a disbursement, EADS would be notified of the applicable interest rate (and the date upon which the disbursement would be made) ten to 15 days prior to the disbursement actually being made.³⁴⁵⁷ Thus, at the time of *concluding the loan contract*, EADS was aware that the interest rate that it would have to pay on any requested disbursement would be composed of two parts: (i) the interest rate applied by the EIB, on the date of EADS' request for disbursement, to loans presenting the same characteristics as the requested disbursement in terms of currency, repayment schedule, and length and periodicity of interest payments; and (ii) a margin of [***] basis points representing the risk premium charged by the EIB.³⁴⁵⁸ Apart from the value of the [***] basis points risk premium, the prescribed methodology for calculating the fixed interest rate (general EIB lending rate applicable to comparable loans plus an

³⁴⁵¹ EC, Answer to Panel Question 179, referring to various provisions of the EADS [***] Credit Facility, Exhibit EC-881 (BCI), withdrawn and replaced by a similar EUR [***] credit facility in [***], Exhibit EC-882 (BCI).

³⁴⁵² EC, Answers to Panel Questions 87 and 179.

³⁴⁵³ Exhibits EC-167 (BCI), US-158 (BCI)

³⁴⁵⁴ Article 1.02, Exhibits EC-167 (BCI), US-158 (BCI).

³⁴⁵⁵ Article 3.01, Exhibits EC-167 (BCI), US-158 (BCI).

³⁴⁵⁶ Article 1.05, Exhibit EC-879 (BCI). The original contract divided each potential disbursement into two equal parts "Sous Tranche A" and "Sous Tranche B" (Article 1.02E, Exhibits EC-167 (BCI), US-158 (BCI)). However, by amendment of May 2004, this division was replaced by another which separated the available credit into two parts: any disbursement that alone or added together with previous disbursements did not exceed [***] would be designated "Tranche A"; and any other disbursement that alone or added together with previous disbursements exceeded [***] would be designated "Tranche B". (Article 1.03, Exhibit EC-879 (BCI)). In accordance with these terms, the [***] disbursement requested by EADS was designated "Tranche A" and therefore subject to the [***] basis points risk premium.

³⁴⁵⁷ Article 1.02C, Exhibit US-158 (BCI). We note that in the context of "single disbursement" contracts, the European Communities argues that a ten to 15 day delay between the conclusion of a contract and disbursement does not justify payment of a commitment fee. EC, Answer to Panel Question 179, footnote 70. The United States has not argued that the 10 to 15 day notice period is sufficiently long enough to warrant the EIB demanding the payment of a commitment fee.

³⁴⁵⁸ EC, Answer to Panel Question 89; Exhibits EC-722 (BCI) and EC-842.

BCI deleted, as indicated [***]

additional margin) is the same that is set out in the EIB's standard form contract.³⁴⁵⁹ Therefore, the interest rate setting mechanism agreed to under the contract was not unique to EADS, but one that was applied generally by the EIB to other lending activities.

7.796 The United States argues that without knowing more about the precise methodology applied by the EIB in setting interest rates, "it is impossible for the Panel to determine the degree to which interest rates may vary according to date of disbursement and, therefore, the degree of uncertainty a borrower from the EIB actually faces compared with a borrower from a commercial lender".³⁴⁶⁰ Moreover, the United States notes that the European Communities has not indicated which factors the EIB does not take into account when it sets interest rates at the date of disbursement. In particular, the United States observes that whereas the European Communities has identified factors such as the EIB's cost of funds, its administrative expenses, and its reserve fund as variables that may affect the interest rates set by the EIB on the date of disbursement, it has said nothing about whether the EIB takes into consideration a deterioration in the creditworthiness of the borrower.³⁴⁶¹ In making this observation, we understand the United States to suggest that to the extent that the EIB does not take into account any deterioration in the creditworthiness of a borrower between the time a loan is granted and the date of disbursement, it acts like a commercial bank that offers a credit facility on agreed terms and therefore, at least to this extent, would be expected to charge a commitment fee. Thus, the fact that EADS did not pay a commitment fee means that the EIB loan was more advantageous to EADS than comparable market financing.

7.797 In our view, the evidence and arguments before us indicate that the purpose of a commitment fee is to compensate a lender for agreeing, at the time of the conclusion of a loan contract, to provide funding at a later date on interest rate terms reflecting *inter alia*, the credit rating of a borrower at the time the loan contract was concluded.³⁴⁶² In other words, a commitment fee is at least in part required to compensate a lender for the risk that a borrower's credit rating will deteriorate between the time that it is relied upon to set the contract interest rate and the actual disbursement of funds. We find support for this conclusion in the following passage from Brealey and Myers, upon which both parties have relied:

"Credit lines are relatively expensive, for in addition to paying interest on any borrowings the company must pay a commitment fee on the unused amount. In exchange for this extra cost, the firm receives a valuable option: It has guaranteed access to the bank's money at a fixed spread over the general level of interest rates. This amounts to a put option, because the firm can sell its debt to the bank on fixed terms even if its own creditworthiness deteriorates or the cost of credit rises".³⁴⁶³

7.798 We recall that the EIB charged EADS a fixed interest rate made up of two components. It is unclear to us, from the European Communities' description of how the EIB sets interest rates³⁴⁶⁴ and the evidence that is before us, whether the first of these components took into account EADS' creditworthiness. However, our understanding of the second component, the [***] basis point risk premium, is that it was in fact (at least in part) established in the light of EADS' creditworthiness *at the time of signature*. In its 2006 Annual Report, the EIB explains that it applies a loan grading

³⁴⁵⁹ Article 3.01A, EIB Standard Form Contract 2001, Exhibit EC-609 (BCI). Apart from the risk premium text, essentially the same language is used in Article 3.01A of the Standard Form Contract that existed prior to 2001, Exhibit EC-711 (BCI).

BCI deleted, as indicated [***]

system to determine the credit risk of each loan. This involves consideration of *inter alia*, the borrower's credit rating, the value of any guarantee instruments and securities, the contractual framework and the loan's duration, with a view to establishing the level of general or specific "provisioning" required. Operations with a loan grading of "A-" will attract a 0.20% risk premium,³⁴⁶⁵ [***].³⁴⁶⁶

7.799 By applying a fixed risk premium of [***] basis points to the disbursement of funds requested by EADS, irrespective of any possible deterioration in EADS' creditworthiness, the EIB provided EADS with at least part of the "valuable option" that we understand would ordinarily justify commitment fees charged by commercial lenders. It follows that to the extent that the EIB did not require EADS to pay a fee to compensate for its commitment to make funding available at a fixed risk premium, irrespective any deterioration in its creditworthiness, its loan to EADS was more advantageous than a comparable loan from a commercial lender.

7.800 Turning to the United States' claim that the EIB loan to EADS conferred a benefit because the EIB did not charge non-utilization fees,³⁴⁶⁷ we note that apart from making this allegation, the United States has advanced no specific explanation nor adduced any particular evidence or expert opinion (as it did in respect of the EIB's failure to charge a commitment fee)³⁴⁶⁸ that suggests a commercial lender would have required EADS to pay a non-utilization fee for the same type of financing it obtained from the EIB under the 2002 loan contract – namely, a credit line with only a risk premium of [***] basis points being fixed at the time of signature (as opposed to, e.g., the full interest rate applicable to the entire disbursement). In the absence of any such evidence or relevant explanation, and given that the European Communities does not accept that the payment of a non-utilization fee was warranted,³⁴⁶⁹ we are not convinced that the United States has done enough to establish that the 2002 loan to EADS conferred a benefit because the EIB did not require EADS to pay a non-utilization fee.

Conclusion in respect of the 2002 loan to EADS

7.801 On the basis of the foregoing analysis, and in the light of our findings on the nature of the EIB's lending activities,³⁴⁷⁰ we find that the United States has established that the 2002 EIB loan to EADS conferred a benefit within the meaning of Article 1.1(b) of the SCM Agreement because: (i) the interest rate charged by the EIB was less than what a market lender would have asked EADS to pay for comparable financing; and (ii) EADS was not required to pay a commitment fee, even though a fixed [***] basis points risk premium was charged on part of the loan, irrespective of any possible future deterioration of EADS' credit rating. On the other hand, we find that the United States has failed to demonstrate that the 2002 EIB loan to EADS also conferred a benefit upon EADS because of the EIB's failure to charge non-utilization fees.

³⁴⁶⁵ Exhibit EC-842, pp. 149-152.

³⁴⁶⁶ See, footnote 3456 above.

³⁴⁶⁷ The United States describes non-utilization fees as fees charged "in cases where borrowers do not use the credit lines the EIB has provided". US, FWS, para. 402. The European Communities initially described non-utilization fees as "a basis point charge on the amount undrawn". EC, Answer to Panel Question 87. However, in its later submissions, the European Communities suggests that non-utilization fees and commitment fees are essentially two ways of referring "interchangeably" to the same compensation that a bank may seek for "guaranteeing borrowing entities immediate access to a lending bank's money 'at a fixed spread over the general level of interest rates'". EC, Answer to Panel Question 179.

³⁴⁶⁸ Indeed, in presenting its revised benefit analysis for the 2002 EADS loan contract, the United States does not repeat its allegation that the loan conferred a benefit because it did not provide for non-utilization fees, focusing only on the absence of commitment fees. US, SWS, paras. 275 and 278. See, also, NERA EIB Report, p.4, Exhibit US-542 (BCI), where the alleged failure of the EIB to charge EADS non-utilization fees is not identified as a benefit of the 2002 loan contract.

BCI deleted, as indicated [***]

The 1992 loan to Aérospatiale

7.802 The 1992 EIB loan to Aérospatiale was granted pursuant to a contract concluded on 21 July 1992 for the purpose of financing Aérospatiale's construction of buildings and the installation of industrial equipment to be used in the commercialization of the A330/A340. The loan was effected through one disbursement of FRF [***] at an interest rate of [***], payable annually, with a maturity of [***] years in [***], amortizing in the last eight years from [***] (*i.e.*, only interest payments required in the [***] years of the loan; principal plus interest being paid annually only from the [***] year).³⁴⁷¹ The United States alleges that this loan conferred a benefit on Aérospatiale because: (i) it was granted on interest rate terms that were more advantageous than comparable market financing; and (ii) the EIB did not charge Aérospatiale any commitment fees or non-utilization fees.

Interest rate terms

7.803 As already noted, the United States presented market interest rate benchmarks for all of the EIB loans at issue based on the country-specific general corporate borrowing rates calculated in the Ellis Report for each of the relevant Airbus entities.³⁴⁷² These benchmarks were constructed by adding: (i) the average annual interest rate attached to 10-year government bonds issued in France, Germany, Spain and the UK in the years corresponding to the conclusion of the EIB loan contracts (*i.e.*, the risk-free rate of interest); to (ii) the "credit spread" for the Airbus borrower at issue (*i.e.*, an interest rate premium reflecting the additional risk associated with each individual Airbus entity's general borrowing). For Aérospatiale, the United States estimated the "credit spread" in 1992 through the use of a regression model. In essence, this model relied upon information on the actual credit spreads of two 10-year bonds allegedly issued by Aérospatiale in 1993 to estimate what Aérospatiale's credit spreads would have been in each of the years from 1970 to 1992.³⁴⁷³ Applying this methodology, the United States initially advanced a market interest rate benchmark for the 1992 EIB loan to Aérospatiale of [***].³⁴⁷⁴ In its second written submission, the United States revised this benchmark to "incorporate market data on the date of the loan", in response to the European Communities' criticism of its reliance upon annual averages.³⁴⁷⁵ On the basis of its updated analysis, the United States submits that the relevant market interest rate benchmark for a loan having similar characteristics to the EIB loan would be "10.46 percent, approximately [***] basis points [***] than the actual rate the EIB charged {Aérospatiale} of [***] percent".³⁴⁷⁶

7.804 The European Communities criticizes the United States' revised benchmark for being based on what it considers to be an erroneous regression model which relies on too few data points and assumes maturities that are not comparable with the actual maturity of the 1992 EIB loan to

³⁴⁷¹ Exhibits US-167 (BCI), EC-694 (BCI) and EC-698 (BCI).

³⁴⁷² See, para. 7.755 above.

³⁴⁷³ Ellis Report, pp. 11-16, Exhibit US-80 (BCI). ("Regressions to establish parameters of the credit spread model for Aérospatiale ... were based on yield-to-maturity data on two bonds issued by Aérospatiale in 1993. ... Using the coefficients arrived at in this way, together with data from the French yield curve for the period 1970 to 1992, we were able to construct values of the credit spread for ten year general corporate borrowings for Aérospatiale for those years.") We understand that the United States relied upon the actual credit spreads for the two Aérospatiale bonds in years after 1992. ("The same procedure used to construct credit spreads for the French operating company was followed in the case of the United Kingdom: actual BAE Systems credit spreads were used for the years 1991-2006, and the regression parameters derived were used in those years for which out-of-sample yield curve data were available.")

³⁴⁷⁴ US, FWS, para. 411.

³⁴⁷⁵ US, SWS, paras. 274-277; NERA EIB Report, pp 3 and 6 ("We agree with the EC's assertion that market conditions fluctuate and that consequently the rate on the loan must be compared with a benchmark 'at the relevant point in time and in the relevant year the EIB loan was made'"). Exhibit US-542 (BCI).

³⁴⁷⁶ US, SWS, para. 276.

BCI deleted, as indicated [***]

Aérospatiale.³⁴⁷⁷ In particular, the European Communities notes that although the chosen explanatory variables are "significant" because "they pass the so called F test", the model's "R²" value is "only 0.43 in range of 0 to 1, where 1 is the most accurate".³⁴⁷⁸ Moreover, the European Communities argues that the regression model does not take into account the relevant features of the relevant loans, observing that whereas the EIB loan to Aérospatiale is [***], the benchmark established by NERA relies upon a "10-year government bond and is assuming a 10-year bullet loan, ignoring the impact of its amortization schedule".³⁴⁷⁹

7.805 The European Communities considers that the flawed nature of the United States' regression model for the 1992 EIB loan to Aérospatiale is confirmed by the fact that the credit spreads associated with two 10-year bonds actually issued by Aérospatiale in September 1991 and October 1992 were respectively [***] and [***] basis points, less than half the [***] basis points spread estimated by the United States' model, even though there was "no significant news/improvement on the creditworthiness of Aérospatiale to justify such a sharp reduction in spreads".³⁴⁸⁰ Accordingly, the European Communities advances its own market interest rate benchmark, constructed on the basis of the actual [***] basis point credit spread that existed in September 1991 and the interest rate it asserts was attached to French government long-term borrowing having allegedly the same maturity as the EIB loan on the actual date of the EIB disbursement to Aérospatiale, 27 July 1992.³⁴⁸¹ Applying this methodology, the European Communities arrives at a market interest rate benchmark for the 1992 EIB loan to Aérospatiale of [***].³⁴⁸²

7.806 Information contained in Aérospatiale's annual reports suggests that the credit spreads derived from the United States' regression model may indeed be overstated. The two 10-year bonds the European Communities asserts were issued by Aérospatiale in September 1991 and October 1992 were "domestic bonds" that each raised FRF 1 billion at an interest rate of 9.4% and 8.7%, respectively.³⁴⁸³ Aérospatiale issued three additional 10-year "foreign bonds" in 1992 and 1993: one in March and June 1992 raising FRF 1.8 billion at an interest rate of 9.125%;³⁴⁸⁴ one in February 1993 raising FRF 1 billion at an interest rate of 8.375%; and another in July 1993 raising FRF 1.5 billion at an interest rate of 7%.³⁴⁸⁵ As the European Communities notes, the September 1991 and October 1992 bonds were issued with a credit spread above the interest rate paid by the French government on its long-term borrowing (according to the European Communities, respectively [***] and [***] basis points). Thus, when compared with the actual credit spreads on the corporate bonds Aérospatiale issued in 1991 and 1992, the credit spread outcome of the United States' regression model for Aérospatiale in July 1992 (136 basis points) appears to overestimate what Aérospatiale's

³⁴⁷⁷ EC, FWS, para. 1078; EIB Analysis of the NERA EIB Report, p.7, Exhibit EC-857 (BCI).

³⁴⁷⁸ EC, FWS, para. 1078. The Ellis Report describes the "adjusted R2" and "F" statistic as "two summary statistics frequently used to assess the validity of a regression ... : adjusted R2 measures the fraction of the variance of the dependent variable explained by the independent variable(s) adjusted for degrees of freedom, and the F statistic is used to test the hypothesis that all of the slope coefficients are zero." Ellis notes that "in this instance the adjusted R2 is relatively high and the F statistic is highly statistically significant; this shows that the regression model does a good job of estimating the credit spread for Aérospatiale's bonds". Ellis Report, p. 14, Exhibit US-80 (BCI).

³⁴⁷⁹ EIB Analysis of the NERA EIB Report, p.7, Exhibit EC-857 (BCI).

³⁴⁸⁰ EIB Analysis of the NERA EIB Report, p.7, Exhibit EC-857 (BCI).

³⁴⁸¹ Exhibit EC-722 (BCI); EIB Analysis of the NERA EIB Report, p.7, Exhibit EC-857 (BCI).

³⁴⁸² Exhibit EC-722 (BCI).

³⁴⁸³ Aérospatiale 1992 Annual Report, p.61, Exhibit EC-174. We note that Aérospatiale's 1992 Annual Report indicates that a 10-year "domestic bond" for FRF 1 billion was issued in November 1992, not October 1992. The European Communities has not submitted a copy of either of these bond instruments.

BCI deleted, as indicated [***]

cost of financing would have been on the market. Nevertheless, overall, we do not find the evidence submitted by the United States to be insufficient for the purpose of establishing that the 1992 EIB loan to Aérospatiale conferred a benefit.

7.807 First, we note that the risk-free rate of interest used in the construction of the United States' revised market interest rate benchmark is 9.10%,³⁴⁸⁶ the same risk-free borrowing rate applied by the European Communities to derive its own market interest rate benchmark,³⁴⁸⁷ which is [***] rate of interest charged by the EIB on the loan to Aérospatiale. In other words, both of the parties agree that the 1992 EIB loan to Aérospatiale was provided at a contract interest rate [***] to the risk-free rate of interest associated with French government long-term borrowing. There is no doubt, however, that the market would have required Aérospatiale to pay a premium above the risk-free rate of borrowing for such funding, a premium that the European Communities contends was as much as 62 basis points in October 1992 (just three months after conclusion of the EIB loan contract).

7.808 Second, the alternative benchmark presented by the European Communities implies that the 1992 EIB loan to Aérospatiale provided an advantage of [***] basis points relative to comparable financing available on the market. Moreover, even if we were to accept the European Communities' contention that the actual level of the interest charged by the EIB should take into account the cost of the loan guarantee required from Airbus (allegedly having a value of [***] basis points),³⁴⁸⁸ the difference between the adjusted interest rate charged on the EIB loan [***] and the European Communities' market interest rate benchmark [***] would still show an advantage to Airbus of [***] basis points. According to the European Communities, this advantage could not be reduced to below zero by the alleged "additional project obligations, financial obligations and administrative obligations" associated with the 1992 loan compared with the bond instruments used to construct the benchmark.³⁴⁸⁹ Thus, on its face, the European Communities' own benchmark analysis confirms the United States' claim that the interest rate charged by the EIB on the 1992 loan to Aérospatiale was more advantageous than what Aérospatiale could have found on the market.

7.809 The European Communities argues that this interest rate differential is not enough to establish the existence of benefit. In particular, the European Communities argues that the difference of [***] basis points is exceptional and should not be taken as demonstrating that the loan confers a benefit upon Airbus. The European Communities submits that a "likely explanation for the substantial divergence{ }... is that the EIB might have fixed its conditions prior to or following an important movement in the rate".³⁴⁹⁰ The European Communities explains that "if in the morning the EIB fixes its condition for a disbursement and the risk free rate increases in the afternoon, then the EIB rate could appear particularly attractive compared to the new risk free rate of that afternoon."³⁴⁹¹ However, the European Communities has presented no evidence demonstrating that the difference of [***] basis points was attributable to any such volatility in daily interest rates, noting that "{u}nfortunately past data is recorded only once per day and therefore it is often impossible to take account of same-day movements in the risk-free rate".³⁴⁹² Thus, the European Communities does not assert, as a matter of fact, that any actual volatility in the level of the risk-free rate of interest on 27 July 1992 explains the interest rate differential of [***] basis points.

³⁴⁸⁶ *I.e.*, the difference between the United States proposed benchmark [***] and the [***] basis points credit spread calculated for Aérospatiale.

BCI deleted, as indicated [***]

7.810 Finally, we recall that in the case of the 1992 EIB loan to Aérospatiale, the contract rate of interest was set at [***] as the risk-free interest rate attached to French government long-term borrowing. Therefore, to accept that the loan to Aérospatiale was not granted at below-market interest rate terms, in the context of the European Communities' own market interest rate benchmark, would mean that we would have to accept that a commercial lender would have granted Aérospatiale a loan at an interest rate that did not take into account Aérospatiale's own discrete credit risk. However, we cannot accept this to be a plausible outcome as it implies that a commercial lender would have been prepared to lend funds to Aérospatiale at a rate of return that at most was [***] the rate of return it could have obtained from lending to the French government at a time when even according to the European Communities' own evidence, Aérospatiale's borrowing carried a risk premium above the risk-free rate of French government lending.³⁴⁹³

Commitment fees and non-utilization fees

7.811 The United States relies on the same evidence advanced in respect of the 2002 loan to EADS to claim that the 1992 loan to Aérospatiale also conferred a benefit upon Airbus because it did not require Aérospatiale to pay any commitment fees or non-utilisation fees.³⁴⁹⁴ The European Communities refutes the United States' allegation, on the basis of the same arguments we have already described above.³⁴⁹⁵

7.812 We recall that the 1992 loan to Aérospatiale was concluded on [***]. It provided for one single disbursement on [***], to be repaid at an interest rate of [***], agreed and fixed in the contract on the date of signature.³⁴⁹⁶ Thus, under the 1992 loan contract, the EIB legally committed itself to providing Aérospatiale with a loan on certain fixed terms and conditions [***] before actually transferring the borrowed funds to Aérospatiale. Conversely, Aérospatiale undertook an obligation to take possession of the prescribed funding amount on [***] on terms and conditions fixed when the contract was concluded.

7.813 According to the European Communities, it would not be in accordance with market practice for the EIB to demand the payment of a fee for making this type of commitment.³⁴⁹⁷ The United States has not contested the European Communities' assertion. Indeed, the characterisation of commitment fees used in the NERA EIB Report that is relied upon by the United States suggests that commitment fees would not normally be demanded by a bank when a borrower has undertaken an *obligation* to borrow, as opposed to merely an *option* to borrow under an open credit line.³⁴⁹⁸ In this light, and given the particular circumstances of the 1992 loan to Aérospatiale, which included the EIB making funds available to Aérospatiale at a fixed interest rate merely [***] after the loan contract was concluded, the United States has failed to advance sufficient evidence and argument to persuade us that the EIB's failure to charge a commitment fee conferred a benefit upon Aérospatiale.

7.814 On the issue of non-utilization fees, once again we note that apart from alleging that the 1992 loan to Aérospatiale (like all EIB loans) conferred a benefit because the EIB did not charge non-utilization fees, the United States has advanced no specific explanation nor adduced any particular evidence or expert opinion suggesting that a commercial lender would have required Aérospatiale to

³⁴⁹³ See, para. 7.806 above.

³⁴⁹⁴ US, FWS, para. 414, citing Exhibits US-160 and US-161.

³⁴⁹⁵ See, para. 7.790 above.

³⁴⁹⁶ See, para. 7.802 above.

³⁴⁹⁷ See, para. 7.790 above.

³⁴⁹⁸ The relevant passage of the NERA EIB Report reads: "an important feature of the EIB Loan Contract signed in 2002 is the fact that it gave the European Communities [***]. This means that the EIB committed itself to make that amount of funds available to EADS. This is a common occurrence in commercial lending, but banks require compensation for tying up their capital, usually in the form of what is called a 'Commitment Fee'". NERA EIB Report, p.4, Exhibit US-542 (BCI).

BCI deleted, as indicated [***]

pay a non-utilization fee for the same type of financing it obtained from the EIB under the 1992 loan contract. In the absence of any such evidence or relevant explanation, and given that the European Communities does not accept that the payment of a non-utilization fee was warranted,³⁴⁹⁹ we are not convinced that the United States has done enough to establish that the 1992 loan to Aérospatiale conferred a benefit because the EIB did not require Aérospatiale to pay a non-utilization fee. In any case, were we to understand non-utilization fees as compensation charged by commercial lenders on unused amounts of credit lines, as the parties have suggested,³⁵⁰⁰ we would note that the entirety of the amount of financing that was the subject of the 1992 loan agreement was, in fact, transferred to Aérospatiale as stipulated in the contract.³⁵⁰¹ On this basis, there would be no justification for requiring Aérospatiale to pay non-utilization fees.

Absence of a risk premium

7.815 In its second written submission, the United States argued that the European Communities admitted in its first written submission that the EIB did not charge a risk premium on any loans granted prior to 1999. According to the United States, the absence of a risk premium means that the EIB's loans were "by definition preferential to those available in the market, because the EIB (unlike a market lender) did not charge a premium to compensate the risk it assumed in providing financing to the borrower".³⁵⁰²

7.816 The European Communities does not contest the United States' view that market lenders would normally charge a premium in return for assuming the risks associated with lending to a particular borrower. However, it rejects the United States' assertion that the EIB's introduction of "risk pricing" in 2000 necessarily implies that all pre-2000 loans conferred a benefit because they did not involve the EIB charging a risk premium. The European Communities explains that the EIB's introduction of "risk pricing" in 2000 was the result of its ongoing efforts to apply "best banking practices" in the area of risk management. The European Communities asserts that following a review of its credit policies, the EIB decided to introduce "risk pricing" as "an alternative (total or partial) to {the} external {loan} guarantees" required under Article 18.3 of its Statute. Thus, the application of a risk premium on a particular loan as of 2000 was intended to place the EIB "in a position similar to that it would have been if the loan benefited from an external guarantee". In other words, the European Communities submits that the introduction of risk premia did "not entail a relaxation of (or variation to) a consistent existing credit policy". Rather, it merely represented another option for the bank to apply in the context of managing the risk associated with its loans.³⁵⁰³

7.817 To support its assertions, the European Communities submits four pages from the EIB's 2006 Annual Report, which describe its risk management practices.³⁵⁰⁴ We have closely reviewed this document and find that it does not substantiate the totality of what the European Communities is alleging. While it states that the EIB does attempt to "align its risk management systems to changing economic conditions and evolving regulatory standards" with a view to following "best market practice", it says nothing about why the EIB decided to introduce a risk premium in 2000 or whether it was intended, as the European Communities contends, to operate as a partial or total alternative to the loan guarantees required under Article 18.3 of its Statute. Thus, although we consider the European Communities' explanation to make some intuitive sense, we cannot accept it as a matter of fact on the basis of the evidence that has been presented.

³⁴⁹⁹ EC, Answers to Panel Question 87 and 179.

³⁵⁰⁰ See, footnote 3467 above.

³⁵⁰¹ See, para. 7.802 above. Exhibits EC-167 (BCI) and EC-698 (BCI) confirm that the amount of agreed funding was transferred to Aérospatiale on [***].

³⁵⁰² US, SWS, para. 269.

³⁵⁰³ EC, SNCOS, para. 190.

³⁵⁰⁴ Exhibit EC-842.

BCI deleted, as indicated [***]

7.818 Moreover, while the European Communities' explanation of why the EIB introduced a risk premium suggests that risks associated with EIB lending prior to 2000 were taken into account by means of "external guarantees", the European Communities has not explained how the particular guarantee provided under the 1992 loan to Aérospatiale served to compensate the EIB for the risks associated with lending to Aérospatiale in the same way that a market lender would have sought compensation for the same risks under a commercial loan.

7.819 In this light, we find that the European Communities has failed to advance sufficient evidence and argument to persuade us that the absence of a risk premium on the EIB 1992 loan to Aérospatiale did not confer a benefit upon Airbus. We therefore uphold the United States' claim that the 1992 loan to Aérospatiale conferred a benefit, within the meaning of Article 1.1(b) of the SCM Agreement, because it did not include a risk premium.

Conclusion in respect of the 1992 loan to Aérospatiale

7.820 On the basis of the foregoing analysis, and in the light of our findings on the nature of the EIB's lending activities,³⁵⁰⁵ we find that the 1992 loan to Aérospatiale conferred a benefit on Aérospatiale, within the meaning of Article 1.1(b) of the SCM Agreement, because it was granted: (i) at an interest rate [***] to the cost of borrowing for the French government and was therefore more advantageous than the interest rate that would have been available to Aérospatiale on the market for comparable financing; and (ii) on interest rate terms that did not include a risk premium. On the other hand, we find that the United States has failed to establish that the 1992 loan to Aérospatiale also conferred a benefit because the EIB did not require Aérospatiale to pay any commitment fees or non-utilization fees.

The other EIB loans

7.821 We recall that in addition to the 2002 loan to EADS for the A380 and the 1992 loan to Aérospatiale for the A330/A340, the United States claims that ten other loans provided by the EIB to various Airbus entities were subsidies within the meaning of the SCM Agreement. These loans are: (i) the 1993 loan to Aérospatiale for the Super Transporteurs; (ii) the 1991 loan to British Aerospace for the A330/A340; (iii) the 1990 loan to CASA for the A320 and A330/A340 (No. 14711/ES); (iv) the 1990 loan to CASA for the A320 and A330/A340 (No. 14712/ES); (v) the 1990 loan to British Aerospace for the A330/A340; (vi) the 1990 loan to Airbus Industrie GIE for the A321; (vii) the 1989 loan to CASA for the A320 and A330/A340; (viii) the 1989 loan to British Aerospace for the A320; (ix) the 1988 loan to British Aerospace for the A320; and (x) the 1988 loan to Aérospatiale for the A330/340. The United States argues that all of these loans conferred a benefit on Airbus because: (a) each loan was granted on interest rate terms that were more advantageous than comparable market financing; (b) the EIB did not charge the respective borrowers any commitment fees or non-utilization fees; and (c) the EIB did not charge a risk premium on each loan.

Interest rate terms

7.822 During the Annex V process, the United States (through the Facilitator) requested the European Communities to provide information on the terms and conditions of the each of the challenged EIB loans, including all of the relevant loan contracts.³⁵⁰⁶ The European Communities responded by providing information only with respect to two of these loans: the 2002 loan to EADS

³⁵⁰⁵ See, para. 7.753 above.

³⁵⁰⁶ See, e.g., Questions 81 and 82 for the EC Pursuant to Annex V of the SCM Agreement, 7 October 2005, Exhibit US-4 (BCI).

BCI deleted, as indicated [***]

for the A380 and the 1992 loan to Aérospatiale for the A330/A340.³⁵⁰⁷ In the absence of information on the actual terms and conditions of the remaining ten loans, the United States endeavoured to substantiate its claims on the basis of publicly available information. On the question of benefit, the United States presented information in its first written submission demonstrating that in each of the years between 1996 and 2004, the average annual interest rates charged by the EIB to its borrowers were lower than the general corporate borrowing rates for the different Airbus entities calculated in the Ellis Report.³⁵⁰⁸ This information was presented in the form of the following table:

Table 9 – US EIB Average Interest Rate Information

	1996	1997	1998	1999	2000	2001	2002	2003	2004
EIB Average	7.87	7.21	6.70	5.91	6.06	5.64	4.74	4.06	3.82
Germany	8.04	7.53	6.56	6.48	7.14	6.75	6.75	6.14	6.11
France	8.13	7.47	6.63	6.60	7.27	6.89	6.83	6.20	6.17
UK	9.25	8.41	6.82	6.21	6.54	6.20	6.10	5.76	6.12
Spain	10.56	8.29	6.82	6.72	7.41	7.07	6.93	6.19	6.17

7.823 The United States argues that in the light of the European Communities' refusal to disclose the actual terms and conditions of the loans, the reasonable inference for the Panel to draw on the basis of the information set out in this table is that the remaining ten EIB loans it challenges were provided to Airbus on beneficial interest rate terms.³⁵⁰⁹

7.824 The European Communities disclosed the interest rates it alleges were charged by the EIB for the first time in Exhibit EC-154 (BCI) to its first written submission. The interest rates were listed in a one page overview of the status of the challenged loans as of January 2007 prepared by the EIB, which also included information on the relevant loan contract numbers, disbursement and repayment dates, loan currencies and outstanding principal amounts.³⁵¹⁰ In its second written submission, the European Communities submitted copies of the EIB loan contracts it considered to be relevant, together with its own benefit analysis for all of the loans.³⁵¹¹ According to the information contained in the European Communities' analysis, the remaining ten EIB loans involved the transfer of funds to Airbus through 22 disbursements at different interest rates, sometimes under separate contracts. The European Communities performed a distinct benefit analysis for each individual disbursement of funds, in effect treating each disbursement as a separate loan. Overall, in the light of all of its arguments, including the contention that a proper benefit analysis must take into account a 20 to 50 basis points range of market interest rates above and below the relevant market interest rate benchmark, the European Communities concludes that none of the 22 disbursements conferred a benefit on Airbus.

7.825 In the following sections, we examine the arguments and evidence the parties have advanced on whether the ten loans cited above in paragraph 7.821 confer a benefit in more detail, focussing in

³⁵⁰⁷ See, e.g., Questions 81 and 82 for the EC Pursuant to Annex V of the SCM Agreement, 7 October 2005, Exhibit US-5 (BCI).

³⁵⁰⁸ Prior to 1996, the EIB's Annual Reports did not contain any information on the average interest rates charged to its borrowers. US, FWS, para. 415, footnote 491 citing EIB Annual Reports from 1997 to 2004, Exhibits US-168 to US-175.

³⁵⁰⁹ US, FWS, paras. 410-416; US, SWS, para. 271; US, Answer to Panel Question 149.

³⁵¹⁰ Exhibit EC-154 (BCI).

³⁵¹¹ Previously, in Answer to Panel Question 89, the European Communities had set out its own benefit analysis in respect of the 1988 loan to Aérospatiale for the A330/A340 and the 1990 loan to British Aerospace for the A330/A340. However, on that occasion, the European Communities provided no evidence to substantiate the facts used as the basis for its analysis.

BCI deleted, as indicated [***]

the first instance on the European Communities' disclosure of what it asserts were the actual interest rates charged by the EIB. We then review the parties' positions on the relevant market interest rate benchmarks, before turning to conclude on the merits of the United States' claims.

What were the interest rates charged by the EIB?

7.826 According to the European Communities, the interest rates charged by the EIB for the relevant disbursements were either fixed for the entire duration of the contract (*single interest rate* disbursements), or revised during the course of the loan through the application of an interest rate revision clause or simply due to the loan contracts being modified or restructured (*revised interest rate* disbursements).

7.827 The European Communities' benefit analysis indicates that 13 of the disbursements under the challenged loans were made at a single interest rate. For these disbursements, the European Communities took the interest rate set by the EIB as the starting point of its benefit analysis. Where necessary, the European Communities adjusted each rate to account for the alleged basis points value of the securities provided under the relevant loans. The European Communities argues that adjustments for loan securities were necessary because the bonds used in the establishment of the market interest rate benchmarks were unsecured. Therefore, in order to ensure a proper comparison, the European Communities submits that the basis points value of the loan securities had to be taken into account in the benefit analysis.

7.828 The European Communities made loan security adjustments to the single interest rate disbursements effected under two loans to British Aerospace³⁵¹² and two loans to Airbus Industrie and Aérospatiale³⁵¹³. In the case of British Aerospace, the European Communities asserts that the loans from the EIB were [***].³⁵¹⁴ The European Communities valued this security at [***] basis points because it alleges that this was the amount by which the EIB increased the relevant interest rate when it agreed to release the security in [***].³⁵¹⁵ The two loans to Airbus Industrie and Aérospatiale³⁵¹⁶ were secured, respectively, by a loan guarantee and an assignment of receivables. The European Communities valued each security at [***] basis points, explaining that "the security is given a relatively low value, to reflect the fact that state-ownership of the relevant companies had already ensured a relatively high rating profile (and the higher rating profile the less valuable the security)".³⁵¹⁷ It therefore made an upward adjustment of [***] basis points to the corresponding interest rates.

7.829 After carefully reviewing the arguments and evidence submitted by the European Communities in respect of the above-mentioned loan security adjustments,³⁵¹⁸ we are satisfied that both the need for and the value attributed by the European Communities to each security is reasonable

³⁵¹² In particular, the European Communities made a security adjustment to one of two disbursements under each of the 1990 and 1991 loans to British Aerospace for the A330/A340.

³⁵¹³ Both disbursements under the 1990 loan to Airbus Industrie for the A321, and one disbursement under the 1993 loan to Aérospatiale for the Super Transporteurs.

BCI deleted, as indicated [***]

and can be accepted.³⁵¹⁹ We note that the United States has not specifically contested these adjustments.

7.830 For the nine remaining disbursements, the initial interest rates set by the EIB were subsequently modified due to the loans being amended, or because of interest rate revisions mandated under the contracts. For these disbursements, the European Communities used the interest rate charged by the EIB at the time of the revision or amendment as the starting point of its analysis. For example, according to the European Communities, the 1990 loan to British Aerospace for the A330/A340 was initially effected through two disbursements under separate contracts.³⁵²⁰ The interest rate terms of one of these disbursements were subsequently modified when amended in 1999, resulting in a reduction of the applicable interest rate on the outstanding loan principal from [***] to [***].³⁵²¹ For this particular disbursement, the European Communities used the interest rate charged by the EIB following the restructuring ([***]) as the starting point of its analysis.

7.831 The European Communities made loan security adjustments to the revised interest rate disbursements effected under two loans to Aérospatiale.³⁵²² The European Communities asserts that two of the three disbursements under the 1988 loan for the A330/A340, and one disbursement under the 1993 loan for the Super Transporteurs were secured by a loan guarantee from EADS NV as well as real estate mortgages.³⁵²³ Because these securities were offered after 2002, the European Communities decided to value them at [***] basis points each because [***] by the EIB for the 2002 loan to EADS, which was [***].³⁵²⁴ For the third disbursement under the 1988 loan for the A330/A340, the European Communities made an upward adjustment of [***] basis points, reflecting the value it attributed to the loan security, which was in the form of an assignment of receivables. As we understand it, the European Communities justifies this [***] basis point adjustment explaining that "the security is given a relatively low value, to reflect the fact that state-ownership of the relevant companies had already ensured a relatively high rating profile (and the higher rating profile the less valuable the security)".³⁵²⁵

7.832 We have carefully reviewed the arguments and evidence submitted by the European Communities in respect of the these loan security adjustments,³⁵²⁶ and are satisfied that both the need

³⁵¹⁹ As we have previously noted (at para. 7.783 above), we agree with the European Communities that, in general, differences between loan and bond instruments may well translate into differences in the price of borrowing that should be taken into account in the present benchmarking exercise. It seems to us that the value of a security provided under a loan agreement should be taken into account when comparing the interest attached to that loan with the price of unsecured bond financing.

³⁵²⁰ The first disbursement of [***] being made on [***] at a fixed interest rate of [***], Exhibit EC-706 (BCI). A second disbursement of [***] was made on [***] at a revisable interest rate of [***], Exhibit EC-707 (BCI).

³⁵²¹ Exhibit EC-708 (BCI).

³⁵²² All three disbursements under the 1989 loan to Aérospatiale for the A330/A340, and one disbursement under the 1993 loan to Aérospatiale for the Super Transporteurs. As we understand it, the European Communities did not make a security adjustment to the two revised interest rate disbursements granted under each of the 1990 and 1991 loans to British Aerospace because the revised interest rates charged on these disbursements were above the relevant Ellis Report market interest rate benchmarks. In other words, although securities were provided for the purpose of both disbursements (Article 7, Exhibits EC-722 (BCI), EC-705 (BCI) and EC-706 (BCI)), the European Communities took their alleged value into account only for the purpose of adjusting the interest rates charged for one of two disbursements under each loan. *See*, para. 7.828 above.

³⁵²⁶ Exhibits EC-154 (BCI); EC-722 (BCI); EC-695 (BCI), Article 7.01; EC-699 (BCI), Articles 2.02 and 2.03; EC-697 (BCI), Articles 2.01 and 2.02.

BCI deleted, as indicated [***]

for and the value attributed by the European Communities to each security is reasonable and can be accepted. Again, we note that the United States has not specifically contested these adjustments.

7.833 The United States does not explicitly dispute the European Communities' assertions in respect of the values of the interest rates charged by the EIB for each of the relevant disbursements. Indeed, to the extent that these values correspond to those found in Exhibit EC-154 (BCI), we note that the United States has itself relied upon information contained in the same exhibit: (i) to confirm its assertion that the EIB provided a loan to British Aerospace for the A330/A340 in 1991;³⁵²⁷ and (ii) when it withdrew its complaint against the alleged 1997 EIB loan to Aérospatiale for the Super Transporteurs.³⁵²⁸ The United States does, however, criticize the European Communities' decision to conduct its benefit analysis for certain loans on the basis of revised interest rates, arguing that it ignores the interest rates applicable from each relevant loan's inception, thereby rendering it incomplete.³⁵²⁹

7.834 We agree with the United States that to the extent that the European Communities' benefit analysis is based on the alleged interest rate applicable following the most recent contractual modification or interest rate revision, without also taking into account interest charged over the previous life of the loan, it is only partially relevant to assessing whether the EIB loans conferred a benefit. For example, in the case of the 1990 loan to British Aerospace for the A330/A340, the European Communities' benefit analysis for one of the two [***] disbursements made in 1991 relies upon the alleged interest rate ([***)] charged on the amount of debt outstanding ([***)] at the time the loan was amended (1999).³⁵³⁰ It says nothing about whether the [***] interest rate charged on the same disbursement between 1991 and 1999 conferred a benefit. Thus, the European Communities' focus on revised interest rates means that its analysis does not determine whether the relevant disbursements, as a whole, conferred a benefit. Nevertheless, to the extent that the revised interest rates represent the interest rate terms associated with a particular disbursement for at least part of the life of a loan, they are in our view relevant for the purpose of determining whether the disbursement was provided on beneficial interest rate terms over that same period. With this qualification in mind, we believe that it would be appropriate, in the light of the evidence and arguments that are before us, to rely upon the EIB interest rates disclosed in the European Communities' benefit analysis as the *starting point* of our own evaluation of the United States' claims. These interest rates, and other related information drawn from our understanding of Exhibit EC-722 (BCI), are set out in the following table:

³⁵²⁷ US, Answer to Panel Question 17.

³⁵²⁸ At footnote 481 of its FWS, the United States noted that it would not be necessary for the Panel to determine whether the alleged 1997 loan to Aérospatiale for the Super Transporteurs was a subsidy if the European Communities confirmed that the alleged loan was never drawn by Aérospatiale. Information in Exhibit EC-154 (BCI) indicated that the loan had been [***]. The Panel asked the United States (Panel Question 12) whether it intended to continue to pursue its claim against this alleged measure "in the light of this information". The US answered that it did not intend to do so. US, Answer to Panel Question 12.

³⁵²⁹ US, SWS, paras. 272-273.

³⁵³⁰ The actual amount of debt outstanding at the time was [***], Exhibit EC-708 (BCI), Article 2.4.

Market interest rate benchmarks advanced by the United States

7.835 Although the EC had disclosed all of the alleged interest rates charged by the EIB and provided copies of what it asserts were all of the relevant loan contracts by the time of its second written submission, the United States did not revise the market interest rate benchmarks advanced in its first written submission. We recall that the benefit analysis presented by the United States in its first written submission compared the average annual interest rates charged by the EIB to its borrowers in each year between 1996 and 2004 with the general corporate borrowing rates for the different Airbus entities calculated in the Ellis Report in those same years. Given the European Communities' disclosure, it is now possible to identify the Ellis Report interest rate benchmarks that correspond more precisely with the information set out in the European Communities' benefit analysis about the challenged loans. These are reported in the following table:

Table 11 – Ellis Report Benchmarks

Loan	Disb. No.	Ellis Report Benchmark	Loan	Disb. No.	Ellis Report Benchmark
1988 loan to British Aerospace	1	6.21%	1993 loan to Aérospatiale	1	8.49%
1989 loan to British Aerospace	1	6.21%		2	6.17%
1990 loan to British Aerospace	1	11.51%	1989 loan to CASA	1	9.46%
	2	11.51%		2	9.46%
1991 loan to British Aerospace	1	6.21%		3	None
	2	11.51%	1990 loan to CASA (No. 14711)	1	None
1990 loan to Airbus Industrie	1	None		2	None
	2	None		3	None
1988 loan to Aérospatiale	1	6.20%	1990 loan to CASA (No. 14712)	1	None
	2	6.20%		2	None
	3	6.63%		3	None

7.836 In considering the evidentiary value of the Ellis Report benchmarks, we believe it is important to bear in mind that they were constructed on the basis of lending in local currencies, not USD. As such, to the extent that the EIB loans at issue involved USD financing, the Ellis Report provides no relevant market interest rate benchmark. Moreover, as we have explained elsewhere,³⁵³¹ the Ellis

³⁵³¹ See, para. 7.803 above.

BCI deleted, as indicated [***]

Report benchmarks were partly derived from interest rate information relating to government bonds with a 10 year maturity. However, the bond-comparable maturity of most of the EIB loans at issue was of a different duration. Finally, we recall that the Ellis Report market interest rate benchmarks were calculated using annual average interest rate data. In the case of the 1992 EIB loan to Aérospatiale, the United States revised the Ellis Report benchmarks precisely because NERA agreed with the European Communities that, for the purpose of assessing whether the EIB loans conferred a benefit, the interest rate charged by the EIB "must be compared with a benchmark 'at the relevant point in time and in the relevant year the EIB loan was made'".³⁵³² It follows that, by its own logic, the United States' failure to revise the market interest rate benchmarks calculated in the Ellis Report for the remaining EIB loans, after the European Communities' disclosure of the interest rates charged by the EIB, means that the Ellis Report interest rate benchmarks for the EIB loans are less accurate than a benchmark based upon interest rate information for comparable market financing in the same currency, with the same maturity and on the same date as the challenged loans.³⁵³³

Market interest rate benchmarks advanced by the EC

7.837 The European Communities did not establish a market interest rate benchmark for each of the challenged EIB loans, but only those to Airbus companies other than British Aerospace. This is because, according to the European Communities, the interest rates charged by the EIB on its loans to British Aerospace, adjusted where relevant to account for the cost of the security and other financial, project and administrative obligations, were above the general corporate borrowing rates calculated for British Aerospace in the Ellis Report.³⁵³⁴

7.838 For the EIB loans to other Airbus entities, the European Communities constructed market interest rate benchmarks through the application of a methodology similar to that used in the Ellis Report: an estimated credit spread for the relevant Airbus borrowing entity was added to the interest rate attached to government risk-free borrowing at the time (or as close as possible to the time) of each disbursement. The European Communities' benchmarks also took into account the maturity of each disbursement and the fact that a certain number of the loans were made in USD.³⁵³⁵

- EC Benchmarks for loans to Airbus Industrie and Aérospatiale

7.839 In the case of the two USD disbursements made under the 1990 loan to Airbus Industrie for the A321, the risk-free rate used by the European Communities was the rate associated with a relevant United States treasury bond having a maturity comparable to that of the two disbursements.³⁵³⁶ The European Communities then added a credit spread which it based on actual credit spread information relating to a USD bond issued by Elf Aquitaine. The European Communities asserts that Elf Aquitaine "was the only French issuer in the [***] market close to the relevant date with a similar rating profile" compared with Airbus Industrie.³⁵³⁷

³⁵³² NERA EIB Report, p.3, Exhibit US-542 (BCI), (underline added).

³⁵³³ In its second non-confidential oral statement, the United States did in fact respond to the benefit analysis presented by the European Communities in its second written submission. However, the United States' comments were limited to criticizing the European Communities' assertion that certain alleged additional loan obligations taken on by EIB borrowers make EIB loans more expensive than commercial loans, and must therefore be taken into account in the benefit analysis. US, SNCOS, para. 122.

³⁵³⁴ Exhibit EC-722 (BCI), p.2.

³⁵³⁵ Exhibit EC-722 (BCI).

³⁵³⁶ The European Communities explains that "{w}here there was no risk free rate available reflecting the precise maturity profile of the relevant EIB loan available, the risk free rate has been derived by linear interpolation of relevant treasury rates". Exhibit EC-722 (BCI), p.2.

³⁵³⁷ Exhibit EC-722 (BCI), pp 2, 11-13.

BCI deleted, as indicated [***]

7.840 The market interest rate benchmarks against which the European Communities compared the interest rates charged by the EIB on the disbursements under the two loans to Aérospatiale were constructed in much the same manner. The disbursement-date value of the credit spread (taken from an actual FRF bond issued by Aérospatiale or the Merrill Lynch Index for A rated or AAA rated corporate bonds) was added to the interest rate attached to a French government FRF bond having a maturity comparable to that of the disbursement.³⁵³⁸ For one of the disbursements under the 1993 loan for the Super Transporteurs, we understand the European Communities to have added the credit spread identified in the Merrill Lynch Index for A rated corporate bonds having a maturity of 3 to 5 years (similar to the alleged maturity of the disbursement at issue) to the relevant EURIBOR (European Interbank Offer Rate) at the time of the disbursement.³⁵³⁹

7.841 The European Communities' market interest rate benchmarks for loans to Airbus Industrie and Aérospatiale are shown in the following table:

Table 12 – EC Market Interest Rate Benchmarks (Loans to Airbus Industrie and Aérospatiale)

Loan	Disb. No.	EC Benchmark	Loan	Disb. No.	EC Benchmark
1990 loan to Airbus Industrie	1	8.79%	1993 loan to Aérospatiale	1	6.53%
	1	7.70%		2	Euribor + 0.26%
1988 loan to Aérospatiale	1	4.09%			
	2	3.55%			
	3	3.98%			

- EC Benchmarks for loans to CASA

7.842 For the nine disbursements made under the loans to CASA, the European Communities constructed a market interest rate benchmark on the basis of the cost of borrowing for the Spanish government. The European Communities asserts that this was justified because each of the relevant disbursements was "[***] through budgetary allocations".³⁵⁴⁰ Thus, in respect of the two disbursements made to CASA in PTAS, the European Communities' market interest rate benchmark is equivalent to the interest rate attached to Spanish government borrowing in PTAS at the time of the relevant disbursements. Because it would have been more expensive for the Spanish government to borrow in USD than for the United States government to borrow in USD at the relevant time, the European Communities determined the market interest rate benchmarks for the seven USD disbursements by adding a "Spain spread" to the value of the relevant United States treasuries. The "Spain spread" was derived from the "spread at issuance (the only data available) on a 10 year maturity Kingdom of Spain bond issue".³⁵⁴¹ The European Communities' market interest rate benchmarks for the loans to CASA are listed in the following table:

³⁵³⁸ Exhibit EC-722 (BCI), p.2.

³⁵³⁹ Exhibit EC-722 (BCI), pp. 2 and 13.

- EIB interest rates compared with the market interest rate benchmarks

7.843 We recall that in order to determine whether a financial contribution in the form of a loan confers a benefit, an assessment must be made of whether that loan places the recipient in a more advantageous position compared with the position the recipient would have been in had a comparable loan been obtained from a commercial lender.³⁵⁴² To this end, both parties' submissions have focussed on showing that the interest rates charged by the EIB were either above or below the interest rates that they consider would have been charged for a comparable loan to the relevant Airbus entity on the commercial lending market. Below we evaluate the merits of the parties' submissions, using the final (adjusted or unadjusted) EIB interest rates identified by the European Communities (reproduced in columns (b) and (e) of Table 10) as the *starting point* of our assessment. We conduct our evaluation on a disbursement-by-disbursement basis, in the same way the European Communities presented its own benefit analysis in Exhibit EC-722 (BCI). In this regard, we agree with the European Communities that to the extent that each of the challenged loans was effected through more than one disbursement of funds on different dates and interest rates, it makes sense to assess whether the entirety of the loan conferred a benefit upon Airbus by examining the interest rates charged on each of the disbursements individually. We begin our evaluation by focusing on the loans to British Aerospace.

- The loans to British Aerospace

7.844 The four EIB loans to British Aerospace that the United States challenges (the 1988 and 1989 loans for the A320 and the 1990 and 1991 loans for the A330/A340) were given effect through three single interest rate disbursements and three revised interest rate disbursements, all in GBP. Comparing the interest rates charged by the EIB on each of these disbursements, as presented and where relevant as adjusted in Exhibit EC-722 (BCI), with the market interest rate benchmarks established in the Ellis Report gives the following result³⁵⁴³:

³⁵⁴² See, para. 7.753 above.

³⁵⁴³ We recall that the European Communities did not establish its own market interest rate benchmarks for the loans to British Aerospace. See, para. 7.837 above.

1990 loan to British Aerospace	1	[***]	11.51%	[***]
	2	[***]	11.51%	[***]
1991 loan to British Aerospace	1	[***]	6.21%	[***]
	2	[***]	11.51%	[***]

[***]
[***]

7.845 For five of the six disbursements, Table 14 shows that the interest rates charged by the EIB were above the market interest rate benchmarks established in the Ellis Report. Two of these were the single interest rate disbursements made under the 1990 loan for the A330/A340. On this basis, it is possible to conclude that the 1990 loan for the A330/A340 was provided to British Aerospace on interest rate terms that were not more advantageous than the interest rate terms the United States asserts would have been available to British Aerospace on the market for a comparable loan. For the three other disbursements (both disbursements under the 1988 and 1989 loans and one of the two disbursements under the 1991 loan), the EIB interest rates in Table 14 reflect those in force *after* the relevant loan contracts had been amended in 1999.³⁵⁴⁴

7.846 As we have previously explained, a benefit analysis that focuses on only the latest applicable interest rate following a contract revision, without also taking into account interest charged by the EIB up to the date of the interest rate revision, is only partially relevant to determining whether the disbursement, as a whole, confers a benefit. Thus, although Table 14 indicates that the interest rates charged by the EIB for the three revised interest rate disbursements were higher than the market interest rate benchmarks established in the Ellis Report, the same result does not automatically follow for the interest rates charged by the EIB on the same disbursements prior to being revised.

7.847 The contract that first amended the interest rates charged on these three disbursements was submitted in Exhibit EC-708 (BCI). On the basis of the information in this contract amendment and other evidence that is before us,³⁵⁴⁵ we can make the following findings about the interest rates that were in effect *prior* to the relevant contractual amendment:

³⁵⁴⁴ Exhibit EC-708 (BCI).

³⁵⁴⁵ Exhibits EC-154 (BCI); EC-703 (BCI); EC-704 (BCI); EC-706 (BCI); and EC-708 (BCI).

BCI deleted, as indicated [***]

Table 15 – EIB Loans to British Aerospace (Interest Rates Charged Prior to 1999 Restructuring)

Loan	Disb. No.	EIB Interest Rate	EIB Interest Rate Applicable From	Ellis Report Benchmark	Variance
1988 loan to British Aerospace	1	[***]	[***]	9.67%	[***]
1989 loan to British Aerospace	1	[***]	[***]	10.19%	[***]
1991 loan to British Aerospace	1	[***]	[***]	11.51%	[***]

7.848 Thus, the initial interest rates charged by the EIB on both disbursements under the 1988 and 1989 loans for the A320 were above the corresponding Ellis Report benchmarks. For the disbursement under the 1991 loan for the A330/A340, the initial interest rate charged by the EIB was below the relevant Ellis Report benchmark. However, we recall that Airbus had provided a particular security under this loan, which the European Communities valued at [***] basis points.³⁵⁴⁶ Adding this to the interest rate charged by the EIB, it is possible to arrive at an adjusted interest rate of [***], which is [***] basis points above the corresponding Ellis Report benchmark.

7.849 The interest rates charged on the three disbursements to British Aerospace were revised once again by amendment of 17 May 2004.³⁵⁴⁷ The interest rates charged on the two disbursements made under the 1988 and 1989 loans were increased, with retroactive effective from 16 October 2003, to [***]. Similarly, the interest rate charged on the disbursement made under the 1991 loan was increased to [***], with retroactive effect from 11 March 2003. In 2003, the corresponding Ellis Report market interest rate benchmark was 5.76%.

7.850 All this confirms the information contained in Table 14 and makes it possible to conclude that the financing provided to British Aerospace under the 1988, 1989 and 1991 loans was agreed on interest rate terms that were not more advantageous than what the Ellis Report suggests would have been available to British Aerospace on the market for comparable loans.

7.851 Finally, we note that Table 14 shows that one single interest rate disbursement was provided to British Aerospace at an interest rate that was [***] below the relevant Ellis Report market interest rate benchmark. However, given the complexities associated with establishing market interest rate benchmarks for the above EIB loans, and in the light of our comments on the relatively low evidentiary value of the Ellis Report benchmarks,³⁵⁴⁸ we believe that a [***] difference between the interest rate charged by the EIB and the market interest rate benchmark calculated in the Ellis Report is not enough to confirm the United States' contention that the interest rate charged by the EIB on this disbursement was more advantageous than comparable market financing.

- The loans to Airbus Industrie and Aérospatiale

7.852 The three EIB loans to Airbus Industrie and Aérospatiale that the United States challenges (the 1990 loan for the A321, the 1988 loan for the A330/A340 and the 1993 loan for the Super Transporteurs) were given effect through two single interest rate disbursements in USD, one single interest rate disbursement in FRF, and four revised interest rate disbursements in FRF. Comparing the interest rates charged by the EIB on each of these disbursements, as presented and where relevant as

³⁵⁴⁶ See, para. 7.828 above.

³⁵⁴⁷ Exhibit EC-710 (BCI).

³⁵⁴⁸ See, para. 7.836 above.

BCI deleted, as indicated [***]

adjusted in Exhibit EC-722 (BCI), with the market interest rate benchmarks advanced by both parties gives the following result:

Table 16 – EIB Loans to Airbus Industrie and Aérospatiale vs. Market Interest Rate Benchmarks

Loan	Disb. No.	EIB Interest Rate	Ellis Report Benchmark	Variance	EC Benchmark	Variance
1990 loan to Airbus Industrie	1	[***]	None	-	8.79%	[***]
	2	[***]	None	-	7.70%	[***]
1988 loan to Aérospatiale	1	[***]	6.20%	[***]	4.09%	[***]
	2	[***]	6.20%	[***]	3.55%	[***]
	3	[***]	6.63%	[***]	3.98%	[***]
1993 loan to Aérospatiale	1	[***]	8.49%	[***]	6.53%	[***]
	2	[***]	6.17%	[***] [‡]	Euribor + 0.26%	[***]

[***]

[‡] Although the European Communities did not disclose the relevant EURIBOR rate, we note that on [***], EURIBOR rates ranged between 2.064% (one week) and 2.388% (12 months).³⁵⁴⁹ It is therefore reasonable to conclude that the difference between the Ellis Report market interest rate benchmark of 6.17% and the EIB interest rate was [***].

7.853 Table 16 shows that the interest rates charged by the EIB on several of the disbursements made under the three loan contracts were below the market interest rate benchmarks established by both parties. However, the interest rate differentials vary considerably depending upon which party's benchmark is used in the analysis.

7.854 Compared with the European Communities' benchmarks, the Ellis Report benchmarks have a more remote temporal connection with the loans at issue because they are based on annual average interest rate information. On the other hand, the European Communities' benchmarks are based on interest rate information taken from the date, or as close as possible to the date, of the actual loan disbursement or interest rate revision. To this extent, and as we have already noted,³⁵⁵⁰ the Ellis Report benchmarks are likely to be less accurate than the benchmarks established by the European Communities, a result we believe the United States acknowledged when it revised the Ellis Report benchmark for the 1992 EIB loan to Aérospatiale in the light of the European Communities' criticism of its reliance on annual average interest rates.³⁵⁵¹ Moreover, we recall that whereas the Ellis Report benchmarks for all of the loans reflect the interest rate terms associated with 10 year borrowing, the European Communities' benchmarks are based on the alleged interest rates charged for borrowing over a term that matches more closely the actual maturity of the loans at issue. In this light, we believe that, for the purpose of determining whether the EIB loans to Airbus Industrie and Aérospatiale conferred a benefit, it would be appropriate to rely upon the market interest rate benchmarks established by the EC.

7.855 Taking the European Communities' market interest rate benchmarks as the relevant point of comparison, we note that the interest rates charged by the EIB were below the relevant benchmarks in respect of both disbursements made under the 1993 loan for the Super Transporteurs (by [***] and [***] basis points), and disbursements 1 and 3 made under the 1988 loan for the A330/A340 (by

³⁵⁴⁹ Euribor Historical Data, www.euribor.org/html/download/euribor_2004.txt, visited by the WTO Secretariat on 3 July 2008.

³⁵⁵⁰ See, para. 7.836 above.

³⁵⁵¹ See, para. 7.803 above.

BCI deleted, as indicated [***]

[***] basis points each). Despite this result, the European Communities considers that it cannot be concluded that these four disbursements were granted at below-market interest rates.

7.856 First, as we have previously noted, the European Communities contends that in assessing whether the EIB loans conferred a benefit, we must determine whether the rate charged by the EIB was convincingly outside a spread of interest rates "20 to 50 basis points above or below the single benchmark".³⁵⁵² While we accept the reasonableness of the principle underlying the European Communities' contention – namely that market lenders may offer slightly different rates of interest for loans granted on the same or comparable terms and conditions – we have found that the European Communities has failed to properly substantiate its position.³⁵⁵³ Thus, we cannot accept that the range of market interest rate benchmarks advanced by the European Communities is an appropriate basis for finding that the above four disbursements were not granted on beneficial interest rate terms.

7.857 Second, and only in respect of disbursements 1 and 3 under the 1988 loan, the European Communities asserts that the [***] basis points difference between the alleged rate charged by the EIB and its own market interest rate benchmarks would fall to below zero, after taking into account the cost of additional project, financial and administrative obligations attached to EIB loans that would not normally be found in the bond instruments used to establish its market interest rate benchmarks.³⁵⁵⁴ Relying on Moody's assessment of the differences in three-year cumulative loss rates between similarly rated loans and bonds, the European Communities submits that it is possible to quantify the "pricing impact of using bonds to benchmark a loan that has more stringent terms and conditions than the benchmark bonds"³⁵⁵⁵, and calls for a 6.5 basis point reduction in the benchmark interest rates derived from bond market information.³⁵⁵⁶

7.858 As we have previously noted, we find the logic of the European Communities' position to be, in general, persuasive.³⁵⁵⁷ Moreover, we note that the United States has not specifically contested the European Communities' reliance on Moody's assessment, nor has it specifically challenged the European Communities' assertion that on the basis of Moody's assessment, an adjustment of 6.5 basis points would be appropriate.³⁵⁵⁸ In this light, we find that when properly adjusted by 6.5 basis points to account for differences between the inherent characteristics of loan instruments compared with bonds, the interest rates charged by the EIB for disbursements 1 and 3 under the 1988 loan do not appear to have conferred a benefit upon Aérospatiale.

7.859 However, we note that the interest rates that are identified in Table 16 as being charged on disbursements 1 and 3 under the 1988 loan reflect the effective interest rates *after* a series of interest rate revisions.³⁵⁵⁹ Again, we recall our view that a benefit analysis that focuses on only the latest applicable interest rate following an interest rate revision, without also taking into account interest charged by the EIB up to the date of that revision, is only partially relevant to determining whether the

³⁵⁵⁶ See, para. 7.780 above.

³⁵⁵⁷ See, para. 7.783 above.

³⁵⁵⁸ US, Comments on EC Answer to Panel Question 176.

³⁵⁵⁹ The two disbursements at issue granted under the 1988 loan were first transferred to Aérospatiale on [***] and [***] at a respective annual interest rate of [***] and [***] Exhibit EC-697 (BCI). The 1988 loan contract envisaged that the interest rate on outstanding disbursement amounts would be revised [***] Exhibit EC-693 (BCI), Article 3.01. The interest rates disclosed by the European Communities in its benefit analysis (which we have used as the basis of the values identified in Table 16) were those in force on [***] and [***], *see*, Table 10 above. It follows that the original interest rate applicable to disbursement 1 must have been revised at least twice between [***] and [***]; and at least once in respect of disbursement 3 between [***] and [***].

BCI deleted, as indicated [***]

terms of the disbursement, as a whole, confer a benefit. Thus, although Table 16 indicates that the *revised interest rates* charged by the EIB on disbursements 1 and 3 under the 1988 loan were above the European Communities' market interest rate benchmarks (when adjusted by 6.5 basis points), the same result does not automatically follow for the interest rates charged by the EIB on the same disbursements prior to the interest rate revision.

7.860 In order to determine whether market interest rate terms were applied to each of the relevant disbursements as a whole, we would need to know the interest rate (or interest rates) charged prior to each revision. However, the European Communities has advanced no information about the precise number of revisions the EIB actually effected. Neither do we know the values of all of the previously applicable interest rates, or the outstanding disbursement values to which they applied. In our view, this is information that the European Communities could have disclosed in answering Panel Question 89, or at the very least, when the European Communities presented its own benefit analysis in respect of each of the challenged loans in Exhibit EC-722 (BCI). In this light, and bearing in mind our findings on the nature of the EIB's lending activities,³⁵⁶⁰ we conclude, on the basis of the entirety of the information that is before us, that the interest rates charged by the EIB on disbursements 1 and 3 under the 1988 loan prior to, respectively, [***] and [***] were below-market. Moreover, given that the (below-market) interest rates previously applicable on disbursement 1 would have been in force for 14 years and that this loan disbursement had a 15 year maturity, we also find that the interest rate terms of this disbursement conferred a benefit on Aérospatiale for almost its entire life.³⁵⁶¹ Similarly, we find that the (below-market) interest rate terms applicable to disbursement 3 ensured that Aérospatiale benefited for approximately eight years of this loan disbursement's 15 year maturity.³⁵⁶²

7.861 Turning to the two disbursements made by the EIB to Aérospatiale under the 1993 loan for the Super Transporteurs, we see from Table 16 that both appear to have been provided on interest rate terms that were below-market. One of these disbursements (disbursement 1) was a single interest rate disbursement. It is therefore possible to conclude that this disbursement was provided to Aérospatiale on interest rate terms that were more advantageous than the interest rate terms that the European Communities believes would have been available on the market. However, in respect of the second disbursement, we note that the EIB interest rate shown in Table 16 reflects the interest rate charged by the EIB *after* the last of a series of interest rate revisions.³⁵⁶³ Again, we recall our view that a benefit

³⁵⁶⁰ See, para. 7.753 above.

³⁵⁶¹ Disbursement 1 was transferred to Aérospatiale on [***] at an initial interest rate of [***]. This interest rate was subject to revision [***] Exhibit EC-693 (BCI), Article 3.01. The interest rate disclosed by the European Communities in its benefit analysis (which we have used as the basis of the values identified in Table 16) was the interest rate in force on [***], see, Table 10 above. The disbursement was fully repaid in advance ("remboursement anticipé") on [***]. Exhibit EC-154 (BCI). Thus, disbursement 1 under the 1988 loan was repaid over [***]. Exhibits EC-154 (BCI), EC-693 (BCI), EC-697 (BCI) and EC-722 (BCI). Given that we have held the interest rates charged by the EIB on this disbursement prior to [***] to be below-market, it is possible to conclude that Aérospatiale paid below-market interest rates for approximately [***] out of the [***] years of life of this disbursement.

³⁵⁶² Disbursement 3 was transferred to Aérospatiale on [***] at an initial interest rate of [***]. This interest rate was subject to revision [***], Exhibit EC-693 (BCI), Article 3.01. The interest rate disclosed by the European Communities in its benefit analysis (which we have used as the basis of the values identified in Table 7) was the interest rate in force on [***]. See, Table 10 above. We understand from Exhibit EC-722 (BCI) and EC, Answer to Panel Question 89 that this was the last applicable interest rate, which remained in place until [***], when the loan was repaid in full., Exhibit EC-154 (BCI) Thus, disbursement 3 under the 1988 loan was repaid over [***] years, Exhibits EC-154 (BCI), EC-693 (BCI), EC-697 (BCI) and EC-722 (BCI). Given that we have held the interest rates charged by the EIB on this disbursement prior to [***] to be below-market, it is possible to conclude that Aérospatiale paid below-market interest rates for approximately [***] out of the [***] years of life of this disbursement.

³⁵⁶³ Disbursement 2 under the 1993 loan was transferred to Aérospatiale on [***] at a [***] interest rate subject to [***] Exhibit EC-695 (BCI), Article 3.01B; and Exhibit EC-699 (BCI). The interest rate disclosed by

BCI deleted, as indicated [***]

analysis that focuses on only the latest applicable interest rate following an interest rate revision, without also taking into account interest charged by the EIB up to the date of that revision, is only partially relevant to determining whether the terms of the disbursement, as a whole, confer a benefit. Thus, although Table 16 indicates that the *revised interest rate* charged by the EIB on disbursement 2 under the 1993 loan was below the market interest rate benchmarks established by the European Communities, the same result does not automatically follow for the interest rates charged by the EIB on the same disbursement prior to the interest rate revision.

7.862 In order to determine whether favourable interest rate terms were applied to this disbursement as a whole, we would need to know the interest rate (or interest rates) charged prior to the revision. However, again, we note that the European Communities has advanced no information about the precise number of revisions the EIB actually effected. Neither do we know the values of all of the previously applicable interest rates, or the outstanding disbursement values to which they applied. In our view, this is information that the European Communities could have disclosed in answering Panel Question 89, or at the very least, when the European Communities presented its own benefit analysis in respect of each of the challenged loans in Exhibit EC-722 (BCI). In this light, and bearing in mind our findings on the nature of the EIB's lending activities,³⁵⁶⁴ we conclude, on the basis of the entirety of the information that is before us, that all of the prior interest rates charged by the EIB on disbursement 2 under the 1993 loan to Aérospatiale were also below-market.

7.863 Finally, we note that for three of the seven disbursements identified in Table 16 (both disbursements made under the 1990 loan for the A321 and one under the 1988 loan for the A330/A340), the interest rate charged by the EIB was greater than the European Communities' market interest rate benchmarks. Both disbursements under the 1990 loan for the A321 were single interest rate disbursements made in USD, for which the United States did not present any market interest rate benchmarks. The other disbursement is the second of the three revised interest rate disbursements made under the 1988 loan to Aérospatiale for the A330/A340.³⁵⁶⁵ The European Communities has explained that the interest rate applied to this latter disbursement was revised three times. In other words, four different interest rates were charged by the EIB on this disbursement.³⁵⁶⁶ However, the European Communities has disclosed neither the value of the four interest rates, nor the dates of the interest rate revisions or the outstanding disbursement amounts to which they applied. Again, this is information that was in the possession of only the European Communities; information which we consider could have been disclosed by the European Communities when answering Panel Question 89, or at the very least, when the European Communities presented its own benefit analysis in respect of each of the challenged loans in Exhibit EC-722 (BCI). In this light, and bearing in mind our findings on the nature of the EIB's lending activities,³⁵⁶⁷ we conclude, on the basis of the entirety of the information that is before us, that all of the prior interest rates charged by the EIB on disbursement 2 under the 1988 loan were below-market. Moreover, given that the below-market interest rates applicable on disbursement 2 under the 1988 contract were in force for 14 out of the loan

the European Communities in its benefit analysis (which we have used as the basis of the value identified in Table 16) was the interest rate applicable on [***], *see*, Table 10 above.

³⁵⁶⁴ *See*, para. 7.753 above.

³⁵⁶⁵ This disbursement was transferred to Aérospatiale on [***] at an annual interest rate of [***] Exhibit EC-697 (BCI). The 1988 loan contract envisaged that the interest rate on outstanding disbursement amounts would be revised [***] Exhibit EC-693 (BCI), Article 3.01. The interest rate disclosed by the European Communities in its benefit analysis (which we have used as the basis of the values identified in Table 16) was the interest rate in force on [***], *see*, Table 10 above. It follows that the original interest rate applicable to this disbursement must have been revised at least twice between [***] and [***].

³⁵⁶⁶ EC, Answer to Panel Question 89.

³⁵⁶⁷ *See*, para. 7.753 above.

BCI deleted, as indicated [***]

disbursement's 19 year expected maturity, we also find that the interest rate terms of the disbursement conferred a benefit on Aérospatiale for approximately three quarters of its expected life.³⁵⁶⁸

- The loans to CASA

7.864 The EIB loans to CASA challenged by the United States (the 1989 and 1990 loans for the A320 and A330/A340) were given effect through two revised interest rate disbursements in PTAS and seven single interest rate disbursements in USD. Comparing the interest rates charged by the EIB on each of these disbursements, as reported in Exhibit EC-722 (BCI), with the market interest rate benchmarks established by the parties gives the following result³⁵⁶⁹:

Table 17 – EIB Loans to CASA vs. Market Interest Rate Benchmarks

Loan	Disb. No.	EIB Interest Rate	Ellis Report Benchmark	Variance	EC Benchmark	Variance
1989 loan to CASA	1	[***]	9.46%	[***]	9.17%	[***]
	2	[***]	9.46%	[***]	9.17%	[***]
	3	[***]	None	-	9.28%	[***]
1990 loan to CASA (No. 14711)	1	[***]	None	-	9.12%	[***]
	2	[***]	None	-	8.78%	[***]
	3	[***]	None	-	9.38%	[***]
1990 loan to CASA (No. 14712)	1	[***]	None	-	8.67%	[***]
	2	[***]	None	-	8.39%	[***]
	3	[***]	None	-	8.41%	[***]

[***]

7.865 We recall that the market interest rate benchmarks constructed by the European Communities for the EIB loans to CASA were based on the cost of borrowing to the Spanish government because of the loan guarantees provided by INI, the Spanish government's industrial holding company. By equating the market interest rate benchmarks to the cost of Spanish government borrowing in PTAS and USD, the European Communities is, in effect, suggesting that CASA's credit worthiness, as a separate and independent entity from the Spanish government, and the risk associated with the funded projects, did not affect the EIB's interest rate setting decisions. In other words, the European Communities' benchmarks imply that because of the INI loan guarantees, the loans to CASA should be compared with market financing available to the Spanish government.

7.866 The United States has not challenged the European Communities' approach to establishing the relevant interest rate benchmarks. Neither has it argued that the loan guarantees provided by INI

³⁵⁶⁸ The disbursement at issue was made to Aérospatiale on [***]. The European Communities explains that the interest rate originally applied to this disbursement was revised three times, the last time on [***], when it was set at [***]. This last interest rate was intended to remain in place until maturity on [***]. Thus, it was expected that the disbursement would be fully repaid over [***] years. EC, Answer to Panel Question 89 and Exhibits EC-154 (BCI), EC-693 (BCI), EC-697 (BCI) and EC-722 (BCI). Given that we have held the interest rates charged by the EIB on this disbursement prior to [***] to be below-market, it is possible to conclude that Aérospatiale paid below-market interest rates for approximately [***] out of the [***] years of its maturity.

³⁵⁶⁹ The United States has not advanced any market interest rate benchmarks for the EIB loans disbursed in USD.

BCI deleted, as indicated [***]

afforded CASA with any particular advantage that was inconsistent with the European Communities' obligations under the SCM Agreement.³⁵⁷⁰ In our view, it follows from the European Communities' own logic that, at least for the purpose of setting the applicable interest rate, the INI loan guarantees transformed the loans to CASA into loans that are akin to loans to the Spanish government. This being the case, a market interest rate benchmark that is based on the cost of Spanish government borrowing would seem to be appropriate.

7.867 Turning to the data presented in Table 17, we note that the *revised interest rates* charged by the EIB for the two disbursements made in PTAS under the 1989 loan were below the Ellis Report and EC market interest rate benchmarks by comparable margins, respectively, [***] and [***] basis points. However, it does not automatically follow that the previous interest rates charged by the EIB on the same disbursements were also below-market. In order to determine whether favourable interest rate terms were applied to each disbursement as a whole, we would need to know the interest rate (or interest rates) charged prior to the revision.

7.868 The two disbursements made in PTAS under the 1989 loan were first transferred to CASA on [***].³⁵⁷¹ The loan contract indicates that the interest rates charged on the two disbursements were to be determined through application of the EIB's standard interest rate setting mechanism, and that they would be subsequently revised to the extent that the loaned principal remained outstanding on [***].³⁵⁷² We understand that it is these revised interest rates (*i.e.*, the interest rates applicable to the outstanding loan principal as of [***]) that the European Communities has used in its benefit analysis, and which we have also relied upon as the basis of the relevant EIB interest rate values identified in Table 17. However, the European Communities has not disclosed the initial interest rates charged by the EIB, and neither are these evident from the loan contract. Again, we consider this to be information that was in the possession of only the European Communities; information which we believe could have been disclosed by the European Communities when answering Panel Question 89, or at the very least, when the European Communities presented its own benefit analysis in respect of each of the challenged loans in Exhibit EC-722 (BCI). In this light, and bearing in mind our findings on the nature of the EIB's lending activities,³⁵⁷³ we conclude, on the basis of the entirety of the information that is before us, that the prior interest rates charged by the EIB on the two disbursements in PTAS made under the 1989 loan contract were also below-market.

7.869 Table 17 indicates that a third, single interest rate, disbursement was made under the 1989 loan in USD. As already noted, unlike the European Communities, the United States has not submitted a comparable market interest rate benchmark for this disbursement. The European Communities' market interest rate benchmark indicates that this disbursement was not granted on interest rate terms that were more advantageous than what CASA could have obtained from a commercial lender for a comparable loan. Therefore, we find that the third, single interest rate, USD, disbursement made under the 1989 loan did not confer a benefit upon CASA.

7.870 Bearing in mind that the funds transferred via the first and second disbursements under the 1989 loan amounted to more than half of the principal made available under the 1989 loan contract, it is possible to conclude that the majority of the funds lent to CASA under the 1989 loan were obtained at preferential interest rates compared with the market, thus conferring upon it a benefit within the meaning of Article 1.1(b) of the SCM Agreement.

³⁵⁷⁰ We recall that loan guarantees are explicitly identified in Article 1.1(a)(1)(i) of the SCM Agreement as one type of "potential direct transfer of funds or liabilities", and as such, under certain circumstances, they may amount to subsidies falling within the scope of the SCM Agreement.

³⁵⁷¹ Exhibit EC-154 (BCI).

³⁵⁷² Exhibit EC-700 (BCI), Article 3.01.

³⁵⁷³ *See*, para. 7.753 above.

BCI deleted, as indicated [***]

7.871 Of the six single interest rate USD disbursements made to CASA under the two 1990 loans, Table 17 indicates that one was made at an interest rate that was [***] basis points below the European Communities' market interest rate benchmark. We note that the principal transferred to CASA under this disbursement represented approximately [***] of the funds made available under loan No. 14711.³⁵⁷⁴ On this basis, it is possible to conclude that just over [***] of the funds borrowed by CASA from the EIB under loan No. 14711 was subject to below-market interest rates, thus conferring a benefit within the meaning of Article 1.1(b) of the SCM Agreement.

7.872 Finally, as we have previously observed, the European Communities contends that in assessing whether the EIB loans conferred a benefit, we must determine whether the rate charged by the EIB was convincingly outside a spread of interest rates "20 to 50 basis points above or below the single benchmark".³⁵⁷⁵ However, for the same reasons we have outlined above,³⁵⁷⁶ we cannot accept that the range of market interest rate benchmarks advanced by the European Communities is an appropriate basis for finding that the relevant disbursement under the 1990 loan to CASA was not granted on beneficial interest rate terms.

Commitment fees and non-utilization fees

7.873 Once again, the United States relies on the same evidence advanced in respect of its complaint against the 2002 loan to EADS and the 1992 loan to Aérospatiale to claim that each of the remaining challenged EIB loans also conferred a benefit because the EIB did not charge commitment fees or non-utilisation fees.³⁵⁷⁷ The European Communities refutes the United States' allegation, on the basis of the same arguments we have already described above.³⁵⁷⁸

7.874 Of the 22 disbursements made under the ten loans reviewed in this section of our Report, the precise disbursement amounts, interest rate values and disbursement dates were, among other terms and conditions, agreed and fixed at the time of signature in respect of seven disbursements. Four of these were disbursements made under each of the four loan contracts between the EIB and British Aerospace.³⁵⁷⁹ The other three were the disbursements made under the 1990 loan between the EIB and CASA (No. 14711).³⁵⁸⁰ In each case, the EIB legally committed itself to providing British Aerospace and CASA with loans on certain fixed terms and conditions either [***], or on a specified date, ranging between [***] and [***] after the date of signature.³⁵⁸¹ In return, not only did British Aerospace and CASA undertake an obligation to take possession of the prescribed funding amounts on the dates and interest rate terms fixed in the contract, but they also agreed to being liable to pay a

³⁵⁷⁸ See, para. 7.790 above.

³⁵⁷⁹ All disbursements made under the 1988 and 1989 loans to British Aerospace for the A320; and one of two disbursements made under each of the 1990 loans to British Aerospace for the A330/A340 Exhibits EC-703 (BCI), EC-704 (BCI), EC-705 (BCI) and EC-706 (BCI).

³⁵⁸⁰ All disbursements made under the 1990 loan to CASA for the A320 and A330/A340 (No. 14711) Exhibit EC-701 (BCI).

³⁵⁸¹ For each disbursement, the delays between contract signature and disbursement date were: [***] under the 1988 loan to British Aerospace, Article 1.02, Exhibit EC-703 (BCI); [***] under the 1989 loan to British Aerospace, Article 1.02, Exhibit EC-704 (BCI); [***] in respect of disbursement 2 under the 1990 loan to British Aerospace, Article 1.02A, Exhibit EC-705 (BCI); [***] in respect of disbursement 1 under the 1990 loan to British Aerospace, Article 1.02B, Exhibit EC-706 (BCI); and respectively [***], [***] and [***] for the disbursements made under the 1990 loan to CASA (No. 14711), Article 1.02, Exhibit EC-701 (BCI).

BCI deleted, as indicated [***]

fee to the EIB in the event that they were to either: (i) request the EIB to defer the disbursements to another date;³⁵⁸² or (ii) annul the disbursements altogether.³⁵⁸³

7.875 We recall that the United States has not contested the European Communities' assertion that it would not be in accordance with market practice for the EIB to demand the payment of a fee for the type of commitment it made in respect of the above seven disbursements.³⁵⁸⁴ Indeed, as we have already noted, the characterisation of commitment fees used in the NERA EIB Report that is relied upon by the United States suggests that commitment fees would not normally be demanded by a bank when a borrower has undertaken an *obligation* to borrow, as opposed to merely an *option* to borrow under an open credit line.³⁵⁸⁵ In this light, we are not convinced, given the particular terms (including penalty provisions) applicable to the above seven disbursements, that the United States has done enough to establish that a commitment fee would have been charged by a commercial lender for comparable financing, and therefore that the EIB's failure to charge a commitment fee in each of the above cases conferred a benefit upon British Aerospace and CASA.

7.876 The remaining 15 disbursements made under the ten loan contracts reviewed in this section of our Report, were granted on what the European Communities has described as "open-rate" terms.³⁵⁸⁶ However, unlike the 2002 loan to EADS (which was also an "open-rate" contract) the interest rate formulae applied to each of these disbursements did not include a fixed risk premium component. Thus, at the time of the conclusion of each relevant loan, the only commitment made by the EIB in terms of interest rates was to apply one or more contractually specified interest rate calculation methodologies when the time came to set the relevant interest rate for any requested funding disbursement.³⁵⁸⁷ As such, the circumstances that both parties have described, which would normally push a commercial lender to require the payment of commitment fees were not present.³⁵⁸⁸ It follows that the EIB's failure to charge the relevant Airbus entities a commitment fee under each of the loans at issue did not place Airbus in a position more advantageous than it would otherwise have been in had it obtained comparable financing from the market.

³⁵⁸² Article 1.04 ("Deferment Commission"), Exhibits EC-703 (BCI) and EC-704 (BCI); Article 1.05 ("Deferment Commission") Exhibits EC-705 (BCI) and EC-706 (BCI); and Article 1.04 ("Comisión de aplazamiento") Exhibit EC-701 (BCI).

³⁵⁸³ Article 1.05 ("Annulment of Credit"), Exhibits EC-703 (BCI) and EC-704 (BCI); Article 1.06 ("Annulment of Credit"), Exhibits EC-705 (BCI) and EC-706 (BCI); and Article 1.05 ("Anulación de la apertura de crédito"), Exhibit EC-701 (BCI).

³⁵⁸⁴ See, para. 7.790 above.

³⁵⁸⁵ See, footnote 3467 above.

³⁵⁸⁶ The relevant disbursements are: disbursement 1 under the 1990 loan to British Aerospace for the A330/A340 (No. 14999), Exhibit EC-705 (BCI); disbursement 2 under the 1991 loan to British Aerospace for the A330/A340 (No. 15119), Exhibit EC-706 (BCI); both disbursements under the 1990 loan to Airbus Industries for the A321 (No. 15007), Exhibit EC-692 (BCI); all three disbursements under the 1988 loan to Aérospatiale for the A330/A340 (No. 13764), Exhibit EC-697 (BCI); both disbursements under the 1993 loan to Aérospatiale for the Super Transporteurs (No. 6832), Exhibit EC-695 (BCI); and all six disbursements made under both the 1989 and 1990 loans to CASA for the A320 and A330/A340 (Nos 14081 and 14712), Exhibits EC-700 (BCI) and EC-702 (BCI)

³⁵⁸⁷ See, in particular, Articles 1 and 3, disbursement 1 under the 1990 loan to British Aerospace for the A330/A340 (No. 14999), Exhibit EC-705 (BCI); Articles 1 and 3, disbursement 2 under the 1991 loan to British Aerospace for the A330/A340 (No. 15119), Exhibit EC-706 (BCI); Articles 1 and 3, both disbursements under the 1990 loan to Airbus Industries for the A321 (No. 15007), Exhibit EC-692 (BCI); Articles 1 and 3, all three disbursements under the 1988 loan to Aérospatiale for the A330/A340 (No. 13764), Exhibit EC-697 (BCI); Articles 1 and 3, both disbursements under the 1993 loan to Aérospatiale for the Super Transporteurs (No. 6832), Exhibit EC-695 (BCI); and Articles 1 and 3, all six disbursements made under both the 1989 and 1990 loans to CASA for the A320 and A330/A340 (Nos 14081 and 14712), Exhibits EC-700 (BCI) and EC-702 (BCI).

³⁵⁸⁸ See, paras. 7.789, 7.790 and 7.797 above.

BCI deleted, as indicated [***]

7.877 Finally, on the issue of non-utilization fees, we repeat the same observations made when examining the United States' complaint in respect of the 1992 loan to Aérospatiale – namely, that apart from alleging that all EIB loans conferred a benefit upon Airbus because the EIB did not charge non-utilization fees, the United States has advanced no specific explanation nor adduced any particular evidence or expert opinion suggesting that a commercial lender would have required the relevant Airbus entities to pay a non-utilization fee for the same type of financing obtained from the EIB under each of the relevant loan contracts. In the absence of any such evidence or relevant explanation, and given that the European Communities does not accept that the payment of a non-utilization fee was warranted,³⁵⁸⁹ we are not convinced that the United States has done enough to establish that the remaining ten loans conferred a benefit for this reason.

Absence of a risk premium

7.878 The parties' arguments and submissions concerning the United States' allegation that the EIB failed to charge a risk premium on any loans granted prior to 1999, including the ten loans that we have focused upon in this section of our Report, are set out above in our analysis of the United States' claims in respect of the 1992 EIB loan to Aérospatiale.³⁵⁹⁰ We emphasized in that part of our Report that although the European Communities' explanation of why the EIB did not charge risk premia on loans prior to 2000 made some intuitive sense, we could not accept it as a matter of fact in the light of the evidence and argument presented to support the European Communities' position. In particular, we found that the evidence advanced by the European Communities showed that the EIB does attempt, as the European Communities asserts, to "align its risk management systems to changing economic conditions and evolving regulatory standards" with a view to following "best market practice". However, the information presented says nothing about why the EIB decided to introduce a risk premium in 2000 or whether it was intended, as the European Communities asserts, to operate as a partial or total alternative to the loan guarantees required under Article 18.3 of its Statute.³⁵⁹¹ Thus, although we consider the European Communities' explanation to make some intuitive sense, we cannot accept it as a matter of fact on the basis of the evidence that has been presented.

7.879 Moreover, while the European Communities' explanation of why the EIB introduced a risk premium suggests that risks associated with EIB lending prior to 2000 were taken into account by means of "external guarantees", the European Communities has not explained how the particular guarantees or securities provided under the ten loans examined in this section of our Report served to compensate the EIB for the risks associated with lending to the relevant Airbus entities in the same way that a market lender would have sought compensation for the same risks under a commercial loan.

7.880 In this light, we find that the European Communities has failed to advance sufficient evidence and argument to persuade us that the absence of a risk premium on the ten loans examined in this section of our Report did not confer a benefit upon Airbus. We therefore uphold the United States' claim that each of the ten loans at issue conferred a benefit, within the meaning of Article 1.1(b) of the SCM Agreement, because it did not include a risk premium.

Conclusion in respect of the "other" loans to Airbus

7.881 On the basis of the foregoing analysis, and in the light of our finding that the nature of the EIB's lending activities,³⁵⁹² we find that each of the ten EIB loans examined in this section of our Report conferred a benefit upon the relevant Airbus entities, within the meaning of Article 1.1(b) of

³⁵⁸⁹ EC, Answers to Panel Question 87 and 179.

³⁵⁹⁰ See, paras. 7.815-7.816 above.

³⁵⁹¹ See, para. 7.817 above.

³⁵⁹² See, para. 7.753 above.

BCI deleted, as indicated [***]

the SCM Agreement, because: (i) it was either in part or in total granted on below-market interest rate terms;³⁵⁹³ and/or (ii) the EIB did not charge the relevant Airbus entity a risk premium.³⁵⁹⁴

7.882 On the other hand, we find that the United States has failed to demonstrate that the ten EIB loans examined in this section of our Report individually conferred a benefit upon the relevant Airbus entities because each did not require payment of commitment fees or non-utilization fees.³⁵⁹⁵

The EUR 700 million credit line

7.883 The United States considers that the EUR 700 million credit line opened for EADS at below-market interest rates conferred a benefit upon Airbus because "the very fact" of its existence gave EADS "valuable liquidity".³⁵⁹⁶

7.884 We recall that we have found the EUR 700 million credit line to be a potential direct transfer of funds, and that in order to understand whether a potential direct transfer of funds confers a benefit, the focus should be on whether the existence of the promise to provide the direct transfer confers a benefit.³⁵⁹⁷ The United States has submitted evidence which we have accepted demonstrates that the [***] EIB loan to EADS was granted at a below-market interest rate, thereby conferring a benefit upon Airbus. Moreover, the United States has also demonstrated that the same loan benefited EADS due to the absence of commitment fees. However, it has adduced no evidence nor advanced any particular argument to identify and explain the alleged benefit of the *promise* to obtain liquidity on favourable terms for EADS. We are not convinced that simply showing that a credit line has been granted on beneficial terms is enough to establish that it has placed its recipient in a better position than it otherwise would have been in absent availability of the particular credit line. In our view, something more is required to demonstrate that a promise to provide "cheap" financing, *in and of itself*, confers a benefit. Thus, while we are sympathetic to the notion that a potential direct transfer of funds taking the form of a credit line on favourable terms may confer a benefit upon its recipient, we believe that in the context of the EUR 700 million credit line to EADS, the United States has failed to substantiate its claim.

Overall conclusion

7.885 In summary, we conclude that the United States has established that:

- (i) the 2002 EIB loan to EADS for the A380 conferred a benefit on EADS within the meaning of Article 1.1(b) of the SCM Agreement, and therefore constituted a subsidy under Article 1.1 of the SCM Agreement, because: (a) the interest rate charged by the EIB was less than what a market lender would have asked EADS to pay for comparable financing; and (b) EADS was not required to pay a commitment fee;³⁵⁹⁸
- (ii) the 1992 loan to Aérospatiale for the A330/A340 conferred a benefit on Aérospatiale, within the meaning of Article 1.1(b) of the SCM Agreement, and therefore constituted a subsidy under Article 1.1 of the SCM Agreement, because: (a) it was granted at an interest rate [***] to the cost of borrowing for the French

³⁵⁹³ These loans are: the 1988 loan to Aérospatiale for the A330/A340; the 1993 loan to Aérospatiale for the Super Transporteur; the 1989 loan to CASA for the A320 and A330/A34; and the 1990 loan to CASA for the A320 and A330/A34 (No. 14711). *See*, paras. 7.852-7.872 above.

BCI deleted, as indicated [***]

government and was therefore more advantageous than the interest rate that would have been available to Aérospatiale on the market for comparable financing; and (b) it was granted on interest rate terms that did not include a risk premium,³⁵⁹⁹

- (iii) the 1988 loan to Aérospatiale for the A330/A340, the 1993 loan to Aérospatiale for the Super Transporteur, the 1989 loan to CASA for the A320 and A330/A340, and the 1990 loan to CASA for the A320 and A330/A340 (No. 14711), each conferred a benefit on the relevant Airbus entity, within the meaning of Article 1.1(b) of the SCM Agreement, and therefore constituted a subsidy under Article 1.1 of the SCM Agreement, because each loan: (a) was either in part or in total granted on below-market interest rate terms; and (b) was granted on interest rate terms that did not include a risk premium,³⁶⁰⁰ and
- (iv) the 1991 loan to British Aerospace for A330/A340, the 1990 loan to CASA for the A320 and A330/A340 (No. 1.4712/ES), the 1990 loan to British Aerospace for the A330/A340, the 1990 loan to Airbus Industrie GIE for the A321, the 1989 loan to British Aerospace for the A320, the 1988 loan to British Aerospace for the A320, each conferred a benefit on the relevant Airbus entity, within the meaning of Article 1.1(b) of the SCM Agreement, and therefore constituted a subsidy under Article 1.1 of the SCM Agreement, because each loan was granted on interest rate terms that did not include a risk premium.³⁶⁰¹

7.886 On the other hand, we find that the United States has failed to demonstrate that the 2002 EIB loan to EADS also conferred a benefit upon EADS because of the EIB's failure to charge non-utilization fees,³⁶⁰² or that the remaining eleven challenged loans conferred a benefit because the EIB did not charge the relevant Airbus entity either commitment fees or non-utilization fees.³⁶⁰³

7.887 Finally, we recall that we have concluded that the United States has failed to demonstrate that the EUR 700 million credit line provided to EADS under the 2002 loan contract conferred a benefit upon Airbus, and was therefore a subsidy within the meaning of Article 1 of the SCM Agreement.³⁶⁰⁴

7.888 In finding, for one or more reasons, that each of the twelve challenged loans constitutes a subsidy, it does not automatically follow, as the European Communities appears to suggest,³⁶⁰⁵ that all loans granted by the EIB and other multilateral finance institutions (such as those cited by the European Communities – the Asian Development Bank, the European Bank for Reconstruction and Development, the Inter-American Development Bank and the International Finance Corporation) will always amount to subsidies within the meaning of the SCM Agreement. The extent to which any loan provided by one or more of these funding institutions involves the provision of a subsidy is obviously a question that can only be answered in the light of the particular facts surrounding the alleged instance of subsidization. However, as a general matter, it is not entirely clear to us whether such entities may all be properly considered to be "a government or any public body within the territory of a Member" for the purpose of Article 1.1(a)(1). In any case, it is important to bear in mind that although the provision of financial assistance on beneficial terms and conditions of one kind or another would seem to fall squarely within the objectives and *raison d'être* of such organizations, not all cases of support may involve subsidization that is actionable under the SCM Agreement.

BCI deleted, as indicated [***]

7.889 We now turn to evaluate the United States' allegation that the EIB loans which we have found to be subsidies are "specific" within the meaning of Article 2 of the SCM Agreement.

(c) Whether the EIB loan subsidies are specific within the meaning of Article 2 of the SCM Agreement

(i) *Introduction*

7.890 The United States argues that each of the challenged EIB loans to Airbus was "specific" within the meaning of Articles 2.1(a) and 2.1(c) of the SCM Agreement, and therefore actionable under Part III of the SCM Agreement. The European Communities rejects the United States' claims, and submits that rather than being "specific" within the meaning of these two provisions, the EIB loans were in fact "non-specific" under Article 2.1(b) of the SCM Agreement. Consequently, the European Communities argues that the EIB loans cannot be challenged under Part III of the SCM Agreement.

7.891 Below we review and evaluate the parties' arguments as they relate to the EIB loans which we have found to be subsidies. We start our analysis by addressing the United States' contention that the EIB loans are "specific" under the terms of Articles 2.1(a) and 2.1(c) of the SCM Agreement. Should we find that the subsidies are not specific within the meaning of these provisions, the United States will have failed to establish that the subsidies are subject to Part III of the SCM Agreement, and there will therefore be no need to address the European Communities' assertion that they are non-specific under Article 2.1(b).

(ii) *Whether the Loans to Airbus were Specific under Article 2.1(a)*

Arguments of the United States

7.892 The United States contends that each of the EIB loans it challenges is specific within the meaning of Article 2.1(a) because the EIB's lending activities are entirely "discretionary", with loans being negotiated individually with each relevant borrower, and granted on the basis of criteria that it alleges the EIB admits are "tailored to each individual project".³⁶⁰⁶ To this extent, the United States submits that the challenged EIB loans are not unlike the subsidy measures at issue in the *Japan – DRAMS* dispute, which were found to be specific because "tailored to the needs of the recipient company" rather than being provided "on pre-determined terms (that are therefore not tailored to the recipient company)".³⁶⁰⁷

7.893 In response to a Panel question asking the parties to elaborate their views on the extent to which a subsidy granted on unique terms and conditions to an individual enterprise under a non-specific subsidy programme could be found to be specific within the meaning of Article 2.1(a),³⁶⁰⁸ the United States answered that such a subsidy could still be specific under this provision, if granted on terms and conditions sufficiently different from the terms and conditions of other subsidies granted under the same non-specific subsidy programme. According to the United States, the unique terms and conditions of such a subsidy could cause it to fall outside the parameters of the broader non-specific subsidy programme. In such an event, the United States argues that the granting authority,

³⁶⁰⁶ US, FWS, paras. 406 and 419, citing Exhibit US-166 (EIB, *The Project Cycle at the European Investment Bank*, at 4-5, 12 July 2001).

³⁶⁰⁷ US, Answer to Panel Question 150, citing Panel Report, *Japan – DRAMS (Korea)*, paras. 7.372 and 7.374.

³⁶⁰⁸ Panel Question 117 ("What are the parties' views on the extent to which a subsidy granted, through a contract including one or more unique terms and conditions, to an individual enterprise pursuant to a subsidy programme that does not explicitly limit access to subsidies to certain enterprises, may be specific within the meaning of Article 2.1(a) of the SCM Agreement?")

BCI deleted, as indicated [***]

through the unique terms and conditions of the subsidy, "explicitly limits access to a subsidy to certain enterprises".³⁶⁰⁹

7.894 The United States argues that in order to assess whether the EIB loans to Airbus were granted on terms and conditions that were sufficiently unique to take them outside of the EIB's broader lending programme, the Panel would need to review a representative sample of other EIB loans. However, the United States submits that the European Communities has failed to disclose this, or any other, information that would be needed to determine the extent to which the terms and conditions of the EIB loans to Airbus differed from those in the EIB's loans to other enterprises. The United States recalls that the European Communities did not provide the information requested during the Annex V process. Furthermore, in the view of the United States, the standard contract templates submitted by the European Communities indicate nothing about how core terms may differ between loans to Airbus and other companies. Indeed, the United States contends that the EIB's standard contract templates show that it is precisely the core terms of the EIB's loan contracts – the terms that, according to the United States, may cause a loan to confer a benefit and thus constitute a subsidy – that vary from contract to contract. In particular, the United States asserts that the templates show that elements such as [***] are not pre-determined. The United States also notes that other provisions, such as those [***].³⁶¹⁰ Without information from actual contracts, the United States argues that it is impossible to know the extent to which the variables highlighted by the template differ as between the Airbus loans and loans to other companies.

7.895 The United States considers the European Communities' refusal to provide information that would allow the Panel to make a comparison between the EIB loans to Airbus and those to other enterprises is an instance of non-cooperation in the information-gathering process that is the subject of Annex V of the SCM Agreement. The United States recalls that pursuant to paragraph 7 of that Annex, a panel should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process. Thus, the United States argues that the reasonable inference to be drawn from the European Communities' alleged lack of cooperation is that the missing information would confirm that the terms and conditions of the EIB's loans to Airbus are sufficiently different from the terms and conditions of other EIB loans as to cause the loans to be specific under Article 2.1(a).³⁶¹¹

Arguments of the European Communities

7.896 The European Communities asserts that the EIB is a public purpose lending institution offering loans of a general character that are not limited to any enterprise, industry or group within the meaning of Article 2 of the SCM Agreement. It recalls that the United States Department of Commerce has found EIB loans to be neither *de facto* nor *de jure* specific under United States law.³⁶¹² The European Communities calls upon the Panel to come to the same conclusion under the SCM Agreement.

7.897 The European Communities explains that the EIB provides loans to companies of all sizes, with respect to projects across all sectors of the economy, and without any discrimination as to the "nationality" of the borrowers. According to the European Communities, any company may qualify for financing from the EIB as long as it is sufficiently credit-worthy and the underlying project

BCI deleted, as indicated [***]

contributes to the attainment of one of the EIB's policy objectives and its eligibility criteria are satisfied.³⁶¹³

7.898 The European Communities rejects the United States' contention that the EIB loans are tailored to the needs of each individual project in such a way that renders them specific within the meaning of Article 2.1(a) of the SCM Agreement. According to the European Communities, the fact that a loan agreement is negotiated with and limited to a particular borrower is standard banking practice. The European Communities argues that the EIB acts like any other bank when it negotiates loan contracts individually with different borrowers. However, unlike other banks, the EIB Statute and the EIB *Eligibility Guidelines* underpin all aspects of its lending operations by defining the financial, administrative and policy-related limits of the EIB, the context of the finance agreements to be agreed upon with the borrowers, the objectives to which the funded projects must contribute, the appraisal process for each loan application, and the interest rate setting methodology.³⁶¹⁴ Thus, the terms and conditions of the negotiated loans, which the European Communities submits matter for finding that there is subsidization (such as interest rate, maturity, repayment profile), are offered to borrowers on the basis of neutral and universally applied financial, technical, methodological and policy criteria, irrespective of the identity or nationality of the borrower and its corporate needs, in line with the prevailing market conditions.³⁶¹⁵

7.899 To the extent that any unique terms and conditions do exist in the EIB loans, the European Communities contends that they do not evidence specificity. Rather, the European Communities submits that they result from the application of the same principles and objective criteria to different projects and borrowers. For instance, the European Communities asserts that interest rate differences arise from the fact that each interest rate is set according to the same methodology applied in the context of financial markets that are constantly moving.³⁶¹⁶ In terms of differences in loan maturities, the European Communities explains that these arise from the application of the general principle that the maximum maturity of the loan depends upon the economic life of the assets being financed – a large scale, long-term transport infrastructure project has a different financing requirement than funding for the purchase of new equipment for a small environmental project undertaken by a medium-sized firm.³⁶¹⁷

7.900 Thus, the European Communities argues that the challenged EIB loans are not like the measure that was found to be specific in *Japan – DRAMS* because they are not tailored to each particular borrower, but are based on generally applicable and horizontally set methodologies and criteria which are pre-determined and independent of each borrower's request for financing. The unique terms and conditions that the European Communities submits matter for a finding of the existence of a subsidy (such as interest rate, maturity, repayment profile), do not depart from the standard criteria and methodology applied to all EIB projects. The European Communities asserts that such a departure would be in contradiction with the EIB Statute, which it asserts rests on the principle of non-discrimination among borrowers.³⁶¹⁸

Evaluation by the Panel

7.901 Before turning to evaluate the merits of the United States' claims, we believe it is useful to first describe the EIB's lending activities in more detail.

BCI deleted, as indicated [***]

The EIB's lending operations

7.902 Since its establishment in 1957, the EIB has provided loans with a total value close to EUR 600 billion for over 10,000 projects undertaken in a wide array of economic sectors.³⁶¹⁹ The EIB's lending is not limited to entities having EU nationality. However, the location of the funded project is important as the EIB's task is to "contribute ... to the balanced and steady development of the common market in the interest of the Community".³⁶²⁰ Thus, funded projects are typically executed within the territory of the EC member States, although the EIB has also funded projects in countries acceding to the EU or in neighbouring States.³⁶²¹

7.903 The EIB grants two types of loans, described by the European Communities as "individual" loans and "global" loans. According to the European Communities, the "main (only)" difference between the two is the method of delivery of the EIB funds to the ultimate borrower, with "individual" loans being negotiated and disbursed directly by the EIB, and "global" loans provided through a financial intermediary (a bank) under mandate from the EIB to apply funds to EIB-eligible projects. Typically, the EIB grants "individual" loans only in relation to projects with an investment cost of at least EUR 25 million. Projects valued at less than this amount are financed through global loans.³⁶²² We note that all of the loans challenged by the United States were "individual loans".

7.904 The EIB's *Eligibility Guidelines* indicate that in order to qualify for loan financing, a proposed project must contribute to the EIB's policy objectives.³⁶²³ In keeping with its mandate under the EC Treaty, the EIB sets these objectives in a way that reflects the goals and priorities of the EU. One expression of the EIB's objectives is found in the Annex to another EIB publication – *The Project Cycle at the European Investment Bank* (the "*Project Cycle Document*"):

"PROJECTS ELIGIBLE FOR BANK FINANCING

WITHIN THE EUROPEAN UNION, projects considered for EIB financing must contribute to one or more of the following objectives:

Balanced economic development of the Union and its less favoured regions;

Enrichment of human capital: health and education;

Information technology and communications networks;

Research and development;

Diffusion of innovation;

³⁶¹⁹ Exhibit EC-163 lists all loans granted by the EIB between 1 January 1958 and 31 December 2006.

³⁶²⁰ Article 267, EC Treaty. Similar language is also found in Article 20.1(b) of the EIB Statute (the EIB "may grant loans or guarantees only where execution of the project contributes to increased economic productivity in general and promotes the attainment of the common market").

³⁶²¹ EIB Statute, Article 18.1, Exhibit EC-158. See, also, Exhibit EC-163. The neighbouring states that the EIB has financed include Albania, Algeria, Bosnia Herzegovina, Egypt, Serbia and Montenegro, Switzerland and Tunisia. The European Communities explains that approximately 10% of the EIB's lending is made outside of the European Communities pursuant to external mandates. We understand that this includes lending to numerous ACP States.

³⁶²² EC, FWS, para. 1047; EC, SWS, para. 475.

³⁶²³ EC, FWS, para. 1025. EIB, *Eligibility Guidelines – Checking Consistency of EIB Operations with EU Objectives*, Projects Directorate, May 2004, (hereinafter "*Eligibility Guidelines*") Exhibit EC-161, pp 1, 6, 11, 14, 18, 21, 27, 31 and 34.

BCI deleted, as indicated [***]

Transport, telecommunications and Trans-European Networks (TENs);

Environment: protection and improvement of the natural and urban environment, projects with a positive impact on the regional or global environment (sustainable development and prevention of climate change);

Increasing the competitiveness and integration of European industry;

Development of small and medium-scale enterprises (venture capital funding aimed at stimulating innovation by SMEs and entrepreneurship is undertaken by the European Investment Fund).

Securing the energy supply base and conserving energy."³⁶²⁴

7.905 A more recent formulation of the EIB's "main operational objectives" is described in the *Eligibility Guidelines*:

"(i) EU economic and social cohesion and regional development; (ii) Implementation of the Innovation 2010 Initiative; (iii) Environment; (iv) TENS and other projects of common interest; and (v) human capital."³⁶²⁵

7.906 For each of the EIB's five "main operational objectives", the *Eligibility Guidelines* identify the various types of projects that may fall within the scope of each objective in more detail. For instance, the "Environment" objective is expanded into what appear to be five sub-objectives: "Tackling Climate Change"; "Protecting Nature / Biodiversity & Natural Resources"; "Improving Environment and Health"; "Promoting Sustainable Use of Natural Resources; Waste Management"; and "Enhancing Urban Environment". The features of the types of projects eligible for EIB funding under each of these sub-objectives are further specified under the "Categories of Investment/Indicators" heading. Overall, the *Eligibility Guidelines* identify 27 sub-objectives and 95 "Categories of Investment/Indicators".³⁶²⁶

7.907 The EIB's operations are directed and managed by a Board of Governors, a Board of Directors and a Management Committee.³⁶²⁷ The Board of Governors consists of Ministers designated by the EC member States. In addition to setting the general credit policy of the EIB, the Board of Governors is responsible for *inter alia*, appointing the Board of Directors and the Management Committee.³⁶²⁸ The Board of Directors is comprised of at least one director nominated by one of each of the EC member States, and one director nominated by the Commission.³⁶²⁹ Members of the Board of Directors are "persons whose independence ... is beyond doubt" and who are "responsible only to the Bank".³⁶³⁰ The Board of Directors has the sole power to take decisions in respect of granting loans,³⁶³¹ and acts on the basis of proposals prepared by the Management Committee. The Management Committee is responsible for the current business of the EIB, including examining whether loan applications comply with the provisions of the Statute,³⁶³² delivering an opinion to the Board of Directors on proposals for granting loans and preparing decisions of the Board

of Directors.³⁶³³ Management Committee opinions on whether to grant a loan are delivered to the Board of Directors only after the proposed project has been appraised by the EIB's technical experts.³⁶³⁴

7.908 As we understand it, the purpose of the EIB's project appraisal is to assess the extent to which a proposed project is economically, financially and technically sound and that the potential borrower is able to service the potential loan.³⁶³⁵ The European Communities argues that this reflects the fact that the EIB is obliged under its Statute to employ funds as rationally as possible.³⁶³⁶ The EIB undertakes appraisals of each loan application using a "standard" set of "criteria", which it explains are "tailored to each individual project".³⁶³⁷ In addition to checking a project's eligibility in terms of contributing to one or more of the EIB's objectives, the appraisal involves assessing a proposed project's business rationale and economic viability, the technical soundness of the project, its environmental impact and the financial and credit risk attached to the lending.³⁶³⁸ The full set of appraisal criteria that are applied by the EIB are described in the *Project Cycle Document* in the following terms:

5.1. Rationale for Bank financing: eligibility, value added of the operation.

The project's contribution to European Union objectives supported by the EIB⁽¹⁾ is ascertained. The analysis also reveals how the Bank's input brings "value added" to the project: this may be apparent in the financial terms offered, in the EIB's active and "catalytic" role in structuring the finance plan, or in the improvement of the project's technical specifications.

5.2. Market and sector:

This analysis is based on the information gathered during project appraisal and on the **sectoral studies** regularly, carried out by the Projects Directorate. It looks at the sector in question, establishes worst and best-case scenarios based on reasonable projections and assesses the promoter's qualities in relation to the project and the project's ability to meet existing demand.

5.3. Technical description, capacity:

The Bank's analysis looks at the project's technical soundness and the promoter's ability to implement the technical solutions adopted. It also examines the technical risks and measures taken to attenuate these.

³⁶³³ EIB Statute, Articles 13.3 and 13.4, Exhibit EC-158.

³⁶³⁴ EC, FWS, para. 1028. The European Communities asserts that these will typically include economists, engineers, lawyers and financial analysts.

³⁶³⁵ *The Project Cycle Document*, Exhibit US-166, pp. 4-7. We understand that the EIB conducts its own appraisal of projects seeking financing in the form of "individual loans". However, it is unclear from the evidence that is before us whether the same appraisal process is applied to individual projects that seek financing from the intermediaries that receive and on-lend the EIB's "global" loans.

³⁶³⁶ EC, FWS, para. 1026.

³⁶³⁷ *The Project Cycle Document*, Exhibit US-166, p.4.

³⁶³⁸ *The Project Cycle*, Exhibit US-166, pp.5-6. The application of the "standard" set of "criteria" also involves reviewing the "total investment cost" of the project, its "implementation", its "operation" and the "prices, tariffs and financial return from the project".

BCI deleted, as indicated [***]

5.4. Investment cost:

The EIB examines the total investment cost, the main project costs compared with those of similar schemes financed by the Bank, the margins for contingencies and price inflation adopted and the impact of taxes on the project and promoter.

5.5. Implementation:

The Bank's analyses cover the following points:

- Technical: establishment of a "technical description" of the project to be **appended to the contract** and serve as a basis for future monitoring.
- Procurement: compliance with current procedures; percentage of project cost subject to international competitive bidding; acceptability to the Bank of procedures envisaged.

5.6. Operation:

Management; measures taken to meet particular risks; evaluation of operating costs; employment.

5.7. Environmental impact:

Environmental situation with and without the project; where appropriate, review of studies of alternative solutions; project's impact on the natural and human environments; definition of the measures adopted to prevent, reduce or mitigate any adverse effects; compatibility with current or proposed environmental legislation; existence of an environmental management plan and promoter's ability to implement and manage it; examination of environmental aspects over the life of the project; project's compatibility with sustainable development objectives - including prevention of climate change - to which the European Union is committed.

In performing the environmental part of its appraisal, the Bank makes use of the variety of studies carried out by the promoter or by independent consultants on its behalf (EIAs, SEAS, SISs, etc.). The Bank examines the mitigating measures proposed, reserving the right to ask for further studies to be undertaken by competent external consultants. **In any event, the EIB ensures compliance with adequate project related conditionality.**

5.8 Prices, tariffs and financial return from the project:

- Calculation of the expected cash flow in real terms.
- Where appropriate, the forecasts and analyses of certain financial ratios may serve as a basis for formulating appropriate tariff policies.
- Sensitivity and/or risk analysis.

5.9. Economic benefits:

Economic justification of the project; economic appraisal of value added of the project and the Bank's input; calculation of the project's economic rate of return;

BCI deleted, as indicated [***]

estimation of external costs/benefits, such as environmental protection, regional development, etc; sensitivity analysis.

5.10. Financial and credit risk analysis:

The Directorate General for Lending Operations performs a **detailed financial analysis of the borrower** - as well as of **the guarantor** if the operation is backed by a commercial guarantee. This can of course be simplified for the EIB's repeat borrowers.

Where public borrowers promoting infrastructure projects are concerned (*e.g.*, regions or municipalities), a different type of financial analysis is performed, based on documents of a budgetary nature.

The Credit Risk Department casts an objective eye on the **financial viability of the borrower and guarantor**, with whom it has no business relationship."³⁶³⁹

7.909 According to the United States, the EIB's admission that its appraisal criteria are "tailored to each individual project" confirms that the loans it grants are assessed against criteria that are unique to each project proposal. On the other hand, the European Communities contends that the EIB's statement should be understood as meaning that the EIB adjusts its general appraisal criteria "to take account of the specifics of the project (the 'input data')".³⁶⁴⁰ In our view, when considered in its proper context, the EIB's explanation of how it applies the "standard" appraisal criteria does not appear to be an admission that it conducts appraisals on the basis of criteria that are unique to each of the projects for which a loan has been requested. The *Project Cycle Document* indicates that the EIB reviews project proposals against the same set of general appraisal criteria, which "are all covered by the report submitted to the Board of Directors for a financing decision".³⁶⁴¹ However, given the wide variety of projects financed by the EIB, it is only natural to expect that the application of these general criteria may involve asking and answering slightly different questions depending upon the particular project proposal being reviewed. It is this process of applying the general appraisal criteria, taking into account the particular characteristics of the project under review, that we believe the EIB is referring to when it states that its "standard" appraisal criteria are "tailored to each individual project".

7.910 For instance, the first of the EIB's "standard" appraisal criteria is described as "Rationale for Bank financing: eligibility, value added of the operation". As we have already noted, the starting point of the EIB appraisal of a project is an assessment of its eligibility in terms of contributing to its main operating objectives. Obviously, a project with an environmental scope will be assessed in terms of how it corresponds with the EIB's environmental objectives. Other EIB objectives may not be relevant. Moreover, when examining the environmental features of the proposed project, the appraisal may involve an assessment in terms of one or more of the environmental sub-objectives or "Categories of Investment/Indicators" that are listed in the *Eligibility Guidelines*.³⁶⁴² In our view, the fact that part of the EIB's appraisal of this particular project would involve assessing how closely it matches one or more of its environmental priorities, without also examining the extent to which it fulfils other objectives and priorities, does not imply that the EIB applies assessment criteria that are unique to the project being reviewed, thereby placing a limitation on the entities entitled to receive the same type of loan.

³⁶⁴⁰ EC, FWS, para. 1027 and footnote 832.

³⁶⁴¹ *The Project Cycle*, Exhibit US-166, p.4.

³⁶⁴² These are briefly discussed at para. 7.906 above.

BCI deleted, as indicated [***]

7.911 A similar conclusion may be reached in respect of the other "standard" appraisal criteria applied by the EIB. Because they are of a general nature, they may not necessarily be applied in the same way or have the same relevance to all project proposals. This does not mean that the EIB applies different appraisal criteria and standards when determining whether to fund different projects. Rather, it shows that when the EIB applies its general appraisal criteria, it does so taking into account the particular characteristics of the proposed project.

7.912 In order to be granted, a loan application that obtains a favourable opinion from the Management Committee must be approved by a qualified majority of the Board of Directors. In considering a request for funding, the Board of Directors must also take into account any opinion delivered by the Commission or the EC member State in whose territory the project will be carried out. Where the concerned EC member State delivers an unfavourable opinion, the Board of Directors cannot grant the loan.³⁶⁴³ Likewise, where an unfavourable opinion is provided by both the Management Committee and the Commission, the Board of Directors may not grant the loan.³⁶⁴⁴ However, where an unfavourable opinion is delivered by the Management Committee or the Commission, the Board of Directors may still grant the loan, but only on the basis of a unanimous decision.³⁶⁴⁵ Thus, under its formal decision-making procedure, it is possible for the EIB to decide not to grant loans to projects that satisfy all eligibility requirements and appraisal criteria. We note, however, that the European Communities asserts that between 1988 and 2006, the Board of Directors decided not to grant only two out of over 5,000 loan proposals submitted by the Management Committee for approval.³⁶⁴⁶ The United States has not contested the European Communities' assertion.

7.913 Finally, once a loan is approved by the Board of Directors, the EIB prepares the finance contract.³⁶⁴⁷ As we understand it, this process begins with the use of a standard contract template as the basis for the loan agreement, which is then adjusted to reflect the characteristics of each loan. The European Communities notes that the standard contract template applied by the EIB has changed over the years "essentially to reflect 'technical' developments in law or EIB lending practice".³⁶⁴⁸ It has submitted copies of two such templates, prepared by the EIB in 1994 and 2001.³⁶⁴⁹ We understand the European Communities to consider both templates to be representative of the contractual provisions relied upon by the EIB around the time of the "individual" loans granted to Airbus that are the subject of the United States' complaint. However, it is unclear from the evidence before us whether the same templates are equally representative of the contractual provisions found in the EIB's "global" loans.³⁶⁵⁰

7.914 Each of the contract templates is comprised of an introduction (identifying the parties), a preamble and 12 Articles, elaborated over more than 20 pages and 40 clauses,³⁶⁵¹ addressing both procedural and substantive features of the EIB's loans.³⁶⁵² The 2001 template also includes two

³⁶⁴³ Statute, Article 20.6.

³⁶⁴⁴ Statute, Article 21.7.

³⁶⁴⁵ Statute, Articles 21.5 and 21.6.

³⁶⁴⁶ EC, FWS, para. 1028.

³⁶⁴⁷ *The Project Cycle Document*, Exhibit US-166, p.7.

³⁶⁴⁸ EC, Answer to Panel Question 85.

³⁶⁴⁹ Exhibits EC-609 (BCI) and EC-711 (BCI).

³⁶⁵⁰ We note that the European Communities has provided no copies of loans granted by the EIB's intermediaries when on-lending "global" loans to qualifying projects. Neither has the European Communities argued that the EIB's intermediaries issue loans on the basis of the same contract templates used by the EIB when granting "individual" loans.

³⁶⁵¹ There are 43 clauses under the 12 Articles contained in the 1994 template, which runs over 24 pages; and 45 clauses under the 2001 template, which has 26 pages.

³⁶⁵² The Article headings used in each contract template are essentially the same: Article 1 – "Provisions Relating to Payment"; Article 2 – "The Loan"; Article 3 – "Interest"; Article 4 – "Reimbursement";

BCI deleted, as indicated [***]

annexes.³⁶⁵³ In most instances, the provisions found in the templates are detailed, precise and mandatory. However, as the United States observes, there are certain provisions where precise amounts, dates or values are left unspecified. This is true in respect of clauses dealing with, for example, [***]. Moreover, the inclusion of one provision found in the 2001 template pertaining to mandatory anticipated repayment will depend upon the particular project to be financed.³⁶⁵⁴

7.915 Where the contract templates leave certain provisions or parts of provisions unspecified, these are finalized in the light of the choices made by the borrower and the particular characteristics of the financed project and loan transaction. For instance, both the 1994 and 2001 templates indicate that borrowers may choose between fixed, variable or floating interest rate regimes.³⁶⁵⁵ Specific formulae describe how the interest rates attached to each regime should be calculated. Irrespective of the borrower's choice, the same principle is applied under each formula. Whether fixed, variable or floating, the interest rate will be the same as that offered by the EIB at the date of the disbursement notice for loans to be made under the same interest rate regime, in the same currency, and on the same repayment terms including amortization and maturity, as the loan at issue. Although this principle is expressed in slightly different language in the provisions covering the three interest rate regimes,³⁶⁵⁶ its application would seem to guarantee that borrowers obtaining comparable loans from the EIB at the same time and under the same interest rate regime are treated in the same manner. In other words, EIB financing is available on the same interest rate terms for all borrowers seeking funding for comparable projects at the same time. Thus, the fact that comparable projects financed by the EIB may be charged different interest rates can be explained by differences in the conditions on the relevant financial markets used by the EIB to finance its lending.

7.916 Borrowers are also given a choice of different loan currencies. The 1994 template offered the possibility of lending in FRF, USD and DM, depending upon the chosen interest rate regime.³⁶⁵⁷ The currency options under the 2001 contract template were either EUR or another currency available to the EIB and negotiated on one of the main financial marketplaces.³⁶⁵⁸

Article 5 – "Payments"; Article 6 – "Specific Commitments"; Article 7 – "Sureties"; Article 8 – "Information and Visits"; Article 9 – "Charges and Costs"; Article 10 – "Acceleration of Loan Maturity"; Article 11 – "Legal Regime Governing the Contract"; and Article 12 – "Final Clauses".

³⁶⁵³ The annexes are: "A" "Technical Description" – a technical description of the project (which is left blank); and "B" "Definition of EURIBOR and LIBOR" (a textual definition of the two types of bank offer rates).

³⁶⁵⁴ Exhibit EC-609 (BCI), Article 4.03.

³⁶⁵⁵ Exhibits EC-609 (BCI), Article 3.01; and EC-711 (BCI), Article 3.01 ("Taux Fixe", "Taux Variable" and "Taux Revisable").

³⁶⁵⁶ The different formulations include: "for the FIXED-RATE TRANCHE, fixed-rate interest calculated at the annual rate applicable, for each currency, upon each NOTIFICATION ... to those operations of THE BANK having the same features, in terms of monies disbursed, amortization regime and term, as the payment in question"; "for the VARIABLE-RATE TRANCHE, ... The variable rate, determined by THE BANK for each of the reference periods in accordance with the procedures established by its Board concerning variable-rate loans financed through the resources in question, applicable to those operations of THE BANK having the same features, in terms of monies disbursed, amortization regime and term, as the payment in question"; "for the FLOATING-RATE TRANCHE ... {the} annual rate applicable to the currency of payment, upon each NOTIFICATION ..., to those operations of THE BANK carried out in the same currency as that of the payment concerned, for a term identical to that between the dates of each payment." Exhibit EC-711 (BCI), Article 3.01. Very similar language is also found in Exhibit EC-609 (BCI).

³⁶⁵⁷ Exhibit EC-711 (BCI), Article 1.03.

³⁶⁵⁸ Exhibit EC-609 (BCI), Article 1.03.

BCI deleted, as indicated [***]

7.917 Guidance is provided in the templates on how to set a loan's amortization schedule.³⁶⁵⁹ However, the precise periods of amortization and loan maturity are not prescribed.³⁶⁶⁰ Finally, loan amounts and conditions precedent are also not specified in the contract templates. In respect of the former, we note that the amount of the EIB's lending is not subject to any specific budgetary restrictions or allocations for distinct loans or policy objectives. However, pursuant to its Statute, it must ensure that the aggregate amount of outstanding loans and guarantees at any time does not exceed 250% of its subscribed capital, and that it has sufficient reserves to cover 10% of its subscribed capital.³⁶⁶¹ Moreover, the EIB applies a policy of only providing part of the funding for a project.³⁶⁶² Subject to these limitations, it appears that the amount of funds loaned by the EIB will depend upon the particular characteristics of the project. Likewise, conditions precedent used in any particular loan agreement will depend upon the features of the loan transaction and the project being financed.³⁶⁶³

Whether the Airbus loans are specific under Article 2.1(a) because allegedly negotiated individually and granted on a discretionary basis on terms and conditions that are not pre-determined

7.918 We begin our assessment of the United States' claim by reviewing the language of Article 2.1(a) of the SCM Agreement, which reads in pertinent part:

"2.1 In order to determine whether a subsidy, as defined in paragraph 1 of Article 1, is specific to an enterprise or industry or group of enterprises or industries (referred to in this Agreement as 'certain enterprises') within the jurisdiction of the granting authority, the following principles shall apply:

³⁶⁵⁹ The 1994 template specifies that an amortization schedule is to be established on the basis of constant annual repayments of capital and interest (under a fixed interest rate regime) and annual repayments of capital in equal instalments (under a variable interest rate regime). Exhibit EC-711 (BCI), Article 4.01A. The 2001 template reveals a similar approach – amortization on the basis of annual or semi-annual repayments of capital in equal instalments under fixed, variable or floating interest rate regimes. Exhibit EC-609 (BCI), Article 4.01A. Pursuant to Article 2.04 of both templates, the amortization schedule is established by the EIB and provided to the borrower after it has executed each disbursement under the contract.

³⁶⁶⁰ Two repayment options are provided for in the 1994 template under fixed and variable interest rate regimes: (i) a one-time repayment, at the earliest, after four years, or at the latest, after 10 years; or (ii) annual repayments, with the first repayment after five years and the last after 15 years. Exhibit EC-711 (BCI), Article 4.01. The 2001 template provides that repayments may be made through a one-time payment or through annual or semi-annual instalments, irrespective of interest rate regime. Exhibit EC-609 (BCI), Article 4.01. Neither template prescribes the precise maturity of a loan. The European Communities asserts that the EIB sets the maturity of a loan through the application of "the general principle that the maximum maturity of the loan depends on the economic life of the assets to be financed". EC, Comments on US Answer to Panel Question 150. However, the European Communities has advanced no evidence to substantiate its assertion, and the terms of the templates do not confirm that this is how the EIB actually operates.

³⁶⁶¹ EIB Statute, Articles 18.5 and 24.1, Exhibit EC-158.

³⁶⁶² EIB Statute, Article 18.2 ("As far as possible, loans shall be granted only on condition that other sources of finance are also used"), Exhibit EC-158.

³⁶⁶³ A condition precedent is a provision that requires one party to a contract to fulfil a certain obligation (satisfy a condition) before the other party to the contract is required to execute its own contractual obligation. The 2001 template leaves the conditions precedent blank. Exhibit EC-609 (BCI), Article 1.04. Two conditions precedent are identified in the 1994 template: (i) that documents attesting the establishment of any loan guarantee required under a loan be provided to the EIB by the time of the first request for disbursement of the agreed funding; and (ii) that none of the situations (defined in Article 10 of the contract) that would require a borrower to make an anticipated repayment has occurred. Exhibit EC-711 (BCI), Article 1.04.

BCI deleted, as indicated [***]

- (a) Where the granting authority, or the legislation pursuant to which the granting authority operates, explicitly limits access to a subsidy to certain enterprises, such subsidy shall be specific."

7.919 The specificity principle set out in Article 2.1(a) focuses on whether the granting authority, or the legislation pursuant to which the granting authority operates, explicitly limits access to a subsidy to certain enterprises. It follows from the ordinary meaning of the word "explicit" that it is not any limitation on access to a subsidy to certain enterprises that will make it specific within the meaning of Article 2.1(a), but only a limitation that "{d}istinctly express(es) all that is meant; leaving nothing merely implied or suggested"; a limitation that is "unambiguous" and "clear".³⁶⁶⁴ In *US – Upland Cotton*, the panel observed that the concept of specificity under Article 2.1 of the SCM Agreement has to do with whether a subsidy is "sufficiently broadly available throughout an economy as not to benefit a particular limited group of producers of certain products".³⁶⁶⁵ While we can broadly agree with this statement (particularly in the context of the facts at issue in *US – Upland Cotton*), we would add that it is not only a limitation to a "group of producers of certain products" that is the focus of the concept of specificity. In our view, the notion of specificity extends to understanding whether a subsidy is sufficiently broadly available throughout an economy so as not to benefit "certain enterprises" as defined in Article 2.1 – that is, a particular enterprise or industry or a particular group of enterprises or industries. Thus, a finding of specificity under Article 2.1(a) requires the establishment of the existence of a limitation that expressly and unambiguously restricts the availability of a subsidy to "certain enterprises", and thereby does not make the subsidy "sufficiently broadly available throughout an economy".

7.920 The first and main argument advanced by the United States to substantiate its claim that the EIB loans to Airbus are specific, within the meaning of Article 2.1(a), is grounded on the view that the EIB explicitly limits access to its loans by negotiating them individually, and by granting them on a discretionary basis on terms and conditions that are not pre-determined, but "tailored to each individual project". In essence, we understand the United States to argue that the EIB loans (including those to Airbus) are all one-off, discrete lending transactions and, to this extent, explicitly limited to the counterpart involved in the loan transaction.

7.921 The United States considers that the panel findings in *Japan – DRAMS* support its claim.³⁶⁶⁶ At issue in that dispute were a number of determinations made by the Japanese investigating authority ("JIA") in a countervailing duty investigation into certain restructurings of Hynix, a Korean semiconductor manufacturer, under the Corporate Restructuring Promotion Act. The United States notes that Korea had argued that the subsidies provided through the restructurings were not specific because "the same basic rules that governed Hynix's restructurings – as embodied in the Workout Agreement and later in the Corporate Restructuring Act {"CRPA"} – were the same rules that governed the restructuring of other Korean companies."³⁶⁶⁷ However, the panel rejected Korea's submission, upholding the finding made by JIA that "the CRPA merely provided the procedural framework within which the October 2001 and December 2002 restructurings took place, rather than actually determining the terms of those restructurings".³⁶⁶⁸ The United States recalls that after making this finding, the panel set out its own views on when it believed a subsidy granted to an individual company under a generally available subsidy programme would not be specific, explaining that in

³⁶⁶⁴ *New Shorter Oxford English Dictionary*, Vol. 1, 1993, p.888.

³⁶⁶⁸ Panel Report, *Japan – DRAMS (Korea)*, para. 7.372.

BCI deleted, as indicated [***]

order to avoid a finding of specificity, such a subsidy had to be granted "on pre-determined terms (that are therefore not tailored to the recipient company)".³⁶⁶⁹

7.922 The United States asserts that, like the restructurings at issue in *Japan – DRAMS*, the loan subsidies provided to Airbus were granted pursuant to a "procedural framework" set forth in documents such as the EIB Statute and the *Eligibility Guidelines*. According to the United States, this "procedural framework" does not set "pre-determined terms", but identifies steps the EIB follows in exercising its discretion to provide loans. Thus, the United States contends that the EIB loan subsidies to Airbus were not granted "on pre-determined terms (that are therefore not tailored to the recipient company)", but rather "tailored to each individual project".³⁶⁷⁰ Like the restructuring measures at issue in *Japan – DRAMS*, the loans to Airbus are therefore specific.

7.923 Having carefully reviewed and considered the arguments and evidence submitted by the parties, we believe that it would not be inaccurate to characterize the EIB's lending activities as constituting a discretionary programme of financing, which involves the granting of loans to entities of all nationalities for activities contributing to the balanced development of a wide array of economic sectors across the EU, on terms and conditions that are not all pre-determined. However, there are various reasons why we consider that the conclusion reached by the panel in *Japan – DRAMS* is not justified in the present case.

7.924 First, in expressing its view on the circumstances needing to be established in order to avoid a determination that a subsidy granted to an individual company under a generally available subsidy programme is specific, the panel in *Japan – DRAMS* was not pronouncing on the correct interpretation of the principle of specificity contained in Article 2.1(a). When read in its full context, it is clear that the panel's statement relates to how it considered the notion of specificity must be understood under Article 2.1 as a whole:

"As a general matter, ... if an investigating authority were to focus on an individual transaction, and that transaction flowed from a generally available support programme whose normal operation would generally result in financial contributions on pre-determined terms (that are therefore not tailored to the recipient company), that individual transaction would not, in our view, become 'specific' in the meaning of Article 2.1 simply because it was provided to a specific company. An individual transaction would be 'specific', though, if it resulted from a framework programme whose normal operation (1) does not generally result in financial contributions, and (2) does not pre-determine the terms on which any resultant financial contributions might be provided, but rather requires (a) conscious decisions as to whether or not to provide the financial contribution (to one applicant or another), and (b) conscious decisions as to how the terms of the financial contribution should be tailored to the needs of the recipient company."³⁶⁷¹

7.925 Our characterization of the panel's statement is supported by the fact that Korea's complaint against the JIA's finding of specificity was focused on Article 2, without specifying the precise paragraph(s) or sub-paragraph(s) forming the basis of its claim.³⁶⁷² In addition, we note that at the heart of the opinion expressed by the panel is the view that the determinative fact for finding that a

³⁶⁶⁹ US, Answer to Panel Question 150, citing Panel Report, *Japan – DRAMS (Korea)*, para. 7.374.

³⁶⁷⁰ US, Answer to Panel Question 150.

³⁶⁷¹ Panel Report, *Japan – DRAMS (Korea)*, para. 7.374 (underline added).

³⁶⁷² Panel Report, *Japan – DRAMS (Korea)*, para. 7.363. The panel noted in the same paragraph that Japan identified the legal basis of the JIA's specificity decision as Article 2.1(a) of the SCM Agreement. However, the panel at no stage stated that its finding upholding the JIA's determination was limited to this provision.

BCI deleted, as indicated [***]

subsidy granted to an individual company under a generally available subsidy programme is specific will be the existence of discretion (*i.e.*, a conscious decision) to grant the financial contribution and set its terms and conditions. If this were the correct standard for finding a subsidy specific under Article 2.1(a) of the SCM Agreement, the implication would be that all subsidies granted pursuant to the exercise of discretion to certain enterprises would be *explicitly* specific within the meaning of Article 2.1(a), irrespective of how that discretion was actually exercised. However, it is clear from Article 2.1(c) of the SCM Agreement that the manner in which a granting authority exercises any discretion to grant subsidies is a consideration that is relevant to determining whether a subsidy is *de facto* specific. Article 2.1(c) reads:

"(c) If, notwithstanding any appearance of non-specificity resulting from the application of the principles laid down in subparagraphs (a) and (b), there are reasons to believe that the subsidy may in fact be specific, other factors may be considered. Such factors are: use of a subsidy programme by a limited number of certain enterprises, predominant use by certain enterprises, the granting of disproportionately large amounts of subsidy to certain enterprises, and the manner in which discretion has been exercised by the granting authority in the decision to grant a subsidy.³ In applying this subparagraph, account shall be taken of the extent of diversification of economic activities within the jurisdiction of the granting authority, as well as of the length of time during which the subsidy programme has been in operation.

³ In this regard, in particular, information on the frequency with which applications for a subsidy are refused or approved and the reasons for such decisions shall be considered."³⁶⁷³

7.926 Because an inquiry into whether a subsidy is *de facto* specific under Article 2.1(c) becomes relevant when there is the appearance of non-specificity under Article 2.1(a), it follows that the existence of discretion in the granting of a subsidy and setting its terms and conditions cannot be determinative of whether it is specific within the meaning of Article 2.1(a) of the SCM Agreement. Therefore, we cannot accept that the principle pronounced by the panel in *Japan – DRAMS* provides the support the United States contends for its claim under Article 2.1(a) of the SCM.

7.927 Second, the facts underlying the panel's decision in *Japan – DRAMS* are in several important respects different from those of the present dispute. The restructuring measures at issue in *Japan – DRAMS* ("new loans", "debt-to-equity swap" and "extension of maturity and interest rate reduction"³⁶⁷⁴) did not follow from the normal operation of the framework programme (the CRPA) that Korea had argued provided the legal basis of the intervention. The panel noted that Article 1 of the CRPA indicated that its purpose was merely "to facilitate the ordinary corporate restructuring under the market functions by (1) enhancing the accounting transparency of enterprises and setting the systems for efficiently managing credit risks by the financial institutions, while (2) prescribing matters necessary to make the corporate restructuring facilitated swiftly and smoothly."³⁶⁷⁵ It was an instrument addressing "procedural matters such as enhanced transparency and facilitation", whose normal operation did not, as a general matter, specifically result in financial contributions.³⁶⁷⁶ In contrast, the provision of financial contributions (in the form of loans or loan guarantees) is the *raison d'être* of the EIB.

³⁶⁷³ Underline added.

³⁶⁷⁴ Panel Report, *Japan – DRAMS (Korea)*, para. 7.55.

³⁶⁷⁵ Panel Report, *Japan – DRAMS (Korea)*, para. 7.372.

³⁶⁷⁶ Panel Report, *Japan – DRAMS (Korea)*, para. 7.372.

BCI deleted, as indicated [***]

7.928 The panel in *Japan – DRAMS* also found that evidence on the JIA's record indicated that the substantive terms of the restructurings at issue in that case were the prerogative of the Councils for Creditor Financial Institutions, bodies which were specifically established for each restructured company separately. Moreover, the panel noted that Korea had been unable to identify any record evidence indicating that the terms of the restructurings were determined by the provisions of the CRPA *per se*. Rather, the panel observed that Korea had in fact emphasized the company-specific nature of the restructuring process.³⁶⁷⁷ On the other hand, in the present case, we are faced with a very different set of facts. The EIB's loans are available for essentially all projects that contribute to one or more of its broad policy objectives. The EIB's lending activities are guided by a generally applicable operational framework that sets both procedural, and also, in many important respects, clear substantive disciplines on the terms and conditions of its loans. All project proposals are reviewed by essentially the same body, examined subject to the same general appraisal criteria, and the same decision-makers decide on whether to provide the requested funds. Thus, unlike the measure at issue in *Japan – DRAMS*, there is no special decision-making authority set up for each of the loans granted by the EIB.

7.929 Moreover, the contractual terms and conditions, including many of those relating to substantive rights and obligations, are to a large degree prescribed *ex ante* in the EIB's standard contract templates. Where dates and values are left blank in the contract templates, methodologies are in some cases described for arriving at the relevant figure(s), or other general guidance is given in order to finalise the relevant clauses. For instance, interest rate terms are determined through the application of the same interest rate formulae for each interest rate regime, irrespective of the applicant.³⁶⁷⁸ The same loan currency options are offered; and general guidance is provided on repayment terms.³⁶⁷⁹ Although subject to a degree of discretion, EIB loans are, in our view, financial contributions of a clearly different kind to the one-off and uniquely conceived restructuring measures at issue in *Japan – DRAMS*.

7.930 Finally, contrary to the situation in *Japan – DRAMS*, where the panel found that the JIA's determination was based, in part, on an intermediate factual conclusion that the Government of Korea had the political intent to save a single company, Hynix, from insolvency,³⁶⁸⁰ there is no evidence before us to suggest that the loans at issue were granted because of any intention to provide that type of assistance only to Airbus.

7.931 We recall that the specificity principle set out in Article 2.1(a) focuses on whether the granting authority "explicitly limits access to a subsidy to certain enterprises". As we have already noted, it follows from the ordinary meaning of the word "explicit" that it is not any limitation on access to a subsidy that will make it specific within the meaning of Article 2.1(a), but a limitation that "{d}istinctly express(es) all that is meant; leaving nothing merely implied or suggested"; a limitation that is "unambiguous" and "clear".³⁶⁸¹ Above we have found that the normal operation of the EIB's lending programme involves the granting of loans, with a degree of discretion, to entities of all nationalities, on terms and conditions that, to varying degrees, reflect the particular characteristics and features of the funded project and finance transaction, for activities contributing to the development of a wide array of economic sectors across the EU. While it could be argued that the EIB lending objectives, although very broad, do establish an *explicit* limitation on its lending activities, we do not consider these to result in a limitation on the availability of its loans to "*certain enterprises*". In our view, the wide array of economic sectors covered by the EIB's explicit lending objectives means that its operations are expressly intended to benefit recipients well beyond a particular enterprise or

BCI deleted, as indicated [***]

industry or group of enterprises or industries. Moreover, the fact the EIB loans to Airbus (and other borrowing entities) may contain one or more terms and conditions that are not exactly the same, does not render access to those loans explicitly limited to the particular recipients. This is because the normal operation of the EIB's lending programme places no explicit limitation on access to the same financing opportunity for any other recipient having the same funding needs for a comparable project. Thus, contrary to what the United States has argued, the fact that the subsidy loans to Airbus were negotiated individually between the EIB and Airbus, and granted on terms and conditions that were not always identical to other loans granted by the EIB, does not mean that they are specific within the meaning of Article 2.1(a) of the SCM Agreement. Bearing in mind that the concept of specificity under Article 2.1 of the SCM Agreement has to do with whether a subsidy is sufficiently broadly available throughout an economy so as not to benefit "certain enterprises", we believe there is, in principle, no express, "unambiguous" and "clear" limitation on access to EIB lending to "certain enterprises". Accordingly, we dismiss the United States claim that the EIB loans to Airbus are specific, within the meaning of Article 2.1(a), because the EIB's lending activities are discretionary, and result in loans being negotiated individually and granted on terms and conditions that are not entirely pre-determined.

Whether the Airbus loans are specific under Article 2.1(a) because allegedly granted on terms and conditions that take them outside of the parameters of the EIB's lending programme

7.932 The United States advances a second line of argument to support its contention that the EIB loans to Airbus are specific under Article 2.1(a). In particular, the United States argues that the Airbus loans could be found to be specific within the meaning of Article 2.1(a) if granted on terms and conditions sufficiently different from the terms and conditions of loans granted to other recipients under the same programme. However, because of the European Communities' alleged failure to provide information requested on the EIB's lending activities during the Annex V process, the United States considers that the Panel does not have enough information before it to undertake a proper comparison of the terms and conditions of the EIB loans granted to Airbus with loans granted to other recipients. The United States submits that the European Communities' failure to provide the requested information is an instance of non-cooperation, and pursuant to paragraph 7 of Annex V, calls on the Panel to draw the adverse inference that had such information been available, it would have confirmed the United States' claims.³⁶⁸²

7.933 The United States' position focuses on the potential differences in the terms and conditions attached to the loans granted to Airbus compared with loans to other recipients. As we have previously observed, although the EIB's loans are generally structured to reflect the terms and conditions found in the EIB's standard contract templates, not all loan terms and conditions are identical. Typically, the final content of several provisions will depend upon the particular characteristics of the proposed project and the finance transaction.³⁶⁸³ There may well be other reasons to explain differences in terms and conditions, including, for example, motives more closely tied to the exercise of the EIB's discretion to grant loans and evaluate the particular finance needs of any given project. However, having carefully compared the terms and conditions in the EIB loans to Airbus with those in the standard contract templates, it is clear to us that the terms and conditions of the loans at issue closely follow the terms and conditions found in the standard contract templates. Thus, in the absence of any allegation on the part of the United States that the EIB does not use its standard contract templates when setting the terms and conditions of all of its loans, it follows that the loans to Airbus were not granted on terms and conditions outside of the general parameters of the EIB's overall lending programme.

³⁶⁸² See, paras. 7.893-7.895 above.

³⁶⁸³ See, paras. 7.913-7.917 above.

BCI deleted, as indicated [***]

7.934 Nevertheless, even assuming, *arguendo*, that the loan subsidies to Airbus were, as the United States suggests, provided on terms and conditions outside of the parameters of the EIB's lending programme, this would not, in our view, render them specific under Article 2.1(a). This is because, on the basis of the facts that are before us, differences in the contractual terms and conditions offered to Airbus compared with other recipients would not evidence the existence of any express, unambiguous and clear limitation on access to such subsidies, but rather only the EIB's decision to exercise its discretion to grant loans on those particular terms and conditions to Airbus.

7.935 We recall that the manner in which a granting authority exercises its discretion to grant a subsidy is a relevant consideration when inquiring into whether a subsidy is *in fact* specific within the meaning of Article 2.1(c) of the SCM Agreement. Thus, the fact that a granting authority may have exercised its discretion to grant a subsidy under a generally available subsidy programme on terms and conditions that are more favourable than those attached to all other subsidies granted under the same programme may be enough to demonstrate that it has, *in fact*, limited access to a subsidy to certain enterprises within the meaning of Article 2.1(c). However, we do not believe that this course of action evidences that it has explicitly limited access to a subsidy within the meaning of Article 2.1(a).³⁶⁸⁴ We therefore dismiss the United States claim that the EIB loans to Airbus were specific within the meaning of Article 2.1(a) of the SCM Agreement because allegedly granted on terms and conditions outside of the parameters of the EIB's overall lending programme.

(iii) *Whether the Airbus loans were specific under Article 2.1(c)*

Arguments of the United States

7.936 The United States claims that the EIB loans to Airbus are specific, within the meaning of Article 2.1(c) of the SCM Agreement, because they involve amounts of funding that are allegedly "disproportionately large", and because it considers that Airbus was the "predominant user" of the EIB's subsidy programme.³⁶⁸⁵

7.937 According to the United States, in order to determine whether the amount of a subsidy is "disproportionately large" for the purpose of Article 2.1(c), it is first necessary to establish a "baseline" against which to measure disproportionality.³⁶⁸⁶ The United States submits that identifying a relevant baseline is a fact-dependent exercise. In its view, such a baseline must, in the first instance, reflect the manner in which the granting authority classifies its subsidization activities.³⁶⁸⁷ When subsidies are provided under the auspices of a particular subsidy programme, the programme may serve as the appropriate baseline. However, where there is no such subsidy programme, the United States argues that other ways in which a granting authority classifies its provision of subsidies should be examined, including any relevant categorisation of subsidization activities on the basis of objectives.³⁶⁸⁸

7.938 The United States considers that an appropriate baseline must also take into account the element of time referred to in the last sentence of Article 2.1(c), that is, "the length of time during which the subsidy programme has been in operation". The United States explains that taking this latter time element into account does not mean that one must compare the amount of subsidy at issue

³⁶⁸⁴ While the United States has advanced a claim that the loans to Airbus are specific under Article 2.1(c), it has not argued that the reason for the alleged *de facto* specificity is the existence of differences in the terms and conditions attached to the Airbus loans compared with loans to other recipients. The United States has raised this argument only in the context of its claim under Article 2.1(a). US, Answer to Panel Question 150.

BCI deleted, as indicated [***]

to all subsidies granted during the entire life of a subsidy programme. According to the United States, such a position would ignore the substantial changes that take place in an economy over a period of decades. It would ignore that technologies change, sectors decline, new sectors emerge, and government priorities evolve. Subsidies targeted towards certain enterprises in an emerging sector might not appear to be disproportionate or otherwise specific when compared with an extremely broad universe that includes subsidies to enterprises in sectors that do not play as significant a role in the economy today as they did fifty years ago. However, the United States argues that looked at in the context of the current economy, the same subsidies may well stand out as disproportionate or otherwise specific.³⁶⁸⁹ Thus, when a subsidy programme has been in operation for a relatively long period of time, the United States contends that taking account of the duration of the subsidy programme means identifying a shorter period for analysis that will lead to a more meaningful assessment of disproportionality than an assessment of all subsidies granted during the entire life of the programme.³⁶⁹⁰ If this were not the case, the United States argues that subsidies granted pursuant to programmes operating for long periods of time could escape SCM Agreement disciplines even though they may have been disproportionately large relative to other subsidies granted during the same distinct periods.³⁶⁹¹

7.939 The United States submits that once an appropriate baseline is identified, the amount of the subsidy at issue must be compared with the subsidies granted to other enterprises in the baseline being examined. The amount of a subsidy will not be "disproportionately large" when "the relationship between the subsidy to certain enterprises ... and subsidies to all enterprises in the baseline group is comparable to the relationship between the certain enterprises and all enterprises in the group (measured by indicators that are appropriate in the light of the circumstances, which could include economic output, employment, or other indicators)".³⁶⁹² In other words, the United States is of the view that "the subsidy granted to certain enterprises constitutes an appropriate share of the relevant baseline if its relationship to the baseline corresponds to the relationship of certain enterprises to the entire group of enterprises covered by the baseline being examined".³⁶⁹³

The 2002 loan to EADS

7.940 The United States submits that the relevant baseline for the 2002 EIB loan to EADS is all EIB lending under the research and development objective of the "Innovation 2000 Initiative" ("i2i"), because it was under the auspices of this objective of this alleged lending programme that the EIB granted the EUR 700 million credit line to EADS.

7.941 The United States argues that the ordinary meaning of the word "programme" implies that a subsidy programme may be found to exist when there are factors indicating that a series of subsidies is circumscribed in a way that distinguishes them as a planned series of subsidies. The United States considers that such factors could include: (i) designation by the granting authority of a series of subsidies as a programme; (ii) a common set of objectives; and (iii) dedicated funding.³⁶⁹⁴ According to the United States, various pieces of evidence confirm that all of these factors are present in the EIB's i2i lending.³⁶⁹⁵ For instance, the United States notes that the EIB explicitly described i2i as a "dedicated EUR 12-15 billion lending programme" and that, in early 2003, the EIB declared it "had

BCI deleted, as indicated [***]

fully achieved its i2i objectives" upon having committed EUR 14.4 billion in loans by the end of 2002.³⁶⁹⁶

7.942 The United States argues that its focus on research and development lending under the i2i is consistent with the way the EIB analysed its own activities. The United States notes that the EIB described its i2i lending as being made pursuant to one of five "economic sectors": "development of SMEs and entrepreneurship"; "diffusion of innovation"; "research and development"; "information and communications technology networks"; and "human capital formation".³⁶⁹⁷ Moreover, the United States asserts that the EIB discusses its lending activities under each sector in its annual activity reports. Thus, the United States observes that in its 2002 Activity Report, the EIB explained that in "2002, the EIB ploughed {Euro} 2.1 billion into 15 R&D projects spanning 6 EU countries, with one pan-European international cooperation project partly located in Switzerland ... ".³⁶⁹⁸

7.943 From a temporal perspective, the United States considers that the relevant baseline for the 2002 loan to EADS should not be set, as the European Communities contends, to correspond with the period of time over which the EIB has conducted all of its lending activities (*i.e.*, since the EIB's establishment in 1957). In the view of the United States, a more meaningful length of time for the baseline would be either the year in which the loan to EADS was granted (2002) or the years from 2000 to 2003, covering the period during which the alleged i2i programme was in existence.³⁶⁹⁹

7.944 The United States asserts that the EUR 700 million credit line represented one third of EIB lending for research and development needs under i2i in 2002, and 18% of its lending for research and development under i2i from 2000 to the end of 2002.³⁷⁰⁰ The United States argues that these facts take on particular significance in the light of the high degree of economic diversification within the European Communities, supporting the conclusion that the 2002 loan to EADS is specific under Article 2.1(c) of the SCM Agreement.³⁷⁰¹ Moreover, the United States alleges that the credit line to EADS was the single largest provided to any one company under the alleged i2i programme taken as a whole,³⁷⁰² over the period 2000 to 2003 or even between 2000 and 2006.³⁷⁰³ Thus, the United States also submits that EADS was the predominant user of the alleged i2i subsidy programme, therefore making the EIB loan specific within the meaning of Article 2.1(c) also for this reason.³⁷⁰⁴

The loans granted to Airbus between 1988 and 1993

7.945 As regards the other EIB loans to Airbus granted between 1988 and 1993, the United States notes that during the relevant period the EIB classified its lending activities by economic sectors and lending objectives. The two broad economic sectors used were: (1) "energy and infrastructure," which contained mostly state-owned-and-operated sectors like petroleum, electricity, railways, roads, telecom, water, and sewage; and (2) "industry, services, and agriculture", which includes, *inter alia*, "transport equipment" (the sector for aeronautical engineering). There were eight different lending

BCI deleted, as indicated [***]

objectives, with the loans to Airbus falling within the "international competitiveness and European integration of large firms" objective. In the light of the EIB's own description of its activities, the United States argues that the appropriate baselines for the 1988 to 1993 loans could be the EIB's lending to the "industry, services and agriculture" sector and also its lending under the "international competitiveness and European integration of large firms" objective.³⁷⁰⁵ In terms of the appropriate length of time of the baseline, the United States submits that the period 1988 to 1993 could be used, covering the five years during which the relevant loans were granted to Airbus.³⁷⁰⁶

7.946 The United States asserts that, during the period from 1988 to 1993, Airbus received approximately 10% of all EIB loans granted to the "industry, services and agriculture" sector and approximately 20% of loans under the "international competitiveness and European integration of large firms lending objective".³⁷⁰⁷ In addition, the United States notes that over the same five years, Airbus was the largest private recipient of EIB individual loans; that among private enterprises, EIB loans to Airbus were 44% greater than loans granted to the next largest recipient; and that the EUR 1.06 billion in loans to Airbus exceeded the EIB's lending to any industrial sector, with the exception of chemicals and other transport equipment.³⁷⁰⁸ On this basis, the United States concludes that the EIB loans granted to Airbus between 1988 and 1993 were "disproportionately large", within the meaning of Article 2.1(c), and therefore *de facto* specific.

Arguments of the European Communities

7.947 The European Communities rejects the United States' claims and argues that the EIB loans were not "disproportionately large", and therefore not *de facto* specific, within the meaning of Article 2.1(c) of the SCM Agreement.

7.948 The European Communities submits that in order to determine whether the challenged loans were granted in disproportionately large amounts for the purpose of Article 2.1(c), it is first necessary to identify the proper universe of funding against which they can be compared. The European Communities argues that the two alternatives advanced by the United States – EIB policy objectives or EIB-supported economic sectors – do not properly constitute distinct universes of funding for this purpose.³⁷⁰⁹ According to the European Communities, the appropriate universe of funding that should be used to determine whether the EIB loans involved disproportionately large amounts is all EIB lending (*i.e.*, all "individual" and "global" loans) since 1957. When this is done, the European Communities argues that it is clear that the EIB loans at issue do not involve disproportionately large subsidy amounts. Moreover, the European Communities submits that the same result holds even when examining the relevant loans under different analytical frameworks involving a smaller universe of funding.

The 2002 loan to EADS

7.949 The European Communities submits that the EIB's lending activities under the i2i do not amount to a subsidy programme and cannot therefore be used as an appropriate baseline for the purpose of conducting a disproportionality analysis. The European Communities asserts that the United States has misinterpreted the facts relating to the i2i, arguing that rather than being a subsidy programme, the i2i is merely a manifestation of one of the objectives of the EIB's overall lending

BCI deleted, as indicated [***]

programme.³⁷¹⁰ The European Communities explains that the i2i was launched to reflect the Lisbon Strategy formulated by the European Council in 2000, a strategy which has the goal of making Europe the most competitive and dynamic knowledge based economy in the world by 2010.³⁷¹¹ According to the European Communities, the i2i was established in order to group together under one name the various elements of EIB policy objectives that were already in place and contributing to the attainment of the Lisbon Strategy in order to demonstrate the EIB's involvement. Thus, the European Communities argues that the i2i is "essentially a successor to the {EIB's} 'industrial competitiveness' and 'advanced technology' objective{s}",³⁷¹² with the "industrial competitiveness" objective being formally replaced by the i2i as a separate EIB eligibility criteria in 2003.³⁷¹³

7.950 The European Communities asserts that the EIB does not ring-fence pools of money for its lending activities under any of its individual policy objectives. As regards the sum of EUR 12-15 billion the United States argues was dedicated to the i2i, the European Communities explains that this figure reflects a lending target based on the EIB's assessment of the possible contribution it could make to the Lisbon Strategy over an initial three-year period based on its experience in the relevant sectors.³⁷¹⁴ The European Communities asserts that as long as the EIB complies with its Statutory obligation to ensure that the aggregate amount of loans and guarantees outstanding at any time does not exceed 250% of its subscribed capital, it can have recourse to the capital markets in order to increase its lending activities. Thus, the European Communities contends that there is no financial ceiling for any of the EIB's objectives and no application for a loan is rejected on such grounds.³⁷¹⁵ In this regard, the European Communities indicates that by April 2003, the EIB Group had in fact lent almost EUR 17 billion under the i2i, more than the EUR 15 billion that had been originally targeted.³⁷¹⁶

7.951 The European Communities recalls that the EIB provides loans that routinely meet several objectives at the same time. For instance, the European Communities notes that the 2002 loan to EADS, like several other research and development loans granted under the i2i, satisfied multiple EIB policy objectives. In addition to being classified under the i2i objective, the 2002 loan to EADS fell within the scope of the "common interest" and "industrial competitiveness" objectives.³⁷¹⁷ The European Communities argues that the fact that the loans granted under the i2i satisfied multiple objectives provides additional confirmation that the i2i was not a distinct lending programme as the United States argues.³⁷¹⁸

7.952 The European Communities submits that, to the extent that any of the challenged loans are found to be subsidies, the relevant subsidy programme is the EIB's entire portfolio of lending since 1957.³⁷¹⁹ When examined in the light of this baseline, the European Communities notes that the EUR 700 million credit line to EADS represents only one of 8,400 contracts that together involved a financing commitment amounting to EUR 591.5 billion.³⁷²⁰ In terms of amounts actually disbursed, the European Communities discloses that between 1957 and 2006, the EIB actually disbursed EUR 497 billion. The European Communities recalls that EADS drew down on only [***] of the

BCI deleted, as indicated [***]

EUR 700 million commitment (i.e, [***]); and that it is only this disbursed amount that is relevant for the purpose of a disproportionality analysis under the SCM Agreement.³⁷²¹

7.953 Even using the EIB's i2i lending as the appropriate baseline, the European Communities contends that the 2002 loan to EADS would still not be disproportionately large. Contrary to what is asserted by the United States, the European Communities argues that the EIB's i2i lending did not end in 2003. Although initially conceived for a term of 3 years, the i2i was "extended" to 2010, with its lending aim increased to EUR 50 billion by the end of the decade. Its name was also formally changed to the "Innovation 2010 Initiative", reflecting the target date of the Lisbon Strategy (2010) as opposed to the year of the Strategy's adoption (2000).³⁷²² When examined over the period from its establishment in 2000 to 31 December 2006, the EUR 700 million represents 1.5% of the EIB's total funding under the i2i policy objective, which amounted to EUR 45.7 billion and covered 288 projects.³⁷²³ In terms of actual disbursements, the European Communities notes that the [***] received by EADS must be compared with the EUR 37 billion disbursed under the i2i as of 8 May 2007, demonstrating that EADS received less than [***] of all i2i funding.³⁷²⁴

7.954 The European Communities arrives at the same conclusion after examining the loan to EADS in the context of research and development lending under the i2i. Although it contests the United States' use of all research and development lending as an appropriate baseline,³⁷²⁵ the European Communities nevertheless notes that total EIB commitments in relation to i2i research and development lending during the period 2000 to January 2007 were EUR 22.7 billion. The European Communities notes that the credit line opened for EADS accounts for 3.1% of this total, even before taking into account the fact that EADS only drew down on [***] of the available funds.³⁷²⁶

7.955 Finally, the European Communities disputes the relevance of the United States' contention that the EADS contract was the largest single credit line to any one company under the i2i, arguing that it fails to take account of the fact that while EADS received one large loan in one year, many other borrowers under i2i (such as Ford) received a number of significant loans across a number of years, which when aggregated, were larger than the 2002 EADS loan contract.³⁷²⁷ In any case, the European Communities asserts that EADS was only the 11th largest recipient; and that when examined in terms of disbursed amounts, only the joint 30th largest recipient of funds under the i2i objective.³⁷²⁸

The loans granted to Airbus between 1988 and 1993

7.956 The European Communities argues that the "industry, services and agriculture sector category" and the "international competitiveness and European integration of large firms lending objective" are policy objectives, and not programmes that can be used as appropriate baselines for the purpose of a disproportionality analysis under Article 2.1(c).³⁷²⁹ According to the European Communities, in seeking to use data relating to loans falling within the scope of these objectives, the United States relies upon classifications made by the EIB for the purpose of periodically reporting to

stakeholders and analysts. In the view of the European Communities, such an approach leaves the question of specificity to be resolved in the light of how a granting authority drafts its reports.³⁷³⁰

7.957 Moreover, the European Communities contends that the 1988 to 1993 time-frame advanced by the United States is artificial and self-serving.³⁷³¹ In this respect, the European Communities argues that the United States has provided no valid explanation for why data relating to total loan amounts reported in this five year period should be accepted instead of data from any other period of time, for example, 10 years, one year, one month or even one week.³⁷³² In addition, the European Communities considers that a period of time that is shorter than the actual length of the subsidy programme that is at issue would be inconsistent with the wording of Article 2.1(c), which it argues expressly envisages that length of the duration of the "programme" as a whole must be taken into account, and not any part or segment thereof.³⁷³³

7.958 Thus, the European Communities considers that all of the EIB's lending since 1957 must be taken into account when examining whether the loans to Airbus between 1988 to 1993 are *de facto* specific within the meaning of Article 2.1(c). However, if another approach were to be taken, the European Communities submits that a methodology that would be more objective to the one proposed by the United States would be to compare the loans to Airbus provided in each year with the total value of loans provided by the EIB in the five preceding years. The European Communities asserts that such a comparison shows that the disputed loans did not represent, in any one year, more than 1.6% (on average 0.9%) of total EIB lending over the preceding five years.³⁷³⁴

Evaluation by the Panel

7.959 We begin our evaluation of the United States claims by reviewing Article 2.1(c) of the SCM Agreement, which reads:

"2.1 In order to determine whether a subsidy, as defined in paragraph 1 of Article 1, is specific to an enterprise or industry or group of enterprises or industries (referred to in this Agreement as "certain enterprises") within the jurisdiction of the granting authority, the following principles shall apply:

...

(c) If, notwithstanding any appearance of non-specificity resulting from the application of the principles laid down in subparagraphs (a) and (b), there are reasons to believe that the subsidy may in fact be specific, other factors may be considered. Such factors are: use of a subsidy programme by a limited number of certain enterprises, predominant use by certain enterprises, the granting of disproportionately large amounts of subsidy to certain enterprises, and the manner in which discretion has been exercised by the granting authority in the decision to grant a subsidy.³ In applying this subparagraph, account shall be taken of the extent of diversification of economic activities within the jurisdiction of the granting authority, as well as of the length of time during which the subsidy programme has been in operation.

BCI deleted, as indicated [***]

³ In this regard, in particular, information on the frequency with which applications for a subsidy are refused or approved and the reasons for such decisions shall be considered."

7.960 The language of Article 2.1(c) suggests that it is intended to address the situation where a challenged subsidy does not appear to be specific within the meaning of the principles set out in Articles 2.1(a) and 2.1(b), but "there are reasons to believe that the subsidy may in fact be specific". When such a situation arises, the first sentence of Article 2.1(c) stipulates that "other factors may be considered". The second sentence of Article 2.1(c) elaborates four "such factors". In essence, the United States' allegation that the EIB loans to Airbus are in fact specific under Article 2.1(c) is grounded in one of these factors – "the granting of disproportionately large amounts of subsidy to certain enterprises". However, it is also based upon reliance on another factor – "predominant use by certain enterprises".

"the granting of disproportionately large subsidy amounts to certain enterprises"

7.961 Something may be said to be "disproportionate" when it is "lacking proportion".³⁷³⁵ The ordinary meaning of the word "proportion" includes "a portion, a part, a share, esp. in relation to a whole", "a relative amount or number", "a comparative relation or ratio between things in size, quantity, number, etc.". ³⁷³⁶ These meanings suggest that the inquiry that must be undertaken when assessing whether the amount of a subsidy is "disproportionately large" will involve identifying the relationship between the amount of the subsidy at issue and something else that is "a whole", and determining whether that relationship demonstrates that the amount of subsidy is greater than the amount it would need to be in order to be proportionate – *i.e.*, not lacking proportion. The United States refers to the "something else" against which the amount of the subsidy at issue should be compared as a "baseline"; the European Communities as a "universe" of funding or "reference data".³⁷³⁷

7.962 According to the European Communities, the "universe" of funding or "reference data" that should be used for the purpose of a disproportionality analysis under Article 2.1(c) must be drawn from the subsidy programme pursuant to which the challenged subsidy is granted. The European Communities argues that this follows from the fact that Article 2.1(c) identifies the "use of a *subsidy programme* by a limited number of certain enterprises" as one of the factors that may be considered when assessing whether a subsidy is in fact specific.³⁷³⁸ Moreover, the European Communities notes that the last sentence of Article 2.1(c) explicitly requires that, in applying Article 2.1(c), "the length of time during which the *subsidy programme* has been in operation" must be taken into account.³⁷³⁹ Thus, the European Communities emphasizes that the language of Article 2.1(c) calls for the consideration of data pertaining to an entire subsidy programme, not a part, component or element of that programme. In its view, a disproportionality analysis must therefore involve comparing the amount of the subsidy at issue with the total amount of subsidies granted under an entire subsidy programme.

7.963 The United States does not share the European Communities' view that the relevant "baseline" for a disproportionality analysis must in all situations be a subsidy programme. In this regard, the

United States notes that the third and fourth factors described in the second sentence of Article 2.1(c) do not refer to a subsidy programme.³⁷⁴⁰ According to the United States, this textual difference means that Article 2.1(c) permits the use of a frame of reference that may be different from a subsidy programme when considering these two factors.

7.964 In our view, the language of Article 2.1(c), when interpreted in its proper context and in the light of its object and purpose, suggests that where the subsidy at issue has been granted pursuant to a subsidy programme, that programme should normally be used for the purpose of identifying the "baseline" or "reference data" needed to perform a disproportionality analysis. However, as the United States points out, the absence of any explicit reference to "a subsidy programme" in the language of Article 2.1(c) suggests that it does not *require* that a subsidy programme be used for this purpose in each and every factual circumstance.

7.965 The "granting of disproportionately large amounts of subsidy to certain enterprises" is the third of four specificity factors that Article 2.1(c) identifies as having possible relevance for the determination of whether a subsidy is in fact specific. Contrary to the first factor ("use of a subsidy programme by a limited number of certain enterprises") and the second factor ("predominant use by certain enterprises"), the third factor makes no direct or indirect reference to a subsidy programme. Likewise, the fourth factor ("the manner in which discretion has been exercised by the granting authority in the decision to grant a subsidy") includes no reference to a subsidy programme. In our view, it would not have been difficult for the drafters of the SCM Agreement to include a reference to a subsidy programme in the text of the third specificity factor, as they did for the first and second specificity factors. However, the drafters chose not to do so. Thus, on its own, the text of the third specificity factor listed in the second sentence of Article 2.1(c) does not support the view that a disproportionality analysis *must* involve comparing the amount of a subsidy granted under a given subsidy programme with the entire amount of subsidies granted under the same subsidy programme.

7.966 Important context for the interpretation of the four specificity factors can be found in the last sentence of Article 2.1(c). This sentence requires that consideration of "the granting of disproportionately large amounts of subsidy to certain enterprises" (or consideration of any one or more of the remaining three specificity factors) must take into account two matters: (i) "the extent of diversification of economic activities within the jurisdiction of the granting authority"; and (ii) "the length of time during which the subsidy programme has been in operation". For present purposes, it is instructive to note that the last sentence of Article 2.1(c) calls for the duration of "*the* subsidy programme" to be taken into account. The use of the definite Article "the" denotes one particular subsidy programme. It is apparent from the text of the first and second specificity factors that "*the* subsidy programme" stands for the programme that must be considered when evaluating whether there has been "use of a subsidy programme by a limited number of certain enterprises" or "predominant use by certain enterprises". In other words, "*the* subsidy programme" is the subsidy programme pursuant to which the subsidy at issue has been granted.

7.967 As we have already observed, the third and fourth specificity factors make no direct or indirect reference to a subsidy programme. In our view, this implies that there may be situations when the third specificity factor ("the granting of disproportionately large amounts of subsidy to certain enterprises") may be considered in the light of a frame of reference that is different from a subsidy programme.³⁷⁴¹ However, where the subsidy at issue is granted pursuant to a subsidy

³⁷⁴⁰ US, Comments on EC Answer to Panel Question 182.

³⁷⁴¹ While we recognise that determining whether a subsidy is specific within the meaning of Article 2.1 involves a case-by-case assessment of the particular facts surrounding the subsidy at issue, in general, we believe that to the extent that a subsidy not granted under a subsidy programme may be characterised as a one-off subsidy, it would be found to be specific within meaning of Article 2.1(a), rendering an assessment of specificity under Article 2.1(c) unnecessary.

BCI deleted, as indicated [***]

programme, the language of the last sentence of Article 2.1(c) implies that the duration of that subsidy programme be taken into account when performing a disproportionality analysis. It follows that when the subsidy at issue is granted pursuant to a subsidy programme, the "baseline" or "reference data" needed to conduct a disproportionality analysis should be drawn from that same subsidy programme.

7.968 The European Communities submits that taking into account "the length of time during which the subsidy programme has been in operation", in the context of a disproportionality analysis, involves comparing the amount of the subsidy at issue with the amount of all of the subsidies granted under the same programme for its entire duration. In other words, the European Communities argues that the relevant "baseline" or "reference data" needed to conduct a disproportionality analysis is the total amount of subsidization provided over the entire life of the relevant subsidy programme. On the other hand, the United States considers that taking this time element into account means identifying a period of time that will lead to a meaningful assessment of disproportionality. According to the United States, this period may not always coincide with the entire duration of the relevant subsidy programme.

7.969 The last sentence of Article 2.1(c) provides that: "In applying this subparagraph, *account shall be taken* of ... the length of time during which the subsidy programme has been in operation". To take something into account means to take something into reckoning or consideration; to take something on notice.³⁷⁴² Therefore, in the context of the third specificity factor, the last sentence of Article 2.1(c) requires that the length of time during which the relevant subsidy programme has been in operation must form part of the *consideration or reckoning* of whether the amount of a subsidy granted to certain enterprises pursuant to that same subsidy programme is disproportionately large. It follows that the total amount of subsidization provided over the entire life of the relevant subsidy programme does not have to be used as the relevant "baseline" or "reference data" when conducting a disproportionality analysis.

7.970 We recall that the notion of specificity has to do with whether a subsidy is sufficiently broadly available throughout an economy so as not to benefit "certain enterprises".³⁷⁴³ In our view, this understanding of what specificity means serves as the beacon which guides the interpretation of the entirety of Article 2, including Article 2.1(c). What it means to take account of "the length of time during which the subsidy programme has been in operation" when performing a disproportionality analysis must be understood in this context. Thus, using the total amount of subsidies granted under a subsidy programme over its entire life as the "baseline" or "reference data" for the purpose of determining whether the amount of a subsidy is "disproportionately large" may not always be appropriate if, for example, the subsidy programme has not operated long enough to understand its full impact on an economy. Likewise, establishing a "baseline" or identifying "reference data" on the basis of the total amount of subsidies granted under a long-standing subsidy programme may also be inappropriate if, for example, there has been a material change in the importance of the subsidized activities in the wider economy and/or the granting authority's economic priorities over the life of the subsidy programme. In this regard, we agree with the United States that subsidies targeted towards certain enterprises in an emerging sector might not appear to be disproportionately large when compared with an extremely broad universe that includes subsidies to enterprises in sectors that do not play as significant a role in the economy today as they did over previous decades. However, in the context of the present economy, the same subsidies may well stand out as disproportionately large.³⁷⁴⁴ Thus, in our view, where a subsidy to certain enterprises has been granted pursuant to a long-standing subsidy programme, identification of the proper "baseline" or "reference data" against which to measure whether the subsidy is granted in "disproportionately large amounts" will involve taking into account the extent to which it would be reasonable and appropriate to determine whether the subsidy

³⁷⁴² The New Shorter Oxford Dictionary, Fourth Edition, p.15.

³⁷⁴³ See, para. 7.919 above.

³⁷⁴⁴ US, Comments on EC Answer to Panel Question 183.

BCI deleted, as indicated [***]

at issue is in fact sufficiently broadly available throughout an economy so as not to benefit "certain enterprises" on the basis of the entire duration of the subsidy programme or some shorter period of time.

7.971 According to the United States, once the correct "baseline" is identified, the relationship between the amount of the subsidy granted to certain enterprises and the total amount of subsidies provided to the "baseline" group of enterprises must be compared with the relationship between the "certain enterprises and all enterprises in the {'baseline'} group (measured by indicators that are appropriate in the light of the circumstances, which could include economic output, employment, or other indicators)".³⁷⁴⁵

7.972 We agree with the United States that identifying the relationship between the amount of the subsidy at issue and the "baseline" is not enough to determine whether the challenged subsidy is "disproportionately large". For example, a subsidy granted to certain enterprises in an amount that represents 50% of the total amount of subsidies granted under a relevant subsidy programme says little, if anything, about whether that amount is "disproportionately large". As we have previously explained,³⁷⁴⁶ assessing whether the amount of a subsidy is "disproportionately large" involves determining whether the relationship between the amount of the subsidy at issue and a relevant "baseline" demonstrates that the amount of subsidy is greater than the amount that it would need to be in order to be proportionate. Thus, determining whether a 50% share of the total amount of subsidies granted under a particular subsidy programme to certain enterprises is "disproportionately large" involves considering whether the 50% share is greater than what it would need to be in order to say that the certain enterprises received a proportionate amount of all subsidies granted under that same programme. There is no explicit guidance in Article 2.1(c) for how to make this determination. However, the fact that the last sentence of Article 2.1(c) requires that "the extent of diversification of economic activities within the jurisdiction of the granting authority" be taken into account, suggests that evidence of the diversity of economic activity must be considered in the analysis.

7.973 One relevant measure of the extent of economic diversification within the jurisdiction of the granting authority is the proportion of economic activity attributable to the subsidy recipient(s). Taking such evidence into account in the "disproportionality" analysis required under Article 2.1(c) would, in our view, involve comparing the share of the total amount of subsidies granted under a generally available subsidy programme to one or more recipients, with the proportion of economic activity attributable to the same recipient(s) within the jurisdiction of the granting authority. Where the amount of a subsidy granted to one or more recipients under a broadly available subsidy programme represents a proportion of total subsidies granted under the same programme that significantly exceeds the economic activity attributable to the same recipient(s) in the broader economy, the amount of the subsidy at issue would be "disproportionately large". In our view, such a subsidy would not be sufficiently broadly available throughout an economy and would therefore benefit "certain enterprises".³⁷⁴⁷

"predominant use"

7.974 The second specificity factor identified in Article 2.1(c) is "predominant use by certain enterprises". As we have already noted, when read in the light of the first specificity factor ("use of a subsidy programme by a limited number of certain enterprises"), it is clear that this factor indirectly refers to "predominant use" of "a subsidy programme". The ordinary meaning of the word "predominant" includes "constituting the main or strongest element; prevailing".³⁷⁴⁸ Thus,

³⁷⁴⁵ US, Answer to Panel Question 119.

³⁷⁴⁶ See, para. 7.961 above.

³⁷⁴⁷ Panel Report, *US – Upland Cotton*, para. 7.1142.

³⁷⁴⁸ The New Shorter Oxford Dictionary, Fourth Edition, p.2329.

BCI deleted, as indicated [***]

"predominant use {of a subsidy programme} by certain enterprises" may be simply understood to be a situation where a subsidy programme is mainly, or for the most part, used by certain enterprises.

7.975 In considering whether there is "predominant use {of a subsidy programme} by certain enterprises" for the purpose of making a finding of specificity, the last sentence of Article 2.1(c) requires that account be taken of: (i) "the extent of diversification of economic activities within the jurisdiction of the granting authority"; and (ii) "the length of time during which the subsidy programme has been in operation". As with determining whether a subsidy has been granted in "disproportionately large amounts", the relevance of these two factors to understanding whether there has been "predominant use {of a subsidy programme} by certain enterprises" will depend upon the particular facts. Thus, for example, where a subsidy programme operates in an economy made up of only a few industries, the fact that those industries may have been the main beneficiaries of a subsidy programme may not necessarily demonstrate "predominant use". Rather, use of the subsidy programme by those industries may simply reflect the limited diversification of economic activities within the jurisdiction of the granting authority. On the other hand, the same subsidy programme operating in the context of a highly diversified economy that is used mainly, or for the most part, by only a few industries would tend to indicate "predominant use".

7.976 Likewise, when taking into account "the length of time during which the subsidy programme has been in operation", the use of a subsidy programme by certain enterprises may not necessarily indicate "predominant use" in the context of a relatively new subsidy programme that has not yet operated for enough time to understand its full impact on an economy. Moreover, it may not always make sense to determine whether there has been "predominant use" over the entire life of a subsidy programme, where that programme has operated for decades that have witnessed a material change in the importance of the subsidized activities in the wider economy and/or the granting authority's economic priorities. As with determining whether a subsidy has been granted under a long-standing subsidy programme in "disproportionately large amounts", a determination of whether there has been "predominant use" of a long-standing subsidy programme should involve taking into account the extent to which it would be reasonable and appropriate to determine whether the subsidy at issue is in fact sufficiently broadly available throughout an economy so as not to benefit "certain enterprises" on the basis of the entire duration of the subsidy programme or some shorter period of time.

7.977 With the above understanding of how to determine whether a subsidy is granted in "disproportionately large amounts" to certain enterprises or whether there is "predominant use" of a subsidy programme by certain enterprises in mind, we now turn to examine the United States' specific allegations in respect of the measures at issue.

The 2002 loan to EADS

7.978 The United States claims that the 2002 loan granted to EADS is specific within the meaning of Article 2.1(c) because in its view: (i) it represents a disproportionately large amount of subsidy granted to certain enterprises when measured against (a) all of the loans granted by the EIB for the purpose of research and development projects under the "Innovation 2000 Initiative" ("i2i") in 2002, or (b) all of the loans granted by the EIB for the purpose of research and development projects under the i2i between 2000 and the end of 2002, in the light of the highly diversified nature of the EU economy; and (ii) it evidences predominant use of the i2i subsidy programme by EADS.

7.979 Before evaluating the merits of the United States' claims, we recall that we have already found that the 2002 finance contract between the EIB and EADS evidences the existence of two financial contributions: a direct transfer of funds in the form of the [***] loan; and a potential direct transfer of funds in the form of the EUR 700 million credit line.³⁷⁴⁹ Of the two financial

³⁷⁴⁹ See, para. 7.738 above.

BCI deleted, as indicated [***]

contributions, we have found that the United States has established that only the former confers a benefit upon Airbus, and therefore constitutes a subsidy.³⁷⁵⁰ Thus, for the purpose of our specificity analysis, the relevant subsidy that must be examined is that conferred by the [***] loan, as evidenced by the 2002 finance contract between the EIB and EADS.

"the granting of disproportionately large amounts of subsidy to certain enterprises"

7.980 Both parties have advanced their arguments on whether the 2002 loan to EADS involved "the granting of disproportionately large amounts of subsidy to certain enterprises" by equating the financial contribution provided under the 2002 loan contract with the "amounts of subsidy" referred to in Article 2.1(c). In our view, when the subsidy at issue is provided in the form of a loan granted on below market interest rate terms, the amount of the subsidy benefit – *i.e.*, the amount of the subsidy – will be a function of the interest rate advantage, the amount of the loan principal and the period of repayment. Thus, the amount of principal transferred under a loan may be a useful indicator of the amount of a subsidy, particularly where, as in the present case, there is evidence showing that the interest rate terms of loans provided by the granting authority followed a standard methodology, and the parties in dispute have not argued there to be, in general, any material difference in the subsidy intensity between loans. Thus, given the particular facts that are before us, we believe that the actual amount of principal transferred to the recipients of subsidized loans granted by the EIB may serve as a reasonable proxy of the "amounts of subsidy".

7.981 A "disproportionality analysis" requires the identification of an appropriate "baseline".³⁷⁵¹ The United States argues that the relevant baseline to use for this purpose is the total amount of funds lent by the EIB for research and development projects under the i2i in 2002, or between 2000 and the end of 2002. According to the United States, such an approach mirrors the EIB's own description of its lending activities, which it considers demonstrates that the EIB had set up the i2i as a distinct lending programme with one of its particular objectives being the funding of research and development projects. In this regard, the United States notes that at its launch, the EIB had explicitly described the i2i as "a practical programme aimed at building a Europe based on knowledge and innovation"; a "dedicated EUR 12-15 billion lending programme", which in February 2003 the EIB declared "had fully achieved its objectives" upon having committed EUR 14.4 million in loans by the end of 2002. The United States justifies its focus on i2i lending for *research and development* by recalling that "research and development" was one of five alleged "economic sectors" targeted by i2i; and because "research and development" was a heading used by the EIB for the purpose of reporting the progress of its lending activities in its Activity Reports. Moreover, the United States submits that the distinct research and development focus of the i2i is also evidenced by the fact that the EIB used research and development lending under the i2i as the "principal tool" with which it implemented the formal agreement that existed between the European Commission and the EIB to cooperate "with the aim of optimising their action in the field of research and the exploitation of its results".³⁷⁵²

7.982 We are not convinced by the United States' submission. The United States places significant reliance on the EIB's own characterisation of the i2i as a "programme" to conclude that it should be treated as such for the purpose of Article 2.1(c). As a general matter, we doubt whether a granting authority's own description of the nature of its activities can always be given the probative value that the United States attributes to the EIB's statements. Nevertheless, we recognize that the statements of

³⁷⁵² US, Answer to Panel Question 14, citing the Joint Memorandum establishing a framework for cooperation between the community research framework programme and the "Innovation 2000 Initiative" between the European Community represented by the Commission of the European Communities and the European Investment Bank, para. 4, Exhibit US-155.

BCI deleted, as indicated [***]

the authority responsible for granting subsidies that are alleged to be specific will be relevant to determining whether those subsidies are in fact specific within the meaning of Article 2.1(c). However, their probative value needs to be assessed on a case-by-case basis. In the present instance, when considered in their proper context, the EIB statements provide little, if any, support for the contention that the i2i was a "programme" in the sense that is argued by the United States.

7.983 The first statement the United States relies upon was taken from an undated three page EIB publication introducing the i2i. The first sentence of this publication reads:

"In order to support the guidelines laid down by the Heads of Government, the EIB is implementing its Innovation 2000 Initiative, a practical programme aimed at building a Europe based on knowledge and innovation." ³⁷⁵³

We note, however, that in the very next sentence, the EIB describes the i2i as an "initiative":

"Adopted by the EIB's Board of Governors at its Annual Meeting in June 2000, this initiative covers a number of operational principles intended to target lending by the EIB Group towards the following five objectives: ..." ³⁷⁵⁴

The United States also refers to the EIB's description in the same document of the i2i as a "dedicated EUR 12-15 billion lending programme". This statement is drawn from the following passage:

"Over the next three years, EIB support for these areas will take the form of a dedicated EUR 12-15 billion lending programme, plus a further EUR 1 billion for developing venture capital operations. Rather than increasing the volume of finance, the Innovation 2000 Initiative will mark a qualitative shift of emphasis in the EIB Group's activities towards sectors of the future with high technological value added." ³⁷⁵⁵

In our view, this statement shows that the i2i was not intended to represent a new "programme" in the sense that is argued by the United States, but rather only a "qualitative shift of emphasis" in the EIB's ongoing finance activities without increasing their overall volume. In other words, as we read it, the statement suggests that the i2i was intended to operate as an "innovation"-focused continuation of the EIB's ongoing lending activities.

7.984 According to an EIB press release, the i2i was "put in place by the EIB to support the 'Lisbon Strategy', as chartered by the European Council in March 2000, for building a 'European economy based on knowledge and innovation'". ³⁷⁵⁶ Similarly, the EIB *Eligibility Guidelines* explain that "{t}he Bank's 'Innovation 2000 Initiative' ... is the Bank's contribution to the Lisbon process, which itself was launched at the Extraordinary EU Summit in Lisbon in March 2000." ³⁷⁵⁷ The overall goal of the Lisbon Strategy was for Europe "to become the most competitive and dynamic knowledge-based economy in the world capable of sustainable growth with more and better jobs and greater social cohesion" through a series of actions including increased support for research and development, competitiveness and innovation. In 2004, the EIB described its involvement in the implementation of the Lisbon Strategy through the i2i in the following terms:

³⁷⁵³ Exhibit US-154 (Underline added).

³⁷⁵⁴ Exhibit US-154 (Underline added).

³⁷⁵⁵ Exhibit US-154 (Underline added).

³⁷⁵⁶ Exhibit US-164.

³⁷⁵⁷ *EIB Eligibility Guidelines*, Exhibit EC-161, p. 8 (emphasis original).

BCI deleted, as indicated [***]

"The EIB Group has been involved in the preparation and in the implementation of {the Lisbon Strategy}, focusing its efforts on those innovation areas where particular investment efforts were most required and where supporting EIB loans or EIF venture capital (and guarantees) could be best deployed. Accordingly, in 2000, the Bank launched the 'Innovation 2000 Initiative'. To some extent, i2i built upon the experience gained within the {EIB's} 'Amsterdam Special Action Programme' (ASAP), which ran from 1997-2000 and introduced or reinforced lending for education, health and R&D, as well as investment in venture capital."³⁷⁵⁸

7.985 With this description, the EIB explicitly acknowledges that the lending activities carried out under the i2i were "to some extent" a more focused continuation of lending activities undertaken between 1997 to 2000. Indeed, other evidence confirms that of the five lending objectives targeted under the i2i ("development of SMEs and entrepreneurship"; "diffusion of innovation"; "research and development"; "information and communications technology networks"; and "human capital formation"³⁷⁵⁹), at least four (if not all five) were already the subject of the EIB's lending activities prior to i2i.³⁷⁶⁰

7.986 That the i2i was not a "programme" in the sense argued by the United States is also supported by evidence showing that loans, including the 2002 loan to EADS, were routinely considered by the EIB to satisfy multiple lending "objectives", not only the i2i.³⁷⁶¹ Indeed, the EIB identifies the relevant "eligibility" criteria for the 2002 loan to EADS to be "industrial competitiveness" not i2i.³⁷⁶² It is difficult to understand, and indeed, the United States has said little to explain, how the i2i may be characterised as a "programme" distinct from the EIB's other lending in the light of the fact that loans granted thereunder were counted by the EIB for its own reporting requirements as satisfying multiple lending objectives.³⁷⁶³

7.987 The United States considers that the EIB's explicit description of the i2i as a "dedicated EUR 12-15 billion lending programme" suggests that it maintained a dedicated budget for i2i lending, thereby supporting the view that the i2i was a "programme" of lending separate to the EIB's other lending activities.³⁷⁶⁴ The United States asserts that the EIB's declaration in early 2003 that it "had

³⁷⁵⁸ *EIB Eligibility Guidelines*, Exhibit EC-161, p. 8. "ECOFIN" is the Economic and Financial Affairs Council of the EU. It is composed of the Economics and Finance Ministers of the EU Member States, as well as Budget Ministers when budgetary issues are discussed.

³⁷⁵⁹ US, Answer to Panel Questions 14 and 218, the latter referring to *The Innovation 2000 Initiative, Actively promoting a European economy based on knowledge and innovation*, European Investment Bank, pp. 2-3, Exhibit US-154.

³⁷⁶⁰ The EIB has consistently provided funding to "European communications infrastructure", "human capital" and "industrial competitiveness" projects since well before launching the i2i. Exhibit EC-713. Moreover, the *Eligibility Guidelines* reveal that the EIB started lending for "ex ante research and development" projects in 1995, and in the area of "education" (*i.e.*, "human capital") in 1981. Exhibit EC-161, pp 11 and 18. As regards the "diffusion of innovation", we see no reason why the same or similar types of projects may not have also been funded by the EIB prior to the launch of the i2i under one of its other lending objectives.

³⁷⁶¹ Exhibit EC-163 indicates that the 2002 loan to EADS fell within three of the EIB's lending policy objectives: "Common Interest (267 – c)", "i2i" and "Int. Compet. and EU. Int." Exhibit EC-163 also identifies many other projects financed by the EIB that were classified under multiple policy objectives, including i2i. One such example is the 2001 EUR 100 million loan for the "Big Education Infrastructure" project, described as falling within five policy objectives: "Economic and Social Cohesion (267a)", "Common Interest (267 – c)", "i2i", "Environment" and "Human Capital". *See, also*, EC, Answer to Panel Question 182, footnote 92.

³⁷⁶² Exhibit US-157; and EC, SWS, footnote 418, referring to Exhibit EC-163.

³⁷⁶³ Exhibit EC-713 contains a table breaking down the individual loans provided by the EIB within the EU in 2002 by six headings, which broadly correspond with its lending objectives. A footnote to this table reads: "As certain financing operations meet several objectives, the totals for the various headings cannot be meaningfully added together."

³⁷⁶⁴ US, Answer to Panel Questions 14 and 218

BCI deleted, as indicated [***]

fully achieved its i2i objectives" upon having committed EUR 14.4 billion in loans by the end of 2002 supports its position.³⁷⁶⁵ We recall, however, that neither the EC Treaty nor the EIB Statute place any legal limits on the amount of lending that the EIB may undertake (apart from requiring that the aggregate amount of outstanding loans and guarantees at any time does not exceed 250% of its subscribed capital, and that its reserves are maintained at a level that covers 10% of its subscribed capital).³⁷⁶⁶ Therefore, the "dedicated" funding amount that is referred to in the EIB statement is probably more accurately to be understood as the target volume of lending the EIB's management set for projects supporting the i2i policy objective in 2002. Because projects considered to fall within the i2i may also satisfy other EIB policy objectives,³⁷⁶⁷ it follows that the EIB's declared "dedicated" funding amount covered projects that satisfied different and multiple EIB policy objectives that included i2i. In other words, even as an expression of the goals of EIB management for the volume of i2i lending to be achieved in 2002, the "dedicated EUR 12-15 billion" was, in effect, not a target limited to only i2i projects.

7.988 Finally, we note that the United States does not argue that loans granted under i2i were approved under a different application, review or decision-making procedure compared with other EIB loans. Nor does it contend that the loans granted under the i2i were granted on contractual terms and conditions that distinguished them from other loans granted by the EIB. However, in our view, an understanding of the legal regime pursuant to which an alleged subsidy is granted is a relevant and important consideration when making a specificity determination under Article 2.1(c) as it helps to define the relevant "programme". In this respect, we note that no evidence has been presented to us showing that i2i loans were granted pursuant to a legal regime that is different from that created by Article 267 of the EC Treaty and the provisions of the EIB Statute; or that these loans were approved using a review procedure that is different from that described in the EIB's *Project Cycle Document*.

7.989 Having carefully considered the detailed evidence and arguments presented by the parties, we believe that the i2i cannot be properly characterised as a "programme" for the purpose of Article 2.1(c). The EIB was established under the EC Treaty, which gave it a general mandate to lend funds "to all sectors of the economy" for the purpose of contributing "to the balanced and steady development of the common market in the interest of the Community". This mandate is explicitly recalled and implemented through the EIB Statute. Like the EC Treaty, the EIB Statute indicates that the focus of the EIB's lending should be on projects that contribute to an increase in economic productivity in general and promote the attainment of the common market. EIB funding is intended to support and contribute to the attainment of EU policy objectives, which the EIB has consistently identified in various documents including the *Project Cycle Document* and the *Eligibility Guidelines*. Funded projects may qualify for one or more of these objectives and are reported as such in the EIB's Annual Reports. This and other evidence tends to support the view that the "programme" in the present instance is EIB lending as a whole, which constitutes one single discretionary programme of financing.³⁷⁶⁸ Thus, the relevant subsidy programme from which to derive the "baseline" must be the entire programme of EIB lending as mandated under the EC Treaty and the EIB Statute, not all of the EIB's lending under the i2i.³⁷⁶⁹

³⁷⁶⁵ US, Answer to Panel Questions 14 and 218, referring to European Investment Bank, Annual Press Conference 2003, Background Note No. 1: Innovation and Knowledge-Based Economy, p.1, Exhibit US-164.

³⁷⁶⁶ See, para. 7.917 above.

³⁷⁶⁷ See, para. 7.986 above.

³⁷⁶⁸ See, para. 7.923 above.

³⁷⁶⁹ We note that the parties have not argued that we should limit our consideration of the EIB's lending activities to data that relates only to loans granted for the purpose of the production or sale of *goods*. However, in our view, the fact that the SCM Agreement is intended to deal exclusively with subsidies to *goods*, could be understood to mean that the baseline for a disproportionality analysis should ignore any subsidies granted for the provision of services.

BCI deleted, as indicated [***]

7.990 However, this does not mean that we agree with the European Communities when it argues that the relevant "baseline" should be the value of the EIB's entire lending activities since 1957. As we have previously explained, when assessing whether a subsidy granted under a long-standing subsidy programme is specific under Article 2.1(c), the identification of the proper "baseline" will involve taking into account the extent to which it would be reasonable and appropriate to determine whether the subsidy at issue is in fact sufficiently broadly available throughout an economy so as not to benefit "certain enterprises" on the basis of the entire duration of the subsidy programme or a shorter period of time. Although the parties in the present dispute have not submitted any data specifically for this purpose, evidence of the EIB's total lending in 2004, the year in which the 2002 loan to EADS was disbursed, indicates that the [***] loan represented approximately [***] of the all loans disbursed in that year.³⁷⁷⁰ Excluding "global" loans from this calculation, which between 1957 and 2006 accounted for approximately 27% of the EIB's loans,³⁷⁷¹ it is possible to estimate that the [***] financing received by EADS under the 2002 loan represented [***] of all "individual" loans disbursed by the EIB in 2004. Essentially the same result holds if the loan to EADS is considered in the light of the total amount of all loans disbursed in 2002 (EUR 35,214 million)³⁷⁷² or even all "individual" loans, which we can estimate would have been approximately EUR 25,700 million.³⁷⁷³ Given that we have found the i2i to be an "innovation"-focused *continuation* of the EIB's existing lending, using the amount of all EIB lending (actual disbursements) in one calendar year is perhaps too short a period within which to assess whether the amount of the loan to EADS was "disproportionately large". Nevertheless, even when using calendar year data from the year in which the loan was disbursed (2004) or when the loan facility was first agreed (2002), the amount of the loan to EADS represents at most [***] of total EIB lending in the form of "individual" loans in each of those two years. Obviously, considering the amount of the loan to EADS in the light of EIB lending data over a longer period would render this proportion smaller. Accepting that the European Communities has a highly diversified economy, we do not believe that these data imply that the 2002 loan to EADS represents a disproportionately large amount of subsidy.

7.991 Thus, in conclusion, we find that the United States has failed to establish that the 2002 loan to EADS involves "the granting of disproportionately large amounts of subsidy to certain enterprises" within the meaning of Article 2.1(c) because the [***] loan to EADS was not disproportionately large when considered in the light of the total value of the EIB's lending programme over a period of time that we believe is reasonable and appropriate for the purpose of conducting a disproportionality analysis.

"predominant use"

7.992 The United States relies upon essentially the same facts and arguments advanced in respect of its allegation of "disproportionality" to support its claim that the 2002 loan to EADS evidences "predominant use" of a subsidy programme, making it a specific subsidy within the meaning of Article 2.1(c). Again, the United States' arguments are framed in terms of the amount of the financial contribution received by EADS under the loan compared with: (a) all of the loans granted by the EIB for the purpose of research and development projects under the i2i in 2002, or (b) all of the loans granted by the EIB for the purpose of research and development projects under the i2i between 2000 and the end of 2002, in the light of the highly diversified nature of the EU economy. In addition, the United States also asserts that the loan granted to EADS was the single largest provided to any one

³⁷⁷⁰ *EIB Annual Report 2004, Volume I Activity Report*, p. 4, indicating that "Loans disbursed" in 2004 amounted to EUR 38 547 million (excluding EUR 93 million of loans disbursed via the EIB's "Investment Facility"). Exhibit EC-714.

company under the alleged i2i programme taken as a whole, over the period 2000 to 2003 or even between 2000 and 2006.³⁷⁷⁴

7.993 We recall that "predominant use {of a subsidy programme} by certain enterprises" may be simply described as the situation where a subsidy programme is mainly, or for the most part, used by certain enterprises. "Predominant use {of a subsidy programme} by certain enterprises" may indicate that a subsidy is in fact specific, within the meaning of Article 2.1(c), when in the light of (i) "the extent of diversification of economic activities within the jurisdiction of the granting authority"; and (ii) "the length of time during which the subsidy programme has been in operation", such predominant use suggests that the subsidy at issue is *not* sufficiently broadly available throughout an economy so as not to benefit "certain enterprises".³⁷⁷⁵ In our view, when considering whether there is "predominant use" of a subsidy programme within these terms, the starting point should be the identification of the relevant subsidy programme.

7.994 For the same reasons advanced to support its allegations of "disproportionality", the United States contends that the relevant subsidy programme for the purpose of determining whether the 2002 loan to EADS evidences "predominant use" is the i2i. We have already dismissed the United States' contention, and found instead that the relevant subsidy programme is the EIB's entire lending activities as mandated under the EC Treaty and EIB Statute.³⁷⁷⁶ Moreover, we have also concluded that when measured against the estimated value of all "individual" loans disbursed by the EIB in only one year – 2002 or 2004 – the amount of the loan to EADS represents at most [***].³⁷⁷⁷ Bearing in mind that the European Communities has a highly diversified economy, and considering that this percentage would be even smaller if the EADS loan amount were measured in the light of EIB lending data over a longer period, we do not consider the 2002 loan to EADS to evidence "predominant use" of a subsidy programme by "certain enterprises".

7.995 We come to the same conclusion when considering the United States' allegations about the size of the loan granted to EADS compared with the size of loans granted to other recipients.³⁷⁷⁸ Although there is no precise data before us on the value of EIB loan disbursements per corporate recipient for its entire lending programme (which would have been our preferred level of comparison), we do have information on the value of disbursements made by the EIB to projects qualifying under the i2i between 2000 and 2006 by recipient.³⁷⁷⁹ Perusing this information, we cannot see any corporate borrower³⁷⁸⁰ that received an "individual" loan that was greater in amount than the [***] disbursement received by EADS in 2004. However, there are at least six companies that received seven "individual" loan disbursements in 2000, 2001, 2003, 2005 and 2006 that were greater than [***].³⁷⁸¹ Thus, even when examining the comparative size of the 2002 loan to EADS at the level of the i2i, it does not appear to us that the [***] loan disbursement to EADS evidences "predominant use" by EADS, irrespective of whether we review the data from 2000 to 2002 (which the United States asserts would be correct)³⁷⁸² or the period 2000 to 2006 (which the European Communities suggests could be used).³⁷⁸³ Although, as already mentioned, we have no precise details

BCI deleted, as indicated [***]

on the value of EIB loan disbursements per corporate recipient for its entire lending programme in any given year, we strongly suspect that considering the loan to EADS within this broader comparison group between 2000 and 2006, or even 2000 and 2003, would render it even less significant compared with other "individual" loans granted to corporate recipients in the same years.³⁷⁸⁴

7.996 Thus, we conclude, on the basis of the foregoing analysis, that the United States has failed to establish that the 2002 loan to EADS involves "predominant use by certain enterprises" of the EIB's lending programme, within the meaning of Article 2.1(c), and is therefore not specific under the terms of this provision.

The loans granted to Airbus between 1988 and 1993

7.997 The United States claims that the loans granted to Airbus between 1988 and 1993 are specific within the meaning of Article 2.1(c) of the SCM Agreement because, in its view, the sum-total of the financial contributions provided thereunder represent a disproportionately large amount of subsidies granted to certain enterprises when measured against: (a) the value of all EIB loans granted between 1988 and 1993 and falling within the then-existing "industry, services and agriculture" category used by the EIB to describe its lending activities; or (b) the value of all of the EIB loans granted between 1988 and 1993 and falling within the EIB's then-existing "international competitiveness and European integration of large firms" objective, in the light of the highly diversified nature of the EU economy. In addition, the United States argues that the challenged loans involved disproportionately large amounts of subsidies because it alleges that: (i) Airbus was the largest recipient of EIB "individual" loans between 1988 and 1993; (ii) among private enterprises, the EIB loans to Airbus from 1988 to 1993 were approximately 44% more than to the next largest recipient; and (iii) the amount of loans received by Airbus between 1988 and 1993 exceeded EIB lending to any entire industrial sector during this period, with the exception of chemicals and other transport equipment.³⁷⁸⁵

7.998 As with the arguments advanced in respect of the 2002 loan to EADS, both parties have presented their positions on the question whether the challenged EIB loans granted to Airbus between 1988 and 1993 involve the granting of disproportionately large amounts of subsidy by focusing on the amount of financial contributions. Although the amount of a financial contribution in the form of a loan is not the amount of the subsidy granted pursuant to that loan, we believe that the amount of principal transferred under a loan may be a useful indicator of the amount of a subsidy, particularly where, as in the present case, there is evidence showing that the interest rate terms of loans provided by the granting authority followed a standard methodology, and the parties in dispute have not argued there to be, in general, any material difference in the subsidy intensity between loans.³⁷⁸⁶ Thus, given the particular facts that are before us, we believe that the actual amount of principal transferred to the recipients of subsidized loans granted by the EIB may serve as a reasonable proxy for the "amounts of subsidy".

7.999 The United States contends that publicly available information shows that the entire sum of the financial contributions transferred to Airbus under the challenged loans amounted to EUR 1,061 million.³⁷⁸⁷ The figure advanced by the European Communities is essentially the same.³⁷⁸⁸

³⁷⁸⁴ Historically, the EIB disburses around 84% of the loan amounts agreed under contract. EC, Answer to Panel Question 181. On this basis, it is possible to identify from Exhibit EC-163 at least 40 "individual" loans "signed" by the EIB between 2000 and 2006 that involved estimated *disbursed* funding amounts in excess of [***] – *i.e.*, individual loans with a "signed" value greater than [***].

³⁷⁸⁵ US, Answer to Panel Question 15, referring to *inter alia*, Exhibit US-475.

³⁷⁸⁶ *See*, para. 7.980 above.

³⁷⁸⁷ US, FWS, para. 420, Exhibit US-475. The same amount is arrived at by adding the individual loan values identified in Exhibit US-157 (subtracting the 1997 loan to Aérospatiale for the Super Transporteur, against which the United States no longer pursues its complaint).

BCI deleted, as indicated [***]

Thus, there is no apparent disagreement between the parties as to the approximate value of all of the funding amounts received by Airbus under the challenged loans. Moreover, we note that the European Communities has not disputed the United States' decision to present its claims of specificity against the challenged loans on an aggregate basis, as opposed to addressing each loan individually, as it did in respect of the 2002 loan to EADS. Indeed, in its response to the United States' claims, the European Communities has to varying degrees adopted the same approach.

7.1000 In our view, where a series of loans conferring a benefit upon the same recipient has been granted under a single long-standing subsidy programme, it may be appropriate to examine whether the provision of such loans involved the granting of disproportionately large amounts of subsidy, within the meaning of Article 2.1(c), by aggregating the subsidy amounts, particularly where there is a close temporal connection between each loan. However, the fact that all such subsidy amounts have been aggregated must be taken into account in identifying the appropriate duration of the subsidy programme.³⁷⁸⁹ Thus, it is conceivable that a party invoking Article 2.1(c) in WTO dispute settlement proceedings may want to conduct a disproportionately analysis by cumulating subsidy amounts granted in, for example, the first two years of a ten year subsidy programme. In this event, it would not, in our view, be appropriate to compare the sum total of these subsidy amounts with all subsidies granted under the programme in only its first or second year of existence. Moreover, in the same factual circumstance, it may also not make sense to compare the cumulated subsidy amount with subsidies that include amounts granted in the *last* two years of the subsidy programme if there has been a material change in the importance of the subsidized activities in the wider economy.³⁷⁹⁰ In this context, we see no contradiction (and certainly, the European Communities has not drawn our attention to any) between the approach adopted by the United States in presenting its allegations of specificity against the 2002 loan to EADS and its approach to the eleven other loans, the last of which was granted in 1993.

7.1001 Turning to the substance of the United States' claim, we recall once again, that in order to examine whether the amount of subsidy granted under a particular subsidy programme is disproportionately large for the purpose of Article 2.1(c), an appropriate "baseline" or "reference data" must be chosen.³⁷⁹¹ Moreover, where the subsidy amount at issue is granted pursuant to a subsidy programme, the "baseline" or "reference data" must be derived from that subsidy programme.³⁷⁹² In the case of the challenged loans, the United States identifies two possible "baselines": (a) the value of all EIB loans granted between 1988 and 1993 that fall within the then-existing "industry, services and agriculture" category used by the EIB to describe its lending activities; or (b) the value of all of the EIB loans granted between 1988 and 1993 that fall within the EIB's then-existing "international competitiveness and European integration of large firms" objective. We are not convinced by either of these options.

³⁷⁸⁸ The European Communities notes on several occasions that the value of the EIB loans (including the full EUR 700 million credit line opened in favour of EADS in 2002) amounts to approximately 0.3% of the EIB's total lending from 1957 to 2006, which it discloses was EUR 591.5 billion. Thus, excluding the EUR 700 million credit line agreed with EADS, the value of the remaining challenged EIB loans the European Communities considers is at stake is approximately EUR 1,075 million. EC, SWS, para. 478; EC, SNCOS, para. 195; EC, Comments on US Answer to Panel Question 151.

³⁷⁸⁹ We recall that in considering whether a subsidy has been granted in disproportionately large amounts for the purpose of Article 2.1(c), "account shall be taken ... of the length of time during which the subsidy programme has been in operation". See, paras. 7.966-7.970 above.

³⁷⁹⁰ Our observations on the effect that material changes in the importance of subsidized activities in the wider economy may have on determining whether a subsidy has been granted in disproportionately large amounts for the purpose of Article 2.1(c) of the SCM Agreement are set out at para. 7.970 above.

³⁷⁹¹ See, paras. 7.961-7.970 above.

³⁷⁹² See, para. 7.967 above.

BCI deleted, as indicated [***]

7.1002 As the United States acknowledges, the "industry, services and agriculture" and "international competitiveness and European integration of large firms" are not separate subsidy programmes operated by the EIB, but rather merely classification descriptions used by the EIB when reporting its overall lending activities.³⁷⁹³ This is clear from the extracts of the EIB Annual Reports submitted by the United States in Exhibits US-176 to US-181. Using these headings as the focus of a "disproportionality" analysis would ignore that, at the time of the challenged loans, the scope of the EIB's lending programme extended beyond the two particular headings chosen by the United States. In particular, the "industry, services and agriculture" heading was one of two economic sectors;³⁷⁹⁴ and the "international competitiveness and European integration of large firms" one of five lending objectives,³⁷⁹⁵ used by the EIB to describe its operations. As we have already found, it is the EIB's entire lending programme as mandated under the EC Treaty and EIB Statute that must be used as the starting point for the identification of the correct "baseline" to perform a "disproportionality" analysis.³⁷⁹⁶

7.1003 The total value of "individual" loans granted by the EIB within the European Communities between 1988 and 1993 amounted to ECU 62,057 million.³⁷⁹⁷ It is unclear from the evidence that is before us whether this amount represented "signed" or "disbursed" amounts of funding.³⁷⁹⁸ If the former, then bearing in mind that the EIB has historically disbursed 84% of its "signed" loan amounts,³⁷⁹⁹ the value of "individual" loans actually disbursed between 1988 and 1993 could be estimated to be ECU 52,142 million. This means that the EUR 1,061 million loan amount received by Airbus represents approximately 2% of the EIB's entire "individual" loan disbursements over the period between 1988 to 1993. However, in our view, given that the subsidy amount at issue relates to eleven loans granted over a period of six years, and because the EIB operates a lending programme that is long-standing, it would be reasonable and appropriate to consider the relative importance of the loans to Airbus over a longer period than the six years between 1988 and 1993. When doing so, we note that even with the addition of data from just one additional year, the loan amounts granted to Airbus would represent a proportion of all EIB "individual" loan disbursements that is smaller than 2%. Considering that the European Communities has a highly diversified economy, we do not believe that these data support the conclusion that the eleven challenged loans to Airbus evidence the existence of a subsidy that is, in fact, specific within the meaning of Article 2.1(c).

7.1004 Finally, the United States contends that the eleven challenged loans to Airbus involved the granting of disproportionately large amounts of subsidy because: (i) Airbus was the largest recipient of EIB individual loans between 1988 and 1993; (ii) among private enterprises, the EIB loans to Airbus from 1988 to 1993 were approximately 44% more than to the next largest recipient; and (iii) the amount of loans received by Airbus between 1988 and 1993 exceeded EIB lending to any entire industrial sector during this period, with the exception of chemicals and other transport equipment. In particular, the United States argues that "these additional facts show that even looking at the EIB

³⁷⁹³ See, e.g., US, Answer to Panel Question 15.

³⁷⁹⁴ The other being "energy and infrastructure".

³⁷⁹⁵ The other four lending objectives were: "regional development"; "Community infrastructure"; "energy"; and "protection of the environment and urban development". We note that the extracts of the Annual Reports submitted by the United States do not identify "international competitiveness and European integration of large firms" as an EIB lending objective for the year 1988. See, Exhibit US-176.

³⁷⁹⁶ See, para. 7.989 above.

³⁷⁹⁷ Exhibits US-176 to US-181.

³⁷⁹⁸ The European Communities asserts that the funding amounts identified in Exhibits US-176 to US-181 represent "signed" amounts of funding within the European Communities. EC, Request for Interim Review, p. 15.

³⁷⁹⁹ See, footnote 3784 above.

BCI deleted, as indicated [***]

loans from perspectives other than those suggested in {its first written submission}, {the loans to Airbus} still were disproportionately large".³⁸⁰⁰

7.1005 We have doubts about whether the United States' factual assertions necessarily imply that the funding amounts obtained by Airbus between 1988 and 1993 involved the granting of disproportionately large amounts of subsidy, within the meaning of Article 2.1(c). For instance, we can see no apparent reason why the simple fact that Airbus may have been the largest private recipient of funds over this period demonstrates, in the light of the highly diversified nature of the European Communities' economy and the long-standing duration of the EIB lending programme, that the EIB's subsidies are *in fact* not sufficiently broadly available throughout an economy to warrant a finding of specificity. Moreover, we are not entirely convinced that it is appropriate, given that many of the loans the United States is challenging in this dispute were to entities that were at least partly government owned,³⁸⁰¹ to remove all information about loans to publicly owned entities from consideration in the analysis. Indeed, the United States has not done so in the other analyses of "disproportionality" it has presented.

7.1006 However, even apart from these doubts, we cannot accept the United States' contention. This is because it is premised on "baseline" information that is drawn exclusively from the EIB's activities in the years in which the loans at issue were granted to Airbus. The United States has not explained why the duration of the "baseline" should be limited to these years, other than to point to the fact that these were the years in which the Airbus loans were agreed. Moreover, as we have articulated above, we believe that given the subsidy amount at issue relates to eleven loans granted over a period of six years, and in the light of the long-standing nature of the EIB lending programme, it would be reasonable and appropriate to take into account information from years in which Airbus did not participate in the EIB's lending programme. Including data on the EIB's lending activities from, for instance, the four years after 1993 into the analysis (*i.e.*, using a ten year "baseline" period from 1988 to 1997) would show that FIAT received more in loans from the EIB than Airbus.³⁸⁰² It would also diminish the importance of the loans received by Airbus over this period compared with other industry sectors.³⁸⁰³

7.1007 Thus, for all of the above reasons and, in the light of the highly diversified nature of the European Communities' economy and the long-standing duration of the EIB's lending programme, we find that the United States has not established that the three additional facts it points to (described above)³⁸⁰⁴ demonstrate that the loans granted to Airbus between 1988 and 1993 were specific within the meaning of Article 2.1(c).

³⁸⁰⁰ US, Answer to Panel Question 15, referring to *inter alia*, Exhibit US-475.

³⁸⁰¹ The European Communities points out that "all of the recipients of the challenged loans (other than British Aerospace and Airbus Industrie)" were companies "owned by state". EC, SWS, para. 473.

³⁸⁰² See, Exhibit EC-163, showing that FIAT received loans worth EUR 83 million (1995), EUR 180 million (1996) and EUR 210 million (1997). In 1998, FIAT obtained an additional loan of EUR 250 million.

³⁸⁰³ The European Communities argues that had the United States' analysis taken into account the EIB's lending via "global" loans, it would have discovered that value of the loans to Airbus between 1988 and 1993 was less than the value of the loans granted to not only the "Transport equipment" and "Chemicals" sectors, but also "Metalworking and mechanical engineering", "Foodstuffs", "Paper and pulp, printing", "Electrical engineering and electronics" and "Rubber and plastics processing". EC, SWS, para. 476 and Exhibit EC-720. However, we cannot accept this proposition as it suggests that the EIB's "global" loans are granted pursuant to the same decision-making process and on the same essential terms and conditions as "individual" loans, when the evidence before us suggests otherwise. See, paras. 7.903 and 7.913 above.

³⁸⁰⁴ See, para. 7.1004 above.

BCI deleted, as indicated [***]

(d) Overall conclusion

7.1008 In summary, we conclude that the United States has failed to establish that each of the 12 challenged EIB loans we have found constitute subsidies³⁸⁰⁵ is specific within the meaning of Articles 2.1(a) and 2.1(c) of the SCM Agreement. Accordingly, we dismiss the United States' complaint against these measures and will not consider them further in this dispute.

6. Whether the German, French, UK, and Spanish Governments Have Subsidized Airbus Through the Provision of Infrastructure and Infrastructure-Related Grants

(a) Introduction

7.1009 In this section of our report, we address the United States' claims concerning infrastructure-related measures provided by German authorities in Hamburg, Nordenham, and Bremen; by French authorities in Toulouse; by UK authorities in Broughton, Wales; and by Spanish authorities in numerous locations in Spain.³⁸⁰⁶

7.1010 The United States asserts that the provision by the governments of Germany, France, the UK, and Spain of infrastructure and infrastructure-related grants constitutes specific subsidies within the meaning of Articles 1.1 and 2 of the SCM Agreement. The United States specifically refers to the provision of the Mühlenberger Loch industrial site near Hamburg,³⁸⁰⁷ certain grants towards the costs of constructing the A380 assembly line in Hamburg,³⁸⁰⁸ the provision of the lengthened runway at Bremen airport,³⁸⁰⁹ the provision of the ZAC Aéroconstellation site,³⁸¹⁰ access roads to the ZAC Aéroconstellation site and a linking road between the Aéroconstellation site and the "Itinéraire à grand gabarit" (IGG),³⁸¹¹ a grant by the German Land of Lower Saxony for the expansion of Airbus' Nordenham facility;³⁸¹² a grant by the Welsh government for Airbus' Broughton, Wales site;³⁸¹³ and grants by Spanish local and regional governments for the expansion and modernization of Airbus and EADS plants in Puerto de Santa Maria, Illescas, Puerto Real, Sevilla and La Rinconada.³⁸¹⁴

7.1011 The United States argues that each of these measures involves a financial contribution within the meaning of Article 1.1(a)(1)(i) or (iii) of the SCM Agreement, each of which confers a benefit on Airbus within the meaning of Article 1.1(b) of the SCM Agreement. The United States argues that the Mühlenberger Loch, Bremen airport, and ZAC Aéroconstellation and access roads are the provision of goods and services other than "general infrastructure", and the remaining measures are outright grants, and thus there is a financial contribution by a government in each case. The United States further asserts that each subsidy asserted is specific, either in law or in fact, or both, to Airbus. In asserting that they confer a benefit, the United States argues that the governments provided the infrastructure in question on better than commercial terms, based on comparison with asserted market benchmarks, or that the measures were grants, and thus conferred a benefit.

³⁸¹⁴ US, FWS, para. 486.

BCI deleted, as indicated [***]

7.1012 The European Communities argues that the Mühlenberger Loch, Bremen runway extension, and the ZAC Aéroconstellation site and access roads constitute "general infrastructure" within the meaning of Article 1.1(a)(1)(iii), and thus there is no financial contribution, such that these measures are not subsidies and are not properly before the Panel.³⁸¹⁵ In addition, the European Communities argues that assuming these measures did involve a financial contribution, they did not confer a benefit on the recipients.³⁸¹⁶ The European Communities does not make any arguments regarding specificity in connection with these measures.

7.1013 With respect to the measures that are outright grants, the European Communities does not dispute that each involves a financial contribution and confers a benefit on the respective recipient, but generally argues that they are not specific.³⁸¹⁷ The European Communities asserts that certain of them are not specific because they are generally available to enterprises in the particular region,³⁸¹⁸ and certain of them are not specific because the relevant governing legislation establishes objective criteria governing the eligibility for, and the amount of, the grants in question.³⁸¹⁹ In addition, the European Communities argues with respect to certain of these measures that the recipient was not Airbus or that the grant in question was not provided in connection with LCA.³⁸²⁰

7.1014 We begin our analysis of the United States' claims by addressing a question which is common to our analysis of the Mühlenberger Loch, Bremen airport, and ZAC Aéroconstellation measures: when does the provision of goods or services in the form of infrastructure constitute the provision of infrastructure which is "**other than general**" within the meaning of Article 1.1(a)(1)(iii) (emphasis added), such that there is a financial contribution by a government. It is not disputed that these measures were provided by a "government" within the meaning of Article 1.1(a)(1). Therefore, should we conclude that these measures involve financial contributions, we shall then go on to determine whether each measure confers a benefit on Airbus and, to the extent disputed, is specific. Finally, we will address the questions of whether the challenged grant measures provided by regional authorities are subsidies and were received by Airbus, and are specific within the meaning of Article 2. With respect to these latter measures, there is no dispute as to the existence of a financial contribution by a government, or as to benefit.

(b) When does the provision of goods or services in the form of infrastructure constitute the provision of infrastructure which is "other than general infrastructure" within the meaning of Article 1.1(a)(1)(iii)?

(i) *Arguments of the Parties*

7.1015 The United States asserts that the infrastructure-related measures in question constitute financial contributions within the meaning of Article 1.1(a)(1)(iii) in that these measures provide infrastructure which is "other than general". The United States asserts that the ordinary meaning of the term "general infrastructure", in context and in light of the object and purpose of the SCM Agreement, leads to an interpretation that "general" infrastructure is infrastructure that is accessible to all or nearly all users on a universal, non-discriminatory basis, where there are no *de jure* or *de facto* limitations on use.³⁸²¹ The United States argues that in order to be excluded from Article 1.1(a)(1)(iii) of the SCM Agreement as "general" infrastructure, infrastructure must include, involve, or affect all or nearly all the parts of a whole territory or community; or must be completely

BCI deleted, as indicated [***]

or nearly universal, as opposed to partial, particular, or local. Conversely, the United States contends, infrastructure that includes, involves, or affects only a certain enterprise or group of enterprises, or that is open only to a limited number of enterprises or group of enterprises ("specifically limited in application") does not constitute "general" infrastructure.³⁸²² The United States goes on to argue that the provision of goods is "general infrastructure" "if it is available to all members of the public on the same terms and conditions".³⁸²³ In this context, the United States contends that the mere fact that a government creates infrastructure for reasons of "public policy" or to "foster economic development" or to perform a public task does not make it "general". Thus, for the United States, universal use is the determinative factor of whether certain infrastructure can be regarded as "general infrastructure" for the purpose of Article 1.1(a)(1)(iii) of the SCM Agreement.³⁸²⁴

7.1016 The European Communities does not disagree with the view of the United States that universal use is an important factor when determining whether certain infrastructure can be regarded as "general infrastructure" for the purpose of Article 1.1(a)(1)(iii) of the SCM Agreement. However, the European Communities does not accept that this element is the only, or the determinative, factor.³⁸²⁵ According to the European Communities, the term "general" given its ordinary meaning, in context and in light of its object and purpose, means the opposite of "specific", and the term "infrastructure" means basic goods and services in a society which underpin its economic performance.³⁸²⁶ Read together, in the European Communities' view, this means that "general" infrastructure is infrastructure provided for the benefit of the public at large, where the relevant good or service is accessible by the public at large, or where it "enables" members of the public at large, thereby fulfilling a public policy objective.³⁸²⁷ Thus, the European Communities concludes that infrastructure is general because it "benefits society as a whole and reflects legitimate economic development policies".³⁸²⁸ In support of its view that the challenged measures constitute the provision of "general infrastructure", the European Communities argues that these measures are (i) government actions, related to basic installations, facilities and services needed to support economic development; (ii) further public policy objectives and (iii) are designated for public use by because they are publicly accessible, because they "enable" members of the public at large, or because they provide common goods to the public.³⁸²⁹

7.1017 The European Communities considers that the reason general infrastructure measures are carved out from the SCM Agreement is because the negotiators were concerned that the SCM Agreement not interfere with legitimate government choices to pursue public policies for the benefit of the population as a whole.³⁸³⁰ The European Communities asserts that the provision of general infrastructure is a public function of governments, being one of the important tools for fostering of economic, social and cultural development.³⁸³¹ Therefore, the European Communities argues that the negotiators of the SCM Agreement accorded themselves a large margin of appreciation for what they consider to constitute "general infrastructure".³⁸³²

BCI deleted, as indicated [***]

7.1018 According to the European Communities, the negotiating history of the SCM Agreement confirms its interpretation.³⁸³³ The European Communities asserts that many interventions were made in the framework of discussions about the list of non-actionable subsidies (what later became Article 8 of the SCM Agreement), but that the draft text of the Chairman of 2 November 1990 put the "general infrastructure" exception into the definition of the subsidy (what is today Article 1.1(a)(1)(iii) of the SCM Agreement).³⁸³⁴ The European Communities considers that this attests to a recognition of the fact that measures of general infrastructure could foster a broad range of public policy objectives and should therefore be excluded from the scope of the SCM Agreement.³⁸³⁵

7.1019 The European Communities does acknowledge the relevance to the determination whether it is "general" infrastructure of "clearly specified" limitations on use of, or access "restricted by regulation" to, the infrastructure provided.³⁸³⁶ However, the European Communities argues that merely because the public does not actually use the infrastructure provided, or because use is in fact limited, does not suffice to disqualify the infrastructure in question as "general" infrastructure.³⁸³⁷ Rather, the European Communities considers that two steps must be distinguished: first, governments may build general infrastructure, and second, governments may limit the use of that general infrastructure to certain companies.³⁸³⁸ In the European Communities' view, the second step makes the infrastructure non-general, but does not invalidate the fact that the first step constitutes provision of general infrastructure. The European Communities argues that the second step must be evaluated

³⁸³³ EC, FWS, para. 721. The European Communities first refers to the Note by the Secretariat, listing issues for Negotiators in which the Secretariat had advised negotiators to make a "clear distinction between trade distorting subsidies and subsidies which are designed to enhance efficiency, facilitate the development of infrastructure for industrialization or facilitate structural adjustment". (Note by the Secretariat, Checklist of Issues for Negotiators, 22 October 1987, MTN.GNG/NG10/W/9, Rev. 2, p. 10.) The European Communities also refers to the Statement made by the delegation of Canada at the meeting held on 28-29 June 1988, MTN.GNG/NG10/W/22, 7 July 1988, p.2., which stated that certain subsidy practices should be accepted, specifically mentioning subsidies for infrastructure, research and development and regional development. In addition, the European Communities recalls that at that time, the European Communities felt that measures concerning "for instance, education, culture, health, social welfare and general infrastructure" are normally not subsidies, because they merely contribute to setting the terms and conditions of a country's economic and business environment, but do not alter the competitive position of firms. (Submission by the European Communities, 27 November 1989, MTN.GNG/NG10/W31, p. 6.). The European Communities further notes that Korea emphasized that subsidies should be non-actionable which supply "social overhead capital" such as harbour facilities, electric power, or transportation systems. Measures for establishing such social infrastructure should not be regarded as subsidies to be disciplined. (Submission by the Republic of Korea, 18 January 1990, MTN.GNG/NG10/W34, p. 4.). The European Communities highlights the understanding of several Members that general infrastructure is characterized by its designation for public use. To this end, the European Communities refers to the submission by the United States in which it sought to list certain practices as non-actionable, among them "basic infrastructure where there are no *de jure* or *de facto* limitations on use". (Submission by the United States, Elements of the Framework for negotiations, 22 November 1989, MTN.GNG/NG10/W/29, p. 6.) Similarly, it refers to the submissions by Canada and India who wished to exclude basic infrastructure "for general public use" from the scope of actionable subsidies. (Submission by Canada, 27 June 1989, MTN.GNG/NG10/W/25, p.7; Submission by India, 30 November 1989, MTN.GNG/NG10/W/33, p. 2.).

³⁸³⁴ EC, FWS, para. 723, citing, Draft Text by the Chairman, 2 November 1990, MTN/GNG/NG10/W/38/Rev. 2, p.1.

³⁸³⁵ In this connection, the European Communities contrasts interventions by the Members relating to general infrastructure made in the context of the discussions about the list of non-actionable subsidies (what later became Article 8 of the SCM Agreement), with the draft text of the Chairman of 2 November 1990, which put the "general infrastructure" exception into the definition of the subsidy (what today is Article 1.1(a)(1)(iii) of the SCM Agreement). EC, FWS, para. 723, referring to the Draft Text by the Chairman, 2 November 1990, MTN/GNG/NG10/W/38/Rev. 2, p.1.

³⁸³⁶ EC, SWS, paras. 333 and 339.

³⁸³⁷ EC, SWS, para. 333.

³⁸³⁸ EC, SWS, para. 340.

BCI deleted, as indicated [***]

on its own, because the existence of limitations on use or access to the infrastructure provided does not effect the general character of the infrastructure, but only the question of whether there is any benefit to the recipient in a limited or exclusive right of use or access.³⁸³⁹

7.1020 The United States contends that the public-policy-focused approach suggested by the European Communities' argument does not comport with the ordinary meaning of the term "general infrastructure", read in context and in light of the object and purpose of the SCM Agreement.³⁸⁴⁰ In the United States' view, the European Communities' position would create an extremely broad exception, undercutting the basic rule that a subsidy may consist of government-provided goods or services that confer a benefit.³⁸⁴¹ The United States maintains that if any grant of infrastructure were deemed to be general infrastructure, so long as it was "fulfilling a public policy objective", then virtually every grant of infrastructure would be excluded from the SCM Agreement's definition of "subsidy."³⁸⁴² According to the United States, the phrase "general infrastructure" in Article 1.1(a)(1)(iii) cannot be interpreted to include any infrastructure "fulfilling a public policy objective" because that would render redundant the word "general".³⁸⁴³

(ii) *Arguments of Third Parties*

Australia

7.1021 Australia notes that Article 1.1(a)(1)(iii) of the SCM Agreement carves out "general infrastructure" from the definition of a "financial contribution". For Australia "general infrastructure" in this context means the provision, by government, of goods and services that are generally available or multi-user. Notwithstanding the carve-out of "general infrastructure" from sub-paragraph (iii), Australia considers that the Panel should examine whether a benefit has been conferred by government. Australia notes that Article 14(d) of the SCM Agreement provides the standard for determining whether the provision of goods or services confers a benefit, and asserts that if the provision of infrastructure relieves an enterprise of a cost it would otherwise have to pay, then it should be considered that a subsidy exists. The facts and circumstances surrounding the provision of "general infrastructure" need to be examined to determine whether the provision of infrastructure confers a benefit to an enterprise. Australia offers the following example by way of illustration: in establishing an industrial park, a government may provide general infrastructure to the site. However, it is necessary to assess whether there will be more than one enterprise located on the site. If there will only be a single enterprise then, in Australia's view, the industrial park cannot be deemed to be general infrastructure. In addition, Australia does not consider that the mere fact that a government creates infrastructure for public policy reasons in order to "enable members of the public at large"³⁸⁴⁴ (e.g., combating unemployment, fostering economic development, raising living standards) necessarily makes it "general infrastructure".³⁸⁴⁵

7.1022 In response to questions from the Panel, Australia asserted that it is not possible to exhaustively list factors that are relevant to the determination as to whether infrastructure is "general" for purposes of Article 1.1(a)(1)(iii), but considered that one relevant factor is whether the infrastructure is for exclusive or dominant use by a particular enterprise or enterprises, and that the question must be addressed on a case-by-case basis, taking into account all the relevant facts and circumstances. Australia further commented that while the Article 2 specificity test is separate and

BCI deleted, as indicated [***]

distinct, the concept of specificity may be relevant in determining whether infrastructure is of a general nature.³⁸⁴⁶ Australia noted that, in assessing whether limiting the provision of goods or service only to certain persons or entities might still constitute "general infrastructure", one relevant consideration may be the nature of the infrastructure provided, e.g., whether the infrastructure provided allows for its use by a number of entities. In Australia's view, any such limitation would tend to militate against a determination of "general infrastructure". Australia also suggested that the provision of infrastructure, and the terms and conditions attached to use of infrastructure are separate questions, e.g., in the establishment of an industrial park involving the provision of goods and services, the nature of the infrastructure provided may be a separate consideration by government from the terms and conditions by which entities make use of the industrial park.³⁸⁴⁷

Brazil

7.1023 Brazil considers that, to give full effect to the text of the SCM Agreement, if the Panel finds that a government provides a financial contribution under Article 1.1(a)(1)(iii) of the SCM Agreement in the form of non-general infrastructure and determines that such contribution confers a benefit, it must also determine whether such subsidy is specific under Article 2 of the SCM Agreement. In Brazil's view, the Panel should not interpret the relevant provisions to preclude the possibility that there may be infrastructure that is not "general" within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement and that is also not specific within the meaning of Article 2 of the SCM Agreement. Such infrastructure may not be "general" because access is limited to certain entities based on *de jure* or *de facto* conditions, such as, for example, requirements in relation to the licensing and qualification of users, quotas on total use, or restrictions intended to protect public health and safety or the environment. However, Brazil considers that a finding that the provision of this non-general infrastructure constitutes a subsidy does not necessarily mean that the subsidy is specific within the meaning of Article 2 of the SCM Agreement. In Brazil's view, the Panel must conduct an objective assessment of the facts to determine whether the provision of this infrastructure is *de jure* or *de facto* specific.³⁸⁴⁸

7.1024 In Brazil's view, infrastructure to which access is *de jure* or *de facto* limited to certain persons or entities would normally not constitute "general infrastructure" within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement. The fact that particular infrastructure is used predominantly or disproportionately by certain users (and other users do not face any restrictions on access) would normally not preclude a finding that the infrastructure is "general" within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement. Brazil considered that the Panel should make its determination regarding whether limitations on access indeed exist, however, on a case-by-case basis.³⁸⁴⁹

Canada

7.1025 Canada agrees with the European Communities that the term "infrastructure" denotes "basic goods and services in a society that underpin its economic performance".³⁸⁵⁰ Canada notes that the word "general" has a number of ordinary meanings, the most relevant of which, in its view, is "*not specifically limited in application; relating to a whole class of objects, cases, occasions, etc.*"³⁸⁵¹ (emphasis added). Canada considers that, for something to be transformed from "general" to non-

BCI deleted, as indicated [***]

general or restricted application, the limitation must be clearly specified. Canada considers this understanding of "general" is confirmed by the negotiating history of the SCM Agreement. Canada thus considers that, where a government provides infrastructure and does not specifically limit its availability to the public, there is no financial contribution for the purposes of the SCM Agreement. Moreover, Canada argues that context supports a broad interpretation which presumes that government-provided infrastructure is general unless a government specifically limits its use so that it is not available to the general public. In this regard, Canada notes that, by virtue of its position in Article 1 of the SCM Agreement, this is the only exclusion in that Agreement where the legal analysis regarding the SCM Agreement's application to a government measure can be completed without any consideration of whether the measure confers a benefit. Second, Canada considers that the fact that general infrastructure is excluded indicates that the drafters' primary purpose was to ensure that exclusion, rather than ensuring that certain infrastructure was included. Finally, Canada asserts that the object and purpose of the broader provision supports a presumption that government-provided infrastructure is general unless its availability is specifically limited.³⁸⁵²

7.1026 Canada argues that because "subsidy" and "specificity" determinations constitute discrete and sequential findings under the SCM Agreement, it follows that a finding under Article 1.1(a)(1)(iii) that government-provided infrastructure is not general, cannot be equated with a finding under Article 2.1 of the Agreement that a resulting subsidy is specific, as this would introduce an element of redundancy to the analysis. Therefore, Canada considers that the test for *de facto* specificity in Article 2.1(c) of the SCM Agreement is not the relevant test in an analysis under Article 1.1(a)(1)(iii), as the application of the *de facto* specificity test to government-provided infrastructure available to the public would give rise to systemic inequities, disadvantaging Members whose lack of national or regional economic diversification results in predominant use of government-provided infrastructure by certain enterprises.³⁸⁵³

7.1027 Canada also argues that improvements to general infrastructure that benefit a limited number of users do not change the status of that infrastructure so long as it remains generally available to the public. Canada asserts that the public reasonably expects that a government will maintain general infrastructure in the public interest, and that improvements to general infrastructure that initially benefit a single or limited number of users frequently end up benefiting new economic actors and activities that may not have been foreseen when the improvements were made. On this basis, Canada asserts that the United States has identified no limitations on the use by the general public of roads related to the Aéroconstellation industrial site as a result of the improvements, suggesting that these are therefore not "the provision of goods or services other than general infrastructure" within the meaning of Article 1.1(a)(1)(iii).³⁸⁵⁴ Canada notes that different considerations are raised by the Bremen runway extension, as specific restrictions on the use of a distinguishable element of infrastructure to certain enterprises could, in appropriate circumstances, justify separate consideration of that element, whether or not it is attached or otherwise connected to general infrastructure.³⁸⁵⁵ In contrast, Canada considers that temporary limitations on the use of infrastructure to certain users do not necessarily deprive that infrastructure of its general nature if there is a reasonable expectation that general use will resume in the foreseeable future (e.g., an exclusive use agreement for a period before public use is practicable or covering a particular season when public use is not practicable). A temporary right of exclusive use may, however, require independent consideration to determine if that conferral of an exclusive right itself constitutes provision of a good (or service).³⁸⁵⁶

³⁸⁵⁶ Canada, Third Party Submission, para. 38.

BCI deleted, as indicated [***]

7.1028 On the basis of this analysis, Canada proposes that government-provided infrastructure should be presumed to be general infrastructure unless the evidence demonstrates that a government has limited its use exclusively to certain users; that Government-provided infrastructure that a government has reserved for exclusive use by certain users is not "general" for the purpose of Article 1.1(a)(1)(iii) of the SCM Agreement; that the fact that certain enterprises are significant or predominant users of government-provided infrastructure does not establish that such infrastructure is not "general" for the purposes of Article 1.1(a)(1)(iii) of the SCM Agreement; and that government-provided infrastructure which is limited to certain enterprises may still qualify as "general" for the purpose of Article 1.1(a)(1)(iii) if the limitations on its use are temporary and where general use is likely to resume in the foreseeable future.³⁸⁵⁷

7.1029 In response to a question from the Panel, Canada emphasized that the focus of the inquiry in Article 1.1(a)(1)(iii) is on what a government actually "provides" to a recipient. In cases where a government has provided something less than complete and exclusive rights to a given item of infrastructure, the focus of the determination whether the government has provided a financial contribution to a recipient should not be on the totality of the infrastructure, but on the part of it that is actually being provided by the government to the recipient. In the case of the Mühlenberger Loch facility, for example, Canada considers that the lease agreements establish what has been provided to Airbus and therefore provide an appropriate basis for determining whether Airbus has received terms consistent with those it would have received from comparable commercial leases in the prevailing market.³⁸⁵⁸

Japan

7.1030 Japan considers that Article 1 of the SCM Agreement does not indicate a presumption that "infrastructure" is "general" unless it is specifically provided for limited persons or its use is specifically limited to such persons. Japan believes that being "specific" as an antonym of being "general" could help inform the determination of whether infrastructure is "general" for the purpose of Article 1.1(a)(1)(iii), in light of the ordinary meaning of the term "general". Japan further notes that the notion of being "specific" does not necessarily exclude the concept of "specificity" prescribed under Article 2 of the SCM Agreement.³⁸⁵⁹

(iii) Evaluation by the Panel

7.1031 We begin our analysis with the text of the treaty. We recall that Article 3.2 of the DSU provides that Members recognise that the dispute settlement system serves to clarify the provisions of the covered agreements "in accordance with customary rules of interpretation of public international law". Article 31.1 of the Vienna Convention on the Law of Treaties ('Vienna Convention'),³⁸⁶⁰ which is generally accepted as such a customary rule, provides:

"A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose."

7.1032 We further recall that, pursuant to Article 32 of the Vienna Convention, if interpretation of the text of a provision in accordance with Article 31 of the Vienna Convention leaves the meaning of that provision "ambiguous or obscure" or "leads to a result which is manifestly absurd or unreasonable",

³⁸⁵⁷ Canada, Third Party Submission, para. 39.

BCI deleted, as indicated [***]

recourse may be had to the supplementary means of treaty interpretation within the meaning of Article 32 of the Vienna Convention.³⁸⁶¹

7.1033 Article 1 of the SCM Agreement provides, in pertinent part:

"1.1 For the purpose of this Agreement, a subsidy shall be deemed to exist if:

(a)(1) there is a financial contribution by a government or any public body within the territory of a Member (referred to in this Agreement as "government"), *i.e.*, where: ...

(iii) a government provides goods or services other than general infrastructure, or purchases goods; ...

and

(b) a benefit is thereby conferred."

7.1034 In this case, it is not disputed that the alleged financial contributions in question were provided by a "government" within the meaning of Article 1.1(a)(1). In addition, the European Communities does not dispute that the measures in question constitute the "provision" of "goods and services", in the form of "infrastructure", within the meaning of Article 1.1(a)(1)(iii). The disagreement between the parties centers on the meaning of "**general** infrastructure" in the context of Article 1.1(a)(1)(iii), and in particular on the factors or circumstances that distinguish between infrastructure which is "general" and infrastructure which is "other than general". In order to establish a framework for our analysis of the facts in this dispute, we must therefore first consider the meaning of the term "general infrastructure".

7.1035 The meaning of the term "general infrastructure" has not been considered in any detail in any WTO dispute. In *US – Softwood Lumber IV*, the Appellate Body emphasized that it is not the provision of "infrastructure" *per se* that is carved out of the scope of a financial contribution under Article 1(a)(1)(iii), but the provision of "general infrastructure" -- that is, infrastructure of a "general" nature:

"In Article 1.1(a)(1)(iii), the only explicit exception to the general principle that the provision of "goods" by a government will result in a financial contribution is when those goods are provided in the form of "general infrastructure". In the context of Article 1.1(a)(1)(iii), all goods that might be used by an enterprise to its benefit—including even goods that might be considered *infrastructure*—are to be considered "goods" within the meaning of the provision, unless they are infrastructure of a *general* nature."³⁸⁶² (emphasis original)

However, this statement does not directly address the central question at issue here, which is how to determine whether the particular provisions of infrastructure by governments in this case are the provision of infrastructure that is "other than general infrastructure", and thus whether there has been a financial contribution by a government.

7.1036 Dictionaries define the term "infrastructure" as, *inter alia*, "installations and services (power stations, sewers, roads, housing, etc.) regarded as the economic foundation of a country,"³⁸⁶³ the

³⁸⁶¹ *Vienna Convention*, Article 32(a) and (b).

³⁸⁶² Appellate Body Report, *US – Softwood Lumber IV*, para. 60.

³⁸⁶³ *New Shorter Oxford English Dictionary*, (1993).

BCI deleted, as indicated [***]

"underlying foundation or basic framework (as of a system or organization),"³⁸⁶⁴ and the "system of public works of a country, state, or region."³⁸⁶⁵ The term "general" is defined as "including, involving, or affecting all or nearly all the parts of a (specified or implied) whole as a territory, community, organization, etc.; completely or nearly universal; not partial, particular, local, or sectional"³⁸⁶⁶ and "involving, applicable to, or affecting the whole; involving, relating to, or applicable to every member of a class, kind, or group".³⁸⁶⁷ We consider that the term "**general** infrastructure", taken in its ordinary and natural meaning, refers to infrastructure that is not provided to or for the advantage of only a single entity or limited group of entities, but rather is available to all or nearly all entities. In our view, this interpretation is consistent with the ordinary meaning of the term "general" when used to modify the word "infrastructure." However, we consider that it is difficult if not impossible to define the concept of "general infrastructure" in the abstract.³⁸⁶⁸

7.1037 For us, the existence of limitations on access to or use of infrastructure, whether *de jure* or *de facto*, is highly relevant in determining whether that infrastructure is "general infrastructure". However, we are not persuaded by the United States' argument that the existence of *de jure* or *de facto* limitations on access or use is the **only** legally relevant consideration, and one that will always be determinative. We find no support for such a test in the words of Article 1.1(a)(1)(iii), and we see no reason why other considerations concerning the provision of the infrastructure in question should be categorically excluded from the analysis. In our view, such additional factors could include, *inter alia*, the circumstances under which the infrastructure in question was created and the nature and type of infrastructure in question.

7.1038 We do not, however, consider all of the additional factors relied upon by the European Communities in this case to be relevant. The European Communities proposes three factors as relevant to determining whether infrastructure is "general":

"(i) the substance of government action related to basic installations, facilities and services needed to support social as well as economic development; (ii) their public policy objective and (iii) their designation for public use be either being publicly

³⁸⁶⁴ Merriam-Webster Dictionary online.

³⁸⁶⁵ Merriam-Webster Dictionary online.

³⁸⁶⁶ *New Shorter Oxford English Dictionary*, (1993).

³⁸⁶⁷ Merriam-Webster Dictionary online.

³⁸⁶⁸ Other disputes involving questions of interpretation of Article 1.1(a)(1) of the SCM Agreement have similarly not resulted in precise or absolute definitions of terms, in the abstract. Thus, the Panel in *US – FSC*, para. 6.7, addressing the definition of "otherwise due" in Article 1.1(a)(1)(ii) noted that "the application of the concept of "otherwise due" in other disputes would require panels to apply their **best judgement** on a **case-by-case** basis" and at paragraph 7.93 observed "In the foregoing sections, we have concluded that whether revenue foregone is "otherwise due" is to be determined on the basis of an examination of the fiscal treatment that would be applicable "but for" the measures in question. Of course, as in other areas under the WTO Agreement, the application of this test requires panels to apply their **best judgement** on a **case-by-case** basis." Panel Report, *United States – Tax Treatment for "Foreign Sales Corporations"* ("*US – FSC*"), WT/DS108/R, adopted 20 March 2000, as modified by Appellate Body Report WT/DS108/AB/R, DSR 2000:IV, 1675 (emphasis added). Similarly, in *US – DRAMS*, para. 116, the Appellate Body acknowledged the difficulty in formulating precise, abstract definition of "entrusts or directs" in the context of Article 1.1(a)(1)(iv) ("It may be difficult to identify **precisely, in the abstract**, the types of government actions that constitute entrustment or direction and those that do not. The particular label used to describe the governmental action is not necessarily dispositive. Indeed, as Korea acknowledges, in some circumstances, "guidance" by a government can constitute direction. In most cases, one would expect entrustment or direction of a private body to involve some form of threat or inducement, which could, in turn, serve as evidence of entrustment or direction. The determination of entrustment or direction **will hinge on the particular facts of the case.**" (emphasis added, footnote omitted) Appellate Body Report, *United States – Countervailing Duty Investigation on Dynamic Random Access Memory Semiconductors (DRAMS) from Korea* ("*US – Countervailing Duty Investigation on DRAMS*"), WT/DS296/AB/R, adopted 20 July 2005, DSR 2005:XVI, 8131

BCI deleted, as indicated [***]

accessible, by enabling access by members of the public at large, or by providing common goods to the public."³⁸⁶⁹

In our view, the first two factors proposed by the European Communities do not provide useful guidance in distinguishing general infrastructure from infrastructure which is not general, and certainly cannot be determinative. The provision of any infrastructure by a government will generally relate to installations, facilities and services needed to support social or economic development of the polity, and will have some public policy objective. Indeed, it would be expected that governments do not, as a rule, undertake to grant specific subsidies, whether in the form of providing infrastructure or otherwise, without such objectives. Thus, to base the exclusion of "general" infrastructure from the scope of the SCM Agreement disciplines on these considerations would result in an exception that swallows the principle to which it pertains: that the provision of goods or services **other** than general infrastructure constitutes a financial contribution by a government. We also agree with the United States, and consider that the phrase "general infrastructure" in Article 1.1(a)(1)(iii) cannot be interpreted to include all infrastructure "fulfilling a public policy objective", because that would render redundant the word "general."

7.1039 Thus, we do not consider that there is any form or type of infrastructure which is inherently "general" *per se*. For instance, in our view, such things as railroads or electrical distribution systems do not necessarily constitute "general infrastructure".³⁸⁷⁰ Rather, the determination whether the provision of the good or service in question is "general infrastructure" or not must be made on a case-by-case basis, taking into account the existence or absence of *de jure* or *de facto* limitations on access or use, and any other factors that tend to demonstrate that the infrastructure was or was not provided to or for the use of only a single entity or a limited group of entities. Such factors may relate to the circumstances surrounding the creation of the infrastructure in question, consideration of the type of infrastructure, the conditions and circumstances of the provision of the infrastructure, the recipients or beneficiaries of the infrastructure, and the legal regime applicable to such infrastructure, including the terms and conditions of access to and/or limitations on use of the infrastructure. If an evaluation of relevant facts concerning such factors demonstrates that the infrastructure was provided to a single entity or a limited group of entities, then we believe it cannot properly be considered "general" infrastructure, and consequently falls within the scope of Article 1.1(a)(1) of the SCM Agreement, necessitating further analysis to determine whether a subsidy exists.

7.1040 We recognize that our interpretation may involve consideration of facts that may be relevant to a determination of specificity under Article 2. However, we note that the question being addressed for purposes of Article 1.1(a)(1)(iii) is not whether the government is limiting access to a subsidy to certain enterprises, but whether it is providing a good or service in the form of general infrastructure or not, and thus whether or not there is a financial contribution by a government, such that a subsidy may exist. In our view, the fact that similar considerations are relevant to the separate inquiry required under Article 2 does not preclude their relevance to the question of determining whether infrastructure is "general".

7.1041 Our conclusion that the determination whether the provision of the good or service in question is "general infrastructure" or not must be made on a case-by-case basis, based on all the facts and circumstances concerning relevant factors, flows from the ordinary meaning of the terms of Article 1.1(a)(1)(iii), and is supported by consideration of their immediate context. As the Appellate Body has observed, Article 1.1(a)(1)(iii) concerns the provision of goods by a government that might

³⁸⁶⁹ EC, Answer to Panel Questions 186 and 221, paras. 148 and 555, respectively

³⁸⁷⁰ Take as an extreme example a 2 kilometer stretch of railway from a mine to a mineral processing plant, used for transporting raw ore for processing, on land owned by the mining company. It seems clear to us that the provision by a government of such a railway cannot properly be considered "general infrastructure" simply because it is a railway.

BCI deleted, as indicated [***]

be used by an enterprise to its benefit. In addition, this interpretation is consistent with Articles 1.1(b) and 2, insofar as it does not blur distinct legal elements of "financial contribution", "benefit", or "specificity".³⁸⁷¹ Moreover, Articles 1.1(a)(1)(i) and (ii) of the SCM Agreement each illustrate specific instances of financial contributions by examples. Thus, Article 1.1(a)(1)(i) illustrates the concept of a "direct transfer of funds" by referring to "e.g., grants, loans, and equity infusion", and illustrates the concept of a "potential direct transfer of funds or liabilities" by referring to "e.g., loan guarantees". Article 1.1(a)(1)(ii) illustrates the concept of a "government revenue that is otherwise due ... foregone or not collected" by referring to "e.g., fiscal incentives such as tax credits". The absence of any examples of "general infrastructure" suggests to us that the negotiators of the SCM Agreement did not consider that the concept could be illustrated with concrete examples, otherwise they would have done so, as they did with the other concepts in the preceding two provisions. Moreover, the practical impossibility, in our view, of classifying every type of infrastructure as "general" or "other than general", in the abstract, compels this conclusion. Finally, interpreting the term "general infrastructure" so as to exclude from the scope of Article 1 the provision of infrastructure that is provided to or for the benefit of a single entity or a limited group is consistent with the object and purpose of the SCM Agreement: *inter alia*, to establish disciplines on the use of government intervention in the form of subsidies that distort, or have the potential to distort, international trade.³⁸⁷² In our view, the provision of "general infrastructure" is excluded from the disciplines of the SCM Agreement because the general nature of qualifying infrastructure implies a lack of such distortion.

7.1042 The European Communities does acknowledge the relevance of "clearly specified" limitations on use of, or government specified limitations on use of, the infrastructure provided to the determination whether it is "general" infrastructure.³⁸⁷³ Thus, both parties apparently accept that *de jure* limitations on use is a critical, potentially determinative, factor in establishing whether infrastructure provided by a government is "general infrastructure". However, the European Communities argues that merely because the public does not actually use the infrastructure provided, or because use is in fact limited to a single entity does not suffice to qualify the infrastructure in question as other than "general" infrastructure.³⁸⁷⁴ The European Communities considers that two steps must be distinguished: first, a government may build general infrastructure, and second, a government may limit the use of that general infrastructure to certain companies. In the European Communities' view, the second step may make the infrastructure non-general (depending on an assessment of benefit), but does not invalidate the fact that the first step constitutes provision of general infrastructure. The European Communities argues that the second step must be evaluated on

³⁸⁷¹ As noted, merely because the separate analysis under Article 2 may involve consideration of the same facts or similar factors as the determination whether infrastructure is "general" does not in our view render Article 2 redundant.

³⁸⁷² Panel Report, *Canada – Aircraft*, WT/DS70/R, para. 9.119.

We note in this regard that, during the negotiation of the SCM Agreement, the European Communities proposed that such measures as education, culture, health, social welfare and general infrastructure be treated as "non-actionable". The European Communities explained its rationale as follows:

"Action in these fields may have an effect on the economy of a country, and thus on the international economy, but they are not normally subsidies, because they merely contribute to setting the terms and conditions of a country's economic and business environment. {T}herefore they do not alter the competitive position of firms."

Elements of the Negotiating Framework, Submission by the European Community, MTN.GNG/NG10/W/31 (27 November 1989) p. 8.

We consider that subsidies that "alter the competitive position of firms" do, in fact, distort or have the potential to distort, international trade, and thus properly fall within the scope of the SCM Agreement disciplines.

³⁸⁷³ EC, SWS, para. 333.

³⁸⁷⁴ EC, SWS, para. 333.

BCI deleted, as indicated [***]

its own,³⁸⁷⁵ because the existence of limitations on use or access to the infrastructure provided does not effect the general nature of the infrastructure.³⁸⁷⁶ The United States contends that where the government creates infrastructure adapted to the particular needs of one company and then provides the infrastructure to that company for its exclusive or preferential use, it is not general infrastructure, and it is subject to the SCM Agreement rules.³⁸⁷⁷

7.1043 Given our view that there is no infrastructure that is inherently "general" *per se* – a proposition with which both parties appear to agree³⁸⁷⁸ – it logically follows for us that it is not possible to determine whether certain infrastructure is "general" or not without assessing whether there exist any *de jure* or *de facto* limitations on access to or use of the infrastructure. That is because, in our view, whether access to or use of infrastructure is actually limited is a highly relevant consideration in determining whether the infrastructure in question is "general". Thus, we are not convinced by the European Communities' argument that a distinction must be drawn between, and a two-step analysis conducted in respect of, the "provision" of infrastructure in the sense, as we understand it, of creating the infrastructure in question, and subsequent limitations on use or access. This would imply that the "general" nature of some infrastructure is inherent and that circumstances surrounding the provision of that infrastructure do not change its general nature. We, however, consider that if an evaluation of the circumstances surrounding the creation of the infrastructure demonstrates that it was provided to a single entity or a limited group of entities, this supports the conclusion that the infrastructure created is not properly considered general. This is, in our view, particularly the case where the infrastructure in question was created for the particular needs of the entity or group which has the right to access or use of that infrastructure.

7.1044 Finally, if it is correct, as we have concluded, that there is no infrastructure that is "general" *per se*, then it also follows logically, in our view, that certain infrastructure may be "general" within the meaning of Article 1.1(a)(1)(iii) at some point in time, but not at another. Thus, for instance, we consider that a government may provide infrastructure that is not general when first provided, because use or access to it is limited, but may subsequently make that same infrastructure available for public use or access, such that it would then become provision of general infrastructure.³⁸⁷⁹ The opposite situation may also obtain – a government may provide general infrastructure, and subsequently limit use or access to it, either permanently or for a period of time, during which it would, in our view, cease to be "general" infrastructure. Such situations would have to be carefully evaluated, based on all the relevant facts in each case, in order to determine whether the provision of the infrastructure in question is general or not, and whether that determination changes over time. Thus, we consider that the proper point of reference in determining whether a provision of goods or services is "other than general infrastructure" is the time when the act of provision that is alleged to constitute a subsidy takes place. That may be at the time the infrastructure in question is created, in the sense of being brought into existence, or a subsequent point in time, when the conditions surrounding the provision of that infrastructure are changed by the government providing it. Moreover, the determination of

³⁸⁷⁵ EC, SWS, para. 340.

³⁸⁷⁶ EC, SWS, para. 340.

³⁸⁷⁷ US, SWS, para 311.

³⁸⁷⁸ We note in this regard that the European Communities has referred to public roads as "the example *par excellence* of a work of 'general infrastructure' within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement." EC, FWS, para. 940. The European Communities also argues that the question of whether the infrastructure is "basic" to be relevant, but recognizes the relevance of public access. EC, Answer to Panel Question 184 at para 131. However, we do not, overall, understand the European Communities to be arguing that certain types of infrastructure are *per se* general infrastructure. See, EC, Answer to Panel Question 186, paras. 148-149.

³⁸⁷⁹ Of course, any such changes would have to be evaluated on the basis of the facts – it seems clear that a purely formalistic change cannot be determinative. Returning to our extreme example from footnote 3870 above, merely that the government providing the railway described makes it *de jure* available to everyone would change nothing, if in fact no one else can or does use it.

BCI deleted, as indicated [***]

whether a provision of goods or services is "other than general infrastructure" may involve a time period of limited or indefinite duration.³⁸⁸⁰

7.1045 We now turn to the alleged subsidies concerning the Mühlenberger Loch industrial site, the Bremen airport runway extension and associated noise reduction measures, and the ZAC Aéroconstellation site. We address first in each case the question of whether the measure in question is one of general infrastructure, in which case we will conclude it does not constitute a financial contribution within the meaning of Article 1.1 of the SCM Agreement. However, if we conclude that any of these three measures is not one of general infrastructure, we will go on to address whether a benefit is conferred upon Airbus by the subsidy in question, and to the extent relevant, specificity.

(c) Mühlenberger Loch

7.1046 According to the United States, when Airbus launched the A380, it decided to establish two assembly facilities, one at Toulouse and one at Hamburg, where Airbus already had existing facilities, so as to utilize synergies with the existing facilities. The United States asserts that the existing Hamburg facilities, located at Finkenwerder, had no real potential for expansion, as the site was on a peninsula in the Elbe river, surrounded by wetlands.³⁸⁸¹ The United States argues that the transformation of a portion of these wetlands, in the "Mühlenberger Loch" and "Rüschkanal", into an industrial site, including building flood protection, erecting a quay with Roll-on/Roll-off installations, and building other facilities and infrastructure required by Airbus on the site, and the provision of that site to Airbus for less than adequate remuneration, is a financial contribution that confers a benefit on Airbus within the meaning of Article 1.1 of the SCM Agreement that is specific within the meaning of Article 2 of the SCM Agreement.

7.1047 The European Communities argues in its request for preliminary ruling that the United States' request for establishment with regard to the alleged subsidy in connection with the Hamburg facilities lacks the requisite specificity concerning the measure subject to challenge. The European Communities considers that the United States' first written submission continues to fail to reveal exactly what measure is subject to the United States' challenge.³⁸⁸² The European Communities contends that it is unclear whether the United States is concerned with the "creation" of the industrial site, *i.e.*, the turning of the wetlands into an industrial site, or the "provision" of the site to Airbus, including its creation and the allegedly inadequate remuneration received.³⁸⁸³

7.1048 According to the European Communities, the Mühlenberger Loch project includes three distinct elements: (1) turning wetlands into usable land; (2) building flood protection measures; and (3) building special-purpose facilities on the reclaimed usable land. The European Communities asserts that it is uncertain which of these measures is the subject of the United States' challenge.³⁸⁸⁴ Assuming that the United States challenges the turning of the wetlands into usable land and the lease of this land and the special-purpose facilities to Airbus Germany, the European Communities argues that the turning of the wetlands into usable land and the provision of flood protection constituted "general infrastructure" within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement, and that these measures do not constitute a subsidy.³⁸⁸⁵ The European Communities further argues that Hamburg, the owner of the land, receives a market-based rent from Airbus Germany for the lease of

³⁸⁸⁰ The provision of infrastructure the use of or access to which is limited in time may complicate the assessment of the benefit, if any, of the measure in question, but that is a different issue from determining whether the infrastructure is general or not.

³⁸⁸¹ US, FWS, para. 423.

³⁸⁸² EC, FWS, para. 746.

³⁸⁸³ EC, FWS, para. 747. We have previously explained our reasons for rejecting the European Communities' arguments in this regard in our preliminary ruling, *see* paragraphs 7.153, 7.155 and 7.158 above.

³⁸⁸⁴ EC, FWS, para. 749.

³⁸⁸⁵ EC, FWS, para 750.

BCI deleted, as indicated [***]

the land and the special-purpose facilities, which thus does not confer any benefit on Airbus Germany within the meaning of Article 1.1(b) of the SCM Agreement.³⁸⁸⁶

(i) *Factual background*

7.1049 In 2000, the City of Hamburg undertook to turn 20 percent of the wetlands in the Mühlenberger Loch and Rüschanal, adjacent to Airbus' existing facilities in Finkenwerder, into usable land. Hamburg also undertook to construct a number of special-purpose facilities on the reclaimed land, and built dykes for the purpose of flood protection.³⁸⁸⁷ Hamburg set up a company, the *Realisierungsgesellschaft GmbH* ("ReGe") for the management of the land reclamation project and the special-purpose facilities.³⁸⁸⁸ On completion of the project, Hamburg transferred ownership of the land and facilities to a government-owned entity, *Projektierungsgesellschaft Finkenwerder GmbH & Co. KG* ("ProFi").³⁸⁸⁹ ProFi, the titleholder of the properties, and Airbus Germany entered into a series of lease agreements for the land and the special-purpose facilities.³⁸⁹⁰

7.1050 As the Mühlenberger Loch was a protected wildlife sanctuary, in order to go ahead with the land reclamation, the German government was obliged to, and did, apply for approval from the European Commission to undertake the reclamation project.³⁸⁹¹ On 19 April 2000, the Commission, conditional upon the undertaking of compensatory measures, approved the project, finding that there were imperative reasons of public interest for the project, including job creation.³⁸⁹² As compensation, Hamburg was obliged to provide substitute wetland areas elsewhere in Germany.³⁸⁹³ It was also required to defend against lawsuits by environmental groups seeking to halt the project.³⁸⁹⁴

7.1051 Work on draining and filling the land began in February 2001, and was carried out in stages.³⁸⁹⁵ The city of Hamburg upgraded the height of dykes around the existing Airbus facility, and built new dykes to protect the reclaimed land.³⁸⁹⁶ Hamburg also constructed special-purpose facilities on the reclaimed land, consisting of (1) a quay facility, (2) a sluice and pump building, (3) a drainage ditch, (4) a roll-on roll-off ("RoRo") facility, and (5) a *sternfender*.³⁸⁹⁷ The European Communities asserts that the aggregate cost of land-filling, flood protection, and special-purpose facilities, was EUR 693.679 million,³⁸⁹⁸ asserting that the figure cited by the United States for this work, {EUR 751 million} is an earlier, now-outdated 2003 estimate.

7.1052 As noted above, the City of Hamburg - through ProFi - leases the reclaimed land and special-purpose facilities to Airbus Germany. The Lease agreement for the reclaimed land indicates that the

lease is for [***].³⁸⁹⁹ The Lease Agreement establishes an annual rent of EUR 3,60/m², to be adjusted annually on the basis of changes in the German consumer price index. The lease foresees a gradual increase in the total rent, as successive parcels of the reclaimed land are taken over by Airbus Germany, starting with the first parcel of land subject to the lease on 1 October 2002, with possession of the whole area scheduled for the end of 2009.³⁹⁰⁰ As the reclaimed land was subject to settling, and thus was not immediately fully usable by Airbus Germany, an initial reduction in the rent was agreed, with the rent to be gradually increased to the full amount as the land fully settled.³⁹⁰¹ The full rent of EUR 5,156,588 per annum will therefore only be achieved gradually.³⁹⁰²

7.1053 ProFi and Airbus Germany also concluded four lease agreements for six special-purpose facilities.³⁹⁰³ The term of each of these agreements is 20 years. According to the European Communities, the amount of rent is set to provide the City of Hamburg with a return of 6.5 % on its investment in each of the facilities, including a return on capital for the portion of each facility's economic life depleted during the 20 year lease term.³⁹⁰⁴ The annual rent over the 20 year period for the special purpose facilities is EUR 5,619,200, again, to be adjusted upwards in line with inflation.³⁹⁰⁵ The European Communities argues that these rental amounts for the land and the special-purpose facilities are consistent with market conditions in Hamburg.³⁹⁰⁶

(ii) *Arguments of the parties*

United States

7.1054 The United States notes that Article 1.1(a)(1)(iii) of the SCM Agreement includes the provision of goods or services other than general infrastructure among the types of measures that constitute financial contributions. The United States argues that the provision of the site to Airbus, including the transformation of the Mühlenberger Loch into land fit for production facilities, the putting into place and provision of a flood protection system, a new quay wall, an extension of the runway, other facilities and infrastructure on the site, etc., constitutes the provision of "goods or services other than general infrastructure," and thus constitutes a financial contribution within the meaning of Article 1.1(a)(1) of the SCM Agreement.³⁹⁰⁷

7.1055 The United States also argues that the provision of the Hamburg-Finkenwerder site to Airbus confers a benefit on Airbus within the meaning of Article 1.1(b) of the SCM Agreement, because Hamburg created a site that the market would not have created, and provided that site to Airbus for less than adequate remuneration.³⁹⁰⁸ The United States asserts that Hamburg spent approximately EUR 751,000,000 to create the 1.4 square kilometer (or 1,400,000 square meter) site, an investment of approximately EUR 536.43 per square meter. Relying on a report by the German real estate surveyor firm Dr. Keunecke & Stoehr, the United States asserts that the fair market value for land in the

immediate vicinity of the Hamburg site in 2000, the year in which the government decided to create and develop the site, ranged between EUR 51.13 and EUR 61.36 per square meter.³⁹⁰⁹ Therefore, according to the United States, the Hamburg government spent EUR 751,000,000 to create a site that was worth between EUR 71,600,000 and EUR 85,900,000.³⁹¹⁰ The United States maintains that a commercial investor in real property in Germany would not have made such an investment, and thus, if Airbus had wanted to expand its facilities at Hamburg-Finkenwerder, it would have had to spend the EUR 751,000,000 to create the site itself, thus significantly increasing the costs of the A380 project.³⁹¹¹ Consequently, the United States argues, the Hamburg government's decision to create the land and provide it to Airbus confers a benefit on Airbus within the meaning of Article 1.1(b) of the SCM Agreement. The United States notes that a September 2000 report that the Hamburg government provided to the Hamburg Parliament analyzed the project under SCM Agreement rules and concluded that the project was a subsidy:

"It is true that the improvements to the infrastructure of the area and its subsequent lease to AI is, in principle, a subsidy within the meaning of Article 1 (1) (iii) of the GATT Subsidy Agreement. ..."³⁹¹²

7.1056 The United States asserts that its approach to analyzing the benefit to Airbus from the Hamburg project is virtually identical to the approach the European Commission uses to determine whether the sale of land constitutes state aid under EU state aid rules.³⁹¹³ In *Scott Paper SA Kimberly-Clark*, for example, the Commission explained that the sale of land does not confer an "advantage" under EU state aid rules if:

³⁹⁰⁹ US, FWS, para. 432, citing Expert Opinion No. 27649/06, Benchmarks for Land Values concerning Hamburg Airbus Site "Mühlenberger Loch," Kreekslag 10, 21129 Hamburg Finkenwerder, 9 October 2006 (hereinafter "Keunecke Report"), Exhibit US-189. The relevant portion of the report is on page 5, Exhibit US-189). The United States notes that the office of Dr. Keunecke & Stoehr is one of the most respected real estate surveyors in Germany, whose two partners, Dr. Klaus-Peter Keunecke and Eberhard Stoehr, have been appointed and sworn in as public surveyors by the Berlin Chamber of Commerce for the appraisal of developed and undeveloped plots of real estate and of leases.

³⁹¹⁰ The United States observes that 1.4 million square meters at EUR 51.13 to EUR 61.36 per square meter equals EUR 71,582,000 to EUR 85,904,000. US, FWS, footnote 516. The United States further notes that the Hamburg government's own reports estimated that the land Hamburg created had a maximum value of EUR 61.35 per square meter, citing Hamburgische Bürgerschaft, Drucksache 16/4734, Mitteilung des Senats an die Bürgerschaft, at 12 (5 September 2000), Exhibit US-183 (explaining that "all the parcels of land that are later to be leased, including those owned by the City of Hamburg and those that must still be acquired from the German Government, will be transferred to the GmbH & Co. DG as contributions in kind (fair market value of about DM 50 million based on a commercial land value of DM 120/m²)). The United States converted the amount to Euros using the official Euro/DM conversion rate. Exhibit US-183.

³⁹¹¹ In this sense, the United States maintains that the creation of the site is akin to a EUR 665-679 million grant to Airbus, since Airbus would have spent EUR 751 million to create a site worth only EUR 71.6-85.9 million. US, FWS, footnote 517.

³⁹¹² US, FWS, para 441, citing Hamburgische Bürgerschaft, Drs. 16/4734, at 3 (in the original German, "Bei der infrastrukturellen Herrichtung der Fläche und der anschliessenden Vermietung an AI handelt es sich {...} grundsätzlich {...} um eine Subvention im Sinne des Artikel 1 Absatz 1 (iii) des GATT-Subventionsübereinkommens"), Exhibit US-183.

³⁹¹³ The United States observes that a government measure constitutes state aid under the EC state aid rules when it "confers an economic advantage on a recipient", and asserts that a requirement to show that a measure "confers an economic advantage on the recipient" is virtually identical to the SCM Agreement's requirement to show that a financial contribution confers a "benefit" on the recipient. Therefore, according to the United States, a DG-Competition finding that a particular measure is state aid is tantamount to a finding that the measure is a subsidy within the meaning of the SCM Agreement. US, FWS, footnote 518.

BCI deleted, as indicated [***]

"a private investor, on the basis of forecast potential profitability and ignoring any social, regional or sectoral policy considerations, would have invested in the land and then sold the plot at the same price as that asked by the local authorities."³⁹¹⁴

According to the United States, when the Hamburg authorities committed to spend EUR 751 million to transform a portion of the Mühlenberger Loch site into an industrial site, they knew the project would result in a loss of several hundred million Euro, an action a private investor would not have undertaken. Relying on the *Scott Paper SA Kimberly-Clark* decision, the United States argues that, by enabling Airbus to avoid spending the EUR 751,000,000 itself, the Hamburg authorities granted a subsidy conferring a benefit on Airbus.³⁹¹⁵

7.1057 The United States asserts that another basis for determining whether the government is providing the infrastructure for less than adequate remuneration is to determine whether the rent Airbus is paying under the lease will allow Hamburg to recoup its investment plus a market-based rate of return. According to the United States, the Keunecke report explains that commercial investors in real estate in Germany expect to receive an annual return on their net investment (including financing costs) of between 9 and 12 percent.³⁹¹⁶ To obtain even a 9 percent return, the United States asserts that Hamburg would need to charge Airbus at least EUR 67.5 million per year in rent; to achieve a 12 percent return, the lease price would need to be set at over EUR 90 million per year.³⁹¹⁷

7.1058 In its first written submission, the United States noted that European Communities and Germany had refused to provide a copy of the Lease to the Annex V Facilitator, so the United States did not know the precise amount of rent that Airbus is paying, but asserted that it was "highly unlikely" that Hamburg was charging Airbus anywhere near the amount required to constitute adequate remuneration.³⁹¹⁸ In this regard, the United States cited a statement by Hamburg's former minister for economic affairs: "The investment would in fact be unprofitable based on the rent alone. The whole thing must be viewed in terms of the public economy."³⁹¹⁹ The United States also relied on reports by the Hamburg government to the Hamburg Parliament in late 2003 and early 2006 regarding the creation of the site which state that the government expects Airbus to pay a total of EUR 29 million in rent through 2007, only EUR 4.9 - 7.25 million per year, assertedly less than a one percent annual return, before inflation.³⁹²⁰ The United States also observed, as noted above, that the Hamburg government had considered the project to be a subsidy within the meaning of the SCM Agreement.³⁹²¹

7.1059 The United States argued that the refusal of the European Communities and Germany to provide any of the information requested by the Facilitator during the Annex V process relating to the creation of the site, including the total costs that Hamburg incurred to create the site; the terms and

³⁹²¹ US, FWS, para. 441.

BCI deleted, as indicated [***]

conditions of any sale or lease of any portion of the site to Airbus; and information regarding any payments by Hamburg to create the facilities that Airbus located on the site gave, rise to a logical inference that the information would have supported the US claim that the measure is a specific subsidy. The United States suggested that the Panel draw such a logical inference. In addition, the United States suggested that, in accordance with paragraph 7 of Annex V, the Panel would be justified in drawing an adverse inference that the withheld information demonstrates that the measure is a specific subsidy and the United States requested that the Panel so infer.³⁹²²

7.1060 Finally, the United States asserts that the subsidies are specific to Airbus within the meaning of Article 2 of the SCM Agreement (i) because the Hamburg authorities custom-built the Hamburg-Finkenwerder site to Airbus's specifications in order to provide space for Airbus' A380 assembly facility (specificity "in law) and (ii) because Airbus is the only company located on the site, Airbus is the only company that can use the site (the site is surrounded by water on three sides and by Airbus's existing facilities on the land side), and the Hamburg authorities exercised their discretion to create the site especially for Airbus (specificity "in fact").³⁹²³

European Communities

7.1061 The European Communities considers that the reclamation of land in the Mühlenberger Loch and Rüschanal does not fall within the scope of the SCM Agreement. The European Communities maintains that conversion of wetlands into usable land is a typical task of public authorities, and constitutes the provision of general infrastructure, and is therefore outside the scope of Article 1 of the SCM Agreement.³⁹²⁴ The European Communities asserts that, under the constitution of Hamburg, the port is of specific importance to the city of Hamburg,³⁹²⁵ noting that the "law on the development of the port" (*Hafentwicklungsgesetz*) states that the development of the port is a public task. According to the European Communities, industrial sites are scarce in Hamburg, and the reclaimed land in the Mühlenberger Loch is an economic asset for the city, whether used by Airbus Germany or others.³⁹²⁶ The European Communities maintains that upon the expiry or termination of the lease agreement between Airbus Germany and Hamburg, Hamburg can open the land for public use or choose to rent it to another industrial investor, who could use it for instance as a container terminal or a car loading facility.³⁹²⁷

7.1062 Thus, the European Communities argues that the United States' allegation that an investor in "the market" would not have created the reclaimed land is beside the point, since a private company is neither bound by public law to implement certain tasks, nor charged with expending public resources to achieve public policy goals.³⁹²⁸ Moreover, the European Communities maintains that in evaluating such projects, cost and the projected return in strict monetary terms is not of paramount importance. Governments may choose to spend more or less public resources on general infrastructure projects, and to frame the expected return in something other than mere monetary terms, for instance, job creation. For the European Communities, under Article 1.1(a)(1)(iii) of the SCM Agreement, the question is whether or not the goods or services provided pertain to general infrastructure goals. Whether or not "the market" would have created a similar site is irrelevant.³⁹²⁹ In the European Communities' view,

the conversion of wetland into generally usable land by Hamburg did not confer an advantage on Airbus.³⁹³⁰

7.1063 The European Communities notes that the statement of the Hamburg Senate that the creation and leasing of the Mühlenberger Loch site constitutes a subsidy reflects the possibility that Hamburg contemplated of renting the reclaimed land to Airbus at a price below the market.³⁹³¹ However, the European Communities asserts that the final lease price reflects the full market rent for the land, and the Senate statement is therefore outdated.³⁹³² The European Communities also argues that WTO subsidy rules and EC State aid rules are not the same, and that therefore, any analogy between EC State aid practice and Article 1 of the SCM Agreement is not accurate.³⁹³³ In particular, the European Communities rejects the United States' assertion that "a DG-Competition finding that a particular measure is State aid is tantamount to finding that a measure is a subsidy within the meaning of the SCM Agreement".³⁹³⁴ Thus, for the European Communities, the United States' reliance on the decision in the *Scott Paper* case is misleading. In any case, the European Communities notes that there is no Commission decision that the Hamburg project constituted State aid under EC competition rules.³⁹³⁵ The European Communities also asserts that the situations in *Scott Paper* and Mühlenberger Loch are also substantially different, as *Scott Paper* did not deal with measures of general infrastructure like the pure creation of land, but rather concerned the transformation of existing agricultural land into a tailor-made industrial site for the company.³⁹³⁶ According to the European Communities, rather than providing general infrastructure, in *Scott Paper*, the French authorities acted in favour of one specific company to whom ownership of the tailor-made industrial site, including specific buildings for the factory, was transferred with a sales price that did not cover the investment costs. No private investor would have acted in such a manner. In the case of Mühlenberger Loch however, the European Communities asserts that Hamburg's land reclamation is a measure of general infrastructure, and that for such measures a market where private investors act does not exist. Furthermore, the European Communities notes that Hamburg has not sold the reclaimed land to Airbus Germany, but rather retains ownership of the property and the possibility to use the reclaimed land for other purposes after termination of the lease agreement with Airbus, and receives a market-based return on its investment in leasing special purpose facilities to Airbus.³⁹³⁷

7.1064 The European Communities also argues that the construction of flood protection measures, *i.e.*, the dykes, constitutes general infrastructure which falls outside the scope of Article 1 of the SCM Agreement. According to the European Communities, the flood protection measures serve a basic infrastructure purpose for the citizens of Hamburg, as part of the public task of the City to ensure the safety of its citizens against natural catastrophes according to section 55 of the Water Law of Hamburg (*Hamburger Wassergesetz*).³⁹³⁸ The European Communities asserts that the flood protection measures implemented around the reclaimed land were part of the federal and regional flood protection programme implemented from 2000 to 2002.³⁹³⁹ According to the European Communities, all dykes must be seen as a measure for the protection of all inhabitants of Hamburg, and there is no specific benefit to single proprietors.

³⁹³⁹ EC, FWS, para. 795.

BCI deleted, as indicated [***]

7.1065 For the European Communities, whether or not Hamburg granted a subsidy to Airbus Germany within the meaning of the SCM Agreement depends solely on the terms under which Hamburg removed the publicly-owned reclaimed land in the Mühlenberger Loch area from public use by renting it to a private company.³⁹⁴⁰ The relevant inquiry must therefore, in the European Communities' view, focus on the terms of the lease, and not on the costs of the creation of the site.

7.1066 The European Communities recalls that a benefit is only conferred if the recipient received a financial contribution on terms more advantageous than those that would have been available to the recipient at market.³⁹⁴¹ The European Communities asserts that, under the terms of the land lease agreements with Airbus Germany, no such advantageous terms exist, relying in this regard on the contemporaneous opinion of the Hamburg real estate Experts Committee³⁹⁴², as well as the Keunecke report relied on by the United States.³⁹⁴³

7.1067 The European Communities points out that at the request of the City of Hamburg, the Experts Committee concluded that the value for industrial land in the vicinity was [***]. As the leased land is approximately 1,577,388 m² and thus that the total value of the land was approximately [***].³⁹⁴⁴ The Experts Committee then concluded that an acceptable market-based rate of return for the Land Lease Agreement was [***].³⁹⁴⁵ The European Communities notes that the United States' expert reached the same conclusion with regard to the value of the land, concluding that the land value is between EUR 1.13/m² and EUR 61.36/m².³⁹⁴⁶ Based on these figures, the European Communities asserts that a market rent would be EUR 3.70/m² per year, or EUR 0.30/m² per month, which it asserts is in accordance with the rent paid by Airbus Germany.³⁹⁴⁷

7.1068 Thus, according to the European Communities, the difference between the conclusions reached by the Experts Committee, and the United States' position, derives from different assumptions concerning the applicable rate of return on real estate, set at 9 to 12% in the Keunecke Report, as opposed to [***] set by the Experts Committee. In the European Communities' view these two percentage values do not measure the same thing and cannot be directly compared, as they result from two different definitions of "return." The European Communities asserts that when these values are restated and expressed in the same economic terms, there is very little difference between them. Any remaining difference is the result of assertions by Dr. Keunecke that are unsupported and not relevant to the industrial land and facilities at hand.³⁹⁴⁸ Thus, the European Communities argues, the difference between the results of the Keunecke Report and the European Communities' position lies in the United States' view that Hamburg should not only demand a fair price for the current value of the land, but should also recover the full costs for the development of the site.³⁹⁴⁹ However, the European Communities considers this to be erroneous, since those costs are related to the creation of general

BCI deleted, as indicated [***]

infrastructure, and therefore, the European Communities maintains, fall outside the scope of Article 1 of the SCM Agreement.³⁹⁵⁰

7.1069 The European Communities further argues that, even if the Panel does not agree that the land reclamation was a measure of general infrastructure, the difference between Hamburg's costs for the project and the rent paid by Airbus Germany does not constitute a "benefit" within the meaning of Article 1.1(b) of the SCM Agreement, because the relevant standard for determining benefit is the benefit to the recipient, and not the cost to the government.³⁹⁵¹ The European Communities notes that these principles, set out in Part V of the SCM Agreement, are equally valid with respect to the definition of a subsidy in Article 1. The question under Article 1.1(b) of the SCM Agreement is whether a financial contribution confers a "benefit" on a recipient, relative to a market benchmark, and not whether the government covers the costs of delivering that financial contribution.³⁹⁵² Thus, the European Communities argues, the market benchmark serves as a floor in determining whether a financial contribution constitutes a benefit, but also serves as a ceiling on the amount of "benefit" that can be found to exist under Article 1.1(b) of the SCM Agreement.³⁹⁵³ While the government is entitled to a market-based return, the European Communities argues that it can only earn a market-based return on the value of the good leased, which may or may not be lower than its cost. The European Communities argues, however, that the government can earn returns through increased employment and other returns that private investors cannot capture.³⁹⁵⁴

7.1070 The European Communities argues that the United States' approach ignores this fundamental point, and would require that Airbus Germany agree to pay the City rent considerably in excess of what the market would demand, based on the cost to reclaim the land.³⁹⁵⁵ That is, the European Communities argues, effectively a resort to a "cost to government" standard. According to the European Communities, the United States considers that, regardless of the rental agreement Airbus Germany could have received at market, it should pay rent sufficient for the government to recover the costs it incurred in creating the reclaimed land, which position the European Communities argues rest on the "cost to government" standard rejected by the Appellate Body. The European Communities urges the Panel to do so as well in this dispute.³⁹⁵⁶

7.1071 Turning to the special purpose facilities, the European Communities notes that Hamburg also requested the Experts Committee to examine the market consistency of the Quay Facility Lease Agreement.³⁹⁵⁷ The Experts Committee concluded that the agreed rent for the facilities covered in the Quay Facility Lease Agreement was consistent with market; and second, that the other terms of the Quay Facility Lease Agreement were consistent with market.³⁹⁵⁸ The other special purpose facility lease agreements were based on the same pattern, and the European Communities asserts that they are also consistent with the market.³⁹⁵⁹

(iii) *Evaluation by the Panel*

7.1072 In order to resolve this aspect of the United States' claims, we will address first the European Communities' contention that the conversion of the Mühlenberger Loch site from wetlands into usable land constitutes a measure of general infrastructure, and thus does not constitute a subsidy under Article 1 of the SCM Agreement. An underlying premise of the European Communities' argument is that the various aspects of the development of the industrial site must be analyzed separately, in contrast to the United States' view, which treats the entire project as an integrated whole for purposes of analysis. Should we conclude that part or all of the provision to Airbus of the site is **not** a measure of general infrastructure, we will then go on to assess whether the financial contribution represented by that measure confers a benefit on Airbus.

General infrastructure

7.1073 As we concluded above,³⁹⁶⁰ in our view, the question of whether the provision of a good or service constitutes a provision of "general infrastructure" cannot be answered in the abstract, but rather must take into account the existence or absence of *de jure* or *de facto* limitations on access or use, and any other factors that tend to demonstrate that the infrastructure was or was not provided to or for the use of only a single entity or a limited group of entities, which may include factors relating to the circumstances surrounding the creation of the infrastructure in question, consideration of the type of infrastructure, the conditions and circumstances of the provision of the infrastructure, the recipients or beneficiaries of the infrastructure, and the legal regime applicable to such infrastructure, including the terms and conditions of access to and/or limitations on use of the infrastructure. Consideration of these factors in this instance leads us to conclude that the provision of the Mühlenberger Loch/Rüschkanal site does not constitute a measure of general infrastructure.

7.1074 Before addressing these factors, we consider the issue raised by the European Communities' argument that the Mühlenberger Loch project consisted of three distinct elements, (1) turning of wetlands into usable land, (2) building of flood protection measures, and (3) building of special purpose facilities, and that these three elements must be considered separately in assessing the issue of whether they constitute a provision of general infrastructure.³⁹⁶¹ The United States, on the other hand, contends that the creation of the site, and its provision to Airbus, are not distinct transactions having nothing to do with one another, but are integrally linked.³⁹⁶² For the United States, the lease of the land and special purpose facilities to Airbus cannot be separated from the creation of the land, including the flood protection measures and building of the special purpose facilities, because it was necessary to create the land in the first place in order to allow the remainder of the project, including the building of the special purpose facilities, to be undertaken.

7.1075 The European Communities does not, in our understanding, contend that the land reclamation was undertaken for reasons unrelated to the needs of Airbus, and then, afterwards, independently, the land was rented to Airbus. The European Communities has submitted no evidence that would suggest that the Hamburg authorities would have undertaken the reclamation of wetlands in the Mühlenberger Loch and Rüschkanal but for the fact that it was necessary to reclaim the land in order to make possible the expansion of Airbus' existing facilities in Hamburg to enable Airbus to assemble the A380 at that facility. Indeed, in its second written submission, the European Communities

³⁹⁶⁰ See, discussion at paras. 7.1036 to 7.1044 above.

³⁹⁶¹ EC, FWS, para. 748.

³⁹⁶² US, SWS, para. 315.

BCI deleted, as indicated [***]

acknowledges that the land reclamation was undertaken to accommodate Airbus' needs in connection with assembly of the A380.³⁹⁶³

7.1076 The European Communities argues that the fact that the Hamburg authorities "were aware of the fact that Airbus would be the first user of the newly-created land" is not surprising, and considers that the United States errs in attaching importance to this undisputed fact.³⁹⁶⁴ The European Communities refers to the law governing the development of the port of Hamburg, suggesting that the reclamation was part of that development, but acknowledges that the site is not, in fact, within the harbour area as defined by the port law.³⁹⁶⁵ The European Communities also suggests that land for industrial use is limited in Hamburg, implying that land reclamation is undertaken in a general effort to provide additional sites for industrial, and residential, use.³⁹⁶⁶

7.1077 In our view, none of these elements supports the basic premise of the European Communities, that we must consider as distinct elements the land reclamation, the building of the dykes, and the lease of the land and special purpose facilities. We agree with the United States that the lease of the land and special purpose facilities to Airbus cannot be separated from the creation of the land, including the flood protection measures and the building of the special purpose facilities, because it was necessary to create the land in the first place in order to allow the remainder of the project, including the building and subsequent lease of the special purpose facilities, to be undertaken. Merely because land reclamation and flood control are "typical task{s} of public authorities, as providers of general infrastructure"³⁹⁶⁷ does not constitute a sufficient basis to conclude that they must be considered as distinct elements of the provision of the Mühlenberger Loch site to Airbus. In fact, the European Communities' argument in this respect is somewhat circular: because the land reclamation and flood control aspects are, in the European Communities' view, measures of general infrastructure, they must be considered separately from the lease of the land to Airbus, and considered separately, they constitute measures of general infrastructure. However, as noted above, despite the European Communities' arguments to the contrary,³⁹⁶⁸ it is clear to us that the United States' claim is that the entire transaction of creating and providing an industrial site to Airbus constitutes the alleged subsidy, which it asserts is not a provision of general infrastructure.³⁹⁶⁹

7.1078 We consider that there is no legal requirement that we separate the various elements of the project for purposes of our analysis, and indeed, the European Communities has not proposed one. Nor are we persuaded that there is any factual basis that necessitates separating the elements as proposed by the European Communities. It is clear from the evidence before us that the land reclamation in question was undertaken in order to make possible the expansion of Airbus' existing facilities, and not for any independent purpose. Thus, it is part of an integrated project to provide a site adjacent to Airbus' existing Finkenwerder site for expansion of its facilities. We therefore proceed on the basis of an analysis of the entire project as a single measure.

³⁹⁶³ "Hamburg agreed, ... to fill in wetlands adjacent to the Deutsche Airbus facility (and owned by the City) to accommodate the A380 {final assembly line}". EC, SWS, para. 1083.

³⁹⁶⁴ EC, SWS, para. 353.

³⁹⁶⁵ EC, Answer to Panel Question 93, para 244. The United States points to evidence that the site was specifically excluded from the Harbor Area through an amendment to the Act in 1999, because the creation of land for the purpose of expanding Airbus' site, according to the Hamburg government, does "not serve any harbor purposes." US, SWS, para. 237, referring to Hamburgische Bürgerschaft, Mitteilung des Senats an die Bürgerschaft, Achten Gesetz zur Änderung des Hafentwicklungsgesetzes, hier: Änderung des Hafengebiets im Mündungsbereich des Rüschanals und vor der Aufhöhungsfläche des Mühlenberger Lochs, Drs. 16/2646, p. 1, Exhibit US-552).

³⁹⁶⁹ See, paras. 7.153, 7.155 and 7.158 above.

BCI deleted, as indicated [***]

7.1079 We recall our interpretation of the term "general infrastructure", where we concluded that that the term "**general** infrastructure", taken in its ordinary and natural meaning, refers to infrastructure that is not provided to or for the advantage of only a single entity or limited group of entities, and that there is no type or form of infrastructure which is inherently "general" *per se*.³⁹⁷⁰

7.1080 It is clear from the evidence before us that the reclamation of the wetlands adjacent to the existing Airbus facility in Finkenwerder was undertaken not merely in the awareness that Airbus would be the "first user", as argued by the European Communities, but specifically in order to enable Airbus to expand its existing facilities in a way it could not do without the creation of the new land.³⁹⁷¹ The decision of the EC Commission granting approval for the draining of the wetlands notes the [***].³⁹⁷² The flood control measures, *i.e.*, the new dyke, for the reclaimed land would not have been undertaken had the land reclamation not taken place. While the European Communities asserts that the existing flood protection system for the existing Airbus facility in Finkenwerder was insufficient, it acknowledges that the land reclamation project provided "a timely opportunity to upgrade" those facilities, in line with the 2002-2012 flood protection programme for the river Elbe.³⁹⁷³ The special purpose facilities, the quay, the roll-on-roll-off facility, sluice and pump building, drainage ditch, and sternfender, all form part of the creation of an industrial site suitable for the expansion of Airbus' existing facilities. There is simply no evidence to suggest that any of this development would have been undertaken at the time were it not necessary in order to enable Airbus to expand its existing facilities to allow for assembly of the A380 at that site.

7.1081 We do not doubt that the Hamburg authorities were pursuing a public interest or public policy goal in undertaking this large project. Indeed, this is clear from the EC Commission decision, which granted approval for a project which would destroy a protected wildlife sanctuary in part on the basis that it would counterbalance job losses in Hamburg and would have a positive effect on the economic and social situation in the region.³⁹⁷⁴ However, merely that the Hamburg authorities were furthering a public interest does not suffice to demonstrate that the project, starting with the reclamation of the land, and including the remaining elements of flood protection and special purpose facilities, constitutes general infrastructure. To the contrary, as we have noted, it is in any event always likely to be the case that public authorities will have reasons of public policy when expending public funds.

7.1082 The European Communities also argues that there is public access to the reclaimed land, and a potential for other uses, allegedly demonstrating that that aspect of the project constitutes provision of general infrastructure.³⁹⁷⁵ As discussed above, we do not consider it appropriate to analyse the elements of provision of the Mühlenberger Loch site separately. However, even if we were to do so, we would not find the European Communities' arguments in this regard persuasive. With respect to its assertion of public access, the European Communities relies primarily on photographic evidence to argue that the site is accessible via a publicly owned road, *i.e.*, the dyke lane, which functions as the normal traffic road between the Airbus facilities and the village of Cranz, without crossing the Airbus facilities.³⁹⁷⁶ However, at best, the dyke lane provides limited access to the circumference of the site,

³⁹⁷⁰ See, discussion at paras. 7.1036 to 7.1044 above.

³⁹⁷¹ See, EC, SWS, para. 1083. We note, moreover, that on 9 July 2004, the City of Hamburg and Airbus Deutschland GmbH concluded a contract under which Airbus promised to undertake all investments needed for the production and delivery of the A380 Freighter, including investments in the buildings on the newly created artificial land in the Mühlenberger Loch. In addition, Airbus agreed to rent the land needed for this purpose, and to pay damages to Hamburg for, *inter alia*, investments to provide the site, should Airbus ultimately not locate A380 production there. US, SWS, para. 337, see Exhibits US 562, 563, 564 and 565.

³⁹⁷² Commission decision of 19 April 2000, Exhibit EC-547 (BCI).

³⁹⁷³ EC, FWS, para. 756. The European Communities provides no evidence to suggest that such an "upgrade" would have taken place at that time but for the entire project being undertaken.

³⁹⁷⁴ EC, FWS, para. 754.

³⁹⁷⁶ Exhibit EC-616.

BCI deleted, as indicated [***]

and not to any of the land leased by Airbus.³⁹⁷⁷ More pertinently, as the European Communities acknowledges, the dyke lane is open to use only by Airbus employees and city officials responsible for maintenance of the dyke, at least for as long as the land is leased to Airbus.³⁹⁷⁸ Moreover, the European Communities has not rebutted the United States' arguments concerning the inadequacy of the dyke lane as a means of access to the site, other than for limited purposes.³⁹⁷⁹ The mere possibility that at some future time, if Airbus no longer leases the land, there might be access to the site via an improved dyke lane, does not, in our view, suffice to demonstrate that any part of the Mühlenberger Loch project constitutes a measure of general infrastructure.

7.1083 With respect to the assertion that there are potentially other uses for the site, the European Communities argues that if the lease agreement with Airbus were terminated, the site could be leased to another company, and specifically, could be used as a container terminal.³⁹⁸⁰ Our review of the lease for the site leads us to conclude that any potential other use of the site is, at best, a fairly distant future possibility.³⁹⁸¹ Moreover, we are not persuaded by the European Communities' arguments that there are alternative uses for the site. The European Communities relies on the land use plan for Hamburg (*Flächennutzungsplan*) to argue that the site is not restricted to use by aviation industries,³⁹⁸² and asserts that due to scarcity of land in Hamburg, the site constitutes a valuable asset.³⁹⁸³ However, the European Communities' argument relies primarily on the overall land use plan and does not address the subsidiary land construction plan (*Bebauungsplan Finkenwerder 37*), which, as argued by the United States, imposes limitations on the use of the Mühlenberger Loch site for any purpose other than Airbus' aircraft assembly facilities.³⁹⁸⁴ While it is true that these plans are subject to revision by the Hamburg authorities, that possibility is not sufficient, in our view, to support the European Communities' position, and does not justify a conclusion that the site is available, in any meaningful sense, for use by any entity other than Airbus or for any use other than by aviation industries.³⁹⁸⁵ Moreover, merely that land is a valuable asset adds nothing to the European Communities' argument, particularly in view of the evidence rebutting the European Communities' assertion that there is a shortage of land for industrial use in Hamburg.³⁹⁸⁶

7.1084 The circumstances surrounding the creation of the Mühlenberger Loch site, including all of aspects discussed above, clearly demonstrate to us that the Hamburg authorities were not simply "aware" that Airbus would be the first user of the site, but undertook the entire project specifically in

³⁹⁷⁷ We note that the Land Lease Agreement contains two specific provisions relating to access to the site by parties other than Airbus. In particular, Article 11.3 states that "the lessee is obliged to allow agents of the lessor or representatives of the utilities companies after prior agreement with the lessee to enter the leased area and undertake any work he considers necessary (surveys, building inspections, maintenance, repairs etc.)," and Article 11.4 provides that "Contractors of the dyke authority or from other responsible authorities must be given access over the leased area to the flood defences at any time in connection with dyke maintenance and dyke defence functions." See, Exhibit EC-551 (BCI).

³⁹⁷⁸ EC, Answer to Panel Question 91, para. 229.

³⁹⁷⁹ US, SWS, para. 347-348.

³⁹⁸⁰ EC, FWS, para. 778, referring to Exhibit EC-571

³⁹⁸¹ The Lease agreement, Exhibit EC-551 (BCI), indicates that the lease is for [***].

³⁹⁸² EC, Answer to Panel Question 91, para. 233, Exhibit EC-617.

³⁹⁸³ EC, Answer to Panel Question 91, para. 225.

³⁹⁸⁴ US, SWS, para 343-344 and references therein.

³⁹⁸⁵ We also note that the fact that Hamburg required Airbus to agree to pay damages, including for the investment made in the site required by Airbus, should the latter decide not to locate A380 freighter operations in Hamburg supports the conclusion that the city authorities did not consider that there were any other uses for the newly created site than the expansion of Airbus' existing operations. US, SWS, para 337 and footnote 411, referring to Exhibits US-562, US-563, US-564, and US-565.

³⁹⁸⁶ Prior to the decision to create the Mühlenberger Loch site, three alternative sites of comparable size in Hamburg were considered. US, SWS, para 320. This supports the US contention that there is no shortage of industrial land, and thus rebuts the implication that creation of the Mühlenberger Loch site was somehow necessary apart from enabling Airbus to expand its existing facilities at that location.

BCI deleted, as indicated [***]

order to enable Airbus to expand its existing facilities. The project, including the special purpose facilities, was tailor-made for Airbus, enabling it to expand its existing facilities so as to be able to benefit from the resulting synergies. No other beneficiary was considered at any time – the project was undertaken exclusively for Airbus. Moreover, the terms of the lease agreements, as well as the then-existing legislation governing use of the land, limit the use of the site for the foreseeable future to Airbus. In light of these facts, we conclude that the creation and provision of the Mühlenberger Loch industrial site is not a provision of general infrastructure, but rather constitutes a financial contribution in the form of the provision of goods or services other than general infrastructure, within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement. We therefore go on to consider whether it conferred a benefit on Airbus.

Benefit

7.1085 The United States asserts that the provision of the Mühlenberger Loch site confers a benefit on Airbus (i) because Hamburg authorities created a site that the market would not have created,³⁹⁸⁷ and (ii) because the site is provided to Airbus for less than adequate remuneration.³⁹⁸⁸

7.1086 In its first written submission, the United States identified the alleged costs of the Mühlenberger Loch project and addressed the question of benefit based on publicly available information, because, it noted, the European Communities and Germany had refused to provide information, as requested by the Facilitator during the Annex V process, concerning the creation of the site, including total costs incurred by Hamburg to create the site, as well as information on the terms and conditions of any sale or lease of the site to Airbus, and information regarding any payments by Hamburg to create the facilities located on the site by Airbus.³⁹⁸⁹ The United States argued that the logical inference to be drawn from this refusal was that the information would have supported the United States' claim that the measure is a specific subsidy, and that the Panel would be justified in drawing an adverse inference pursuant to paragraph 7 of Annex V to that effect.

7.1087 Paragraph 7 of Annex V provides that a panel "should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process". Although the European Communities failed to provide all of the information requested on the Mühlenberger Loch project during the Annex V process, it has, during the course of this panel proceeding, submitted additional information. Thus, we are not here faced with a situation where a party has failed to supply any part of the requested information. As a consequence, we cannot simply accept, as the United States suggests, that the failure to provide the requested information during the Annex V process warrants drawing an adverse inference against the European Communities. Rather, we consider that it is appropriate to address the evidence that has been put before us on the issue of benefit.

7.1088 The United States argues, based on publicly available information, that the Hamburg authorities invested EUR 751,000,000 in the creation and development of the site, including the land reclamation, dykes, and special purpose facilities. The United States asserts that Hamburg estimated that the total cost of the project would be EUR 693,700,000³⁹⁹⁰ but that "the Hamburg Accounting Office criticised this estimate and predicted that the total costs to Hamburg would amount to EUR 751,000,000".³⁹⁹¹ The European Communities, on the other hand, argues that this amount represents

³⁹⁸⁷ US, FWS, paras. 431-436.

³⁹⁹¹ US, FWS, para. 428, citing Hamburgische Bürgerschaft, DRs. 17/2267, Report from the Audit Office to the Bürgerschaft (19 February 2003), Exhibit US-188, at 155, para. 385.

BCI deleted, as indicated [***]

an early estimate of the cost of the project, and that the aggregate costs for the project foreseeable in 2006 were EUR 693,679,000.³⁹⁹²

7.1089 Although the European Communities has now provided information concerning the total cost of creating the Mühlenberger Loch site that was not presented during the Annex V process, the United States continues to argue that the real costs were approximately EUR 750 million.³⁹⁹³ The United States argues that the European Communities' contention that its calculation is based on a earlier, outdated estimate is wrong, and asserts that the European Communities fails to include the cost of certain interim financing incurred by ProFi, which it contends should be included, based on the Court of Auditors report on which the United States relies.³⁹⁹⁴ We agree with the United States that the European Communities' cost estimates do not include the interim financing costs to ProFi.³⁹⁹⁵ We further agree that those costs are appropriately included in the total. Together with the fact that the European Communities did not provide the information requested during the Annex V process, we therefore consider it appropriate to accept the United States' assertion, based on publicly available information, that the cost of the development of the Mühlenberger Loch site, including the land reclamation, flood protection, and special purpose facilities was approximately EUR 751 million. The site is leased to Airbus under a series of leases for the land and the special purpose facilities, for a period of [***]. The full rent for the land, which will only be achieved after 2009, after all parcels are suitable for use, and the reductions for settling are eliminated, will be EUR 5,619,588 per annum, while the rent for the special purpose facilities is EUR 5,619,200 per annum, both subject to adjustment for inflation.

7.1090 We recall that Article 1.1(b) of the SCM Agreement does not define the notion of "benefit". However, it is well established that a "financial contribution" will confer a "benefit" upon a recipient when it places that recipient in a more advantageous position compared with the position of that recipient in the absence of the "financial contribution".³⁹⁹⁶ In *Canada – Aircraft*, both the panel and the Appellate Body considered that the basis for making this comparison was the market. Thus, the panel observed that:

"a financial contribution will only confer a 'benefit', *i.e.*, an advantage, if it is provided on terms that are more advantageous than those that would have been available to the recipient on the market".³⁹⁹⁷

Similarly, the Appellate Body explained that:

"the marketplace provides an appropriate basis for comparison in determining whether a 'benefit' has been 'conferred', because the trade distorting potential of a 'financial contribution' can be identified by determining whether the recipient has

³⁹⁹² EC, FWS, para. 758, citing Hamburgische Bürgerschaft, Drucksache 18/4115, Mitteilung des Senats and die Bürgerschaft (18 April 2006), Exhibit EC-548, at 8.

³⁹⁹³ US, SWS, footnote 367 and paras. 352, 356.

³⁹⁹⁴ US, SWS, footnote 439.

³⁹⁹⁵ In its report, the Court of Auditors noted that the Hamburg government had not included in its cost information certain interim financing cost incurred by the government-owned developer ProFi that should be included in the cost. *See*, Hamburgische Bürgerschaft, Jahresbericht 2003 des Rechnungshofs (2003 Annual Report of the Court of Auditors), Drs. 17/2267, para. 385, Exhibit US-188).

BCI deleted, as indicated [***]

received a 'financial contribution' on terms more favourable than those available to the recipient on the market."³⁹⁹⁸

7.1091 Thus, a benefit will be conferred whenever a financial contribution is granted to a recipient on terms more favourable than those available to the recipient in the market. In the context of a financial contribution in the form of provision of goods or services other than general infrastructure, we consider that the appropriate question to be addressed in resolving the question of benefit is whether a market actor would have provided the good or service to the recipient at the time, on the same terms and conditions as the government provision at issue.

7.1092 In this regard, the European Communities argues that it is incorrect to assess benefit to Airbus on the basis of the difference between the cost to the Hamburg government of the project, and the rent paid by Airbus for the site.³⁹⁹⁹ The United States does not dispute the basic premise that cost to the government is not an appropriate basis for assessment of benefit. However, the United States does argue that the circumstances of the case require consideration of the total amount invested by Hamburg to create the site in order to determine the existence and amount of any benefit. The United States argues that this is not a case where the government simply rented an existing parcel of land to Airbus. Rather, in this case the Hamburg authorities specifically created the land that was necessary for Airbus' expansion next to its existing site at Finkenwerder, and then rented that land to Airbus. The United States does not, in the first instance, dispute that the rent for the land and special purpose facilities may well be commensurate with a market benchmark for rental of **existing** land in the area,⁴⁰⁰⁰ but considers that the underlying investment in reclaiming the land must be included in the calculation in this case in order to arrive at a realistic approximation of a market benchmark for the value of the **particular land in question, which must reflect the investment in land**. In the United States' view, a calculation of the lease price which does not take into consideration the investment in creating the site effectively turns that amount into a grant to Airbus.

7.1093 The European Communities, on the other hand, argues that Hamburg did not create an industrial site for Airbus, but "conducted mere land reclamation",⁴⁰⁰¹ and then rented that land to Airbus at a market-based price, and that no benefit was conferred upon Airbus thereby. We have already rejected the argument that "mere land reclamation" is exempt from consideration as a subsidy in this dispute, and are considering the entire Mühlenberger Loch project as a whole. Therefore, we consider that the investment by Hamburg in bringing the site into existence is relevant in our assessment of whether a benefit was conferred on Airbus. This does not constitute, as argued by the European Communities, a determination of the amount of benefit on the basis of cost to the government. Rather, we consider that it is simply a reflection, in the particular circumstances of this measure, of the basis on which a market actor would determine the amount of rent to be charged for that particular parcel of land, and thus the appropriate "market" benchmark.

7.1094 While the parties agree that, in this case, no commercial investor would have undertaken the project, it is clear to us that this is because the investment necessary in reclaiming the land was disproportionately large in comparison to any potential returns. The parties are in general agreement as to the market value of industrial land in Hamburg, and the value of the Mühlenberger Loch land - between EUR 71,600,000 and EUR 85,900,000, according to the United States,⁴⁰⁰² or approximately

³⁹⁹⁸ Appellate Body Report, *Canada – Aircraft*, para. 157.

³⁹⁹⁹ EC, FWS, para. 820.

⁴⁰⁰⁰ The United States does, as a second line of argument, assert that the rent is insufficient by comparison to a market benchmark. In light of our conclusion, we do not consider it necessary to address this line of argument.

⁴⁰⁰¹ EC, SWS, para. 357.

⁴⁰⁰² US, FWS, para. 432, and Exhibit US-183.

BCI deleted, as indicated [***]

[***], according to the EC.⁴⁰⁰³ It is clear that a market-based rental on land of that value is necessarily far less than would be a market based rental on an investment in land worth EUR 750 million. Indeed, the European Communities does not even suggest that the rental paid by Airbus provides a market return on the investment in reclaiming the land. Yet, in our view, a market actor who invested EUR 750 million in land, whether by purchasing it or by creating it through reclamation, would, in renting the property, seek a return on that investment. In this situation, the "investor" was the Hamburg city authorities, who directed public funds to create an asset that the market would not have created. To argue, as the European Communities effectively does, that in this situation, no benefit can be found, would, in our estimation, result in a wholesale circumvention of the fundamental purpose of the SCM Agreement's discipline on subsidies. Under the European Communities' view, the more a financial contribution by a government distorted the allocation of resources that the market would otherwise produce, the less it could be found to be a subsidy.⁴⁰⁰⁴ This is not an acceptable outcome, as it perverts a fundamental goal of the SCM Agreement.

7.1095 The European Communities argues that for the United States to successfully argue that the cost of the project should be taken into account it must demonstrate that, absent the actions of the Hamburg authorities, Airbus would have reclaimed the land itself, in which case the costs incurred by Hamburg would represent the "cost savings" for Airbus.⁴⁰⁰⁵ While the European Communities argues that Airbus would not have done so, this appears largely to be based on its view that land reclamation is a government task, and that absent the action of Hamburg to reclaim the land, Airbus would simply have sited its new facility elsewhere. While it may be true that land reclamation is most commonly undertaken by governments, there is nothing in principle that would preclude a private party from undertaking such a project, and thus nothing in principle that would have precluded Airbus from reclaiming the Mühlenberger Loch site on its own account.⁴⁰⁰⁶ That the cost of the project might have persuaded Airbus not to undertake it, but rather to site its assembly facility elsewhere, as argued by the European Communities, in our view simply underscores the fact that the reclamation of this land involved, as the European Communities itself suggested, a "cost of reclamation that no rational investor, including Airbus, would incur for land that Airbus did not need."⁴⁰⁰⁷ The fact that Airbus had other options, but chose to expand its existing facilities at Finkenwerder once the necessary land was made available to it thus supports our view that the financial contribution of the Hamburg authorities in reclaiming the land and building special purpose facilities for Airbus' use conferred a benefit on Airbus.⁴⁰⁰⁸

⁴⁰⁰³ EC, FWS, para. 801 and Exhibit EC-563 (BCI) p. 4-6.

⁴⁰⁰⁴ The European Communities agrees that there are instances where cost can serve as a surrogate for a market price. However, it asserts that cost may be used to estimate market prices only in instances where it is apparent that generally prevailing market prices at the time of the investment are sufficient to induce private investors to undertake the project. The European Communities argues that cost does not provide a reliable measure of market value where it is apparent that no private investor would undertake the investment because the rent or price required to provide a market return exceeds the market value of the resulting asset. EC, Comments on US Answer to Panel Questions 154 and 155.

⁴⁰⁰⁵ See, EC, SNCOS, paras. 30 & 212.

⁴⁰⁰⁶ Provided, of course, that necessary permission was granted to undertake such a project. In our view, had Airbus sought to undertake the land reclamation on its own account, and been denied permission by the Hamburg authorities, which then undertook the project at government expense and provided the reclaimed land exclusively to Airbus, this would demonstrate that the provision of the land conferred a benefit, as it would be clear that the government had, by its own action, enabled Airbus to save the expense of reclaiming the land.

⁴⁰⁰⁷ EC, SCOS, para. 20.

⁴⁰⁰⁸ Moreover, not only did the Hamburg authorities have incentive to keep Airbus active at its existing facility, which might not have been the case had the expansion for purposes of the A380 project not been possible, but Airbus had incentive to site A380 production operations at the site, in order to ensure that it obtained LA/MSF from the German government. The European Communities acknowledges that [***] was one of the reasons Airbus set up two production sites, despite the asserted [***] that resulted. EC, SWS, para. 1079.

BCI deleted, as indicated [***]

7.1096 Finally, the European Communities argues that Airbus pays rent for the land and special purpose facilities that is commensurate with market rates for like land and facilities in Hamburg, and therefore that there is no benefit conferred on Airbus. However, the European Communities' argument is premised on its view that the land reclamation aspect of the project does not constitute a financial contribution, which we have rejected. It is clear, and the European Communities does not argue otherwise, that the rent paid by Airbus for the reclaimed land and special purpose facilities does not provide a market rate of return on the whole of the investment by the Hamburg authorities to create the Mühlenberger Loch site. Thus, in our view, whether the rent paid by Airbus for the land and special purpose facilities is commensurate with a market rate for rental of existing industrial land and facilities in Hamburg is simply not relevant to our analysis of benefit. We consider that the subsidy granted by Hamburg by creating and leasing the Mühlenberger Loch site conferred a benefit on Airbus in an amount equivalent to the extent of the difference between the actual rent paid by Airbus for the land and facilities in question, and a reasonable rate of return on the investment of the Hamburg authorities in creating that land and those facilities. That investment was many times greater than the value of the site reflected in the actual rental amounts, and thus in our view, the provision of the site conferred a very large benefit to Airbus.

7.1097 Therefore, in our view, the conclusion that the provision of the Mühlenberger Loch site to Airbus confers a benefit on Airbus, for whom the project was undertaken, and thus constitutes a subsidy within the meaning of Article 1 of the SCM Agreement is inescapable. The European Communities does not dispute that the provision of the site was specific to Airbus. As Airbus is the only user of the site, which was developed to fulfil Airbus' needs, we find that the subsidy in question is specific to Airbus within the meaning of Article 2.1(a) of the SCM Agreement.

(d) Bremen Airport Runway

7.1098 The United States argues that the main runway at Bremen airport was extended by German authorities in 1988-89 to accommodate transport flights for Airbus wings manufactured in Bremen. According to the United States, the authorities extended the runway specifically for Airbus' requirements, and use of the extended portions of the runway is restricted by regulation to flights transporting Airbus parts. The United States contends that the provision of the extended runway to Airbus for its exclusive use for less than adequate remuneration is a financial contribution that confers a benefit on Airbus within the meaning of Article 1.1 of the SCM Agreement that is specific within the meaning of Article 2 of the SCM Agreement.⁴⁰⁰⁹

7.1099 According to the European Communities, the United States' claim fails to adequately identify the presumed beneficiary, and falls outside the scope of the SCM Agreement.⁴⁰¹⁰ The European Communities argues that the extension of the Bremen airport runway, and the associated noise reduction measures, constitute measures of general infrastructure, and therefore do not constitute a financial contribution within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement.⁴⁰¹¹ The European Communities acknowledges that allowing only Airbus to use the full length of the extended runway may constitute the provision of a service within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement, but contends that granting Airbus a right to use the full length of the runway does not confer a benefit on Airbus because Airbus pays for this use in accordance with the general fee schedule applicable at Bremen Airport.⁴⁰¹²

BCI deleted, as indicated [***]

(i) *Factual Background*

7.1100 According to the European Communities, German authorities require a safety margin at either end of commercial runways, consisting of a 300 meter area free of all obstacles. In Bremen, the implementation of this requirement had resulted in the shortening of the usable length of the runway.⁴⁰¹³ In May 1988, an extension of the runway by 300 meters at either end was authorized.⁴⁰¹⁴ Consequently, in 1989-90, the runway was extended from its existing length of 2,034 meters to 2,634 meters.⁴⁰¹⁵ At the same time, noise reduction measures were put in place.⁴⁰¹⁶ It is undisputed that, with the exception of emergencies, only 2,034 meters of the runway's length is available for general aviation use. Regular use of the entire length of the runway, including the 600 meters of extension, is permitted only for flights transporting Airbus wings from Bremen.

7.1101 The cost of the runway extension and noise reduction measures was borne by the City of Bremen. The United States asserts that Bremen paid DM 40 million to extend the runway and a further DM 10 million for noise reduction measures.⁴⁰¹⁷ The European Communities disputes the amounts in question, asserting that Bremen paid [***] for the extension of the runway and [***] for noise reduction.⁴⁰¹⁸

(ii) *Arguments of the Parties*

7.1102 The United States argues that the extension of the Bremen airport runway and the provision of the runway to Airbus for its exclusive use, including the implementation of noise reduction measures, constitutes the provision of goods and services other than general infrastructure within Article 1.1(a)(1)(iii) of the SCM Agreement, and confers a benefit on Airbus.⁴⁰¹⁹

7.1103 In response, the European Communities asserts first that the United States' challenge is "overly vague", as it fails to adequately identify the presumed beneficiary of the alleged subsidy. In this regard, the European Communities notes that, at the time of the runway extension, neither Airbus SAS nor Airbus Germany existed.⁴⁰²⁰ We recall our findings that, for the purpose of this dispute " a financial contribution provided to any Airbus partner or affiliated entity, or to Airbus GIE, in relation to the production of an Airbus LCA, confers a benefit on the Airbus Industrie consortium, as the producer of Airbus LCA" and that the United States is not required to demonstrate "the "pass-through" to Airbus SAS of benefits conferred by financial contributions provided to the Airbus Industrie consortium."⁴⁰²¹ Therefore, we conclude that the United States has sufficiently identified the beneficiary of the alleged subsidy. The European Communities also maintains that this measure falls outside the temporal scope of Article 5 of the SCM Agreement and was grandfathered by Article 2 of the 1992 Agreement. These issues were addressed and the European Communities' arguments in this

BCI deleted, as indicated [***]

regard were rejected in our Preliminary Ruling.⁴⁰²² We therefore will not address these arguments further in this section.

7.1104 Substantively, the European Communities argues that the extension of the Bremen airport runway, and the associated noise reduction measures, constitute measures of general infrastructure, and therefore do not constitute a financial contribution within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement.⁴⁰²³ The European Communities argues that the runway extensions fall "within the notion of general infrastructure", asserting that Bremen may provide modern transportation facilities, including an airport, whose proper function is subject to questions of capacity, and thus the extension of the runway to match demand constitutes the provision of general infrastructure.⁴⁰²⁴ The European Communities acknowledges that allowing only Airbus to use the full length of the extended runway may constitute the provision of a service within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement,⁴⁰²⁵ but contends that granting Airbus a right to use the full length of the runway does not confer a benefit on Airbus because Airbus pays for this use in accordance with the general fee schedule applicable at Bremen Airport.⁴⁰²⁶

7.1105 The United States maintains that the extension of the runway and the implementation of noise reduction measures do not constitute the provision of general infrastructure.⁴⁰²⁷ The United States argues that the extension of the runway was undertaken by the city of Bremen specifically for Airbus, to accommodate its need to transport large parts, *i.e.*, aircraft wings, by air, to other Airbus facilities elsewhere. In support of its argument, the United States relies, *inter alia*, on statements made in the Bremen Parliament that described the runway as a "company runway" for Airbus.⁴⁰²⁸ The United States further argues that the use of the full length of the extended runway is limited to Airbus by regulation.⁴⁰²⁹ In this regard, the United States cites, *inter alia*, an order of the Administrative Court of Bremen which limits the use of the full length of the runway to specific aircraft types carrying freight consisting of wings for Airbus A330/A340 and future models.⁴⁰³⁰

⁴⁰²² See, paras. 7.88 - 7.105 (findings on temporal scope arguments) and paras. 7.138 - 7.158 (findings on adequacy of US request for panel establishment) above.

⁴⁰²⁴ EC, FWS, para 870.

⁴⁰²⁵ EC, FWS, para. 872.

⁴⁰²⁶ EC, FWS, para. 873. The European Communities argues that fees for runway usage are based on objective criteria (such as the weight and type of aircraft, number of passengers). According to the European Communities, the fact that the fees are not calculated based on the length of runway used by a plane does not mean that Airbus should pay an additional fee simply because it uses the full length of the runway. The European Communities asserts that aircraft weight is related to the use of the runway extension because heavier aircraft require longer runways. In other words, the European Communities argues that because the fees are levied in part based on the weight of the aircraft, Airbus is paying a higher user fee when it uses the runway extension to land heavier aircraft. BCI deleted, as indicated [***]

7.1106 The European Communities acknowledges that there are limitations on use of the runway, but argues that these limitations are based on environmental concerns about increased air traffic and pollution, as well as noise-related concerns.⁴⁰³¹ The European Communities also acknowledges that in deciding to extend the runway, the Senate intended to allow Airbus to use the extended runway for the transport of parts, so as to ensure the maintenance of an Airbus facility, and 500 associated jobs, in the region.⁴⁰³² In light of this, the European Communities acknowledges that allowing only Airbus to use the full length of the extended runway may constitute the provision of a service within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement.⁴⁰³³ However, the European Communities contends that this right does not confer a benefit on Airbus, because Airbus pays for this use in accordance with the general fee schedule applicable at Bremen Airport.⁴⁰³⁴ The European Communities also asserts that in practice, the runway extensions can be used by any aircraft in emergency situations such as interrupted take-offs and emergency landings, can be used for the transport of parts and components by the aerospace industry and, in particular cases, can be used by any private airline.⁴⁰³⁵ Therefore, the European Communities asserts, all users of the Bremen airport may benefit from the extensions.⁴⁰³⁶

7.1107 The United States argues that the use of the extended runway is limited to Airbus for the transport of aircraft parts by law, referring first to the decision of the Bremen government to extend the runway.⁴⁰³⁷ In that decision, the United States argues, the Bremen government explicitly rejected the possibility that the extended runway could be used for general, non-Airbus related air transport. Second, the United States refers to the December 2001 judgment by the Bremen Administrative Court, which confirmed that the use of the extended runway was limited to Airbus, and only for the transport of wings for the A330/A340 or future models.⁴⁰³⁸ The United States maintains that, contrary

German air traffic control agency Deutsche Flugsicherung in the German AIP (14 and 28 October 2004), Exhibit US-193; *see also*, http://www.fluglaerm.de/bremen/flughafenvertrag_seite_1.htm for a description of the history of the extension, Exhibit US-194. *See, also*, United States, Answer to Panel Question 20, para. 152.

⁴⁰³¹ The European Communities notes that in January 1989, Bremen concluded a contract with the Bremen airport company with the aim of permanently restricting noise and pollution from the runway, as extended, which governs the use of the runway extensions. Following a complaint about use of the extension contrary to the applicable restrictions, the Bremen Administrative court in December 2001 confirmed the terms of the user restrictions, obliging the city of Bremen not to use the extensions beyond the agreed level. EC, FWS, paras. 865-867, referring to Verwaltungsgericht Bremen, Az.2 K 2787/00, pp. 5-13, Exhibit EC-578) and Oberverwaltungsgericht Bremen Az 1A159/02, p.1, Exhibit EC-579.

⁴⁰³⁷ US, Answer to Panel question 20, para.153 referring to Senatsbeschluss of 31 May 1988, Exhibit EC-577, at paras. 1 and 3 (English translation by the European Communities).

"{1.} The Senate hereby endorses its decision of 8 May 1973, that Bremen Airport, after full availability of the existing 2,034m long runway has been restored, duly satisfies the requirements to be placed on it in the interest of ensuring the safety of flight operations and achieving optimum integration with the domestic and European operations network through short and medium haul flights with the exception of minor restrictions on load capacity. The rejection of an extension to the existing runway for general air traffic remains the unchanged foundation of Bremen's airport policy and the subject of Bremen Airport's operating licence in its revised form of 7 February 1985. ... {3.} The Senate resolves, for the purposes of safeguarding Airbus wing assembly operations in Bremen in the long-term and the 500 jobs which are dependent on such operations, to extend the paved runway to the west and east of the airport by 300m in each direction by Summer 1990 for the exclusive use of super guppy take-offs or take-offs by similarly quiet freight aircraft for MBB intra-factory flights."

⁴⁰³⁸ US, Answer to Panel Question 20, para. 153:

"The operating restrictions set forth in the following nos. 1 to 4 provide, *inter alia*, that the special runway can only be operated for take-offs and solely for transporting airfreight consisting of the wings of Airbus

BCI deleted, as indicated [***]

to the European Communities' assertions, the complainant in that case was concerned that the use restrictions, *i.e.*, the limitation to use in transporting Airbus wings, had not been, and might in the future not be, strictly enforced.⁴⁰³⁹ Third, the United States refers to the adoption by the Bremen Parliament of a motion reaffirming that the runway extension was undertaken exclusively for use by Airbus to transport Airbus wings.⁴⁰⁴⁰

7.1108 In response to a question from the Panel, the European Communities confirmed that use of the full length of the extended runway is "currently open only to certain freighters from Airbus and not to other companies".⁴⁰⁴¹ The European Communities noted that the general conditions to use the runway of the Bremen airport, including the extension, are laid down in the January 1989 contract between the City of Bremen and the airport company ("the *Flughafenvertrag*"), and that in the process of extending the runway, Bremen committed to use the extended runway only in accordance with the agreed user restrictions. Departures exceeding those restrictions can only be authorised with the consent of the neighbours concerned, with the exception of emergency situations.⁴⁰⁴²

7.1109 In this context, the European Communities sought to distinguish the provision of a service from limitations on access to a service. The European Communities asserts that the SCM Agreement "is not concerned with questions of access to services provided by governments".⁴⁰⁴³ For the European Communities, under Article 1.1(a)(1)(iii) of the SCM Agreement, the provision of a service constitutes a financial contribution, but the Agreement is not concerned with potential government

models A 330 and 340 as well as successive versions thereof and only using Aero Spaceliner 377 Guppy/Super-Guppy or one with noise levels not exceeding those of such model. The implementation order of the Senator for Building Affairs, which conform with the settlement, was issued on January 14, 1992. Subsequently, the special runways were built, *i.e.*, the main runway was extended by 300m at each end."

Verwaltungsgericht Bremen (Administrative Court) (20 December 2001), case no. 2K 2787/00, at 3, Exhibit US-199).

⁴⁰³⁹ US, Answer to Panel Question 20, para.153. The United States argues that the European Communities omits relevant pages from the Court's decision and that it also omits details and modifies the facts to suit its purposes. For instance, the United States observes that at para. 867 of its first written submission, the European Communities asserts that the complainant had "complained that a Boeing 747 (!) had used the extended runway." The United States argues that in fact, the complaint was triggered primarily by the use of the extended runway by Airbus for six test flights with an aircraft of the type VFW614-ATD. The complainant was concerned, and the Court agreed, that this regular use of the runway by Airbus for test flights, rather than the transport of wings as provided for, indicated that the restriction on the use of the extension was no longer being fully enforced. *See*, pp. 9-13 of the judgment, Exhibit EC-578 and pp. 9-12 of the English translation. The one instance in which the extension of the runway was used by a Boeing 747 was, according to the United States, irrelevant to the judgment. It appears that the runway extension was not used in that instance for either take off or landing, but only for a turning manoeuvre after landing was complete, and the Court did not rely on this event in its ruling. *Id.* at pp. 5 & 8-9 (English version).

⁴⁰⁴⁰ US, Answer to Panel Question 20, para. 153. The United States notes that, in a motion submitted by the governing party, the SPD, to the Bremen Parliament on 16 May 1988, the Parliament was asked to approve the runway extension. The motion noted that "{t}he extension of the takeoff and landing runway as a *company runway* at the Bremen Airport is being done *exclusively for use in the industrial transport of MBB {i.e., the corporate parent of Deutsche Airbus} Bremen to transport the Airbus wings.*" (emphasis added). The motion was adopted on 18 May 1988. US, Answer to Panel 20, para.153, citing Bremische Bürgerschaft, Antrag (Entschließung der Fraktion der SPD), Drs. 12/194, Exhibit US-195 and Bremische Bürgerschaft, 18. Sitzung am Mittwoch, dem 18. Mai 1988, Plenarprotokoll, p. 1032, paras. (B) and (C), Exhibit US-196.

⁴⁰⁴¹ EC, Answer to Panel Question 269, para 146.

⁴⁰⁴² The European Communities clarified that other airport users could request the airport company to receive slots for using the extended runway as well. In order to respond positively, the contract would have to be modified by mutual agreement between the City of Bremen and the airport company. The City of Bremen can only agree to such modifications, if and to the extent commitments vis-à-vis the neighbours not to exceed a fixed number of allowed departures on the extended runway would be kept. EC, Answer to Panel Question 269, paras. 144-145.

⁴⁰⁴³ EC, Answer to Panel Question 269, para. 147.

BCI deleted, as indicated [***]

services or with regulating under which conditions governments may or may not grant exclusive rights to companies. Thus, the European Communities maintains, it is immaterial that only a certain company can have access to a government service, whereas other cannot. According to the European Communities, the SCM Agreement establishes disciplines on the granting of subsidies, and the relevant test is whether the actual provision of the service to a certain company is done on favourable terms as compared with market conditions so as to confer a benefit to the company. Thus, the European Communities argues that the relevant analysis requires a comparison of the user fees Bremen collects from Airbus for the service of allowing it the use of the full length of the extended runway, with the fees collected from other companies for the service of allowing the use of the ordinary length of the runway.⁴⁰⁴⁴

7.1110 The United States asserts that the SCM Agreement does not support the European Communities' position, but rather flatly contradicts it. The United States argues that Article 2 of the SCM Agreement makes clear that "limit{ing} access to a subsidy to certain enterprises" renders that subsidy specific and that Article 14(d) provides that the "availability" of, *i.e.*, access to, a government-provided service is one factor to be considered when examining adequacy of remuneration in the context of a benefit determination. Therefore, the United States maintains that, where the subsidy at issue is, as provided for in Article 1.1(a)(1)(iii), the provision of a service by a government, the extent to which other users may access that service is critical to any inquiry under the SCM Agreement.⁴⁰⁴⁵

7.1111 With respect to the noise reduction measures, the European Communities argues that these measures are general infrastructure on the grounds that it is a constitutional duty of the city of Bremen to protect the public health of its citizens. The European Communities contends that in performing this task, the city of Bremen may construct noise reduction measures for the benefit of the public at large and may also chose where such measures need to be located to be most effective. More specifically, it asserts that construction of the noise reduction measures in the area surrounding an airport is for the benefit of citizens living in the immediate neighbourhood, and is a legitimate choice that falls outside the ambit of the SCM Agreement.⁴⁰⁴⁶

7.1112 The United States contends that the noise reduction measures implemented by the Bremen government at the time of the runway extension cannot be seen as general infrastructure measures. The United States argues that these noise reduction measures were necessary only because of the runway extension, which itself was undertaken exclusively for Airbus for the transport of aircraft wings.⁴⁰⁴⁷ Thus, rather than protecting the areas adjacent to the airport against noise from the airport generally, these measures were prompted exclusively by the extension of the runway and are, as such, for the exclusive benefit of Airbus. In support of its view, the United States refers to the Bremen government's decision authorizing the extension, which describes the government's motivation in undertaking the noise reduction measures.⁴⁰⁴⁸ In addition, the United States refers to the 16 May 1988 motion of the SPD, which indicates that, while additional noise reduction measures were not formally required, the extension of the runway should be accompanied by an extended noise reduction area.⁴⁰⁴⁹ A Bremen Parliamentarian therefore called the cost of the noise reduction

BCI deleted, as indicated [***]

measures "follow-up costs for noise reduction."⁴⁰⁵⁰ The above evidence, in view of the United States, demonstrates that the additional noise reduction measures were prompted exclusively by the extension of the runway.

(iii) *Evaluation by the Panel*

General infrastructure

7.1113 We consider first the European Communities' argument that the provision of the runway extension for the exclusive use of Airbus to transport aircraft wings, and the noise reduction measures, constitute measures of general infrastructure. In order to address that question, however, we must first determine whether the noise reduction measures must be considered separately from the extension of the runway *per se*, and if so, whether the former constitute, as the European Communities argues, a measure of general infrastructure. The United States maintains that the noise reduction features were undertaken only as a result of the extension of the runway, and that therefore they constitute a single measure.

7.1114 We agree with the United States. The evidence before us supports the conclusion that the noise reduction measures were considered only as a result of the decision to extend the runway, and even in that context were not considered necessary, but were undertaken as a matter of choice in connection with the runway project.⁴⁰⁵¹ The European Communities has provided no evidence to suggest that the noise reduction measures in question would have been undertaken but for the decision of the Bremen authorities to extend the runway. While we recognize that measures to reduce noise in the area of an urban airport may well benefit the public at large, this does not, in our view, suffice to demonstrate that the measures at issue here must be considered general infrastructure, independently from the runway extension. It would be putting the cart before the horse, in our view, to consider whether the noise reduction measures constitute general infrastructure and therefore should be considered separately from the runway extension. We will therefore consider whether the runway extension and associated noise reduction measures constitute the provision of general infrastructure together in our analysis.

7.1115 As we concluded above,⁴⁰⁵² in our view, the determination whether the provision of a good or service constitutes a provision of "general infrastructure" cannot be answered in the abstract, but rather must take into account the existence or absence of *de jure* or *de facto* limitations on access or use, and any other factors that tend to demonstrate that the infrastructure was or was not provided to or for the use of only a single entity or a limited group of entities, which may include factors relating to the circumstances surrounding the creation of the infrastructure in question, consideration of the type of infrastructure, the conditions and circumstances of the provision of the infrastructure, the recipients or beneficiaries of the infrastructure, and the legal regime applicable to such infrastructure, including the terms and conditions of access to and/or limitations on use of the infrastructure.

7.1116 It is clear from the evidence before us that the extension of the runway at Bremen airport, and the associated noise reduction measures, were undertaken by the Bremen city authorities specifically for Airbus' needs. The records of the decision to extend the runway by 600 meters make it clear that this was undertaken in order to enable Airbus to use the runway to transport aircraft wings from its Bremen facility to other facilities in the production of LCA. For instance, the January 1989 contract relating to the airport specifies that that the use of the runway extensions should be limited to ensuring the transport of Airbus wings assembled in Bremen. It goes on to provide that should the

⁴⁰⁵⁰ US, Answer to Panel Question 22, para. 159, Bremische Bürgerschaft, 18. Sitzung am Mittwoch, dem 18. Mai 1988, Plenarprotokoll, Exhibit US-196, p. 1016, para. (B).

⁴⁰⁵² See, discussion at paras. 7.1036 to 7.1044 above.

BCI deleted, as indicated [***]

transportation of wings cease, transportation of other goods of the Bremen air and space industry is possible to a limited extent, if such transport cannot be carried out without use of the "special" runway, that is, the extensions, and that should such take-offs not be necessary in the future, no other take-offs are to be carried out.⁴⁰⁵³ A motion in the Bremen Parliament concerning the extensions cited costs of DM 40 million for the construction of the "company runway" and DM 9 million for the "voluntary additional noise protection measures". The motion referred to the extension of a "company runway at the Bremen Airport ... being done exclusively for use in the industrial transport of MBB Bremen to transport the Airbus wings".⁴⁰⁵⁴ The motion notes that "{a}ll other proposed and examined alternatives for transport of the wings have been ruled out" and goes on to observe that while "{a}dditional noise protection ... is not necessary ... voluntary additional noise protection measures should be completed now".⁴⁰⁵⁵ During discussions in the Bremen Parliament prior to the eventual approval of this motion, it was noted that the planned "restrictions in use" limited the use of the extensions "only for MBB".⁴⁰⁵⁶ The European Communities does not dispute this evidence, and has presented no evidence to suggest that the extension of the runway was not undertaken exclusively for Airbus' use.⁴⁰⁵⁷

7.1117 We do not doubt that the Bremen authorities were pursuing a public interest in undertaking the project – indeed, it is clear from the evidence before us that one motivation for the runway extension was the desire to ensure that Airbus' Bremen facility, and the associated 500 jobs, would be able to continue operations. However, a public interest in maintaining jobs in the region is simply not sufficient to demonstrate that the project constitutes general infrastructure. As we have noted, it is in any event always likely to be the case that public authorities will have reasons of public policy when expending public funds. Particularly in the face of evidence to the contrary, a public purpose cannot, in our view, be enough to justify a finding that a measure constitutes general infrastructure.

7.1118 Moreover, not only was the extension of the runway undertaken explicitly to enable Airbus to transport wings by air, but it is clear from the evidence before us that the use of the full length of the extended runway is limited to Airbus by regulation.⁴⁰⁵⁸

⁴⁰⁵³ Exhibit US-194.

⁴⁰⁵⁵ Bremische Bürgerschaft, Antrag (Entschließung) der Fraktion der SPD, Drucksache 12/194 (16 May 1998), Exhibit US-195, paras. 6, 11-12.

⁴⁰⁵⁶ Bremische Bürgerschaft, 18. Sitzung am Mittwoch, dem 18. Mai 1988, Plenarprotokoll, p. 1032, paras. (B) and (C), Exhibit US-196. We recall our decision that the United States need not demonstrate a "pass through" to Airbus, *see* paras. 7.192 and 7.200 above.

⁴⁰⁵⁷ Thus, for instance, although the European Communities alludes, para. 870 of its first written submission, to "questions of capacity" and the "extension of the runways to match demand", it has submitted no evidence to suggest that there were any capacity concerns regarding the Bremen airport at the time the decision to extend the runway was undertaken. Certainly, none of the records concerning the decision to extend the runways before us suggest the existence of any capacity concerns, other than Airbus' need for a longer take-off runway to transport wings manufactured in the region to other facilities.

⁴⁰⁵⁸ US, FWS, para 451, referring to the description in Verwaltungsgericht Bremen (Administrative Court) (20 December 2001), case no. 2K 2787/00, at 3, Exhibit US-199; *see also*, the maps published by the German air traffic control agency Deutsche Flugsicherung in the German AIP (14 October and 28 October 2004), Exhibit US-193; *see also*, http://www.fluglaerm.de/bremen/flughafenvertrag_seite_1.htm for a description of the history of the extension, Exhibit US-194. *See, also*, US, Answer to Panel Question 20, paras. 152-153, referring to the ruling of the Bremen Administrative Court concerning the operating restrictions for the use of the extended runway, which provide that it can only be operated for take-offs and solely for transporting airfreight consisting of the wings of Airbus models A330 and A340, as well as successive versions thereof, and only using Aero Spaceliner 377 Guppy/Super Guppy or aircraft with noise levels not exceeding those of these models.

BCI deleted, as indicated [***]

7.1119 Indeed, the European Communities does not dispute that the limitation on use of the full length of the extended runway may constitute a subsidy, but rather argues that Airbus pays fees for this usage and that therefore no benefit is conferred on Airbus. The European Communities suggests that the right to exclusive use of the full length of the runway, should be considered access to a service, and should be distinguished from the provision of a service by a government.⁴⁰⁵⁹ It goes on to argue that that the exclusive access provided to Airbus does not confer a benefit.⁴⁰⁶⁰

7.1120 Our understanding of the United States' position is that it challenges the provision of the extended runway as a good, rather than the provision of access to the extended runway as a service, and thus the European Communities' argument is inapposite. In any event, however, we see no basis in the text of the SCM Agreement for the distinction the European Communities seeks to draw between access to a service or provision of a service, in the context of Article 1.1(a)(1)(iii) of the SCM Agreement. We see no reason why the provision of a service by a government to a company should be distinguished from the establishment, by a government, of limitations on access to a service – in our view, these two slightly different government actions have the same consequences, and thus fall within our understanding of a government providing services as set out in Article 1.1(a)(1)(iii).

7.1121 Having found, as a matter of fact, that the runway extension was undertaken to fulfil Airbus' specific needs, and that use of the extended runway is *de jure* limited to Airbus for the purpose of transporting aircraft wings, we do not agree with the European Communities that only the right to exclusive use of the extended runway is at issue here. Rather, the entire project, extending the runway, the associated noise reduction measures, and the right of exclusive use, constitute a financial contribution to Airbus, within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement. Thus, in view of the specific limitations on access to, *i.e.*, use of the extended runway, and the clear evidence demonstrating that the runway extension was undertaken for the use of Airbus, we conclude that it does not constitute a measure of general infrastructure but rather constitutes a financial contribution in the form of the provision of goods or services other than general infrastructure, within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement. We therefore turn to the question of benefit.

Benefit

7.1122 The United States asserts that the provision of the runway confers a benefit on Airbus, because (i) Airbus did not reimburse the Bremen authorities for the costs of extending the runway and creating the noise reduction measures, and (ii) Airbus does not pay any additional landing fees for use of the extended runway.⁴⁰⁶¹

7.1123 We recall that Article 1.1(b) of the SCM Agreement does not define the notion of "benefit". However, it is well established that a "financial contribution" will confer a "benefit" upon a recipient when it places that recipient in a more advantageous position compared with the position of that recipient in the absence of the "financial contribution".⁴⁰⁶² In *Canada – Aircraft*, both the panel and the Appellate Body considered that the basis for making this comparison was the market. Thus, the panel observed that:

⁴⁰⁵⁹ EC, Answer to Panel Question 269, para. 147.

⁴⁰⁶⁰ EC, Answer to Panel Question 270.

⁴⁰⁶¹ US, FWS, para. 453.

⁴⁰⁶² Panel Report, *Canada – Aircraft*, para. 9.112, cited with approval in Appellate Body Report, *Canada – Aircraft*, para. 149.

BCI deleted, as indicated [***]

"a financial contribution will only confer a 'benefit', *i.e.*, an advantage, if it is provided on terms that are more advantageous than those that would have been available to the recipient on the market".⁴⁰⁶³

Similarly, the Appellate Body explained that:

"the marketplace provides an appropriate basis for comparison in determining whether a 'benefit' has been 'conferred', because the trade distorting potential of a 'financial contribution' can be identified by determining whether the recipient has received a 'financial contribution' on terms more favourable than those available to the recipient on the market."⁴⁰⁶⁴

7.1124 Thus, a benefit will be conferred whenever a financial contribution is granted to a recipient on terms more favourable than those available to the recipient in the market. In the context of a financial contribution in the form of provision of goods or services other than general infrastructure, we consider that the appropriate question to be addressed in resolving the question of benefit is whether a market actor would have provided the good or service to the recipient at the time, on the same terms and conditions as the government provision at issue.

7.1125 We note that, during the Annex V process, the Facilitator asked the European Communities and the Airbus governments to provide information regarding the cost of the runway extensions and noise reduction measures at the Bremen airport, but that the European Communities refused to provide any of the information that the Facilitator requested. The United States asks the Panel, in accordance with paragraph 7 of Annex V, to draw adverse inferences that the withheld information supports the contentions of the United States.⁴⁰⁶⁵ The United States has supported its contentions concerning benefit with publicly available information. During the proceedings before the Panel, the European Communities also provided some information concerning the costs of the runway extension and associated noise reduction measures.

7.1126 Relying on the records of the Bremen Parliament approving the runway extension and noise reduction measures, the United States asserts that the City of Bremen paid DM 40 million to extend the runway, and DM 10 million for noise reduction measures.⁴⁰⁶⁶ The European Communities does not dispute that these figures represent the planned expenditures, but contends that the actual construction costs were lower than planned.⁴⁰⁶⁷ Thus, the European Communities contends that the City of Bremen actually paid [***] for the extension of the runway and [***] for noise reduction.⁴⁰⁶⁸ While the European Communities did not originally submit any supporting evidence for these assertions, in response to a question from the Panel, the European Communities submitted a document indicating that the runway extension accounted for 25.9% of the total amount budgeted for the

⁴⁰⁶³ Panel Report, *Canada – Aircraft*, para. 9.112; Appellate Body Report, *Canada – Aircraft*, paras. 157-158; Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, para. 102.

⁴⁰⁶⁸ EC, FWS, para 864.

BCI deleted, as indicated [***]

Bremen runway project. According to the European Communities, the entire project included the restoration of the full original length of the runway, as well as the extension.⁴⁰⁶⁹ Thus, the European Communities estimated the actual costs of the extension by applying the 25.9% portion of the total estimate accounted for by the extension to the final actual costs for the runway project as a whole, and arrived at the [***] figure cited above.⁴⁰⁷⁰ The European Communities argues that "rather than basing itself on early estimates, the Panel should base its findings on actual data submitted by the European Communities in its first written submission...".⁴⁰⁷¹

7.1127 While we are perturbed that the European Communities did not substantiate its contentions until specifically asked by the Panel, the United States does not dispute, and we do accept, as a matter of fact, that the actual cost of the noise reduction measures was [***] as shown in Exhibit EC-622⁴⁰⁷².

7.1128 On the other hand, while we understand the calculation on which the European Communities has based its contentions regarding the actual cost of the runway extension, we are not satisfied that this calculation is sufficient to substantiate the [***] figure cited by the European Communities as the actual cost of the extension. We recall that the "runway project" included the restoration of the full length of the runway and rerouting of the river, as well as the extension. The European Communities asserts that the restoration of the runway and the extension were "financed under the same budget line, which does not specifically distinguish between restoration and extension".⁴⁰⁷³ Thus, the European Communities' contention rests on applying the percentage of estimated costs accounted for by the extension, 25.9 %, to the actual costs of the entire runway project, to arrive at the [***] figure. The European Communities indicates that actual costs of the construction were less than the originally estimated costs.⁴⁰⁷⁴ In these circumstances, we cannot simply accept that the percentage of the actual costs of the entire runway project attributable to the runway extension is necessarily the same as the portion of the estimated costs. The actual expenditures were less than the estimated expenditures, and we cannot rule out the possibility that the proportion of the actual expenditures represented by the different aspects of the entire project also changed, since we do not know why the costs were lower than estimated. We further note that the failure of the European Communities to respond at all to the Facilitator's questions in this regard, and the European Communities' failure to substantiate its assertions concerning the costs of the runway extension until directly asked to do so by the Panel, warrants our accepting the figure proposed by the United States. We therefore accept the United States' allegation of DM 40 million, which as noted, the European Communities accepts reflects the originally estimated cost of the runway extension, as the cost of the runway extension for purposes of our consideration of benefit.⁴⁰⁷⁵ Thus, we conclude that the investment by the City of Bremen in the

⁴⁰⁶⁹ EC, Answer to Panel Question 94, para. 249 and Exhibit EC-621 (English translation). The exhibit shows budgeted amounts for "Reinstatement of the full use of the runway ... Extension of the runway ... Loan to Bremen Airport ... Grant to Bremen Airport for investments ... and Noise protection for Airport" The reference to "reinstatement of the full use of the runway" is somewhat perplexing, as the European Communities elsewhere stated that the runway was restored to its full length in 1973, EC, FWS, para. 863, citing Senatbeschluss of 8 May 1973, Exhibit EC-576, while, the extension of the runway was only undertaken in 1988-89. In any event, the European Communities does not dispute that the amounts cited by the United States relate only to the extension of the runway and the noise reduction measures.

⁴⁰⁷⁰ EC, Answer to Panel Question 94, paras. 250-252 and Exhibit EC-622. The European Communities relies on this latter exhibit to substantiate its contention regarding the costs of the noise reduction measures.

⁴⁰⁷¹ EC, Comments on US Answer to Panel Question 245, paras. 247-248.

⁴⁰⁷² Exhibit EC-622.

⁴⁰⁷³ EC, Answer to Panel Question 94, para. 247.

⁴⁰⁷⁴ EC, Answer to Panel Question 94, para. 250.

⁴⁰⁷⁵ We note that the European Communities argues that, for the same reasons as in connection with Mühlenberger Loch, cost to the government is irrelevant for determining benefit. EC, FWS, para. 873. For the same reasons as expressed previously in paragraph 7.1093, we consider that whether the provision of the

BCI deleted, as indicated [***]

extension of the runway, including the associated noise reduction measures, constitutes a financial contribution in the amount of [***].

7.1129 The European Communities does not argue that the Bremen authorities receive a market return on their investment in extending the runway, but only that the exclusive right to use the extended runway given to Airbus is not on more favourable terms than those in the market, and therefore confers no benefit on Airbus. The European Communities argues that since Airbus pays for the runway use, including the use of the extension, in accordance with the general fee schedule applicable at Bremen Airport, there is no benefit to Airbus.⁴⁰⁷⁶ The European Communities maintains that the fact that Airbus is the only company allowed to use the extended runway is irrelevant for determining the benefit.⁴⁰⁷⁷ The United States maintains that, absent an arrangement that ensures that the City of Bremen is compensated for the cost of the runway infrastructure created specifically for Airbus and available for use only by Airbus, Airbus receives a benefit from having been provided with this infrastructure.⁴⁰⁷⁸

7.1130 The European Communities observes that the user fees are calculated on the basis of a number of factors including weight of the aircraft, but not on the basis of the length of runway used by a plane when taking off or landing. The European Communities asserts that because Airbus is landing heavier aircraft, it is paying the highest user fees under the applicable fee schedule.⁴⁰⁷⁹ The United States acknowledges that the fee is based on the maximum take-off weight of the aircraft, but argues that maximum take-off weight has nothing to do with the actual take-off weight, and it is this latter fact that determines the actual length of runway needed for take-offs.⁴⁰⁸⁰ Therefore, the United States asserts that the maximum take off weight, on which the fees are calculated, it is not dispositive of whether or not a departing or landing aircraft uses the extended runway. Moreover, United States argues that regardless of the maximum take-off weight of Airbus aircraft using the extended runway, users other than Airbus are not allowed to use the extended runway. Finally, the United States asserts that the European Communities mistakenly suggests that the maximum take-off weight of the aircraft used by Airbus to transport wings from Bremen is particularly high.⁴⁰⁸¹

extended runway and noise reduction measures to Airbus confers a benefit is properly evaluated on the basis of the investment by the government in the measure.

⁴⁰⁷⁶ EC, FWS, para 873. Fees for runway usage are based on objective criteria such as the weight and type of aircraft, number of passengers, etc.. According to the European Communities, the fact that the fees are not calculated based on the length of runway used by a plane does not mean that Airbus should pay an additional fee simply because it uses the full length of the runway. The European Communities asserts that aircraft weight is related to the use of the runway extension because heavier aircraft require longer runways. In other words, because the fees are levied in part based on the weight of the aircraft, Airbus is paying a higher user fee when it uses the runway extension to land heavier aircraft; EC, Answer to Panel Question 96, para. 257. *See, also*, EC, Answer to Panel Question 269, para. 146.

⁴⁰⁷⁷ EC, Answer to Panel Question 270, para. 156; *see also*, the European Communities' answer to Panel Question 269, paras. 147-148.

⁴⁰⁷⁸ US, SWS, para 418.

⁴⁰⁷⁹ EC, Answer to Panel Question 96, para. 257.

⁴⁰⁸⁰ US Comment on EC, Answer to Panel Question 270

⁴⁰⁸¹ US, SWS, para 419. The United States observes that the Boeing Super Guppy has a maximum take-off weight of 77 tonnes; the Airbus Super Transporteur (Beluga) has a maximum take-off weight of 155 tonnes. By way of comparison, the A300-600 Freighter has a maximum take-off weight of 170.5 tonnes; the A330-200 Freighter has a maximum take-off weight of 233 tonnes; and the A340-200 has a maximum take-off weight of 275 tonnes. *See*, Airbus, Product Viewer, 18 May 2007, Exhibit US-590; Flugzeuginfo.net, B-377 SG Super Guppy, 2006, available at www.flugzeuginfo.net, Exhibit US-591. The United States observes that the European Communities' "implicit fee" theory would only make sense if the maximum weight of the Airbus-owned aircraft allowed to use the extended runway - the Beluga and the Super Guppy - were so extraordinarily high that Airbus would have to pay, by definition, a higher fee than any other user of the airport (which is not allowed to use the extension). If so, the difference between the fee charged for the Beluga and the Super Guppy

BCI deleted, as indicated [***]

7.1131 The United States maintains that Airbus' exclusive use of the extended runway is relevant to the determination of benefit, because if Airbus pays less than adequate remuneration for that exclusive use, it is receiving a benefit, referring to Article 14 (d) of the SCM Agreement. In sum, the United States argues that Airbus continues to enjoy the use of the extended runway to the exclusion of all other users for a nominal fee that in no way compensates Bremen airport for that use.⁴⁰⁸²

7.1132 The European Communities provided no evidence to support the suggestion that the take-off weight of Airbus aircraft transporting wings and using the extended runway is higher than that of other aircraft, which are not allowed to and do not use the extended runway. Thus, there is no factual basis on which we could conclude that Airbus pays a higher fee for use of the extended runway than other users pay for the use of the non-extended runway. Moreover, the European Communities has provided no evidence, or even argued, that heavier Airbus aircraft actually require the use of the extended runway – indeed, evidence submitted by the United States suggests that aircraft heavier than those used by Airbus on the extended runway use the Bremen airport, but these do not, barring emergencies, use the extended runway. Thus, no connection has been established suggesting that Airbus pays fees relating to the use of the extended runway. It is clear to us that the fees paid by Airbus do not relate to the use of the extended runway *per se*, but are based on the weight of the aircraft in question, and thus are indistinguishable from the fees paid by other users of the airport for the use of the non-extended runway.

7.1133 As we have already concluded that the subsidy is not limited to simply the use of the extended runway, but rather encompasses the entire investment by the City of Bremen in extending the runway and the associated noise reduction measures, for the benefit of Airbus, we do not consider that an evaluation of the fees paid by Airbus for runway use at Bremen airport affects our analysis of benefit. It is undisputed that Airbus pays runway fees in accordance with the regular fee schedule, applicable to all users of the airport, with no additional charges for the use of the runway extensions, which only Airbus is permitted to use, and only for certain flights. Airbus pays no other fees or charges in connection with the extended runway. Thus, it is clear that there is no return to the City of Bremen on its investment in the runway extension and noise reduction measures, and a benefit to Airbus conferred by the provision of that extension and noise reduction measures.

7.1134 Therefore, in our view, the conclusion that the provision of the runway extension and associated noise reduction measures confers a benefit on Airbus, for whom the project was undertaken, and which is by regulation the exclusive user, is clear. As Airbus is the only company entitled to regular use of the extended runway, and in view of the fact that the extension was undertaken by the Bremen authorities explicitly to fulfil Airbus' needs in transporting aircraft wings, we find that the subsidy in question is specific to Airbus within the meaning of Article 2.1(a) of the SCM Agreement.

(e) ZAC Aéroconstellation

7.1135 The United States asserts that the provision of the Aéroconstellation site to Airbus, which it asserts includes the sale of a portion of the site and the lease of another portion of the site, and including the provision of certain specialized facilities (the EIG facilities), constitutes a subsidy within meaning of the SCM Agreement because it involves a financial contribution in the form of the provision of goods and services other than general infrastructure within the meaning of

(which may use the extension) and "usual" aircraft of other users (which may not use the extension) might be seen as an implicit fee for the extension. The comparison submitted by the United States shows, however, that the maximum weights of the Beluga and the Super Guppy are not such as to carry an implicit fee. US Comment on EC, Answer to Panel Question 270, para.137. Thus, it appears that weight of the aircraft is not relevant to the use of the extended runway.

⁴⁰⁸² US Comment on EC, Answer to Panel Question 270, para.139.

BCI deleted, as indicated [***]

Article 1.1(a)(1) of the SCM Agreement,⁴⁰⁸³ that confers a benefit within the meaning of Article 1.1(b) of the SCM Agreement.⁴⁰⁸⁴ The United States claims that the subsidies provided are specific within the meaning of Article 2.1(a) ("specificity in law") and Article 2.1(c) (specificity "in fact").⁴⁰⁸⁵ The United States also claims that the improvement of roads linking the Aéroconstellation site to the "Itinéraire à Grand Gabarit" ("IGG") (the extra-wide highway) constitutes a subsidy within the meaning of Article 1 of the SCM Agreement, which is specific within the meaning of Article 2.⁴⁰⁸⁶

7.1136 The European Communities argues that the creation of industrial land such as the Aéroconstellation site is not a financial contribution for purposes of Article 1.1(a) of the SCM Agreement because the provision by the government of any goods or services in the context of the creation of the site, including the improvement of the roads, constitutes the provision of general infrastructure.⁴⁰⁸⁷ As regards the EIG facilities, the European Communities contends that the lease for these facilities does not confer a benefit within Article 1.1(b) because it is at market rates.⁴⁰⁸⁸

(i) *Factual Background*

7.1137 In 1999, French government authorities signed a protocol on the development of a site located near Toulouse, adjacent to the Toulouse Blagnac airport, to be known as the Aéroconstellation site, and to be dedicated to aeronautical activities.⁴⁰⁸⁹ The site is designated as a "zone d'aménagement concertée" ("ZAC") under French law, a zone in which a public authority buys, improves, and sells land for economic development.⁴⁰⁹⁰ ZACs of different sorts, *e.g.*, for industrial, housing, and various tertiary services, exist throughout France, created under the same general legal provisions.⁴⁰⁹¹

7.1138 The development of the ZAC Aéroconstellation required first that the agricultural land in question be made suitable for industrial use. This included the creation of drainage, sewage, water circulation systems, fencing, fire protection, landscaping and lighting. Second, in order to make the site suitable for the aeronautical activities for which it was intended, certain additional elements, including taxiways and roads on the site, aircraft parking areas, underground technical galleries and service areas, were created. These specialized facilities are collectively known as "équipement d'intérêt général" ("EIG") facilities.⁴⁰⁹²

7.1139 After the Aéroconstellation site was prepared, the government-established company charged with implementing the project the "Société d'Équipement Toulouse Midi Pyrénées" ("SETOMIP") sold all but 11 hectares of the land to different companies involved in the aeronautical industry, including with the development and production of the A380 aircraft that were to be assembled there.⁴⁰⁹³ Purchasers of land in the ZAC included Airbus France, Air France Industries, the Société industrielle aéronautique du Midi (SIDMI), CUS-Elyo, Exxon Mobil and STTS.⁴⁰⁹⁴ These companies are all

BCI deleted, as indicated [***]

involved, in various ways, with different aspects of the construction, assembly, testing, maintenance, etc. of aircraft. All purchasers of land in the ZAC paid the same price per square meter for the different sized plots purchased.⁴⁰⁹⁵ In addition, an association of users, the "*Association Foncière Urbaine Libre*" ("AFUL") comprising all the companies that bought land in the ZAC, was created.⁴⁰⁹⁶ The EIG facilities were leased by the Toulouse authorities to the AFUL. Only AFUL members have access to the EIG facilities, and each member of the AFUL pays rent for the EIG facilities on a pro-rata, user pays basis, at the same rate per unit of use.⁴⁰⁹⁷

7.1140 At the same time as the Aéroconstellation site was being developed, the French authorities undertook the improvement of several public roads around the site, specifically, the RD901, the RD902 and the RD963. These roads serve, *inter alia*, as access roads linking the Aéroconstellation site to the IGG, the extra-wide highway that enables Airbus to transport A380 components manufactured elsewhere from the French coast to Toulouse. The improvement of these roads was financed and supervised by the French authorities.⁴⁰⁹⁸

(ii) *Arguments of the Parties*

Provision of the ZAC Aéroconstellation site and EIG facilities

United States

General Infrastructure

7.1141 The United States argues that the ZAC Aéroconstellation site, including the EIG facilities, is not "general infrastructure", asserting that it has been tailor-made for Airbus, its suppliers and Air France. The United States claims that the French authorities transformed agricultural land in Toulouse into a site suitable for use by Airbus as a production, testing, and delivery site for the A380, and then sold the site to Airbus at a below-market price, thereby conferring a benefit.⁴⁰⁹⁹ The United States argues that, even accepting the European Communities' allegations regarding the price paid for the land, that price is lower than the French authorities' investment in preparing the site, including the development of the EIG facilities.⁴¹⁰⁰ In addition, the United States asserts that Airbus appears to be the predominant user of the site and the predominant or exclusive user of the EIG facilities,⁴¹⁰¹ noting that Airbus occupies the largest single space on the site, 51 hectares, more than half of the total 95 hectares made available for sale.⁴¹⁰² Almost all other occupants are suppliers to Airbus.⁴¹⁰³ The

⁴¹⁰³ In support of its position, the United States refers to maps which can be found at <http://www.grandtoulouse.org/admin/upload/fichier/aeroconstellation.htm> (Carte interactive), Exhibit US-218, and in particular to the descriptions of the activities of these companies in the maps entitled "La société Capelle", "Le centre technique" and "La station carburant". *See, also*, press releases published by ELYO,

BCI deleted, as indicated [***]

United States contends that, as with the Hamburg site, had the French authorities not created the Aéroconstellation site for and provided it to Airbus, the company would have had to make the investment itself.⁴¹⁰⁴ The United States also argues that the fact that the site is a ZAC, created under the same legal authority as other similar sites elsewhere in France, lends no support to the European Communities' position that provision of the site is a measure of general infrastructure.⁴¹⁰⁵ The United States asserts that the site was created specifically as a location for Airbus A380 facilities, its use is expressly limited to the aeronautics industry, and it is used almost exclusively by Airbus and its suppliers.⁴¹⁰⁶ The United States also refers to the European Commission's decision in the *Scott Paper* case, arguing that the Commission's conclusion that purchase and transformation of agricultural land to industrial use, and its sale at a price that did not recoup costs, would not have been undertaken by a private investor, and therefore constituted state aid, supports its view that the provision of the Aéroconstellation site constitutes a subsidy.⁴¹⁰⁷

7.1142 The United States alleges that the revenue from the sale of land in the ZAC constituted less than adequate remuneration, thereby conferring a benefit on Airbus, because it does not cover (a) the cost of the land improvements, (b) the value of the unimproved land, and (c) an unspecified return. The United States asserts that a private investor would not have improved the land and sold it at a loss. The United States argues that the European Communities' focus on the market price for improved land in the area as the benchmark ignores that fact that the site was created expressly for Airbus, and that a private investor who prepared land for a particular buyer would not exclude the value of its investment in developing the land from its selling price, which is what the government did in providing the Aéroconstellation site to Airbus.⁴¹⁰⁸

7.1143 The United States also contends that most of the taxiways on the site exclusively connect Airbus assembly and testing facilities to the airport.⁴¹⁰⁹ The only other users of taxiways on the Aéroconstellation site are Air France and STTS, which use the taxiways to access their buildings. The United States, referring to the official map of the site, notes that these buildings are located at the entrance to the site from Toulouse-Blagnac Airport at the very southern end of the site, and argues that these taxiways used by Air France and STTS do not account for even 10 percent of the total length of the taxiways.⁴¹¹⁰ Similarly, Airbus is the exclusive user of most of the aircraft parking space on the site. The United States asserts that the large space in front of Airbus's production hall labelled "infrastructure publique" and marked red on the map available from the website of Grand Toulouse is used exclusively by Airbus as a testing site for the A380. Airbus owns the land used for the actual testing facilities, marked blue on the map.⁴¹¹¹ The United States asserts that this evidences that the infrastructure improvements are not "general" in the sense of Article 1.1.(a)(1)(iii).

BCI deleted, as indicated [***]

Benefit

7.1144 The United States made its assertions concerning the alleged benefit associated with the provision of the Aéroconstellation site and the EIG on the basis of publicly available information, as the European Communities had not provided any of the information requested in this regard during the Annex V process. The United States provides a range of figures for the expenditures to develop the Aéroconstellation site, from EUR 158 million⁴¹¹² to EUR 200 million.⁴¹¹³ The United States also asserts that French authorities spent approximately EUR 77.9 million, that is, EUR 82 per square meter, on internal development measures to turn 950,000 square meters of agricultural land into land fit for industrial use, not including the EIG facilities.⁴¹¹⁴ The European Communities does not dispute these figures. The United States contends that a commercial owner of the land either would have sold the land "as is" or would have asked for a commercial return on the owner's investment in turning the land into an industrial site, in addition to a price reflecting the value of the land.⁴¹¹⁵ The United States argues that the EUR 158 million in site preparation is akin to a grant, since the French authorities spent funds to create a site that Airbus would otherwise have had to create itself.⁴¹¹⁶ The United States originally asserted, based on public information, that the French authorities sold the land in the ZAC to Airbus for between EUR 14 and EUR 27 per square meter,⁴¹¹⁷ while they sold the remaining commercial surfaces in the ZAC for EUR 45.73 per square meter.⁴¹¹⁸ The United States also points out that at the same time that they created the Aéroconstellation site, the French authorities also created the near-by ZAC Andromède, a mixed residential and commercial area developed primarily to respond to the residential and commercial needs arising from the Aéroconstellation project, and sold land in the ZAC Andromède at EUR 200 per square meter.⁴¹¹⁹ Thus, in the United States' view, the sale of the land in the ZAC Aéroconstellation was for less than adequate remuneration, and thus confers a benefit on Airbus.

7.1145 Again relying on publicly available information,⁴¹²⁰ the United States asserts that the lease for the EIG facilities was based on the total cost of the facilities, as originally estimated in 2002, EUR 53.4 million. The lease, with a term of 40 years, was concluded in June 2002. The rental amount was determined by analogy to a loan with a 2.2 percent annual interest rate, with repayment of the principal and interest spread over the 40 year term of the lease. The lease payments were progressive, with lower payments in the early years and higher amounts later.⁴¹²¹ By 2003, however,

US-218, in particular the maps entitled "Les aires industrielles" and "Les postes extérieurs". Finally, *see* the [***] the Atisreal study provided by the European Communities as Exhibit EC-18 (BCI) p. 11.

⁴¹¹² US, FWS para. 467, footnote 568.

⁴¹¹³ US, FWS para 456.

⁴¹¹⁴ EUR 77.9 million is the difference between the total EUR 158 million that French authorities spent to develop the Aéroconstellation site (US, FWS, para. 468) and the 80.1 million of that amount attributable to EIG facilities (US, FWS, para. 475).

⁴¹¹⁵ US, SWS, para. 406.

⁴¹¹⁶ US, FWS, para.468.

⁴¹¹⁷ US, FWS, paras. 467-468.

⁴¹¹⁸ US, FWS, para.469 referring to Agence d'Urbanisme et d'Aménagement du Territoire Toulouse Aire Urbaine, Atlas des Parcs d'Activités de la Haute-Garonne, available at <http://www.auat-toulouse.org>, Exhibit US-223; *see also*, *Airbus entame la construction de l'usine Star de l'A380 à Blagnac*, Les Echos No. 18555, at 12 (19 December 2001) (reporting that, as of December 2001, 37 hectares were still available at EUR 45.73 per square meter), Exhibit US-212.

⁴¹¹⁹ US, FWS, para 470, referring to Atlas des Parcs d'activités de la Haute-Garonne, Blagnac, ZAC Andromède, available at http://www.auat-toulouse.org/cdza_trav/Rcs_swf/loader.php, Exhibit US-224.

⁴¹²⁰ US, FWS, paras. 474, referring to Conseil de Communauté du Grand Toulouse, Délibération no. 2004-05-ADU-01, 28 May 2004, Exhibit US-214; *see also*, *Les collectivités locales ont investi 172 millions d'euros dans la zone Aéroconstellation*, Les Echos No. 19155, at 20 (10 May 2004), Exhibit US-213.

⁴¹²¹ The United States clarifies that when the original cost for the EIG facilities was estimated at EUR 53.4 million, the annual rent was expected to be between EUR 1.6 million (in 2007) and EUR 2.8 million (in 2042).

BCI deleted, as indicated [***]

the total estimated cost of the project had increased to EUR 69.2 million, resulting in a modification of the lease, under which EUR 56 million of the costs were treated like a 40 year loan with a 2.2 percent annual interest rate, while a 4.5 percent interest rate, again over 40 years, was applied to the remaining EUR 13.2 million. In 2004, after costs increased again, to EUR 80.1 million in total, the lease agreement was again modified, to treat EUR 62.6 million like a 40-year loan with a 2.2 percent annual interest rate in accordance with the original lease terms, and applying a 4.5 interest rate to the remaining EUR 17.5 million.⁴¹²²

7.1146 The United States argues that these terms are not commercial. According to the United States, a commercial investor in industrial real estate in the region at the time (2002-2004) would have required an initial net return of between 9 and 11 percent on its investment in building the EIG facilities, EUR 80.1 million, for a lease price of between EUR 7.2 million and EUR 8.8 million.⁴¹²³ The United States also contends that other aspects of the lease demonstrate its non-commercial nature: (a) the lease price calculation ignores the value of the 119 hectares of land on which the EIG facilities were built; (b) the lease price increases progressively, further reducing the effective net initial return,⁴¹²⁴ and (c) the lease price is not subject to [***], but remains [***] over the 40 years.⁴¹²⁵ According to the United States a commercial investor would not have acted this way, but would have asked for an [***] of the lease price to reflect the [***] of money.⁴¹²⁶ The absence of an [***] clause results in an additional, very large advantage for Airbus.⁴¹²⁷

7.1147 Finally, the United States asserts that the European Communities' own consultant, Mr. Miller, came to the conclusion that the lease agreement conferred a benefit as compared with a market benchmark. According to the United States, Mr. Miller concluded that a commercial investor would have asked for a lease price of EUR 4.4 million per year for the EIG facilities plus an additional EUR 1.5 million for the land on which these facilities were built, for a total of EUR 5.9 million per year.⁴¹²⁸ However, the United States asserts, on average, Airbus pays an annual lease price of EUR 3.1 million,⁴¹²⁹ therefore, on average, Airbus pays EUR 2.8 million less per year than what a commercial investor would have required it to pay.⁴¹³⁰

7.1148 Responding to the European Communities' argument that the cost of Airbus debt should be used as a benchmark, the United States asserts that, accepting the European Communities' approach,

⁴¹²² US, FWS, paras. 474-476, also referring to the Conseil de Communauté de Grand Toulouse, Délibération no. 2004-05-ADU-01 (28 May 2004), Exhibit US-214.

⁴¹²³ US, SWS, para. 410.

⁴¹²⁴ US, FWS, para. 473.

⁴¹²⁵ US, SWS, paras. 411-413.

⁴¹²⁶ US, SWS, para. 413, citing INSEE, Informations Rapides, Série "Principaux Indicateurs", Indice du coût de la construction, 12 January 2007, p. 2: "The cost of construction index is used, in particular, to adjust lease prices agreed in lease agreements for commercial property." ("L'Indice du coût de la construction est notamment utilisé pour réviser les loyers des baux commerciaux."), Exhibit US-588.

⁴¹²⁷ US, SWS, para. 413. The United States notes that, from the third quarter of 1997 to the third quarter of 2006, lease prices indexed to the INSEE cost of construction index increased annually by 2.86 percent on average, citing INSEE, L'Indice du Coût de la Construction, Exhibit US-589. Based on the terms of the lease agreement as modified in 2004, the United States contends that Airbus pays, on average, EUR 3.1 million over the course of 40 years. If one ties the annual payment of these EUR 3.1 million to the INSEE cost of construction index, as a private investor would have done, and assumes an average annual increase of cost of construction by 2.86 percent, the United States asserts that the annual lease price would increase to EUR 4.00 million by 2012; EUR 5.30 million by 2022; EUR 7.02 million by 2023; and EUR 9.31 million by 2042. ⁴¹³⁰ US, Comment on EC Answer to Panel Question 185, para. 123.

BCI deleted, as indicated [***]

and taking Airbus' cost of debt at 6.83 percent,⁴¹³¹ a market-based lease price should have been EUR 5.5 million per year⁴¹³² – almost double the amount paid by Airbus. Thus, according to the United States, even using the European Communities' approach to analyzing the lease, including the benchmark proposed by it, the United States contends that Airbus saves at least EUR 2.7 million per year from the beneficial terms of the lease of the EIG facilities.⁴¹³³

7.1149 The United States also defends its benchmark lease price of between EUR 7.2 million and EUR 8.8 million, based on an initial net return of at least between 9 and 11 percent.⁴¹³⁴ The United States asserts that the EIG facilities lease is no different from any other lease, and if anything, its risks are higher than for typical real estate because the ZAC Aéroconstellation site and EIG facilities are tailor-made for Airbus and the aeronautics industry's needs and are thus extremely specialized facilities for which there exists virtually no other market than Airbus and the associated companies that occupy the ZAC.⁴¹³⁵ The United States also asserts that while Airbus France credit rating may have been A1 in 2007, it was rated only A2 in 2001 and was downgraded even further to A3 in early 2002, when the lease terms were negotiated and agreed, and that this rating persisted until about 2 years past the start date of the EIG facilities lease.⁴¹³⁶

7.1150 The United States considers the European Communities' assertion that Airbus France would not have agreed to an investor return on the lease that exceeded its own borrowing cost to be at odds with economic reality. In particular, the United States maintains that companies regularly prefer leases over purchases because a lease keeps the debt involved off their balance sheets. The United States also recalls that the lease was entered into as part of the same package as the Aéroconstellation site purchase by Airbus and the other aeronautics companies using it.⁴¹³⁷ Thus, it is not clear if Airbus even had a choice whether to construct and/or purchase the EIG facilities itself. Indeed, the United States argues that the European Communities' assertion is difficult to reconcile with actual practice in the market, where lease prices are frequently higher than purchase prices based on a company's cost of borrowing.

7.1151 In respect of indexation, the United States clarifies that: (i) due to the time-value of money, the fact that larger lease payments are not made until later results in a lower rate of return for the investor/lessor; and (ii) the lack of [***] exposes the investor to the additional risk of further reducing his return because of [***]. A [***] lease price would typically demand a premium to compensate for this additional risk (in particular in light of the long term of the lease), but the 3.9% return that is achieved through the EIG lease does not include such a premium. In the United States' view,

⁴¹³¹ EC, Answer Panel Question 271, para. 160.

⁴¹³² US, Comment on EC, Answer to Panel Question 271, para. 143 and footnote 193, referring to the United States' calculation in Exhibit US-686. The United States observes that it fails to understand how the European Communities arrived at the amount of EUR 4.4 million used in EC Answer Panel Question 271, para. 161, noting that the European Communities has not explained its calculation method, nor has it revealed its calculation.

⁴¹³³ US, Comment on EC, Answer to Panel question 271, para. 143. The United States observes that the European Communities suggests that 6.83 percent was Airbus France's average cost of debt throughout the entire period (EC Answer Panel Question 271, para. 160), the United States has used previously 6.83 percent for the EUR 62.6 million share agreed in 2002 and 6.17 percent for the EUR 17.5 million share agreed in 2004 (US, SWS, para. 411, n.512). Even if calculated on this more conservative basis, the United States considers that the lease price would have been EUR 4.3 million for the EUR 62.6 million share and EUR 1.1 million for the EUR 17.5 million share (totaling EUR 4.4 million per year, or EUR 2.2 million per year more than the lease price agreed), referring to the calculation in Exhibit US-686.

⁴¹³⁵ US, Comment on EC, Answer to Panel Question 271, para. 147.

⁴¹³⁶ US Comment on EC, Answer to Panel Question 271, para. 148, referring to Moody's screen-print, Exhibit US-688.

⁴¹³⁷ US Comment on EC, Answer to Panel Question 271, para. 149, referring to EC, FWS, n.726.

BCI deleted, as indicated [***]

characterization of the lease as debt financing does not "obviate" the need for [***], it simply means that while [***] is usually made explicit in lease contracts, it is usually implicit in debt financing. It also means, that, in the case of a 40-year arrangement like the EIG facilities lease, such "implicit [***]" would need to take account of the [***] that comes with a longer term loan, *i.e.*, that the premium would be far higher than on the average borrowing of the company.⁴¹³⁸

7.1152 Thus, the United States maintains that Airbus receives a benefit of at least EUR 4 million to EUR 5.6 million per year from the EIG lease, and, in fact, much more.⁴¹³⁹ In any event, however, the United States notes that the European Communities has admitted that Airbus receives a benefit from the terms and conditions of the EIG lease agreement that is worth at least EUR 2.3 million per year.⁴¹⁴⁰

7.1153 The United States claims that the provision of the site is a subsidy specific "in law" because the entire site, including the EIG facilities, was "tailor-made" for A380 production operations, and is explicitly dedicated to the aeronautics industry as a "parc d'activités aéronautiques". It also claims that the provision of the site is a subsidy specific "in fact," because only aeronautics companies and their suppliers are located on the Aéroconstellation site, and Airbus is the primary or predominant user of the site, including the EIG facilities.⁴¹⁴¹

European Communities

General Infrastructure

7.1154 The European Communities assert that industrial parks like the ZAC Aéroconstellation constitute general infrastructure within the meaning of Article 1.1 of the SCM Agreement because creation of such facilities benefits society as a whole and reflects legitimate economic development policies. According to the European Communities, the creation of an industrial site is a legitimate policy choice open to every WTO member.⁴¹⁴² It argues that the creation of an industrial site is therefore a public investment for the benefit of the population at large. The European Communities states that any member of the public can participate in the tenders for the sale of the land and lease of the EIG facilities, and that such tenders are open and non-discriminatory. In return, the companies who use the ZAC are then expected to invest and produce at it, with a positive spill-over for employment and tax income in the region. Thus, the European Communities asserts that ZAC Aéroconstellation site, like ZACs all over France, is a typical example of public-private partnership for the economic development of the country at large and constitutes general infrastructure.⁴¹⁴³ In addition, the European Communities observes that all of the companies which bought land in the ZAC Aéroconstellation paid the same price for that land, [***] per square meter, a price the European Communities argues is commensurate with market prices for improved land in the area.⁴¹⁴⁴ The European Communities also argues that Airbus did not lack alternatives to the ZAC Aéroconstellation – according to the European Communities, Airbus bought "undifferentiated" industrial land, with basic infrastructure allowing it to be used for industrial purposes, and that similar land is available throughout Europe. Moreover, the European Communities asserts that the return to the government is not limited to the purchase price of the land, but may include "other forms" of remuneration such as higher tax revenues and increased employment, which may make it willing to incur what appears to be a loss in providing the land in question. The European Communities maintains that consideration

BCI deleted, as indicated [***]

of the cost incurred by the French authorities in preparing the site for industrial use is irrelevant to the question of benefit.⁴¹⁴⁵

7.1155 The European Communities does not argue that the EIG facilities constitutes general infrastructure and their provision is therefore not a financial contribution. Rather, the European Communities asserts that the terms of the lease for these facilities is commensurate with a market benchmark, and therefore does not confer a benefit within the meaning of Article 1.1(b).⁴¹⁴⁶ The European Communities asserts that the EIG facilities enable owners of land in the ZAC Aéroconstellation to exploit the efficiencies of using a single, integrated network of facilities, instead of each company constructing its own redundant and potentially incompatible infrastructure.⁴¹⁴⁷ It argues that [***], and that the land in the ZAC would have been worthless to Airbus France without facilities such as taxiways and aircraft service areas, because these shared facilities are indispensable to Airbus France's A380 final assembly operations.⁴¹⁴⁸ The European Communities further contends that [***].⁴¹⁴⁹ The European Communities also points out that [***].⁴¹⁵⁰

Benefit

7.1156 The European Communities asserts that the price paid by Airbus to purchase land in the ZAC Aéroconstellation was at or above prices charged in other similarly-improved ZACs in France. For instance, at the ZAC de Saint Martin du Touch, which is similarly located near the Toulouse-Blagnac airport, the price of comparable industrial land is [***].⁴¹⁵¹ The European Communities disputes the appropriateness of the United States' comparison with the ZAC Andromède, because the latter does not have an industrial purpose, but is dedicated to housing and services, and is thus considerably more expensive than land in an industrial ZAC.⁴¹⁵² The European Communities contends that the findings of Atisreal, an independent commercial appraisal firm, confirm that the price of the land purchased by Airbus France in the ZAC Aéroconstellation was consistent with market terms. Atisreal, employing both comparative and land cost valuation methodologies, allegedly in accordance with industry standards, concluded that the market price of improved land of the sort purchased by Airbus France was between EUR 24/m² and EUR 27/m² in 2001.⁴¹⁵³

7.1157 In this context, the European Communities argues that in instances where the government's costs are particularly high relative to the value of the economic resources transferred to the recipient, the "benefit to the recipient," market benchmark standard still applies, and serves as a ceiling on the amount of "benefit" that can be assessed under Article 1.1(b) of the SCM Agreement. This, according to the European Communities, means that the government can only earn a market-based return on the value of the thing, which may or may not be lower than its cost.⁴¹⁵⁴ The European Communities maintains that the United States erroneously relies on Article 14(a) of the SCM Agreement, which relates to government equity infusions and according to which a benefit is not conferred unless an equity infusion is conferred contrary to the "usual investment practice ... of private investors in the territory of that Member." Article 14(d) of the SCM Agreement prescribes a different standard for the provision of goods and services, one that is tied to "prevailing market conditions," such as "price."

BCI deleted, as indicated [***]

Where "prevailing market conditions" dictate a price for the good or service – as with improved industrial land – that price serves as the appropriate benchmark for determining whether a "benefit" has been conferred. The European Communities rejects the United States' argument that a benefit was conferred because a private investor would not have provided the financial contribution in the first place, or in the exact form that it ultimately took (e.g., as a sale of improved versus unimproved land).⁴¹⁵⁵ The European Communities disputes the relevance of the EC Commission's decision in *Scott Paper* to the analysis in this case, as it asserts that EC state aids rules impose different disciplines than the SCM Agreement.⁴¹⁵⁶ According to the European Communities, a government may incur higher costs than a private investor would, and even sell land for a loss, without conferring a subsidy, because a government can realize other forms of remuneration – such as higher tax revenues and increased employment.⁴¹⁵⁷

7.1158 The European Communities acknowledges that the EIG facilities are indispensable to the A380 final assembly operations and were central to Airbus France's decision to move to the ZAC Aéroconstellation. The European Communities notes that [***].⁴¹⁵⁸ Each member pays the same amount per unit of use of a given EIG.⁴¹⁵⁹ The European Communities argues that the United States has not provided sufficient evidence to show that the terms of the lease of the EIG facilities were not commercial,⁴¹⁶⁰ although it does not dispute the United States' allegations concerning the calculation of the lease price.

7.1159 In response to the argument of the United States that the lease price calculation ignores the value of the land on which the EIG facilities were built, the European Communities asserts, relying on the expert conclusion of Mr. Miller, that the benchmark initial return employed by the United States (9-11%) is significantly inflated, and is based on an inapposite report analyzing initial net returns for industrial real estate.⁴¹⁶¹ According to the European Communities, the EIG facilities are not typical industrial real estate, but are akin to facilities/equipment project financing. Therefore, the European Communities asserts, unlike a typical industrial real estate lease, the EIG lease presents a very low risk to investors, first because the lease financing is effectively secured by the EIG equipment itself, and second because the lease covers the entire economic life of the facilities investment.⁴¹⁶² The European Communities further asserts that Airbus France and Air France provide investors with very low credit/default risk.⁴¹⁶³ Taken together, the European Communities contends that these factors mean that any risk premium applied to the EIG lease would be low. By contrast, the return on typical industrial real estate must capture occupancy and default risk. Moreover, according to the European Communities, the long-term nature of the EIG lease makes comparison to a benchmark based on initial net returns for industrial real estate particularly inappropriate. The European Communities argues that long-term capital leases for the life of an asset are simply a means of financing what is, in effect, an asset purchase. Thus, in the European Communities' view, Airbus France would not agree to an investor return that exceeded its own borrowing cost (*i.e.*, the cost of financing the purchase of these assets), which it asserts the United States recognizes was only 6.83% during the relevant

⁴¹⁵⁵ EC, SWS, paras. 386-391.

⁴¹⁶⁰ EC, FWS, paras. 936-938.

⁴¹⁶¹ EC, SCOS, para. 29.

⁴¹⁶² EC, Answer to Panel Question 271, para. 159. According to the European Communities, this means that, at the end of the lease term, investors do not incur occupancy risk – *i.e.*, the risk that, if there is residual value at the end of a lease, the investor will not be able to recover this value by finding a new lessee.

⁴¹⁶³ EC, Answer to Panel Question 271, para. 159, citing Moody's Investor Service, EADS, 12 March 2007, Exhibit EC-835.

BCI deleted, as indicated [***]

period.⁴¹⁶⁴ Thus, the European Communities maintains that Airbus France could have simply borrowed the EUR 80.1 million required to construct the EIG facilities, and then sublet a portion of the facilities to the other AFUL members. For a financial lease covering the entire useful life of the assets, the European Communities maintains that the lessor cannot demand a return higher than the cost of funds available to the lessee through readily-available alternative financing mechanisms. On the basis of the above, the European Communities argues that the appropriate benchmark for the EIG lease is Airbus France's borrowing cost, which reflects the most likely alternative source of market financing.

7.1160 The European Communities therefore concludes that under this cost of debt benchmark, the average annual lease payment would be approximately EUR 4.4 million, far less than the amounts asserted by the United States (EUR 7.2 to EUR 8.2 million). The European Communities argues that since debt financing is not indexed (because the borrowing rate captures the total return to the lender), any shortfall between this benchmark and the actual return on the lease would capture the entire amount of any "benefit" received by Airbus France.⁴¹⁶⁵

7.1161 The European Communities also disputes the United States' view that the lease confers a benefit because the lease price increases progressively, further reducing the effective net initial return to far below the 3.9 percent nominal rate and is not subject to [***], but remains [***] over the course of 40 years, on three grounds. The European Communities maintains that the "benefit" inquiry does not hinge on the structural features of a financing instrument.⁴¹⁶⁶ The European Communities considers that there is nothing inherently non-commercial about instruments that do or do not possess features such as a progressive repayment structure or indexation. The European Communities argues that these characteristics are only relevant to the extent that they affect the investor's rate of return, while the "benefit" inquiry asks whether the resulting effective return on such instruments is consistent with a market rate. Second, the European Communities argues that the United States' reliance on these two structural features, progressive repayments and the absence of indexation, is incoherent because, on the one hand, the United States criticizes the EIG lease's "progressive" repayment structure, while on the other, it asserts that these repayments should, in fact, increase over time through indexation to account for the decreasing value of money.⁴¹⁶⁷ Third, the European Communities argues that even if the EIG lease could be viewed as not incorporating indexation, this would not render the lease "non-commercial." In this context the European Communities maintains its position that use of a cost of debt benchmark obviates the need for indexation; debt financing is not indexed.⁴¹⁶⁸

7.1162 The European Communities does not argue the question of specificity beyond its assertion that the provision of the site *per se* constitutes general infrastructure, and thus is not a financial contribution and not within the scope of the SCM Agreement. With respect to the EIG facilities, the European Communities does not make any additional arguments regarding specificity.

Provision of roads

United States

7.1163 The United States claims that the improvements to the RD901, RD902 and RD963 do not constitute provision of general infrastructure. The United States asserts that these improvements are

⁴¹⁶⁴ EC, Answer to Panel Question 271, para. 160.

⁴¹⁶⁶ EC, Answer to Panel Question 271, para. 163, referring to EC, FWS, paras. 1640-41; EC, FCOS, paras. 14-18 (Statement of Prof. Whitelaw); EC, Answer to Panel Question 65, para. 71.

⁴¹⁶⁷ EC, Answer to Panel Question 272, paras. 163-164..

⁴¹⁶⁸ EC, Answer to Panel Question 272, para. 165..

BCI deleted, as indicated [***]

for use only by Airbus and its suppliers.⁴¹⁶⁹ In support of its assertion, the United States refers to a statement by French authorities describing "the access roads for the site",⁴¹⁷⁰ as well as to satellite images of the site which, it asserts, demonstrate that Air France, STTS and SIDMI access the site from the south, via the RD901, while improvements created at the site's northern perimeter (at the RD963) and at its eastern perimeter (at the RD902, including the "Diffuseur de Pinot") are for the exclusive use of Airbus and its suppliers. The United States argues that the improvements to the roads became necessary as a result of the preparation of the Aéroconstellation site. Thus, the United States asserts that the road works were not undertaken to create general infrastructure, but are specifically related to the development of the site, undertaken to provide access to the site for Airbus and its suppliers.⁴¹⁷¹ The United States disputes the European Communities' assertion that the decision to develop the Aéroconstellation site merely brought forward the schedule for road improvements in the whole region. According to the United States, the construction work on the RD901, RD902 and RD963 was either triggered exclusively by the development of the Aéroconstellation site for A380 assembly, testing and delivery, or the plans were amended significantly for that purpose.⁴¹⁷²

7.1164 The United States asserts that the publicly available information indicates that the French authorities spent at least EUR 49 million (approximately EUR 17 million to rebuild the RD901 through and beneath the Aéroconstellation site, and EUR 33 million to adapt the RD902 to Airbus' needs), and provided them to Airbus free of charge.⁴¹⁷³ The United States indicates that it was unable to locate any information on the costs of the work on the RD963.⁴¹⁷⁴ In essence, the United States argues that the provision of the road improvements is a grant to Airbus, and thus confers a benefit, and thus constitutes a subsidy within the meaning of Article 1 of the SCM Agreement.⁴¹⁷⁵

7.1165 The United States asserts that the improvements to the RD901, RD902, and RD963 in connection with establishment of the Aéroconstellation site are *de facto* specific to Airbus, within the meaning of Article 2.1(c) of the SCM Agreement. The United States argues that (i) the overpasses for taxiways at the RD901 are, in fact, used exclusively by the users of the Aéroconstellation site and primarily by Airbus, and that (ii) the access infrastructure, in particular the traffic circles created at the RD902 and RD963, is used, in fact, exclusively or primarily for access to the Airbus A380 facilities.⁴¹⁷⁶

European Communities

7.1166 The European Communities argues that building of the access roads linking the Aéroconstellation site to the IGG is a classic example of provision of general infrastructure, an example "*par excellence*" of general infrastructure and is, therefore, outside the scope of Article 1.1(a)(1)(iii).⁴¹⁷⁷ According to the European Communities, the road works were necessary in order to alleviate existing traffic congestion, and the decision to develop the ZAC Aéroconstellation

⁴¹⁶⁹ US, Answer to Panel Question 153, para. 107. Thus, the United States does not accept the European Communities' view of its position as based on an assertion of predominant use by the companies located in the ZAC.

BCI deleted, as indicated [***]

merely brought forward the schedule for road improvements in the whole region.⁴¹⁷⁸ The European Communities further notes that there is no restriction on the use of the roads in question, and that companies located in the Aéroconstellation site do not have privileged access to the roads.

7.1167 The European Communities also disputes that the users of Aéroconstellation site obtain more benefit from the improvements than any other users of the roads. In this connection, the European Communities argues that, considering the practical effects of building a public road, it cannot be established that the users of the Aéroconstellation site, let alone one specific user, benefit from the improvements more than other users of the roads, because, according to the European Communities, the road improvements were necessary to alleviate existing traffic congestion, with the establishment of several ZACs, noting that access to the ZAC Andromède is from the same roads. The European Communities also contends that the RD901 and RD902 are central transportation arteries for the Département de Haute-Garonne, and their improvement was planned long before the decision to develop the ZAC Aéroconstellation was taken.⁴¹⁷⁹

7.1168 The European Communities refers to countervailing duty practice in the United States in support of its position. In particular, it argues that in *Stainless Steel Sheet and Strip in Coils from the Republic of Korea*, the US Department of Commerce ("DOC") concluded that the construction of a public highway in the Kwangyang Bay area was not a countervailable subsidy.⁴¹⁸⁰ The DOC found that "the reason for the public highway was not to serve [***], but to provide general infrastructure to the area as part of the [***] continuing development of the country and to relieve a transportation bottleneck."⁴¹⁸¹ The DOC observed that the road "is utilized by both industries in the area to transport goods and by residents living in the Kwangyang Bay area."⁴¹⁸² The same reasoning, according to the European Communities, applies with respect to the improvements to the RD901, RD902 and RD963.⁴¹⁸³

7.1169 The European Communities contends that the claim of the United States really only concerns the two traffic circles, *i.e.*, the improvements at the site's northern perimeter (at the RD963) and at its eastern perimeter (at the RD902, in particular the "Diffuseur de Pinot").⁴¹⁸⁴ The European Communities also argues that the two overpasses (at the RD901 on the southern perimeter) link taxiways on the Aéroconstellation site to the Toulouse airport, and that when a government creates an industrial site for the aerospace industry, an important feature is its interconnection with the airport. It therefore believes that these two elements are confounded with the general infrastructure of the public roads RD902 and RD963.⁴¹⁸⁵ In this connection it observes that the traffic circles related to the RD902 and RD963 may be seen as an integral part of the French road network - the fact that these are used more often by companies located in ZAC Aéroconstellation is only normal.⁴¹⁸⁶

⁴¹⁷⁸ EC, FWS, paras. 921 and 944.

⁴¹⁸⁵ EC, SWS, para. 372.

⁴¹⁸⁶ EC, SWS, para. 373.

BCI deleted, as indicated [***]

7.1170 The European Communities argues that even if the building of the roads constituted a financial contribution, the United States has failed to establish that this alleged subsidy is specific within the meaning of Article 2.1 of the SCM Agreement, because the improvements are not specific to Airbus France, or even to the entire group of companies in the ZAC Aéroconstellation.⁴¹⁸⁷ Noting that according to Article 2.1 of the SCM Agreement, a subsidy is specific if "the granting authority, or the legislation pursuant to which the granting authority operates, explicitly limits access to a subsidy to certain enterprises", the European Communities observes that RD901, RD902 and RD963 are public roads accessible to anyone, and that French law requires that departmental roads remain open to public traffic.⁴¹⁸⁸

7.1171 The European Communities does not appear to dispute the United States' allegations concerning the amounts spent by the French authorities on road improvements.

(iii) *Evaluation by the Panel*

7.1172 In order to resolve this aspect of the United States' claims, we will address first the European Communities' contention that the provision of the ZAC Aéroconstellation site constitutes a measure of general infrastructure, and thus does not constitute a subsidy under Article 1 of the SCM Agreement. In this connection we will evaluate whether it is appropriate to consider the provision of the EIG facilities separately, as suggested by the European Communities' argument, or as an integral part of the creation of the site and its provision to Airbus and other companies, as suggested by the United States' argument. We will then address whether the improvements to the access roads around the ZAC Aéroconstellation site, specifically the RD901, RD902, and RD963, and including the Diffuseur de Pinot and the underpasses beneath the taxiways which connect the ZAC Aéroconstellation with the Toulouse-Blagnac airport over the RD901, constitute measures of general infrastructure. Should we conclude that any of these is not a provision of general infrastructure, we will then go on to assess the financial contribution represented by that measure, and whether that measure confers a benefit on Airbus, including consideration of the appropriate benchmark for comparison in assessing the question of benefit.

Provision of the ZAC Aéroconstellation site and EIG facilities

General infrastructure

7.1173 As we concluded above,⁴¹⁸⁹ in our view, the determination whether the provision of a good constitutes a provision of "general infrastructure" cannot be answered in the abstract, but rather must take into account the existence or absence of *de jure* or *de facto* limitations on access or use, and any other factors that tend to demonstrate that the infrastructure was or was not provided to or for the use of only a single entity or a limited group of entities, including factors relating to the circumstances surrounding the creation of the infrastructure in question, consideration of the type of infrastructure, the conditions and circumstances of the provision of the infrastructure, the recipients or beneficiaries of the infrastructure, and the legal regime applicable to such infrastructure, including the terms and conditions of access to and/or limitations on use of the infrastructure.

7.1174 Before addressing these factors with respect to the ZAC Aéroconstellation site and the EIG facilities, we consider it appropriate to address whether the EIG facilities should be evaluated as a separate measure, as implied by the European Communities' argument. The European Communities

⁴¹⁸⁷ EC, SWS, para. 373.

⁴¹⁸⁸ EC, FWS, para. 946 referring to Loi no 89-413 du 22 juin 1989 relative au code de la voirie routière, Art. L131-2, <http://www.legifrance.gouv.fr>; Code de la Voirie Routière, Art. L111-1, L131-1, <http://www.legifrance.gouv.fr/WAspad/ListeCodes>.

⁴¹⁸⁹ See, discussion at paras. 7.1036 to 7.1044 above.

BCI deleted, as indicated [***]

does not argue that the provision of the EIG facilities does not constitute a financial contribution, and thus does not argue that the provision of those facilities constitutes general infrastructure. Rather, the European Communities' argument with respect to these facilities is that they are rented at a market price to the owners of the sites in the ZAC, and thus there is no benefit to Airbus. The United States, while it also disputes the European Communities' contention that the rental of the EIG facilities is at a market price, considers the provision of the ZAC Aéroconstellation, including the EIG, is not a measure of general infrastructure, and constitutes a specific subsidy to Airbus.

7.1175 In our view, the EIG facilities constitute an integral part of the Aéroconstellation site. Indeed, the European Communities' own arguments indicate that the EIG facilities were a necessary part of the development of the site, in order to make it suitable for its intended use by the aeronautics industry, including particularly A380 production. Thus, for instance, the European Communities itself asserts that the purchasers of the land in the ZAC [***],⁴¹⁹⁰ and that the land in the ZAC would have been worthless to Airbus without EIG facilities such as taxiways and aircraft service areas, because these shared facilities are indispensable to Airbus France's A380 final assembly operations. Moreover, the European Communities itself contends that [***].⁴¹⁹¹ Thus, we see no basis for an analysis of the EIG facilities separate from our consideration of the provision of the Aéroconstellation site as a whole.⁴¹⁹²

7.1176 We recall our interpretation of the term "general infrastructure", where we concluded that that the term "**general** infrastructure", taken in its ordinary and natural meaning, refers to infrastructure that is not provided to or for the advantage of only a single entity or limited group of entities, and that there is no infrastructure which is inherently "general" *per se*.⁴¹⁹³ Thus, merely because the development of industrial sites such as the ZAC Aéroconstellation "benefits society as a whole" and "reflects legitimate economic development policies", as argued by the EC,⁴¹⁹⁴ does not demonstrate that the provision in this case of the site constitutes provision of general infrastructure. Similarly, the fact that the ZAC Aéroconstellation was developed under the same legislation as other ZACs throughout France does not inform our consideration of this issue.⁴¹⁹⁵ The European Communities does not argue, as it did in connection with the reclamation of land in the case of the Mühlenberger Loch development, that development of industrial land is a "typical task of public authorities, as providers of general infrastructure",⁴¹⁹⁶ but merely that the creation of an industrial site is a "legitimate policy choice".⁴¹⁹⁷ We do not disagree. However, this fact provides no basis for a conclusion that the development of the particular site in question, the ZAC Aéroconstellation, is a

⁴¹⁹⁰ EC, FWS, para. 919, citing [***] declaration, paras. 5-6, Exhibit EC-17 (BCI). The European Communities notes that the [***]. Exhibit EC-130 (BCI).

⁴¹⁹¹ EC, FWS, para. 919 referring to [***] declaration, paras. 4-6, Exhibit EC-17 (BCI); ZAC Protocole d'Accord, [***], Exhibit EC-130 (BCI) [***].

⁴¹⁹² We note that the European Communities asserts, in discussing the question of benefit, that an appropriate market benchmark for the EIG lease is Airbus' cost of debt. This is because, the European Communities appears to recognize, had the French authorities not created the EIG facilities, Airbus could have done so itself, as they are necessary to its activities in the production of A380 aircraft, as well as those of the other companies purchasing land in the ZAC and involved in the production of that aircraft. This supports our view that the provision of the site and the EIG facilities should be considered together, as it is clear that Airbus, as well as the French authorities, considered the EIG facilities an integral part of the site.

⁴¹⁹³ See, discussion at paras. 7.1036 to 7.1044 above.

⁴¹⁹⁴ EC, FWS, para. 909.

⁴¹⁹⁵ It may be that the provision of other ZACs constitutes the provision of general infrastructure, or the provision of infrastructure which is not general. As we have previously concluded, whether a provision of infrastructure is "general" or not must be assessed in each instance on the basis of the particular facts of the specific measure at issue. Thus, we are not making any ruling concerning the status of any ZAC except the ZAC Aéroconstellation which is before us in this dispute.

⁴¹⁹⁶ EC, FWS, para. 775.

⁴¹⁹⁷ EC, FWS, para. 923.

BCI deleted, as indicated [***]

measure of general infrastructure. The provision of specific subsidies⁴¹⁹⁸ is equally a legitimate policy choice of governments – however, it is one that has potential consequences under the SCM Agreement.

7.1177 The European Communities does not, in our understanding, seriously contend that the development of the site was undertaken for reasons unrelated to the needs of Airbus. There is no evidence before us to suggest that the French authorities would have undertaken the development of the site and the construction of the EIG facilities but for the fact that it was desirable in order to provide a suitable site for Airbus' A380 final assembly line, adjacent to the Toulouse-Blagnac airport. Indeed, it is clear to us that the development of the ZAC Aéroconstellation site and the construction of the EIG facilities was undertaken specifically to enable Airbus to situate an A380 final assembly line in an advantageous location, in France.⁴¹⁹⁹ The ZAC Aéroconstellation is specifically designated as a site for aeronautics-related activities, and the sale of land in the ZAC was limited to companies in the aeronautics industry, and the purchasers are companies concerned specifically with the assembly and testing of the A380.⁴²⁰⁰ The EIG facilities are, as the European Communities itself argues, necessary to the efficient and effective operation of the A380 assembly operations for which the site was developed, as well as for other aeronautics related activities undertaken at the site. Moreover, we do not accept the European Communities' view that Airbus purchased "undifferentiated" industrial land, and that similar land is available throughout Europe. It is clear to us that the ZAC Aéroconstellation site was, from the outset, uniquely adapted to Airbus' needs, from its situation next to and connection to the Toulouse-Blagnac airport, to the highly specific EIG facilities.

7.1178 We do not doubt that the French authorities considered that they were pursuing a public interest in undertaking the development of the Aéroconstellation site. However, this interest does not suffice to demonstrate that the project, starting with the development of agricultural land into an industrial site, and including the construction of the EIG facilities, constitutes a provision of general infrastructure. As we have noted previously, it is in any event always likely to be the case that public authorities will have reasons of public policy when expending public funds. However, when the circumstances of such expenditure demonstrate that it was provided to or for the use of only a single entity or a limited group of entities, we do not consider that it can be found to be "general" infrastructure.

7.1179 The European Communities makes no other arguments with respect to the ZAC Aéroconstellation site that might suggest that it was not created and provided specifically for the use

⁴¹⁹⁸ With the exception of subsidies prohibited under Article 3.

⁴¹⁹⁹ Indeed, the European Communities argues that the decision by Airbus to establish two A380 assembly facilities rather than the single site in Toulouse originally contemplated resulted in [***], implying that the ZAC Aéroconstellation site was the most advantageous location. EC, SWS, para. 1079. *See, also, Les élus toulousains réservent un site pour la chaîne d'assemblage de l'Airbus géant*, Les Echos, No. 17994, 28 September 1999 ("This project is a credible and attractive alternative to Aérospatiale-Matra's solution for integration of the Airbus A3XX for which Toulouse is a candidate.") Exhibit US-205; Airbus, press release, *Airbus' A380 Final Assembly Facility inaugurated by French President*, 16 July 2000, Exhibit US-200; <http://www.aeroconstellation.com>, "Le Programme Constellation, Quelques Chiffres, La ZAC AéroConstellation", Exhibit US-201.

⁴²⁰⁰ Exhibit US-218 contains excerpts from the interactive map on the Grand Toulouse web-site, <http://www.grandtoulouse.org/admin/upload/fichier/aeroconstellation/aeroconstellation.htm> describing the companies, installations, and activities planned for the site. That map shows that these include, in addition to the "pôle logistique" where aircraft parts are received on the site and stored, the large Airbus assembly building and outside stations for final testing of A380 aircraft, a building for the Société Capelle, responsible for road transport of A380 fuselage parts, a fuel supply installation (Exxon), a building for Air France Industries, active in aircraft and engine maintenance, a building for STTS, which paints and waterproofs aircraft, underground galleries linking the various sectors and supplying heating, fire suppression, compressed air, communications, etc., and taxiways linking the various parts of the site and linking the site to the Toulouse-Blagnac airport.

BCI deleted, as indicated [***]

of Airbus, its suppliers, and companies associated with the aeronautics industry for, initially, the assembly and testing of A380 aircraft. The circumstances surrounding the development of the site, including the limitation on the use of the site as a "parc d'activités aéronautiques", and the connections between the purchase of land and the required participation in the lease of the EIG facilities, makes it clear that the development of the ZAC Aéroconstellation, including the EIG facilities, was undertaken to suit Airbus' needs, and in particular, its needs in connection with the assembly and testing of A380 aircraft. In light of these facts, we conclude that the creation and provision of the ZAC Aéroconstellation site and EIG facilities is not a measure of general infrastructure within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement. We therefore will go on to consider whether the financial contribution of the French authorities in this respect conferred a benefit on Airbus.

Benefit

7.1180 The United States contends that the provision of the ZAC Aéroconstellation site and EIG facilities confers a benefit on Airbus because (i) the French authorities sold the land for less than adequate remuneration, and (ii) because the authorities are leasing the EIG facilities to Airbus for less than adequate remuneration.⁴²⁰¹

7.1181 We recall that Article 1.1(b) of the SCM Agreement does not define the notion of "benefit". However, it is well established that a "financial contribution" will confer a "benefit" upon a recipient when it places that recipient in a more advantageous position compared with the position of that recipient in the absence of the "financial contribution".⁴²⁰² In *Canada – Aircraft*, both the panel and the Appellate Body considered that the basis for making this comparison was the market. Thus, the panel observed that:

"a financial contribution will only confer a 'benefit', *i.e.*, an advantage, if it is provided on terms that are more advantageous than those that would have been available to the recipient on the market".⁴²⁰³

Similarly, the Appellate Body explained that:

"the marketplace provides an appropriate basis for comparison in determining whether a 'benefit' has been 'conferred', because the trade distorting potential of a 'financial contribution' can be identified by determining whether the recipient has received a 'financial contribution' on terms more favourable than those available to the recipient on the market."⁴²⁰⁴

7.1182 Thus, a benefit will be conferred whenever a financial contribution is granted to a recipient on terms more favourable than those available to the recipient in the market. In the context of a financial contribution in the form of provision of goods or services other than general infrastructure, we consider that the appropriate question to be addressed in resolving the question of benefit is whether a market actor would have provided the good or service to the recipient at the time, on the same terms and conditions as the government provision at issue.

7.1183 In its first written submission, the United States identified the alleged costs of the Aéroconstellation site and EIG facilities based on publicly available information, because, it noted,

⁴²⁰¹ US, FWS, para. 464.

⁴²⁰⁴ Appellate Body Report, *Canada – Aircraft*, para. 157.

BCI deleted, as indicated [***]

the European Communities and France had refused, during the Annex V process, to provide the requested information relating to the site, which included a copy of the agreement in which the French national and regional authorities agreed to develop the site, a detailed description of the site development project, a list of the measures that French authorities undertook and the costs they incurred to develop the site, information regarding the terms and conditions of any purchase by Airbus or any other entities of any portion of the site, and information on Airbus' use of the site.⁴²⁰⁵ The United States contends that the logical inference to be drawn from these refusals is that the information would have supported the United States' claim that the measure is a specific subsidy. The United States suggests that the Panel draw such a logical inference.⁴²⁰⁶ In addition, the United States asserts that in this situation, the Panel would be justified, in accordance with paragraph 7 of Annex V, in drawing an adverse inference that the withheld information demonstrates that the measure is a specific subsidy, and respectfully requests that the Panel so infer.⁴²⁰⁷ The United States contends that since the European Communities and France refused the request for the terms and conditions of the lease and the terms and conditions of equivalent commercial leases, it is not possible to calculate the exact amount of the benefit to Airbus.⁴²⁰⁸

7.1184 Paragraph 7 of Annex V provides that a panel "should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process". Although the European Communities failed to provide any of the information requested concerning the Aéroconstellation site during the Annex V process, it has, during the course of this panel proceeding, submitted some information, in particular concerning the price paid by purchasers for land in the ZAC and a valuation of that land by Atisreal. However, it has not provided any information concerning the costs associated with the development of the site. Nor has it disputed the United States' allegations concerning those costs, and it has not contested the United States' allegations concerning the costs associated with the creation of the EIG facilities and the terms of the lease for those facilities. Thus, while we are not here faced with a situation where a party has failed to supply any part of the requested information, much of the information before us on the question of benefit is factual allegations by the United States based on public information which are unchallenged by the European Communities. To the extent reliance on that information may be adverse to the European Communities' position in this dispute, we consider that such reliance, which is not in itself an adverse inference, is entirely justified. Moreover, to the extent the information publicly available to the United States and submitted in support of its arguments is insufficient, we consider that inferences favourable to the United States' view are warranted to the extent necessary to reach conclusions, in view of the lack of cooperation by the European Communities during the Annex V process.

7.1185 The European Communities contends that the United States' argument concerning benefit conferred by the provision of land in the ZAC effectively is based on a "cost to government" standard, as it is based on the premise that regardless of the market price for industrial land in the area, Airbus France should have paid a price sufficient for the government to recover the costs incurred in developing the ZAC. Because the "cost to government" standard has been rejected by the Appellate Body, the European Communities asks the Panel to do so in this dispute.⁴²⁰⁹

7.1186 The United States does not dispute the basic premise that cost to the government is not an appropriate basis for assessment of benefit, but does argue, as it did with respect to the Mühlenberger Loch project, that consideration of the total amount invested by the French authorities is appropriate in order to determine the amount of any benefit. The United States contends that a commercial owner

⁴²⁰⁵ Questions 56-72 from the Facilitator to the EC, Exhibit US-4 (BCI); EC Answers to Questions 56-72 from the Facilitator, Exhibit US-5 (BCI).

⁴²⁰⁶ Our understanding is that this position does not extend to the development of the roads.

⁴²⁰⁷ US, FWS, para 480.

⁴²⁰⁸ US, FWS, para 476.

⁴²⁰⁹ EC, FWS, para. 935.

BCI deleted, as indicated [***]

of the land on which the ZAC Aéroconstellation was developed either would have sold the land "as is", *i.e.*, in its raw agricultural state, or would have asked for a commercial return on the owner's investment in turning the land into an industrial site, in addition to a price reflecting the value of the land. Thus, the United States' argument is that the amount of the investment should be considered in determining the appropriate market-based benchmark for assessing the existence of benefit. Moreover, the United States argues that the EUR 158 million invested in site preparation is akin to a grant, since the French authorities spent funds to create a site that Airbus would otherwise have had to create itself.⁴²¹⁰

7.1187 We have already rejected the European Communities' view that the provision of the Aéroconstellation site constituted a measure of general infrastructure. The European Communities' arguments concerning the price of the land in the ZAC Aéroconstellation do not address the question of the amount invested in developing raw agricultural land into land suitable for industrial use, but focus on the market price for industrial land in the region, and the fact that all purchasers paid the same price per hectare for land in the ZAC. However, neither of these arguments directly addresses the question before us here. As we concluded with respect to the Mühlenberger Loch project,⁴²¹¹ we consider that the investment by the French authorities in developing the site to make the land suitable for industrial use is the relevant basis for assessing whether a benefit was conferred on Airbus.

7.1188 As previously discussed, this does not constitute, as argued by the European Communities, a determination of the amount of benefit on the basis of cost to the government. Rather, it is simply a reflection, in the particular circumstances of this case, of the basis on which a market actor would determine the price to be charged for the land to be sold, and thus the appropriate "market" benchmark. In our view, based on the evidence provided by the European Communities, the "prevailing market conditions" in the region would have led to a sales price for land in the ZAC Aéroconstellation that would have been insufficient to provide an adequate return to cover the investment in developing the land for industrial use. Thus, in our view, a commercial land developer would not have undertaken the project. In these circumstances, to argue, as the European Communities does, that the market price for improved industrial land is the appropriate benchmark for determining whether a benefit has been conferred would, in our estimation, result in a wholesale circumvention of the fundamental purpose of the SCM Agreement's discipline on subsidies. Under the European Communities' view, the more a financial contribution by a government distorts the allocation of resources that the market would otherwise produce, the less it could be found to be a subsidy. This is not an acceptable outcome, as it perverts a fundamental goal of the SCM Agreement.

7.1189 The European Communities asserts that the return to the government is not limited to the purchase price of the land, but may include "other forms" of remuneration such as higher tax revenues and increased employment, which may make it willing to incur what appears to be a loss in providing the land in question.⁴²¹² We do not agree. In the first place, the European Communities has provided no evidence to substantiate the possibility of such other forms of remuneration in this case, or that any such other forms of remuneration would make up the difference between the amount invested by French authorities in developing the land to be suitable for use by the aeronautics industry, including the investment in the EIG facilities, and the sales price for the land and lease price for the EIG facilities. More importantly, we do not consider that the possibility of higher tax revenues or increased employment has any relevance in assessing whether a financial contribution by a government confers a benefit on the recipient. As we have previously noted, government authorities would be expected to have a public policy purpose in making a financial contribution – higher tax revenues and increased employment might be among the factors considered in deciding whether a particular financial contribution by the government is in the public interest. But the fact that such a

⁴²¹⁰ US, FWS, para. 468.

⁴²¹¹ See, paragraph 7.1093 above.

⁴²¹² EC, SWS, para. 389.

BCI deleted, as indicated [***]

contribution is in the public interest, for instance because the government, or the locality, or the public at large may benefit from it, simply does not affect whether the recipient of that financial contribution benefits from it, which is the question before us here. If a financial contribution confers a benefit on the recipient, then it constitutes a subsidy under Article 1 of the SCM Agreement. That others, including the public at large, may also benefit does not alter that conclusion.

7.1190 Finally, as discussed above, we consider that the provision of the Aéroconstellation site is appropriately considered together with the provision of the EIG facilities. It is clear, and the European Communities does not argue otherwise, that the price paid by Airbus for land in the ZAC Aéroconstellation, and the lease for the EIG facilities, does not provide a market rate of return on the investment by the French authorities to develop the site, including the EIG facilities. Thus, whether the lease for the EIG facilities is commensurate with a market benchmark does not save the provision of the site, including the EIG facilities, from conferring a substantial benefit on Airbus. Therefore, we conclude that the provision of the ZAC Aéroconstellation, including the EIG facilities, constitutes a subsidy within the meaning of Article 1 of the SCM Agreement.

7.1191 The European Communities does not dispute the United States' allegations of specificity, other than arguing that the measure constitutes general infrastructure, a view we have rejected. While it is true that Airbus is not the sole occupant of the ZAC or user of the EIG, it is clear that it is the main beneficiary, as the other purchasers of land in the ZAC are all suppliers or contractors connected to Airbus' activities in producing LCA, in particular the A380. Moreover, the ZAC is specifically designated as a site for aeronautics-related activities, and the sale of land (and consequently use of the EIG facilities) is limited to companies in the aeronautics industry. We therefore consider that the provision of the ZAC, including the EIG facilities, is specific within the meaning of Article 2.1(a) of the SCM Agreement.

Provision of Roads

7.1192 We recall once more our interpretation of the term "general infrastructure", where we concluded that that the term "**general** infrastructure", taken in its ordinary and natural meaning, refers to infrastructure that is not provided to or for the advantage of only a single entity or limited group of entities, and that there is no form or type of infrastructure which is inherently "general" *per se*.⁴²¹³ In the context of the road improvements alleged to constitute subsidies in this case, the United States argues that the improvements to the RD901, RD902, and RD963, were triggered exclusively by, or were amended significantly as a result of, the development of the ZAC Aéroconstellation site, and that these improvements were undertaken for the use of Airbus and its suppliers in the ZAC Aéroconstellation. In support of this position, the United States relies on the fact that the improvements provide access to the Aéroconstellation site at two points, on the northern perimeter from the RD963, and on the eastern perimeter, from the RD902, and that the construction of underpasses on the southern perimeter for the RD901 allows taxiways on the Aéroconstellation site to link to the Toulouse-Blagnac airport.⁴²¹⁴ The United States asserts that the access at the northern and eastern perimeters is exclusively for Airbus and its suppliers, while the taxiways are principally used by Airbus.

⁴²¹³ See, paragraphs 7.1035 to 7.1044 above.

⁴²¹⁴ While it is not entirely clear from the arguments, we understand the taxiways themselves to constitute part of the development of the ZAC site itself, including the EIG facilities, rather than a part of the road improvements. Of course, the need for taxiways linking a site for the assembly of aircraft to the airport, or in general, to a runway, is obvious, and given the existence of a perimeter road, either level crossings or under- or over-passes will have to be created to allow traffic to flow on the road. Thus, the road aspect, the underpasses, and the taxiway "bridges" are inextricably linked.

BCI deleted, as indicated [***]

7.1193 The European Communities has put before us evidence that improvements to the roads in the area, including the RD901, RD902, and RD963, were under consideration by the local authorities in 1998, before the decision to develop the ZAC Aéroconstellation site was made in September 1999.⁴²¹⁵ Thus, while the specific details of the improvements and the timing of the works appears to have been affected as a result of the decision to develop the Aéroconstellation site, we cannot agree with the United States that the road improvements it challenges were "triggered" by that development.

7.1194 Nor do we agree with the United States' view that those improvements are exclusively for Airbus and its suppliers situated on the site. Even assuming the United States is correct that Airbus and the other aerospace companies located at the Aéroconstellation site are the primary or predominant users of the road improvements, it is clear that there are no express or implied restrictions or limitations on the use of the roads, or any part thereof. As a matter of French law, they are open to all traffic. Moreover, their use is not limited as a matter of fact to Airbus or the other companies located on the site. Rather, the improvements to the roads, like the roads themselves, allow for through traffic, and access to other sites in the region and beyond. The European Communities observes, and the United States does not dispute, that the RD901 and RD902 are central transportation arteries for the region. The Diffuseur de Pinot, the roundabout from which the Aéroconstellation site is accessed from the east, also provides access to the ZAC Andromède, located directly across from the entrance to the ZAC Aéroconstellation site.⁴²¹⁶ Similarly, while the underpasses at the southern perimeter permit aircraft assembled on the site to access the Toulouse-Blagnac airport, they also allow traffic on the RD901 to continue to move freely.

7.1195 Unlike the case of an industrial site developed for a particular purpose and for the use of a particular company or industry, in the case of publicly accessible and publicly used roads that form part of the general network of roads in a region, very strong evidence would be necessary to support the conclusion that improvements to such roads do not constitute general infrastructure. Merely that some users may benefit more directly or more immediately from such improvements than others does not, in our view, suffice in this regard. Moreover, it is not clear that companies situated on the Aéroconstellation site use the road improvements more than other traffic, given that the roads and roundabouts in question are part of the general network of roads, allowing and/or improving access to all sites in the region, including the other ZACs and the airport itself. Thus individuals and businesses in the entire region are likely to use the improved roads to a similar degree. We simply do not consider that the United States has submitted sufficient evidence to demonstrate that the road improvements were provided to or for the use of only Airbus and/or companies located on the ZAC Aéroconstellation site.

7.1196 We therefore conclude that the road improvements challenged by the United States in this case constitute the provision by the French authorities of general infrastructure within the meaning of Article 1.1(a)(1)(iii) of the SCM Agreement. Therefore, there is no financial contribution by a government in connection with these road improvements, and they do not constitute a subsidy within the meaning of Article 1 of the SCM Agreement. We will not consider these measures further in this dispute.

(f) Regional grants

(i) *Arguments of the Parties*

7.1197 These measures concern grants for the construction of manufacturing and assembly facilities provided by the German Land of Lower Saxony and the German government to Airbus in Nordenham in Germany, grants provided by the Spanish government and regional and local governments in Spain,

⁴²¹⁵ Exhibit EC-126. *See, also*, Exhibit US-201. pg. 2.

⁴²¹⁶ Exhibit US-203. pg. 3.

BCI deleted, as indicated [***]

supported in some cases by the European Regional Development Fund, to Airbus in Sevilla, La Rinconada, Illescas (Toledo), Puerto de Santa Maria and Puerto Real in Spain, and grants provided by the Welsh government to Airbus in Broughton, Wales.⁴²¹⁷ The United States asserts that these grants are specific to Airbus under Article 2 of the SCM Agreement⁴²¹⁸ and Article 2.2 of the SCM Agreement⁴²¹⁹ because they were provided to "certain enterprises located within a designated geographical region within the jurisdiction of the granting authority".

7.1198 The United States notes that, during the Annex V process, the Facilitator asked the European Communities and the Airbus governments to provide numerous categories of information regarding each of the grants referred to above, including the amount of the grant; the reasons for approval of the grant; the terms and conditions of the grant; how Airbus used the grant money; and all agreements or other documents providing the legal basis for the grant, but that the European Communities refused to provide any of the information that the Facilitator requested. The United States asserts that the logical inference to be drawn from this refusal is that the information would have supported the United States' claim that the measures were specific subsidies, and suggests that the Panel draw such a logical inference. In addition, the United States considers that this would appear to be a situation in which, in accordance with paragraph 7 of Annex V, the Panel would be justified in drawing an adverse inference that the withheld information demonstrates that the measures are specific subsidies and the United States requests that the Panel draw such an inference.⁴²²⁰

7.1199 The European Communities argues that under Article 2.2 of the SCM Agreement, a subsidy that is limited to *certain* enterprises within a designated geographical region within the jurisdiction of the granting authority shall be specific (emphasis of the European Communities).⁴²²¹ The European Communities asserts that, *a contrario*, a subsidy would appear to be non-specific if it is available to *all* enterprises located within a designated geographical region under the jurisdiction of the granting authority.⁴²²² Thus, the European Communities argues, the United States is wrong when it alleges that Article 2.2 of the SCM Agreement renders all regional aid schemes *per se* specific without inquiring whether or not access is limited to *certain* enterprises located within the designated regions.⁴²²³

7.1200 The European Communities relies, in addition to its parsing of the text of Article 2.2, on the negotiating history of Article 2 in support of its view. The European Communities argues that proposed Article 2.1(d) of the Chairman's draft text of 6 November 1990 would have rendered all subsidies granted by sub-federal authorities specific, even if the subsidy was available to all enterprises within the authority's territory:

"A subsidy which is available to all enterprises located within a designated geographical region shall be specific irrespective of the nature of the granting authority." (emphasis added)⁴²²⁴

The European Communities asserts that this provision eventually became Article 2.2, which does away with the idea that designation of a geographical region alone leads to specificity. Rather, the European Communities asserts, there is the additional limitation that such regional aid must be "limited to certain enterprises", which establishes that regional aid programmes that are available to

BCI deleted, as indicated [***]

all enterprises located within a designated region within the jurisdiction of the granting authority are non-specific.⁴²²⁵

7.1201 As noted, the European Communities asserts that regional aid programmes that are available to all enterprises (as distinct from certain enterprises) in designated regions are non-specific under an *e contrario* reading of Article 2.2. In the European Communities' view, even if regional aid programmes were specific under Article 2.1(a) of the SCM Agreement, such programmes could be non-specific within the meaning of Article 2.1(b).⁴²²⁶ Thus, the European Communities asserts that even if a regional subsidy were found to be specific under Article 2.2, it could nonetheless be non-specific within the meaning of Article 2.1(b) of the SCM Agreement. That is, the European Communities perceives a hierarchical relationship, whereby a finding of non-specificity under Article 2.1(b) prevails over a finding of specificity under Article 2.2. The European Communities goes on to assert that the decisive test is whether the programme satisfies the "objective criteria" element of Article 2.1(b), and maintains that the regional programmes in questions do satisfy this element, and that therefore none of the challenged grants constitutes a specific subsidy.⁴²²⁷

7.1202 The United States disputes the European Communities' proposed interpretation of Article 2 of the SCM Agreement, which the United States considers rests on two mistaken propositions. The United States asserts that the European Communities errs in arguing that, under Article 2.2, a subsidy is only specific if it is limited to a subset of enterprises within a designated geographical region, and in arguing that a subsidy which is specific under Article 2.2 may nevertheless be found to be non-specific under Article 2.1(b).⁴²²⁸ The United States argues that the European Communities' interpretation is not supported by the text of the provision, understood in context and in light of the object and purpose of the SCM Agreement, by the negotiating history of Article 2.2, or by European Communities' practice under its own countervailing duty law.⁴²²⁹

(ii) *Arguments of Third Parties*

Australia

7.1203 Australia disagrees with the European Communities' view that a subsidy is non-specific if it is available to all enterprises located within a designated geographic region under the jurisdiction of the granting authority.⁴²³⁰ Referring to the European Communities' argument that Article 2.2 involves a two-step test, requiring assessment first whether the subsidy is limited to a designated geographic region and second whether the subsidy is limited to certain enterprises within that designated geographic region,⁴²³¹ Australia notes that if such a two-step test for regional specificity were adopted, it would be difficult to envisage a situation covered by Article 2.2 that would not already be covered by Article 2.1(a).⁴²³²

Japan

7.1204 In response to a question from the Panel, Japan asserts that the first sentence of Article 2.2 confirms that a subsidy provided by a local government is treated in the same way as a subsidy

⁴²²⁵ EC, FWS, para. 736.

provided by a central government if the subsidy provided by a local government is specific. Thus, in Japan's view, Article 2.1(a) covers situations stipulated in the first sentence of Article 2.2.⁴²³³

(iii) *Evaluation by the Panel*

Factual background

7.1205 With respect to the United States' allegations concerning regional grants in Germany, Spain, and Wales, we note that, except as specifically indicated below, the factual allegations of the United States concerning the dates, amounts, and recipients of the challenged grants are not disputed by the European Communities.

Nordenham

7.1206 The European Communities acknowledges that on 14 May 2002, the government of the German Land of Lower Saxony awarded a grant, co-financed from the EU budget and the special federal budget "*Gemeinschaftsaufgabe*", of EUR 6 million to Airbus for the extension of Airbus Germany's existing manufacturing site in Nordenham.⁴²³⁴ According to the European Communities, the grant was made because it contributed to improving economic infrastructure in a region struggling with structural difficulties and created additional jobs, complied with the requirements of both Objective 2 under the EU Regional Development Funds ("ERDF") and the German Framework Programme No. 31.⁴²³⁵ The European Communities acknowledges that the eligibility for the grant is restricted to those companies located in specifically designated areas, both under the EU wide regional programme and the German "*Gemeinschaftsaufgabe*".⁴²³⁶

Sevilla, La Rinconada, Illescas (Toledo), Puerto de Santa Maria, Puerto Real

7.1207 The European Communities acknowledges the provision in 2001 of a grant of EUR 2.2 million to the EADS-CASA's facility at Tablada (Sevilla), and the provision of a grant of EUR 814,000 linked to an investment at the EADS CASA facility of San Pablo (Sevilla).⁴²³⁷ The European Communities also acknowledges that in March 2003, the Spanish Ministry of Economics granted EUR 37.9 million to Airbus Spain for its plant of Illescas (Toledo).⁴²³⁸

7.1208 The European Communities also acknowledges that the Spanish Ministry of Economics granted EUR 5.9 million to EADS CASA to invest in a new facility of Puerto Santa Maria and approved a grant of EUR 13.1 million for the Airbus Spain's facility in Puerto Real.⁴²³⁹ The legal basis for all these grants was the Spanish Law 50/1985 on less favourable geographical zones, and, with respect to the co-financed part in Toledo, the ERDF regulation.⁴²⁴⁰

7.1209 The European Communities further acknowledges that the government of Andalusia in July 2001 provided a grant of EUR 8.6 million to the EADS CASA facility in Puerto Santa Maria, and in July 2002 provided another grant of EUR 35.7 million to EADS CASA for its new facility at

⁴²³³ Japan Answer to Panel Third Party Question 5.

⁴²³⁴ EC, FWS, para. 881.

⁴²³⁵ EC, FWS, para. 895.

⁴²³⁶ EC, FWS, para. 897.

⁴²³⁷ EC, FWS, para. 949. The United States identified this grant as having been made to EADS CASA's facility at La Rinconada. US, FWS, para. 494. We do not consider this to undermine the adequacy of the United States' allegations regarding this grant.

⁴²³⁸ EC, FWS, para. 950.

⁴²³⁹ EC, FWS, paras. 952-953.

⁴²⁴⁰ EC, FWS, paras. 949-954.

BCI deleted, as indicated [***]

Sevilla.⁴²⁴¹ The legal basis for these grants was the Orden of 10 March 2000. The European Communities acknowledges that in July 2003, the Andalusian government provided a EUR 17.5 million grant, co-financed by the ERDF, to Airbus Spain for the Puerto Real facility under a regional Andalusian scheme for most depressed areas in Andalusia and the ERDF.⁴²⁴²

7.1210 Finally, the European Communities acknowledges that in March 2004, the government of Castilla-La Mancha, under a regional aid scheme for the entire region of Castilla-La Mancha, provided a grant of EUR 7.6 million, co-financed by the ERDF, with respect to investment in the Airbus, Spain plant in Illescas, Toledo.⁴²⁴³

7.1211 The European Communities disputes the provision of a Spanish government grant of EUR 43.1 million to EADS CASA for the facility at La Rinconada in July 2003, asserting that there exists no such EADS CASA facility at La Rinconada.⁴²⁴⁴ The European Communities asserts that EADS CASA received the EUR 43.1 million grant in connection with the building of a new facility in the area of Sevilla rather than La Rinconada.⁴²⁴⁵ The European Communities acknowledges that the Andalusian Government provided a EUR 61.9 million grant in October 2004 for the purpose of the new EADS CASA facility in Sevilla.⁴²⁴⁶ However, the European Communities asserts that EADS used the proceeds from this grant for purposes unconnected with Airbus LCA.⁴²⁴⁷

Broughton, Wales

7.1212 The European Communities acknowledges that, in 2000, the Welsh government provided two grants, of GBP 4.9 million and GBP 14.6 million, to Airbus UK in respect of its facility in Broughton, Wales.⁴²⁴⁸

Evaluation by the Panel

Existence of a subsidy under Article 1 of the SCM Agreement

7.1213 To the extent that the European Communities has not disputed the United States factual allegations, as indicated above, we consider that with respect to each of the measures described in paragraphs 7.1206 to 7.1212 above, the United States has made out a *prima facie* case that a subsidy exists under Article 1 of the SCM Agreement. The European Communities does not dispute that these measures all consisted of cash grants benefiting Airbus, with the exception of the October 2004 grant by the government of Andalusia, which we address below. Nor does the European Communities dispute that these measures constitute subsidies.

7.1214 With respect to the October 2004 grant by the government of Andalusia, we must resolve certain factual issues under Article 1 of the SCM Agreement before addressing the question whether it is specific under Article 2 of the SCM Agreement. The European Communities does not dispute that

⁴²⁴¹ EC, FWS, para. 955. The European Communities asserts that this latter grant amount is erroneously attributed to La Rinconada by the United States. However, the US asserted that this grant was in connection with the EADS CASA facility in Sevilla. US, FWS, para. 506.

⁴²⁴² EC, FWS, para. 957.

⁴²⁴³ EC, FWS, para. 959.

⁴²⁴⁴ EC, FWS, para. 951.

⁴²⁴⁵ EC, FWS, para. 951.

⁴²⁴⁶ EC, FWS, para. 958, and Exhibit EC-140 (BCI). The European Communities asserts that this latter grant amount is erroneously attributed to La Rinconada by the United States. However, the US identified this grant as being made in connection with the EADS CASA "Sevilla/La Rinconada facility". US, FWS, para. 512.

⁴²⁴⁷ Specifically, the European Communities asserts that the grant funds were used to [***]. EC, FWS, para. 958.

⁴²⁴⁸ EC, FWS, para. 986, 989.

BCI deleted, as indicated [***]

this measure consists of a direct transfer of funds that confers a benefit, but it does dispute the United States' allegation that the grant conferred a benefit on the subsidized product, large civil aircraft. The European Communities argues that the United States has not established as a matter of fact that this grant benefits Airbus Spain's large civil aircraft activities, asserting that it was provided for the purpose of the EADS CASA facilities in Sevilla/La Rinconada, and used exclusively for non-large civil aircraft-related activities.⁴²⁴⁹

7.1215 With respect to this issue, we observe that these factual allegations were first raised in the European Communities' first written submission, in response to the arguments made by the United States in its first written submission, expanding on its request for establishment. We further note that the United States attempted, during the Annex V information gathering process, to seek more specific and detailed information concerning each of these grants, including the amount of the grant, the reasons for approval of the grant, the terms and conditions of the grant, how the grant money was used, and all agreements or other documents providing the legal basis for the grant. The European Communities refused to respond to the United States' questions. In its first written submission, the United States identified the measures in dispute and the respective amounts of funding at stake, relying on information that was publicly available. Although the European Communities has now provided information that was not presented during the Annex V process, we understand the United States to continue to be of the view that the European Communities has failed to disclose all relevant information and that the Panel should draw adverse inferences when establishing the facts surrounding a number of its claims.

7.1216 Paragraph 7 of Annex V provides that a panel "should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process". Although the European Communities failed to provide information requested during the Annex V process, it has subsequently, during the course of this panel proceeding, provided much of that information, which largely corresponds to the publicly available information relied on by the United States. Thus, we are not here faced with a situation where we cannot draw factual conclusions based on the information before us. We therefore do not consider it necessary to draw adverse inferences.

7.1217 In any event, the evidence that the European Communities provides fails to substantiate its factual assertions concerning the October 2004 grant. Having reviewed the information before us, it is clear to us that the United States has demonstrated that the grant in question benefited the EADS CASA facilities in question. Information provided by European Communities demonstrates that work is done at the Tablada facility on large civil aircraft, specifically, A320 and A380 aircraft.⁴²⁵⁰ We note that the European Communities itself asserts that the "overwhelming majority" of activities in Tablada concerns military activities, thus acknowledging that there are LCA activities as well.⁴²⁵¹ Even assuming, as the European Communities asserts, that only a "minor portion" of revenues is derived from sales to Airbus Spain involving the A320 and A380 models, this fails to demonstrate that the grant in question does not benefit Airbus Spain's LCA activities. In addition, the European Communities asserts that the San Pablo facility is "virtually entirely" dedicated to military activities, thus acknowledging that there are some LCA-related activities undertaken as well.⁴²⁵² None of the evidence submitted by the European Communities concerning this facility provides any information about the grant money or how it was invested or used, but it does confirm that work at that facility

⁴²⁴⁹ Specifically, the European Communities asserts that the grant funds were used to [***]. EC, FWS, para. 958.

⁴²⁵⁰ Exhibit EC-139 (BCI) consists of a series of slides dated December 2006, showing the layout of the EADS-CASA Tablada plant and summarizing certain projects apparently undertaken at that plant. Two of the slides indicate that work at this plant is done for Airbus's A380 and A320 models.

⁴²⁵¹ EC, FWS, para. 975-976.

⁴²⁵² EC, FWS, para. 975-977.

BCI deleted, as indicated [***]

includes LCA-related activities.⁴²⁵³ Thus, we conclude that the European Communities has failed to rebut the United States' *prima facie* case that, as a matter of fact, this grant benefits Airbus.

7.1218 Our review of the information provided by the parties, and particularly the facts set out by the European Communities itself, leads us to conclude that each of the challenged regional grants is a financial contribution in the form of a direct transfer of funds and that each confers a benefit on Airbus in connection with the production of LCA. Therefore, each constitutes a subsidy within the meaning of Article 1 of the SCM Agreement.

Specificity

7.1219 Having concluded that the measures challenged by the United States constitute subsidies within the meaning of Article 1 of the SCM Agreement, we now turn to the question of specificity. The European Communities raises two arguments in this regard. First, the European Communities makes a legal argument with respect to the meaning of Article 2.2 of the SCM Agreement, and the question whether subsidies provided to enterprises in certain geographic regions within the territory of the granting authority are specific. Second, the European Communities makes a factual and legal argument with respect to the grants by the Welsh government, arguing that they are not specific under Article 2. We turn first to the legal question under Article 2.2.

Interpretation of Article 2.2 of the SCM Agreement

7.1220 We recall that Article 3.2 of the DSU provides that Members recognise that the dispute settlement system serves to clarify the provisions of the covered agreements "in accordance with customary rules of interpretation of public international law". Article 31.1 of the Vienna Convention on the Law of Treaties ("Vienna Convention"),⁴²⁵⁴ which is generally accepted as such a customary rule, provides:

"A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose."

7.1221 There is a considerable body of WTO case law dealing with the application of these provisions on treaty interpretation in dispute settlement in the WTO. It is clear that interpretation must be based above all on the text of the treaty,⁴²⁵⁵ but that the context of the treaty also plays a role. It is also well-established that these principles of interpretation "neither require nor condone the imputation into a treaty of words that are not there or the importation into a treaty of concepts that were not intended."⁴²⁵⁶ Thus, all language must have a meaning. Furthermore, panels "must be guided by the rules of treaty interpretation set out in the Vienna Convention, and must not add to or diminish rights and obligations provided in the WTO Agreement."⁴²⁵⁷ Finally, the Appellate Body has noted that, if after applying Article 31 of the Vienna Convention, the meaning of a term of the treaty remains ambiguous or obscure, or leads to a result which is manifestly absurd or unreasonable,

⁴²⁵³ Specifically, the document indicates that work at this plant involves [***]. Exhibit EC-138 (BCI). There is no evidentiary basis for apportioning the amount of the grant between LCA and other activities, and the European Communities has not suggested otherwise.

BCI deleted, as indicated [***]

Article 32 of the Vienna Convention allows a treaty interpreter to have recourse to supplementary means of interpretation, including the preparatory work of the treaty, *i.e.*, its negotiating history.⁴²⁵⁸

7.1222 Article 2.2 of the SCM Agreement provides as follows:

"2.2 A subsidy which is limited to certain enterprises located within a designated geographical region within the jurisdiction of the granting authority shall be specific. It is understood that the setting or change of generally applicable tax rates by all levels of government entitled to do so shall not be deemed to be a specific subsidy for the purposes of this Agreement."

Thus, Article 2.2 establishes that a subsidy "**shall** be specific" if it is "limited to certain enterprises located within a designated geographical region within the territory of the granting authority." In order to resolve the question before us, we must interpret the latter phrase.

7.1223 Article 2.2 is not particularly clearly drafted. It could be understood, based on the text alone, as establishing specificity on the basis of a geographical limitation on the recipients ("within a designated region"), which is the United States' position. It could also be understood to establish specificity on the double basis posited by the European Communities – "certain", *i.e.*, not all, enterprises, "within a designated region". While the text, standing alone, is not unambiguous in this respect, when the text is considered in its context and in light of its object and purpose, it is clear to us that Article 2.2 is properly understood to provide that a subsidy available in a designated region within the territory of the granting authority is specific, even if it is available to all enterprises in that designated region.

7.1224 We recall that the European Communities argues that under Article 2.2 of the SCM Agreement, only a subsidy that is limited to *certain* enterprises within a designated geographical region within the jurisdiction of the granting authority shall be specific.⁴²⁵⁹ The European Communities' proposed interpretation would entail that, in order to be specific, a subsidy granted by a regional authority must not only be limited to a designated region within the territory of the granting authority, but must in addition be limited to only a subset of enterprises within that region. However, if a national authority grants a subsidy to a subset of enterprises within its territory, whether that subset of enterprises is located in a designated region or not, such a subsidy would, by definition, already be specific under Article 2.1, which provides, in pertinent part:

"2.1 In order to determine whether a subsidy, as defined in paragraph 1 of Article 1, is specific to an enterprise or industry or group of enterprises or industries (referred to in this Agreement as "certain enterprises") within the jurisdiction of the granting authority, the following principles shall apply:

(a) Where the granting authority, or the legislation pursuant to which the granting authority operates, explicitly limits access to a subsidy to certain enterprises, such subsidy shall be specific.

(b) Where the granting authority, or the legislation pursuant to which the granting authority operates, establishes objective criteria or conditions² governing the eligibility for, and the amount of, a subsidy, specificity shall not exist, provided that the eligibility is automatic and that such criteria and conditions are strictly adhered to.

⁴²⁵⁸ Appellate Body Report, *European Communities – Customs Classification of Certain Computer Equipment* ("EC – Computer Equipment"), WT/DS62/AB/R, WT/DS67/AB/R, WT/DS68/AB/R, adopted 22 June 1998, DSR 1998:V, 1851, para. 86.

⁴²⁵⁹ EC, FWS, para. 733.

BCI deleted, as indicated [***]

The criteria or conditions must be clearly spelled out in law, regulation, or other official document, so as to be capable of verification.

² Objective criteria or conditions, as used herein, mean criteria or conditions which are neutral, which do not favour certain enterprises over others, and which are economic in nature and horizontal in application, such as number of employees or size of enterprise.

Thus, the European Communities' proposed reading of Article 2.2 merely replicates the standard set out in Article 2.1(a), and thereby makes Article 2.2 redundant. As the Appellate Body has stated:

"A fundamental tenet of treaty interpretation flowing from the general rule of interpretation set out in Article 31 is the principle of effectiveness (*ut res magis valeat quam pereat*).²¹ In *United States - Standards for Reformulated and Conventional Gasoline*, we noted that "{o}ne of the corollaries of the 'general rule of interpretation' in the Vienna Convention is that interpretation must give meaning and effect to all the terms of the treaty. An interpreter is not free to adopt a reading that would result in reducing whole clauses or paragraphs of a treaty to redundancy or inutility".²²

²¹ See also (1966) Yearbook of the International Law Commission, Vol. II, p. 219: "When a treaty is open to two interpretations one of which does and the other does not enable the treaty to have appropriate effects, good faith and the objects and purposes of the treaty demand that the former interpretation should be adopted."

²² *United States - Standards for Reformulated and Conventional Gasoline*, WT/DS2/9, adopted 20 May 1996, p. 23."

7.1225 The European Communities appears to recognize that its reading of Article 2.2 has the effect of making it redundant of Article 2.1(a), but dismisses this as a "structural overlap," which it describes as "not uncommon" in treaty-making.⁴²⁶⁰ However, in our view, there is a perfectly reasonable reading of Article 2.2 which avoids this problem, and we consider it appropriate to eschew a reading of that provision which raises it. On this basis alone, we consider the European Communities' proposed interpretation of Article 2.2 to be unsatisfactory, as it fails to give full effect to the text of Article 2 as a whole.

7.1226 In addition, as the United States points out,⁴²⁶¹ the European Communities' reading of Article 2.2 also creates a redundancy with Article 8.2(b). Although Article 8.2(b) has expired (pursuant to the provisions of Article 31 of the SCM Agreement), it did form part of the original "traffic light" architecture of the SCM Agreement, and thus provides us with important context for understanding the intended scope of other provisions.⁴²⁶² Article 8.2(b) specifically rendered assistance to disadvantaged regions within the territory of a Member non-actionable, as long as that assistance met certain criteria. One of those criteria was that the assistance be "non-specific (within

⁴²⁶⁰ EC, Answer to Panel Question 97, para. 263.

⁴²⁶¹ US, SWS, para 380.

⁴²⁶² The Panel in *US - Upland Cotton* noted that provisions of the SCM Agreement that have lapsed may nevertheless be useful in understanding the overall architecture of the SCM Agreement with respect to the different types of subsidies it sought and seeks to address; Panel Report, *US - Upland Cotton*, para. 7.907 (footnote 1086). A similar view was expressed in the Decision by the Arbitrator, *US - FSC (Article 22.6 - US)*, footnote 66.

BCI deleted, as indicated [***]

the meaning of Article 2) within eligible regions." Under the European Communities' reading of Article 2.2, a regional subsidy that is not "limited to certain enterprises" within the region is not specific. Thus, the European Communities' reading of Article 2.2 would have rendered Article 8.2(b) redundant and unnecessary from the outset. Moreover, Article 8.1(b) provided that subsidies which were specific within the meaning of Article 2, but which met all the conditions of Article 8.2, would be non-actionable. Thus, Article 8.2(b) carved out as non-actionable regional development subsidies which, presumably, would otherwise have been actionable, in part because they were specific. Given that the establishment of particular types of subsidies as non-actionable under Article 8, including assistance to disadvantaged regions, was a significant achievement of the Uruguay Round negotiations, an interpretation of Article 2.2 which would have rendered one of the key provisions of Article 8 in this regard redundant and useless from the outset makes no sense to us, and we reject such an interpretation.

7.1227 Thus, in our view, the ordinary meaning of Article 2.2 of the SCM Agreement, read in context and in light of its object and purpose, is clear. As a consequence, there is no need for consideration of the negotiating history of the SCM Agreement.

7.1228 However, even assuming, *arguendo*, that there were some ambiguity in the interpretation of Article 2.2, in our view, the European Communities' description of the negotiating history is inaccurate and does not lend weight to its position. An important issue during the negotiation of the SCM Agreement was the treatment of subsidies by sub-national authorities – e.g., states or provinces in a federal system. Some delegations considered that all subsidies granted by sub-national authorities should be treated as automatically specific, simply because the subsidies were only available to enterprises within the geographical region in question.⁴²⁶³ The European Communities was one of the proponents of this view:

"Indeed, there is no difference, as to their economic effect, between a subsidy granted by a regional or local government to all firms in that region on one hand, and the same subsidy granted to the same firms in the same region but by the central government on the other hand."⁴²⁶⁴

Others delegations argued that subsidies granted by sub-national authorities should be treated as specific only if they were limited to enterprises in a designated geographical region within the jurisdiction of the sub-national authority in question.

7.1229 The 7 November 1990 draft text of the Negotiating Group on Subsidies and Countervailing Measures reflected the first approach, providing, in Article 2.1(d) that a regional subsidy is specific "irrespective of the nature of the granting authority." In other words, regardless of whether the granting authority was national or regional, the fact that a subsidy was limited to a "designated geographical region" would automatically make it specific. The text of Article 2.2 in the Draft Final Act also reflected this approach, providing:

"A subsidy which is available to all enterprises located within a designated geographical region shall be specific irrespective of the nature of the granting authority. It is understood that the setting or change of generally applicable tax rates

⁴²⁶³ US, SWS, para. 383

⁴²⁶⁴ Elements of the Negotiating Framework, Submission by the European Community, MTN.GNG/NG10/W/31, at 6 (November 27, 1989).

BCI deleted, as indicated [***]

by all levels of government entitled to do so shall not be deemed to be a specific subsidy for the purposes of this Agreement."⁴²⁶⁵

7.1230 However, the adopted text of the SCM Agreement reflects the other approach, that a subsidy meets the regional specificity test only if it is "limited to certain enterprises located within a designated geographical region within the jurisdiction of the granting authority."

7.1231 The European Communities argues that the adopted text of Article 2.2 eliminates the notion of aid to a designated region as a singular basis of a finding of specificity. However, the European Communities ignores the change from a text which established that any regional assistance, irrespective of the granting authority, would always be specific, to a text which linked specificity to availability within the jurisdiction of a particular granting authority. This change reflects a compromise which accomplished the goal of those delegations who opposed the text of Article 2.2 in the Draft Final Act, and who sought to ensure that, if the granting authority was a regional government, a subsidy available to enterprises throughout the territory over which that regional government had jurisdiction would not be specific. The European Communities argues that the negotiators went even further, and added an additional limitation that regional aid granted by a regional authority would be specific only if it was limited to less than all enterprises within the region. There does not seem to be any basis for this outcome in the negotiating history, and the European Communities has put forward no evidence or arguments suggesting reasons why it would have been sought by or acceptable to the negotiators.

7.1232 The United States also points out that the European Communities' proposed construction of the regional specificity provision in Article 2.2 is contrary to its own practice in countervailing duty investigations.⁴²⁶⁶ In response to a question from the Panel, the European Communities asserts that this is not the case.⁴²⁶⁷ However, the only evidence it provides is the EC Basic Regulation governing countervailing duty investigations. As the European Communities recognizes, the Basic Regulation transposes the relevant provisions from the SCM Agreement into EC law. It does not, however, elaborate on how they are to be interpreted or applied in practice. The United States has submitted as exhibits decisions of the EC Commission, the investigating authority in the European Communities, and the Council of the European Communities, imposing countervailing duties, finding that aid to designated regions within the territory of a sub-national granting authority is countervailable, based on finding that such a subsidy is specific.⁴²⁶⁸ For instance, the European Communities found that certain incentives granted by the regional government in the Indian state of Maharashtra to enterprises in developing and backward regions of that state were specific, even though they were not limited to a subset of enterprises, stating:

"The scheme is only available to companies having invested within certain designated geographical areas within the State of Maharashtra. It is not available to companies located outside these areas. The level of benefit is different according to the area

⁴²⁶⁵ Draft Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations, MTN.TNC/W/FA, at I.3 (20 December 1991)

⁴²⁶⁶ US, SWS, para 388.

⁴²⁶⁷ EC, Answer to Panel Question 98, paras. 267-269..

⁴²⁶⁸ US, SWS, para. 477, referring to Council Regulation (EC) No 1338/2002 of 22 July 2002 imposing a definitive countervailing duty and collecting definitively the provisional countervailing duty imposed on imports of sulphuric acid originating in India, OJ L196/1, 25.7.2002, recital 32, Exhibit US-581. The United States also points to Council Regulation (EC) No 1891/97 of 26 September 1997 imposing a definitive countervailing duty on imports of farmed Atlantic salmon originating in Norway, OJ L267/19, 30.9.1997, recital 26 ("With regard to the business development grants in central regions, investment grants in assisted areas and business development grants in assisted areas, access to the subsidy is limited to enterprises in certain regions and specificity therefore exists."), Exhibit US-582 and recital 28 ("The grants which are restricted to certain regions are by definition specific.").

BCI deleted, as indicated [***]

concerned. The scheme is therefore specific in accordance with Article 3(2)(a) and Article 3(3) of the basic Regulation."⁴²⁶⁹

While it is clear, as the European Communities asserts, that its countervailing duty determinations are not the subject of this Panel,⁴²⁷⁰ and we are not here addressing the consistency of those determinations with the SCM Agreement, it is nonetheless clear that the European Communities has not, in its own practice, followed the interpretation it urges on us in this dispute.

7.1233 Finally, with regard to the European Communities' "hierarchy" argument, we note that Article 2.2 provides, "A subsidy which is limited to certain enterprises located within a designated geographical region within the jurisdiction of the granting authority **shall be specific.**" There is no indication in the text of the SCM Agreement that a finding of specificity under Article 2.2 is somehow subject to further examination under Article 2.1(b). There is thus no basis for the inference of a hierarchy posited by the European Communities, and a reading of the provisions of Article 2 as potentially conflicting in this manner is to be avoided. Moreover, non-specificity under Article 2.1(b) is based on the existence and application of criteria or conditions governing eligibility for and amount of a subsidy which are neutral, "do not favour certain enterprises over others, and which are economic in nature and horizontal in application, such as number of employees or size of enterprise." The European Communities asserts that "the regional aid programmes themselves satisfy the criteria of Article 2.1(b) of the SCM Agreement".⁴²⁷¹ Essentially, the European Communities appears to be arguing that because the criteria for designation of the region within which challenged subsidies are granted are objective, and the criteria for eligibility for those subsidies within that region are objective, the subsidies granted within that region are non-specific.

7.1234 If this position were accepted, it would mean that Article 8.2(b)(ii) of the SCM Agreement was redundant from the outset. That Article provided that, in order for assistance to a disadvantaged region to be considered non-actionable, *inter alia*, the region in question must be determined "on the basis of neutral and objective criteria", defined in footnote 32 as "criteria which do not favour certain regions beyond what is appropriate for the elimination or reduction of regional disparities within the framework of the regional development policy." There would have been no need for this provision if the European Communities' "hierarchy" argument were correct. Of course, Article 8 has now expired, and thus there is no longer a category of non-actionable subsidies to disadvantaged regions. The European Communities' position effectively would re-introduce the expired provisions of Article 8.2(b), making regional assistance subsidies non-actionable on the basis of being non-specific under Article 2.1(b), which is not a justifiable outcome.

7.1235 The European Communities does not contest, and the information before us substantiates, that the grants provided by the German Land of Lower Saxony and the German government to Airbus in Nordenham in Germany, and the grants provided by the Spanish government to Airbus in Sevilla, La Rinconada, Illescas (Toledo), Puerto de Santa Maria and Puerto Real in Spain, and grants provided by the government of Andalusia to Airbus in Sevilla and Puerto Real in July 2002, July 2003 and October 2004, and by the government of Castilla-La Mancha to Airbus in Illescas (Toledo) in March 2004, were provided to enterprises in designated geographical regions within the territory of the respective granting authorities.

⁴²⁶⁹ See, Commission Regulation (EC) No 573/2002 of 3 April 2002 imposing a provisional countervailing duty on imports of sulphanilic acid originating in India, OJ L87/5, 4.4.2002 ("Sulphanilic Acid from India Provisional CVD Regulation"), recital 68, Exhibit US-580. This finding was confirmed in the regulation imposing a definitive countervailing duty.

⁴²⁷⁰ EC, Answer to Panel Question 98, para. 267.

⁴²⁷¹ EC, FWS, para. 897. See, also, paras. 948, 981-83.

BCI deleted, as indicated [***]

7.1236 In this regard, we note that the grants provided by the government of Andalusia to Airbus in Sevilla and Puerto Real in 2002 and 2003, respectively, and by the government of Castilla-La Mancha to Airbus in Illescas (Toledo) in 2004, were co-financed by the European Regional Development Fund (ERDF).⁴²⁷² The United States asserts that "subsidies under the {ERDF} are necessarily limited to "certain enterprises located within a designated geographical region within the jurisdiction of the granting authority," and thus are specific within the meaning of Article 2.2 of the SCM Agreement".⁴²⁷³ The European Communities does not dispute that these grants were co-financed by the ERDF. However, the European Communities does not address the United States' assertion that grants co-financed by the ERDF are necessarily specific within the meaning of Article 2.2. The European Communities relies entirely on its assertion that the programmes under which these grants were made were generally available throughout Andalusia and Castilla-La Mancha, respectively to dispute the United States' assertion of specificity with respect to these grants.⁴²⁷⁴ Even accepting this as fact⁴²⁷⁵, it does not undermine the United States' specificity argument. In our view, the United States' argument implies that the ERDF is the granting authority, within the meaning of Article 2.2 of the SCM Agreement, for the portions of these grants which it financed, and that the ERDF-financed portions of these grants were therefore provided to enterprises in designated geographical regions within the territory of the granting authority. Based on the foregoing, we consider that the portions of these grants financed by the ERDF were provided to enterprises in designated geographical regions within the territory of the granting authority, and therefore, we conclude that they are specific under Article 2.2 of the SCM Agreement.⁴²⁷⁶

7.1237 Turning to the grant provided by the government of Andalusia to Airbus in Puerto Santa Maria in July 2001, we reach a different conclusion. Although the United States asserts that the grant to Puerto Santa Maria was made pursuant to an Andalusian government development plan for the Bahía de Cadiz, the evidence cited by the United States does not support this conclusion.⁴²⁷⁷ The United States did not assert any other basis for a finding of specificity with respect to this grant. Based on the foregoing, we conclude that the grant provided by the government of Andalusia to Airbus in Puerto Santa Maria in July 2001 was not provided to an enterprise in a designated geographical region within the territory of the granting authority, and is therefore not specific under Article 2.2 of the SCM Agreement.

GBP 19.5 million grant in 2000 by the government of Wales

7.1238 With respect to the alleged 2000 grant by the Welsh government, the European Communities asserts that two grants were actually provided, under two programmes the terms of which make clear that they were not specific within the meaning of Article 2 of the SCM Agreement. The United States asserts that BAE Systems originally applied for a grant under Welsh Assembly's Regional Selective

⁴²⁷² US, FWS, paras. 506, 508 and 510.

⁴²⁷³ US, FWS, paras. 507, 509 and 511.

⁴²⁷⁴ EC, FWS, paras. 967, 980.

⁴²⁷⁵ The United States does not dispute that the governments of Andalusia and Castilla-La Mancha "authorized" and "approved" those grants, respectively. US, FWS, paras. 506, 508 and 510.

⁴²⁷⁶ We note in this regard that the information before us indicates that 75 percent of the grant to Sevilla was financed by the ERDF, but does not indicate what portion of the grants to Puerto Real and Illescas was financed by the ERDF. Thus, the amount of specific subsidy to Puerto Real and Illescas is less than the total amount of those grants, EUR 17.5 and 7.6 million, respectively. Given our conclusions with respect to the magnitude of the subsidies, see paras. 7.1963 - 7.1976, we consider that the lack of precise quantification of the amount of these subsidies does not affect our overall conclusions.

⁴²⁷⁷ Page 14,291 of Exhibit US-240, cited by the United States in this regard, states that that the funds were granted "for a plan of action for the Bahía de Cádiz Centre (*Polígono Parque Industrial Bahía*)". Having carefully reviewed the evidence, we cannot conclude that the "Plan" referred to in Exhibit US-240 is an Andalusian government development plan for the Bahía de Cádiz.

BCI deleted, as indicated [***]

Assistance ("RSA") scheme, which application was denied.⁴²⁷⁸ The United States asserts that the Welsh Assembly, in the face of pressure,⁴²⁷⁹ in September 2000 agreed to provide *ad hoc* a total of GBP 19,500,000, in lieu of the assistance initially requested, to BAE Systems in support of A380 wing production work in Broughton, Wales.⁴²⁸⁰ The United States argues that Article 2 of the UK A380 Launch Aid contract, [***].⁴²⁸¹ further demonstrates that these measures are specific.⁴²⁸²

7.1239 The United States maintains that the circumstances surrounding the GBP 19.5 million grant are important to understanding why it is a specific subsidy.⁴²⁸³ The United States notes that the original grant application was under the RSA programme, and asserts that grants under that scheme are specific within the meaning of Article 2.2 of the SCM Agreement, as they are limited to certain "assisted areas" in Wales.⁴²⁸⁴ The United States asserts that an "uproar" following the Welsh Assembly's rejection of that original application, including, *inter alia*, the threat by BAE Systems to move A380 wing production from Wales to Germany,⁴²⁸⁵ led the Welsh Assembly to provide the GBP 19.5 million to BAE Systems, albeit formally under schemes other than the RSA scheme under which the original application had been made.⁴²⁸⁶ In the United States' view, the European Communities' approach fails to take into account the totality of the evidence, focusing only on events starting with BAE Systems' application for the grants that ultimately were provided, and further fails to address the [***].⁴²⁸⁷

7.1240 The European Communities argues that the United States' allegation that the grant of GBP 19.5 million to Airbus UK in Broughton, Wales is specific is based on an application for a grant that Airbus UK did not actually receive, and simply assumes, without evidence, that the amount actually received was an *ad hoc* replacement for that denied grant.⁴²⁸⁸ According to the European Communities, the United States' allegation of specificity is based entirely on its assumption that the amounts actually received were a direct substitute for the RSA grant that had been originally sought but denied, and argues that the United States has failed to make a *prima facie* case of specificity.⁴²⁸⁹ The European Communities denies, in any event, that the RSA programme provides specific subsidies.⁴²⁹⁰ The European Communities disputes the implication that the grants actually received by Airbus UK in 2000 replaced the denied RSA grant.⁴²⁹¹ Therefore, the European Communities considers that the A380 contract is not relevant, because that contract refers to an amount for RSA, which Airbus UK did not receive. The European Communities argues that, whether RSA is a programme that provides specific subsidies (which the European Communities contends it is not) is not the point, as Airbus received two grants pursuant to two different programmes, both of which are

⁴²⁷⁸ US, FWS, para. 491.

⁴²⁷⁹ According to the United States, *inter alia*, BAE Systems threatened to move the A380 wing production work from Wales to Germany. US, FWS, para. 493.

⁴²⁸⁰ The package included GBP 15,000,000 from the Welsh Development Agency for the "general infrastructure of a big site" and GBP 4,900,000 for the "development of people." US, FWS para. 492.

⁴²⁸¹ A380 LA/MSF Contract, Art. 2.1.2, DS-316-EC-BCI-0000556, 0000562 (blank space in parentheses in original). BCI deleted, as indicated [***]

generally available in Wales.⁴²⁹² Neither of these programmes is RSA, which is limited to assisted areas, whereas the programmes under which grants were actually provided are applicable throughout Wales.⁴²⁹³ The European Communities considers that these grants must be evaluated on the basis of the terms and conditions of the programmes under which they were actually provided, and not as replacements or surrogates for RSA, which was not granted.⁴²⁹⁴

7.1241 While we agree with the United States that the circumstances surrounding the provision of a subsidy are relevant to our evaluation of the question of specificity, the starting point for that evaluation must, in our view, be the programme(s) pursuant to which the subsidy at issue is granted. Only if, notwithstanding an appearance of non-specificity in the grant of a particular subsidy, there are reasons to believe it may nonetheless be specific, do we consider it appropriate to focus our attention on the factual circumstances surrounding the provision of that subsidy to determine the question of specificity. In this regard, the European Communities has provided us with evidence, which the United States does not dispute, that the GBP 19.5 million was granted pursuant to two programmes that do not meet the test set forth in Article 2.2. There is no indication, and the United States does not argue otherwise, that subsidies granted under these programmes are limited by sector, region or enterprise. It follows that subsidies provided under those programmes are not "limited to certain enterprises located within a designated geographical region within the jurisdiction of the granting authority", and are therefore not specific under Article 2.2 of the SCM Agreement. The United States has made no other allegations of specificity with respect to the GBP 19.5 million grant.⁴²⁹⁵

7.1242 We therefore conclude that the GBP 19.5 million provided to Airbus UK in respect of its operations in Broughton, Wales, is not a specific subsidy within the meaning of Article 2.2 of the SCM Agreement.

7.1243 Based on the foregoing, we therefore conclude that grants for the construction of manufacturing and assembly facilities in Nordenham, Germany, and Sevilla, La Rinconada, Toledo, and Puerto Real, Spain, are subsidies within the meaning of Article 1 that are specific within the meaning of Article 2.2. The European Communities does not dispute the amounts in question.

(g) Conclusion

7.1244 In summary, we conclude that the provision of the Mühlenberger Loch industrial site, the provision of the extended runway at Bremen Airport, the provision of the ZAC Aéroconstellation and EIG facilities, as well as regional grants by German authorities in Nordenham and Spanish authorities in Sevilla, La Rinconada, Toledo, Puerto Real, constitute specific subsidies to Airbus. We further conclude that the provision of road improvements by French authorities, the grant provided by the government of Andalusia to Airbus in Puerto Santa Maria in July 2001 and the grant of GBP 19.5 million to Airbus UK in respect of its operations in Broughton, Wales, are not specific subsidies to Airbus, and we will not consider them further in this dispute.

⁴²⁹² EC, FWS, para 985.

⁴²⁹³ EC, SWS, para. 410.

⁴²⁹⁴ EC, SWS, para. 409-410.

⁴²⁹⁵ We therefore do not address the question of specificity under Article 2.1, or the European Communities' arguments concerning *de facto* specificity. EC, FWS, paras. 994, 996.

BCI deleted, as indicated [***]

7. Whether the German government's transfer of its ownership share in Deutsche Airbus to the Daimler Group is a specific subsidy to Airbus

(a) Background to the Capital Restructuring of Deutsche Airbus

7.1245 In this section, we address the United States' claims that two specific transactions arising out of the Federal German government's restructuring of Deutsche Airbus in the late 1980s constitute subsidies to Airbus. We begin by describing the events that led to the restructuring of Deutsche Airbus in 1989, and the specific transactions at issue before us, before considering in greater detail the arguments of the United States and the responses of the European Communities.

7.1246 Deutsche Airbus GmbH (Deutsche Airbus), the German partner in the Airbus GIE consortium, was founded in 1967 to assume work for the development of a European wide-body aircraft that had originally begun in 1965 as a joint venture among five German aerospace companies.⁴²⁹⁶ By 1989, as a result of the consolidation of various German aerospace firms, Deutsche Airbus had become a wholly owned subsidiary of Messerschmitt-Bölkow-Blohm GmbH (MBB), itself the largest aerospace company in West Germany.⁴²⁹⁷ The German share of the Airbus Industrie consortium's development and series production work was performed by MBB and Dornier, with Deutsche Airbus paying MBB and Dornier for services provided.⁴²⁹⁸ Deutsche Airbus had been insufficiently capitalized by its parent company, MBB, and was largely dependent on financial aid from the German government, including guarantees of its private debt.⁴²⁹⁹

7.1247 The German government had, for a number of years prior to 1989, been encouraging MBB to obtain additional capital for Deutsche Airbus by finding new investors, although MBB's attempts on this front had been unsuccessful.⁴³⁰⁰ By 1989, the German government had committed DM 10.7 billion to Deutsche Airbus in LA/MSF and financial aid for sales and series production.⁴³⁰¹ Deutsche Airbus also anticipated that it would require additional financing for the A320 programme, and the start-up of the A330/A340 programme.⁴³⁰² During this time, a significant depreciation of the US dollar relative to the DM, combined with a variety of other factors, had brought Deutsche Airbus to the brink of bankruptcy.⁴³⁰³ It is against this background that the German government implemented the 1989 plan to restructure Deutsche Airbus. The objective of the restructuring plan was to gradually shift the risks associated with participation in Airbus GIE to the private sector. According to the German Federal Ministry of Economics, the restructuring of Deutsche Airbus was designed to create a

⁴²⁹⁶ The original companies in question were: Blohm-Hamburger Flugzeugbau GmbH (HFB), Messerschmitt AG, Vereinigte Flugtechnische Werke (VFW), Siebel and Dornier.

⁴²⁹⁷ By 1969, Messerschmitt, Bölkow AG and HFB had merged to form Messerschmitt-Bölkow-Blohm GmbH (MBB). MBB originally held 60 percent of the interests in Deutsche Airbus, with Dornier and VFW each holding 20 percent. MBB took over VFW in 1981. Prior to Daimler-Benz AG acquiring control of MBB in 1989, the German federal states of Bavaria, Hamburg and Bremen held 52.3 percent of the capital stock of MBB; Monopolkommission, *Zusammenschlussvorhaben der Daimler Benz AG mit der Messerschmitt-Boilkow-Blohm GmbH*, Sondergutachten 18, 1989 (*Monopolkommission Report*), Exhibit US-30, para. 138.

⁴²⁹⁸ *Monopolkommission Report*, Exhibit US-30, para. 116.

⁴²⁹⁹ *Monopolkommission Report*, Exhibit US-30, para. 116. According to the German Federal Cartel Office, the German government bore most of the financial risk associated with development and series production of the German share of Airbus GIE, with Deutsche Airbus functioning as "a liability and risk barrier" for MBB.

⁴³⁰⁰ *Monopolkommission Report*, Exhibit US-30, para. 123.

⁴³⁰¹ *Monopolkommission Report*, Exhibit US-30, para. 117.

⁴³⁰² *Monopolkommission Report*, Exhibit US-30, para. 124.

BCI deleted, as indicated [***]

"realistic chance of placing the Airbus program under full private industry responsibility over the longer term and thus reducing the level of state financial assistance for Airbus." ⁴³⁰⁴

7.1248 The restructuring plan involved the industrial group Daimler-Benz AG (Daimler-Benz) acquiring control of MBB (and thus Deutsche Airbus) through a newly created aerospace subsidiary, Deutsche Aerospace AG (Dasa).⁴³⁰⁵ The restructuring also involved a series of commitments by the German government that significantly limited any risk to Daimler-Benz associated with its acquisition of the German share of the Airbus consortium.⁴³⁰⁶ These transactions were set forth in a Framework Agreement among the Federal Republic of Germany, Daimler-Benz, MBB and Deutsche Airbus.⁴³⁰⁷ The principal elements of the restructuring transactions were as follows: First, the German government repaid, on behalf of Deutsche Airbus, DM 1.9 billion of Deutsche Airbus outstanding bank debt which had been guaranteed by the German government.⁴³⁰⁸ In addition, the German government agreed to pay up to DM 750 million of Deutsche Airbus' guaranteed debt in respect of the A300/A310 programmes that was still outstanding at the end of 1994.⁴³⁰⁹ Second, the German government established an exchange rate loss insurance programme under which it agreed to cover future exchange rate losses incurred by Deutsche Airbus.⁴³¹⁰ Third, the German government provided a DM 165 million loan to finance production of the A320.⁴³¹¹ Fourth, the German government rescheduled repayments of LA/MSF previously granted in connection with its financing of development costs for the A300, A310, A320 and A330/A340 pursuant to a (profit-based) income adjustment bond, or "debtor warrant".⁴³¹² Fifth, the German government, through the government development bank, *Kreditanstalt für Wiederaufbau* (KfW) agreed to make a DM 505 million equity infusion to Deutsche Airbus, representing 20 percent of the equity in Deutsche Airbus. KfW's

⁴³⁰⁴ *Handelsblatt* No. 212, November 3, 1988, p. 24 "Daimler-Benz-MBB / Statement of the German Federal Ministry of Economics on the Restructuring of the Aviation Industry," Exhibit US-259.

⁴³⁰⁵ In 1989, MBB, Dornier and two other companies, Motoren und Turbinen Union and Telefunken System Technik were merged into a newly created aerospace subsidiary of the German automaker Daimler-Benz AG (Daimler-Benz), called Deutsche Aerospace AG (Dasa), as one part of the restructuring of the German aerospace industry; Exhibit EC-26, p. 2.

⁴³⁰⁶ *Monopolkommission Report*, Exhibit US-30, para. 129.

⁴³⁰⁷ The Framework Agreement, dated as of 23 March 1989, as amended on 2 September 1989 (the "Framework Agreement"), Exhibit EC-887-HSBI. The Framework Agreement was amended a further three times between 1992 and 1998. The last of those amendments occurred in December 1998, when the parties agreed to settle all of the German government's outstanding repayment claims under the debtor warrant for a one-off compensatory payment of DM 1.75 billion. The United States claims that the 1998 settlement of Deutsche Airbus debt to the German government was itself a specific subsidy to Airbus. We address this claim in Section VII.E.8

⁴³⁰⁸ *Monopolkommission Report*, Exhibit US-30, para. 121.

⁴³⁰⁹ *Monopolkommission Report*, Exhibit US-30, para. 131.

⁴³¹⁰ *Monopolkommission Report*, Exhibit US-30, para. 131. This aspect of the restructuring programme was determined to be a subsidy on exports prohibited under the Tokyo Round Subsidies Code, by a GATT panel. GATT Panel Report, *EEC – Airbus*, 4 March 1992, unadopted, *SCM/142*.

⁴³¹¹ US, FWS, para. 520, footnote 622; EC, FWS, para. 1180.

⁴³¹² The European Communities translates *Besserungsschein* as "debtor warrant"; EC, FWS, para. 1179, and we use the same term to refer to the *Besserungsschein*. We note that in one exhibit, the United States has translated the term *Besserungsschein* as "(profit-based) income-adjustment bond": Exhibit US-31, p. 14. Under the terms of the debtor warrant, the German government's repayment claims against Deutsche Airbus' were to be met from Deutsche Airbus' annual profits (*i.e.*, the repayment obligations were contingent on Deutsche Airbus having earned pre-tax profits in the preceding year); Daimler-Benz Annual Report 1997, Exhibit US-262, p. 96. Moreover, Deutsche Airbus profits were first to be applied to increasing its equity capital to DM 1.755 billion and to providing a special reserve for exchange rate losses and a revenue reserve. According to the Federal Cartel Office, the arrangement for the government's repayment obligations to be made pursuant to the terms of the debtor warrant meant that the repayment claims of the German government were delayed far into the future, leading to a considerable interest rate subsidy; *Monopolkommission Report*, Exhibit US-30, para. 132.

BCI deleted, as indicated [***]

acquisition of the 20 percent stake in Deutsche Airbus was originally envisaged to be for a period of 10 years, with MBB agreeing to purchase the 20 percent stake from KfW by the end of 1999 at the latest.

7.1249 The United States' subsidy claims relate to the fifth element of the restructuring of Deutsche Airbus; namely, the acquisition by KfW of the 20 percent equity interest in Deutsche Airbus in 1989, and the subsequent sale of that interest to MBB in 1992.⁴³¹³

(b) Arguments of the parties

(i) *United States*

The purchase by KfW of 20 percent of the shares of Deutsche Airbus

7.1250 The United States argues that the acquisition by KfW of 20 percent of the shares of Deutsche Airbus constitutes a "financial contribution" by the German government in the form of a "direct transfer of funds" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. The United States argues that the acquisition by KfW of 20 percent of the shares of Deutsche Airbus is an equity infusion by the German government in Deutsche Airbus, and that Article 1.1(a)(1)(i) of the SCM Agreement includes equity infusions among the types of "direct transfers of funds" that constitute financial contributions under Article 1.1(a)(1).⁴³¹⁴ The United States also contends that this financial contribution conferred a benefit on Deutsche Airbus within the meaning of Article 1.1(b) of the SCM Agreement. The United States submits that, while Article 1.1(b) of the SCM Agreement does not establish a standard for determining whether an equity infusion confers a benefit on the recipient, Article 14(a) provides relevant context for such a determination. In light of Article 14(a), the United States submits that if a government's decision to provide equity to a company is inconsistent with the usual investment practice of private investors in the Member's territory, the equity infusion confers a benefit within the meaning of Article 1.1(b).⁴³¹⁵

7.1251 Accordingly, the United States argues that the German government's decision to make the DM 505 million equity infusion in Deutsche Airbus was inconsistent with the usual investment practice of private investors in Germany. The United States contends that Deutsche Airbus' financial position at the time of the investment by KfW was exceedingly poor.⁴³¹⁶ In particular, the United States notes that in Deutsche Airbus' 1990 Annual Report, the company reported significant liabilities on its balance sheet, that it continued to face business risks from the DM/dollar exchange rate, lacked capital to finance the DM 2 billion costs of producing the A320, A321 and A330/A340 and would not be able to borrow the necessary additional funds without first obtaining additional equity.⁴³¹⁷ The United States also points to the fact that the KfW infusion was itself part of a package of financial aid

⁴³¹³ Although the parties to the Framework Agreement had originally agreed that MBB would purchase KfW's interest in Deutsche Airbus in 1999, this date was brought forward to 1996 by a September 1989 amendment to the Framework Agreement. In 1992, following the adverse GATT Panel Report in *EEC – Airbus*, and the German government's decision to terminate the exchange rate loss insurance programme at issue in that dispute, the Framework Agreement was further amended, *inter alia*, to require that MBB purchase KfW's 20 percent equity stake in Deutsche Airbus by 30 September 1992 at the latest, for the purchase price of DM [[HSBI]], the consideration to take the form of a repayment claim pursuant to the terms of the debtor warrant; EC, FWS, para. 1182.

⁴³¹⁴ US, FWS, paras. 543.

⁴³¹⁵ US, FWS, para. 545.

⁴³¹⁶ In this regard, the United States notes that at the end of 1988, Deutsche Airbus' parent, MBB, had reported shareholders' equity of less than DM 900 million, compared to total liabilities in excess of DM 3.6 billion. MBB had also reported a consolidated net loss of DM 83.3 million in 1987; US, FWS, para. 546; MBB Consolidated Annual Report 1989, Exhibit US-267, p. 51.

⁴³¹⁷ US, FWS, para. 546 ; Deutsche Airbus, Annual Report 1990, p. 18, Exhibit US-268.

BCI deleted, as indicated [***]

to MBB (that was a precondition to Daimler-Benz's agreement to acquire control of MBB) as an additional relevant fact that confirms the non-commercial nature of the German government's investment.⁴³¹⁸

7.1252 Finally, the United States argues that the equity infusion is specific to Airbus within the meaning of Article 2 of the SCM Agreement, as an exercise of discretion by the German government to provide equity to a single company, Deutsche Airbus, as part of a broader aid package for that company.⁴³¹⁹

The 1992 sale of KfW's 20 percent interest in Deutsche Airbus to MBB

7.1253 The United States claims that the 1992 sale by KfW of its 20 percent interest in Deutsche Airbus to MBB also constitutes a subsidy to Airbus. The United States argues that the transfer of shares in Deutsche Airbus to MBB is a "financial contribution" because it involves the "direct transfer of funds" (*i.e.*, share capital), within the meaning of Article 1.1(a)(1) of the SCM Agreement.⁴³²⁰ The United States asserts that, based on publicly available information, MBB did not appear to have paid any consideration for the Deutsche Airbus shares acquired from KfW, and that the share transfer was, effectively, a DM 505 million grant.⁴³²¹

7.1254 The United States also points to the background of the share transfer to MBB as evidence of its non-commercial nature. In this regard, the United States notes that that when KfW acquired the 20 percent stake in Deutsche Airbus in 1989, it had been agreed that MBB would purchase that stake from KfW by 1999 at the latest. In 1990, this agreed date was changed to 1996. However, the United States alleges that the date for the acquisition by MBB was then brought forward to 1992 directly as a result of the findings of the 1992 GATT panel that the German government's exchange rate guarantee scheme was a prohibited export subsidy to Deutsche Airbus.⁴³²² According to the United States, the German government agreed to eliminate the exchange rate guarantee scheme, whereupon Daimler-Benz demanded that it be compensated, and the German government agreed to return its 20 percent stake in Deutsche Airbus to MBB (which had been renamed Dasa) in 1992 "apparently free of charge".⁴³²³ The United States argues that KfW's uncompensated return of Deutsche Airbus shares could be considered as converting its original provision of a DM 505 million equity infusion to Deutsche Airbus into an outright grant.⁴³²⁴ In support of its contention that the share transfer to MBB was non-commercial in nature, the United States also relies on statements by Daimler-Benz and the former head of DG Trade of the European Commission, to the effect that the terms of the 1992 transfer of Deutsche Airbus shares to MBB was intended to "compensate" Daimler-

⁴³¹⁸ United States, FWS, para. 547. The United States also points to a published Answer by the Deputy Secretary of Parliament to a question concerning the "subsidies" granted by the Federal government to Airbus, which specifically lists the equity infusion as one such subsidy. US, FWS, para. 540; BT-Drs. 13/8409, Exhibit US-31, pp. 13-14.

⁴³¹⁹ US, FWS, para. 548.

⁴³²⁰ US, FWS, para. 553.

⁴³²¹ US, FWS, para. 555.

⁴³²² GATT Panel Report, *EEC – Airbus*, 4 March 1992, unadopted, *SCM/142*.

⁴³²³ US, FWS, para. 550. The United States notes that in a 1992 Report, Daimler-Benz explained that, following the decision of the GATT Panel, the German government and Daimler-Benz entered into negotiations "with a view to achieving an equally satisfactory solution when the present assistance ceases. In the resulting agreement, it was decided that, as one of the compensatory measures, the shares held by the Reconstruction Loan Corporation will be transferred to Deutsche Airbus at an earlier date than scheduled..."; Daimler-Benz Consolidated Interim Report, January 1-June 30, 1992, p. 7, Exhibit US-272.

⁴³²⁴ US, Answer to Panel Question 161, para. 160. This is why, if the Panel accepts that the 1992 KfW transfer of its 20 percent stake in Deutsche Airbus to MBB was made "free of charge", the United States considers it unnecessary for the Panel to make a separate finding regarding the original DM 505 million equity infusion; *see also*, US, FWS, para. 552, footnote 668.

BCI deleted, as indicated [***]

Benz for the German government's withdrawal of the exchange rate guarantee scheme following the adverse GATT Panel decision.⁴³²⁵

7.1255 The United States also argues that, if the Panel were to find that KfW's transfer of its 20 percent equity interest in Deutsche Airbus to MBB was not free of charge, we should find (i) that the original equity infusion constitutes a subsidy (inasmuch as providing that infusion was inconsistent with the usual investment practice of private investors and thus confers a benefit); and (ii) "that, even assuming *arguendo*, the payment the European Communities says KfW received when it sold its Deutsche Airbus shares to MBB in 1992, that equity infusion also constitutes a subsidy (inasmuch as providing that infusion was inconsistent with the usual investment practice of private investors and thus confers a benefit)."⁴³²⁶

7.1256 The United States argues that in other disputes concerning restructuring of financially distressed companies, panels have considered the absence of independent assessments or going-concern analyses of the company to be relevant to the commercial reasonableness of government provision of equity to such companies. The United States notes that the European Communities has not offered any evidence that the German government based its decision to provide additional capital to Deutsche Airbus on independent assessment studies, such as studies comparing the going-concern value of Deutsche Airbus with its liquidation value.⁴³²⁷ The United States also notes that the European Communities had refused to respond to questions about the terms and conditions of the 1992 transfer by KfW of its 20 percent equity interest in Deutsche Airbus posed by the Facilitator during the Annex V process.⁴³²⁸ According to the United States, the logical inference to be drawn from such a refusal is that the information would have supported the United States' claim that the measure is a specific subsidy. The United States requests the Panel to draw such an inference, and in addition, requests the Panel to draw an adverse inference that the withheld information demonstrates that the measure is a specific subsidy.⁴³²⁹

7.1257 Finally, the United States argues that the 1992 share transfer is specific to Airbus within the meaning of Article 2 of the SCM Agreement because it resulted from a negotiation between the German government and a single company to compensate the company from the effects of withdrawing the exchange rate guarantee scheme that was found to be inconsistent with the Tokyo Round Subsidies Code.⁴³³⁰

(ii) *European Communities*

The purchase by KfW of 20 percent of the shares of Deutsche Airbus

7.1258 The European Communities argues that the United States "fails to distinguish between the recipient of the alleged subsidy in 1989 and today's LCA manufacturer - Airbus SAS."⁴³³¹ According

⁴³²⁵ US, FWS, paras. 550-552, 554. The United States refers to an excerpt from an interview with the then head of DG Trade, Peter Carl, in which Carl is quoted as saying:

"We lost the export subsidy case...But it was settled immediately afterwards. We agreed with the Germans that they had to change their system. But what happened in reality was the way the German government simply changed the way in which it handed out very substantial amounts of money to Deutsche Airbus. Instead of going by route A, it went by route B"; Stephen Aris, *Close to the Sun*, at 166-167 (2004), Exhibit US-23.

⁴³³⁰ US, FWS, para. 556.

⁴³³¹ EC, FWS, para. 1212.

BCI deleted, as indicated [***]

to the European Communities, the United States has attempted to demonstrate that the 1989 investment by KfW is a subsidy, "without showing how that alleged subsidy passed on to Airbus SAS to benefit the production of LCA alleged by the United States to be causing present adverse effects."⁴³³² The European Communities submits that the Panel should reject the United States' claim on this basis.

7.1259 The European Communities argues that KfW's equity investment in Deutsche Airbus did not confer a benefit on Deutsche Airbus. The European Communities agrees with the United States that Article 14(a) of the SCM Agreement offers contextual guidance for determining whether a benefit is conferred in the context of an equity infusion.⁴³³³ Contrary to the assertions of the United States however, the European Communities argues that the KfW investment was not inconsistent with the usual investment practice of private investors in Germany because Daimler-Benz, "through MBB" also acquired shares in Deutsche Airbus at that time and for the same nominal price per share. The European Communities also contends that the evidence adduced by the United States of MBB's financial position at the time of the investment is irrelevant to an assessment of Deutsche Airbus' equityworthiness. According to the European Communities, Deutsche Airbus was equityworthy at the relevant time, as is confirmed by Daimler-Benz's simultaneous purchase of Deutsche Airbus' shares *following* Deutsche Airbus' restructuring.⁴³³⁴

The 1992 transfer of KfW's 20 percent interest in Deutsche Airbus to MBB

7.1260 The European Communities contends that the sale by KfW of its 20 percent interest in Deutsche Airbus to MBB did not confer a benefit on Deutsche Airbus, because the transfer of a company's shares from one shareholder to another is of no economic consequence to the company itself.⁴³³⁵ In addition, the European Communities argues that MBB, as the purchaser of KfW's 20 percent interest in Deutsche Airbus (and therefore as the recipient of any alleged financial contribution), did not develop, manufacture or sell any Airbus LCA in 1992 or subsequently.⁴³³⁶ According to the European Communities, the United States has failed to demonstrate how the acquisition of shares in Deutsche Airbus could have conferred a benefit on Deutsche Airbus, let alone "how the alleged subsidy (benefit) passed from MBB to "Deutsche Airbus" (which was manufacturing LCA in the past) or, more pertinently, to Airbus SAS, which today develops, manufactures and sells LCA that is alleged to impose present adverse effects on United States' interests."⁴³³⁷

7.1261 Moreover, the European Communities contends that the share transfer to MBB was not in fact "free of charge" as alleged by the United States. The European Communities points to independent valuations of KfW's 20 percent interest in Deutsche Airbus by [***] and contends that the fact that the value of KfW's 20 percent stake in Deutsche Airbus in 1992 was less than its initial value at the time KfW subscribed the shares does not indicate that there was a subsidy.

7.1262 The European Communities notes that one of the terms of the 1989 restructuring was that, should the value of KfW's 20 percent interest in Deutsche Airbus [***].⁴³³⁸ Since the 1992 valuation

⁴³³² EC, FWS, para. 1212.

⁴³³³ The European Communities argues that Appellate Body case law on the relevance of Article 14 to the interpretation of Article 1.1(b) of the SCM Agreement "neither calls for nor suggests a mechanistic, automatic and literal application of tests in Article 14 to the issue of determination of existence of benefit in the sense of Article 1.1(b)." However, the European Communities also indicates that in the context of an equity contribution by a government, it is implicit in the notion of "benefit" in Article 1.1(b) to inquire into the usual investment practice of private investors; EC, Answer to Panel Question 101, paras. 277, 280.

⁴³³⁴ EC, FWS, para. 1217.

⁴³³⁵ EC, FWS, para. 1203; EC, SWS, para. 600.

⁴³³⁶ EC, FWS, para. 1203.

⁴³³⁷ EC, FWS, para. 1203.

⁴³³⁸ EC, FWS, para. 1209.

BCI deleted, as indicated [***]

of the 20 percent stake by [***] was less than DM 505 million, the German government thereby became entitled, above and beyond the [[HSBI]] value ascribed to the 20 percent stake by [***], to an additional amount of [[HSBI]]. According to the European Communities, the German government, Daimler-Benz, MBB and Deutsche Airbus agreed that an amount of [[HSBI]], corresponding to the value of the shares by [***], plus an additional amount of [[HSBI]], be paid by Deutsche Airbus under the terms of the debtor warrant.⁴³³⁹ The transfer by KfW of its 20 percent interest in Deutsche Airbus to MBB was therefore not "free of charge" and, according to the European Communities, did not confer a benefit on Deutsche Airbus.

7.1263 The European Communities also contends that the United States has agreed that the 1992 amendment to the 1989 Framework Agreement did not affect the economic position of Deutsche Airbus and that, since the 1992 sale of KfW's 20 percent equity interest in Deutsche Airbus to MBB was an element of the 1989 Framework Agreement and the 1992 amendment, it likewise cannot be held to confer a benefit on Deutsche Airbus.⁴³⁴⁰ In addition, the European Communities argues that, if the Panel were to find that the KfW acquisition of a 20 percent equity interest in Deutsche Airbus in 1989 were tantamount to a grant to Deutsche Airbus, it could not then conclude that the 1992 transfer of that equity interest to MBB constitutes a second subsidy, because to do so would amount to double counting.⁴³⁴¹

(c) Evaluation by the Panel

(i) *Additional factual background to KfW's acquisition and subsequent sale of the 20 percent equity interest in Deutsche Airbus*

7.1264 Before proceeding to evaluate the arguments of the parties, we consider it helpful to set forth additional information concerning the terms on which KfW initially acquired the 20 percent interest in Deutsche Airbus in 1989, and the terms on which it ultimately transferred that interest to MBB in 1992. As previously indicated, these transactions were elements of the 1989 restructuring of Deutsche Airbus which involved Daimler-Benz acquiring a majority shareholding in MBB and thus, indirectly, Deutsche Airbus' 37.9 percent interest in Airbus Industrie.

7.1265 In conjunction with the Daimler-Benz acquisition of a majority interest in MBB, MBB agreed to contribute additional capital of approximately DM 1 billion to Deutsche Airbus.⁴³⁴² Also in conjunction with the Daimler-Benz acquisition of a majority interest in MBB, KfW agreed to make a capital contribution of DM 505 million to Deutsche Airbus, representing 20 percent of the outstanding equity capital of Deutsche Airbus. In addition, the German government agreed that, during the 10 year period in which KfW was originally expected to hold its equity interest in Deutsche Airbus, any profits generated by Deutsche Airbus would, for at least the first eight years, be used first to build up Deutsche Airbus' capital base and to form a special reserve to compensate Deutsche Airbus for exchange rate losses.⁴³⁴³

⁴³³⁹ EC, FWS, para. 1209.

⁴³⁴⁰ EC, Comments on US Answer to Panel Question 225, para. 208; referring to US, Answer to Question 32, paras. 209-211.

⁴³⁴¹ EC, Comments on US Answer to Panel Question 225, para. 209.

⁴³⁴² Of this amount, DM 800 million was to be provided in cash, DM 5 million was to be provided in the form of an in-kind contribution of MBB's transport and commercial aircraft division, and DM 195 million was to consist of a special payment to be allocated to a special capital reserve in order to compensate Deutsche Airbus for US dollar exchange rate losses. According to the German Federal Cartel Office, DM 800 million of the DM 1 billion additional capital provided by MBB was attributable to Daimler-Benz's DM 993 million capital injection to MBB as part of its acquisition of a majority interest in MBB; *Monopolkommission Report*, Exhibit US-30, paras. 125, 126, 128.

⁴³⁴³ *Monopolkommission Report*, Exhibit US-30, para. 132.

BCI deleted, as indicated [***]

7.1266 It was originally agreed among the parties to the Framework Agreement that KfW's investment in Deutsche Airbus was to be of 10 years' duration, with MBB agreeing to acquire the 20 percent equity interest in Deutsche Airbus from KfW by the end of 1999.⁴³⁴⁴ The parties to the Framework Agreement had agreed that, [***].⁴³⁴⁵

7.1267 In 1992, the Framework Agreement was amended to, among other things, bring forward to 1992 the date of MBB's purchase of KfW's 20 percent equity interest in Deutsche Airbus, and to provide that the purchase price for that stake [***] DM [[HSBI]] million. The European Communities has provided evidence suggesting that the amount of DM [[HSBI]] million was negotiated between the German government and MBB based on advice from two independent accounting firms, [***], and that the value of KfW's 20 percent equity interest in Deutsche Airbus in 1992 was DM [[HSBI]] million.⁴³⁴⁶ This means that the sale price of DM [[HSBI]] million negotiated in 1992 represents [*** [[HSBI]] ***].

(ii) *Was the 1992 transfer of KfW's 20 percent equity interest in Deutsche Airbus to MBB "free of charge"?*

7.1268 The United States argues that both the acquisition by KfW of the 20 percent interest in Deutsche Airbus and the subsequent sale of that interest to Deutsche Airbus' parent MBB, are specific subsidies. In its first written submission, the United States indicated that if the Panel were to find that the 1992 sale by KfW of its 20 percent interest in Deutsche Airbus to MBB amounted to a grant in the amount of DM 505 million, it would not be necessary for the Panel to determine whether the original acquisition of the 20 percent stake by KfW in 1989 was also a subsidy.⁴³⁴⁷ In response to a question from the Panel, the United States subsequently explained that the argument which it had formulated in its first written submission was based on publicly available information regarding the purchase and subsequent sale by KfW of its equity interest in Deutsche Airbus, because the European Communities had not provided any information concerning the 1992 transfer by KfW in the Annex V process.⁴³⁴⁸ According to the United States, the logical inference to be drawn from the publicly available information was that KfW's shares in Deutsche Airbus had been acquired in 1989 for DM 505 million and had then effectively been returned to MBB without payment. As a result, according to the United States, the uncompensated return of shares could be considered to have converted the original provision of a DM 505 million equity infusion to Deutsche Airbus into an outright grant.⁴³⁴⁹ On this basis, the United States considered that it would be unnecessary for the Panel to make a separate finding as to whether the 1989 KfW acquisition of shares in Deutsche Airbus amounted to a subsidy.

7.1269 According to the United States, if the Panel were to accept the European Communities' subsequent contention that the 1992 transfer by KfW of its 20 percent interest in Deutsche Airbus to MBB was made for consideration (a contention which the United States regards as unsubstantiated), then the Panel should make findings regarding both the original DM 505 million acquisition by KfW of a 20 percent equity interest in Deutsche Airbus and the subsequent transfer of that interest to MBB in 1992.⁴³⁵⁰

⁴³⁴⁴ As previously noted, the Framework Agreement was amended in September 1989 to bring forward the date at which MBB was required to purchase KfW's 20 percent interest in Deutsche Airbus to 1996, before that date was once again brought forward to 1992.

BCI deleted, as indicated [***]

7.1270 We are not persuaded that the 1992 transfer of KfW's equity interest in Deutsche Airbus to MBB was "free of charge" as alleged by the United States. We base this factual finding on the terms of the Framework Agreement, as amended in 1992, which provided that the consideration to be provided for the transfer of the shares was DM [[HSBI]] [***].⁴³⁵¹ As we explain further below, we are not in a position to calculate with precision what would have been the present value, in 1992, [*** [[HSBI]]***]. However, we are satisfied that the value would have been greater than zero. We are therefore unable to conclude that the 1992 transfer by KfW of its 20 percent equity interest in Deutsche Airbus was made "free of charge", or that it could be considered to have converted the whole of KfW's original provision of a DM 505 million equity infusion to Deutsche Airbus into a grant.⁴³⁵² This being so, it is necessary for us to consider whether the 1989 acquisition by KfW of a 20 percent stake in Deutsche Airbus *and* the 1992 sale of that stake to MBB, *each* constitutes a specific subsidy to Airbus.

7.1271 Although we will examine both the 1989 and the 1992 transactions in order to establish whether either can be said to amount to a subsidy, we note that the two transactions are related to one another and that this circumstance should be taken into account in our assessment of each of them. For example, in assessing whether the 1989 acquisition by KfW of a 20 percent equity interest in Deutsche Airbus constitutes a subsidy, we consider not only the purchase price paid by KfW (DM 505 million) but the fact that one of the terms on which that stake was acquired was that MBB, the only other shareholder of Deutsche Airbus, was obligated to purchase that stake from KfW by 1999 according to a particular pricing formula designed to [***].⁴³⁵³ Similarly, in assessing whether the 1992 transfer by KfW of its 20 percent interest in Deutsche Airbus to MBB constitutes a subsidy, we consider the 1992 amendments to the terms of the debtor warrant [***].

(iii) *KfW's acquisition of a 20 percent equity interest in Deutsche Airbus in 1989*

7.1272 We consider that the 1989 acquisition by KfW of a 20 percent equity interest in Deutsche Airbus constitutes a direct transfer of funds in the form of an equity infusion and is therefore a financial contribution pursuant to Article 1.1(a)(1)(i) of the SCM Agreement.

7.1273 In relation to the existence of a benefit conferred by that financial contribution, we note the European Communities' contention that the United States has failed to demonstrate how any "alleged subsidy passed on to Airbus SAS to benefit the production of LCA alleged by the United States to be causing present adverse effects."⁴³⁵⁴ By this, we understand the European Communities to argue that the United States has failed to demonstrate how any benefit conferred on Deutsche Airbus by the financial contribution "passed through" to Airbus SAS. For reasons which we fully explain elsewhere in this report, we reject the European Communities' arguments that it is necessary for the United States to affirmatively demonstrate the "pass-through" to Airbus SAS of the benefit conferred by a financial contribution which is provided to Airbus GIE or one of the Airbus partners (such as Deutsche Airbus).⁴³⁵⁵ In short, if we find that KfW's acquisition of 20 percent of the shares of Deutsche Airbus conferred a benefit on Deutsche Airbus, we consider that it will have conferred a benefit on the Airbus Industrie consortium and thus, Airbus SAS, without requiring the United States to affirmatively establish the "pass-through" of any benefit to the Airbus Industrie consortium, or to Airbus SAS.

⁴³⁵¹ Second amendment to the Framework Agreement; Exhibit EC-889 HSBI.

⁴³⁵² Moreover, we note that this claim to repayment was settled by the German government in 1998, along with the other debt outstanding under the debtor warrant, as part of the 1998 debt settlement. *See*, paras. 7.1315 - 7.1322.

⁴³⁵³ As originally negotiated, the latest date for the purchase of KfW's stake by MBB was 1999. The first amendment to the Framework Agreement amended that date to 1996, and the third amendment to the Framework Agreement amended the date once again, to 1992.

⁴³⁵⁴ EC, FWS, para. 1212.

⁴³⁵⁵ *See*, paras. 7.190 - 7.200 above.

BCI deleted, as indicated [***]

7.1274 As to whether KfW's acquisition of a 20 percent equity interest in Deutsche Airbus conferred a "benefit" on Deutsche Airbus, we note that the SCM Agreement does not set forth when a financial contribution in the form of an equity infusion will be considered to confer a "benefit" for purposes of Article 1.1(b). However, it is well established that a financial contribution confers a benefit within the meaning of Article 1.1(b) where the terms on which the financial contribution was provided to the recipient are more favourable than the terms available to the recipient in the market.⁴³⁵⁶ Although Article 14 of the SCM Agreement sets forth guidelines for investigating authorities in countervailing duty investigations to follow when calculating the amount of benefit to the recipient for purposes of Part V of the SCM Agreement, the Appellate Body has held that Article 14 also constitutes relevant context for the interpretation of "benefit" in Article 1.1(b).⁴³⁵⁷ Article 14(a) of the SCM Agreement provides:

"{G}overnment provision of equity capital shall not be considered as conferring a benefit, unless the investment decision can be regarded as inconsistent with the *usual investment practice* (including for the provision of risk capital) *of private investors* in the territory of that Member."⁴³⁵⁸

7.1275 Both the United States and the European Communities agree that, in assessing whether the KfW equity infusion conferred a benefit on Deutsche Airbus, it is appropriate for us to consider whether providing the equity infusion was consistent with the usual investment practice of private investors in Germany.⁴³⁵⁹ Our approach to the issue of benefit in the context of KfW's acquisition of a 20 percent equity interest in Deutsche Airbus is to ask whether the United States has demonstrated that a reasonable private investor would not have made this investment on the same terms and conditions based on the information available at that time.

7.1276 We note that the financial position of Deutsche Airbus at the time of the KfW investment was exceedingly poor. For the financial year ended 31 December 1988, Deutsche Airbus reported a loss of DM 270.1 million.⁴³⁶⁰ Deutsche Airbus had also accumulated losses from previous years that, together with the 1988 loss, comprised an aggregate loss of DM 3.37 billion. The European Communities itself acknowledges that in the late 1980s, "despite Deutsche Airbus' favourable commercial prospects (especially as regards the number of orders received for the A320), a variety of external and internal factors, and especially the extreme collapse in the value of the US dollar, brought Deutsche Airbus to the verge of bankruptcy."⁴³⁶¹ In order to avoid insolvency, Deutsche Airbus was availing itself of a provision of German law that permitted creditors to waive claims in

BCI deleted, as indicated [***]

respect of government-guaranteed debt to the extent necessary to limit the company's losses to the amount of subscribed capital.⁴³⁶²

7.1277 We note in addition evidence that the German government had, by its own account, been seeking to obtain private capital for Deutsche Airbus for a number of years prior to 1989.⁴³⁶³ According to the German government, Daimler-Benz was the only private investor that could be secured for long-term industrial management of Deutsche Airbus while accepting a simultaneous reduction in state financial aid.⁴³⁶⁴ In a statement in 1988 announcing the planned restructuring of Deutsche Airbus, the German Ministry of Economics noted that the German government currently bore all of Deutsche Airbus' risk through its provision of guarantees for the costs of the A300/A310 programmes, and indicated that its overall policy objective was to transfer the management and risk associated with Deutsche Airbus' operations to the private sector over the long term.⁴³⁶⁵ In response to a Parliamentary question asking why MBB's own negotiations with prospective private investors had not resulted in a private investor acquiring an equity interest in MBB/Deutsche Airbus, the German government explained that, while Deutsche Airbus' sales prospects had "improved considerably" over the 20 years since its establishment, the production of civil aircraft presented substantial risks (since invested capital can generally only be amortized over project terms of up to 20 years), along with factors such as exchange rate risks.⁴³⁶⁶ In addition, statements of the German Ministry of Economics indicate that it considered that the relatively small market share that Airbus Industrie enjoyed at that time, coupled with the currency risks, would continue to present difficulties for the future profitability of Deutsche Airbus.⁴³⁶⁷

7.1278 The European Communities rejects the United States' arguments that KfW's 1989 acquisition of a 20 percent equity interest in Deutsche Airbus was inconsistent with the usual investment practice of private investors in Germany. According to the European Communities, the commercial nature of KfW's equity infusion is evident from the fact that Daimler-Benz also purchased an interest in Deutsche Airbus "on the same terms and conditions as KfW".⁴³⁶⁸ In other words, the European Communities argues that Daimler-Benz is an appropriate "private investor" whose acquisition "through MBB" of an interest in Deutsche Airbus on the same terms and conditions as KfW's investment demonstrates that the KfW investment was consistent with the usual investment practice of private investors in Germany and thus did not confer a benefit on Deutsche Airbus.

7.1279 The European Communities appears to base its argument that Daimler-Benz invested in Deutsche Airbus "through MBB" on the same terms and conditions as KfW on the fact that, pursuant to the Framework Agreement, MBB had agreed that, of the DM 993 million it received from Daimler-Benz (as the subscription price for 258 million newly issued shares of MBB), it would use DM 800 million to purchase 294 million newly issued shares in Deutsche Airbus.⁴³⁶⁹ We recall that the Framework Agreement provided that (i) MBB would contribute DM 800 million in capital to Deutsche Airbus to purchase 294 million newly issued Deutsche Airbus shares (representing a

BCI deleted, as indicated [***]

nominal value of DM 2.72 per share) and (ii) KfW would contribute DM 505 million in capital to Deutsche Airbus to purchase 186 million newly issued Deutsche Airbus shares (representing a nominal value of DM 2.72 per share). We understand that it is on the basis of the above analysis that the European Communities contends that KfW and Daimler-Benz "through MBB" invested in Deutsche Airbus on the same terms and conditions. We are not persuaded by this analysis.

7.1280 The fact that Daimler-Benz paid DM 993 million to acquire 258 million newly issued MBB shares suggests that it paid DM 3.849 per share of MBB. As previously mentioned, MBB owned Deutsche Airbus, in addition to significant defence technology operations conducted through other MBB subsidiaries. Although MBB was required to make the DM 800 million capital contribution to Deutsche Airbus, in return for the issuance by Deutsche Airbus of 294 million shares to MBB, there is no evidence to suggest that Daimler-Benz, in paying DM 3.489 per newly-issued MBB share, could be deemed (based on the relative valuations of the operations of Deutsche Airbus and those of the other subsidiaries of MBB) to have thereby indirectly paid the equivalent of DM 2.72 per share for the newly issued shares in Deutsche Airbus. The terms of MBB's capital contribution to Deutsche Airbus under the Framework Agreement represent a negotiated allocation of MBB's funds for purposes of building Deutsche Airbus' capital base as part of the restructuring arrangement. They are not indicative of the value of MBB's Deutsche Airbus subsidiary relative to the other MBB subsidiaries, or of the price that an arm's length private investor would have been prepared to pay to directly acquire shares in Deutsche Airbus.

7.1281 We reject the European Communities' argument that the 1989 acquisition by KfW of a 20 percent equity interest in Deutsche Airbus was consistent with the usual investment practice of a private investor in Germany because Daimler-Benz invested in Deutsche Airbus on the same terms and conditions as KfW. First, we cannot equate KfW's direct investment in Deutsche Airbus with Daimler-Benz's indirect investment in Deutsche Airbus through its acquisition of a majority interest in MBB. The transaction that the European Communities describes as an investment by Daimler-Benz in Deutsche Airbus "through MBB" was, in fact, a transaction in which Daimler-Benz acquired a majority interest in MBB, the parent company of Deutsche Airbus, not shares in Deutsche Airbus. We note in this regard that MBB was not a mere holding company for Deutsche Airbus. MBB was at that time West Germany's largest aerospace and defence contractor, active in *both* the aerospace and defence technology sectors. MBB's defence technology operations were profitable, its aerospace operations (*i.e.*, Deutsche Airbus) were not.⁴³⁷⁰ Daimler-Benz's acquisition of shares of MBB was not the same, in legal or economic terms, as KfW's acquisition of shares of Deutsche Airbus.

7.1282 We also consider that, for purposes of assessing whether the government's investment decision can be regarded as inconsistent with the usual practice of private investors, any comparison of the terms and conditions on which a government and a private investor each invest in a company should take account of the different obligations undertaken by the respective parties in connection with those investments. When the specific terms of the KfW investment are considered, it is clear to us that Daimler-Benz can in no sense be considered to have invested in Deutsche Airbus on the same terms and conditions as KfW. The Framework Agreement provided that the German government would instruct KfW to acquire the 20 percent equity interest in Deutsche Airbus and that MBB would then acquire that shareholding from KfW by a specific date.⁴³⁷¹ In other words, it was contemplated from the outset that the KfW equity infusion would be of a temporary duration. At the time at which KfW acquired the 20 percent interest in Deutsche Airbus, which we consider to be the relevant time for purposes of assessing whether the investment decision was consistent with the usual investment practice of private investors, KfW's shareholding in Deutsche Airbus was to be purchased by MBB in

⁴³⁷⁰ The United States contends that at the time of Daimler-Benz's investment in MBB, approximately 75 percent of MBB's total turnover and 100 percent of its profits were generated by its non-Airbus-related activities; US, Answer to Panel Question 156, para. 138.

⁴³⁷¹ Framework Agreement, Exhibit EC- 887 HSBI.

BCI deleted, as indicated [***]

ten years (*i.e.*, with effect from the end of 1999 at the latest) at an agreed market-based valuation of the 20 percent equity interest at that time, [***]. In addition, the German government had agreed that during the time that KfW was originally expected to hold its interest in Deutsche Airbus, any profits generated by Deutsche Airbus would, for at least the first eight of the 10 years of the investment, be used first to build up Deutsche Airbus' capital base and to form a special reserve to compensate Deutsche Airbus for exchange rate losses. In light of all of the above, it is inconceivable to us that Daimler-Benz can be considered to have invested in Deutsche Airbus on the same terms and conditions as KfW, or that KfW's investment decision can be considered to have been consistent with the usual investment practice of private investors in Germany on the basis of Daimler-Benz's investment in Deutsche Airbus "through MBB".

7.1283 The European Communities has also presented various arguments throughout its submissions suggesting that the KfW and Daimler-Benz investments "took place *following* the financial restructuring of Deutsche Airbus".⁴³⁷² According to the European Communities, provided that, *following* a financial restructuring, a government injects capital on equal terms with a private investor, the capital injection does not confer a benefit on the recipient company, within the meaning of Article 1.1(b).⁴³⁷³ Therefore, the European Communities argues that (i) the terms on which Daimler-Benz, via its subsidiary MBB, invested in Deutsche Airbus reflect the terms on which a commercial investor was willing to put fresh equity capital into the financially restructured Deutsche Airbus, and (ii) the fact that KfW paid the same price as Daimler-Benz for the newly issued shares in a financially restructured Deutsche Airbus, confirm the consistency of that equity infusion with the ordinary investment practice of private investors.

7.1284 In our view, it is not appropriate to approach the question whether the KfW equity investment conferred a benefit on Deutsche Airbus by treating that transaction as an equity investment in a *restructured* Deutsche Airbus (*i.e.*, as a transaction that occurred *subsequent* to the restructuring of Deutsche Airbus). The KfW investment was an integral element of the restructuring of Deutsche Airbus as set forth in the Framework Agreement and as described by the German government.⁴³⁷⁴ It is clear to us that Daimler-Benz would not have made the investment in Deutsche Airbus at all absent the restructuring arrangement (one component of which was the KfW investment, with significant other components being the foreign exchange risk loss insurance programme and the rescheduling of Deutsche Airbus debt).⁴³⁷⁵ Daimler-Benz agreed to invest in Deutsche Airbus *provided that* the German government (i) restructured Deutsche Airbus' existing debt obligations, delaying the German government's repayment claims far into the future, (ii) agreed to assume a portion of Deutsche Airbus' exchange rate risk through an insurance program, and (iii) provided additional equity capital to Deutsche Airbus for (an initially contemplated period of) 10 years, while agreeing to forego rights to

⁴³⁷³ EC, Answer to Panel Question 100, para. 273.

⁴³⁷⁴ *Handelsblatt* No. 212, 3 November 1988, p. 24 "Daimler-Benz-MBB / Statement of the German Federal Ministry of Economics on the Restructuring of the Aviation Industry," Exhibit US-259. We note that the European Communities acknowledges elsewhere in its submissions that the 20 percent equity infusion by KfW in Deutsche Airbus *is part of* the 1989 restructuring arrangement; EC, Answer to Question 187, paras. 152 and 158.

⁴³⁷⁵ The Report of the Federal Cartel Office states: "Daimler-Benz linked its stake in MBB to a series of commitments by the federal government, and they *significantly limit any risk to Daimler-Benz which is associated with the acquisition of the German share of Airbus*", Exhibit US 30, para. 129 (emphasis added). In a German government Answer to a Parliamentary question concerning alternative options for raising additional capital for Deutsche Airbus, the government responded that "Daimler-Benz is the only company that could be secured for a long-term industrial management in the Airbus program whilst accepting a simultaneous reduction in state financial aid."; BT-Drs 11/4375 (German government Answer to a Parliamentary Question), Exhibit US-14.

BCI deleted, as indicated [***]

payment of dividends from profits for the first eight years of that investment, in order for Deutsche Airbus to rebuild its capital base.⁴³⁷⁶

7.1285 The European Communities itself acknowledges that, had the German government required Daimler-Benz to assume fully Deutsche Airbus' repayment obligations and government-guaranteed debt, neither Daimler-Benz nor any other buyer would have purchased Deutsche Airbus.⁴³⁷⁷ However, the European Communities also contends that the German government's behaviour was consistent with that of a rational investor in similar circumstances; *i.e.*, it acted to minimize its losses "while providing certain contributions to rebalance the value of Deutsche Airbus' assets and liabilities."⁴³⁷⁸ The European Communities therefore argues that the United States has not established that the 1989 restructuring was inconsistent with the practice of a similarly-situated private creditor of Deutsche Airbus, faced with the imminent insolvency of a debtor company.

7.1286 We make the following observations regarding this argument. First, we note that the European Communities has provided no evidence to support it; for example, contemporaneous, objective evaluations of the German government's prospects of minimizing its losses and/or maximizing its recovery if Deutsche Airbus were to be restructured in the manner described rather than liquidated. Second, we fail to understand, on the basis of the evidence before us, how the terms of the restructuring could have minimized the German government's losses and/or maximized its returns as the major creditor of a financially distressed Deutsche Airbus. Under the restructuring arrangement, the German government paid Deutsche Airbus' outstanding bank debt, rescheduled Deutsche Airbus' government debt pursuant to the [***] "debtor warrant", provided Deutsche Airbus with an additional DM 165 million loan to finance production of the A320, established an exchange rate loss insurance programme (for which the German government had either appropriated in the federal budget, or included in its planning estimates, approximately DM 4.1 billion to cover its anticipated obligations over the period 1989 to 2000)⁴³⁷⁹ and provided additional equity capital to Deutsche Airbus for an (initially contemplated) period of 10 years. In a 1998 statement announcing the planned restructuring of Deutsche Airbus, the German Ministry of Economics noted that the German government currently bore all of Deutsche Airbus' risk through its provision of guarantees for the costs of the A300/A310 programmes, and indicated that its overall policy objective was to transfer the management and risk associated with Deutsche Airbus' operations to the private sector over the long term.⁴³⁸⁰ The Ministry also stated that the pursuit of this overall aim, to gradually move Deutsche Airbus into private sector management and responsibility, "now justifies an additional substantial financial effort" in order to bring it about.⁴³⁸¹ The terms of the 1989 restructuring arrangement and the German government's comments appear to us to be far more consistent with a government providing a final round of assistance in order to reduce a company's dependence on subsidization over the long term than with a major creditor of a financially distressed company seeking to minimize its losses and/or maximize its returns.

7.1287 Finally, we regard the European Communities' argument, that the United States has failed to demonstrate that the 1989 restructuring is inconsistent with the practice of a similarly-situated private creditor of Deutsche Airbus, faced with the imminent insolvency of a debtor company, as irrelevant to the United States' arguments as to "benefit". The United States does not argue that the KfW equity infusion is a subsidy because it is part of the 1989 restructuring arrangement. Nor do we understand it

BCI deleted, as indicated [***]

to argue that the 1989 restructuring arrangement as a whole constitutes a subsidy.⁴³⁸² The United States argues that no private investor would have invested in Deutsche Airbus at the relevant time, and that KfW's investment was therefore inconsistent with the usual investment practice of private investors and conferred a benefit on Deutsche Airbus within the meaning of Article 1.1(b) of the SCM Agreement. The European Communities attempted to rebut the United States' argument by demonstrating that the KfW investment was not inconsistent with the usual investment practice of private investors because a private investor, namely, Daimler-Benz, invested in Deutsche Airbus at the same time and on the same terms and conditions as KfW. It was in response to the European Communities' rebuttal argument that the United States asserted that the Daimler-Benz investment was linked to the restructuring in a way that significantly limited the risk to Daimler-Benz of the investment, and thus that the Daimler-Benz investment cannot be considered a market benchmark for the purpose of assessing the existence of benefit.⁴³⁸³ In the context of a response to the European Communities' rebuttal argument, it is not necessary for the United States to establish that the German government's conduct in regard to the 1989 restructuring arrangement as a whole was inconsistent with the conduct of a similarly-situated private creditor of Deutsche Airbus.

7.1288 We therefore reject the European Communities' argument the KfW investment in Deutsche Airbus was consistent with the usual investment practice of private investors because Daimler-Benz had invested in Deutsche Airbus, "through MBB", on the same terms and conditions as KfW. In light of the evidence of Deutsche Airbus' perilous financial condition at the time of the KfW investment, its serious exposure to adverse movements in the US dollar/DM exchange rate in the absence of a government exchange rate insurance programme, its substantial dependence on government aid for at least the short to medium term, evidence that, while Airbus Industrie's sales prospects were improving, its future profitability would remain "difficult" due to its relatively small market share of 20 percent, and its inability to attract private investment in the absence of government investment and rescheduling of government-related debt, we are satisfied that KfW's investment decision was inconsistent with the usual investment practice of private investors in Germany, because no private investor seeking a reasonable rate of return on its investment would have made the equity investment in Deutsche Airbus which KfW made. We accordingly find that KfW's acquisition of 20 percent of the shares of Deutsche Airbus conferred a "benefit" on Deutsche Airbus within the meaning of Article 1.1(b) and thus constitutes a subsidy to Deutsche Airbus.⁴³⁸⁴

7.1289 For the reasons set forth above, we conclude that KfW's 1989 acquisition of a 20 percent equity interest in Deutsche Airbus was a financial contribution within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement, which conferred a benefit on Deutsche Airbus within the meaning of Article 1.1(b), and thus constitutes a subsidy to the Airbus Industrie consortium and to Airbus SAS.

7.1290 The United States argues that KfW's acquisition of a 20 percent equity interest in Deutsche Airbus is a specific subsidy to Airbus within the meaning of Article 2 of the SCM Agreement because it was an exercise of discretion by the German government to provide equity to a single company,

⁴³⁸² US, Comments on EC Answer to Panel Question 187, para. 133.

⁴³⁸³ The United States has pointed out clearly, "the relevance of the fact that the KfW equity infusion was part of the broader aid package to Deutsche Airbus is that it undermines the European Communities' attempt to use Daimler's investment in MBB (the parent company of Deutsche Airbus) as a market benchmark. Daimler would not have made its investment without the aid package that included the equity infusion at issue". US, Comments on EC's Answer to Question 187, para. 129. *See, also*, US, Answer to Panel Question 157, para. 141.

⁴³⁸⁴ We have reached our factual conclusions without drawing inferences, logical or adverse, from the European Communities' failure to provide information requested by Questions 46, 73-76, 77 and 85-90 of the Annex V Facilitator, Exhibit US-4 BCI. We consider it unnecessary to decide whether the Panel would have been entitled to draw such inferences.

BCI deleted, as indicated [***]

Deutsche Airbus, as part of a broader aid package for that company.⁴³⁸⁵ Although the United States has not identified a particular sub-paragraph of Article 2 as the basis of its claim, we understand from the nature of the argument it advances that its claim is grounded in Article 2.1(a) of the SCM Agreement. Evidence submitted by the United States as to the terms of the KfW investment in Deutsche Airbus and of the 1989 restructuring arrangements more generally confirms the United States' assertion that the KfW investment in Deutsche Airbus was explicitly limited to Deutsche Airbus and was thereby "specific" within the meaning of Article 2.1(a) of the SCM Agreement. The European Communities does not contest the United States' allegation. We therefore find that KfW's 1989 acquisition of a 20 percent equity interest in Deutsche Airbus constitutes a specific subsidy to Airbus SAS.

(iv) *KfW's transfer of its 20 percent equity interest in Deutsche Airbus to MBB in 1992*

7.1291 We now turn to the United States' claim that the 1992 acquisition by MBB of KfW's 20 percent equity interest in Deutsche Airbus was also a subsidy. We first consider whether the transfer by KfW of its shares in Deutsche Airbus to MBB is a "financial contribution" in the sense of Article 1.1(a)(1)(i) of the SCM Agreement. The Appellate Body has indicated that the term "funds" in Article 1.1(a)(1)(i) encompasses not only "money" but also financial resources and other financial claims more generally.⁴³⁸⁶ We regard shares in a company as financial claims to a stream of income (in the form of dividends paid out of a company's profits) and to a share in the capital of the company on its liquidation. Therefore, we consider that shares in a company fall within the scope of the term "funds" in Article 1.1(a)(1)(i), and that a transfer of shares falls within the scope of the term "direct transfer of funds". We thus conclude that the transfer by KfW of its 20 percent equity interest in Deutsche Airbus to MBB was a "financial contribution" within the meaning of Article 1.1(a)(1)(i).

7.1292 Our approach to the issue of benefit in the context of KfW's transfer of its 20 percent equity interest in Deutsche Airbus to MBB is to ask whether the terms of that transfer are more favourable to MBB than those that would have been available in the market? To the extent that they are, then the financial contribution in question (*i.e.*, the transfer by KfW of its 20 percent equity interest in Deutsche Airbus) will have conferred a benefit on MBB within the meaning of Article 1.1(b) of the SCM Agreement.

7.1293 The European Communities argues that the United States has failed to make a *prima facie* case that the KfW transfer of its 20 percent equity interest in Deutsche Airbus conferred a benefit on Deutsche Airbus or on Airbus. According to the European Communities, the United States has failed to demonstrate whether and how any alleged subsidy benefit passed from MBB to Deutsche Airbus, as the former manufacturer of LCA, or for that matter, to Airbus SAS, as the present day manufacturer of LCA. The European Communities argues that neither in 1992 nor subsequently did MBB develop, produce or sell LCA.⁴³⁸⁷ Moreover, the European Communities contends that, from Deutsche Airbus' perspective, the transfer of its shares from one shareholder (*i.e.*, KfW) to another (*i.e.*, MBB) is of no economic consequence.⁴³⁸⁸

7.1294 We note that prior to 1989, development and series production of the German share of the Airbus consortium was performed by MBB on behalf of Deutsche Airbus.⁴³⁸⁹ Even accepting the European Communities' assertion that the corporate entity MBB did not itself develop, produce or sell

BCI deleted, as indicated [***]

LCA from 1992 onwards, we are not persuaded by the proposition that the United States must demonstrate that any benefit conferred on MBB by the transfer to MBB of KfW's 20 percent equity interest in Deutsche Airbus passed through to Deutsche Airbus and ultimately, to Airbus SAS. We recall that, prior to KfW's 1989 investment in Deutsche Airbus, Deutsche Airbus was a wholly-owned subsidiary of MBB. MBB thereafter continued to own an 80 percent interest in Deutsche Airbus until 1992, when MBB re-acquired KfW's 20 percent stake in Deutsche Airbus and Deutsche Airbus once again became a wholly-owned subsidiary of MBB. As we have previously explained, MBB's re-acquisition of a 20 percent stake in Deutsche Airbus was undertaken for the sole purpose of facilitating the restructuring of Deutsche Airbus. There is therefore no doubt that it was inherently linked with Deutsche Airbus' ability to continue to operate in LCA business. When Daimler Benz merged MBB into Daimler-Benz's aerospace subsidiary, Dasa, later in 1992, Deutsche Airbus became a wholly-owned subsidiary of Dasa. Dasa has since been the parent company of Deutsche Airbus, and following the reorganization of the Airbus consortium in 2000, a controlling shareholder of EADS. Thus, in the light of these facts, we are of the view that absent a demonstration by the European Communities that the financial contribution which allegedly conferred a benefit on MBB was unrelated to the production of Airbus LCA, MBB along with Deutsche Airbus should be considered to be a producer of Airbus LCA for purposes of our analysis of the existence of a subsidy under the SCM Agreement.⁴³⁹⁰

7.1295 As regards our determination of a benefit conferred by the 1992 transfer of KfW's 20 percent equity interest in Deutsche Airbus to MBB, we have already indicated that we are satisfied that the transfer was not "free of charge". However, the fact that consideration was provided to KfW in respect of the transfer does not necessarily mean that the transfer did not confer a benefit: whether it did or did not depends on whether the terms of the transfer were consistent with what could have been obtained in the market.

7.1296 We note that the price at which KfW sold its 20 percent equity interest in Deutsche Airbus consisted of two components. The first was the agreed value of the shares as of 1 January 1992, as evaluated by two independent accounting firms according to a market-based methodology. The second was the [***]. This price was to be paid, [***][[HSBI]] [***].⁴³⁹¹ We recall the [***] nature of the Deutsche Airbus debt payable pursuant to the debtor warrant; namely, such debt was repayable [***]. In addition, [***].⁴³⁹²

7.1297 Given the [***], it is necessary for us to evaluate whether the principal amount of DM [[HSBI]] of Deutsche Airbus [***] was equivalent to the market value of KfW's 20 percent interest in Deutsche Airbus. Although we are unable to arrive at a precise estimate, we have no doubt that the present value in 1992 of the principal amount of DM [[HSBI]] of Deutsche Airbus [***] would have been heavily discounted from its face amount in light of the fact that repayments would not become due before 2001 and in any case, would be contingent on, and paid from 40 percent of, Deutsche Airbus' annual pre-tax profits. Indeed, we are of the view that the principal amount of DM [[HSBI]] of Deutsche Airbus [***] would have been less than the appraised cash value of the 20 percent stake

⁴³⁹⁰ See, further on the question of pass-through our general discussion and conclusions set out at paras. 7.190 - 7.200 above.

⁴³⁹¹ In response to a question from the Panel asking why or how Deutsche Airbus assumed obligations which appear to have been MBB's as purchaser of the Deutsche Airbus shares from KfW, the European Communities replied that, following the German government's cancellation of the exchange rate insurance mechanism in 1992, the parties agreed to amend certain repayment provisions, including the terms of the debtor warrant, and to transfer KfW's 20 percent stake in Deutsche Airbus in exchange for Deutsche Airbus' commitment to pay the agreed purchase price under the amended debtor warrant, in order to "maintain the balance of rights and obligations negotiated in the 1989 restructuring agreement"; EC, Answer to Panel Question 192, para. 190.

⁴³⁹² Second Amendment to the Framework Agreement dated 23 March 1989, dated as of 14 July 1992; Exhibit EC-888 HSBI.

BCI deleted, as indicated [***]

in Deutsche Airbus of DM [[HSBI]]. We therefore consider that the transfer by KfW of its 20 percent interest in Deutsche Airbus to MBB was made on terms considerably more favourable to MBB than the market and thus conferred a benefit on MBB. Our conclusion in this regard is confirmed by evidence relating to the context in which the 1992 transfer occurred.

7.1298 As noted in our discussion of the background to the capital restructuring of Deutsche Airbus, KfW's time-limited equity investment in Deutsche Airbus was one element of a comprehensive restructuring plan for Deutsche Airbus that was designed to gradually shift the risks associated with participation in the Airbus GIE to the private sector. Another element of the restructuring arrangement as it had originally been envisaged was the establishment of an exchange rate loss insurance programme under which the German government agreed to guarantee against exchange rate losses incurred by Deutsche Airbus. The German government had either appropriated in the federal budget, or included in its planning estimates, approximately DM 4.1 billion to cover its anticipated obligations under the exchange rate loss insurance programme over the period 1989 to 2000.⁴³⁹³ When the German government subsequently cancelled the exchange rate loss insurance programme in 1992, it had already made payments under the programme of approximately DM 1.48 billion.⁴³⁹⁴ We consider it reasonable to infer that the cancellation of the exchange rate loss guarantee programme resulted in Deutsche Airbus potentially losing approximately DM 2.6 billion in assistance that it had anticipated in 1989 that it would receive through to 2000. The European Communities acknowledges that the 1992 amendments to the Framework Agreement, including the amendments to the terms of the debtor warrant and the transfer of KfW's 20 percent equity interest in Deutsche Airbus to MBB in exchange for Deutsche Airbus' commitment to pay the agreed purchase price [***] were agreed between the parties in order to "maintain the rights and obligations negotiated in the 1989 restructuring agreement".⁴³⁹⁵ In addition, the United States points to statements by Daimler-Benz to the effect that the early transfer of KfW's 20 percent equity interest in Deutsche Airbus to MBB was one of the measures designed to compensate Deutsche Airbus/Daimler-Benz for the loss of assistance which had been anticipated under the exchange rate loss insurance scheme.⁴³⁹⁶

7.1299 As we have previously noted, we are unable, on the basis of the evidence before us, to find that the sale of the KfW stake in Deutsche Airbus to MBB was "essentially for free". However, on the basis of the [***], we conclude that KfW transferred its 20 percent equity interest in Deutsche Airbus to MBB for considerably less than its market value, which we consider to be [[HSBI]] in accordance with the appraisal performed by [***]. We therefore find that the 1992 transfer by KfW of its 20 percent equity interest in Deutsche Airbus to MBB conferred a benefit on MBB within the meaning of Article 1.1(b) of the SCM Agreement.⁴³⁹⁷

7.1300 We therefore conclude that KfW's 1992 transfer of a 20 percent equity interest in Deutsche Airbus to MBB was a financial contribution within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement, which conferred a benefit on MBB within the meaning of Article 1.1(b) and thus constitutes a subsidy to the Airbus Industrie consortium and to Airbus SAS.

7.1301 The United States argues that KfW's transfer of its 20 percent equity interest in Deutsche Airbus to MBB is a specific subsidy to Airbus within the meaning of Article 2 of the SCM Agreement

⁴³⁹³ *Monopolkommission Report*, Exhibit US-30, para. 131.

⁴³⁹⁴ BT-Frs. 13/8409, Exhibit US-31, para. 21.

⁴³⁹⁵ EC, Answer to Panel Question 192, para. 190.

⁴³⁹⁶ US, FWS, para. 550; Daimler-Benz, Consolidated Interim Report, January 1-June 30, 1992, Exhibit US-272, at 7. The United States refers to similar statements attributed to Peter Carl, then head of the European Communities' DG-Trade; Stephen Aris, *Close to the Sun*, Exhibit US-23, at 166-167.

⁴³⁹⁷ We have reached our factual conclusions without drawing inferences, logical or adverse, from the European Communities' failure to provide information requested by Questions 46, 73-76, 77 and 85-90 of the Annex V Facilitator, Exhibit US-4 (BCI). We consider it unnecessary to decide whether the Panel would have been entitled to draw such inferences.

BCI deleted, as indicated [***]

because it resulted from a negotiation between the German government and a single company to compensate the company for the effects of withdrawing the exchange rate guarantee scheme that was found to be inconsistent with the Tokyo Round Subsidy Code.⁴³⁹⁸ Although the United States has not identified a particular sub-paragraph of Article 2 as the basis of its claim, we understand from the nature of the argument it advances that its claim is grounded in Article 2.1(a) of the SCM Agreement. Evidence before us as to the terms of the 1992 share transfer confirms the United States' assertion that share transfer to MBB was explicitly limited to MBB and was thereby "specific" within the meaning of Article 2.1(a) of the SCM Agreement. The European Communities does not contest the United States' allegation. We therefore find that KfW's 1992 transfer of its 20 percent equity interest in Deutsche Airbus to MBB constitutes a specific subsidy to Airbus SAS.

(d) Conclusion

7.1302 In conclusion, we find that the 1989 acquisition by KfW of a 20 percent equity interest in Deutsche Airbus constitutes a subsidy to Airbus because it involves a financial contribution, in the form of a direct transfer of funds, pursuant to Article 1.1(a)(1)(i) of the SCM Agreement, which conferred a benefit on Deutsche Airbus because the investment decision was inconsistent with the usual investment practice of private investors in Germany. We further find that this subsidy is specific within the meaning of Article 2 of the SCM Agreement. We also find that the 1992 transfer by KfW of its 20 percent equity interest in Deutsche Airbus to MBB constitutes a subsidy to Airbus because it involves a financial contribution, in the form of a direct transfer of funds, within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement which conferred a benefit on MBB because the consideration provided in respect of the transfer was less than the market value of the shares. We further find that this subsidy is specific within the meaning of Article 2 of the SCM Agreement.

7.1303 We now consider the parties' arguments concerning the 1998 settlement of the German government's outstanding claims against Deutsche Airbus.

8. Whether the German government has subsidized Airbus by forgiving at least DM 7.7 billion of Deutsche Airbus' government debt

(a) Background to the 1998 debt settlement

7.1304 We recall our previous discussion of the key elements of the 1989 restructuring of Deutsche Airbus.⁴³⁹⁹ In particular, we note that, pursuant to the 1989 Framework Agreement, the German government (i) paid DM 1.9 billion in Deutsche Airbus' guaranteed bank debts and agreed to pay up to DM 750 million of LA/MSF debt in respect of the A300/A310;⁴⁴⁰⁰ (ii) made a loan of DM 165 million to finance production of the A320; (iii) agreed to reschedule repayments of government financing of development costs for the A300, A310, A320, A330/A340; and (iv) made a time-limited equity investment in Deutsche Airbus through KfW.⁴⁴⁰¹ The payments made by the German government in items (i) through (iii), as well as amounts owed to the German government as a result of the exchange rate insurance mechanism between 1989 and 1992, were to be conditionally repayable by Deutsche Airbus, in that they would give rise to claims to repayment to the German government pursuant to the terms of the debtor warrant. Under the debtor warrant, Deutsche Airbus' repayment obligations were to be contingent on Deutsche Airbus recognizing pre-tax profits, were to be payable only from such profits, and were to be payable from such profits only after any profits had

⁴³⁹⁸ US, FWS, para. 556.

⁴³⁹⁹ See, paras. 7.1264 - 7.1302 above.

⁴⁴⁰⁰ Exhibit US-30, paras. 121 and 131. Of the DM 750 million, only DM 426 million was actually paid, bringing the total of Deutsche Airbus bank debt which was paid by the German government to approximately DM 2.33 billion; Exhibit US-31, para. 21; EC, FWS, para. 1184.

⁴⁴⁰¹ Exhibit US-31, p. 14.

BCI deleted, as indicated [***]

first been applied to rebuilding Deutsche Airbus' capital base and to funding a reserve to cover future exchange rate losses.⁴⁴⁰²

7.1305 In 1992, following the GATT Panel report in *EEC- Airbus*, KfW transferred its 20 percent equity interest in Deutsche Airbus to MBB, in return for the German government holding a claim to repayment against Deutsche Airbus, in the amount of [[HSBI]], [***]. In addition, the repayment terms of the debtor warrant were themselves amended to provide that Deutsche Airbus would only be required to begin making repayments from 2001, and then only from 40 percent of its pre-tax profits, with the annual repayment obligation being contingent on Deutsche Airbus having earned pre-tax profits in the previous year, and such pre-tax profits being subject to reduction by the application of prior years' cumulative loss carryforwards.⁴⁴⁰³

7.1306 In 1997, pursuant to the third amendment to the 1989 Framework Agreement, the German government agreed to accept a payment of DM 1.4 billion from Deutsche Airbus to fully discharge all of the German government's repayment claims in respect of development financing for the A320.⁴⁴⁰⁴

7.1307 Finally, pursuant to the fourth amendment to the Framework Agreement, the German government agreed, on 30 December 1998, to treat as satisfied the remainder of the German government's existing and/or projected payment and other claims against Deutsche Airbus pursuant to the Framework Agreement, and in respect of development financing for the A300 and A310 from 2001 onwards, and for the A330/A340 from July 2004 onwards, in return for a one-off compensation payment of DM 1.75 billion, representing the present value of those claims on 1 January 1999.⁴⁴⁰⁵

7.1308 The United States argues that the total accumulated principal amount of debt which Deutsche Airbus owed the German government by the time of the 1998 transaction was at least DM 9.4 billion.⁴⁴⁰⁶ According to the United States, settlement of DM 9.4 billion in debt for a payment of DM 1.735 billion equates to debt forgiveness in the amount of DM 7.7 billion.⁴⁴⁰⁷ The United States therefore argues that the 1998 transaction should be characterized as "debt forgiveness" and therefore, a financial contribution within Article 1.1(a)(1)(i) of the SCM Agreement.⁴⁴⁰⁸

⁴⁴⁰² Exhibit US-30, para. 132.

⁴⁴⁰³ Daimler-Benz Annual Report 1997, Exhibit US-262, p. 96.

⁴⁴⁰⁴ EC, FWS, para. 1183; Third Amendment to the Framework Agreement of 23 March 1989, dated 22 December 1997, Exhibit EC-889 HSBI. ⁴⁴⁰⁵ Fourth Amendment to the Framework Agreement of 23 March 1989, dated as of 30 December 1998, Exhibit EC-890 HSBI; EC, FWS, para. 1187.

⁴⁴⁰⁶ US, FWS, para. 516. The United States alleges that this debt consisted of DM 5.4 billion principal amount of debt in respect of LA/MSF for the A300/A310 and A330/A340 programs; a DM 165 million loan provided by the German government in 1988 to underwrite the costs of producing the A320, which was repayable pursuant to the debtor warrant; and DM 3.8 billion in additional loans arising out of the 1989 restructuring; US, FWS, paras. 518-521.

⁴⁴⁰⁷ US, FWS, para. 531.

⁴⁴⁰⁸ US, FWS, paras. 532-533. The United States refers to the Panel Report in *Korea – Commercial Vessels*, where the Panel stated that debt forgiveness is comparable to a cash grant, as funds that were previously provided as a loan, against interest, are now provided for free, given the removal of the repayment obligation; Panel Report, *Korea – Measures Affecting Trade in Commercial Vessels ("Korea – Commercial Vessels")*, WT/DS273/R, adopted 11 April 2005, DSR 2005:VII, 2749, para. 7.413.

BCI deleted, as indicated [***]

(b) Arguments of the parties

(i) *United States*

7.1309 The United States alleges that in 1998, the German government agreed to accept a payment of DM 1.735 billion from Deutsche Airbus in full settlement of DM 9.4 billion outstanding debt owed by Deutsche Airbus to the German government. The United States contends that in 1997, Deutsche Airbus and the German government entered into an agreement pursuant to which the German government agreed to accept a payment of DM 1.4 billion to settle the outstanding amount of DM 1.5 billion outstanding debt of Deutsche Airbus in respect of LA/MSF for the A320. Then in 1998, Deutsche Airbus and the German government entered into another agreement in which the German government agreed to accept a further payment of DM 1.735 billion to settle the remainder of Deutsche Airbus' DM 9.4 billion outstanding debt. According to the United States, both the 1997 and 1998 debt settlements were designed to strengthen Deutsche Airbus' balance sheet in anticipation of a merger of the Airbus partners to form an Airbus single corporate entity.⁴⁴⁰⁹ The United States argues that the 1998 settlement thus constitutes debt forgiveness in the amount of DM 7.7 billion (excluding interest), and is a financial contribution within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.⁴⁴¹⁰

7.1310 The United States argues that the 1998 settlement also confers a benefit on Deutsche Airbus within the meaning of Article 1.1(b) of the SCM Agreement. According to the United States, because debt forgiveness is comparable to a cash grant, it likewise places the recipient in a better position than it otherwise would have been in the marketplace.⁴⁴¹¹ The United States further argues that Article 6.1(d) of the SCM Agreement confirms that debt forgiveness confers a benefit, and thus constitutes a subsidy, as debt forgiveness is one of only four types of transactions that are explicitly defined as subsidies which are deemed to cause serious prejudice.⁴⁴¹² According to the United States, Deutsche Airbus received an additional "intangible" benefit from the 1998 settlement, in the sense that the 1998 settlement removed the commercial uncertainty as to the period of time over which Deutsche Airbus was to be able to enjoy the benefit of DM 9.4 billion of debt interest free, as Deutsche Airbus' repayment obligations were subject to Deutsche Airbus' post-2001 profitability.⁴⁴¹³

7.1311 Finally, the United States argues that the 1998 settlement is specific within the meaning of Article 2 of the SCM Agreement. The United States contends that the 1998 settlement was effectuated through an *ad hoc* agreement between the German government and Deutsche Airbus to settle all of the company's outstanding repayment obligations for all of the support it had previously received from the government. The United States notes that this debt forgiveness was specifically limited to Deutsche Airbus and no other company participated in the transaction.⁴⁴¹⁴

(ii) *European Communities*

7.1312 The European Communities argues that there was no forgiveness of debt arising out of the 1998 settlement; rather, the settlement amount represents the present value in 1998 of the obligation to repay outstanding debt negotiated as part of the 1989 restructuring, as modified in 1992. According to the European Communities, even if a "benefit" had been conferred on Airbus as a result

⁴⁴⁰⁹ US, FWS, paras. 530-531.

⁴⁴¹⁰ US, FWS, para. 515. The United States refers to the Panel's determination in *Korea – Commercial Vessels*, that debt forgiveness is "comparable to a cash grant, as funds that were previously provided as a loan, against interest, are now provided for free, given the removal of the repayment obligation"; Panel Report, *Korea – Commercial Vessels*, para. 7.413.

⁴⁴¹¹ US, FWS, para. 534.

⁴⁴¹⁴ US, FWS, para. 536.

BCI deleted, as indicated [***]

of the 1989 restructuring (which it denies), all that Deutsche Airbus received in 1998 was the present value (in 1998) of the benefits that had been conferred pursuant to the 1989 restructuring.⁴⁴¹⁵ According to the European Communities, the 1998 settlement did not constitute the "forgiveness" of outstanding debt owed by Deutsche Airbus to the German government; rather, the 1998 settlement simply fixed the present fair value (in 1998) of the debt that would become due under the repayment obligations that had been negotiated in 1989.⁴⁴¹⁶ The European Communities contends that in purporting to challenge the 1998 settlement as debt forgiveness of DM 7.7 billion, the United States is in reality seeking to challenge the terms of the 1989 restructuring arrangement, which constitutes a new claim that is outside the terms of reference of this Panel.⁴⁴¹⁷ In addition, the European Communities argues that it would be seriously prejudiced and injured in its rights, as a defendant, if it were required to defend itself against such a legally and factually complex claim that was being raised for the first time after the first written submissions had been filed and the first substantive meeting of the Panel had been held.⁴⁴¹⁸

7.1313 The European Communities also disputes that in 1998 Deutsche Airbus owed DM 9.4 billion to the German government.⁴⁴¹⁹ The European Communities asserts that in 1989, the German government negotiated a restructuring arrangement that involved, among other things, the *deferral* of outstanding debt of Deutsche Airbus, through a profit-sharing arrangement (as amended in 1992) known as the *Besserungsschein* (the "debtor warrant").⁴⁴²⁰ According to the European Communities, the terms of this debt instrument were such that Deutsche Airbus' repayment obligations were not triggered before 2001 (and on reaching certain financial milestones). In other words, in 1998, Deutsche Airbus' repayment obligations under the debt instrument had not yet been triggered, and the European Communities contends that it is therefore not correct to say that in 1998, the German government was entitled to repayment of DM 9.4 billion.⁴⁴²¹

7.1314 The European Communities further disputes the United States' assertion that there was an additional "intangible" benefit conferred by the 1998 settlement, in the sense that the high level of uncertainty about the claims that would accrue to the German government was removed. The European Communities argues that, although the import of such an argument is unclear, it is theoretically possible that such a conversion might result in a "benefit" if undertaken for an amount that does not reflect the fair market value of the converted cash flow stream in light of the risk associated therewith. However, the European Communities contends, to avoid such a possibility in the present case, an independent international auditing firm, [***], valued the German government's claims against Deutsche Airbus through the application of the most commonly used corporate evaluation method – a discounted cash flow analysis.⁴⁴²² The European Communities argues that the report prepared [***][***] in 1998 at the request of the German government in order to [***], used discount rates and assessed delivery forecasts and exchange rates in order to neutralize the uncertainties to which the United States refers, in order to determine the likely value of future

⁴⁴¹⁵ EC, SWS, para. 574.

⁴⁴¹⁶ EC, SWS, para. 579.

⁴⁴¹⁷ EC, SWS, paras. 571, 584, 585-591.

⁴⁴¹⁸ EC, Answer to Panel Question 103, paras. 297-298. In this regard, the European Communities submits that it has never understood the United States to be challenging the terms of the 1989 restructuring. According to the European Communities, the terms of reference of a panel "are not a moving target that can be adjusted as the complainant likes, and at the expense of the defending party". EC, RPQ 103, para. 297 and footnote 179.

⁴⁴¹⁹ EC, SWS, para. 567.

⁴⁴²⁰ As previously indicated, the European Communities translates the term *Besserungsschein* as "debtor warrant". The European Communities notes that the 1989 package involved the *deferral* rather than a write-off of debts of Deutsche Airbus to the German government; EC, FWS, para. 1179.

⁴⁴²¹ EC, SWS, paras. 568-570.

⁴⁴²² EC, SNCOS, para. 245.

BCI deleted, as indicated [***]

repayments under the 1989 restructuring, discounted to their present value in 1998.⁴⁴²³ The European Communities asserts that the settlement amount agreed by the parties ultimately exceeded the value placed on the German government's claims by [***].⁴⁴²⁴

(c) Evaluation by the Panel

7.1315 The United States has clarified the claim pertaining to the 1998 debt settlement, which it explains in the following terms:

"{T}he U.S. "claim" is that the European Communities has violated Article 5 of the SCM Agreement through the 1998 settlement agreement, which amounted to a financial contribution that provided a benefit to Deutsche Airbus within the meaning of Article 1, that is specific within the meaning of Article 2, and that causes adverse effects to U.S. interests."⁴⁴²⁵

7.1316 The United States argues that the 1998 settlement agreement amounts to a financial contribution within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement; namely, debt forgiveness of DM 7.7 billion. The European Communities argues that in 1998, there was no debt due to the German government that could be forgiven: Deutsche Airbus did not "owe" anything to the German government, because the obligation to begin repaying financing provided by the German government did not arise until 2001.⁴⁴²⁶ The European Communities' argument suggests that debt can only be "forgiven" when it is otherwise due and payable. We are unable to accept such a proposition. We accept the factual evidence submitted by the United States, and not specifically rebutted by the European Communities, that as of 1998, the German government had advanced at least DM 9.4 billion to Deutsche Airbus which Deutsche Airbus was obliged to repay to the German government pursuant to the terms of the debtor warrant and of LA/MSF arrangements.⁴⁴²⁷ As of 1998, this amount was owed by Deutsche Airbus to the German government and was therefore a debt, notwithstanding that the parties had agreed to defer repayments on this debt so that the first repayment would not be due until 2001, assuming the prerequisite financial conditions were satisfied.

7.1317 The United States characterizes the financial contribution arising out of the 1998 debt settlement as "debt forgiveness". Our approach is, rather, to determine first, whether the 1998 debt settlement involves a financial contribution within the meaning of Article 1.1(a)(1) of the SCM Agreement, and second, whether that financial contribution confers a benefit on Deutsche

⁴⁴²³ EC, SWS, para. 576. The European Communities notes that the United States does not offer any basis on which to question whether [***] independent assessment of the value in 1998 of these future repayment was properly undertaken; nor does the United States argue that the amount arrived at by [***] underestimated the present value of those future claims.

⁴⁴²⁴ EC, SNCOS para. 246. According to the European Communities, the discount rate implied in the actual settlement amount implies that the future cash flow stream was converted at the risk free German government borrowing rate, meaning that Deutsche Airbus had effectively agreed, in its negotiations with the German government, to settle the repayment claims as if there were virtually no risk that repayments would be delayed compared with current projections, or would not be made at all. The European Communities contends that the parties effectively assumed, in other words, that the amount and timing of Deutsche Airbus' future payments on the claims held by the German government was as certain as the payment on a German government bond; EC, SNCOS, para. 246.

⁴⁴²⁵ US, Answer to Panel Question 31, para. 204, footnote 241; FWS, paras. 515-536;.

⁴⁴²⁶ EC, SWS, para. 567.

⁴⁴²⁷ *Frankfurter Allgemeine Zeitung*, 16 June 1997, reporting a statement by the CEO of Dasa that Deutsche Airbus owed DM 10.5 billion under the profit-sharing arrangement (*i.e.*, the debtor warrant, and DM 1 billion through LA/MSF delivery-based repayments), Exhibit US-263; *Frankfurter Allgemeine Zeitung*, 24 May 1997, reporting a statement by the Federal Minister of Finance that the German government had repayment claims under debtor warrants in respect of DM 10.4 billion in German federal government subsidies to Airbus; Exhibit US-264.

BCI deleted, as indicated [***]

Airbus within the meaning of Article 1.1(b) of the SCM Agreement. If we conclude that the financial contribution confers a "benefit" on Deutsche Airbus, then it may be that the subsidy in question could be described as "debt forgiveness" in an amount equal to the amount of benefit found to have been conferred. However, the first issue for us to determine is whether the 1998 debt settlement constitutes one of the forms of financial contribution set forth in Article 1.1(a)(1). We conclude that the 1998 debt settlement constitutes a financial contribution in the form of a "direct transfer of funds" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. We note that, in *Japan – DRAMS*, the Appellate Body interpreted the term "funds" in Article 1.1(a)(1)(i) broadly, as encompassing not only "money" but also "financial resources and other *financial claims* more generally."⁴⁴²⁸ Debt owed to the government is an asset held by the government consisting of certain *financial claims* (i.e., rights to payment of money or equivalents) that the government has against a debtor. A settlement of government-held debt essentially involves the transfer to the debtor of the government's financial claims against that debtor, resulting in the cancellation of the debt. We therefore regard a settlement of debt as a "direct transfer of funds" by a government, and thus a "financial contribution" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.

7.1318 We now consider whether the 1998 debt settlement conferred a benefit on Deutsche Airbus within the meaning of Article 1.1(b) of the SCM Agreement. The United States alleges that by the end of 1998, Deutsche Airbus had accumulated DM 9.4 billion in debt to the German government, consisting of (i) DM 5.4 billion in LA/MSF that the German government had provided to Deutsche Airbus in respect of the A300/A310 and A330/A340 programs;⁴⁴²⁹ (ii) a DM 165 million loan that the German government had provided to Deutsche Airbus in 1988 to underwrite costs of producing the A320;⁴⁴³⁰ and (iii) approximately DM 3.8 billion in additional loans that the German government had provided to Deutsche Airbus in the 1980s and early 1990s, which had their genesis in the 1989 restructuring of Deutsche Airbus.⁴⁴³¹ The German government and Daimler-Benz negotiated to settle Deutsche Airbus' outstanding repayment obligations under the debtor warrant and LA/MSF on the basis of a report prepared by the accounting firm [***]. In the [***] Report, [***] attempted to calculate a present value for two categories of conditional repayment obligations of Deutsche Airbus. The first category comprised claims that were based on future deliveries of LCA, such as German government development financing for the A300 and A310 (from 2001 onwards) and for the A330/A340 from July 2004 onwards. The second category comprised amounts repayable under the debtor warrant (which were repayable from 40 percent of Deutsche Airbus' annual pre-tax profits from 2001 onwards). The [***] Report used a discounted cash flow methodology to calculate [***].⁴⁴³² The settlement amount ultimately negotiated between the German government and Daimler-Benz was higher than the upper end of the range of the values [***].

7.1319 The United States argues that, even if one assumes *arguendo* that DM 1.7 billion represented the present fair value of the German government's claims at the time of the settlement, the effect of

⁴⁴²⁸ Appellate Body Report, *Japan – DRAMS (Korea)*, para. 250.

⁴⁴²⁹ The United States notes that figure of DM 5.4 billion represents principal only; US, FWS, para. 519.

⁴⁴³⁰ US, FWS, para. 520. The United States refers to German budget documents as indicating that the DM 165 million loan was originally part of a total loan of DM 670 million which the German government had decided to provide to Deutsche Airbus for the production of the A320. According to the United States, the German government converted DM 505 million of the loan into a DM 505 million capital investment in Deutsche Airbus in 1989. As previously indicated, the United States challenges the DM 505 million capital investment by the German government as a specific subsidy. *See*, paras. 7.1264 - 7.1302 and paras. 7.1315 - 7.1322 above.

⁴⁴³¹ US, FWS, para. 521.

⁴⁴³² [***] also provided the German government with a document confirming its view that the settlement amount did not amount to alteration of existing contractual obligations to advantage the beneficiary, but represented an adequate amortization of those obligations on the basis of the various assumptions on which the settlement amount was based; [***] Letter, dated 26 July 1999, Exhibit EC-HSBI-0000205.

BCI deleted, as indicated [***]

settling the debt for a payment of DM 1.7 billion was to confer on Airbus a one time benefit of DM 7.7 billion, as opposed to receiving the benefit of the below-market interest rate embedded in the debtor warrant over a period of decades from 1989. According to the United States, in ascertaining whether Deutsche Airbus received an advantage relative to what would have been accorded by a market-based creditor, it is necessary to consider also the "non-market based terms of the underlying claims". Thus, in the United States' view, the fair market value of a market-based creditor's claims against Deutsche Airbus would have been higher than the fair market value of the non-market based claims that the German government had against Deutsche Airbus. The United States argues that, by discounting the preferential repayment obligations inherent in LA/MSF and the other outstanding debt effective as of 1 January 1999, the German government converted the loans and repayable grants, and the future benefit associated with them, to a net present repayment obligation of DM 1.7 billion and therefore a net present benefit of DM 7.7 billion.⁴⁴³³

7.1320 Consideration of this issue involves two levels of transactions that could potentially constitute subsidies to Deutsche Airbus; namely, (i) the original transactions between the German government and Deutsche Airbus that resulted in Deutsche Airbus being obligated to repay, as of December 1998, DM 9.4 billion to the German government; and (ii) the settlement by the German government of those repayment claims in return for a payment of DM 1.75 billion. The United States has challenged the latter as a specific subsidy to Deutsche Airbus.⁴⁴³⁴ We do not agree with the United States that it is appropriate to consider the terms of the original transactions that resulted in the repayment claims totalling DM 9.4 billion in determining whether the terms of the settlement of those repayment claims are consistent with the terms on which a market-based creditor would have settled such claims. We are aware of the possibility that the underlying transactions were themselves subsidies, and indeed, certain of them have been challenged as, and in some cases found to be, subsidies in this dispute.⁴⁴³⁵ However, in light of the specific circumstances of the 1998 debt settlement, we do not consider the fact that the underlying transactions may be subsidies to be relevant to the question whether the "financial contribution" at issue before us here; *i.e.*, the transfer of the German government's financial claims against Deutsche Airbus to Deutsche Airbus for a specified amount, conferred a "benefit" on Deutsche Airbus, within the meaning of Article 1.1(b).⁴⁴³⁶ For purposes of assessing any benefit conferred as a result of the 1998 debt settlement, the relevant question is whether the terms of the transfer of the financial claims were consistent with those that Deutsche Airbus would have obtained from a market-based creditor.

7.1321 The European Communities has presented evidence that the DM 1.75 billion settlement amount negotiated between the German government and Daimler-Benz was based on the present value of the financial claims, and was consistent with the terms that Deutsche Airbus could have

⁴⁴³³ US, Answer to Panel Question 30, para. 199.

⁴⁴³⁴ Although the United States has challenged certain of the underlying transactions as specific subsidies in this dispute, including elements of the 1989 restructuring arrangement, namely KfW's acquisition of a 20 percent equity interest in Deutsche Airbus in 1989 and subsequent transfer of that interest to MBB in 1992, we note that the United States does not challenge the 1989 restructuring arrangement as a whole. The United States has made clear that its challenge is confined to "the 1998 transaction that led to the elimination of DM 9.4 billion in debt that Deutsche Airbus owed to the German government in exchange for a one-time payment of DM 1.7 billion"; US, Comments on EC Answer to Panel Question 187, para. 133.

⁴⁴³⁵ The United States has challenged certain of the underlying transactions that gave rise to the repayment claims as themselves involving subsidies; *e.g.*, LA/MSF in respect of the A300/A310, A320 and A330/A340 and the 1992 sale of KfW's 20 percent equity interest in Deutsche Airbus to MBB. We have found that these are specific subsidies in this dispute. *See*, paras. 7.497 and 7.1302 above. If, having found that these underlying transactions constituted subsidies, we were to then find that settlement of financial claims created by those underlying transactions constituted subsidies *because the underlying transactions constitute subsidies*, we would be double-counting the same subsidies.

⁴⁴³⁶ We express no view as to whether, in other factual circumstances, it may be relevant to the question whether a settlement of debt conferred a benefit that the debt in question related to previously granted subsidies.

BCI deleted, as indicated [***]

obtained in the market for the settlement of those claims. The United States has not challenged the assumptions employed or range of estimates arrived at in the [***] Report, nor has it argued that the settlement amount of DM 1.75 billion was less than the fair value, in 1998, of the German government's outstanding claims. On the basis of the unrefuted evidence presented by the European Communities that the amount of DM 1.75 billion is consistent with the present value in 1998 of Deutsche Airbus' outstanding indebtedness to the German government, we consider that the United States has not established that the German government's 1998 settlement of outstanding debt of Deutsche Airbus for DM 1.75 billion conferred a benefit on Deutsche Airbus within the meaning of Article 1.1(b) of the SCM Agreement.

(d) Conclusion

7.1322 We conclude that the 1998 settlement by the German government of all of Deutsche Airbus' outstanding repayment obligations to the German government in exchange for a payment of DM 1.75 billion is a financial contribution in the form of a "direct transfer of funds" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. We are not satisfied, however, that the financial contribution conferred a "benefit" on Deutsche Airbus within the meaning of Article 1.1(b) of the SCM Agreement. We therefore reject the United States' claim that the 1998 debt settlement constitutes a specific subsidy to Airbus.

9. Whether the equity infusions that the French government provided to Aérospatiale are specific subsidies

(a) The French government's capital investments in Aérospatiale between 1987 and 1994

(i) *Factual background*

7.1323 In this section, we address the United States' claims that four capital contributions made by the French government to Aérospatiale between the years 1987 and 1994, constitute specific subsidies to Airbus. We briefly recount the facts concerning those capital contributions, before addressing the parties' arguments and setting forth our evaluation of the relevant legal issues and our findings.

7.1324 We recall that, from its inception in 1970 until 1999, Aérospatiale was wholly-owned, either directly or indirectly, by the French government.⁴⁴³⁷ In 1987, the French government made a capital contribution in the amount of FF 1.25 billion to Aérospatiale. This amount was integrated into Aérospatiale's financial statements for the year ended 31 December 1987, although it was not paid in until the beginning of 1988.⁴⁴³⁸ The French government made a further capital contribution of FF 1.25 billion to Aérospatiale in 1988.⁴⁴³⁹ Then, in 1992, Crédit Lyonnais, which was at that time

⁴⁴³⁷ The French government's indirect interests in Aérospatiale were held through SOGEPa and (following its equity investment in 1992), Crédit Lyonnais. In 1999, Aérospatiale merged with Matra Hautes Technologies to form Aérospatiale-Matra; *see*, footnote 2054.

⁴⁴³⁸ Aérospatiale Results 1987, p. 2, Exhibit US-32, p. 2; French Senate Report No. 88, *Project de loi des finances pour 1989*, Tome III, Annexe 34 due 21/11/1988, Transports et mer II/Aviation civile III/Météorologie, Exhibit US-279, p. 33.

⁴⁴³⁹ French Senate Report No. 85, *Project de loi des finances pour 1991, Tome III, Annexe 19 Equipement, logement, transport et mer*, Exhibit US-281, p. 46, which records a contribution of FF 1,250 million being made by the French government to Aérospatiale in 1987 and an additional capital contribution of FF 1,250 million being made by the French government to Aérospatiale in 1988; Aérospatiale 1988 Annual Report, Exhibit US-282, pp. 5, 25; Aérospatiale, *Comptes de l'Exercice 1988*, at 5, referring to a "second tranche" of FF 1.25 billion being received by Aérospatiale in 1988.

BCI deleted, as indicated [***]

controlled by the French government, acquired a 20 percent equity interest in Aérospatiale.⁴⁴⁴⁰ This transaction involved Crédit Lyonnais subscribing for FF 1.4 billion in newly-issued Aérospatiale shares, as well as acquiring existing Aérospatiale shares from the French government, in exchange for the issuance to the French government of approximately two percent of Crédit Lyonnais' share capital.⁴⁴⁴¹ On 1 February 1994, the French government made a further capital transfer of FF 2 billion to Aérospatiale.⁴⁴⁴²

7.1325 We note that in its first written submission, the European Communities indicates that the relevant amounts and dates of the capital contributions made by the French government are: FF 1.48 billion in 1988; FF 1.25 billion in 1989; 1.439 billion in 1992 and FF 2 billion in 1994.⁴⁴⁴³ Thus, although the parties agree generally as to the amounts and timing of the 1992 and 1994 capital contributions, the United States alleges that the French government made a capital contribution of FF 1.25 billion in 1987, whereas the European Communities considers this capital contribution to have been in the amount of FF 1.48 billion in 1988. Similarly, the "second" FF 1.25 billion capital contribution, which the United States alleges was made in 1988, the European Communities considers to have been made in 1989. The exhibits to which the European Communities refers in support of its assertions that the relevant dates of the two capital contributions are 1988 and 1989, rather than 1987 and 1988 as alleged by the United States, actually record the capital contributions as having been made in 1987 and 1988. As for the apparent discrepancy over the amount of the 1987 capital contribution, the United States notes that, although Aérospatiale's 1987 Annual Report records a FF 1.48 billion "capital stock increase in process", it can be assumed that this larger amount includes a FF 230 million capitalized advance which was provided in 1986. We are satisfied that the French government made a capital contribution of FF 1.25 billion to Aérospatiale in 1987 and a further capital contribution in the same amount in 1988 and we shall proceed to examine the United States' claims on that basis.

7.1326 The United States argues that each of the capital contributions made by the French government to Aérospatiale in 1987, 1988, 1992 (made by Crédit Lyonnais), and 1994, are financial contributions within the meaning of 1.1(a)(1) of the SCM Agreement, which conferred a benefit on Aérospatiale within the meaning of Article 1.1(b). The United States further alleges that each of the above-referenced transactions constitutes a specific subsidy within the meaning of Article 2 of the SCM Agreement. As will be apparent from our discussion of the respective arguments of the United States and the European Communities, the parties' disagreement over whether the transactions in question are specific subsidies centres on the issue of whether they can be said to have conferred a "benefit" on Aérospatiale, within the meaning of Article 1.1(b) of the SCM Agreement. This in turn, involves a consideration of the appropriate standard for determining the existence of a benefit conferred by a financial contribution in the form of an equity infusion, and the nature of evidence sufficient to establish (and rebut) the existence of benefit.

⁴⁴⁴⁰ Immediately preceding the 1992 capital investment by Crédit Lyonnais, the French government held a 54.3 percent interest in Crédit Lyonnais. Following the capital investment, its stake increased to 56.1 percent.

⁴⁴⁴¹ The transaction occurred in two stages: (i) Crédit Lyonnais, acting through its subsidiary Crédit Lyonnais Industrie-Clindus, acquired 3,570,884 newly issued shares in Aérospatiale (representing a FF 1,439 million increase in Aérospatiale's equity capital); and (ii) the French government contributed 4,637,931 of its shares in Aérospatiale to Crédit Lyonnais, in exchange for an increase in Crédit Lyonnais' capital reserved for the state; Aérospatiale Group Annual Report 1992, Exhibit EC-174, p. 74.

⁴⁴⁴² Aérospatiale 1993 Annual Report, Exhibit EC-186, p. 42.

⁴⁴⁴³ EC, FWS, para. 1132.

BCI deleted, as indicated [***]

(ii) *Arguments of the parties*

United States

The appropriate standard for determining the existence of "benefit" under Article 1.1(b)

7.1327 The United States notes that Article 1.1(b) of the SCM Agreement does not establish a standard for determining whether an equity infusion confers a benefit on its recipient.⁴⁴⁴⁴ The United States contends that Article 14(a) provides relevant context for determining how to make such a determination, however, as it provides a standard for purposes of Part V of the SCM Agreement.⁴⁴⁴⁵ In light of Article 14(a), the United States argues that, "if a government's decision to provide equity to a company is inconsistent with the usual investment practice of private investors in that Member's territory, the infusion confers a benefit within the meaning of Article 1.1(b) of the SCM Agreement."⁴⁴⁴⁶ Thus, according to the United States, if under the usual investment practice of private investors in the territory of the subsidizing Member, the equity infusion would not have been provided, or if the government equity infusion is made on better than commercial terms, the equity infusion confers a benefit and constitutes a subsidy.⁴⁴⁴⁷

7.1328 According to the United States, where a recipient company's shares are not publicly traded, the question whether an equity infusion is consistent with the usual investment practice of private investors in the territory of the Member involves an analysis of the company's financial state and performance to determine whether the government had a realistic expectation of a reasonable return on the investment, or if private investors would have undertaken such an investment at all.⁴⁴⁴⁸ The United States contends that the usual practice of private investors considering whether to invest in a company is to analyze indicators of the company's financial and commercial health and performance, as reflected in the company's financial statements, and to conduct an objective analysis and in-depth "due diligence" on the company. The United States contends that a market investor, with virtually limitless options for investing its capital, is interested in maximizing its returns, regardless of whether that interest coincides with the interest of a particular company in meeting ongoing capital requirements.⁴⁴⁴⁹

The 1987 and 1988 capital contributions

7.1329 The United States argues that the capital contributions made by the French government to Aérospatiale in 1987 and 1988 are direct transfers of funds in the form of equity infusions and therefore constitute financial contributions within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.⁴⁴⁵⁰ The United States argues that each of these financial contributions conferred a benefit on Aérospatiale and thus constitutes a subsidy to Aérospatiale.⁴⁴⁵¹ Finally, the United States argues that these subsidies are specific to Aérospatiale within the meaning of Article 2 of the

⁴⁴⁴⁴ US, FWS, para. 544.

⁴⁴⁴⁵ US, FWS, para. 544.

⁴⁴⁴⁶ US, FWS, para. 545.

⁴⁴⁴⁷ US, FWS, para. 562.

⁴⁴⁴⁸ US, FWS, para. 563.

⁴⁴⁴⁹ For this reason, the United States contends that it is beside the point that the French government may have considered the capital contributions to be necessary to meet Aérospatiale's ongoing capital requirements; US, Answer to Panel Question 224, para. 322.

⁴⁴⁵⁰ US, FWS, para. 567.

⁴⁴⁵¹ US, FWS, para. 561.

BCI deleted, as indicated [***]

SCM Agreement, as they are *ad hoc* infusions into the company by the French government and are explicitly limited to Aérospatiale.⁴⁴⁵²

7.1330 In support of its argument that the 1987 and 1988 equity infusions were inconsistent with the usual investment practice of private investors in France, and therefore conferred a benefit on Aérospatiale, the United States contends that Aérospatiale was "in serious financial trouble", at the relevant times at which the French government would have been considering whether or not to make the investments. The United States points to Aérospatiale's total shareholders' equity in 1986 (which was slightly more than FF 3.3 billion) compared to its long-term borrowings of FF 8.7 billion and total liabilities of approximately FF 36.7 billion.⁴⁴⁵³ The United States also presents evidence of certain key financial ratios of Aérospatiale compared with those of an alleged peer group of French aerospace and defence companies.⁴⁴⁵⁴ The United States notes that Aérospatiale's debt-to-equity ratio in 1986 was 10.9, compared with an average of 6.2 for the peer group companies. Aérospatiale's debt coverage ratio was 0.1 in 1986 and zero in 1987, compared with a peer group average of 1.1 and 1.6, respectively.⁴⁴⁵⁵ Finally, the United States notes that Aérospatiale's return on equity in 1986 and 1987 was 9.8 percent and 4 percent, respectively, compared with peer group averages of 45.2 percent and 17.2 percent. In sum, the United States argues that "in 1987 and 1988, Aérospatiale had a liquidity crisis; the investments were insufficient to resolve the crisis; it had been a poor investment in the years preceding the equity infusions."⁴⁴⁵⁶

7.1331 In addition, the United States notes that the Annex V Facilitator had requested the European Communities to indicate whether any prior evaluation had been made of the equity infusions or Aérospatiale shares during this period and to provide any contemporaneous reports or analyses of the financial situation or prospects of Aérospatiale.⁴⁴⁵⁷ The United States contends that the European Communities neither provided such information nor indicated whether such information exists. Accordingly, the United States argues that the European Communities' failure to respond gives rise to a logical inference that there are no such contemporaneous analyses (indicating behaviour at variance with that of the usual investment practice of a private investor), or that such contemporaneous analyses contain information adverse to the European Communities' case.⁴⁴⁵⁸

The 1992 capital contribution

7.1332 The United States asserts that Crédit Lyonnais, as an entity that was controlled by the French government at the relevant time, is a "public body" within the meaning of Article 1.1(a)(1) and thus that the FF 1.4 billion investment in Aérospatiale by Crédit Lyonnais constitutes a direct transfer of funds (in the form of an equity infusion) by a public body within the meaning of Article 1.1(a)(1)(i) of

⁴⁴⁵² US, FWS, para. 574.

⁴⁴⁵³ US, FWS, para. 569.

⁴⁴⁵⁴ Exhibit US-274. The alleged key financial ratios are return on equity, debt-to-equity ratio and debt coverage ratio. The alleged peer group companies are Aviation Latécoère, Dassault Aviation S.A., SAFRAN S.A., Thales S.A. and Zodiac S.A.

⁴⁴⁵⁵ The United States notes that, as a ratio of one or above is necessary in order for a company to be able to cover its outstanding short-term debt, Aérospatiale's debt coverage ratios indicate that it was "in serious financial trouble" at the time.

⁴⁴⁵⁶ US, FWS, para. 573. The United States notes that the European Communities' evidence concerning an expected recovery in the LCA market dates only from 1994 and that the European Communities did not provide any evidence of contemporaneous studies or analyses undertaken by the French government on the investment prospects of Aérospatiale in 1988, 1989, 1992 or 1994; United States, Answer to Question 27 of the First Questions of the Panel, para. 174.

⁴⁴⁵⁷ Question 94(h)-(i) from the Facilitator to the EC, Exhibit US-4 BCI.

⁴⁴⁵⁸ US, FWS, para. 572.

BCI deleted, as indicated [***]

the SCM Agreement.⁴⁴⁵⁹ The United States argues that this financial contribution conferred a benefit on Aérospatiale because Crédit Lyonnais' decision to invest in Aérospatiale in 1992 was inconsistent with the usual investment practice of private investors. Finally, the United States argues that the 1992 equity infusion is specific to Aérospatiale within the meaning of Article 2 of the SCM Agreement because it is an *ad hoc* infusion by a public body and is explicitly limited to Aérospatiale.⁴⁴⁶⁰

7.1333 In support of its argument that the 1992 equity infusion by Crédit Lyonnais was inconsistent with the usual investment practice of private investors in France and therefore conferred a benefit on Aérospatiale, the United States points to certain evidence of Aérospatiale's financial health and performance, as reflected in its financial statements, and its commercial outlook at the time of the 1992 equity infusion. In this regard, the United States notes that Aérospatiale's total liabilities had increased from FF 33.2 billion in 1989 to FF 60.2 billion in 1991, of which debt maturing within one year had increased from FF 3.6 billion to FF 8.4 billion.⁴⁴⁶¹ Aérospatiale's debt coverage ratio was 0.1, -0.5 and 0.2 for the years 1989, 1990 and 1991, respectively, compared to corresponding peer group averages of 2.4, 1.5 and 1.3, respectively.⁴⁴⁶² Aérospatiale's debt-to-equity ratio was 6.5 in 1989, 10.5 in 1990 and 12.3 in 1991, compared to peer group averages of 4.0, 4.3 and 3.7, respectively, over the same periods.⁴⁴⁶³ The United States considers these results to be evidence that, "prior to the 1992 decision to provide yet another equity infusion, Aérospatiale was sinking deeper into debt, with less ability to pay its short-term liabilities and with its capital under constant pressure from sustained losses."⁴⁴⁶⁴

7.1334 In addition, the United States notes that Aérospatiale had sustained a net operating loss in 1990 and had reported a positive result in 1991 only because of the effect of two extraordinary income items not related to its Airbus operations.⁴⁴⁶⁵ According to the United States, Aérospatiale's return on equity was "dismal" in the years preceding the 1992 equity infusion.⁴⁴⁶⁶ Moreover, the United States notes that contemporaneous press reports had questioned how the investment in Aérospatiale made sense for Crédit Lyonnais.⁴⁴⁶⁷ In sum, the United States argues that Aérospatiale's financial results at the time of the 1992 equity infusion would have deterred private investors from injecting further equity into the company. According to the United States, Aérospatiale was undergoing a liquidity crisis, it had been a poor investment in the years preceding the infusion and the situation in the aeronautics industry did not indicate that its prospects would soon improve.⁴⁴⁶⁸

7.1335 Finally, the United States notes that, in response to requests from the Annex V Facilitator to provide contemporaneous reports, studies or analyses of Aérospatiale's financial situation or expectations with respect to the investment, the European Communities had replied that the transactions in question were carried out consistently with the French government's practice and in

⁴⁴⁵⁹ US, FWS, para. 580. The United States notes that in the Annex V process, the European Communities confirmed that Crédit Lyonnais was controlled by the French government at the time of the 1992 equity infusion; EC, Answer to Q99 from the Facilitator, Exhibit US-5 BCI.

⁴⁴⁶⁸ US, FWS, para. 589.

BCI deleted, as indicated [***]

full accordance with French law.⁴⁴⁶⁹ The United States contends that the European Communities' response suggests that the equity infusion was consistent with French government practices, not the usual investment practice of private investors, and that the European Communities' refusal to provide the information sought by the Annex V facilitator further supports this conclusion.

The 1994 capital contribution

7.1336 The United States alleges that in February 1994, the French government transferred a further FF 2 billion to Aérospatiale as an advance on a capital increase which took place in April 1994.⁴⁴⁷⁰ According to the United States, this capital contribution constitutes a financial contribution as it is a direct transfer of funds in the form of an equity infusion within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.⁴⁴⁷¹ The United States argues that the 1994 equity infusion conferred a benefit on Aérospatiale because, based on an analysis of Aérospatiale's financial condition and performance prior to the capital contribution, such an investment was inconsistent with the usual investment practice of private investors in France. Finally, the United States argues that the 1994 equity infusion is specific within the meaning of Article 2 of the SCM Agreement because it was an *ad hoc* infusion which was explicitly limited to Aérospatiale.

7.1337 In support of its argument that the 1994 equity infusion was inconsistent with the usual investment practice of private investors in France, and therefore conferred a benefit on Aérospatiale, the United States points to Aérospatiale's reported financial results and financial ratios in the periods preceding the 1994 equity infusion. In that regard, the United States notes that Aérospatiale reported consolidated net losses of FF 2.38 billion and FF 1.4 billion in 1992 and 1993, respectively.⁴⁴⁷² In addition, the United States notes that Aérospatiale's financial ratios "remained dire".⁴⁴⁷³ The United States also refers to various media reports suggesting that Aérospatiale's serious financial condition was common knowledge at the time of the 1994 equity infusion, including a statement by Aérospatiale's then-Chairman, Louis Gallois in February 1994, that from an investor's point of view, Aérospatiale was probably still "repellent" and suggesting that privatization of Aérospatiale was unlikely to occur in 1994 or even in 1995.⁴⁴⁷⁴ Moreover, the United States argues that Aérospatiale's prospects at the time of the 1994 equity infusion were also unpromising, noting management's prediction in Aérospatiale's 1993 Annual Report that economic conditions would remain very difficult in 1994.⁴⁴⁷⁵

7.1338 The United States further notes that the European Commission examined the 1994 equity infusion under the EC state aid rules and that, despite the Facilitator's request during the Annex V process that the European Communities provide information with respect to the European

⁴⁴⁶⁹ US, FWS, para. 588; citing to EC, Answer to Panel Question 100(g) from the Facilitator, Exhibit US-5 BCI.

⁴⁴⁷⁰ US, FWS, para. 594.

⁴⁴⁷¹ We understand that the United States challenges the capital investment made by the French government and that this transaction took the form of an advance contribution of cash to Aérospatiale in February 1994 against the issuance of new shares in Aérospatiale which occurred in April 1994.

⁴⁴⁷² US, FWS, para. 598.

⁴⁴⁷³ US, FWS, para. 599. Aérospatiale's debt-to-equity ratios were 16.6 and 25.5 in 1992 and 1993, respectively, which the United States contrasts to peer group averages for the corresponding periods of 3.2 and 3.1. The United States also notes that Aérospatiale had a debt coverage ratio of -1.3 and -0.7 in 1992 and 1993, respectively, which it contrasts with peer group averages for the corresponding periods of 1.1 and 0.7. According to the United States, the negative debt coverage ratios indicate that Aérospatiale's assets were "grossly insufficient" to cover its current borrowings. In addition, Aérospatiale's return on equity was -48.5 percent in 1992 and -37 percent in 1993, which the United States contrasts with peer group averages for the corresponding periods of 13.2 percent and 8.3 percent, respectively.

⁴⁴⁷⁵ US, FWS, para. 603.

BCI deleted, as indicated [***]

Commission's review (including the Commission's conclusion and reasons as to whether the infusion constituted state aid), the European Communities refused to provide the information. The United States requested the Panel to use its authority under Article 13 of the DSU to request the information on the European Commission's state aid review of the 1994 equity infusion that the European Communities had failed to provide to the Facilitator in the Annex V process.⁴⁴⁷⁶

European Communities

7.1339 The European Communities argues that the United States has failed to make out a *prima facie* case that any of the four capital contributions made by the French government to Aérospatiale between 1987 and 1994, which the United States alleges are subsidies to Aérospatiale, "have benefited Airbus SAS, which is the only company that produces Airbus LCA in the European Communities".⁴⁴⁷⁷

7.1340 The European Communities contends that the provisions of Article 14 of the SCM Agreement are simply guidelines for investigating authorities to follow in calculating the benefit to the recipient conferred pursuant to Article 1.1 in the context of countervailing duty investigations and, as such, serve as "guidelines" providing "relevant context" for Article 1.1(b) of the SCM Agreement.⁴⁴⁷⁸ According to the European Communities, Article 14 is not supposed to provide a "cut and paste" legal test for the purposes of Article 1.1(b).⁴⁴⁷⁹ However, the European Communities considers that, in the context of an equity contribution by a government, it is implicit in the notion of "benefit" in Article 1.1(b) of the SCM Agreement to inquire into the usual investment practice of private investors. The European Communities argues that in determining what the usual investment practice of private investors would have been, it is necessary to take account of the factual circumstances surrounding the making of the financial contribution.⁴⁴⁸⁰ According to the European Communities, private investor "practice" will differ depending on such factors as whether the investment target is solvent and the private investor is an existing creditor, whether "countercyclical investment" is considered important or unwise in the sector in which the investment target operates, and whether the investment target is a candidate for sale, merger or other consolidation.⁴⁴⁸¹

7.1341 The European Communities argues that determining the benchmark of the usual investment practice of private investors requires an assessment of an investment target's prospects for the future, rather than an undue focus on its past performance. Private investors decide whether or not to commit capital based on an assessment of prospects, rather than past performance because, according to the European Communities, "fundamentally the value of a business today is the present value of its anticipated future free cash flow available for distribution or reinvestment."⁴⁴⁸² The European Communities contends that the United States' conclusion that the French government acted inconsistently with the usual investment practice of private investors in France in making the capital contributions between 1987 and 1994 is, in each instance, based solely on data concerning Aérospatiale's *past* financial performance. The European Communities contends that the United States' arguments concerning the existence of benefit allegedly conferred by the various capital

⁴⁴⁸¹ EC, Answer to Panel Question 224, para. 568.

⁴⁴⁸² EC, FWS, para. 1140. The European Communities notes, for example, that during the early 1990s, when the commercial airline industry was depressed and Boeing's commercial aircraft revenue and operating profit were in decline, Boeing increased its investment in total assets and assumed significant additional risk. According to the European Communities, Boeing's management understood that in the LCA industry, with its long and costly development cycle, increased investment is imperative even during depressed periods in order to position the company to be competitive when the market recovers. EC, FWS, para. 1115.

BCI deleted, as indicated [***]

contributions are flawed because of this undue focus on Aérospatiale's past financial performance rather than its prospects, and moreover, because the United States exaggerates Aérospatiale's past financial difficulties.

7.1342 The European Communities argues that, at the time of the capital contributions made by the French government between 1987 and 1994, Aérospatiale needed additional equity capital to fund product development. According to the European Communities, the French government's decision to provide that equity capital was "informed by its knowledge that countercyclical investment is critical in the LCA sector."⁴⁴⁸³ The European Communities contends that a similarly knowledgeable private investor would have considered data related to Aérospatiale's past financial performance in light of the need to invest countercyclically in LCA development.⁴⁴⁸⁴ The European Communities argues, moreover, that a private investor considering whether to make the capital contributions under consideration would evaluate Aérospatiale's future prospects.⁴⁴⁸⁵

The capital contributions made between 1987 and 1994

7.1343 The European Communities does not dispute the United States' position that the capital contributions made by the French government to Aérospatiale between 1987 and 1994 (including the 1992 capital contribution made by Crédit Lyonnais) are direct transfers of funds in the form of equity infusions and thus constitute financial contributions within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. However, the European Communities does dispute the United States' contention that the various equity infusions conferred a benefit on Aérospatiale within the meaning of Article 1.1(b) of the SCM Agreement.

7.1344 The European Communities argues that, although Aérospatiale posted losses from 1992 through 1995 when the industry was in recession, it had been consistently profitable for the fiscal years 1987 through 1991 (covering the years leading up to the 1987, 1988 and 1992 capital increases), returned to profitability in 1996, and remained profitable through the merger with Matra Hautes Technologies in 1999 and the creation of EADS in 2000.⁴⁴⁸⁶

7.1345 More specifically, the European Communities disputes as a factual matter the United States' assertion that the 1987, 1988 and 1992 capital contributions were made when Aérospatiale was not "equityworthy". The European Communities argues that at the relevant times at which the French government was assessing whether to make the 1987, 1988 and 1992 capital contributions, Aérospatiale was profitable, even though its financial performance "may not have been as robust as the company would have liked".⁴⁴⁸⁷ The European Communities argues that in producing the A320 (which entered commercial service in March 1988) Aérospatiale had made significant investments in specialized capital and facilities, in addition to investing in increasing levels of work-in-process

⁴⁴⁸³ EC, Comments on US Answer to Panel Question 224, para. 415. The European Communities argues that both parties agree that, given the long and costly development cycle in the LCA industry, increased investment in aircraft development is imperative, "particularly during a period of trying financial performance driven by weak sales" so that an LCA manufacturer is poised to be competitive when the market recovers. EC, Comments on US Answer to Panel Question 224, para. 415.

⁴⁴⁸⁴ EC, Comments on US Answer to Panel Question 224, para. 415.

⁴⁴⁸⁵ The European Communities argues that it has provided "reams of contemporaneous documents" establishing that at the time that the French government made the capital contributions in question, Boeing, Airbus GIE and the US government itself had forecast commercial airline traffic growth and "robust, untapped demand for LCA well into the future"; EC, Comments on US Answer to Panel Question 224, para. 416; EC, SWS, paras. 534-535; see also the evidence discussed in paragraphs 7.1344 through 7.1350, 7.1365, 7.1369, and 7.1373.

⁴⁴⁸⁷ EC, FWS, para. 1137.

BCI deleted, as indicated [***]

inventory as production ramped up.⁴⁴⁸⁸ According to the European Communities, these investments put considerable strain on the financial resources of the company, in response to which it incurred additional debt and discussed with its sole shareholder, the French government, the need for additional equity capital.⁴⁴⁸⁹ As regards the period between 1992 and 1995, the European Communities argues that Aérospatiale's financial performance was driven by the depressed state of the commercial airline industry, which had also adversely affected Boeing's financial performance during this period.⁴⁴⁹⁰

7.1346 According to the European Communities, the fact that Aérospatiale's financial performance "was not robust in certain of the years in which capital contributions were made by the French government" does not suggest that the French government could not or did not have a realistic expectation of a reasonable return on the investment, or that it had no basis on which to conclude that its return on equity would improve significantly in the coming years.⁴⁴⁹¹ The European Communities contends that, at the time of the challenged capital contributions in 1987, 1988, 1992 and 1994, an informed investor with an understanding of the LCA development cycle would have considered Aérospatiale to be equityworthy, on the basis of "objectively measurable positive prospects for the firm".⁴⁴⁹² The European Communities argues that, just as Boeing dramatically increased its investment in commercial aircraft assets and assumed additional debt, notwithstanding its own "abysmal financial performance in the early 1990s", so too Aérospatiale and the French government, based on their assessment of positive future prospects driven by dramatic growth in LCA passenger demand, decided to look beyond Aérospatiale's recent performance and increase investment in the future.⁴⁴⁹³ According to the European Communities "a strong order book in the late 1980s, and robust forecasts for the new A320 and for the A330/A340 programme then under development, meant that management and the company's shareholder had ample evidence that the company's performance would improve significantly."⁴⁴⁹⁴

⁴⁴⁸⁸ EC, FWS, paras. 1134; SWS, para. 524; Aérospatiale Annual Report 1990, Exhibit EC-177, at p. 4. The European Communities argues that a further factor that caused Aérospatiale's debt-to-equity ratio to deteriorate in 1986 and 1987 was its accounting practice of expensing losses incurred in production of LCA at the beginning of the learning curve when production costs are significantly higher than revenue from sales. The European Communities notes that, in contrast, Boeing employs an accounting method known as "program accounting" in which early production losses are classified as an asset; EC, SWS, paras. 525-526.

⁴⁴⁸⁹ EC, SWS, para. 524.

⁴⁴⁹⁰ EC, FWS, para. 1138; Trends and Challenges in Aerospace Offsets, Proceedings and Papers, Charles W. Wessner, Editor, Board on Science, Technology, and Economic Policy, National Research Council, National Academy Press, Washington, D.C., 1999, Exhibit EC-181, p. 134; Five-Year Summary, 1994 Boeing 10-K, Exhibit EC-169, at p. 56.

⁴⁴⁹¹ EC, FWS, para. 1116.

⁴⁴⁹² EC, SWS, para. 531.

⁴⁴⁹³ EC, SWS, paras. 532-533. The European Communities submits that, in the early 1990s, Boeing's commercial aircraft revenue and operating profit declined precipitously, by 30 percent, and 49 percent, respectively, between 1992 and 1994, reflecting the depressed state of the commercial aircraft industry; however, despite such less than robust financial performance, Boeing dramatically increased its investment in commercial aircraft assets (by 82 percent between 1991 through 1995) and assumed additional debt. Indeed, the European Communities notes, Boeing launched the 777 programme in October 1990 and continued its development during a very depressed period of demand, with the first commercial flight in 1995, while in 1993, it launched the 737 Next Generation programme. EC, FWS, paras. 1114 – 1115, 1142; 1993 Boeing 10-K, Exhibit EC-184, at p. 57; 1994 Boeing 10-K, Exhibit EC-169, at p. 56; 1995 Boeing 10-K, Exhibit EC-185, at pp. 41, 61.

⁴⁴⁹⁴ EC, FWS, para. 1117. The European Communities refers to management's discussions of Airbus LCA deliveries, orders and options in its Annual Reports for 1987, 1988 and 1989 as reinforcing the company's prospects and underscoring the legitimate basis on which the French government acted in deciding to make the capital contributions in 1988, 1989 and 1992; paras. 1145-1149

BCI deleted, as indicated [***]

7.1347 The European Communities argues that Aérospatiale's financial results for 1990 and 1991 were adversely affected by three major events unrelated to Aérospatiale's business.⁴⁴⁹⁵ According to the European Communities, Aérospatiale's "underlying trends were robust for Airbus", notwithstanding these events.⁴⁴⁹⁶ Although airline deregulation, a global recession and reduced military spending had combined to result in losses at Aérospatiale in 1992 and 1993, the European Communities notes that the company was predicting that most of its markets would grow in the longer term. The European Communities argues that the decision by Crédit Lyonnais to provide the 1994 equity infusion was based on the rationale that the additional equity capital was necessary in order to ensure that Aérospatiale would continue to enhance its product line and increase its competitiveness for the future, in anticipation of the future recovery of the LCA market.⁴⁴⁹⁷

7.1348 The European Communities argues that the French government was, at all relevant times, closely informed about the business plans and prospects of Aérospatiale. In this regard, the European Communities notes that French law required that the French government, as shareholder, be provided with certain information in order to enable it decide on how to vote on the proposed capital contributions.⁴⁴⁹⁸ Moreover, the European Communities submits that the French government's assessment of Aérospatiale's prospects at the times of the various capital contributions "proved to be prescient" given that, through the privatization of Aérospatiale in 1999 and formation of EADS in 2000, the French government earned an annual rate of return of [***] percent on the capital investments it made between 1988 and 1994.⁴⁴⁹⁹

7.1349 The European Communities also contends that, even if past financial performance were determinative of investor behaviour, the United States "distorts the significance of the debt-to-equity relationship." The European Communities argues that the significant indebtedness of Aérospatiale during the late 1980s can be explained by reference to the financial demands of developing and manufacturing the A320 and its decision to expense as losses recurring costs in excess of revenues (in contrast to way in which Boeing accounts for these costs) which exaggerated the negative effect on the firm's debt-to-equity ratio in 1986 and 1987.⁴⁵⁰⁰

7.1350 In sum, the European Communities contends that it has demonstrated that the challenged capital contributions are WTO-consistent, even on the basis of the legal test proposed by the United States. For this reason, the European Communities submits that there is no need for the Panel or the United States to request the information related to the European Commission's review of the 1994 capital contribution under the European Communities' state aid rules. According to the European

⁴⁴⁹⁵ EC, FWS, para. 1151. These events were the significant drop in the US dollar, the Gulf War and consequent write off of Iraqi receivables and a strike at BAE Systems which delayed Airbus deliveries; Aérospatiale Annual Report 1990, Exhibit EC-177, at p. 3; Aérospatiale Comptes de l'Exercice 1988, Exhibit EC-172, at p. 3.

⁴⁴⁹⁶ EC, FWS, para. 1152. The European Communities notes, for example, that adjusted for the decrease in the value of the US dollar, Aérospatiale's sales volume increased 10 percent in 1990 (from 1989) and again in 1991 (from 1990). Aérospatiale Annual Report 1990, Exhibit EC-177, at p. 18; Aérospatiale Annual Report 1991, Exhibit EC-179, at p. 4.

Communities, the EC state aid regime is based on distinct concepts that are different from WTO law and have no bearing on the WTO-consistency of a particular commercial operation.⁴⁵⁰¹

(iii) *Evaluation by the Panel*

7.1351 The parties have advanced general horizontal arguments as to the existence of a requirement to demonstrate the pass-through to Airbus SAS of any benefit conferred on Aérospatiale by a financial contribution and the standard against which the presence of absence of a "benefit" within the meaning of Article 1.1(b) is assessed. We consider these general, horizontal questions first followed by the specific arguments and evidence pertaining to each of the challenged capital investments.

Pass-through

7.1352 We reject the European Communities' argument that the United States has failed to make out a *prima facie* case that any of the four capital contributions made by the French government to Aérospatiale between 1987 and 1994 are subsidies to Airbus SAS because the United States has not demonstrated how the benefit conferred by the respective financial contributions provided to Aérospatiale passed through to Airbus SAS. Our reasons for rejecting the European Communities' "pass-through" arguments are set forth in detail elsewhere in this report.⁴⁵⁰² In short, *if* we find that any of the capital contributions is a "financial contribution" which conferred a "benefit" on Aérospatiale within the meaning of Article 1.1(b), we consider that such financial contribution also conferred a benefit on the Airbus Industrie consortium (and therefore Airbus SAS), without requiring the United States to affirmatively establish the "pass-through" of any such benefit from Aérospatiale to Airbus Industrie or to Airbus SAS.

Determining the existence of a benefit conferred by a financial contribution in the form of an equity infusion

7.1353 A "financial contribution" provided by a government only constitutes a subsidy if it confers a "benefit" on a recipient. As we have already noted in the context of our evaluation of the United States' claims concerning the capital restructuring of Deutsche Airbus by the German government, the SCM Agreement does not contain a definition of the term "benefit" as it is used in Article 1.1(b). However, it is well established that a financial contribution confers a benefit within the meaning of Article 1.1(b) where the terms of the financial contribution are more favourable than the terms available to the recipient in the market.⁴⁵⁰³

7.1354 Accordingly, in order to determine whether the capital contributions made by the French government (including Crédit Lyonnais) to Aérospatiale conferred a benefit on Aérospatiale, we must evaluate whether the terms on which those capital contributions were provided to Aérospatiale were more favourable than those that would have been available to Aérospatiale on the market at the relevant times.

7.1355 The SCM Agreement does not set forth methodologies that panels may use in assessing whether the terms on which an equity infusion was made by a government were more favourable than those that would have been available on the market. Nor does it indicate the nature of evidence that is necessary or sufficient to establish those market-based terms. Article 14 of the SCM Agreement, entitled "Calculation of the Amount of a Subsidy in Terms of the Benefit to the Recipient", sets forth

⁴⁵⁰¹ EC, FWS, para. 1163.

⁴⁵⁰² See, paras. 7.193 - 7.200 above.

⁴⁵⁰³ See, e.g., Appellate Body Report, *Canada – Aircraft*, paras. 157-158; Panel Report, *US – Countervailing Duty Investigation on DRAMS*, para. 7.179; Panel Report, *EC – Countervailing Measures on DRAM Chips*, paras. 7.173-7.175; Panel Report, *Japan – DRAMs (Korea)*, para. 7.256.

BCI deleted, as indicated [***]

guidelines for methods used by investigating authorities in countervailing duty investigations to calculate the benefit to a recipient for the purposes of Part V of the SCM Agreement.

7.1356 As we have previously noted, panels and the Appellate Body have acknowledged that, although the introductory words of Article 14 state that the guidelines it establishes apply for purposes of Part V of the SCM Agreement, Article 14 nonetheless constitutes relevant context for the interpretation of "benefit" in Article 1.1(b).⁴⁵⁰⁴

7.1357 The parties agree generally that Article 14(a), although not directly applicable to Part III of the SCM Agreement, nevertheless provides guidance for the interpretation of Article 1 of the SCM Agreement as regards claims not involving Part V.⁴⁵⁰⁵ Accordingly, the United States argues that the capital contributions in question conferred a benefit on Aérospatiale because they were inconsistent with the usual investment practice of private investors in France. We understand the United States to argue that Aérospatiale was not equityworthy at the times of the equity infusions by the French government, in the sense that Aérospatiale was, or would have been, unable to attract investment capital from a private investor. The French government's decision to provide such investment capital was, therefore, inconsistent with the usual investment practice of private investors. Conversely, the European Communities has sought to rebut the United States' allegations that the financial contributions conferred a benefit on Aérospatiale on the basis that Aérospatiale's positive future prospects at the times of the various equity infusions justified the commitment of additional capital, and that in providing that capital, the French government anticipated a reasonable return on its investment and was thus acting consistently with the usual investment practice of private investors.

7.1358 Our approach to the issue of benefit in the context of the French government's capital investments in Aérospatiale is to ask whether the United States has demonstrated that a private investor would not have made the capital investments in question based on the information available at that time. In this regard, we note that a private investor evaluating an equity investment in an enterprise will be seeking to achieve a reasonable rate of return on its investment. Information relevant to such an evaluation would include current and past indicators of an enterprise's financial performance (including rates of return on equity) calculated from the enterprise's financial statements and accounts, information as to the future financial prospects of the enterprise, including market studies, economic forecasts and project appraisals, equity investment in the enterprise by other private investors, and marketplace prospects for the products produced by the enterprise.

The capital contributions to Aérospatiale made between 1987 and 1994

Financial contribution

7.1359 We consider that the capital contributions made by the French government to Aérospatiale in 1987, 1988 and 1994 are direct transfers of funds in the form of equity infusions and therefore constitute "financial contributions" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. The European Communities does not dispute that, at the relevant time, Crédit Lyonnais was a "public body" within the meaning of Article 1.1(a)(1) of the SCM Agreement. We consider that, at the time of its 1992 investment in Aérospatiale, Crédit Lyonnais was controlled by the French government and

⁴⁵⁰⁴ See, e.g., Appellate Body Report, *Canada – Aircraft*, para. 155; Appellate Body Report, *Japan – DRAMs (Korea)*, para. 173.

⁴⁵⁰⁵ US, FWS, paras. 544-545, 561-564; EC, FWS, para. 1215; EC, SNCOS, para. 267; EC, Answer to Question 101, para. 280; EC, SWS, para. 520. In its Answer to Question 101, the European Communities states that WTO case law does not suggest a "mechanistic, automatic, literal application of tests in Article 14 to the issue of determination of the existence of benefit in the sense of Article 1.1(b)". According to the European Communities, the Panel should apply this test taking due account of the sector and type of operations; para. 277.

BCI deleted, as indicated [***]

was a "public body" for purposes of Article 1.1(a)(1) of the SCM Agreement. As a result, the FF 1.4 billion capital contribution which Crédit Lyonnais made to Aérospatiale in 1992 also constitutes a financial contribution (*i.e.*, a direct transfer of funds in the form of an equity infusion) by a public body within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.

Benefit

7.1360 The United States has submitted evidence of Aérospatiale's financial performance (expressed in terms of certain key financial ratios) during the relevant periods compared to the financial performance of certain alleged peer group companies over the same periods.⁴⁵⁰⁶ This evidence indicates that between 1985 and 1994, Aérospatiale's financial ratios were uniformly and, in many cases, significantly inferior to the corresponding average ratios of its peer group of companies. We are aware that investors employ a variety of methodologies to estimate the expected rate of return from a potential investment and that measures of a firm's past financial performance are often relevant, at least as a starting point, to making such estimates. Moreover, there are many different ways of measuring a firm's financial performance. The United States has submitted evidence of Aérospatiale's financial performance measured against the performance of alleged peer group companies in terms their respective return on equity, debt-to-equity and debt coverage ratios. The European Communities has not disputed that the so-called "peer" companies identified by the United States are appropriate comparators for evaluating Aérospatiale's financial performance in the context of the industries in which it operates. While we would be reluctant to place undue reliance on a single measure of financial performance in isolation, recognizing that any particular financial ratio may be affected by accounting or other factors unrelated to a firm's underlying financial condition and performance, we note that the European Communities has not challenged the relevance, accuracy or appropriateness of evaluating Aérospatiale's financial performance on the basis of the financial ratios selected by the United States, nor has it suggested any alternative bases for evaluating Aérospatiale's financial performance in comparison to its peer group of companies. Owing to the cyclical nature of the markets in which Aérospatiale operates, we regard indicators of Aérospatiale's financial performance in relation to the performance of other firms operating in the same industries, presumably subject to similar business risks and cycles as Aérospatiale, as particularly probative of the question whether a private investor would have chosen to make the capital investments in Aérospatiale at issue in this dispute.

7.1361 The European Communities has submitted evidence purporting to demonstrate that at the times at which the French government made the various equity infusions, Aérospatiale had positive future prospects which, when coupled with the company's commitment to invest in product development, justified the commitment of expansion capital.⁴⁵⁰⁷ This evidence covers the period between 1985 and 1994 and consists of (i) statements in various Aérospatiale Annual Reports as to the status of aircraft deliveries, orders and backlog, revenue, profits and turnover; (ii) market and business forecast reports prepared by Airbus GIE predicting increases in demand for LCA and increases in Airbus GIE's market share; and (iii) Boeing market forecasts and a US government publication predicting increased long-term growth for the LCA industry. For reasons which we discuss in paragraphs 7.1366, 7.1370 and 7.1374, in assessing whether a private investor would have made the capital investments in question, we are inclined to accord the evidence in the latter two of these categories relatively less weight than evidence of Aérospatiale's past financial performance in comparison to that of its peers, coupled with management's statements as to expectations and prospects for the company contained in Aérospatiale's annual reports.

7.1362 We have considered the evidence carefully, and in its totality, and set forth below our factual findings with respect to the financial condition and prospects of Aérospatiale on the basis of

⁴⁵⁰⁶ Exhibit US-274.

⁴⁵⁰⁷ EC, SWS, para. 534.

BCI deleted, as indicated [***]

information that existed at the time at which the French government made the various capital investments in Aérospatiale.

7.1363 First, in relation to the **1987 and 1988 capital contributions**, we note that Aérospatiale reported a profit of FF 50 million for 1987 and FF 93 million in 1988. Noting that sales for 1987 had continued to be affected by the crisis that hit the aeronautics sector in 1982-1983, Aérospatiale described 1987 as marking a turning point for the company.⁴⁵⁰⁸ However, Aérospatiale also noted that with over one quarter of its production billed in US dollars, the continued drop of the US dollar since 1985 weighed considerably against sales in French francs. Aérospatiale noted positive factors affecting its outlook, such as strong growth in commercial air traffic, military budgets that allowed scope for modernization of military equipment, the commencement of strategic new programmes by Airbus GIE such as the launch of the A330/340 programmes, and the launch of the Arian 5 and Hermès satellites.⁴⁵⁰⁹ On the other hand, Aérospatiale warned that it was vulnerable to declines in the US dollar, to market volatility as a result of economic instability and an economic situation approaching stagnation, and to increased competition. Aérospatiale also indicated that in 1987 its working capital had declined due to a reduction in in-house funding and an increase in investments, while its working capital requirements had increased as a result of higher business levels and the need to make increased deliveries in future years. According to Aérospatiale, this "need to re-establish a balanced financial position" led to the French government making the FF 1.25 billion capital contribution in 1987.⁴⁵¹⁰ In sum, Aérospatiale predicted that the future would not be any less difficult than the previous year had been. Finally, we note that during the period leading up to the French government's capital investments, Aérospatiale's return on equity, debt to equity and debt coverage ratios were consistently inferior to the corresponding average ratios for its peer group of companies.⁴⁵¹¹

7.1364 The European Communities explains that Aérospatiale required additional equity capital in 1987 and 1988 in order to fund new investments, such as the ramp-up for manufacture of the A320 (with first delivery due in 1988) and the launch of the A330/A340 in 1987 (with first delivery due in 1993).⁴⁵¹² In our view, the fact that additional capital may have been necessary from the perspective of the recipient enterprise does not mean that the provision of such additional capital made sense from the perspective of an investor seeking to achieve a reasonable rate of return on its investment. On the other hand, we do not regard the fact that Aérospatiale was undercapitalised by the French government, its sole shareholder, to necessarily mean that a private investor would not have provided capital to the company.

7.1365 Aside from excerpts from Aérospatiale's 1987 and 1988 Annual Reports (detailing increases in revenue, net income and orders between 1987 and 1988, and providing details as to Aérospatiale's backlog and levels of orders and options for the A320 and A330/340), the European Communities has provided two types of evidence which it claims to be objective evidence demonstrating positive future prospects for Aérospatiale that would have provided a basis for a private investor to anticipate a reasonable return on an equity investment in Aérospatiale at the relevant times. This evidence consists of (i) Airbus GIE market and business outlook forecasts;⁴⁵¹³ and (ii) Boeing market outlook forecasts.⁴⁵¹⁴

⁴⁵¹³ Airbus GIE, *A View of the Future*, April 1985, part C and Chart C2, Exhibit EC-727; Airbus GIE, *Market and Business Forecasts* 1986-2005, Exhibit EC-728; Airbus GIE, *Global Market Forecast* 1987-2006, Exhibit EC-729. The Airbus GIE documents predict that, by 2004/2005, Airbus will achieve its long term strategic objective of securing a 30 percent share of the world's major commercial airline supply business, while

BCI deleted, as indicated [***]

7.1366 However, this evidence generally relates to overall market conditions and contains very little explanation of the basis for the assumptions and forecasts. In addition, the forecasts do not relate specifically to Aérospatiale's business operations, but to those of Airbus GIE, whose business comprises only one component of Aérospatiale's operational activities. In this regard, the evidence is potentially relevant to prospects for Aérospatiale's Aircraft Division, but is not indicative of prospects for Aérospatiale's Missiles, Space and Defence and Helicopters divisions, which would also be relevant to an investor contemplating an investment in the company as a whole. We attribute relatively less weight to the evidence contained in market and business outlook forecasts for Airbus GIE and market outlook forecasts for Boeing as we do not regard this evidence to be particularly probative of the question whether a private investor contemplating a capital investment in Aérospatiale at the relevant time could have expected to achieve a reasonable rate of return on its investment. We note also that the European Communities has not submitted information as to Aérospatiale's actual projected earnings figures for 1988 and subsequently, or any other Aérospatiale financial projections or budgets which presumably were made available to the French government prior to its decision to provide the additional equity capital to Aérospatiale in 1987 and 1988. Such evidence might potentially have supported a rebuttal by the European Communities of the United States' case by demonstrating that a private investor contemplating a capital investment in Aérospatiale at the relevant time could have expected to achieve a reasonable rate of return on such an investment.⁴⁵¹⁵

7.1367 We conclude that a private investor would not have made capital investments of FF 1.25 billion in Aérospatiale in 1987 and 1988. We reach this conclusion after considering all of the evidence in its totality in respect of the French government's 1987 and 1988 capital contributions to Aérospatiale.⁴⁵¹⁶ Accordingly, we consider that the United States has established that the French government's investment decisions with respect to the FF 1.25 billion equity infusions in 1987 and 1988 were inconsistent with the usual investment practice of private investors in France and conferred a benefit on Aérospatiale within the meaning of Article 1.1(b) of the SCM Agreement.

7.1368 As regards the **1992 capital contribution by Crédit Lyonnais**, we note that in 1991, Aérospatiale had reported net income of FF 1,829 million, compared with FF 38 million in 1990 and FF 204 million in 1989. However, allowing for the effect of extraordinary items, the company had actually posted a net loss in 1991.⁴⁵¹⁷ Moreover, in late 1992 Aérospatiale had announced a loss of FF 477 million for the first half of 1992, plus a provision of FF 300 million for an employment adaptation plan which was expected to affect 1,150 employees.⁴⁵¹⁸ Aérospatiale had noted in its 1991 Annual Report that its order books were deeply affected by a year-long atmosphere of crisis resulting from the drop-off in air traffic and heavy losses incurred by airlines, the general economic slowdown and budgetary restrictions which affected buyers. Although orders for commercial aircraft were then

also forecasting traffic growth of an average of 5.6 percent per annum over the period 1985-2004 and significant increases in demand over the 1987-2006 period.

⁴⁵¹⁴ Airbus GIE, *A View of the Future*, April 1985, part C and Chart C2, Exhibit EC-727.

⁴⁵¹⁵ We note, however, that the weight that we would accord to any such evidence would depend on the evidence itself.

⁴⁵¹⁶ We recall that the United States requested the Panel to draw certain logical inferences from the European Communities' failure to respond to requests from the Annex V Facilitator related to whether there had been any prior evaluation of the equity infusions or Aérospatiale shares during this period and to provide any contemporaneous reports or analyses of the financial situation or prospects of Aérospatiale. Given our conclusions with regard to the evidence presented in this dispute, we do not find it necessary to draw the logical inferences requested by the United States.

⁴⁵¹⁷ Aérospatiale Annual Report 1991, Exhibit EC-179, at 13. The extraordinary items were a capital gain of FF 3,316 million from the spinoff of the company's helicopter business and a FF -815 provision for retirement indemnities.

⁴⁵¹⁸ Les Echos, *Accord annonce en juillet dernier – Le Crédit Lyonnais finalise son entrée dans Aérospatiale*, Exhibit US-283, at 1.

BCI deleted, as indicated [***]

at three to four years' production, the backlog situation for both helicopters and missiles was described as a cause for concern. In addition, the cancellation of the S-45 strategic missile programme was described as profoundly changing the outlook for the Space and Defence Division, while the company's position in the regional aircraft market was described as "vulnerable" due to the European Commission's refusal to approve Aérospatiale's acquisition of de Havilland.⁴⁵¹⁹ Finally, we note that during the period leading up to Crédit Lyonnais' capital investment, Aérospatiale's return on equity, debt to equity and debt coverage ratios were consistently inferior to the corresponding average ratios for its peer group of companies.⁴⁵²⁰

7.1369 The evidence provided by the European Communities consists of information from Aérospatiale's Annual Reports relating to reported net income, turnover, backlog and orders and credit ratings, Airbus GIE's planning and market and delivery forecasts,⁴⁵²¹ and Boeing market outlook documents. The European Communities also pointed to statements by a Crédit Lyonnais executive following the announcement of the capital investment in August 1992 to the effect that the investment was justified by the good prospects for the A330/A340 programme, which would start generating substantial revenue in 1994 and that Crédit Lyonnais considered the Aérospatiale investment to be a long term investment.⁴⁵²²

7.1370 However, aside from the evidence concerning Aérospatiale's reported financial results, this evidence generally relates to overall market conditions and contains very little explanation of the basis for the assumptions and forecasts. In addition, the market and delivery forecasts do not relate specifically to Aérospatiale's business operations, but relate to those of Airbus GIE, whose business comprises one component of Aérospatiale's operational activities. In this regard, the evidence is potentially relevant to prospects for Aérospatiale's Aircraft Division, but is not indicative of prospects in Aérospatiale's Missiles, Space and Defence and Helicopters divisions, which would also be relevant to an investor contemplating an investment in the company as a whole. We attribute relatively less weight to the evidence contained in market and delivery forecasts for Airbus GIE and market outlook forecasts for Boeing as we do not regard this evidence to be particularly probative of the question whether a private investor contemplating a capital investment in Aérospatiale at the relevant time could have expected to achieve a reasonable rate of return on its investment. We note also that the European Communities has not submitted information as to Aérospatiale's actual projected earnings figures for 1992 and subsequently, or any other Aérospatiale financial projections or budgets which presumably were made available to Crédit Lyonnais and to the French government prior to the decision to provide the capital contribution to Aérospatiale in 1992. Such evidence may potentially have supported a rebuttal by the European Communities of the United States' case by demonstrating that a private investor contemplating a capital investment in Aérospatiale at the relevant time could have expected to achieve a reasonable rate of return on such an investment.⁴⁵²³

7.1371 We conclude that a private investor would not have made a capital investment of FF 1.4 billion in Aérospatiale in 1992. We reach this conclusion after considering all of the evidence in its totality in respect of Crédit Lyonnais' 1992 capital investment in Aérospatiale.⁴⁵²⁴ Accordingly,

⁴⁵²¹ Airbus GIE Operational Plan & Budget 1989-1991, Exhibit EC-724; Airbus GIE Market and Delivery Forecasts 1990-2009, Exhibit EC-730; Airbus GIE Global Market Forecast 1990-2009, Exhibit EC-731; Airbus GIE Forecast, Exhibit EC-725; Airbus GIE Market Perspectives for Civil Jet Aircraft, Exhibit EC-732; Airbus GIE Market Perspectives for Civil Jet Aircraft June 1991, Exhibit EC-733.

⁴⁵²² Aviation Week & Space Technology, Crédit Lyonnais to Buy 20% Stake in Aérospatiale from French Government, 3 August 1992, Exhibit US-284.

⁴⁵²³ We note, however, that the weight that we would accord to any such evidence would depend on the evidence itself.

⁴⁵²⁴ We recall that the United States requested the Panel to draw certain logical inferences from the European Communities' failure to respond to requests from the Annex V Facilitator related to whether there had

BCI deleted, as indicated [***]

we consider that the United States has established that Crédit Lyonnais' investment decision with respect to the FF 1.4 billion equity infusion in 1994 was inconsistent with the usual investment practice of private investors in France and conferred a benefit on Aérospatiale within the meaning of Article 1.1(b) of the SCM Agreement.

7.1372 Finally, regarding the **French government's FF 2 billion capital investment in 1994**, we note that, in the period leading up to that investment, Aérospatiale had posted a consolidated loss of FF 1.42 billion in 1993, which it considered to be an improvement over the FF 2.38 billion loss in 1992.⁴⁵²⁵ In its 1993 Annual Report, Aérospatiale indicated that in general, market conditions in 1993 were worse than in 1992, with markets shrinking significantly under the impact of a dual crisis in civil and military demand, which had created surplus production capacity and augmented pressure on prices. Aérospatiale said that it was continuing to suffer from the crisis which had reigned in the world's aerospace industry for several years. Uncontrolled airline deregulation and the global recession had led to cancellations of aircraft orders during 1993, military orders from Western countries experienced a sharp drop and the civil helicopter market had collapsed.⁴⁵²⁶ Aérospatiale reported that "{t}he crisis in the aerospace industry is global, and our markets have never been as seriously affected as they are today."⁴⁵²⁷ Aérospatiale described the outlook for its Aircraft division as "very pessimistic", and predicted that there would be "no significant recovery" in aircraft orders until 1996 or 1997.⁴⁵²⁸ Aérospatiale predicted that its missile division business for the next three years would be comparable to 1993 levels. The civil helicopter market had experienced its worst year for helicopter sales since 1967, with Aérospatiale indicating that no significant recovery could be expected in the short term.⁴⁵²⁹ As a result of what Aérospatiale described as its "poor medium-term outlook", Aérospatiale decided to adopt a new employment adaptation plan involving the elimination of 2,240 jobs in 1994, in addition to the 1,800 jobs which had been eliminated in 1993. Its expressed goal was to return to profitability by 1995 at the latest.⁴⁵³⁰ We note also that during the period leading up to the French governments' capital investment, Aérospatiale's return on equity, debt to equity and debt coverage ratios were consistently inferior to the corresponding average ratios for its peer group of companies.⁴⁵³¹ By March 1994, the media was reporting that Aérospatiale's 1993 results, along with a poor outlook for military and civil sales until 1996, had prompted the French Prime Minister to rule out the possibility of privatizing Aérospatiale in the near future.⁴⁵³²

7.1373 The European Communities refers to Aérospatiale's 1992 Annual Report which reported sales increases of 10 percent over the previous year and a year-end backlog of four years' of production. The European Communities also provided evidence of Airbus GIE forecasts of significant increases in civil aircraft demand over the 1992-2011 period (with Airbus orders announced by 1992 amounting to 20 percent of that demand),⁴⁵³³ evidence that the French government considered that there would be a

been any prior evaluation of the equity infusions or Aérospatiale shares during this period and to provide any contemporaneous reports or analyses of the financial situation or prospects of Aérospatiale. Given our conclusions with regard to the evidence presented in this dispute, we do not find it necessary to draw the logical inferences requested by the United States.

⁴⁵²⁵ Aérospatiale Annual Report 1993, at 5. Although Aérospatiale had succeeded in reducing its net debt to FF 3.7 billion, it also noted that the undervalued US dollar, changes in the repayment terms of government loans for financing aircraft development and a charge of FF 724 million to cover the employment adaptation plan to be executed in 1994, all had a negative impact on operating results.

⁴⁵²⁶ Aérospatiale Annual Report 1993, Exhibit EC-186, at 42.

BCI deleted, as indicated [***]

gradual recovery in aerospace markets from which Aérospatiale could be expected to benefit,⁴⁵³⁴ evidence that Aérospatiale had predicted in 1993 that most of its markets would grow in the longer term, notwithstanding their weakness in the short term,⁴⁵³⁵ and Boeing market outlook forecasts as well as a US National Research Council publication predicting substantial increases in traffic growth and deliveries in the longer term.⁴⁵³⁶

7.1374 Although the European Communities has pointed to general statements about expectations for a recovery in the market in the longer term, this evidence must be considered against the evidence of Aérospatiale's poor results in the years leading up to the 1994 capital contribution (both absolute and relative to its peer group of companies) and the very pessimistic statements made by management in its annual reports about prospects for recovery in the short to medium term. For the reasons we have previously explained, we attribute relatively less weight to the evidence contained in market and business outlook forecasts for Airbus GIE and market outlook forecasts for Boeing as we do not regard this evidence to be particularly probative of the question whether a private investor contemplating a capital investment in Aérospatiale at the relevant time could have expected to achieve a reasonable rate of return on its investment. We note also that the European Communities has not submitted information as to Aérospatiale's actual projected earnings figures for 1994 and subsequently, or any other Aérospatiale financial projections or budgets which presumably were made available to the French government prior to its decision to provide the additional equity capital to Aérospatiale in 1994. Such evidence might potentially have supported a rebuttal by the European Communities of the United States' case by demonstrating that a private investor contemplating a capital investment in Aérospatiale at the relevant time could have expected to achieve a reasonable rate of return on such an investment.⁴⁵³⁷

7.1375 We conclude that a private investor would not have made capital investment of FF 2 billion in Aérospatiale in 1994. We reach this conclusion after considering all of the evidence in its totality in respect of the French government's 1994 capital contribution to Aérospatiale.⁴⁵³⁸ Accordingly, we consider that the United States has established that the French government's investment decision to make the FF 2 billion equity infusion in 1994 was inconsistent with the usual investment practice of private investors in France and conferred a benefit on Aérospatiale within the meaning of Article 1.1(b) of the SCM Agreement.

The relevance of the absence of contemporaneous, objective assessments of an enterprise's financial condition and prospects

7.1376 We note that the United States also argues that contemporaneous independent analyses of the finances and prospects of an investment target are among the "key types of evidence" available to show whether an equity infusion was consistent with the usual investment practice of private

⁴⁵³⁴ New York Times, *France Pledges Subsidy to Aerospace Group*, 3 February 1994, Exhibit US-298.

⁴⁵³⁵ Financial Times, *Aérospatiale Posts FFr 2.3 bn loss*, 26 March 1993, Exhibit US-295.

⁴⁵³⁶ Boeing 1991 Current Market Outlook, Exhibit EC-742; Boeing 1992 Current Market Outlook, Exhibit EC-743; Boeing 1993 Current Market Outlook, Exhibit EC-744; Boeing 1994 Current Market Outlook, Exhibit EC-745; High-Stakes Aviation: US-Japan Technology Linkages in Transport Aircraft, Committee on Japan, Office of Japan Affairs, Office of International Affairs, National Research Council, National Academy Press, Washington, D.C. 1994, Exhibit EC-170.

⁴⁵³⁷ We note, however, that the weight that we would accord to any such evidence would depend on the evidence itself.

⁴⁵³⁸ We recall that the United States requested the Panel to draw certain logical inferences from the European Communities' failure to respond to requests from the Annex V Facilitator related to whether there had been any prior evaluation of the equity infusions or Aérospatiale shares during this period and to provide any contemporaneous reports or analyses of the financial situation or prospects of Aérospatiale. Given our conclusions with regard to the evidence presented in this dispute, we do not find it necessary to draw the logical inferences requested by the United States.

BCI deleted, as indicated [***]

investors.⁴⁵³⁹ According to the United States, conversely, the *absence* of contemporaneous independent analyses "tends to show that an investment decision is not consistent with the usual investment practice of private investors; that is, it is not based on commercial considerations"⁴⁵⁴⁰ and suggests that the government made an investment decision without the "analytical foundation private investors would ordinarily require".⁴⁵⁴¹

7.1377 The European Communities argues that basing a finding of "benefit" within the meaning of Article 1.1(b) on the *absence* of contemporaneous, independent financial analyses is tantamount to reversing the burden of proof, requiring a defending Member (or a respondent in domestic countervailing duty proceedings) to affirmatively demonstrate that the financial contribution did not confer a benefit.⁴⁵⁴² In this regard, the European Communities distinguishes between the standard against which the presence or absence of a "benefit" is to be assessed, on the one hand, and evidence relevant to that assessment, on the other.⁴⁵⁴³ As to the former, the European Communities contends that the standard for assessing the presence or absence of a benefit is the market, and that nothing in Article 1.1(b) or Article 14 makes a government's "considerations" the lodestone of that standard.⁴⁵⁴⁴ The European Communities argues that contemporaneous, independent financial analyses of an investment target's financial condition and prospects are but one (and by no means the only or necessary) example of evidence that a defending Member may offer in order to establish that the Member's investment decision was consistent with the usual investment practice of private investors.⁴⁵⁴⁵

7.1378 We do not preclude the possibility that the absence of any evidence that a government evaluated an equity investment in a manner consistent with the manner in which a private investor would evaluate the same investment may, in particular circumstances, be probative of the question whether the government's investment decision was consistent with the usual investment practice of a private investor. However, as is clear from our discussion of the evidence in paragraphs 7.1353 - 7.1358 above, the evidence as to Aérospatiale's financial condition and prospects at the relevant times has persuaded us that each of the French government's equity investments in 1987, 1988, 1992 and 1994 was inconsistent with the usual investment practice of private investors without attributing weight to the fact that the European Communities has not submitted evidence of contemporaneous, objective assessments of a Aérospatiale's financial condition and prospects undertaken by or provided to the French government at the times of the contemplated investments.

⁴⁵³⁹ US, FWS, para. 564.

⁴⁵⁴⁰ US, Answer to Panel Question 280, para. 110.

⁴⁵⁴¹ US Comment on EC, Answer to Panel Question 260, para. 44; *see also*, US, Answer to Panel Question 280, para. 110. The United States refers to various disputes in which it contends that other panels have found a financial contribution was not provided on the basis of commercial considerations, as evidenced by the absence of contemporaneous, independent financial analysis: Panel Report, *EC – Countervailing Measures on DRAM Chips*, para. 7.208; Panel Report, *Japan – DRAMs (Korea)*, para. 7.276; Panel Report, *Korea – Commercial Vessels*, para. 7.437.

⁴⁵⁴² EC, Answer to Panel Question 280, para. 182. The European Communities asserts that the United States has erroneously converted a finding by the Panel in *Korea – Commercial Vessels* regarding the *relevance* of contemporaneous government studies or analyses into a requirement that such studies or analyses be provided in order for the European Communities to successfully defend the French government's capital contributions to Aérospatiale; EC, SWS, para. 543.

⁴⁵⁴³ EC, Answer to Panel Question 280, para. 183.

⁴⁵⁴⁴ EC, Answer to Panel Question 280, para. 184. The European Communities argues that if the terms on which a financial contribution is provided are consistent with market, no "benefit" is conferred, regardless of the government's "considerations" in providing the financial contribution.

⁴⁵⁴⁵ EC, Answer to Panel Question 280, para. 186. According to the European Communities, contemporaneous, objective evidence demonstrating the consistency of a transaction with market is sufficient; EC, Answer to Panel Question 260, para. 39.

BCI deleted, as indicated [***]

Specificity

7.1379 The United States argues that the 1987, 1988, 1992 and 1994 capital contributions are subsidies which are specific to Aérospatiale within the meaning of Article 2 of the SCM Agreement as they are *ad hoc* infusions into the company by the French government (and as regards the 1992 contribution by Credit Lyonnais, a public body) and are explicitly limited to Aérospatiale.⁴⁵⁴⁶ Although the United States has not identified a particular sub-paragraph of Article 2 as the basis of its claims, we understand from the nature of the argument it advances that its claims are grounded in Article 2.1(a) of the SCM Agreement. Evidence submitted by the United States as to each of the challenged capital contributions to Aérospatiale between 1987 and 1994 more generally confirms the United States' assertion that these capital contributions were explicitly limited to Aérospatiale and were thereby "specific" within the meaning of Article 2.1(a) of the SCM Agreement. The European Communities does not contest the United States' allegations. We therefore find that each of the challenged capital contributions to Aérospatiale made between 1987 and 1994 constitutes a specific subsidy to Aérospatiale and thus to Airbus SAS.

Conclusion

7.1380 In conclusion, we find that each of the capital contributions to Aérospatiale made by the French government in 1987, 1988 and 1994, and the capital contribution to Aérospatiale made by Crédit Lyonnais in 1992, constitutes a subsidy to Aérospatiale. Each involves a "direct transfer of funds" in the form of an equity infusion, and therefore a financial contribution pursuant to Article 1.1(a)(1)(i), which conferred a benefit on Aérospatiale because the investment decision was inconsistent with the usual investment practice of private investors in France. We further find that each of these subsidies is specific within the meaning of Article 2 of the SCM Agreement.

- (b) The 1998 transfer of the French government's 45.76 percent interest in Dassault Aviation to Aérospatiale
- (i) *Background to the French government's transfer of its 45.76 percent equity interest in Dassault Aviation to Aérospatiale*

7.1381 In this section, we address the United States' claims that the 1998 transfer by the French government of its 45.76 percent equity interest in Dassault Aviation to Aérospatiale is a specific subsidy to Aérospatiale within the meaning of Article 1 and 2 of the SCM Agreement. We begin by describing the transaction and the context in which it occurred, before addressing the arguments of the parties and setting forth our evaluation of the relevant legal issues and our findings.

7.1382 Dassault Aviation is a French aircraft manufacturer of military, regional and business jets. Until 1978, almost all of its capital was privately held by the Dassault family through the entity Dassault Industries. In 1978, the French government acquired a 45.76 percent equity interest in the company.⁴⁵⁴⁷ Although the French government held less than a majority interest in Dassault Aviation, it was able to exercise 55 percent of the voting rights of the company owing to double voting rights attached to certain of its shares. On 30 December 1998, the French government transferred its 45.76 percent interest in Dassault Aviation to Aérospatiale, in exchange for new shares of Aérospatiale to be issued at a later date following the fixing of an exchange ratio by a panel of independent experts.⁴⁵⁴⁸ The panel of independent experts delivered its report on 19 March, 1999, approving the contribution of the Dassault Aviation shares to Aérospatiale at an amount equal to their

⁴⁵⁴⁶ US, FWS, paras. 574, 590, 605.

⁴⁵⁴⁷ Dassault Industries held 49.9 percent of the shares in Dassault Aviation, with the remaining 4.34 percent being held by the public.

⁴⁵⁴⁸ Aérospatiale Matra Offering Memorandum, dated 25 May 1999, Exhibit EC-53, p. 24.

BCI deleted, as indicated [***]

net book value of FF 2,658 million. On the basis of this report, on 6 May, 1999, Aérospatiale issued 9,267,094 new shares to the French government (based on an exchange ratio of two Aérospatiale shares for each Dassault Aviation share).⁴⁵⁴⁹

7.1383 The French government's transfer of its 45.76 percent interest in Dassault Aviation to Aérospatiale in late 1998 was a preliminary step in the planned consolidation of the French aeronautical, defence and space industries through the combination of Aérospatiale and Matra Hautes Technologies (MHT) to create Aérospatiale-Matra, and the public offering of shares in Aérospatiale-Matra.⁴⁵⁵⁰ In 1999, Aérospatiale and MHT were combined to create Aérospatiale-Matra, and the French government thereupon sold a portion of its shareholding in Aérospatiale-Matra in a public offering. Following the public offering in 1999, the French government held approximately 48 percent of the shares in Aérospatiale-Matra.⁴⁵⁵¹

7.1384 When the French government acquired its interest in Dassault Aviation in 1978, it had agreed with the Dassault family that the special control rights (double voting rights) attaching to certain of the French government's shares would not be transferred to private entities.⁴⁵⁵² When the French government transferred its 45.76 percent interest in Dassault Aviation to Aérospatiale, in anticipation of Aérospatiale's combination with MHT and the privatization of Aérospatiale-Matra, the French government agreed to the cancellation of the double voting rights which had attached to certain of its shares in Dassault Aviation, and the Dassault family thus regained effective control of Dassault Aviation.⁴⁵⁵³

(ii) *Arguments of the parties*

United States

7.1385 The United States argues that the 1998 transfer by the French government of its 45.76 percent interest in Dassault Aviation to Aérospatiale is a "direct transfer of funds" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement, and constitutes a financial contribution within the meaning of Article 1.1(a)(1) of the SCM Agreement.⁴⁵⁵⁴ The United States further argues that the share transfer conferred a "benefit" on Aérospatiale, within the meaning of Article 1.1(b) of the SCM Agreement, because it was inconsistent with the usual investment practice of private investors.⁴⁵⁵⁵ In addition, the United States argues that the 1998 share transfer is specific within the

⁴⁵⁴⁹ Aérospatiale recorded the difference between the net book value of the Dassault Aviation shares and the nominal value of the Aérospatiale shares (FF 100 nominal value per share) as additional paid-in capital of approximately FF 1,731 million; Aérospatiale Matra Offering Memorandum, dated 25 May 1999, Exhibit EC-53, p. 24.

⁴⁵⁵⁰ The consolidation of the French aeronautical, defence and space industries was itself undertaken in preparation for the creation of EADS; EC, FWS, para. 1165; *see*, paras. 7.183 and 7.199 and Section VII.E.1 Attachment, following para. 7.289 above.

⁴⁵⁵¹ A private company, Lagardère, held 33 percent of Aérospatiale-Matra and exercised control over Aérospatiale-Matra jointly with the French government. The remaining shares were held by the public and Aérospatiale-Matra employees.

⁴⁵⁵² EC, SNCOS, paras. 274-277; *Avis du Conseil d'Etat, no. 362-610*, Exhibit EC-846. Although French law would theoretically have allowed the French government to transfer its double voting rights to a third person following a two-year waiting period, the French government agreed that the double voting rights would not be exercised, even after the expiration of the two year period required by French law; EC, SNCOS, para. 275; *Loi no. 66-537 du 24 juillet 1966 sur les sociétés commerciales*, Article 175, Exhibit EC-845.

⁴⁵⁵³ EC, SNCOS, paras. 274-277; The current share ownership of Dassault Aviation is as follows: Groupe Industriel Marcel Dassault, 50.21 percent; EADS, 46.30 percent; public, 3.49 percent; EC, FWS, para. 1169, footnote 942; Exhibit EC-845; Exhibit EC-846.

⁴⁵⁵⁴ US, FWS, para. 608.

⁴⁵⁵⁵ US, FWS, para. 609.

BCI deleted, as indicated [***]

meaning of Article 2 of the SCM Agreement because it is an *ad hoc* transfer from the French government which is explicitly limited to Aérospatiale.⁴⁵⁵⁶

7.1386 The United States argues that, if under the usual investment practice of private investors in the territory of the subsidizing Member, an equity infusion would not have been provided, or if the government equity infusion is provided on better than commercial terms, it confers a benefit within the meaning of Article 1.1(b) of the SCM Agreement and constitutes a subsidy.⁴⁵⁵⁷ The United States argues that the French government's transfer of its 45.76 percent interest in Dassault Aviation to Aérospatiale conferred a benefit on Aérospatiale because Aérospatiale received what amounts to a FF 5.28 billion equity infusion (which increased Aérospatiale's consolidated capital by approximately 20 percent) through a transaction that was inconsistent with the usual investment practice of private investors in France.⁴⁵⁵⁸ According to the United States, a private investor would not have engaged in the transaction that resulted in Aérospatiale's receipt of the Dassault Aviation shares, given Aérospatiale's "dire financial circumstances" at the time, the uncompensated loss of control over Dassault Aviation which the transaction entailed, and the absence of any contemporaneous studies suggesting that such loss would be outweighed by gains that could be expected from the eventual public offering of Aérospatiale-Matra.⁴⁵⁵⁹

7.1387 The United States argues that Aérospatiale's financial condition and commercial outlook "remained serious" in the late 1990s.⁴⁵⁶⁰ In 1997, Aérospatiale reported total liabilities of more than FF 56 billion, compared with shareholders' equity of FF 5.3 billion.⁴⁵⁶¹ In addition, the United States alleges that Aérospatiale's financial ratios were very poor in comparison with those of its peer group of companies.⁴⁵⁶² The United States alleges that, following a negative market reaction to the news that the French government was considering the privatization of Aérospatiale, the French government decided instead to pursue a partial merger between Dassault Aviation and Aérospatiale through the transfer of its 45.76 percent interest in Dassault Aviation.⁴⁵⁶³ According to the United States, the transfer of the 45.76 percent equity interest in Dassault Aviation to Aérospatiale "led to a considerable benefit to Aérospatiale".⁴⁵⁶⁴ The United States refers to a report of the French *Sénat* indicating that the transaction would benefit Aérospatiale by reinforcing its financial position through an equity participation in Dassault Aviation (a company with superior operating margins), as well as amounting to a 20 percent increase in Aérospatiale's equity.⁴⁵⁶⁵

7.1388 The United States also notes that in transferring its stake in Dassault Aviation to Aérospatiale, the French government relinquished double voting rights attaching to certain of its shares, which had enabled it to exercise control of Dassault Aviation despite holding less than a majority interest. The

BCI deleted, as indicated [***]

United States contends that the French government's ceding control over Dassault Aviation as a result of the transfer of its stake in that company to Aérospatiale was not compensated by the Dassault family, owners of the rest of the shares in the company who thus regained control, and resulted in the French government incurring a substantial financial loss.⁴⁵⁶⁶ The United States acknowledges that a private investor might knowingly incur such a loss where it has a "reasonable expectation of an offsetting financial gain". However, the United States argues that such an expectation should be based on prior studies undertaken in order to determine the financial benefit that could be expected.⁴⁵⁶⁷ The United States notes that the French government failed to undertake any such studies and that the European Communities has not identified any basis for the French government to have expected that its profit from the formation of Aérospatiale-Matra would outweigh its loss from ceding control of Dassault Aviation without compensation.⁴⁵⁶⁸

7.1389 The United States argues that two further considerations help to reinforce the conclusion that the 1998 share transfer to Aérospatiale was not consistent with the usual investment practice of private investors. First, in addition to ceding control of Dassault Aviation to the Dassault family as a consequence of the transfer of its equity stake in Dassault Aviation to Aérospatiale, the French government also agreed to grant Dassault a significant participation in the merged entity Aérospatiale-Matra in the hope of persuading the Dassault family to consent to a full merger between Aérospatiale and Dassault Aviation.⁴⁵⁶⁹ According to the United States, this additional cost to the French government should increase the offsetting gain that it would have been reasonable for the French government to expect from the formation of Aérospatiale-Matra and its subsequent privatization, in order for the 1998 share transfer to be considered consistent with the usual investment practice of private investors.⁴⁵⁷⁰ Second, the United States argues that the French government's transfer of its 45.76 percent interest in Dassault Aviation to Aérospatiale was motivated by political and industrial policy concerns, rather than an interest in receiving a commercial return on its investment.⁴⁵⁷¹ According to the United States, evidence of the French government's political and industrial policy motivations explains the absence of cost-benefit analyses that would have been undertaken by a private investor and further demonstrates that the 1998 share transfer to Aérospatiale was not consistent with the usual investment practice of private investors.⁴⁵⁷²

European Communities

7.1390 The European Communities contends that, unlike the capital investments which the French government made in Aérospatiale between 1987 and 1994, the contribution to Aérospatiale of the French government's 45.76 percent interest in Dassault Aviation was made, not to fund the expansion

⁴⁵⁶⁶ US, Answer to Panel Question 158, para. 146. The United States has furnished an expert report that calculates that the French government's relinquishment of control of Dassault Aviation without compensation translated into a loss of [[HSBI]] to the French government. Lauren D. Fox, 1998 Dassault Share Transfer Valuation Report, Exhibit US-595 HSBI.

⁴⁵⁶⁷ US, Answer to Panel Question 158, para. 147.

⁴⁵⁶⁸ US, Answer to Panel Question 158, para. 148. The United States notes that by the end of the 13-month period following the formation of Aérospatiale-Matra (during which Aérospatiale-Matra shares were publicly traded) the value of the French government's interest in Aérospatiale-Matra substantially declined, compounding the loss which the French government had already incurred in ceding control of Dassault Aviation without compensation.

⁴⁵⁶⁹ US, FWS, para. 616.

⁴⁵⁷⁰ US, Answer to Panel Question 158, para. 150.

⁴⁵⁷¹ US, FWS, para. 615; US, Answer to Panel Question 158, para. 151. The United States alleges that, at the time of the 1998 share transfer, the French government had foreseen the consolidation of the European aerospace industry through the creation of Airbus SAS and wanted to strengthen Aérospatiale's balance sheet (and thus its relative position in negotiations with the other members of the Airbus consortium) and protect French interests in the anticipated consolidation of the European aerospace industry.

⁴⁵⁷² US, Answer to Panel Question 158, para. 151.

BCI deleted, as indicated [***]

of Aérospatiale's product lines, but to facilitate the consolidation and privatization of the French aerospace industry (*i.e.*, the combination of Aérospatiale with MHT to form Aérospatiale-Matra and the public offering of shares in Aérospatiale-Matra).⁴⁵⁷³

7.1391 The European Communities notes that, prior to its contribution to Aérospatiale of its shares in Dassault Aviation, the French government owned 100 percent of Aérospatiale and independently owned a 45.76 percent interest in Dassault Aviation. According to the European Communities, the French government's transfer of its stake in Dassault Aviation to Aérospatiale in exchange for newly issued shares of Aérospatiale amounted to "changing the form but not the substance" of the French government's ownership of both Aérospatiale and its stake in Dassault Aviation. In other words, the French government continued to own its 45.76 percent equity interest in Dassault Aviation, only now through its 100 percent ownership of Aérospatiale.⁴⁵⁷⁴ The European Communities asserts that, to the extent that the French government transferred anything "the transfer was to itself."⁴⁵⁷⁵ Accordingly, the European Communities considers that the transaction was purely mechanical and practical, in that it enabled the French government to sell a significant interest in both Aérospatiale and Dassault Aviation in a single sale transaction through the public offering of Aérospatiale-Matra in June 1999.⁴⁵⁷⁶

7.1392 The European Communities argues that if Aérospatiale-Matra had sold the Dassault Aviation shares at the time at which they were transferred to Aérospatiale or shortly thereafter, the French government's contribution of the 45.76 percent interest in Dassault Aviation to Aérospatiale "could be considered equivalent to a cash equity contribution by the French government."⁴⁵⁷⁷ However, because Aérospatiale, then Aérospatiale-Matra, and subsequently, EADS, retained the 45.76 percent interest in Dassault Aviation, the French government's transfer of the 45.76 percent interest in Dassault Aviation should not be characterized as a "new investment" in Aérospatiale, but simply as the combination of two of its existing investments (*i.e.*, the French government's equity stakes in Aérospatiale and Dassault Aviation, respectively) under the corporate entity Aérospatiale, in anticipation of the sale of a majority interest in the combined entity, Aérospatiale-Matra, to private investors.⁴⁵⁷⁸

7.1393 According to the European Communities, for the United States to sustain its argument that this pooling of assets by the French government in anticipation of the privatization of those assets is inconsistent with the usual investment practice of a private investor, it would need to present evidence as to what a private investor would have done in the context of the specific investment.⁴⁵⁷⁹ In other words, the United States would need to demonstrate that it is inconsistent with the usual investment practice of an owner to pool wholly-owned assets together in anticipation of a combined sale of those assets, for which the owner is compensated on market terms.⁴⁵⁸⁰ The European Communities argues that a market-based parent entity would consolidate holdings in order to realize synergies and create wealth, and that the United States has failed to demonstrate that it is inconsistent with the usual

⁴⁵⁷⁴ EC, FWS, para. 1166.

⁴⁵⁷⁵ EC, Answer to Panel Question 102, para. 282 ; SWS, para. 553 ; SNCOS, para. 264.

⁴⁵⁷⁶ EC, FWS, para. 1167.

⁴⁵⁷⁷ EC, FWS, para. 1170.

⁴⁵⁷⁸ EC, FWS, para. 1170. According to the European Communities, the French government's interests in both "assets" remained the same: It owned 100 percent of its 45.76 percent stake in Dassault Aviation before the transfer to Aérospatiale and 100 percent of that stake after the transfer to Aérospatiale. Similarly, it owned 100 percent of Aérospatiale before the contribution of its interest in Dassault Aviation, and 100 percent of Aérospatiale after the contribution of its interest in Dassault Aviation; EC, Answer to Panel Question 102, para. 281.

⁴⁵⁷⁹ EC, Answer to Panel Question 102, para. 282; EC, SWS, para. 554.

BCI deleted, as indicated [***]

investment practice of a private investor to pool wholly-owned assets together where doing so would realize synergies and create wealth.⁴⁵⁸¹

7.1394 The European Communities contends that the United States' argument that the French government knowingly incurred financial losses in transferring its 45.76 percent interest in Dassault Aviation to Aérospatiale is irrelevant to the question whether, for purposes of Article 1.1(b) of the SCM Agreement, Aérospatiale received the Dassault Aviation shares on better terms than would have been conferred by a market-based owner of those shares.⁴⁵⁸² According to the European Communities, the United States has acknowledged that the beneficiary of any allegedly uncompensated sacrifice by the French government of voting control over Dassault Aviation was the Dassault family, rather than Aérospatiale. The European Communities argues that, if anything, ceding the double voting rights reduced, rather than enhanced, the value of the Dassault Aviation shares received by Aérospatiale.⁴⁵⁸³ The European Communities also rejects the United States' argument that, in ceding its double voting rights to the Dassault family, the French government incurred a loss because it was not compensated for the value of the double voting rights. According to the European Communities, the double voting rights could not be acquired by private entities (due to the contractual arrangements between the French government and Dassault Industries) and therefore had no "market" value.⁴⁵⁸⁴

7.1395 Moreover, the European Communities contends that the French government was adequately compensated for the value of its 45.76 percent interest in Dassault Aviation in the subsequent privatization of Aérospatiale-Matra.⁴⁵⁸⁵ The European Communities points to the separate valuations of Aérospatiale's 45.76 percent interest in Dassault Aviation carried out by several investment banks in conjunction with the combination of Aérospatiale and MHT in 1999. These valuations were undertaken in order to estimate a value for the combined Aérospatiale-Matra entity, and thus a public offering price for shares in Aérospatiale-Matra.⁴⁵⁸⁶ The European Communities acknowledges that the valuations were not "fairness opinions" on the transfer of the 45.76 percent equity interest in Dassault Aviation to Aérospatiale; rather, they related to the valuation of Aérospatiale-Matra for purposes of establishing a public offering price for the shares of that entity.⁴⁵⁸⁷ However, the European Communities contends that they demonstrate that the French government did not leave Aérospatiale-Matra, the successor to Aérospatiale, with any residual value from the 45.76 percent stake in Dassault Aviation for which the French government was not compensated through the public offering of shares in Aérospatiale-Matra.⁴⁵⁸⁸

7.1396 The European Communities also argues that the United States has distorted the facts concerning Aérospatiale's financial condition at the time of the Dassault Aviation transfer. The European Communities notes that Aérospatiale's annual orders had grown from EUR 9.6 billion in 1996, to EUR 12.2 billion in 1997 and EUR 13.3 billion in 1998 and that its backlog had also increased substantially, from EUR 19.8 billion in 1996, to EUR 24.5 billion in 1997 and EUR 27.2 billion in 1998.⁴⁵⁸⁹ The European Communities further notes that Aérospatiale had reported profits of EUR 93 million, EUR 217 million and EUR 175 million in 1996, 1997 and 1998, respectively, while at the same time incurring almost EUR 5 billion in research and development expenses.⁴⁵⁹⁰ According to the European Communities, the financial ratios referred to by the United States as

BCI deleted, as indicated [***]

evidence of Aérospatiale's "dire" financial condition relate to Aérospatiale's need for additional capital, and the implication of the United States' arguments is that, if a company needs capital, it is by definition not equityworthy. However, the European Communities contends that the fact that a company may require additional capital says nothing about whether or not it is equityworthy. Rather, the relevant question is whether, from the perspective of a private investor, an investment holds out the prospect of good returns.⁴⁵⁹¹

7.1397 In this regard, the European Communities refers to a number of studies of the potential costs and benefits of the anticipated combination of Aérospatiale and MHT and public offering of Aérospatiale-Matra conducted by investment banks on behalf of the French government, Aérospatiale and Lagardère.⁴⁵⁹² The European Communities notes that certain of the reports of these investment banks "confirm" that Aérospatiale undertook an "extensive due diligence exercise" including the September 1998 exchange of Aérospatiale's and MHT's respective sector-by-sector business plans for the period 1998 to 2003. According to the European Communities, these business plans contained financial projections as well as past and projected data which were the subject of intensive review and assessment by the investment banks.⁴⁵⁹³ The European Communities contends that the investment banks had valued synergies expected to result from the combination of Aérospatiale and MHT at an amount that significantly exceeded any loss of value that the United States has attributed to the French government's loss of the double voting rights attached to its Dassault Aviation stake, and that this evidence shows that the French government expected synergies from the Aérospatiale-MHT combination that would offset any such loss.⁴⁵⁹⁴

7.1398 The European Communities also refers to the detailed information concerning Aérospatiale in the 1999 offering memorandum prepared for the public offering of Aérospatiale-Matra, "setting out positive future prospects" for Aérospatiale and Aérospatiale-Matra, as well as the terms of Lagardère's association with Aérospatiale-Matra and the response of retail and institutional investors to the Aérospatiale-Matra public offering, as evidence that private investors held reasonable expectations of financial gains in the anticipated combination of Aérospatiale and MHT and public offering of Aérospatiale-Matra.⁴⁵⁹⁵

7.1399 The European Communities thus requests that the Panel reject the United States' claim that the contribution to Aérospatiale of the French government's shareholding in Dassault Aviation conferred a "benefit" on Aérospatiale and thus constitutes a subsidy.⁴⁵⁹⁶

(iii) *Evaluation by the Panel*

Financial contribution

7.1400 The United States argues that the 1998 transfer by the French government of its 45.76 percent shareholding in Dassault Aviation to Aérospatiale is a "direct transfer of funds" and therefore constitutes a financial contribution for purposes of Article 1.1(a)(1)(i) of the SCM Agreement.

BCI deleted, as indicated [***]

7.1401 The European Communities argues that the transfer should not be characterized as a "new investment" by the French government, but simply as the combination of two of its existing investments under the corporate entity, Aérospatiale, in anticipation of the sale of a majority interest in Aérospatiale's successor entity, Aérospatiale-Matra.⁴⁵⁹⁷ It may be *possible* to understand the European Communities to argue that the French government's transfer of its 45.76 percent interest in Dassault Aviation to Aérospatiale is not a *financial contribution* within the meaning of Article 1.1(a)(1), because it is simply a change in the form in which the French government held its investment in Dassault Aviation, and not a "new investment". Such an argument would, we believe require us to accept the proposition that a government cannot provide a financial contribution to an entity of which it is already the owner; *i.e.*, one cannot make a "financial contribution" to oneself. We are unable to accept such a proposition. We note that a similar argument in relation to transactions involving debt-for-equity swaps was rejected by the Panel in *Korea – Commercial Vessels*.⁴⁵⁹⁸

7.1402 The European Communities does not expressly argue that the contribution by the French government of its 45.76 percent interest in Dassault Aviation to Aérospatiale is not a "financial contribution". On the contrary, the European Communities argues that, had Aérospatiale-Matra sold the Dassault Aviation stake at the time at which it was transferred by the French government, or shortly thereafter, the contribution of the Dassault Aviation shares to Aérospatiale "could be considered equivalent to a cash equity infusion by the French State", which suggest that the European Communities considers that the transaction could, in certain circumstances, constitute a financial contribution.⁴⁵⁹⁹ However, we do not consider that the ordinary meaning of Article 1.1(a)(1) permits us to characterize a transaction as a "financial contribution" according to the behaviour of the recipient subsequent to the transaction. If the transfer of the 45.76 percent interest in Dassault Aviation to Aérospatiale constitutes an equity infusion and falls within the meaning of Article 1.1(a)(1)(i), it will do so regardless of whether or not Aérospatiale or Aérospatiale-Matra as the recipient retained the transferred Dassault Aviation shares or subsequently sold them to a third party.⁴⁶⁰⁰

7.1403 Article 1.1(a)(1)(i) of the SCM Agreement provides that a "financial contribution" exists where there is a "direct transfer of funds (*e.g.*, grants, loans, and equity infusion), potential direct transfers of funds or liabilities (*e.g.*, loan guarantees)." The first issue we consider is whether a contribution of shares in a company (rather than a cash contribution) in exchange for newly-issued shares in the recipient company is a "direct transfer of funds" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. We agree with the Appellate Body that the term "funds" in Article 1.1(a)(1)(i) encompasses not only "money" but also financial resources and other financial claims more generally.⁴⁶⁰¹ Moreover, as the Appellate Body has noted, the words "grants, loans, and

⁴⁵⁹⁷ EC, FWS, para. 1170; EC, Answer to Panel Question 102, para. 281.

⁴⁵⁹⁸ See, Panel Report, *Korea – Commercial Vessels*, paras. 7.419-7.423, where the panel noted that the fact that equity infusions are explicitly designated as "financial contributions" suggests that the SCM Agreement does not preclude the owner of a company from making a "financial contribution" to that company (at para. 7.420).

⁴⁵⁹⁹ EC, FWS, para. 1170.

⁴⁶⁰⁰ During the Second Meeting of the Panel, while the European Communities stated that, to the extent that the French government transferred anything in connection with the Dassault Aviation transaction, the transfer was to itself, this statement, along with the European Communities' arguments concerning the proper characterization of the transaction as a combination of existing investments rather than as a "new investment", were made in the context of rebutting the United States' allegations that the transfer conferred a benefit on Aérospatiale, and thus appear to be directed to the issue of benefit within the meaning of Article 1.1(b); see EC, SNCOS, paras. 264-279. See, also, EC, SWS, paras. 552-553, where the European Communities makes the same statement as part of its argument that the transaction could not have conferred a "benefit" within the meaning of Article 1.1(b).

⁴⁶⁰¹ Appellate Body Report, *Japan – DRAMs (Korea)*, para. 250.

BCI deleted, as indicated [***]

equity infusion" in Article 1.1(a)(1)(i) are preceded by the abbreviation "e.g." which indicates that grants, loans and equity infusion are cited examples of transactions falling within Article 1.1(a)(1)(i), and transactions which are similar to those expressly listed are also covered by the provision. As we have indicated previously, we regard shares in a company as financial claims to a stream of income (in the form of dividends paid out of a company's profits) and to a share in the capital of a company on its winding up.⁴⁶⁰² Therefore, we consider shares in a company to fall within the scope of the term "funds" in Article 1.1(a)(1)(i), and a transfer of shares to fall within the scope of the term "direct transfer of funds" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.⁴⁶⁰³ We conclude that the French government's transfer of its 45.76 percent stake in Dassault Aviation to Aérospatiale constitutes a "financial contribution" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement.

7.1404 We next consider whether that financial contribution conferred a "benefit" on Aérospatiale within the meaning of Article 1.1(b) of the SCM Agreement.

Benefit

7.1405 We have previously indicated that it is well established that a financial contribution confers a benefit within the meaning of Article 1.1(b) where the terms of the financial contribution are more favourable than the terms available to the recipient in the market.⁴⁶⁰⁴ We have also noted that the Appellate Body has held that Article 14 constitutes relevant context for the interpretation of "benefit" in Article 1.1(b).⁴⁶⁰⁵ Moreover, the United States and European Communities both agree generally that Article 14(a), although not directly applicable to Part III of the SCM Agreement, provides guidance for the interpretation of Article 1 of the SCM Agreement as regards claims not involving Part V.⁴⁶⁰⁶

7.1406 The United States does not argue that the transfer by the French government of its 45.76 percent interest in Dassault Aviations to Aérospatiale, in exchange for the issuance by Aérospatiale to the French government of an additional 9,267,094 shares in Aérospatiale, conferred a benefit on Aérospatiale because the value of the newly issued shares in Aérospatiale was less than the value of the 45.76 percent interest in Dassault Aviation.⁴⁶⁰⁷ The United States argues that the transaction conferred a benefit on Aérospatiale because it constituted an equity infusion that was inconsistent with the usual investment practice of private investors in France.

7.1407 Our approach to the issue of benefit in the context of the French government's 1998 equity infusion to Aérospatiale (through the transfer of its 45.76 percent interest in Dassault Aviation to Aérospatiale in exchange for newly-issued shares in Aérospatiale) is to ask whether the United States has demonstrated that a private investor would not have made the equity investment in question based on the information available at the time. In this regard, we consider that a private investor contemplating such an investment would be seeking to achieve a reasonable rate of return on its investment. The United States has not presented evidence as to the rates of return which the French

⁴⁶⁰⁷ US, Answer to Panel Question 159, para. 152. The United States agrees with the European Communities that the ratio at which the French government exchanged its Dassault Aviation shares for newly-issued shares in Aérospatiale is of "no economic significance" due to the French government's ownership of Aérospatiale and the Dassault Aviation shares.

BCI deleted, as indicated [***]

government could reasonably have expected to achieve from what the United States contends is effectively a FF 5.28 billion equity infusion to Aérospatiale. Instead, the United States argues that a private investor would not have made such an equity infusion because Aérospatiale was, at the time, in "dire financial circumstances", the transaction involved considerable costs associated with ceding control of Dassault Aviation, and there is nothing to suggest that, at the time of the transaction, those costs appeared to be outweighed by gains that could be expected from the subsequent sale of shares of Aérospatiale-Matra.⁴⁶⁰⁸

7.1408 In this regard, the United States refers to Aérospatiale's reported total liabilities of more than FF 56 billion in 1997, compared with shareholders' equity of FF 5.3 billion, along with its poor financial ratios as compared with those of its peer group companies.⁴⁶⁰⁹ The United States also refers to evidence indicating that Aérospatiale was seriously undercapitalized at the relevant time.⁴⁶¹⁰ We do not regard the fact that Aérospatiale was undercapitalized by the French government, as its sole shareholder, to necessarily mean that a private investor would not have provided capital to the company.⁴⁶¹¹ Although the United States refers to a 1997 report of the French *Sénat* which stated that Aérospatiale had insufficient capital for its development, we note that the report also explained that, despite its undercapitalization, Aérospatiale had reasonable levels of indebtedness and cost management.⁴⁶¹² Indeed, while Aérospatiale's debt to equity ratios and debt coverage ratios in 1995 and 1996 continued to be inferior to the average ratios of its peer group of companies,⁴⁶¹³ unlike the period between 1987 and 1995, Aérospatiale's return on equity in 1996 and 1997 exceeded the average return on equity for its peer group of companies.⁴⁶¹⁴ However, we are unable, on the basis of the arguments and evidence before us, to determine whether the relative improvement in Aérospatiale's return on equity ratios is primarily due to increased revenues, or is at least partially the result of other factors that are not necessarily indicative of an improvement in financial performance. In any case, we note that Aérospatiale reported profits of EUR 93 million in 1996, and EUR 217 in 1997, along with growth in annual orders from EUR 9.6 billion in 1996 to EUR 12.2 billion in 1997 and consider that this evidence demonstrates that Aérospatiale's financial condition and prospects in 1996 and 1997 had improved over prior periods.⁴⁶¹⁵

7.1409 Despite this improvement over prior periods, however, it is clear to us that the increase in Aérospatiale's capitalization brought about by the transfer of the French government's 45.76 percent interest in Dassault Aviation (representing a 20 percent increase in Aérospatiale's total consolidated capital) was necessary in order to increase the chances that the planned privatization of Aérospatiale could occur as soon as possible.⁴⁶¹⁶ Moreover, we are satisfied that the planned privatization of Aérospatiale was regarded as necessary to improve the French government's position in its negotiations with other Airbus governments over the terms of the consolidation of the European

⁴⁶⁰⁸ US, Answer to Panel Question 159, para. 153.

⁴⁶⁰⁹ See, para. 7.1387 above.

⁴⁶¹⁰ US, FWS, paras. 610-611.

⁴⁶¹¹ Aérospatiale's undercapitalization by the French government can therefore be contrasted with the undercapitalization of Deutsche Airbus by MBB, a private shareholder; see, paras. 7.1291 - 7.1302 above.

⁴⁶¹² Exhibit US-18, p. 77.

⁴⁶¹³ In 1996 and 1997, Aérospatiale's debt to equity ratios were 13.5 and 10.7, respectively, compared with average peer group ratios of 2.6 and 2.1, respectively. Over the same periods, Aérospatiale's debt coverage ratios were 0.6 and 1.5, respectively, compared with average peer group ratios of 4.3 and 7.7, respectively.

⁴⁶¹⁴ In 1996, Aérospatiale's return on equity was 27.7 percent compared with an average of 15.0 percent for its peer group of companies, and in 1997, its return on equity was 37.4 percent compared with a peer group average of 17.8 percent.

⁴⁶¹⁵ EC, Comments on US Answer to Panel Question 158, para. 190. In addition, the European Communities notes that Aérospatiale's backlog increased from EUR 19.8 billion in 1996 to EUR 24.5 billion in 1997.

⁴⁶¹⁶ Exhibit US-276.

BCI deleted, as indicated [***]

aerospace industry.⁴⁶¹⁷ This being so, we consider that Aérospatiale's financial position and prospects immediately prior to the French government's transfer of its 45.76 percent interest in Dassault Aviation, while improved, were not improved to a degree that would have enabled Aérospatiale, absent the addition of the 45.76 percent interest in Dassault Aviation (representing a 20 percent increase in its total consolidated capital), to attract private capital.

7.1410 The European Communities argues that the appropriate focus of inquiry in evaluating the consistency or otherwise of the Dassault Aviation transfer with the usual investment practice of private investors is to ask whether a private *owner* would consolidate its wholly-owned investments in advance of the sale of those assets.⁴⁶¹⁸ In the context of the French government's transfer of its 45.76 percent interest in Dassault Aviation to Aérospatiale, the European Communities argues that this standard requires that the United States demonstrate that it is inconsistent with the usual investment practice of private owners to pool wholly-owned assets together in anticipation of a combined sale of those assets, for which the owner is compensated on market terms.⁴⁶¹⁹

7.1411 We do not reject the possibility that a party may successfully rebut a claim that an equity infusion conferred a benefit because it was inconsistent with the usual investment practice of private investors by showing that the transaction in question was a preliminary step in, or otherwise part of, a restructuring or consolidation project and that, considered in the context of the overall returns expected to be generated from that restructuring or consolidation project, the equity investment was consistent with the usual investment practice of a private investor. As we have indicated, we are satisfied as a factual matter that the French government's transfer of its 45.76 percent interest in Dassault Aviation to Aérospatiale was envisaged as a preliminary step in the consolidation of the French aeronautics industry, in preparation for the eventual consolidation of the European aeronautics industry. However, the European Communities has presented no evidence to persuade us that, at the time at which the French government was contemplating transferring its 45.76 percent interest in Dassault Aviation to Aérospatiale, it had a rational basis for believing that the overall returns it could expect from a public offering of shares in an entity that combined the French government's interests in Dassault Aviation with Aérospatiale, exceeded the rate of return it could expect from retaining its 46.75 percent equity interest in Dassault Aviation (including the double voting rights attached to certain of those shares) separately from its ownership of Aérospatiale.

7.1412 The European Communities has provided evidence to the effect that the Dassault Aviation stake received by Aérospatiale had been valued separately from Aérospatiale in the context of calculating a public offering price for Aérospatiale-Matra. We note, however, that the transfer by the French government of its 45.76 percent interest in Dassault Aviation occurred in December 1998.⁴⁶²⁰ The assessments to which the European Communities refers concern the relative valuations of Aérospatiale, Aérospatiale's 45.76 percent interest in Dassault Aviation, and MHT for the purpose of establishing a public offering price for the Aérospatiale-Matra shares, which occurred in 1999. These valuations are all dated either February, March or April 1999; in other words, they were all made *after* the French government had decided to transfer its 45.76 percent interest in Dassault Aviation to Aérospatiale. Moreover, the assessments do not analyze the relative merits of the French government retaining its separate holdings of Dassault Aviation (including the French government's double voting rights) and Aérospatiale, on the one hand, as opposed to combining those holdings (and cancelling the

⁴⁶¹⁷ In announcing the French government's decision to transfer its interest in Dassault Aviation to Aérospatiale, the French Finance Ministry said that the agreement between Aérospatiale and Dassault Aviation was designed to promote a concerted strategy for the French aeronautics industry in the broader context of alliances that need to be concluded in the near-term between the principal European actors; French Finance Ministry, *Communiqué de presse*, 15 May 1998, Exhibit US-304. Similar views are expressed in media reports: Exhibit US-307; Exhibit US-309; Exhibit US-310; Exhibit US-312; Exhibit US-596.

⁴⁶¹⁸ EC, Comments on US Answer to Panel Question 224, para. 421. Emphasis added.

BCI deleted, as indicated [***]

double voting rights attached to the Dassault Aviation shares) and merging them with MHT with a view to a subsequent public offering of the merged entity. Rather, the assessments are valuations of Aérospatiale and MHT and estimates of the synergies that could be expected from their combination.⁴⁶²¹ We therefore do not consider any of the assessments submitted by the European Communities to support the proposition that the French government had a rational basis for believing that the overall returns it could expect from a public offering of shares in an entity which combined the French government's interests in Dassault Aviation (minus the double voting rights) with Aérospatiale exceeded the rate of return it could expect from holding its 45.76 percent equity interest in Dassault Aviation (including the double voting rights attached to certain of those shares) separately from Aérospatiale. We are satisfied that the French government's transfer of its 45.76 percent equity interest in Dassault Aviation in exchange for newly issued shares in Aérospatiale was inconsistent with the usual investment practice of a private investor in France, because a private investor would not have made the investment, and that the transaction therefore conferred a benefit on Aérospatiale within the meaning of Article 1.1(b) of the SCM Agreement. We reach this conclusion after considering all of the evidence in its totality in respect of the French government's 1998 transfer of its 45.76 percent interest in Dassault Aviation to Aérospatiale.

Specificity

7.1413 The United States argues that the 1998 transfer by the French government of its 45.76 percent interest in Dassault Aviation to Aérospatiale is a subsidy which is specific to Aérospatiale within the meaning of Article 2 of the SCM Agreement as is an *ad hoc* transfer from the French government which is explicitly limited to Aérospatiale.⁴⁶²² Although the United States has not identified a particular sub-paragraph of Article 2 as the basis of its argument, we understand from the nature of the argument it advances that it is grounded in Article 2.1(a) of the SCM Agreement. Evidence submitted by the United States as to the 1998 transfer of a 45.76 percent interest in Dassault Aviation to Aérospatiale more generally confirms the United States' assertion that this transfer was explicitly limited to Aérospatiale and was thereby "specific" within the meaning of Article 2.1(a) of the SCM Agreement. The European Communities does not contest the United States' allegations. We therefore find that the 1998 transfer by the French government of its 45.76 percent interest in Dassault Aviation to Aérospatiale constitutes a specific subsidy to Aérospatiale.

(iv) Conclusion

7.1414 In conclusion, we find that the French government's 1998 transfer of its 45.76 percent equity interest in Dassault Aviation to Aérospatiale in exchange for the issuance by Aérospatiale of shares to the French government constitutes a subsidy to Aérospatiale because it involves a "direct transfer of funds" comparable to an equity infusion and is therefore a financial contribution within the meaning of Article 1.1(a)(1)(i), which conferred a benefit on Aérospatiale because the investment decision was inconsistent with the usual investment practice of private investors in France. We further find that this subsidy is specific within the meaning of Article 2 of the SCM Agreement.

⁴⁶²¹ We also note that certain of the assessments were performed by investment banks that had been retained to advise parties other than the French government in connection with the Aérospatiale-MHT offering, and therefore cannot necessarily be presumed to be information known to, or advice received by, the French government in the context of its decision to effect the transfer of its interest in Dassault Aviation to Aérospatiale. For example, [***] advised Aérospatiale, Exhibit EC-HSBI0000543; Exhibit EC-HSBI0000235, while [***] advised Lagardère, Exhibit EC-HSBI0000727; Exhibit EC-HSBI0000905.

BCI deleted, as indicated [***]

10. Whether research and technological development funding that the European Commission and the member States provide to Airbus are specific subsidies

(a) Introduction

7.1415 The United States challenges multiple instances of research and technological development ("R&TD") funding provided or committed to Airbus by the European Communities, the French, German, Spanish and UK governments and three German sub-federal public entities between 1986 and 2007. In the vast majority of cases, the challenged funding measures take the form of grants. However, in two instances, the United States' complaint focuses on loans. The United States claims that each of the challenged measures amounts to a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement. The R&TD measures that are subject to the United States' claims are:

- (i) EC grants for LCA-related R&TD projects in which Airbus participated pursuant to the:
 - Second Framework Programme for Community Activities in the Field of Research and Technological Development (1987-1991) ("Second Framework Programme" or "2nd FP"),⁴⁶²³
 - Third Framework Programme for Community Activities in the Field of Research and Technological Development (1990-1994) ("Third Framework Programme" or "3rd FP"),⁴⁶²⁴
 - Fourth Framework Programme of the European Community Activities in the Field of Research and Technological Development and Demonstration (1994-1998) ("Fourth Framework Programme" or "4th FP"),⁴⁶²⁵
 - Fifth Framework Programme of the European Community for Research, Technological Development and Demonstration Activities (1998-2002) ("Fifth Framework Programme" or "5th FP"),⁴⁶²⁶ and
 - Sixth Framework Programme of the European Community for Research, Technological Development and Demonstration Activities, Contributing to the Creation of the European Research Area and to Innovation (2002-2006) ("Sixth Framework Programme" or "6th FP");⁴⁶²⁷
- (ii) French government grants for LCA-related R&TD projects in which Airbus participated, between 1986 and 2005.⁴⁶²⁸
- (iii) German federal government grants for LCA-related R&TD projects in which Airbus participated under the:
 - Luftfahrtforschungsprogramm I ("LUFO I") (1995-1998),⁴⁶²⁹ Luftfahrtforschungsprogramm II ("LUFO II") (1998-2002)⁴⁶³⁰ and Luftfahrtforschungsprogramm III ("LUFO III") (2003-2007);⁴⁶³¹

BCI deleted, as indicated [***]

- (iv) Grants from three German sub-federal public entities for LCA-related R&TD projects in which Airbus participated under the:
- Offensive Zukunft Bayern (1995),⁴⁶³²
 - Offensive Zukunft Bayern II (1996),⁴⁶³³
 - Bayerisches Luftfahrtforschungsprogramm (2000),⁴⁶³⁴
 - Hightechoffensive Bayern (1999-2003),⁴⁶³⁵
 - Airbus Materials & System Technology Centre Bremen ("AMST I") (2000-2002),⁴⁶³⁶
 - Airbus Materials & System Technology Centre Bremen II ("AMST II") (2002-2006),⁴⁶³⁷ and
 - Luftfahrtforschungsprogramm (2000-2005) Hamburg,⁴⁶³⁸
- (v) Spanish government loans for LCA-related R&TD projects in which Airbus participated, in particular loans made under :
- the Plan Tecnológico Aeronáutico ("PTA") (1993-2003),⁴⁶³⁹ and
 - the Programa de Fomento de la Investigación Técnica ("PROFIT") (2000-2007);⁴⁶⁴⁰ in particular the Programa Nacional de Aeronáutica of PROFIT (2000-2003)⁴⁶⁴¹ and the Subprograma Nacional de Transporte Aéreo de PROFIT (2004-2007);⁴⁶⁴²
- (vi) UK government grants for LCA-related R&TD projects in which Airbus participated under the
- Civil Aircraft Research and Development Programme ("CARAD") (subsequently renamed the Aeronautics Research Programme ("ARP") (1992-2004),⁴⁶⁴³ and Technology Program ("TP") (2004-2005).⁴⁶⁴⁴

7.1416 In responding to the United States' claims, the European Communities has presented multiple arguments, two of which have already been set out and addressed in our Preliminary Ruling.⁴⁶⁴⁵ A

BCI deleted, as indicated [***]

third argument relates to the extent to which R&TD measures involving the participation of companies other than Airbus SAS and its subsidiaries are within the scope of this dispute. As we have noted elsewhere,⁴⁶⁴⁶ the European Communities argues that the only companies that can be the subject of the United States' adverse effects complaint are those that produce Airbus LCA, *i.e.*, the product which in the United States' view causes adverse effects to United States interests. Thus, according to the European Communities, to the extent that the United States has sought to contest R&TD measures that did not involve the participation of Airbus SAS or any of its subsidiaries, it has overstated the amount of R&TD support that can be rightfully challenged under the SCM Agreement.⁴⁶⁴⁷

7.1417 We recall our findings on the "relevant companies" for the purpose of this dispute: we do not consider that the changes to the corporate structure of the producer of Airbus LCA are such as to require the United States to demonstrate, as part of its *prima facie* case, the "pass-through" to the entity Airbus SAS of benefits conferred by financial contributions that had been provided to the Airbus Industrie consortium. If we find that any of the alleged financial contributions provided to the Airbus Industrie consortium conferred a benefit within the meaning of Article 1.1(b), and thus constitute subsidies, we would be satisfied that those subsidies do, in fact, subsidize Airbus LCA for purposes of our adverse effects analysis under Articles 5 and 6.⁴⁶⁴⁸ Thus, we will proceed to examine the United States' claims with this understanding of Airbus in mind.

(b) Terms of Reference

7.1418 Another issue raised by the European Communities (for the first time in its first written submission) relates to our terms of reference. According to the European Communities, the United States' complaint against the Spanish government loans provided to Airbus under the PROFIT is outside our terms of reference because the measures at issue were not adequately identified in the United States' panel request, in accordance with Article 6.2 of the DSU.⁴⁶⁴⁹ The United States rejects the European Communities' contention, arguing that its panel request clearly identifies the measures at issue in conformity with Article 6.2 of the DSU.⁴⁶⁵⁰

7.1419 The relevant section of the United States' panel request reads:

"The measures of the EC and the member States that are the subject of this panel request include:

...

(6) The provision by the EC and the member States of financial contributions for aeronautics-related research, development, and demonstration ("R&D"), undertaken by Airbus, whether alone or with others, or in any other way to the benefit of Airbus, including:

...

(d) Funding from the Spanish government, including regional and local authorities, since 1993 for civil aeronautics-related R&D projects in which Airbus

⁴⁶⁴⁵ See, paras. 7.65 and 7.105 (findings on temporal scope arguments) and paras. 7.117, 7.137 and 7.158 (findings on adequacy of US request for panel establishment) above.

⁴⁶⁴⁶ See, paras. 7.185 - 7.186 above.

⁴⁶⁴⁷ EC, FWS, para. 1219.

⁴⁶⁴⁸ See, para. 7.200 above.

⁴⁶⁴⁹ EC, FWS, para. 1315.

BCI deleted, as indicated [***]

participated, including loans and other financial support provided under the Plan Tecnológico Aeronáutico I and the Plan Tecnológico Aeronáutico II."

7.1420 The language in Section (6)(d) of the panel request identifies the measures subject to the United States' complaint as "funding from the Spanish government, including regional and local authorities since 1993 for civil aeronautics-related R&D projects in which Airbus participated". This description indicates: the provider ("the Spanish government, including regional and local authorities"); the timing ("since 1993"); the purpose ("for civil aeronautics-related R&D projects"); and the subject ("in which Airbus participated"), of the funding at issue. Thus, the focus of the United States' complaint is not all Spanish government funding to Airbus for LCA-related activities; rather only funding provided "since 1993" "for civil aeronautics-related R&D projects". Section (6)(d) explains that such funding *includes* "loans and other financial support provided under the" PTA I and PTA II. It is clear to us from the use of the word "including" that the United States' challenge is not limited to loans under the PTA I and PTA II.

7.1421 The United States' request for the establishment of the present Panel was made on 31 May 2005. On 23 September 2005, the Dispute Settlement Body initiated Annex V procedures. On the same day, the parties exchanged draft questions requesting a range of information each party considered relevant to the dispute. These included a series of detailed questions from the United States to the European Communities on loans made under the PROFIT. The United States' questions on the PROFIT followed, in numerical order, from a similar set of questions asked in respect of loans granted under the PTA I and PTA II. Final versions of these questions were provided to the European Communities on 7 October 2005.

7.1422 On 25 October 2005, the European Communities requested the Panel (which had been composed on 17 October 2005) to make a number of preliminary rulings on a series of matters, including whether certain aspects of the United States' panel request satisfied the standards of clarity required by Article 6.2 of the DSU. Although, at the time, the European Communities was aware that the PROFIT was one of the two Spanish government R&TD loan programmes about which the United States was interested in collecting information, the European Communities' request for a preliminary ruling did not raise any issue about the adequacy of the United States' identification of those measures in the panel request. Likewise, despite asserting in its answer of 18 November 2005 to question 279 of the Facilitator during the Annex V process that "the PROFIT scheme" fell outside the Panels terms of reference, the European Communities did not object to the United States' claims in the updated request for a preliminary ruling it presented on 7 November 2006. By that stage, the European Communities could have had no doubt that the PROFIT loans formed part of the United States' complaint, given that they had been explicitly identified in the addendum to the United States' consultations request, filed nine months prior to the European Communities' updated request for a preliminary ruling.⁴⁶⁵¹ Thus, when considered as a whole and in light of the attendant circumstances,⁴⁶⁵² we find that Section (6)(d) of the United States panel request presents the United States' claim against the PROFIT loans in a manner that is sufficiently clear to meet the standards of Article 6.2 of the DSU.

⁴⁶⁵¹ The addendum to the United States' request for consultations was communicated on 31 January 2006, in WT/DS316/1/Add.1. In this communication, the United States expressed the view that its updated request for consultations might "help to clarify, and if possible, resolve, the issues in the EC's preliminary ruling request". Subsequently, and with reference to *inter alia*, this communication, the United States requested the establishment of a new panel, in WT/DS316/6. Both of these documents were later renumbered, respectively, WT/DS347/1 and WT/DS347/3, and the words "Second Complaint" added to the titles.

⁴⁶⁵² Other attendant circumstances are referred to in our Preliminary Ruling, where we addressed and dismissed the European Communities' allegation that the United States' complaint against French government R&TD measures was outside the Panel's terms of reference because it failed to identify those measures with sufficient precision in its panel request. *See*, para. 7.149 above. *See, also*, US, SWS, paras. 18-24.

BCI deleted, as indicated [***]

(c) The Measures At Issue

7.1423 A final matter that we believe must be addressed before evaluating the merits of the United States' claims is the not insignificant issue of the precise identity of the R&TD measures being challenged and, in particular, the amount of funding provided to Airbus.

(i) *Background*

7.1424 During the Annex V process, the United States, through the Facilitator, posed over 300 questions, including at least as many detailed sub-questions, to the European Communities on a range of issues relating to alleged instances of European Communities and EC member State funding of Airbus LCA-related research and development activities. These questions included requests for information on the precise identity of the alleged measures and the related amounts of funding. The European Communities refused to provide any of the requested information in respect of the Second EC Framework Programme and French government R&TD funding from 1986 to 1994 because it considered that some of the United States' requests in respect of these measures related to funding activities that were outside the temporal scope of the dispute.⁴⁶⁵³ It also refused to provide any of the requested information with respect to the Spanish government PROFIT programme, because it considered this programme to be outside of the Panel's terms of reference.⁴⁶⁵⁴ Where the European Communities did provide information, it was limited to projects involving the Airbus corporate entities that it considered were relevant to the dispute.⁴⁶⁵⁵

7.1425 In its first written submission, the United States identified the measures in dispute and the respective amounts of funding at stake, relying in part on information submitted by the European Communities during the Annex V process and in part on information that was publicly available. In elaborating its claims, the United States has, in a number of instances, asked the Panel to draw adverse inferences, in accordance with paragraph 7 of Annex V, from the fact that the European Communities did not provide all of the data that was requested during the Annex V process.⁴⁶⁵⁶ Although the European Communities has now provided information that was not presented during the Annex V process, we understand the United States to continue to be of the view that the European Communities has failed to disclose all relevant information and that the Panel should draw adverse inferences when establishing the facts surrounding a number of its claims.⁴⁶⁵⁷

7.1426 With this background in mind, we now review the facts that have been presented in respect of each category of R&TD measures that is the subject of the United States complaint with a view to identifying the precise R&TD measures and funding amounts that are in dispute.

(ii) *Grants under the Second Framework Programme*

7.1427 The United States asserts that publicly available information shows that the European Communities funded 28 LCA-related projects under the Second Framework Programme, providing a total of EUR 35 million to all participating entities.⁴⁶⁵⁸ The United States submits that Airbus was

⁴⁶⁵⁷ US, Answer to Panel Question 34; US, Comments to EC, Answer to Panel Questions 277 and 278.

⁴⁶⁵⁸ US, FWS, paras. 628 referring to Commission of the European Communities, Directorate-General for Science, Research and Development, *BRITE/EURAM Area 5 – Specific Activities Relating to Aeronautics – Synopses of Projects Supported under the Call for Proposals 1989*, October 1990, Exhibit US-317.

BCI deleted, as indicated [***]

involved in 15 of these projects, and that it received EUR 18.75 million.⁴⁶⁵⁹ The European Communities rejects the United States' assertions. According to the European Communities, 53 aeronautic sector projects were funded under the Second Framework Programme, with the "relevant" Airbus entities participating in [***]. In total, the data submitted by the European Communities indicates that the "relevant" Airbus entities received just over ECU [***].⁴⁶⁶⁰ The European Communities asserts that it derived the relevant information from "original source documents, notably contracts and payment records".⁴⁶⁶¹

7.1428 The United States argues that the information submitted by the European Communities cannot be relied upon as an accurate reflection of the full amount of funding Airbus received because the European Communities has failed to disclose the data from which it was derived. In other words, the United States considers the EC' information to be unreliable because it does not identify all of the LCA-related projects or the full list of participants funded under the Second Framework Programme.⁴⁶⁶² The United States recalls that during the Annex V procedure, the European Communities refused to provide any information on the projects and participants funded under the Second Framework Programme in response to the Facilitator's questions. In the light of this refusal, the United States asks the Panel to draw the adverse inference, pursuant to paragraph 7 of Annex V, that Airbus obtained funding in the amount of EUR 18.75 million under the Second Framework Programme.⁴⁶⁶³

7.1429 Our review of the information submitted by the parties leads us to conclude that there are a number of discrepancies in the data presented by the European Communities suggesting that the total value of the LCA-related funding received by Airbus under the Second Framework Programme has not been disclosed. The European Communities asserts that the list of projects it has identified "coincide with publicly available data".⁴⁶⁶⁴ However, the publicly available information submitted by the United States, which the European Communities has not contested, identifies one project involving Airbus' participation which was not included in the list of projects that was submitted by the European Communities – the "Advanced Study for Active Noise Control in Aircraft (ASANCA)" project.⁴⁶⁶⁵ Furthermore, in respect of two of the projects identified in the European Communities' list, funding provided to British Aerospace and CASA was not disclosed, even though publicly available information indicates that these companies participated in the two projects.⁴⁶⁶⁶ The

⁴⁶⁵⁹ US, FWS, paras. 628-630. The United States arrived at this figure by apportioning 15/28th of the total amount of funding made available to all entities under the Programme to Airbus, reflecting its alleged participation in 15 of the 28 funded projects. US, FWS, para. 630, footnote 774.

⁴⁶⁶⁰ EC, FWS, paras. 1231 and 1234; EC, Answer to Panel Question 277 citing Exhibits EC-189 (BCI) and EC-968 (BCI). The precise amount disclosed in the information submitted by the European Communities is ECU [***]. We note that in Panel Question 277, we specifically asked the European Communities to provide "a break-down of all LCA-related projects in which the entities identified in Answer to Questions 273 to 275 participated" (emphasis added). Although the European Communities appears to suggest in its answer to Panel Question 277 and elsewhere (e.g., EC, FWS, para. 1228) that the list of projects it has submitted is over-inclusive in the sense that it contains funding for non-LCA-related activities, it has not specifically identified which projects must not be taken into account. Neither has it explained exactly why any such projects do not relate to LCA. In the absence of any such identification or explanation, and given the very specific nature of our question, we have treated all of the projects identified by the European Communities as LCA-related.

⁴⁶⁶¹ EC, FWS, para. 1221.

⁴⁶⁶² US, Answer to Panel Question 34; US, Comments to EC, Answer to Panel Questions 277 and 278.

⁴⁶⁶³ US, FWS, para. 630.

⁴⁶⁶⁴ EC, FWS, para. 1231.

⁴⁶⁶⁵ Exhibit US-317 lists the German company "MBB" as one of the project's "partners". As noted above, MBB was part of the Airbus Industrie Consortium and was involved in the development, production and sale of LCA up until at least 1992. See, para. 7.1294 above.

⁴⁶⁶⁶ Exhibit US-317 indicates that CASA was one of the "EUROMESH" project "partners" and that British Aerospace was one of the "All Electric Aircraft" project "partners". The information provided by the European Communities indicates that these two Airbus companies received no funding under these projects.

BCI deleted, as indicated [***]

European Communities has provided no valid explanation for these apparent discrepancies. Moreover, in the light of Panel Question 277, we are particularly puzzled as to why the European Communities omitted to provide any details about the ASANCA project, when it had previously, in its first written submission, identified this project and noted that MBB, a company we have found forms part of the Airbus consortium, was a recipient of funding.⁴⁶⁶⁷ Finally, we note that the total amount of Airbus funding disclosed in Exhibit EC-968 (BCI) is miscalculated, because it does not include one contribution (amounting to ECU [***]) identified in the same Exhibit as having been provided to a relevant Airbus entity. Thus, the total amount of funding to Airbus actually disclosed by the European Communities must be increased by this same amount.⁴⁶⁶⁸ For all of these reasons, we cannot accept that the information the European Communities has submitted on funding amounts covers all of the relevant monies granted to Airbus under the Second Framework Programme.

7.1430 We recall that the European Communities has not contested the publicly available information submitted by the United States in Exhibit US-317. This information indicates that Airbus participated in [***] projects for which the European Communities has provided either no information or incomplete details on the payments to all relevant Airbus entities.⁴⁶⁶⁹ The missing information relates to [***] contributions that were apparently made to three Airbus entities.⁴⁶⁷⁰ In our view, these contributions should be added to the funding the European Communities has confirmed Airbus obtained through its participation in the [***] projects it has already identified.⁴⁶⁷¹

7.1431 Paragraph 7 of Annex V provides that a panel "should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process". Although the European Communities failed to provide information on the funding amounts received and projects undertaken by Airbus under the Second Framework Programme during the Annex V process, it has subsequently, during the course of this panel proceeding, both on its own initiative and in response to Panel Question 277, submitted information that it considers discloses all of the relevant data. Thus, we are not here faced with a situation where a party has failed to supply any part of the requested information. Moreover, we observe that to draw the adverse inference that Airbus received EUR 18.75 million in funding under the Second Framework Programme would, in effect, be to accept that Airbus received [***] as much of the funding obtained from [***] projects (that is, over EUR [***]) from one individual project and contributions to two Airbus companies under two other projects. In our view, there is enough factual evidence before us to indicate that such an outcome would be overly speculative and unreasonable.⁴⁶⁷²

⁴⁶⁶⁷ Exhibit EC-194 (BCI). We recognize that the European Communities explained in this Exhibit that it had not provided any details in respect of this project because it considered MBB was not a "relevant" company. However, in Panel Question 277, we asked the European Communities to provide "a break-down of all LCA-related projects in which the entities identified in Answer to Questions 273 to 275 participated". As MBB was one of the companies identified in the Answers to those questions, information on funding it received under the Second Framework Programme should have been provided. Indeed, this is exactly what the European Communities did for eight other projects funded under the Second Framework Programme which involved MBB. Therefore, we do not understand why the European Communities did not also provide the amounts received by MBB under the ASANCA project.

⁴⁶⁶⁸ Therefore, the precise amount of funding the European Communities disclosed went to Airbus is ECU [***].

⁴⁶⁶⁹ These projects are (by acronym): "EUROMESH"; "All Electric Aircraft"; and "ASANCA".

⁴⁶⁷⁰ These entities were: CASA ("EUROMESH" project); British Aerospace ("All Electric Aircraft" project); and MBB ("ASANCA" project).

⁴⁶⁷¹ See, para. 7.1427 above.

⁴⁶⁷² The European Communities disclosed that the monies made available to Airbus for the ASANCA II project under the Third Framework Programme amounted to EUR [***]. Information on the "EUROMESH" and "All Electric Aircraft" projects indicates that Airbus entities other than British Aerospace and CASA received individual grants that ranged from ECU [***] to ECU [***]. In our view, this evidence strongly suggests that for Airbus to have received over EUR [***] from its participation in the ASANCA project and the

BCI deleted, as indicated [***]

7.1432 We note that the average amount of funding obtained by Airbus for each contribution received pursuant to [***] projects under the Second Framework Programme was ECU [***].⁴⁶⁷³ On this basis, the sum total of the [***] contributions to Airbus under the [***] projects that we believe must be accounted for in the total amount of funding at issue is ECU [***]. In our view, it would therefore be reasonable, in the light of the parties' positions and the factual information that is before us, to find that the total amount of funding granted to Airbus under the Second Framework Programme amounted to approximately ECU [***], covering [***] separate projects. A list setting out our findings in respect of the [***] individual projects that are the subject of the United States' complaint is contained in Annex I.1 to this Section, following para. 7.1609.

(iii) *Grants under the Third Framework Programme*

7.1433 The United States asserts that publicly available information shows that the European Communities funded 27 aeronautics-related research projects under the Third Framework Programme, providing a total of EUR 56 million to all participating entities.⁴⁶⁷⁴ The United States asks the Panel to find that Airbus participated in 18 of these projects, receiving a total of EUR [***].⁴⁶⁷⁵ The European Communities rejects the United States' assertions. According to the European Communities, 61 aeronautics-related projects were funded under the Third Framework Programme, with the "relevant" Airbus entities participating in [***] of those projects.⁴⁶⁷⁶ The European Communities contends that total funding allocated to the aeronautics research sector amounted to EUR 130 million of which the "relevant" Airbus entities received EUR [***].⁴⁶⁷⁷ Again, the European Communities explains that the funding data it submitted was derived from "original source documents, notably contracts and payment records".⁴⁶⁷⁸

7.1434 The United States argues that the information submitted by the European Communities cannot be relied upon as an accurate reflection of the full amount of funding Airbus received because

two distributions made to British Aerospace and CASA under the "EUROMESH" and "All Electric Aircraft" projects, would be extraordinary.

⁴⁶⁷³ Derived from information contained in Exhibit EC-968 (BCI) (EUR [***] / [***] contributions).

⁴⁶⁷⁴ US, FWS, paras. 631-634 referring to European Commission, Industrial and Materials Technologies Programme: Area 3, Aeronautics: Synopses of Current Aeronautics Projects (1993), Exhibit US-319.

⁴⁶⁷⁵ The United States arrives at the EUR [***] figure by adding (i) the amount of funding it alleges the European Communities disclosed, during the Annex V process, was provided to "Airbus research consortia" participating in 16 aeronautics-related projects (EUR [***]) to (ii) an amount representing Airbus' participation in the two additional projects (EUR [***]), constructed on the basis of the average funding received by "Airbus research consortia" under the 16 projects confirmed by the European Communities (*i.e.*, EUR [***] / 16 projects = EUR [***]). US, FWS, paras. 631-632, 635 and footnote 780. During the Annex V process, the European Communities disclosed that EUR [***] was provided for 16 projects in which Airbus entities participated, with those entities directly receiving EUR [***].

⁴⁶⁷⁶ EC, FWS, paras. 1231 and 1236, Exhibits EC-190 (BCI) and EC-194 (BCI).

⁴⁶⁷⁷ EC, Answer to Panel Question 277 citing Exhibit EC-969 (BCI); EC, Letter to Panel of 19 February 2008, referring to revisions made in Exhibit EC-993 (BCI). The precise amount disclosed in the information submitted by the European Communities is EUR [***]. Again, we note that in Panel Question 277, we specifically asked the European Communities to provide "a break-down of all LCA-related projects in which the entities identified in Answer to Questions 273 to 275 participated" (emphasis added). Although the European Communities appears to suggest in its answer to Panel Question 277 and elsewhere (e.g., EC, FWS, para. 1228) that the list of projects it has submitted is over-inclusive in the sense that it contains funding for non-LCA-related activities, it has not specifically identified which projects must not be taken into account. Neither has it explained exactly why any such projects do not relate to LCA. In the absence of any such identification or explanation, and given the very specific nature of our question, we have treated all of the projects identified by the European Communities as LCA-related.

⁴⁶⁷⁸ EC, FWS, para. 1221.

BCI deleted, as indicated [***]

the European Communities has failed to disclose the data from which it was derived.⁴⁶⁷⁹ In addition, the United States argues that the European Communities made no attempt to reconcile the discrepancies between publicly available information and the information it submitted during the Annex V process.⁴⁶⁸⁰ According to the United States, these discrepancies suggest that the European Communities has not reported all of the funding that Airbus entities received under the Third Framework Programme. For instance, the United States asserts that publicly available information establishes that monies under the Third Framework Programme were provided to CASA for participating in two projects – the "Basic Research in Aircraft Interior Noise" and "Crashworthiness for Commercial Aircraft" projects.⁴⁶⁸¹ However, the information presented by the European Communities indicates that CASA [***], without explaining why the publicly available information submitted by the United States indicates otherwise. Thus, the United States concludes that the information it submitted, showing that Airbus participated in [***] projects under the Third Framework Programme, provides the most reliable basis for the Panel to conduct its inquiry into the relevant subsidies.⁴⁶⁸² As we understand it, the United States therefore asks the Panel to find, pursuant to paragraph 7 of Annex V, that Airbus participated in [***] projects under the Third Framework Programme, receiving funds in the amount of EUR [***].

7.1435 Our review of the United States' and EC' submissions has revealed shortcomings in the information presented by both parties. For instance, the list of beneficiaries the United States asserts were funded under the Third Framework Programme includes Airbus entities that allegedly received contributions under four projects which cannot be found in the information in the publicly available document submitted as Exhibit US-319.⁴⁶⁸³ Although the European Communities acknowledges the existence of all four projects, it does not accept that it has failed to disclose payments made to all Airbus entities that participated in those initiatives.⁴⁶⁸⁴ Thus, we are unable to confirm the United States' contention in respect of the alleged beneficiaries under these four projects. Similarly, the information submitted by the European Communities indicates that Airbus did not receive any funding pursuant to four projects, which the publicly available information presented by the United States indicates did involve Airbus participation.⁴⁶⁸⁵ Moreover, when compared to the same publicly available information, the funding data submitted by the European Communities is incomplete in respect of three other projects because it omits funding that Exhibit US-319 indicates was allocated to CASA.⁴⁶⁸⁶ Again, the European Communities has provided no valid explanation for these apparent discrepancies.

⁴⁶⁷⁹ US, Answer to Panel Question 34; US, Comments to EC, Answer to Panel Questions 277 and 278.

⁴⁶⁸⁰ US, FWS, para. 633.

⁴⁶⁸¹ US, Comments on EC Answer to Panel Question 277, referring *inter alia*, to European Commission, Industrial and Materials Technologies Programme: Area 3, Aeronautics: Synopses of Current Aeronautics Projects (1993), Exhibit US-319.

⁴⁶⁸² US, Comments on EC Answer to Panel Question 277.

⁴⁶⁸³ The United States identifies these projects (by acronym) as: "ASANCA II"; "BREZ-0313"; "BREZ-0151"; and "BREZ-0169 DICANT". Exhibits US-485 and US-689. In respect of the latter three projects, we understand the United States to be referring to the projects the European Communities has identified as "BRE2-0313"; "BRE2-0151"; and "BRE2-0169 PICANT". We have assumed that the reference to "ECARD" in Exhibit US-689 is intended to mean what is identified in Exhibit US-319 and by the European Communities as "ECARP".

⁴⁶⁸⁴ See, e.g., Exhibit EC-194 (BCI).

⁴⁶⁸⁵ These projects are (by acronym): "SNAAP"; "NS Solvers"; "FANPAC"; and "AERONOX". We note that the European Communities did identify a project described as "Aeroacoustic Methods for Fan Noise Prediction and Control (FANPAC)" in its submissions. However, the associated contract number, proposal number and acronym provided by the European Communities for this project did not match the publicly available information. Compare Exhibit EC-969 (BCI) (line 6) with Exhibit US-319 (p.15).

⁴⁶⁸⁶ The projects are (by acronym): "BRAIN"; "CRASHWORTHINESS"; and "IMAGES 2000".

BCI deleted, as indicated [***]

7.1436 We recall that the European Communities has not contested the publicly available information submitted by the United States in Exhibit US-319. This information indicates that Airbus participated in [***] projects for which the European Communities has provided either no information or incomplete details on the payments to all relevant Airbus entities.⁴⁶⁸⁷ The missing information relates to [***] contributions that were apparently made to five Airbus entities.⁴⁶⁸⁸ In our view, these contributions should be added to the funding the European Communities has confirmed Airbus obtained through its participation in the [***] projects it has already identified.⁴⁶⁸⁹

7.1437 Paragraph 7 of Annex V provides that a panel "should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process". Although the European Communities failed to provide all of the information requested on the funding amounts received and projects undertaken by Airbus under the Third Framework Programme during the Annex V process, it has subsequently, during the course of this panel proceeding, both on its own initiative and in response to Panel Question 277, submitted additional information that it considers discloses all of the relevant data. Thus, we are not here faced with a situation where a party has failed to supply any part of the requested information. Moreover, we observe that, as with the Second Framework Programme, publicly available information shows that Airbus participated in the Third Framework Programme research initiatives as one of several entities (the number of parties involved in each of the relevant projects ranged from eight to 35). Thus, we cannot simply accept, as the United States suggests, that the full amount of funding provided to all participants under each of the projects must be allocated to Airbus.

7.1438 We note that the average amount of funding obtained by Airbus for each contribution received pursuant to [***] projects under the Third Framework Programme was EUR [***].⁴⁶⁹⁰ On this basis, the sum total of the [***] contributions to Airbus under the [***] projects that we believe must be accounted for in the total amount of funding at issue is EUR [***]. In our view, it would therefore be reasonable, in the light of the parties' positions and the factual information that is before us, to find that the total amount of funding granted to Airbus under the Third Framework Programme amounted to approximately EUR [***], covering [***] separate projects. A list setting out our finding in respect of the [***] individual projects that are the subject of the United States' complaint is contained in Annex I.2 to this Section, following para. 7.1609.

(iv) Grants under the Fourth Framework Programme

7.1439 The United States asserts that publicly available information shows that the European Communities funded 139 aeronautics-related research projects under the Fourth Framework Programme, providing a total of EUR 245 million to all participating entities.⁴⁶⁹¹ The United States asks the Panel to find that Airbus participated in 71 of these projects, receiving a total of

⁴⁶⁸⁷ These projects are: (by acronym): "SNAAP"; "NS Solvers"; "FANPAC"; and "AERONOX" (no information); "BRAIN"; "CRASHWORTHINESS"; and "IMAGES 2000" (information on contributions to CASA missing).

⁴⁶⁸⁸ These entities were: Aérospatiale ("SNAAP", "NS Solvers", "FANPAC", "EUROSHOCK" projects); Bae Airbus ("AERONOX", "EUROSHOCK" projects); Bae Sowerby Research Center ("NS Solvers" project); Deutsche Aerospace Airbus GmbH ("FANPAC", "EUROSHOCK" projects); and CASA ("BRAIN", "CRASHWORTHINESS", "IMAGES 2000", "EUROSHOCK" projects).

⁴⁶⁸⁹ See, para. 7.1433 above.

⁴⁶⁹⁰ Derived from information contained in Exhibits EC-969 (BCI) and EC-993 (BCI) (EUR [***] / [***] contributions).

⁴⁶⁹¹ US, FWS, para. 636 referring to European Commission, Fourth Framework Programme, Aeronautics Related Research, Synopses of Current Projects Selected Under the 1995 Call for Proposals, at xix, xxi (Area 3A Aeronautics Technologies) (1996), Exhibit US-314, and European Communities online project synopses at www.cordis.europa.eu.

BCI deleted, as indicated [***]

EUR [***].⁴⁶⁹² The European Communities rejects the United States' assertions. According to the European Communities, 126 aeronautics-related projects were funded under the Fourth Framework Programme with the "relevant" Airbus entities participating in [***] of those projects.⁴⁶⁹³ Of the EUR 245 million in funding allocated to the aeronautics research sector, the European Communities asserts that the "relevant" Airbus entities received EUR [***].⁴⁶⁹⁴ Again, the European Communities explains that the funding data it submitted was derived from "original source documents, notably contracts and payment records".⁴⁶⁹⁵

7.1440 The United States argues that the information submitted by the European Communities cannot be relied upon as an accurate reflection of the full amount of funding Airbus received under the Fourth Framework Programme because it does not identify all of the LCA-related projects or the full list of participants funded.⁴⁶⁹⁶ Moreover, the United States argues that the European Communities made no attempt to reconcile the discrepancies between publicly available information and the information it submitted during the Annex V process.⁴⁶⁹⁷ According to the United States, these discrepancies suggest that the European Communities has not reported all of the funding that Airbus entities received under the Fourth Framework Programme. Thus, the United States argues that the publicly available information it submitted, showing that Airbus participated in 71 projects under the Fourth Framework Programme, provides the most reliable basis for the Panel to conduct its inquiry into the relevant subsidies.⁴⁶⁹⁸ As we understand it, the United States therefore asks the Panel to find, pursuant to paragraph 7 of Annex V, that Airbus participated in 71 projects under the Fourth Framework Programme, receiving funds in the amount of EUR [***].

7.1441 Our review of the United States' and EC' submissions has revealed shortcomings in the information presented by both parties. For instance, the United States identifies one project and three beneficiaries of other projects under the Fourth Framework Programme that cannot be verified in the publicly available information.⁴⁶⁹⁹ In addition, the United States' latest submission incorrectly

⁴⁶⁹² The United States arrives at the EUR [***] figure by adding (i) the amount of funding it alleges the European Communities disclosed, during the Annex V process, was provided to "Airbus research consortia" participating in [***] aeronautics-related projects (EUR [***]) to (ii) an amount representing Airbus' participation in the 39 additional projects (EUR [***]), constructed on the basis of the average funding received by "Airbus research consortia" under the [***] projects confirmed by the European Communities (*i.e.*, EUR [***] / [***] projects = EUR [***] / project). US, FWS, paras. 636-637, 640 and footnote 786. During the Annex V process, the European Communities disclosed that EUR [***] was provided for [***] projects in which Airbus entities participated, with those entities directly receiving EUR [***].

⁴⁶⁹³ EC, FWS, paras. 1231 and 1238.

⁴⁶⁹⁴ EC, Answer to Panel Question 277 citing Exhibit EC-970 (BCI). The precise amount disclosed in the information submitted by the European Communities is EUR [***]. Again, we note that in Panel Question 277, we specifically asked the European Communities to provide "a break-down of all LCA-related projects in which the entities identified in Answer to Questions 273 to 275 participated" (emphasis added). Although the European Communities appears to suggest in its answer to Panel Question 277 and elsewhere (e.g., EC, FWS, para. 1228) that the list of projects it has submitted is over-inclusive in the sense that it contains funding for non-LCA-related activities, it has not specifically identified which projects must not be taken into account. Neither has it explained exactly why any such projects do not relate to LCA. In the absence of any such identification or explanation, and given the very specific nature of our question, we have treated all of the projects identified by the European Communities as LCA-related.

⁴⁶⁹⁷ US, FWS, para. 638.

⁴⁶⁹⁸ US, Comments on EC Answer to Panel Question 277.

⁴⁶⁹⁹ These discrepancies relate to: (i) the "AEROJET" project, the existence of which cannot be verified in the publicly available information submitted by the parties; and (ii) the "AERONET", "AFMS" "GASCA", "INGENET", "ADSTREFF" projects, where the alleged beneficiaries under the project, EADS, GIE and EADS-CASA, cannot be found in the publicly available information submitted by the parties. (We have assumed that the United States reference to the "ADSTREFFEX" project is intended to be a reference to what is

BCI deleted, as indicated [***]

asserts that the European Communities failed to disclose funding amounts provided to six Airbus entities, which the European Communities has in fact disclosed.⁴⁷⁰⁰ Similarly, the information submitted by the European Communities fails to disclose the funding received by Airbus under 11 projects, which the publicly available information presented by the United States indicates involved Airbus participation.⁴⁷⁰¹ Moreover, when compared to the same publicly available information, the funding data submitted by the European Communities is incomplete in respect of six additional projects because it fails to identify the funding that went to BAE Systems Aviones Ltd., EADS GIE, CASA and DASA Airbus, whose participation in the "ENHANCE", "EDAVCOS", "ELGAR", "EUROSUP", "ISAWARE" and "PROFOCE" projects was confirmed in the publicly available information. Again, the European Communities has provided no valid explanation for these apparent discrepancies between the data it has provided and the publicly available information.

7.1442 We recall that the European Communities has not contested the publicly available information relied upon by the United States. This information indicates that Airbus participated in [***] projects for which the European Communities has provided either no information or incomplete details on the payments to all relevant Airbus entities.⁴⁷⁰² The missing information relates to [***] contributions that publicly available information suggests were made to eight Airbus entities.⁴⁷⁰³ In our view, these contributions should be added to the funding the European Communities has confirmed Airbus obtained through its participation in the [***] projects it has already identified.⁴⁷⁰⁴

7.1443 Paragraph 7 of Annex V provides that a panel "should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process". Although the European Communities failed to provide all of the information requested on the funding amounts

identified in the publicly available information as the "ADSTREFF" project). Compare Exhibit US-689 with information contained in Exhibits US-314 and EC-970 (BCI) and the relevant Programme synopses of projects at <http://www.cordis.europa.eu>.

⁴⁷⁰⁰ The six beneficiaries are: CASA, under the "ENIFAIR" "ENHANCE" and "HYLDA" projects; Aérospatiale-Matra SA, under the "ADSTREFF" project; BAE Systems (Operations) Ltd., under the "ADSTREFF", "HYLTEC" and "BRPR-97-0551" projects; Airbus UK, under the "ENHANCE" project; Daimler Benz Aerospace AG, under the "ENHANCE" and CEDIX projects; and Airbus Industrie, under the "HYLDA" projects. (We note that for the "ENHANCE", "HYLDA" and CEDIX projects, the United States and publicly available information identifies Daimler Benz Aerospace AG and Airbus Industrie as the beneficiaries, whereas the European Communities identifies Airbus Deutschland, Airbus France and EADS Deutschland. We have assumed that the European Communities' disclosure includes the amounts of funding obtained by the beneficiaries identified in the publicly available information.) Compare Exhibits US-689 and EC-970 (BCI).

⁴⁷⁰¹ These projects are (by acronym): "AIRDATA"; "AERONET"; "AEROJET II"; "AEROPROFILE"; "AFMS"; "VINTHEC"; Investigation of the Viability of MEMS Technology for Boundary Layer Control on Aircraft (this project has no acronym, we have assumed that it is the project the US refers to with the acronym "MEMS"); "DAMASCOS"; "HICAS"; "WAVENC" and Non-Intrusive Measurements of Aircraft Engine Emissions (this project has no acronym). Compare Exhibit EC-970 (BCI) with Exhibit US-314 and the relevant Programme synopses of projects at www.cordis.europa.eu

⁴⁷⁰² These projects are (by acronym): "AIRDATA"; "AERONET"; "AEROJET II"; "AEROPROFILE"; "AFMS"; "GASCA"; "INGENET"; "VINTHEC"; "DAMASCOS"; "HICAS"; "WAVENC"; Investigation of the Viability of MEMS Technology for Boundary Layer Control on Aircraft (this project has no acronym); Non-Intrusive Measurements of Aircraft Engine Emissions (this project has no acronym); and "ENHANCE"; "EDAVCOS"; "ELGAR"; "EUROSUP"; ISAWARE" and "PROFOCE" (information on contributions to BAE Systems Aviones Ltd., EADS GIE, CASA and DASA Airbus missing).

⁴⁷⁰³ These entities were: BAE Systems (Operations) Ltd ("AIRDATA", "AERONET", "AEROJET II", "AEROPROFILE", "VINTHEC", Investigation of the Viability of MEMS Technology for Boundary Layer Control on Aircraft, "HICAS" and Non-Intrusive Measurements of Aircraft Engine Emissions (this project has no acronym)); BAE Sowerby Research Centre ("AIRDATA"); DASA ("AFMS"); Daimler Benz Aerospace AG ("DAMASCOS"); BAE Systems Aviones Ltd ("ENHANCE" and "ISAWARE"); EADS GIE ("EDAVCOS" and "PROFOCE"); CASA ("ELGAR"); DASA Airbus ("EUROSUP"); Aérospatiale-Matra ("WAVENC").

⁴⁷⁰⁴ See, para. 7.1439 above.

BCI deleted, as indicated [***]

received and projects undertaken by Airbus under the Fourth Framework Programme during the Annex V process, it has subsequently, during the course of this panel proceeding, both on its own initiative and in response to Panel Question 277, submitted additional information that it considers discloses all of the relevant data. Thus, we are not here faced with a situation where a party has failed to supply any part of the requested information. Moreover, we observe that, as with the previous Framework Programmes, publicly available information shows that Airbus participated in the Fourth Framework Programme research initiatives as one of several entities (the number of parties involved in each of the relevant projects ranged from five to 24). Thus, we cannot simply accept, as the United States suggests, that the full amount of funding provided to all participants under each of the projects must be allocated to Airbus.

7.1444 We note that the average amount of funding obtained by Airbus for each contribution received pursuant to [***] projects under the Fourth Framework Programme was EUR [***].⁴⁷⁰⁵ On this basis, the sum total of the [***] contributions to Airbus under the [***] projects that we believe must be accounted for in the total amount of funding at issue is EUR [***]. In our view, it would therefore be reasonable, in the light of the parties' positions and the factual information that is before us, to find that the total amount of funding granted to Airbus under the Fourth Framework Programme amounted to approximately EUR [***], covering [***] separate projects. A list setting out our finding in respect of the [***] individual projects that are the subject of the United States' complaint is contained in Annex I.3 to this Section, following para. 7.1609.

(v) *Grants under the Fifth Framework Programme*

7.1445 The United States asserts that publicly available information shows that during the Fifth Framework Programme, the European Communities allocated EUR 700 million to aeronautics-related research projects.⁴⁷⁰⁶ According to the United States, the same publicly available information indicates that "Airbus research consortia" participated in 72 of these projects, receiving EUR 509 million. In the absence of more detailed and precise information on Airbus' participation in these projects, the United States asks the Panel to attribute the full amount of EUR 509 million to Airbus.⁴⁷⁰⁷ The European Communities rejects the United States' assertions. According to the European Communities, 152 aeronautics-related projects were funded under the Fifth Framework Programme, with the "relevant" Airbus entities participating in [***] of those projects.⁴⁷⁰⁸ Of the EUR 700 million in funding allocated to the aeronautics research sector, the European Communities asserts that the "relevant" Airbus entities received EUR [***].⁴⁷⁰⁹ Again, the European Communities

⁴⁷⁰⁵ Derived from information contained in Exhibit EC-970 (BCI) (EUR [***] / [***] contributions).

⁴⁷⁰⁶ US, FWS, para. 641 referring to European Commission, *The Competitive and Sustainable Growth Programme, 1998-2002 Project Synopses: New Perspectives in Aeronautics* (2003), at xi, Exhibit US-322, and European Communities online project synopses at www.cordis.europa.eu.

⁴⁷⁰⁷ US, FWS, para. 645.

⁴⁷⁰⁸ EC, FWS, paras. 1231 and 1240.

⁴⁷⁰⁹ EC, Answer to Panel Question 277 citing Exhibit EC-971 (BCI). The precise amount disclosed by the European Communities is EUR [***]. Again, we note that in Panel Question 277, we specifically asked the European Communities to provide "a break-down of all LCA-related projects in which the entities identified in Answer to Questions 273 to 275 participated" (emphasis added). Although the European Communities appears to suggest in its answer to Panel Question 277 and elsewhere (e.g., EC, FWS, para. 1228) that the list of projects it has submitted is over-inclusive in the sense that it contains funding for non-LCA-related activities, it has not specifically identified which projects must not be taken into account. Neither has it explained exactly why any such projects do not relate to LCA. In the absence of any such identification or explanation, and given the very specific nature of our question, we have treated all of the projects identified by the European Communities as LCA-related.

BCI deleted, as indicated [***]

explains that the funding data it submitted was derived from "original source documents, notably contracts and payment records".⁴⁷¹⁰

7.1446 The United States argues that the information submitted by the European Communities cannot be relied upon as an accurate reflection of the full amount of funding Airbus received under the Fifth Framework Programme because it does not identify all of the LCA-related projects or the full list of participants funded.⁴⁷¹¹ Moreover, the United States argues that the European Communities made no attempt to reconcile the discrepancies between publicly available information and the information it submitted during the Annex V process.⁴⁷¹² According to the United States, these discrepancies suggest that the European Communities has not reported all of the funding that Airbus entities received under the Fifth Framework Programme. Thus, the United States argues that the publicly available information it submitted, showing that Airbus participated in [***] projects under the Fifth Framework Programme, provides the most reliable basis for the Panel to conduct its inquiry into the relevant subsidies.⁴⁷¹³ As we understand it, the United States therefore asks the Panel to find, pursuant to paragraph 7 of Annex V, that Airbus participated in [***] projects under the Fifth Framework Programme, receiving funds in the amount of EUR 509 million.

7.1447 Our review of the United States' and EC' submissions has revealed shortcomings in the information presented by both parties. For instance, the United States identifies one project and four beneficiaries of other projects under the Fifth Framework Programme that cannot be verified in the publicly available information.⁴⁷¹⁴ In addition, the United States' latest submission incorrectly asserts that the European Communities has failed to disclose funding amounts provided to two Airbus entities, which the European Communities has in fact disclosed.⁴⁷¹⁵ Similarly, the information submitted by the European Communities fails to disclose the funding received by Airbus under seven projects, which the publicly available information presented by the United States indicates involved Airbus participation.⁴⁷¹⁶ "The European Communities has provided no valid explanation for these apparent discrepancies between the data it has provided and the publicly available information. Finally, we note that the total amount of Airbus funding disclosed in Exhibit EC-971 (BCI) is miscalculated, because it does not include various sums of monies (amounting to EUR [***]) identified in the same Exhibit as having been provided to individual Airbus entities. Thus, the total amount of funding to Airbus actually disclosed by the European Communities is approximately EUR [***]⁴⁷¹⁷ not EUR [***].

7.1448 The European Communities has not contested the publicly available information submitted by the United States in Exhibit US-322. This information indicates that Airbus participated in [***]

⁴⁷¹⁰ EC, FWS, para. 1221.

⁴⁷¹¹ US, Answer to Panel Question 34; US, Comments to EC, Answer to Panel Questions 277 and 278.

⁴⁷¹² US, FWS, para. 643.

⁴⁷¹³ US, Comments on EC Answer to Panel Question 277.

⁴⁷¹⁴ These discrepancies relate to: (i) the "COMPOSIT" project, the existence of which cannot be verified in the publicly available information submitted by the parties; (ii) the "ADAMS2" project, where the United States identifies BAE Systems (Operations) Ltd. as a beneficiary, but publicly available information and the European Communities identify the beneficiary as Airbus UK; and (iii) the "ENABLE", "FUBACOMP" and "MA-AFAS" projects, where the alleged beneficiaries under the respective projects, EADS Deutschland GmbH, GIE EADS and BAE Systems (Operations) Ltd., cannot be found in the publicly available information submitted by the parties. Compare Exhibit US-689 with information contained in Exhibits US-322 and EC-972 (BCI) and the relevant Programme synopses of projects at www.cordis.europa.eu.

⁴⁷¹⁵ The two beneficiaries are GIE Airbus Industrie under the "AERONET II" project and EADS GIE under the "EECS" project. Compare Exhibits US-689 with EC-972 (BCI).

⁴⁷¹⁶ These projects are (by acronym): "AEROFIL"; "FUBACOMP"; "HEACE"; "HiAER"; "MA-AFAS"; "MOB" and "VINTECH II". Compare Exhibit EC-971 (BCI) with Exhibit US-322 and the European Communities online project synopses at www.cordis.europa.eu.

⁴⁷¹⁷ The precise amount is EUR [***].

BCI deleted, as indicated [***]

projects for which the European Communities has provided either no information or incomplete details on the payments to all relevant Airbus entities.⁴⁷¹⁸ The missing information relates to [***] contributions that publicly available information suggests were made to five Airbus entities.⁴⁷¹⁹ In our view, these contributions should be added to the funding the European Communities has confirmed Airbus obtained through its participation in the [***] projects it has already identified.⁴⁷²⁰

7.1449 We recall that paragraph 7 of Annex V provides that a panel "should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process". Although the European Communities failed to provide all of the information requested on the funding amounts received and projects undertaken by Airbus under the Fifth Framework Programme during the Annex V process, it has subsequently, during the course of this panel proceeding, both on its own initiative and in response to Panel Question 277, submitted additional information that it considers discloses all of the relevant data. Thus, we are not here faced with a situation where a party has failed to supply any part of the requested information. Moreover, we observe that, as with all previous Framework Programmes, publicly available information shows that Airbus participated in the Fifth Framework Programme research initiatives as one of several entities (the number of parties involved in each of the relevant projects ranged from six to 48). Thus, we cannot simply accept, as the United States suggests, that the full amount of funding provided to all participants under each of the projects must be allocated to Airbus.

7.1450 We note that the average amount of funding obtained by Airbus for each contribution received pursuant to [***] projects under the Fifth Framework Programme was EUR [***].⁴⁷²¹ On this basis, the sum total of the [***] contributions to Airbus under the [***] projects that we believe must be accounted for in the total amount of funding at issue is EUR [***]. This compares with a total European Communities contribution to all 98 participants in the same [***] projects of EUR 30.5 million.⁴⁷²² In our view, it would therefore be reasonable, in the light of the parties' positions and the factual information that is before us, to find that the total amount of funding granted to Airbus under the Fifth Framework Programme amounted to approximately EUR [***], covering [***] separate projects. A list setting out our finding in respect of the [***] individual projects that are the subject of the United States' complaint is contained in Annex I.4 to this Section, following para. 7.1609.

(vi) *Grants under the Sixth Framework Programme*

7.1451 The United States asserts that publicly available information shows that during the Sixth Framework Programme, EUR 840 million was used by the European Communities to fund aeronautics-related research projects.⁴⁷²³ According to the United States, the same publicly available information indicates that "Airbus research consortia" participated in 61 of these projects, receiving EUR 450 million. In the absence of more detailed and precise information on Airbus' participation in these projects, the United States asks the Panel to attribute the full amount of EUR 450 million to Airbus.⁴⁷²⁴ The European Communities rejects the United States' assertions. According to the

⁴⁷¹⁸ These projects are (by acronym): "AEROFIL"; "FUBACOMP"; "HEACE"; "HiAER"; "MA-AFAS"; "MOB"; and "VINTHEC II".

⁴⁷¹⁹ These entities were: GIE EADS ("AEROFIL"); EADS Deutschland GmbH ("HEACE" and "HiAER"); BAE Systems (Operations) Ltd ("VINTHEC", "MOB" and "FUBACOMP"); BAE Systems Avionics Ltd. ("MA-AFAS") and Daimler-Chrysler Aerospace ("MOB").

⁴⁷³¹ These alleged beneficiaries are: EADS Deutschland GmbH under the "DINAMIT" project; and GIE EADS under the "DEEPWELD", "ITOOL" and "IFATS" projects.

⁴⁷³² This entity is: GIE EADS CCR under the "DIALFAST" project. Compare Exhibits US-689 and EC-972 (BCI).

⁴⁷³³ These projects are (by acronym): "ADLAND"; "ARTIMA"; "ATENAA"; "B-VHF"; "DEEPWELD"; "DESIDER"; "EMMA"; "HILAS"; "HISAC"; "IFATS"; "IPAS"; "iTOOL"; "MESEMA"; "MOWGLY"; "RETINA"; "UFAST"; "SEFA"; "WISE"; "ASAS-TN2"; and "C-ATM (PHASE 1)". For the purpose of this list, we have assumed that the United States' reference to a project identified as "ATEENA" was

BCI deleted, as indicated [***]

information, the funding data submitted by the European Communities is incomplete in respect of two other projects because it omits funding that the publicly available information shows was allocated to Airbus Spain and Airbus France.⁴⁷³⁴ Again, the European Communities has provided no valid explanation for these apparent discrepancies.

7.1454 We recall that the European Communities has not contested the publicly available information relied upon by the United States. This information indicates that Airbus participated in [***] projects for which the European Communities has provided either no information or incomplete details on the payments to all relevant Airbus entities.⁴⁷³⁵ The missing information relates to [***] contributions that were apparently made to eight Airbus entities.⁴⁷³⁶ In our view, these contributions should be added to the funding the European Communities has confirmed Airbus obtained through its participation in the [***] projects it has already identified.⁴⁷³⁷

7.1455 Paragraph 7 of Annex V provides that a panel "should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process". Although the European Communities failed to provide all of the information requested on the funding amounts received and projects undertaken by Airbus under the Sixth Framework Programme during the Annex V process, it has subsequently, during the course of this panel proceeding, both on its own initiative and in response to Panel Question 277, submitted additional information that it considers discloses all of the relevant data. Thus, we are not here faced with a situation where a party has failed to supply any part of the requested information. Moreover, we observe that, as with all the Framework Programmes, publicly available information shows that Airbus participated in the Sixth Framework Programme research initiatives as one of several entities (the number of parties involved in each of the relevant projects ranged from seven to 62). Thus, we cannot simply accept, as the United States suggests, that the full amount of funding provided to all participants under each of the projects must be allocated to Airbus.

7.1456 We note that the average amount of funding obtained by Airbus for each contribution received pursuant to [***] projects under the Sixth Framework Programme was EUR [***].⁴⁷³⁸ On this basis, the sum total of the [***] contributions to Airbus under the [***] projects that we believe must be accounted for in the total amount of funding at issue is EUR [***]. This compares with a total EC contribution to all [***] participants in the same [***] projects of EUR [***]. In our view, it would be reasonable, in the light of the parties' positions and the factual information that is before us, to find that the total amount of funding granted to Airbus under the Sixth Framework Programme amounted to approximately EUR [***], covering [***] separate projects. A list setting out our

intended to be the "ATENAA" project. Compare Exhibit EC-972 (BCI) with Exhibit US-324 and the relevant Programme synopses of projects at www.cordis.europa.eu.

⁴⁷³⁴ The projects are (by acronym): "TATEM" and "SMIST".

⁴⁷³⁵ These projects are: (by acronym): "ADLAND"; "ARTIMA"; "ATENAA"; "B-VHF"; "DEEPWELD"; "DESIDER"; "EMMA"; "HILAS"; "HISAC"; "IFATS"; "IPAS"; "iTOOL"; "MESEMA"; "MOWGLY"; "RETINA"; "UFAST"; "SEFA"; "WISE"; "ASAS-TN2"; and "C-ATM (PHASE 1)" (no information); "TATEM" and "SMIST" (information on contributions to Airbus Spain and Airbus France missing).

⁴⁷³⁶ These entities were: EADS Deutschland ("ADLAND", "ARTIMA", "ATENAA", "DESIDER", "HISAC", "iTOOL", "MESEMA", "RETINA", "UFAST", "SEFA" and "WISE" projects); BAE Systems (Operations) Ltd. ("B-VHF", "HILAS", "IPAS" and "ASAS-TN2" projects); Airbus France ("EMMA", "SMIST" and "C-ATM (PHASE 1)" projects); Airbus Deutschland ("MOWGLY" project); EADS CCR ("IPAS" and "DEEPWELD" projects); Airbus Spain ("TATEM" project); BAE Systems Avionics Ltd. ("EMMA" and "C-ATM (PHASE 1)" projects); EADS Systems and Defence Electronics SA ("IFATS" project); EADS Astrium ("IPAS" project).

⁴⁷³⁸ Derived from information contained in Exhibit EC-972 (BCI) (EUR [***] / [***] contributions).

BCI deleted, as indicated [***]

finding in respect of the [***] individual projects that are the subject of the United States' complaint is contained in Annex I.5 to this Section, following para. 7.1609.

(vii) *German Federal government grants*

7.1457 The United States challenges the German Federal government's alleged provision of EUR 217 million to Airbus for civil aeronautics research under the LuFo I, LuFo II and LuFo III programmes.⁴⁷³⁹ The European Communities argues the amount of alleged German Federal government subsidization under the LuFo programmes that may be properly challenged is limited to EUR [***].⁴⁷⁴⁰ According to the European Communities, this amount is the maximum level of funding that may be challenged because it represents the monies actually *disbursed* by the German Federal government to Airbus under the LuFo programmes as of 1 July 2005 (the alleged cut-off date used by the United States in its first written submission)⁴⁷⁴¹. While the European Communities acknowledges that as of 1 July 2005, the German Federal government had *committed* to provide Airbus with approximately an additional EUR [***] (bringing the total amount of funding to EUR [***]),⁴⁷⁴² the European Communities does not accept that this additional EUR [***] can be properly challenged in this dispute.⁴⁷⁴³

7.1458 As we understand it, the European Communities' position is premised on the view that a government practice involving the *commitment* of funds, without any actual disbursement of those funds, cannot amount to a "financial contribution" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. We will address the merits of this position in the substance of our evaluation of the United States' claims against the LuFo programmes.⁴⁷⁴⁴

(viii) *German sub-federal government grants*

Bavaria

7.1459 The United States asserts that the government of Bavaria has, since 1990, provided Airbus with at least EUR [***] in R&TD grants under various civil aeronautics programmes including the Offensive Zukunft Bayern (established in 1995), the Offensive Zukunft Bayern II (established in 1996) and the Bayerisches Luftfahrtforschungsprogramm (established in 2000).⁴⁷⁴⁵ The European Communities acknowledges that the Bavarian government awarded nine project grants, totalling EUR [***], to Daimler Benz Aerospace ("Dasa") and EADS Deutschland in the period 1997 to 2006.⁴⁷⁴⁶ However, it argues that these grants cannot be properly challenged in this dispute because Daimler Benz Aerospace and EADS Deutschland are not relevant Airbus companies and the United States has failed to show how they have benefited Airbus Germany.⁴⁷⁴⁷

7.1460 We recall that in Section VII.E.1 of this Report, we rejected the European Communities' contentions, finding that a financial contribution provided to any Airbus partner or affiliated entity, or to Airbus GIE, in relation to the development and/or production of an Airbus LCA, potentially confers a benefit on the Airbus Industrie consortium, as the "producer" of Airbus LCA, and Airbus SAS as the

successor corporate entity.⁴⁷⁴⁸ As we have previously explained, Dasa was a member of the Airbus Industrie consortium. Likewise, EADS Deutschland was a subsidiary of Dasa, later contributed to EADS.⁴⁷⁴⁹ Moreover, we note that the European Communities does not assert that the R&TD grants at issue were not intended to support LCA development. Accordingly, we will proceed to examine the merits of the United States' claims against all nine Bavarian government R&TD grants of EUR [***] identified in the parties' first written submissions.

Bremen

7.1461 The United States asserts that publicly available information confirms that, between 1999 and 2006, the government of Bremen provided a total of EUR 11 million in grants to Airbus for aeronautics-specific research under the Airbus Materials and System Technology I and II programmes ("AMST I" and "AMST II").⁴⁷⁵⁰ According to the United States, the European Communities has failed to explain the discrepancy between the amount of funding it conceded, during the Annex V process, was received by Airbus (EUR [***]), and the EUR 11 million that publicly available information shows was provided by the government of Bremen. In this light, the United States asks the Panel to find, in accordance with paragraph 7 of Annex V, that the government of Bremen provided Airbus with EUR 11 million in subsidies under the AMST I and AMST II programmes.⁴⁷⁵¹

7.1462 The European Communities submits that Airbus Germany received EUR [***] for participating in nine projects under the AMST I programme and a further EUR [***] for five projects under the AMST II programme, bringing the total amount of R&TD funding obtained by Airbus Germany under both programmes to EUR [***].⁴⁷⁵² According to the European Communities, the alleged level of funding set out in the United States' submissions overstates the amount of funding actually provided to Airbus Germany because it includes payments to recipients other than Airbus. In particular, the European Communities asserts that under the AMST I programme, monies were made available to three research institutes, namely the Fraunhofer Institute for Manufacturing Technology and Applied Materials Research, the Bremen Institute for Applied Jet-Propulsion Technology, and the Institute for Materials Technology.⁴⁷⁵³ The European Communities discloses the precise amounts it alleges were received by these institutes (approximately EUR [***]) in a table set out in its first written submission. Thus, the European Communities asks the Panel to find that the R&TD support to Airbus Germany under AMST I and AMST II was limited to EUR [***].⁴⁷⁵⁴

7.1463 As we understand it, the publicly available information that the United States relies upon to establish that Airbus received EUR 11 million under the AMST programmes is a press release issued by a Senator of Economics of the City of Bremen, Dr Peter Gloystein. This press release appears to repeat a speech made by Senator Gloystein at the "'Richtfest' (topping-out ceremony) of the new Halls

⁴⁷⁴⁸ See, paras. 7.192 - 7.200 above.

⁴⁷⁴⁹ We recall that prior to the EADS combination, the LCA-related assets and activities of Dasa were reorganized into various subsidiaries, including (i) a subsidiary called DaimlerChrysler Aerospace Beteiligungs GmbH, which held 99.99 percent of the shares in DaimlerChrysler Aerospace Airbus GmbH, which in turn held 37.9 percent of the membership rights in Airbus GIE; and (ii) a subsidiary called EADS Deutschland GmbH, to which various other assets and liabilities of Dasa were contributed. These Dasa subsidiaries were then contributed to EADS. See, footnote 2187 above.

BCI deleted, as indicated [***]

400 and 57 at Airbus Bremen". Its title is "Aircraft construction one of the key industries in Bremen". The particular passage that indicates the amount of funding allegedly provided to Airbus reads: "The Senate is making a palpable contribution to improving the performance and competitiveness of the Bremen Airport plant and therefore to safeguarding and creating permanent jobs – which involves considerable financing. For example, the Senator of Economics has provided some EUR 26 million for the AMST ('Airbus Material & System Technology-Center Bremen'), of which around EUR 11 million will go to Airbus Bremen."⁴⁷⁵⁵ We note that this extract does not categorically state that EUR 11 million has been provided to Airbus Bremen, but that "around" this amount "will go" to Airbus.

7.1464 The publicly available information also confirms that the three research institutes identified by the European Communities did in fact participate in the AMST programmes.⁴⁷⁵⁶ There is, however, no indication in the publicly available information of how much funding these institutes actually obtained. Although the European Communities provided a breakdown of the alleged amounts in a table in its first written submission, it has provided no evidence to substantiate the information contained therein. In the light of the United States' insistence on the European Communities' failure to disclose all relevant information and appropriately explain the discrepancy between the publicly available information and its factual assertions, we are surprised that the European Communities has provided no evidence in support of the funding disclosures made in respect of the three research institutes. In the absence of any such evidence, we cannot accept the European Communities' tabulation of the amounts of monies received by Airbus Germany and other participants under the AMST programmes. In these circumstances, we consider it appropriate to base our factual finding on the publicly available information submitted by the United States, and accordingly find that Airbus received EUR 11 million from the government of Bremen under the AMST programmes.

Hamburg

7.1465 The United States asserts that, between 2001 and 2005, the government of Hamburg provided Airbus with at least EUR [***] in aeronautics-specific R&TD grants under the Hamburger Luftfahrtforschungsprogramm.⁴⁷⁵⁷ The European Communities argues that the funding amounts referred to by the United States include EUR [***] provided to EADS Airbus GmbH. The European Communities submits that this amount should be excluded from the total amount of funding at stake because the United States has not explained how the monies to EADS Airbus GmbH have benefited Airbus Germany. Thus, according to the European Communities, the total amount of funds that may be properly challenged in this dispute is EUR [***].⁴⁷⁵⁸

7.1466 We recall that in Section VII.E.1 of this Report, we rejected the European Communities' contentions, finding that a financial contribution provided to any Airbus partner or affiliated entity, or to Airbus GIE, in relation to the development and/or production of an Airbus LCA, potentially confers a benefit on the Airbus Industrie consortium, as the "producer" of Airbus LCA, and Airbus SAS as the successor corporate entity. The European Communities has at no stage argued that EADS Airbus GmbH is not a company involved in the Airbus LCA business. Moreover, the European Communities has not asserted that the R&TD grant at issue was not intended to support Airbus LCA development activities. Accordingly, we will proceed to examine the merits of the United States' claims against all of the Hamburg government R&TD grants of EUR [***] identified in the parties' first written submissions.

(ix) *French government grants*

7.1467 The United States asserts, on the basis of publicly available information, that between 1986 and 2005, the French government budgeted over EUR 1.2 billion in grants to the aeronautics industry for civil aeronautics research and development activities. In particular, the United States contends that French authorities budgeted EUR 391 million for the period 1986 to 1993; and EUR 809 million for the period 1994 to 2005.⁴⁷⁵⁹

7.1468 The United States recalls that the European Communities refused, during the Annex V process, to provide any information on the funding received by Airbus between 1986 and 1993. Consequently, in its first written submission, the United States asks the Panel to either request this information from the European Communities, or else find, in accordance with paragraph 7 of Annex V, that Airbus received EUR 391 million in LCA-related research and development grants from the French government for the period 1986 to 1993.⁴⁷⁶⁰ In respect of the grants made between 1994 and 2005, the United States recalls that the European Communities acknowledged, during the Annex V process, that Airbus was a beneficiary of EUR [***]. However, the United States doubts the accuracy of the European Communities' disclosure, citing the European Communities' alleged consistent under-valuation of Airbus funding under the EC Framework Programmes.⁴⁷⁶¹ In the absence of more reliable information from the European Communities on the amount of funding actually obtained by Airbus, the United States asks the Panel to attribute the full amount of EUR 809 million to Airbus, in accordance with paragraph 7 of Annex V. Thus, according to the United States, the logical inference to be drawn from the European Communities' continued refusal to provide all of the information needed to confirm the precise amount of French government Airbus LCA-related research and development expenditure, is that the entire amount of EUR 1.2 billion for the period 1986 to 2005 must be allocated to Airbus.⁴⁷⁶²

7.1469 The European Communities rejects the United States' assertions. In respect of the alleged subsidies granted between 1986 and 1994, the European Communities initially argued that these fell outside of the temporal scope of this dispute.⁴⁷⁶³ However, following our preliminary ruling on this issue, we asked the European Communities to provide a break-down of all Airbus LCA-related projects funded by the French government between 1986 and 1993.⁴⁷⁶⁴ In response, the European Communities stated that it was unable to provide the requested information as neither the French government nor Airbus were able to locate any of the research contracts for this period.⁴⁷⁶⁵ However, the European Communities explained that:

"the amount of EUR 391 million to which the United States refers in its First Written Submission ... constitutes a budgeted figure for the entire aeronautics sector (comprising LCA and non-LCA activities, such as helicopters and engines). Therefore, the amount that Airbus would have received for LCA-related R&T during this period would inevitably have been far below this figure. This is illustrated by the fact that out of the EUR 809 million budgeted by the French Senate for R&T programmes in the aeronautics field for the period 1994 to 2005, only EUR [***] went to Airbus."⁴⁷⁶⁶

BCI deleted, as indicated [***]

7.1470 For the years 1994 to 2005, the European Communities maintains that the information provided during the Annex V process accurately reflects the funding obtained by Airbus over this period.⁴⁷⁶⁷ According to the European Communities, the EUR 809 million figure advanced by the United States includes the entire French government R&TD budget for all projects undertaken in the civil aeronautics sector (comprising LCA and non-LCA activities) between 1994 and 2005.⁴⁷⁶⁸ Therefore, the European Communities maintains, it is not all relevant to this dispute and cannot be allocated in its entirety to Airbus. In the European Communities' view, the correct amount of funding provided to Airbus by French authorities is disclosed in the project-by-project breakdown submitted during the Annex V process showing that Airbus received EUR [***] in LCA-related R&TD grants from 1994 to 2005.⁴⁷⁶⁹

7.1471 The publicly available information relied upon by the United States takes the form of a compilation of extracts of seven French Senate reports that reveal the amounts of R&TD funding provided to the French civil aeronautics sector. It is clear from these reports that the funding amounts disclosed pertain to monies distributed to the French civil aeronautics sector as a whole, including but not limited to Airbus and, in some cases for non-LCA activities.⁴⁷⁷⁰ For the period 1986 to 1993, the information indicates that FF 2,565 million, or EUR 391 million, was disbursed for civil aeronautics research undertaken by the participating French entities. The European Communities does not contest that the French government disbursed this amount of funding to the civil aeronautics sector between 1986 and 1993. However, it has provided no information on the share of this funding going to Airbus. Moreover, in response to a specific question from the Panel asking it to disclose the projects and amount of French government R&TD funding going to Airbus during this period,⁴⁷⁷¹ the European Communities provided no information, citing the inability of both the French government and Airbus to find the relevant research contracts.

7.1472 We appreciate that obtaining information from up to 22 years ago may not always be a simple task. However, where a party that is the obvious originator of requested information is faced with such difficulties, we believe it is incumbent upon that party to not only explain why it cannot submit the requested information, but also to do its best to provide an appropriate proxy for the missing information. In our view, the explanation the European Communities has provided for its failure to submit the requested information and the approach it suggests might be adopted by the Panel in order to arrive at an appropriate R&TD figure are less than satisfactory. In particular, we are not convinced that, even in the absence of the actual contracts, there was no public (or confidential) information available to the French government and Airbus that might have usefully guided us in our deliberations on the amount, or approximate amount, of actual R&TD funding received by Airbus. Simply stating that Airbus "inevitably" received an amount "far below" the total funding provided to the aeronautics sector as a whole (*i.e.*, "far below" EUR 391 million) because the evidence from a subsequent period of funding (1994 to 2005) shows that this was the case in that subsequent period, is guidance of a kind that is so general that in practice it provides very little assistance at all. In the absence of a more acceptable suggestion on the part of the European Communities for how to fill the evidentiary gap, the only information we have available to us on the French government R&TD contributions to Airbus between 1986 to 1993 is that contained in Exhibit US-337. Although we are fully aware of its limitations, we believe that in these particular circumstances, we are left with no alternative but to use

⁴⁷⁶⁷ EC, SWS, para. 640; EC, Answer to Panel Question 279.

⁴⁷⁶⁸ EC, FWS, para. 1278.

⁴⁷⁶⁹ EC, FWS, para. 1279; EC, SWS, para. 640, both referring to Direction des Programmes Aéronautiques et de la Coopération ("DPAC"), Soutiens Versés au Titre des Etudes et Recherches portant sur les Avions de 10 place et plus de 1992 à 2005, 2 novembre 2005, Exhibit EC-209 (BCI).

⁴⁷⁷⁰ For instance, *see* Budget 1997: Sénat, No. 89 (session ordinaire de 1999-2000), Rapport Général, Commission des Finances du Contrôle Budgétaire et des Comptes Economiques de la Nation sur le projet de loi de finances pour 2000, Tome III, Annexe No. 25, Equipment, Transports et Logement; III. – Transports; Transport Aérien et Météorologie et Aviation Civile, p. 88, in Exhibit US-337.

⁴⁷⁷¹ Panel Question 278.

BCI deleted, as indicated [***]

it as the basis of our factual finding. In this regard, we recall that where a party refuses to supply information requested by a panel, it is open to that panel to draw inferences from the full configuration of facts that are before it.⁴⁷⁷² Accordingly, on the basis of the full configuration of the facts that are before us, we find that Airbus received a maximum of EUR 391 million in French government R&TD grants between 1986 and 1993.

7.1473 We come to a different conclusion in respect of the funding provided to Airbus between 1994 and 2005. The information submitted by the European Communities showing that Airbus was the recipient of EUR [***] is derived from a document authored by the DPAC, the authority that administered the French government funding programmes.⁴⁷⁷³ This document provides a project-by-project break-down of French government R&TD funding to all recipients from 1994 to 2005.⁴⁷⁷⁴ We are satisfied that this document provides a suitable basis for our factual finding in respect of the monies Airbus received from the French government for R&TD activities over this period. Although the United States has expressed doubt about whether this document captures all such funding provided to Airbus, it has pointed to no inconsistency between the data contained in this document and, for example, publicly available information to suggest that it is unreliable. Thus, we find the total amount of French government R&TD funding to Airbus between 1994 and 2005 to be EUR [***].

(x) *Spanish government loans*

Plan Tecnológico Aeronáutico

7.1474 The United States asserts that, between 1993 and 2003, the Spanish government provided Airbus with below-market research and development loans in the amount of EUR [***] under two phases of the Plan Tecnológico Aeronáutico ("PTA"). Under the first phase, PTA I, which ran from 1993 to 1998, the United States contends that Airbus received loans in the amount of EUR [***]. In the second phase, PTA II, which ran from 1999-2003, the United States submits that Airbus obtained EUR [***] in loans.⁴⁷⁷⁵ The European Communities does not contest that Airbus received loans of EUR [***] under the PTA. However, according to the European Communities, the disbursements under PTA I and II which took place from 1993 to 1994 fall outside the temporal scope of Article 5 of the SCM Agreement. According to the European Communities, these payments must be disregarded by the Panel, bringing the total amount of relevant funding under the PTA to EUR [***].⁴⁷⁷⁶

7.1475 We recall that in Section VII.C.2 of this Report, we rejected the European Communities' arguments on the temporal scope of this dispute.⁴⁷⁷⁷ Accordingly, we will proceed to examine the merits of the United States' claims against the Spanish government's provision of EUR [***] in R&TD loans under the PTA.

Programa de Fomento de Innovación Técnica

7.1476 The United States asserts that the Spanish government provided Airbus with below-market research and development loans under two phases of the Programa de Fomento de Innovación Técnica ("PROFIT"), first established in 2000. According to the United States, publicly available information demonstrates that Airbus received loans under the first phase of the PROFIT in the

⁴⁷⁷⁷ See, paras. 7.65 and 7.105 above.

BCI deleted, as indicated [***]

amount of EUR 1.5 million.⁴⁷⁷⁸ In addition to this amount that allegedly went directly to Airbus, the United States asserts that the Spanish aeronautics industry received an additional EUR 62 million in loans under both phases of the programme.⁴⁷⁷⁹ The United States recalls that the European Communities did not respond to the Facilitator's request for recipient-specific funding information under the PROFIT. In this light, the United States asks the Panel to request the European Communities to provide the information the Facilitator requested, or else find, in accordance with paragraph 7 of Annex V, that the Spanish government provided Airbus with loans in the amount of EUR 63.5 million.⁴⁷⁸⁰

7.1477 As we have noted above, the European Communities has consistently argued that the PROFIT loans challenged by the United States fall outside the terms of reference of the present dispute.⁴⁷⁸¹ Because of this, the European Communities initially refused to provide any information on payments under the PROFIT. However, following the first substantive meeting with the parties, the Panel asked the European Communities to provide information on the loan payments made under the PROFIT.⁴⁷⁸² This request was made in the context of the statement of the European Communities in its first written submission, that it would provide the Panel with "information regarding loans and grants" under the PROFIT were the Panel to determine that the United States' claims fell within the Terms of Reference.⁴⁷⁸³ In response, the European Communities submitted information on what appears to be a selection of payments made under a series of PROFIT sub-programmes in the years 2004 and 2005 "in the spirit of good cooperation and without prejudice to its" position that the United States' claims fell outside of the Panel's terms of reference.⁴⁷⁸⁴ The European Communities subsequently characterized this information as "relevant information on payments made under the PROFIT programme".⁴⁷⁸⁵ However, it is less than apparent to us how the figures supplied by the European Communities are in fact "relevant" to our request for information. First, it is unclear whether the information provided by the European Communities relates to all sub-programmes funded under the PROFIT or just a selection, because the European Communities has not specified exactly how much payment data it has supplied. Second, the information does not identify the recipients of the funding amounts, making it impossible to determine how much of the disclosed monies involved loans to Airbus.

7.1478 The European Communities noted that "in view of the immense scope of the programme, the European Communities respectfully requests the Panel, should it decide that PROFIT falls within the terms of reference, *quod non*, and desire additional information concerning the programme, to specify the information it would like to obtain so that such information could be prepared in the most

⁴⁷⁷⁸ US, FWS, para. 698, referring to *PROFIT 2003, Comites de Evaluación de 21 y 22/4/03, Proyectos y entidades con propuesta favorable de ayuda, P.N. Aeronáutico*, Exhibit US-351.

⁴⁷⁷⁹ US, FWS, para. 698, referring to *Javier Alfonso Gil, Antonia Sáez Cala and Maricruz Lacalle Calderón, EADS y las Estrategias Territoriales del Sudoeste Europeo: Informe de la Región de Madrid, Universidad Autónoma de Madrid (undated)*, at 70, Exhibit US-352; and *Ramon Herrero, Ministerio de Industria, Turismo y Comercio, Aeronautics Research and Development in Spain, ACARE AeroDays*, March 31, 2005, at 25, Exhibit US-353.

⁴⁷⁸⁰ US, FWS, para. 702.

⁴⁷⁸¹ See, para. 7.1418 above; EC, FWS, para. 1315; EC, Answer to Panel Question 109; EC, SWS, para. 647.

⁴⁷⁸² Panel Question 109.

⁴⁷⁸³ EC, FWS, para. 1318. We note that the European Communities made this statement under the "Payments" sub-heading within its discussion of the PROFIT. Elsewhere, where the European Communities used the same "Payments" sub-heading it revealed what it considered to be the amount of alleged subsidization received by Airbus, for instance, at paras. 1312 (grants under the PTA I and II); 1289-1290 (grants and loans under the CARAD and ARP Programmes); 1278-1279 (French government R&TD grants); and 1271-1272 (Bremen authorities' R&TD grants).

⁴⁷⁸⁴ EC, Answer to Panel Question 109, submitting Exhibit EC-624 (BCI).

⁴⁷⁸⁵ EC, SWS, para. 648.

BCI deleted, as indicated [***]

efficient way possible."⁴⁷⁸⁶ We are puzzled by the European Communities' response. Although we recognize that the question posed to the European Communities was not as specific as it could have been, it is our view that, in the context of the European Communities' statement at paragraph 1318 of its first written submission,⁴⁷⁸⁷ the United States' claims and factual assertions, as well as the Facilitator's previous Annex V information requests, it was reasonably clear that the information we requested was information pertaining to loan payments to Airbus under the PROFIT. The fact that we had not yet ruled on whether the United States' claims fell within our terms of reference at the time of our request is, in our view, not a valid reason for failing to provide the requested information. In this regard we observe that the European Communities did not consider the absence of any terms of reference ruling problematic when it voluntarily, on a without prejudice basis, provided information on the amount of French government R&TD funding granted to Airbus in its first written submission, even though it had also consistently argued that such funding fell outside of our terms of reference.⁴⁷⁸⁸

7.1479 The publicly available information submitted by the United States takes the form of: (i) two Spanish government decrees establishing the PROFIT;⁴⁷⁸⁹ (ii) a table of unknown origin setting out various items of information on loans provided under the PROFIT (Programa Nacional de Aeronautica) in 2003; (iii) one page from a Report prepared by the Universidad Autonoma de Madrid; and (iv) one page from what appears to be a Powerpoint presentation prepared by an official of the Spanish Ministerio de Industria, Turismo y Comercio. The Spanish government decrees confirm that the PROFIT was established with a view to running under two phases from 2000 to 2007.⁴⁷⁹⁰ The next above-cited document submitted by the United States indicates that Airbus obtained two loans in 2003 of approximately EUR 1.5 million.⁴⁷⁹¹ We note that the European Communities has acknowledged that Airbus received this amount of funding.⁴⁷⁹² However, the European Communities does not accept that Airbus received the remainder of the funding the United States asserts was provided to Airbus. In this regard, the information supplied by the United States indicates that EUR 2.58 million and EUR 2.76 million in "anticipos reembolsables", and EUR 0.5 million and EUR 0.7 million in "subvenciones", was provided to all participants under the "Programa Nacional de Aeronautica" of the PROFIT in 2001 and 2002.⁴⁷⁹³ In addition, the last of the above-cited documents submitted by the United States indicates that EUR 55.5 million in loans was provided to the Spanish aeronautics sector in 2004.⁴⁷⁹⁴ The United States contends that, in the light of the European Communities' refusal to provide more specific information on the funding obtained by Airbus, the full value of these amounts (EUR 62 million, *i.e.*, EUR 6.54 million in 2001 and 2002 plus EUR 55.5 million in 2004) must be added to the EUR 1.5 million accepted by the European Communities and allocated to Airbus for the year 2003.

BCI deleted, as indicated [***]

7.1480 We recognize that the bulk of the information the United States is asking us to rely upon discloses industry-wide funding and not individual loans granted to Airbus. However, due to the European Communities' failure to provide any specific information on the value of the loans obtained by Airbus under the PROFIT in response to the Facilitator's and our own requests, the publicly available information submitted by the United States is the only data we have to consider. In this regard, we note that the European Communities has at no stage challenged the credibility of the information contained in these publicly available documents. Thus, we have no reason to doubt that the Spanish aeronautics industry received EUR 62 million in funding under the PROFIT. In this light, and in accordance with paragraph 7 of Annex V, we believe it is appropriate to base our findings on the amount of loans obtained by Airbus under the PROFIT on the publicly available information, submitted by the United States. In doing so, we observe that given the focus of the United States complaint on "anticipos reembolsables", we believe that it would be inappropriate to consider allocating the amounts (EUR 1.2 million) described as "subvenciones" in Exhibit US-352 to Airbus.⁴⁷⁹⁵ Therefore, in accordance with paragraph 7 of Annex V, we find that Airbus was the recipient of approximately EUR 62.2 million in loans under the PROFIT.

(xi) *UK government grants*

Civil Aircraft Research and Demonstration Programme / Aeronautics Research Programme

7.1481 The United States asserts that, between 1992 and 2005, the UK Department of Trade and Industry ("DTI") agreed to provide Airbus with GBP [***] in LCA-related research grants under the Civil Aircraft Research and Demonstration Programme ("CARAD"), which it alleges was later renamed the Aeronautics Research Programme ("ARP"). In particular, the United States asserts that, over this period, the UK DTI disbursed approximately GBP [***] and committed to disburse a further GBP [***].⁴⁷⁹⁶ According to the European Communities, the total amount of LCA-related research grants that Airbus received between 1992 and 2005 under the CARAD programme and ARP was approximately GBP [***]. However, the European Communities argues that not all of this amount is properly within the scope of this dispute because it includes payments of GBP [***] that were granted prior to 1995, and therefore outside of the temporal scope of this dispute.⁴⁷⁹⁷ Thus, the European Communities submits that the amount of funding that is properly within the scope of the United States complaint is limited to GBP [***].⁴⁷⁹⁸

7.1482 We recall that in Section VII.C.2 of this Report, we rejected the European Communities' arguments on the temporal scope of this dispute.⁴⁷⁹⁹ Therefore, we will include payments made under the CARAD programme between 1992 and 1995 in our analysis.

7.1483 In reviewing the parties' submissions on the actual amount of funding received by Airbus under the CARAD programme, we have identified a number of discrepancies. In the first instance, we note that the factual basis of the United States assertion that Airbus received GBP [***] is information submitted by the European Communities during the Annex V process. However, the European Communities relies upon the same data to conclude that Airbus received only GBP [***].

7.1484 Payments made to Airbus under the CARAD programme between April 1997 and October 2005 are specified in one table, submitted by the United States as Exhibit US-339 (BCI)

⁴⁷⁹⁵ See, e.g., US, FWS, para. 697 and footnote 859, which refers to Article 7.4 paras. a) to c) of the Spanish government decree establishing the PROFIT (2000 to 2003), Exhibit US-349.

⁴⁷⁹⁶ US, FWS, para. 686, citing Exhibit US-339, which reproduces information supplied by the European Communities during the Annex V process.

⁴⁷⁹⁷ EC, FWS, paras. 1281 and 1289.

⁴⁷⁹⁸ EC, FWS, para. 1289.

⁴⁷⁹⁹ See, paras. 7.65 and 7.105 above.

BCI deleted, as indicated [***]

and the European Communities as Exhibit EC-233 (BCI). This table sets out the relevant payments on a project-by-project basis, in each financial year (1 April to 31 March) starting from 1997/1998 to October 2005. These individual payments are also summed and presented in a separate column as the total amount of funds received per-project as well as the total overall amount obtained by Airbus under the entire programme. The difference in how the parties have interpreted the data contained in this table may be explained by a calculation error. In arriving at an amount of funding of GBP [***], the United States used a figure of GBP [***], which was identified in the table as the total value of all payments made to Airbus under the CARAD programme. This figure was calculated by adding all of the per-project payment amounts listed in the same column. However, we have found that for eleven of the projects, the total amount of payments made to Airbus listed in the "Payments to Airbus to Date" column overstates what the same table shows was actually paid in each of the relevant financial years. When these errors are taken into account, the correct figure should be GBP [***].

7.1485 In addition, the United States' assertion that the UK DTI made a commitment to provide Airbus with an additional GBP [***] in grants under the CARAD programme appears to involve double-counting. As we understand its submission, the United States relies on the table contained on the last page of Exhibit US-339 (BCI) to justify its assertion. However, it appears to us that the contributions that the United States relies upon, which added together come to approximately GBP [***],⁴⁸⁰⁰ are already accounted for as payments in the financial years listed in the table the United States uses to justify that Airbus received GBP [***]. Therefore, we cannot accept the United States' assertion in respect of the alleged commitment of GBP [***].

7.1486 Finally, in arguing that Airbus received GBP [***] in grants under the CARAD programme, the European Communities relied upon a series of tables setting out payments made to Airbus between 1992 and 1996 presented in Exhibits EC-232 (BCI) and US-339 (BCI). However, in doing so, the European Communities incorrectly transposed two of the values shown in the tables ([***] and [***]).

7.1487 Thus, in the light of the information before us, we find that Airbus received GBP [***] in grants under the CARAD programme and ARP between January 1992 and October 2005.

Technology Programme

7.1488 The United States initially asserted that Airbus research consortia received GBP [***] in grants under the Technology Programme ("TP"), which ran from 2004.⁴⁸⁰¹ The European Communities indicated in its first written submission that, as of November 2005, Airbus had participated in 18 projects under the Technology Programme, receiving a total of GBP [***].⁴⁸⁰² The United States appears to be satisfied that this amount of funding is an accurate reflection of the monies Airbus received under the TP. Thus, we find that there is no dispute between the parties as to the amount of funding Airbus received under the TP.

⁴⁸⁰⁰ The actual amount is GBP [***].

⁴⁸⁰¹ US, FWS, para. 687, citing Exhibit US-340, which reproduces information supplied by the European Communities during the Annex V process.

⁴⁸⁰² EC, FWS, para. 1292, citing Exhibit EC-235 (BCI), showing that Airbus received GBP [***] in grants under the programme.

BCI deleted, as indicated [***]

(d) Whether each of the challenged R&TD measures individually constitutes a subsidy within the meaning of Article 1 of the SCM Agreement

(i) *Arguments of the Parties*

United States

7.1489 The United States alleges that each of the challenged R&TD measures constitutes a "financial contribution" that confers a "benefit" on Airbus, and therefore amounts to a subsidy, within the meaning of Article 1.1 of the SCM Agreement.

7.1490 To the extent that the measures at issue take the form of grants or loans, the United States contends that they fall explicitly within the definition of a "financial contribution" set out in Article 1.1(a)(1)(i) of the SCM Agreement.⁴⁸⁰³ According to the United States, it is well established that a grant confers a benefit because, as the panel stated in *United States – Cotton*, it "place{s} the recipient in a better position than the recipient otherwise would have been in the marketplace".⁴⁸⁰⁴ Thus, the United States argues that the R&TD grants at issue in this dispute necessarily confer a benefit on Airbus and, consequently, constitute subsidies within the meaning of Article 1.1 of the SCM Agreement.⁴⁸⁰⁵

7.1491 As far as the Spanish government loans are concerned, the United States argues that when a loan is provided to a recipient on terms that are better than those available in the commercial marketplace, a benefit is conferred.⁴⁸⁰⁶ Thus, according to the United States, because the loans at issue are provided to Airbus [***], they confer a benefit upon Airbus. The United States submits that it is not necessary to quantify the amount of this benefit because the [***] terms are alone sufficient to establish the existence of a benefit.⁴⁸⁰⁷ Furthermore, the United States argues that the deferred repayment terms provided for under the challenged loans further evidence the existence of a benefit to Airbus.⁴⁸⁰⁸

European Communities

7.1492 The European Communities explicitly acknowledges that Airbus received subsidies under the LuFo I, LuFo II, LuFo III, the AMST I, AMST II and the CARAD/ARP programmes.⁴⁸⁰⁹ However, it disputes whether funds *committed* but *not disbursed* to Airbus under the LuFo III programme as of 1 July 2005 should be taken into account in establishing the *amount* of subsidy provided to Airbus under this programme.⁴⁸¹⁰ For all of the remaining R&TD measures at issue, the European Communities does not contest that they constitute financial contributions within the meaning of

⁴⁸⁰³ US, FWS, paras. 626 (grants under the EC Framework Programmes); 680 (French government grants); 655 (German Federal government and Sub-Federal government grants); 694, 700 (Spanish government loans); and 688 (UK government grants).

⁴⁸⁰⁴ Panel Report, *US – Upland Cotton*, para. 7.1116.

⁴⁸⁰⁵ US, FWS, paras. 627 (grants under the EC Framework Programmes); 681 (French government grants); 656 (German Federal government and Sub-Federal government grants); and 689 (UK government grants).

⁴⁸⁰⁶ US, FWS, paras. 695 (PTA loans) and 701 (PROFIT loans), relying upon Appellate Body Report, *Canada – Aircraft*, para.157.

⁴⁸⁰⁷ US, Answer to Panel Question 38.

⁴⁸⁰⁸ US, FWS, paras. 693 and 695 ([***] for PTA loans) and 697 and 701 (up to 15 years for PROFIT loans); US, SWS, para. 514.

⁴⁸⁰⁹ EC, Answer to Panel Question 108.

⁴⁸¹⁰ EC, FWS, para. 1256-1257; EC, SWS, para. 630; EC, Answer to Panel Question 104.

BCI deleted, as indicated [***]

Article 1.1(a)(1)(i) of the SCM Agreement.⁴⁸¹¹ Moreover, the only United States allegation of benefit that the European Communities explicitly contests relates to Spanish government loans under the PTA. According to the European Communities, the United States has failed to establish that these loans confer a benefit on Airbus because it failed to undertake an appropriate comparison between the terms of the PTA loans and loans available on the marketplace.⁴⁸¹²

(ii) *Evaluation by the Panel*

Do the Challenged Measures involve a "Financial contribution"?

7.1493 The European Communities argues that funds *committed* to Airbus, but *not disbursed*, under the LuFo III programme as of 1 July 2005 (*i.e.*, the cut-off date used by the United States in its first written submission) should be excluded from our consideration. According to the European Communities, this would reduce the amount of funding at issue under the three LuFo programmes from EUR [***] to EUR [***] (a difference of approximately EUR [***]).⁴⁸¹³ The United States argues that the amount of funding at stake under the three LuFo programmes is EUR 217 million. The United States appears to derive this amount from the *Förderkatalog*.⁴⁸¹⁴ According to the United States, the *Förderkatalog* is an electronic R&D subsidy catalogue maintained by the German Federal government which records R&D funding provided by the German Federal Ministry for Research and Technology and the German Federal Economics Ministry.⁴⁸¹⁵ The United States argues that the *Förderkatalog* demonstrates that a firm commitment had been made as of 1 July 2005 to disburse the EUR [***], which the European Communities contends should not be considered, and that there is no indication that such money has not been and will not be disbursed. The United States notes that a subsidy within the meaning of Article 1 of the SCM Agreement includes "potential direct transfers of funds" as well as actual direct transfers of funds. Thus, even if the European Communities were correct in characterising certain amounts as "commitments" rather than "disbursements" that would not be a basis for excluding those amounts from the Panel's consideration.⁴⁸¹⁶

7.1494 The European Communities does not contest the United States' allegation that funding granted to Airbus under the LuFo programmes up to 1 July 2005 constitutes a "financial contribution" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. In our view, there is no doubt that such amounts represent a "direct transfer of funds" and therefore fall squarely within the definition of a "financial contribution" that is set out in Article 1.1(a)(1)(i) of the SCM Agreement. Thus, we are satisfied that the evidence submitted by the United States, to the extent corroborated by the European Communities on the basis of information obtained from the German Federal Ministry of Economics and Industry, establishes that as of 1 July 2005, the German Federal government provided a "financial contribution" to Airbus under the LuFo programmes in the amount of EUR [***].⁴⁸¹⁷

⁴⁸¹¹ EC, FWS, paras. 1218-1319; EC, SWS, paras. 610-649; EC, Answer to Panel Question 104, where the European Communities recognizes that to the extent that they are shown to confer a benefit on Airbus, the challenged measures would constitute subsidies within the meaning of Article 1 of the SCM Agreement.

⁴⁸¹² EC, FWS, para. 1313. The European Communities makes no similar argument on the question of the existence of benefit in respect of the United States complaint against the PROFIT loans. EC, FWS, paras. 1314-1319; EC, SWS, paras. 646-649.

⁴⁸¹³ EC, FWS, para. 1258.

⁴⁸¹⁴ US, FWS, para. 663.

⁴⁸¹⁵ US, FWS, footnote 806 and Exhibit US-326. The European Communities describes the *Förderkatalog* as a public database which lists all the recipients of research grants in all areas where funding is provided by the German government. EC, FWS, para. 1255.

⁴⁸¹⁶ US, SWS, para. 514.

⁴⁸¹⁷ EC, FWS, para. 1257. The BCI table presented following para. 1257 of the European Communities' first written submission identifies amounts of funding under each of the three LuFo programmes,

BCI deleted, as indicated [***]

7.1495 In respect of the funding that was committed, but not disbursed under LuFo III as of 1 July 2005, the European Communities' principal argument in response to the United States' claims amounts to the submission that a government commitment of funds, without any actual disbursement of those funds, cannot amount to a "financial contribution". However, as we have noted elsewhere in this Report, a commitment to provide funds may well be a "financial contribution" if in the form of a "potential direct transfer of funds".⁴⁸¹⁸ As we understand it, the United States argues that the funds that were committed but not disbursed to Airbus under the LuFo III programme represent precisely this form of "financial contribution". We agree. Just as the disbursement of funds is a "direct transfer of funds", a commitment – or a promise – to disburse funds may be properly characterized as a "potential direct transfer of funds" falling within the definition of a "financial contribution" set out in Article 1.1(a)(1)(i) of the SCM Agreement. Thus, on the basis of the parties' submissions and the evidence that has been presented, we find that as of 1 July 2005, the German Federal government provided Airbus with a "potential direct transfer of funds" in the form of a commitment to transfer approximately EUR [***] to Airbus under the LuFo III programme.⁴⁸¹⁹

7.1496 As regards the remaining R&TD measures at issue,⁴⁸²⁰ we agree with the United States that to the extent they are grants involving direct transfers of funds or loans, they explicitly fall within the definition of a "financial contribution" under Article 1.1(a)(1)(i) of the SCM Agreement.

Do the challenged Measures confer a "Benefit" on Airbus?

7.1497 The European Communities has not contested the United States' allegation that the R&TD grants confer a benefit upon Airbus. However, it has disputed whether the United States has established that Airbus received any benefit from the Spanish government loans provided under the PTA. The basis of the European Communities' view is that, consistent with the Appellate Body's views in *Canada – Aircraft*, the United States must demonstrate the existence of a benefit to Airbus by undertaking "some kind of comparison" between the loans obtained by Airbus and comparable loans available on the marketplace. The United States argues that the very fact that the loans in question were made at a [***] interest rate is enough to establish that they were made on preferential terms compared with the marketplace and, therefore, that they confer a benefit on Airbus.⁴⁸²¹

7.1498 The Spanish government loans that are the subject of this part of the United States' complaint were provided to Airbus between 1993 and 2003 under two phases of the PTA (PTA I and PTA II). PTA I ran from 1993 to 1998 and PTA II ran from 1999 to 2003. The evidence submitted by the

distinguishing between "project grants to Airbus Germany" and "amount{s} received by Airbus Germany as of 1 July 2005", listing the latter as an amount of EUR [***].

⁴⁸¹⁸ See, paras. 7.301 - 7.304 and 7.733 - 7.735 above.

⁴⁸¹⁹ EC, FWS, para. 1257. The BCI table presented following para. 1257 of the European Communities' first written submission identifies amounts of funding under each of the three LuFo programmes, distinguishing between "project grants to Airbus Germany" and "amount{s} received by Airbus Germany as of 1 July 2005". The table shows that the "project grants to Airbus" under LuFo I and LuFo II were paid out to Airbus in full; whereas under LuFo III, there was an approximately EUR [***] difference between "project grants to Airbus Germany" (EUR [***]) and "amount received by Airbus Germany as of 1 July 2005" (EUR [***]). The funding "grants" under the LuFo III programme were intended to be made over a period ending 2007. See, also, EC, SWS, para. 630.

⁴⁸²⁰ I.e., all of the measures granted under the 2nd Framework Programme, 3rd Framework Programme, 4th Framework Programme, 5th Framework Programme and 6th Framework Programme (see, paras. 7.1427, 7.1433, 7.1439, 7.1445 and 7.1451 above) as well as the German federal and sub-federal government grants, French government grants, Spanish government loans and UK government grants (see, paras. 7.1457, 7.1459, 7.1461, 7.1465, 7.1467, 7.1474 and 7.1481 above).

⁴⁸²¹ US, FWS, para. 695; US, SWS, para. 514.

BCI deleted, as indicated [***]

United States suggests that all of the PTA loans were [***].⁴⁸²² The European Communities has not contested this evidence. In addition, we note that the loans granted under PTA I between 1993 and 1998 carried a [***] repayment term, with the first repayment expected only in the year 2000.⁴⁸²³ The PTA II loans granted between 1999 and 2003 carried a [***] repayment term, with the first repayment required in 2007.⁴⁸²⁴ The monies loaned under the two phases of the PTA amounted to approximately EUR [***].⁴⁸²⁵

7.1499 We recall that it is well established that whether a financial contribution confers a benefit upon its recipient is a question that must be resolved by reference to the market. Thus, in the particular context of a financial contribution in the form of a loan, a benefit will be conferred whenever it is granted to a recipient on terms more favourable than those available to the recipient in the market.⁴⁸²⁶ As already noted elsewhere in this Report, we believe that it would be extraordinary and highly unlikely for a market-based lender acting pursuant to commercial considerations to provide financing at a [***] rate of return.⁴⁸²⁷ It would be even more exceptional to find a market lender agreeing to finance EUR [***] worth of R&TD activities in the LCA sector at a [***] rate of return with full repayment not expected before as much as 21 to 30 years. In this light, we consider that it was not necessary for the United States to present evidence of the terms and conditions of specific market-based financing comparable to the loans at issue in order to establish, at least on a *prima facie* basis, that the PTA loans conferred a benefit upon Airbus.

7.1500 Although the European Communities has questioned whether the United States has demonstrated that the PTA loans conferred a benefit, it has provided no evidence of its own to counter the United States' *prima facie* case. Thus, on the basis of the evidence and arguments before us, we are satisfied that Airbus obtained the PTA loans from the Spanish government on terms more favourable than would otherwise have been possible on the market. We therefore find that the PTA loans at issue conferred a benefit upon Airbus, and consequently, amount to subsidies within the meaning of Article 1.1 of the SCM Agreement.

7.1501 In respect of the remainder of the challenged R&TD measures, we agree with the United States that to the extent that Airbus received a funding grant in the form of an actual "direct transfer of funds" from the various entities involved, it was automatically placed in a better position than it would otherwise have been in without the grant.⁴⁸²⁸ The European Communities has not contested this aspect of the United States' submission. Consequently, we find that all of the R&TD funding grants obtained by Airbus that we have identified as the subject of the United States' complaint conferred a benefit upon Airbus, and are therefore subsidies within the meaning of Article 1.1 of the SCM Agreement.

7.1502 However, we are not convinced that the United States has established that the approximately EUR [***] "financial contribution" granted to Airbus under the LuFo III programme in the form of a "potential direct transfer of funds" conferred a benefit. As we have previously explained, a benefit may arise from a "potential direct transfer of funds" when the commitment or promise to provide funds *in and of itself* places the recipient of that commitment or promise in a better position

⁴⁸²² The information submitted by the United States in Exhibits US-344 (BCI) and US-345 (BCI) indicates that [***].

⁴⁸²³ Exhibit US-344 (BCI).

⁴⁸²⁴ Exhibits US-344 (BCI) and US-345 (BCI).

⁴⁸²⁶ See, para. 7.401 above.

⁴⁸²⁷ See, footnote 2728 above.

⁴⁸²⁸ US, FWS, paras. 627 (grants under the EC Framework Programmes); 681 (French government grants); 656 (German Federal government and Sub-Federal government grants); and 689 (UK government grants).

BCI deleted, as indicated [***]

than it would otherwise have been in without that commitment or promise.⁴⁸²⁹ The United States has advanced no argument and submitted no evidence explaining why the LuFo III funding commitment at issue *in and of itself* conferred a benefit that is separate and independent from the benefit that might be conferred by any future transfer of the promised funds. On the contrary, the entire focus of the United States' arguments appears to have been the benefits associated with the amount of funds that were promised, as opposed to the promise itself. Thus, we find that the United States has failed to establish that the EUR [***] funding commitment made by the German Federal government under the LuFo III programme conferred a benefit upon Airbus. We therefore dismiss the United States' claims with respect to this particular measure.

7.1503 Finally, we note that the European Communities has not challenged the United States' contention that the loans under the PROFIT confer a benefit because they were provided to Airbus at a [***] rate of interest, with deferred repayment schedules extending up to 15 years. The publicly available information the United States has submitted to support its claims confirms that the PROFIT loans were provided to Airbus on [***] terms with a maximum repayment period of 15 years.⁴⁸³⁰ Once again, we note that it would, in our view, be exceptional to find a market lender acting pursuant to commercial considerations willing to finance EUR [***] worth of R&TD activities in the LCA sector at a [***] rate of interest. We therefore find that the evidence and arguments presented by the United States are sufficient to establish, at least on a *prima facie* basis, that the PROFIT loans conferred a benefit upon Airbus. The European Communities has provided no evidence to counter the United States' contentions. Thus, on the basis of the evidence and arguments before us, we are satisfied that Airbus obtained the PROFIT loans from the Spanish government on terms more favourable than would have been possible on the marketplace. We therefore find that the PROFIT loans at issue conferred a benefit upon Airbus, and consequently, amount to subsidies within the meaning of Article 1.1 of the SCM Agreement.

(e) Whether the R&TD subsidies are specific within the meaning of Article 2 of the SCM Agreement

(i) *Introduction*

7.1504 The United States argues that all of the R&TD subsidies it challenges are specific to Airbus and/or the aeronautics industry, within the meaning of Article 2.1 of the SCM Agreement.⁴⁸³¹ The European Communities disputes the United States' allegations **only** in respect of the subsidies granted under each of the EC Framework Programmes, the Spanish government PROFIT programme and the UK Technology Programme.⁴⁸³² In the sections that follow, we start our evaluation of the merits of the United States' claims by focusing on the allegations of specificity contested by the EC.

(ii) *Grants under the EC Framework Programmes*

Arguments of the United States

7.1505 The United States argues that the subsidies granted to Airbus under the Framework Programmes are specific, "in law", within the meaning of Article 2.1(a) of the SCM Agreement, because they were granted pursuant to "specific programmes" with their own implementation rules and separate budgets dedicated to aeronautics industry research activities. In particular, the

⁴⁸²⁹ See, paras. 7.301 - 7.304 and 7.733 - 7.735 above.

⁴⁸³⁰ Exhibit US-349, Articolo 7.4(c), confirming that loans ("anticipos reembolsable") under the PROFIT I were provided with an "applied interest rate of zero per cent per year". Exhibit US-350, Capitolo I, paragrafo noveno, regarding loans ("préstamos"), "applied interest rate of zero per cent per year".

BCI deleted, as indicated [***]

United States asserts that, under the Second Framework Programme, the European Communities established a programme called "Industrial manufacturing technologies and advanced materials applications" ("BRITE/EURAM"), within which it allocated a "ring-fenced" amount of funding to aeronautics research under the heading "Area 5 - Specific Activities Relating to Aeronautics". Similarly, the United States submits that the European Communities allocated "ring-fenced" funding amounts for aeronautics research within the scope of the "Area 3, Aeronautics" and "Area 3A, Aeronautics" headings of the BRITE/EURAM programmes, respectively established under the Third and Fourth Framework Programmes. Moreover, the United States contends that a separate aeronautics-specific sub-budget was also created within each of the Fifth and Sixth Framework Programmes. In respect of the Fifth Framework Programme, the United States asserts that eight specific programmes were established, including one known as "competitive and sustainable growth". The United States argues that this programme included a dedicated sub-budget for research falling within the "New perspectives for aeronautics" heading. Finally, the United States asserts that the European Communities designated aeronautics research as a "priority" area under the Sixth Framework Programme, with its own separate and dedicated budget.⁴⁸³³

7.1506 The United States submits that for areas under each of the Framework Programmes where a dedicated sub-budget was made available, the European Commission adopted a "work programme" setting out the technical content of the areas of civil aeronautics research to be funded. According to the United States, the budgeted funds were accessed through calls for project proposals issued by the European Commission in accordance with the aeronautics work programme of each Framework Programme. These calls for projects established specific criteria for the proposals to be submitted, including the type of project, criteria for the evaluation of proposals, the number of project participants, and, most notably in the United States' view, the area and specific topic of research as well as the budget for the call. The United States argues that only project proposals satisfying the requirements of the respective call were eligible for the relevant research grants.⁴⁸³⁴

7.1507 Finally, the United States also argues that the subsidies that Airbus received under the EC Framework Programmes are specific "in fact", within the meaning of Article 2.1(c) of the SCM Agreement, because Airbus and other aeronautics companies were the predominant users of the grants.⁴⁸³⁵ According to the United States, Airbus received EUR [***] under the Second Framework Programme, constituting [***] of the sub-budget reserved for aeronautics research; EUR [***] under the Third Framework Programme, which is [***] of the relevant aeronautics sub-budget; EUR [***] under the Fourth Framework Programme, accounting for approximately [***] of the relevant aeronautics sub-budget; EUR [***] under the Fifth Framework Programme, which is [***] of the sub-budget reserved for aeronautics; and [***] of the aeronautics sub-budget of the Sixth Framework Programme.⁴⁸³⁶

Arguments of the European Communities

7.1508 The European Communities disputes the United States' contentions. In its view, subsidies granted under the relevant Framework Programmes are not specific within the meaning of Article 2.1(a) of the SCM Agreement because they are not limited, "in law", to any particular enterprise, industry or group of enterprises or industries.⁴⁸³⁷ The European Communities explains that the Framework Programmes at issue are funding instruments that provide grants for collaborative research activities falling within a broad array of thematic areas to which funds are specifically allocated. The European Communities argues that the thematic areas established under each of the

⁴⁸³³ US, FWS, paras. 651-653; US, Answer to Panel Question 36; US, SWS, paras. 499-505.

⁴⁸³⁴ US, Answer to Panel Question 36; US, SWS, para. 502.

⁴⁸³⁵ US, FWS, para. 653.

⁴⁸³⁶ US, Answer to Panel Question 35.

⁴⁸³⁷ EC, FWS, para. 1244.

BCI deleted, as indicated [***]

Framework Programmes do not coincide with any particular enterprise, industry or group of enterprises or industries. Moreover, according to the European Communities, the purpose of the allocation of funds to the thematic areas is not to favour any particular enterprise or industry or group of enterprises or industries, but rather to ensure that funds under each of the Framework Programmes are spread across several important fields of research.⁴⁸³⁸

7.1509 The European Communities asserts that the Second to Fifth Framework Programmes did not establish sub-budgets specific to the aeronautics industry. However, the European Communities acknowledges that these programmes did make an "indicative internal allocation of funds" at a "level" below the "sub-sub-budget" "level". Thus, for instance, the European Communities asserts that the Fourth Framework Programme breaks down its overall budget into seven sub-budgets for research activities within the "information and communication technologies", "industrial technologies", "environment", "life sciences and technologies", "non-nuclear energy", "transport" and "targeted socio-economic research" headings. According to the European Communities, none of these are specific to aeronautics. The European Communities explains that the "industrial technologies" research area is broken down further establishing "sub-sub"-budgets for research areas identified as "industrial and material technologies" and "measurements and testing". It is only at the next level that an "aeronautics" research activity appears with an "indicative internal allocation of funds".⁴⁸³⁹ Similarly, the European Communities argues that the Sixth Framework Programme does not establish any dedicated subsidy programme for aeronautics. Rather, the European Communities submits that the Sixth Framework Programme establishes "aeronautics and space" as one of seven "priority thematic areas" under the sub-programme "Focussing and Integrating Community Research" to which certain portions of the budget are allocated.⁴⁸⁴⁰

7.1510 The European Communities argues that to the extent that the Framework Programmes allocate, at some level well below the programme level, portions of their budget to "aeronautics and space" and "aeronautics", this does not render the funding grants specific. In the European Communities' view, such allocations simply serve the purpose of ensuring that a disproportionate amount of funds is not allocated to one sector (which could give rise to *de facto* specificity). Thus, according to the European Communities, specificity "in law" within the meaning of Article 2.1(a) of the SCM Agreement must be determined at the programme level. If this were not the case, the European Communities contends that support provided under broad research programmes, which necessarily allocate their budget to a variety of research areas in order to spread funds to several important technological fields, would always constitute a specific subsidy pursuant to Article 2.1(a) of the SCM Agreement.⁴⁸⁴¹

7.1511 The European Communities also disputes the United States' allegation that the subsidies granted to Airbus under the Framework Programmes are "in fact" specific, within the meaning of Article 2.1(c). The European Communities submits that specificity "in fact" must be determined by looking to the amount of funding made available at the overall programme level. When assessed at this level, the European Communities argues that aeronautics companies cannot be found to be the predominant users of research funding afforded under the Framework Programmes. Thus, according to the European Communities, of the total budget for the Third Framework Programme (EUR 5.7 billion), only EUR 130 million (2.3%) was spent on aeronautics. For the Fourth Framework Programme, only EUR 400 million (3.3%) of the total budget of EUR 12.3 billion went to aeronautics. As regards Fifth and Sixth Framework Programmes, the aeronautics budget allegedly represented 5.1% and 6.6%, respectively, of the total budgets. The European Communities submits that these amounts demonstrate that aeronautics expenditure under each of the Framework

⁴⁸³⁸ EC, FWS, paras. 1243-1251.

⁴⁸³⁹ EC, Answer to Panel Question 106; EC, SWS, para. 625.

BCI deleted, as indicated [***]

Programmes was not disproportionate and that therefore aeronautics companies were not the predominant users of the grants. Finally, the European Communities stresses that the above-mentioned figures cover the total funding for aeronautics-related research activities and, thus, include payments to research institutes and universities, so that the actual portion of funding that went to aeronautics companies is even lower. With regard to Airbus SAS, the European Communities argues that the absence of any in fact specificity is even more evident. In particular, the European Communities asserts that the relevant companies (*i.e.*, Airbus Germany, Airbus France, Airbus Spain and Airbus UK) received only [***] of the total budget of the Third Framework Programme and [***] of the grants provided to aeronautics-related R&TD. Under the Fourth Framework Programme, the relevant companies received [***] of the total budget and [***] of the grants provided to aeronautics-related R&TD. For the Fifth Framework Programme, the figures were [***] and [***], and for the Sixth Framework Programme, [***] and [***] respectively. The European Communities submits that it can hardly be argued that a pro-mille portion of a total budget or a portion of less than [***] in case of aeronautics-related R&TD rises to the level of "predominant use" and, thus, "in fact" specificity.⁴⁸⁴²

Evaluation by the Panel

7.1512 We begin our evaluation of the United States' claims by focusing on the question whether the challenged Framework Programmes are specific within the meaning of Article 2.1(a) of the SCM Agreement. As previously noted in the context of our discussion of the EIB loans, a finding of specificity under Article 2.1(a) requires the establishment of the existence of a limitation that expressly and unambiguously restricts the availability of a subsidy to "certain enterprises", and thereby does not make the subsidy "sufficiently broadly available throughout an economy".⁴⁸⁴³

7.1513 The subsidies provided to Airbus under the challenged Framework Programmes were granted by the European Commission pursuant to a series of similar, but not identical, legal instruments. Before turning to assess the extent to which each of these subsidies was specific within the meaning of Article 2.1(a), we first describe our understanding of how the grants at issue flowed from the operation of the legal instruments forming part of each of the relevant Framework Programmes.

- Second Framework Programme

7.1514 The Second Framework Programme was established by Council Decision 87/516/Euratom, EEC of 28 September 1987,⁴⁸⁴⁴ giving effect to the strategic research and technological development mandate and objectives set out in Title VI of the Treaty establishing the European Economic Community.⁴⁸⁴⁵ As reflected in the recitals of the Decision, the Programme's objectives included advancing EC R&TD activities in order to strengthen the scientific and technological basis of EC industry; encouraging undertakings of all sizes in their R&TD efforts; and promoting the overall harmonious development of the European Communities with a view to strengthening its economic and social cohesion. To this end, the Decision was intended to establish:

"a multiannual {1987 to 1991} framework programme laying down the scientific and technical objectives of its activities, defining their respective priorities, setting out the main lines of the activities envisaged, estimating the necessary amount and drawing

⁴⁸⁴² EC, SWS, paras. 627-629.

⁴⁸⁴³ *See*, para. 7.919 above.

⁴⁸⁴⁴ *Council Decision 87/516/Euratom, EEC of 28 September 1987 concerning the framework programme for Community activities in the field of research and technological development (1987 to 1991)*, OJ L 302/1, 24.10.1987 (hereinafter "Council Decision 87/516"), Exhibit EC-200.

⁴⁸⁴⁵ Treaty establishing the European Economic Community, as amended by the Single European Act, 1 July 1987.

BCI deleted, as indicated [***]

up detailed rules for financial participation by the Community in the programme as a whole and the breakdown of this amount between the various activities envisaged"⁴⁸⁴⁶

7.1515 Annex I of the Decision contains a breakdown of the activities targeted for funding, together with the amount of funds allocated to each. In total, 22 activities are identified under eight headings: two activities under the "Exploitation of the sea bed and use of marine resources" heading; three activities under each of the "Quality of life", "Towards a large market and an information and communications society", "Exploitation and optimum use of biological resources" and "Energy" headings; and four activities under each of the "Modernization of industrial sectors" and "Improvement of European S/T cooperation" headings.⁴⁸⁴⁷ Most of these activities appear to be of a general horizontal nature, potentially cutting across a variety of business segments.⁴⁸⁴⁸ Others seem to be more focussed, concentrating on particular economic sectors.⁴⁸⁴⁹ The funding levels "deemed necessary" for each of the 22 activities are also disclosed, with the total amount for all activities combined amounting to ECU 5,396 million.

7.1516 Annex II of the Decision sets out a more detailed description of each of eight research headings and 22 envisaged activities and their scientific and technical objectives; while Annex III outlines the selection criteria that should generally be applied when selecting the R&TD initiatives to fund. The Decision does not, however, provide for the disbursement of any funds to individual applicants. In this respect, Article 2.1 of the Decision explains in clear terms that the Second Framework Programme was to be implemented through "specific programmes developed within each of" the eight prescribed research headings. According to Article 2.2, each "specific programme shall":

- "- define the detailed rules for implementing it, fix its duration and provide for the means deemed necessary,
- state its precise objectives and provide for an evaluation of results achieved in relation to these objectives,
- be evaluated in the light of all the selection criteria set out in Annex III, which include that of contributing to the strengthening of the economic and social cohesion of the Community,
- define the rate or rates of the Community's financial participation"

⁴⁸⁴⁶ Council Decision 87/516, recital 7.

⁴⁸⁴⁷ No activities are specifically identified under the "Science and technology for development" heading, to which ECU 80 million is allocated.

⁴⁸⁴⁸ These activities are: (i) under the "Quality of life" heading – "Health" and "Environment"; (ii) "Towards a large market and an information and communication society" heading – "Information technologies" and "New services of common interest (including transport)"; (iii) under the "Modernization of industrial sectors" heading – "Science and technology for manufacturing industry", "Science and technology of advanced materials", "Raw materials and recycling" and "Technical standards, measurement methods and reference materials"; (iv) under the "Science and technology for development" heading"; and (v) under the "Improvement of European S/T cooperation" heading – "Stimulation, enhancement and use of human resources", "Use of major installations", "Forecasting and assessment and other back-up measures (including statistics)" and "Dissemination and utilization of S/T research results".

⁴⁸⁴⁹ These activities are: (i) under the "Quality of life" heading – "Radiation protection"; (ii) under the "Towards a large market and an information and communication society" heading – "Telecommunications"; (iii) under the "Exploitation and optimum use of biological research" heading – "Biotechnology", "Agro-industrial technologies" and "Competitiveness of agriculture and management of agricultural resources"; (iv) under the "Energy" heading – "Fission: nuclear safety", "Controlled thermonuclear fusion" and "Non-nuclear energies and rational use of energy"; and (v) under the "Exploitation of the sea bed and use of marine resources" heading – "Marine science and technology" and "Fisheries".

BCI deleted, as indicated [***]

7.1517 Thus, the Decision setting up the Second Framework Programme established an EC-wide R&TD support initiative targeting a variety of economic activities at both horizontal and sector-specific levels. The Decision identified and allocated funds to 22 areas of research under eight headings and described, in broad terms, their scientific and technical objectives. However, in laying down these overall guidelines, the Decision establishing the Second Framework Programme did not actually indicate how these funds could be accessed by individual applicants. Neither did it prescribe any specific modalities for the distribution of funds. The detailed rules and methodologies for the distribution of funds was left to the "specific programmes" that were to be adopted for the purpose of implementation.

7.1518 As we understand it, the Decision establishing the Second Framework Programme was implemented through numerous "specific programmes". For the purpose of the present dispute, the focus of our analysis is on what is referred to as the BRITE/EURAM programme.

7.1519 The BRITE/EURAM programme was established through Council Decision 89/237/EEC of 14 March 1989 with the aim of contributing to the achievement of the objectives of the Second Framework Programme by implementing a specific R&TD programme in two of the fields identified under that Programme, namely, the industrial manufacturing technologies and advanced materials applications activities.⁴⁸⁵⁰ Annex IV of the Council Decision 89/237/EEC made an "indicative internal allocation" of a total of ECU 499.5 million across five "Areas" of research: "Advanced materials technologies" (28%); "Design methodologies and assurance for products and processes" (19%); "Application of manufacturing technologies" (19%); "Technologies for manufacturing processes" (20%); and "Specific activities relating to aeronautics" (7%).⁴⁸⁵¹ A summary of the scope and objectives of each of the five research areas was provided in Annex I. As regards the "Specific activities relating to aeronautics" area, Annex I stipulated the type of research that would fall under this heading as "pre-competitive research in technological areas which are of primary relevance to aeronautics (in particular aeroplanes and helicopters) and are not yet covered in other programme areas". It also identified four fields of focus: "Aerodynamics"; "Acoustics"; "Airborne systems and equipment" and "Propulsion systems".

7.1520 Rules for the implementation of the "specific programme" are set out in Annex II. These indicate that the funding initiatives would be principally executed by "means of shared-cost research contracts to be awarded following a selection procedure based on calls for proposals" published by the Commission in the Official Journal of the European Communities. They also describe four types of research projects that would be funded ("Industrial applied research", "Focused fundamental research", "Feasibility awards for SMEs" and "Coordinated activities"), spelling out *inter alia*, the level of support expected from participants and the funding that would be committed by the European Communities for each type of project. The rules for "Research relating to aeronautics" are set out separately in Annex II. Again, these require the Commission to initiate the process by publishing calls for proposals. However, unlike the other types of research projects, the rules implementing the aeronautics research area activities specify that the Commission's calls for proposals must be based on a "work programme" "established to define precise objectives and determine priority themes for research". Moreover, the rules relating to financing of "Industrial applied research" and "Focused fundamental research" projects apply equally to aeronautics research only when "appropriate".

7.1521 Finally, we note that the BRITE/EURAM programme established two different decision-making procedures and programme review guidelines: one for projects funded under the aeronautics

⁴⁸⁵⁰ Council Decision 89/237/EEC of 14 March 1989 on a specific research and technological development programme in the field of industrial manufacturing technologies and advanced materials applications (Brite/Euram) (1989 to 1992), OJ L 98/18, 11.4.1989 (hereinafter "Council Decision 89/237"), recital 7 and Article 1, Exhibit EC-195.

⁴⁸⁵¹ The allocation makes 7% of the funds available to cover staff and administrative costs.

BCI deleted, as indicated [***]

research area, and another for all other areas of research. In particular, Article 6.1 specifies that decisions relating to funding activities other than in the aeronautics research area must be taken by the European Commission after consultation with a Committee composed of representatives of EC member States. On the other hand, Article 6.2 stipulates that decisions in respect of measures to be undertaken in the aeronautics research area were to be made on the basis of a qualified majority vote of the EC member State representatives in the Committee or the Council. Likewise, different approaches were envisaged for the programme reviews mandated under Article 4. While a review of the BRITE/EURAM programme was required during the third year of implementation, a review in respect of research relating to aeronautics was called for during the second year. Moreover, Annex III described the programme objectives and criteria that were required to be taken into account when undertaking such reviews, setting out additional objectives and criteria for aeronautics research area projects.

7.1522 Thus, the BRITE/EURAM programme implemented the objectives of the Second Framework Programme by further elaborating five areas of research that would be funded, providing for an indicative allocation of funds to these areas, establishing implementation rules and decision-making procedures, and a review process. However, it is apparent that the BRITE/EURAM programme treated the area of aeronautics research somewhat differently than the other research areas. First, we note that, unlike the other four research areas identified under BRITE/EURAM, the aeronautics research area specifically targets a particular sector of economic activity. The other four research areas are much more horizontal in nature. Projects falling within their scope do not appear to be limited to any particular sector of the economy and, as envisaged in Annex I, might even include areas of research relating to aeronautics. Second, the aeronautics research area is implemented through different rules and decision-making procedures, with the latter involving a much stronger degree of control by the EC member States on, *inter alia*, the research work programme and projects to be funded. Finally, the BRITE/EURAM programme mandates a shorter time-frame for reviewing the results of the financing provided to projects in the aeronautics research area, and requires that such reviews take into account objectives that do not have to be considered when reviewing projects funded under the other four areas.

- Third Framework Programme

7.1523 The Third Framework Programme was established by Council Decision 90/221/Euratom, EEC of 23 April 1990,⁴⁸⁵² giving effect to the strategic research and technological development mandate and objectives set out in Title VI of the Treaty establishing the European Economic Community.⁴⁸⁵³ As reflected in the recitals of the Decision, the Programme's objectives included advancing EC R&TD activities in order to strengthen the scientific and technological basis of EC industry; encouraging undertakings of all sizes in their R&TD efforts; and promoting the overall harmonious development of the European Communities with a view to strengthening its economic and social cohesion. To this end, the Decision was intended to set up a multiannual framework programme covering the period 1990 to 1994 to continue and develop the research and technological development activities identified and supported under the Second Framework Programme.

7.1524 Annex I of the Decision contains a breakdown of the activities targeted for funding, together with the amount of funds allocated to each. In total, 15 activities are identified under six headings: three activities under the "Information and communications technologies" heading; two activities under each of the "Industrial and material technologies" and "Environment" headings; four activities

⁴⁸⁵² Council Decision 90/221/Euratom, EEC of 23 April 1990 concerning the framework programme for Community activities in the field of research and technological development (1990 to 1994), OJ L 117/28, 8.05.1990 (hereinafter "Council Decision 90/221"), Exhibit EC-201.

⁴⁸⁵³ Treaty establishing the European Economic Community, as amended by the Single European Act, 1 July 1987.

BCI deleted, as indicated [***]

under the "Life sciences and technologies for developing countries" headings; three activities under the "Energy" heading; and one activity under the "Human capital and mobility" heading. Most of these activities appear to be of a general horizontal nature, potentially cutting across a variety of business segments.⁴⁸⁵⁴ Others seem to be more focussed, concentrating on particular economic sectors.⁴⁸⁵⁵ The funding levels "deemed necessary" for each of the 15 activities are also disclosed, with the total amount for all activities combined amounting to ECU 5,700 million.

7.1525 Annex II of the Decision sets out a more detailed description of each of the six research headings and 15 envisaged activities and their scientific and technical objectives; while Annex III outlines the selection criteria that should generally be applied when selecting the R&TD initiatives to fund. The Decision does not, however, provide for the disbursement of any funds to individual applicants. In this respect, Article 2.1 of the Decision explains that the Third Framework Programme was to be implemented through "specific programmes developed within each of" the six prescribed research headings. According to Article 2.4, each "specific programme shall: "determine its precise objectives and make provision for an evaluation of the results achieved as compared with those objectives and with the criteria in Annex III".

7.1526 Thus, the Decision setting up the Third Framework Programme established an EC-wide R&TD support initiative targeting a variety of economic activities at both horizontal and sector-specific levels. The Decision identified and allocated funds to 15 areas of research activity under six headings and described, in broad terms, their scientific and technical objectives. However, in laying down these overall guidelines, the Decision establishing the Third Framework Programme did not actually indicate how these funds could be accessed by individual applicants. The detailed rules and methodologies for the distribution of funds were left to the "specific programmes" that were to be adopted for the purpose of implementation.

7.1527 As we understand it, the Decision establishing the Third Framework Programme was implemented through numerous "specific programmes". For the purpose of the present dispute, the focus of our analysis is on the "Specific Programme for Research and Technological Development in the Field of Industrial and Materials Technologies" (the "IMT 1991 programme").⁴⁸⁵⁶

7.1528 The IMT 1991 programme was established through Council Decision 91/506/EEC of 9 September 1991 with the aim of contributing to the achievement of the objectives of the Third Framework Programme by implementing a specific R&TD programme in the field of industrial and materials technologies.⁴⁸⁵⁷ Annex II of the Decision sets out an "indicative allocation" of a total of ECU 663,3 million across three "Areas" of research: "Materials - raw materials" (ECU 308.8 million); "Design and manufacture" (ECU 301.5 million); and "Aeronautics research" (ECU 53 million).⁴⁸⁵⁸

⁴⁸⁵⁴ These activities are: (i) under the "Information and communications technologies" heading – "Information technologies", "Communication technologies" and "Development of telematics systems of general interest"; (ii) under the "Industrial and material technologies" heading – "Industrial and material technologies" and "Measurement and testing"; (iii) under the "Environment" heading – "Environment"; and (iv) under the "Human capital and mobility" heading – "Human capital and mobility".

⁴⁸⁵⁵ These activities are: (i) under the "Environment" heading - "Marine sciences and technologies"; (ii) under the "Life sciences and technologies for developing countries" heading – "Biotechnology", "Agricultural and agro-industrial research", "Biomedical and health research", and "Life sciences and technologies for developing countries"; and (iii) under the "Energy" heading – "Non nuclear energies", "Nuclear fission safety" and "Controlled nuclear fusion".

⁴⁸⁵⁶ *Council Decision 91/506/EEC of 9 September 1991 on a specific research and technological development programme in the field of industrial and materials technologies (1990 to 1994)*, OJ L 269/30, 25.9.1991 (hereinafter "Council Decision 91/506"), Exhibit EC-196.

⁴⁸⁵⁷ Council Decision 91/506, Article 1, Exhibit EC-196.

⁴⁸⁵⁸ The amount intended for aeronautics research is provided for a period of three years. The allocation makes 8% of the funds available to cover staff and administrative costs.

BCI deleted, as indicated [***]

The Annex stipulates that the funding amount allocated to "Aeronautics research" is provided for a period of three years.⁴⁸⁵⁹

7.1529 A summary of the scope and objectives of each of the three research Areas is set out in Annex I of the Decision. For the "Aeronautics research" Area, six fields of focus are identified: "Environment related technologies"; "Technologies of aircraft operation"; "Aerodynamics and aerothermodynamics"; "Aeronautical structures and manufacturing technologies"; "Avionic system technologies"; and "Mechanical, utility and actuation technologies". Annex I of the Decision explains that "the aeronautical technologies research that began with the BRITE/EURAM programme will be continued taking account of harmonization, standardization, safety and environmental aspects". Moreover, it provides that the "Aeronautics research" Area is intended to support only "specific aeronautical research and applications". Generic aeronautics research is to be dealt with under the other two research Areas.⁴⁸⁶⁰

7.1530 Article 5 provides that a work programme would be prepared in accordance with the objectives identified in Annex I of the Decision, and that the Commission would draw up calls for proposals for projects on the basis of the work programme. Other implementation rules are set out in Annex III of the Decision, which *inter alia*, describes the four types of actions through which the European Communities intended to provide funding ("Research Projects", "Cooperative research projects", "Concerted actions" and "Accompanying measures, including feasibility premiums"). The rules set out in Annex III of the Decision also indicate the level of support expected from participants and the proportion of funding that would be committed by the European Communities for each type of action.

7.1531 Finally, unlike the decision-making procedure found in the Second Framework Programme, the IMT 1991 programme envisages one and the same decision-making process, irrespective of the Area of research. In particular, decisions must be taken by the Commission after consultation with a Committee composed of representatives of EC member States, and on the basis of a qualified majority vote of the EC member State representatives in the Committee or the Council.⁴⁸⁶¹

7.1532 Thus, the IMT 1991 programme implemented the objectives of the Third Framework Programme by further elaborating three areas of research that would be funded, providing for an indicative allocation of funds to these areas, establishing implementation rules and a decision-making procedure. Of the three research "Areas" the aeronautics research area is the only one that specifically targets a particular sector of economic activity. The other two research areas cover projects that are more horizontal in nature. Moreover, as already noted, Annex I of the decision explicitly provides that only "specific aeronautical research" will be supported under the "Aeronautics research" Area, with aeronautics research of a generic nature to be dealt with under the other two Areas.

- Fourth Framework Programme

7.1533 The Fourth Framework Programme was established by Decision 1110/94/EC *European Parliament and of the Council of 26 April 1994*⁴⁸⁶², giving effect to the strategic research and technological development mandate and objectives set out in Title VI of the Treaty establishing the

⁴⁸⁵⁹ Council Decision 91/506, Annex II, Footnote 1.

⁴⁸⁶⁰ Council Decision 91/506, Annex I, Paragraph 6.

⁴⁸⁶¹ Council Decision 91/506, Article 6.

⁴⁸⁶² *Decision 1110/94/EC European Parliament and of the Council of 26 April 1994 concerning the framework programme for Community activities in the field of research and technological development and demonstration (1994 to 1998)*, OJ L 126/1, 18.05.1994 (hereinafter "Council Decision 1110/94/EC"), Exhibit EC-202.

BCI deleted, as indicated [***]

European Economic Community.⁴⁸⁶³ As reflected in the recitals of the Decision, the Programme's objectives included advancing EC R&TD activities in order to strengthen the scientific and technological basis of EC industry; encouraging undertakings of all sizes in their R&TD efforts; and promoting the overall harmonious development of the European Communities with a view to strengthening its economic and social cohesion. To this end, the Decision was intended to set up a multiannual framework programme covering the period 1994 to 1998 to continue and develop the research and technological development activities identified and supported under the Third Framework Programme.

7.1534 Annex I of the Decision contains a breakdown of the activities targeted for funding, together with the amount of funds allocated to each. In total, four activities are identified: (i) "Research, technological development and demonstration programmes"; (ii) "Cooperation with third countries and international organizations"; (iii) "Dissemination and optimization of results"; and (iv) "Stimulation of the training and mobility of researches". The funding levels for each of the four activities are also disclosed, with the total amount coming to ECU 11,046 million. The Decision contains an indicative breakdown of the themes and subjects only of the first activity ("Research, technological development and demonstration programmes"). In total, 13 research themes are identified under seven main headings: three research themes under the "Information and communication technologies" heading; two research themes under each of the "Industrial technologies" and "Environment" headings; and three research themes under the "Life sciences and technologies" heading. The following three headings do not specify any particular research themes: "Non-nuclear energy", "Transport" and "Targeted socio-economic research". The funding levels for each of the 13 research themes are also disclosed, with the total amount coming to ECU 9,432 million. Most of these research themes appear to be of a general horizontal nature, potentially cutting across a variety of business segments.⁴⁸⁶⁴ Others seem to be more focussed, concentrating on particular economic sectors.⁴⁸⁶⁵

7.1535 Annex III of the Decision sets out a more detailed description of each of the four activities and their scientific and technical objectives; while Annex II of the Decision outlines the selection criteria that should be generally applied when selecting the R&TD initiatives to fund. As we understand it, the Decision does not provide for the disbursement of any funds to individual applicants. In this respect, Article 2.1 of the Decision explains that the Fourth Framework Programme was to be implemented through "specific programmes developed within each" of the four prescribed activities. According to Article 2.1, each specific programme "shall specify its precise objectives on the lines of the scientific and technological objectives in Annex III".

7.1536 Thus, the Decision setting up the Fourth Framework Programme established an EC-wide R&TD support initiative targeting a variety of economic activities at both horizontal and sector-specific levels. The Decision identified and allocated funds to four activities and described, in broad terms, their scientific and technical objectives. However, in laying down these overall guidelines, the Decision establishing the Fourth Framework Programme did not actually indicate how these funds could be accessed by individual applicants. The detailed rules and methodologies for the distribution

⁴⁸⁶³ Treaty establishing the European Economic Community, as amended by the Single European Act, 1 July 1987.

⁴⁸⁶⁴ These activities are: (i) under the "Information and communications technologies" heading – "Telematics", "Communication technologies" and "Information technologies"; (ii) under the "Industrial technologies" heading – "Industrial and material technologies" and "Measurement and testing"; (iii) under the "Environment" heading – "Environment and climate"; (iv) the "Transport" heading and (v) the "Targeted socio-economic research" heading".

⁴⁸⁶⁵ These activities are: (i) under the "Environment" heading "Marine sciences and technologies"; (ii) under the "Life sciences and technologies" heading – "Biotechnology", "Biomedicine and health" and "Agriculture and fisheries (including agro-industries, food technologies, forestry, aquaculture and rural development)" and (iii) the "Non-nuclear energy" heading.

BCI deleted, as indicated [***]

of funds were left to the "specific programmes" that were to be adopted for the purpose of implementation.

7.1537 As we understand it, the Decision establishing the Fourth Framework Programme was implemented through numerous "specific programmes". For the purpose of the present dispute, the focus of our analysis is on the "Specific Programme for Research and Technological Development, including Demonstration, in the Field of Industrial and Materials Technologies" (the "IMT 1994 programme").

7.1538 The IMT 1994 programme was established through Council Decision 94/571/EC of 27 July 1994 with the intention of contributing to the achievement of the objectives of the Fourth Framework Programme by implementing a specific R&TD programme in the field of the industrial and material technologies.⁴⁸⁶⁶ Annex II of the Decision sets out an "indicative breakdown" of a total of ECU 1,617 million across three "Areas" of research: "Production Technologies" (ECU 590 million); "Materials and technologies for product innovation" (ECU 566 million); and "Technologies for transport means" (ECU 461 million). The Annex stipulates that 50% of the amount allocated to the "Technologies for transport means", ECU 230.5 million, is for the aeronautics sector.⁴⁸⁶⁷ The aeronautics sector is the only sector to have been allocated a specific amount.

7.1539 A summary of the objectives and content of each of the three research Areas is described in Annex I of the Decision. Annex I of the Decision indicates that in the development of the different technologies for transport means, due account shall be taken of the requirements of the various transport industries. The Annex explains that "where the aircraft industry is concerned, research will concern advanced technologies, in particular for environmental protection, to reduce both noise and polluting emissions, and as regards design, to reduce overall energy consumption". It also stipulates that the activities will aim to improve safety, increase the capacity and cost-effectiveness of the air transport system, and facilitate the production, operation, reliability and maintenance of future generations of aircraft and equipment.⁴⁸⁶⁸

7.1540 Article 5 provides that a work programme would be prepared in accordance with the objectives identified in Annex I of the decision, and that the Commission would draw up calls for proposals for projects on the basis of the work programme. Other implementation rules set out in Annex III of the decision indicate that the funding initiatives would be executed by different means of shared-cost research actions, preparatory, accompanying and support measures and concerted actions. The rules set out in Annex III also indicate the level of support expected from participants and the proportion of funding that would be committed by the European Communities for each type of action.

7.1541 Finally, unlike the decision-making procedure in the Second Framework Programme, the IMT 1994 programme envisages one and the same decision-making process, irrespective of Area of research. In particular, decisions must be taken by the Commission after consultation with a Committee composed of representatives of EC member States, and on the basis of a qualified majority vote of the EC member State representatives in the Committee or the Council.⁴⁸⁶⁹

7.1542 Thus, the IMT 1994 programme implemented the objectives of the Fourth Framework Programme by further elaborating three areas of research that would be funded, providing for an indicative allocation of funds to these areas, establishing implementation rules and a decision-making

procedure. The aeronautic sector is the only sector to have been allocated a specific amount, with ECU 230.5 million being exclusively directed for projects in the aeronautics sector.⁴⁸⁷⁰

- Fifth Framework Programme

7.1543 The Fifth Framework Programme was established by Council Decision 182/1999/EC of 22 December 1998⁴⁸⁷¹, giving effect to the strategic research and technological development mandate and objectives set out in Title VI of the Treaty establishing the European Economic Community.⁴⁸⁷² As reflected in the recitals of the Decision, the Programme's objectives included advancing EC R&TD activities in order to strengthen the scientific and technological basis of EC industry; encouraging undertakings of all sizes in their R&TD efforts; and promoting the overall harmonious development of the European Communities with a view to strengthening its economic and social cohesion. To this end, the Decision was intended to set up a multiannual framework programme covering the period 1998 to 2002 to continue and develop the research and technological development activities identified and supported under the Fourth Framework Programme.

7.1544 The Decision setting up the Fifth Framework Programme established an EC-wide R&TD support initiative targeting a variety of economic activities at both horizontal and sector-specific levels. Annex III of the Decision contains a breakdown of the activities targeted for funding, together with the amount of funds allocated to each. In total, eight activities are identified under four headings: four activities under the "Implementation of research, technological development and demonstration programmes" heading; and one activity under each of the "Promotion of cooperation in the field of community research, technological development and demonstration with third countries and international organizations", "Dissemination and optimization of the results of activities in Community research, technological development and demonstration" and "Stimulation of the training and mobility of researches in the Community" headings. The eighth activity is identified as the Joint Research Centre. These eight activities appear to be of a general horizontal nature, potentially cutting across a variety of business segments.⁴⁸⁷³ The funding levels for each of the four headings are also disclosed, with the total amount for all activities combined coming to ECU 13,700 million. Annex III of the Decision contains a breakdown only of the activities targeted for funding under the first heading, and indicates the amount of funds allocated to each of them. In total, ECU 10,843 million is allocated to the first heading.

7.1545 Annex I of the Decision outlines the selection criteria for selecting the themes of the activities; while Annex II of the Decision sets out a more detailed description of each of the activities, their scientific and technical objectives and related priorities. This Decision does not, however, provide for the disbursement of any funds to individual applicants. In this respect, Article 3.1 of the

⁴⁸⁷⁰ Council Decision 94/571, Annex II, Footnote I.

⁴⁸⁷¹ *Decision 182/1999/EC of 22 December 1998 concerning the framework programme for Community activities in the field of research, technological development and demonstration (1998 to 2002)*, OJ I 26/1, 1.2.1999 (hereinafter "Council Decision 182/1999"), Exhibit EC-203.

⁴⁸⁷² Treaty establishing the European Economic Community, as amended by the Single European Act, 1 July 1987.

⁴⁸⁷³ These activities are: (i) under the "Implementation of research, technological development and demonstration programmes" heading – "Quality of life and management of living resources", "User-friendly information society", "Competitive and sustainable growth", and "Energy, environment and sustainable development"; (ii) under the "Promotion of cooperation in the field of community research, technological development and demonstration with third countries and international organizations" heading – "Confirming the international role of Community research"; (iii) under the "Dissemination and optimization of the results of activities in Community research, technological development and demonstration" heading – "Promotion of innovation and encouragement of participation of Small and Medium-size Enterprises (SMEs); and (iv) under the "Stimulation of the training and mobility of researches in the Community" heading – "Improving human research potential and the socioeconomic knowledge base."

BCI deleted, as indicated [***]

Decision explains that the Fifth Framework Programme was to be implemented through "specific programmes" developed within each of the four prescribed research headings. According to Article 3.1, each "specific programme shall specify its precise objectives, and define the detailed rules for implementing it, fix its duration and provide for the means deemed necessary."

7.1546 Thus, the Decision setting up the Fifth Framework Programme established an EC-wide R&TD support initiative targeting a variety of economic activities at both horizontal and sector-specific levels. The Decision identified and allocated funds to eight areas of research activity under four headings and described, in broad terms, their scientific and technical objectives. However, in laying down these overall guidelines, the Decision establishing the Fifth Framework Programme did not actually indicate how these monies could be accessed by individual applicants.

7.1547 As we understand it, the Decision establishing the Fifth Framework Programme was implemented through numerous "specific programmes". For the purpose of the present dispute, the focus of our analysis is on the "Specific Programme for Research, Technological Development and Demonstration on Competitive and Sustainable Growth" ("the CSG programme").

7.1548 The CSG programme was established through Council Decision 1999/169/EC of 25 January 1999 with the intention of contributing to the achievement of the objectives of the Fifth Framework Programme by implementing a specific programme in one field identified under that Programme, namely, the competitive and sustainable growth activity.⁴⁸⁷⁴ Annex I of the Decision set out an "indicative internal allocation" of a total of ECU 2,705 million across three "Areas" of research: "Key Actions"; "Research and technological development activities of a generic nature" and "Support for research infrastructures". A summary of the objectives and priorities of each of the three research areas is set out in Annex II of the Decision.

7.1549 For the "Key actions" Area, four types of activities and associated budgets are identified: "Innovative products, processes and organisation" (ECU 731 million); "Sustainable mobility and intermodality" (ECU 371 million); "Land transport and marine technologies" (ECU 320 million), and "New perspectives for aeronautics" (ECU 700 million).⁴⁸⁷⁵ For the "New perspectives for aeronautics" Area, three fields of focus are identified: "Acquisition of critical technologies"; "Technology integration for new-generation aircraft"; and "Operational efficiency and safety". Annex II of the Decision explains that the overall goal of the "New perspectives for aeronautics" is to facilitate the development of aircraft and their subsystems and components in order to foster the competitiveness of the European industry, including SMEs, while assuring the sustainable growth of air transportation.⁴⁸⁷⁶

7.1550 Article 5 provides that a work programme would be prepared by the Commission specifying in greater detail the objectives and priorities identified in Annex II. Implementation rules are set out in Annex III of the decision, which indicate that the programme will be implemented through indirect R&TD actions provided for in the Fifth Framework Programme. These indirect R&TD actions comprise shared-cost research actions, training fellowships, support for networks, concerted actions and accompanying measures.⁴⁸⁷⁷

7.1551 Finally, unlike the decision-making procedure in the Second Framework Programme, the CSG programme foresees one and the same decision-making process, irrespective of Area of research.

⁴⁸⁷⁴ *Decision 1999/169/EC of 25 January 1999 adopting a specific programme of research, technological development and demonstration on competitive and sustainable growth (1998 to 2002)*, OJ L 64/40, 12.3.1999 (hereinafter "Council Decision 1999/169/EC"), Article 1, Exhibit EC-198.

⁴⁸⁷⁵ Council Decision 1999/169/EC, Annex I.

⁴⁸⁷⁶ Council Decision 1999/169/EC, Annex II.

⁴⁸⁷⁷ Council Decision 1999/169/EC, Annex III and Council Decision 182/1999 Annex IV.

BCI deleted, as indicated [***]

In particular, decisions must be taken by the Commission after consultation with a Committee composed of representatives of EC member States, and on the basis of a qualified majority vote of the EC member State representatives in the Committee or the Council.⁴⁸⁷⁸

7.1552 Thus, the CSG programme implemented the objectives of the Fifth Framework Programme by further elaborating three areas of research that would be funded, providing for an indicative allocation of funds to these areas and establishing implementation rules and a decision-making procedure. Only the activities under the "Key actions" area were identified in the Decision, and the only one of these activities that appears to be sector specific was "New perspectives for aeronautics", to which a budget of ECU 700 million was allocated.

- Sixth Framework Programme

7.1553 The Sixth Framework Programme was established by Decision No. 1513/2002/EC of the European Parliament and the Council of 27 June 2002,⁴⁸⁷⁹ giving effect to the strategic R&TD mandate and objectives set out in Title XVIII of the Treaty establishing the European Community.⁴⁸⁸⁰ As reflected in the recitals of the Decision, the Programme's objectives included advancing EC R&TD activities in order to strengthen the scientific and technological basis of EC industry; contributing to the creation of a European Research Area and innovation; and promoting the development of scientific and technical excellence and the coordination of European research. To this end, and in accordance with Article 166(1) of the EC Treaty, the Decision was adopted to:

"establish the scientific and technical objectives {of the sixth multiannual (2002 to 2006) framework programme} and fix the relevant priorities for the activities envisaged, the maximum overall amount, the detailed rules for Community financial participation in the ... programme, as well as the respective shares in each of the activities envisaged, and to indicate the broad lines of the activities in question"⁴⁸⁸¹

7.1554 Annex I of the Decision contains a breakdown of the activities targeted for funding, and provides a description of the related scientific and technological objectives and priorities. In total, 17 activities are identified under three headings: 11 activities under the "Focussing and integrating Community research" heading; four activities under the "Structuring the European Research Area" heading; and two activities under the "Strengthening the foundation of the European Research Area" heading. Most of these activities appear to be of a general horizontal nature, potentially cutting across a variety of business segments.⁴⁸⁸² Others seem to be more focussed, concentrating on particular

⁴⁸⁷⁸ Council Decision 1999/169/EC, Article 7.

⁴⁸⁷⁹ *Decision No 1513/2002/EC of the European Parliament and of the Council of 27 June 2002 concerning the sixth framework programme of the European Community for research, technological development and demonstration activities, contributing to the creation of the European Research Area and to innovation (2002 to 2006)*, OJ L 232/1, 29.8.2002 (hereinafter "Decision 1513/2002/EC"), Exhibit EC-204.

⁴⁸⁸⁰ Treaty establishing the European Community; Treaty of Rome 1957 amended through the Treaty of Amsterdam 1997.

⁴⁸⁸¹ Decision 1513/2002/EC, recital 10, read together with Article 1.

⁴⁸⁸² These activities are: (i) under the "focussing and integrating Community research" heading – the "nanotechnologies and nanosciences, knowledge-based multifunctional materials, and new production processes and devices", "sustainable development, global change and ecosystems", "citizens and governance in a knowledge-based society", "supporting policies and anticipating scientific and technological needs", "horizontal research activities involving SMEs", "specific measures in support of international cooperation", and "non-nuclear activities of the Joint Research Centre" activities; (ii) under the "structuring the European Research Area" heading – the "research and innovation", "human resources" and "science and society" activities; and (iii) under the "strengthening the foundation of the European Research Area" heading – the "coordination activities ... in the whole field of science and technology" and "support {for} the coherent development of research and innovation policies" activities.

BCI deleted, as indicated [***]

economic sectors.⁴⁸⁸³ The "indicative" funding levels for each of the 17 activities are set out in Annex II, with the total amount of funding made available for all activities coming to EUR 16,270 million. The funding made available for the "aeronautics and space" activity was EUR 1,075 million.

7.1555 Annex III of the Decision describes ten different types of "instruments" that it is envisaged will be used to execute the various funded activities, outlining the expected level of the European Communities' financial participation in each one. As we read them, the "instruments" described in Annex III of the Decision represent different forms or types of research projects, including "networks of excellence", "integrated projects", "coordination action" and "integrated infrastructure activities". Some of these "instruments" are expressly limited to particular research activities, while others are intended to be used more broadly in respect of multiple activities.

7.1556 Like all of the prior Decisions establishing framework programmes, Decision 1513/2002/EC does not provide for the disbursement of any funds to individual applicants. In this respect, Article 5 explains that the Sixth Framework Programme was to be implemented through "specific programmes" which "shall establish precise objectives and the detailed rules for implementation".

7.1557 Thus, the Decision setting up the Sixth Framework Programme established an EC-wide R&TD support initiative targeting a variety of economic activities at both horizontal and sector-specific levels. The Decision identified and allocated funds to 17 preferred areas of research activity and described the forms or types of research projects that would be supported. However, in laying down these overall guidelines, the Decision did not explain how any financial support could be practically accessed by individual applicants. As with all other Framework Programmes, the detailed rules and methodologies for the distribution of funds were left to the "specific programmes" adopted for the purpose of implementation.

7.1558 As we understand it, the Decision establishing the Sixth Framework Programme was implemented through more than one "specific programme". For the purpose of the present dispute, the focus of our analysis is on the "Specific Programme for Integrating and Strengthening the European Research Area" (the "ISERA programme").

7.1559 The ISERA programme was established through Council Decision 2002/834/EC of 30 September 2002 for the purpose of implementing the research initiatives described in two of the three headings set out in Decision 1513/2002/EC, namely, the "Focussing and Integrating Community research" and "Strengthening the Foundation of the European Research Area" headings.⁴⁸⁸⁴ Annex I of the Decision provides a detailed description of 12 of the 13 activities listed in Annex I of Decision 1513/2002/EC under the same two headings.⁴⁸⁸⁵ This includes an explanation of four research priorities that may qualify for funding through the "Aeronautics" element of the "Aeronautics and Space" activity. These priorities are described as: "Strengthening Competitiveness"; "Improving Environmental Impact with regard to Emissions"; "Improving Aircraft Safety"; and "Increasing Operational Capacity and Safety of the Air Transport System". Similarly, Annex II of the ISERA programme contains the same "indicative breakdown" of funding amounts per activity that were set

⁴⁸⁸³ These activities are all found under the "focussing and integrating Community research" heading – namely, the "life sciences, genomics and biotechnology for health", "information society technologies", "food quality and safety" and "aeronautics and space" activities.

⁴⁸⁸⁴ Council Decision 2002/834/EC of 30 September 2002 adopting a specific programme for research, technological development and demonstration: "Integrating and strengthening the European Research Area" (2002-2006), OJ L 294/1, 29.10.2002 (hereinafter "Decision 2002/834/EC"), recital 2 and Article 1, Exhibit EC-199.

⁴⁸⁸⁵ The one research activity falling within the "focussing and integrating Community research" heading that is not covered by the ISERA programme is the "non-nuclear activities of the Joint Research Centre" activity.

BCI deleted, as indicated [***]

out in Annex II of Decision 1513/2002/EC. The same figure of EUR 1,075 million is disclosed as the indicative amount of funding for projects falling within the scope of the "Aeronautics and Space" activity.

7.1560 A description of the "means" for implementing the ISERA programme is set out in Annex III. These include seven of the ten "instruments" referred to Annex III of Decision 1513/2002/EC, which are further elaborated and explained. In addition, Annex III of the programme stipulates that the programme will be implemented in accordance with "Regulation (EC) No .../2002 on rules for the participation of undertakings, research centres and universities and for the dissemination of research results" (which neither of the parties to this dispute has submitted). As with other Framework Programmes, the Commission is called upon to initiate the process by establishing work programmes associated with each thematic area of research and publishing calls for proposals.⁴⁸⁸⁶ Finally, two decision-making procedures are envisaged, one applying specifically for the purpose of adopting measures in respect of research involving or using human embryos and human embryonic stem cells, and another for measures adopted in respect of all other research activities falling within the scope of the ISERA programme.⁴⁸⁸⁷

7.1561 Thus, the ISERA programme implemented the objectives of the Sixth Framework Programme by providing a more detailed exposition of 12 of the 13 research activities identified in Decision 1513/2002/EC, identifying the same indicative levels of funding that would be made available to support these activities, and explaining how funding decisions would be taken and implemented. In respect of "Aeronautics and Space" activities, the ISERA programme confirmed that the EUR 1,075 million funding allocation would be used to finance research that advanced, *inter alia*, the competitiveness of the aeronautics industry, one of the objectives being to "enable the 3 sectors of the manufacturing industry: airframe, engines and equipment, to increase their competitiveness, by reducing in the short and long term, respectively, aircraft development costs by 20% and 50%, and aircraft direct operating cost by 20% and 50%, and improving passenger comfort".⁴⁸⁸⁸

- Whether the Framework Programme grants are specific within the meaning of Article 2.1(a) of the SCM Agreement

7.1562 A common feature of all of the Framework Programmes is that their establishment and implementation was provided for under separate legal instruments. Nevertheless, it is apparent that for each Framework Programme, these legal instruments constituted one single legal regime pursuant to which the European Commission granted the subsidies at issue to Airbus. In our view, it follows that for the purpose of Article 2.1(a) of the SCM Agreement, it is appropriate to regard the legal regime established through the constituent instruments of each Framework Programme as the "legislation pursuant to which the granting authority operates". Thus, in order to determine whether the subsidies granted to Airbus are specific within the meaning of Article 2.1(a), the question we must answer is whether the "granting authority" or each of the relevant legal regimes explicitly limited access to the subsidies at issue to "certain enterprises".

7.1563 Although the overall aims of each of the Framework Programmes were expressed in terms of advancing EC R&TD activities in general, the legal regimes giving effect to these objectives did so, at least partly, by channelling dedicated amounts of funding to sector-specific research areas that were

⁴⁸⁸⁶ Decision 2002/834/EC, Article 5 and Annex I (work programmes) and Article 6.2(a) (calls for proposals).

⁴⁸⁸⁷ Decision 2002/834/EC, Articles 6 and 7.

⁴⁸⁸⁸ Decision 2002/834/EC, Annex III.

BCI deleted, as indicated [***]

implemented in accordance with specific work programmes.⁴⁸⁸⁹ We note, in particular, that an amount of funding dedicated to "aeronautics" or "aeronautics and space" research was made available under each of the relevant Framework Programmes.⁴⁸⁹⁰ These funding amounts were disbursed in line with the objectives and priorities identified in the aeronautics research related work programmes.⁴⁸⁹¹ The effect of creating such allocations is, in our view, equivalent to setting aside a portion of a budget that is ostensibly intended to fund research activities in all sectors of the economy for the sole purpose of the research efforts of enterprises or industries active in the aeronautics sector. In doing so, the legal regimes under which the European Commission operated, explicitly limited access to a dedicated portion of the subsidy grants made available under the Framework Programmes to only those enterprises or industries undertaking research in the field of aeronautics. To this extent, the research grants at issue could be viewed as emanating from a closed system of subsidization that focused on "aeronautics" or "aeronautics and space".

7.1564 The European Communities argues that to the extent that the Framework Programmes allocated portions of their budgets to research activities in the field of "aeronautics", this did not render the subsidies granted to Airbus specific within the meaning of Article 2.1(a). According to the European Communities, specificity within the meaning of Article 2.1(a) must be determined at the overarching Framework Programme level where budgets are allocated to a wide array of different thematic research areas. If this were not the case, the European Communities contends that support provided under broad research programmes, which necessarily allocate their budgets to a variety of research areas in order to spread funds to several important fields of technology, would always constitute a specific subsidy pursuant to Article 2.1(a).⁴⁸⁹²

7.1565 We are not persuaded by the European Communities' arguments. While it is true that each of the Framework Programmes was intended to provide R&TD funding opportunities for projects across a wide array of economic sectors, such opportunities were circumscribed by the fact that the funding amounts were explicitly allocated to particular sectors of research, including "aeronautics" or "aeronautics and space". Funds made available for aeronautics research were reserved for entities active in this research segment; and funding amounts so allocated could not be accessed by entities seeking support for other types of R&TD projects. Moreover, the fact that entities not active in the field of aeronautics research were eligible to obtain R&TD grants under other research headings does not mean that the subsidies received by Airbus under the aeronautics research headings were equally accessible to these other entities. It is clear to us that the legal regimes of each of the challenged Framework Programmes did not allow for this outcome, creating, what was in effect, a separate programme of subsidization for the benefit of "certain enterprises".

⁴⁸⁸⁹ See, para. 7.1518 above, Second Framework Programme; para. 7.1527 above, Third Framework Programme; para. 7.1537 above, Fourth Framework Programme; para. 7.1547 above, Fifth Framework Programme; and para. 7.1558 above, Sixth Framework Programme.

⁴⁸⁹⁰ See, para. 7.1519 above, Second Framework Programme; para. 7.1528 above, Third Framework Programme; para. 7.1538 above, Fourth Framework Programme; para. 7.1548 above, Fifth Framework Programme; and para. 7.1559 above, Sixth Framework Programme.

⁴⁸⁹¹ For example, see for Fifth Framework Programme – *New Perspectives in Aeronautics* in European Commission, *Growth Work programme for RTD actions in support of "competitive and sustainable growth" 1998-2002*, Exhibit US-488; and Sixth Framework Programme – *Thematic Priority 1.4 Aeronautics and Space Work Programme 2002-2006*, Exhibit US-489. Although the parties have not submitted a copy of similar work programmes established under the Second to Fourth Framework Programmes, we are satisfied that work programmes of the same kind associated with the respective "aeronautics" research areas were required under the legal regimes of each of these programmes. For the Second Framework Programme, we note that the dedicated funding was also disbursed pursuant to a distinct "aeronautics" area decision-making procedure. See, para. 7.1521 above.

⁴⁸⁹² EC, Answer to Panel Question 106; EC, SWS, para. 626.

BCI deleted, as indicated [***]

7.1566 This, however, does not mean that we believe any subsidy granted pursuant to an allocated sub-budget of a general subsidy programme will necessarily be specific within the meaning of Article 2.1(a) of the SCM Agreement. In our view, the allocation of funds to certain exclusive research activities under an umbrella subsidy programme is not incompatible with Article 2.1(a), **provided that** the availability of those funds is not explicitly limited to certain enterprises. However, in the present case, the evidence before us indicates that amounts of subsidization were explicitly set aside under each of the relevant Framework Programmes for the research efforts of "certain enterprises". Thus, we conclude that the R&TD subsidies granted to Airbus under each of the Framework Programmes are specific within the meaning of Article 2.1(a) of the SCM Agreement.

7.1567 In the light of the above finding, we believe it is unnecessary for the resolution of this dispute to also determine whether the subsidies at issue were de facto specific within the meaning of Article 2.1(c) of the SCM Agreement. We therefore exercise judicial economy and decline to rule on the United States' allegation that the challenged subsidy measures were also specific under Article 2.1(c) of the SCM Agreement.

(iii) *Loans under the Spanish PROFIT programme*

Arguments of the United States

7.1568 The United States argues that the loans received by Airbus under the Programa de Fomento de la Investigación Técnica ("PROFIT") are specific within the meaning of Article 2 of the SCM Agreement, because it considers they were explicitly limited to aeronautics companies.⁴⁸⁹³ To support its position, the United States first notes that the two phases of PROFIT pursuant to which Airbus received the subsidies at issue established sector-specific research programmes for aeronautics – the Programa Nacional de Aeronautica (PROFIT I, 2000-2003) and the Subprograma Nacional de Transporte Aero (PROFIT II, 2004-2007).⁴⁸⁹⁴ Second, the United States observes that the research objectives and priorities under each of these programmes singled out the aeronautics industry; with eligibility for the available support measures limited to aeronautics-related research proposals.⁴⁸⁹⁵

7.1569 The United States also claims that the subsidies at issue were de facto specific within the meaning of Article 2.1(c). The United States maintains that the European Communities' failure to provide information on PROFIT loans during the Annex V process has made it impossible for it to present a detailed analysis of de facto specificity under the terms of Article 2.1(c) of the SCM Agreement. Therefore, in the light of the European Communities' alleged lack of cooperation, the United States asks the Panel to draw the logical inference that, had the European Communities provided the information requested, it would have supported a finding of de facto specificity.⁴⁸⁹⁶

BCI deleted, as indicated [***]

Arguments of the European Communities

7.1570 The European Communities rejects the United States' allegations that the research support provided under the PROFIT is specific within the meaning of Article 2 of the SCM Agreement. The European Communities explains that the PROFIT implements the Plan Nacional de Investigación Científica, Desarrollo e Innovación Tecnológica (the "PLAN"), the objective of which is to encourage companies and other organisations to carry out R&TD activities across a wide array of economic sectors in accordance with a defined set of objectives. According to the European Communities, the PROFIT concerns the part of the PLAN dedicated to technological research, and neither explicitly nor implicitly restricts participation of any enterprise or industry or group thereof wanting to participate. In the European Communities' view, the PROFIT is a framework programme providing R&TD support in the form of mainly loans and grants across a wide variety of research areas.⁴⁸⁹⁷ Thus, the European Communities contends that loans received by Airbus under the PROFIT cannot be specific.⁴⁸⁹⁸

Evaluation by the Panel

- Specificity under Article 2.1(a)

7.1571 We begin our analysis of the United States' claim by considering whether the subsidies at issue are specific within the meaning of Article 2.1(a) of the SCM Agreement. We recall that Article 2.1(a) of the SCM Agreement stipulates that a subsidy is specific to an enterprise or industry or group of enterprises or industries within the jurisdiction of the granting authority, if the granting authority, or the legislation pursuant to which the granting authority operates, explicitly limits access to a subsidy to certain enterprises.⁴⁸⁹⁹ Thus, in examining whether the subsidies at issue are specific within the meaning of this provision, the focus of our analysis will be on understanding whether the Spanish "granting authority" or the "legislation pursuant to which the granting authority operates" explicitly limits access to the subsidies at issue to "certain enterprises".

7.1572 The subsidies challenged by the United States were granted to Airbus under two phases of the PROFIT – PROFIT I (2000-2003) and PROFIT II (2004-2007). Both phases of the PROFIT implemented the R&TD objectives identified by the Spanish government in the PLAN for the respective four year periods. First established in 1986,⁴⁹⁰⁰ the PLAN defines the general framework of the Spanish government multi-year scientific research, development and technological innovation support initiatives across a broad spectrum of economic sectors.⁴⁹⁰¹ The two phases of the PROFIT that are the subject of the United States' complaint implemented the R&TD activities identified in the

⁴⁸⁹⁹ See, para. 7.919 above.

⁴⁹⁰⁰ Law 13/1986 of Promotion and General Co-ordination of Scientific and Technical Research.

⁴⁹⁰¹ The sectors covered by the PLAN 2000-2003 were: Biomedicine; Biotechnology; Information and Communication Technologies; Materials; Chemical Processes and Products; Industrial Design and Production; Natural Resources; Agro-Food Resources and Technologies; Socio economy; Aeronautics; Food sector; Automotive; Civil construction and conservation of cultural heritage; Defence; Energy; Space; Environment; Sociosanitary; Information Society; Transport and Land Planning, and Tourism, leisure and sports., Exhibit US-690-A, p. 13 -14. The sectors covered by the PLAN 2004-2007 were: Biomedicine; Technologies for the Health and the Well-being; Biotechnology; Basic Biology; Resources and Agro-Food Technologies; Sciences and Environmental Technologies; Earth sciences and Biodiversity; Space; Astronomy and Astrophysics; Particle Physics; Math; Physics; Energy; Sciences and Chemical Technologies; Materials; Design and Industrial Production; Security; Defence; Electronic and Communications Technologies; Informatics Technologies; Information Society Technologies; Transport; Construction; Humanities, and Social, Economic and Legal Sciences, Exhibit US- 691-A, p. 16-22.

BCI deleted, as indicated [***]

PLAN that were managed by the Ministry of Industry and Energy for the period 2000-2003 and the Ministries of Education and Science, and Industry, Trade and Tourism between 2004-2007.⁴⁹⁰²

7.1573 PROFIT I was enacted by Ministerial Order of 7 March 2000⁴⁹⁰³ in order to give effect to the following research areas identified in the PLAN 2000-2003: the "National Biotechnology Programme"; the "National Industrial Design and Production Programme", the "National Materials Programme"; the "National Programme of Chemical Processes and Products"; the "National Natural Resources Programme"; the "National Programme of Agro-Food Resources and Technologies"; the "National Programme of Information and Communication Technologies"; the "National Socio-Economic Research Programme", the "National Biomedicine Programme"; the "**National Aeronautics Programme**"; the "National Automotive Programme", the "National Energy Programme", the "National Space Programme"; the "National Environment Programme"; the "National Information Society Programme"; and the "National Transport and Land Planning Programme".⁴⁹⁰⁴

7.1574 Likewise, PROFIT II was established by Ministerial Order of 18 March 2005⁴⁹⁰⁵ in order to give effect to the following research areas identified in the PLAN 2004-2007: the "National Programme of Biomedicine"; the "National Programme of Technologies for the Health and the Well-being"; the "National Biotechnology Programme"; the "National Programme of Resources and Agro-Food Technologies"; the "National Programme of Sciences and Environmental Technologies"; the "National Programme of Energy"; the "National Programme of Sciences and Chemical Technologies"; the "National Materials Programme"; the "National Programme of Design and Industrial Production"; the "National Programme of Electronic and Communications Technologies"; the "National Programme of Informatics Technologies"; the "National Programme of Information Society Technologies"; the "National Transport Programme", including the "Air Transport Sub-Programme"; the "National Construction Programme"; the "National Security Programme"; and the "National Programme of Social, Economic and Legal Sciences".⁴⁹⁰⁶

7.1575 The loans challenged by the United States were provided to Airbus under the National Aeronautics Programme (PROFIT I) and the Air Transport Sub-Programme (PROFIT II). In summary, the objectives of both of these Programmes were to advance the research activities and capacity of the Spanish aeronautics industry, and thereby enhance its competitive position.⁴⁹⁰⁷ Essentially the same objectives are described for each of the other research Programmes established under the PROFIT I and II. With regard to the beneficiaries, PROFIT I and II identify the same group of generic potential recipients of funding for all research areas, including the National Aeronautics Programme and the Air Transport Sub-programme, namely: enterprises; groups or associations of enterprises; public research institutes; private non-profit research and development centers; and for certain specified projects and actions, public statutory bodies.⁴⁹⁰⁸

7.1576 Although it is apparent that only businesses active in the field of aeronautics research may qualify for loans under the National Aeronautics Programme and the Air Transport Sub-Programme,

⁴⁹⁰² The Ministry of Industry and Energy managed PROFIT I. Exhibit US-349, p. 1, recital 5. PROFIT II was managed by the Ministry of Education and Science and the Ministry of Industry, Trade and Tourism. As we understand it, the latter Ministries assumed competencies from the Ministry of Industry and Energy which was re-organized after PROFIT I. EC, FWS, para. 1317.

⁴⁹⁰⁸ PROFIT I: Exhibit US-349, Chapter III, Article 39. PROFIT II: Exhibit US-350, Chapter I, Article Sexto.

BCI deleted, as indicated [***]

it does not automatically follow that, for this reason alone, the subsidies granted thereunder are specific within the meaning of Article 2.1(a) of the SCM Agreement. In our view, when assessing whether an umbrella subsidy programme that channels support through one or more industry-focussed sub-programmes is specific under the terms of Article 2.1(a) of the SCM Agreement, all relevant facts and circumstances must be taken into account. One of these may involve examining whether any dedicated sub-budgets exist for one or more of the industry-focussed sub-programmes.⁴⁹⁰⁹ As in the case of the EC Framework Programmes, where a subsidy is granted pursuant to a sub-budget allocated for research activities falling within the scope of a particular industry-focussed sub-programme, that subsidy will be explicitly limited to "certain enterprises".⁴⁹¹⁰ However, where there is no such ring-fencing of funds for particular sub-programmes, it follows that the entirety of the funding available under the umbrella programme will, in principle,⁴⁹¹¹ be accessible for eligible projects under any particular sub-programme. In this event, all projects eligible for support under any particular sub-programme will have access to the same pool of resources available to subsidize all research endeavours that are the focus of the umbrella programme.

7.1577 We note that the United States does not argue, as it did with respect to the EC Framework Programmes, that a dedicated sub-budget was allocated exclusively to research activities falling within the scope of the National Aeronautics Programme or the Air Transport Sub-Programme.⁴⁹¹² Rather, the United States' claim of specificity within the terms of Article 2.1(a) rests solely on the fact that the two aeronautics support programmes under PROFIT I and II were entirely focused on and open to research activities carried out for the purpose of aeronautics. The United States has pointed to no other particular fact or circumstance in support of its claim. However, as we have articulated above, we are not convinced that the aeronautics-focus of the two programmes is, in the light of the evidence and arguments, alone enough to demonstrate that the subsidies granted to Airbus under the PROFIT I and PROFIT II were explicitly limited to "certain enterprises". We therefore dismiss the United States' claim of specificity under Article 2.1(a) of the SCM Agreement.

⁴⁹⁰⁹ Other factors that may also be relevant might include eligibility criteria and decision-making procedures.

⁴⁹¹⁰ See, paras. 7.1563-7.1566 above.

⁴⁹¹¹ In our view, funds that are, in form available for all projects equally under an umbrella subsidy programme might in substance be ring-fenced for a particular purpose or industry sector if, for instance, different decision-making procedures or eligibility criteria apply without justification to limit the availability of funds to "certain enterprises".

⁴⁹¹² Our own review of the evidence advanced by the United States does not lead us to conclude that any funding amounts were in fact actually reserved for this purpose. The evidence indicates that funds were to be distributed after review of applications in Answer to Calls for Proposals and that projects and activities under the different programmes were to be financed in accordance with the budgetary lines determined in the corresponding Calls for Proposals in each of the years of the Programmes, Exhibit US- 349, Chapter I, Article 7, and Exhibit US-350, Chapter I, Article 11. The one Call for Proposals under the National Aeronautics Programme submitted by the United States, Exhibit US-354, *Segundo*, reveals that eligible projects would be financed from a series of numbered "aplicaciones presupuestarias" ("budgetary lines") - "20.08.542E.747", "20.08.542E.777", "20.08.542E.787", "20.08.542E.821" and "20.08.542E.831". However, there is no evidence (or argument) before us that explains exactly what these numbered "aplicaciones presupuestarias" mean. In respect of the Air Transport Sub-Programme the United States submitted a document pertaining to a Call for Proposal for the year 2005 for most of the programmes established under the PROFIT II, including the Air Transport Sub-Programme, Exhibit US-355, *Tercero*. This Call for proposal also reveals that eligible projects would be financed from a series of numbered "aplicaciones presupuestarias" ("budgetary lines") "20.16.467C.747", "20.16.467C.757", "20.16.467C.767", "20.16.467C.777", "20.16.467C.787", "20.16.467C.821.10", and "20.16.467C.831.10". Although there is no evidence (or argument) before us that explains exactly what these numbered "aplicaciones presupuestarias" mean, it is clear to us that not only eligible projects for the Air Transport Sub-Programme would be financed from these "aplicaciones presupuestarias", but that almost all eligible projects under all the Programmes that the Call for Proposal refers to, would be financed from these "aplicaciones presupuestarias". In our view, this evidence strongly suggests that there was no sub-budget allocated exclusively to research activities falling within the scope of the Air Transport Sub-Programme.

BCI deleted, as indicated [***]

- Specificity under Article 2.1(c)

7.1578 The United States asserts that during the Annex V process the Facilitator asked the European Communities a series of detailed questions on the amounts of funding received by Airbus and other participants for all projects carried out under the PROFIT programmes.⁴⁹¹³ The United States recalls that the European Communities provided no information in response to the Facilitator's request.⁴⁹¹⁴ In this light, the United States asked the Panel to request the European Communities to provide the information the Facilitator requested, or else find, in accordance with paragraph 7 of Annex V, that the loans received by Airbus under the PROFIT are specific within the meaning of Article 2.1(c) of the SCM Agreement.⁴⁹¹⁵ The United States argues that had the European Communities provided the information requested, it would have supported a finding of de facto specificity, within the meaning of this provision.⁴⁹¹⁶

7.1579 The European Communities has consistently argued that the PROFIT loans challenged by the United States are outside the terms of reference of the present dispute.⁴⁹¹⁷ Because of this, the European Communities initially refused to provide any information at all about the projects carried out under the PROFIT.⁴⁹¹⁸ However, in response to Panel Question 109, the European Communities submitted certain information on loan payments made under the PROFIT II in the years 2004 and 2005.⁴⁹¹⁹ For reasons we have previously explained, we believe the European Communities' response to Panel Question 109 to be less than satisfactory.⁴⁹²⁰ In our view, had the European Communities provided clear and accurate information on, at least, the loan payments made to Airbus under the two separate PROFIT programmes at issue, (as we had expected it would in response to Panel Question 109), the United States would have at least had a credible starting point from which it could have assessed whether the subsidies at issue were specific within the meaning of Article 2.1(c), and if necessary construct its case. Obviously, had the European Communities disclosed some or all of the information requested during the Annex V process, the United States would have had more data to inform its analysis.⁴⁹²¹ However, in the light of the EC' responses to the Facilitator's information requests and Panel Question 109, the United States was left with publicly available data estimating the global loan amounts received by Airbus over an unknown period of time under both phases of the PROFIT.⁴⁹²² As is apparent from our previous discussion of the factors that may be considered in order to establish specificity under Article 2.1(c) of the SCM Agreement,⁴⁹²³ the publicly available information before us is not enough to conduct a proper assessment of whether the subsidies at issue were de facto specific.⁴⁹²⁴

⁴⁹¹³ Questions 279(a)-(k) and 280(a)-(l) from the Facilitator to the EC, Exhibit US-4 (BCI).

⁴⁹¹⁴ EC Reply to Questions 279 and 280 from the Facilitator, Exhibit US-5 (BCI).

⁴⁹¹⁵ US, FWS, paras. 699, 702; US, SWS, para 518, footnote 660.

⁴⁹¹⁶ US, FWS, paras. 699, 702; US, SWS, para 518, footnote 660.

⁴⁹¹⁷ EC, FWS, para. 1315; EC, Answer to Panel Question 109; EC, SWS, para. 647.

⁴⁹¹⁸ EC Reply to Questions 279 and 280 from the Facilitator, Exhibit US-5 (BCI).

⁴⁹¹⁹ Exhibit EC-624 (BCI).

⁴⁹²⁰ See, paras. 7.1477-7.1478 above.

⁴⁹²¹ We note that the information requested during the Annex V process was much broader and more detailed than the "payment information" requested in Panel Question 109, and included information on the total budgets for PROFIT I and II as well as the National Aeronautics Programme and Air Transport Sub-Programme, lists of all funded projects and recipients under the Programme and Sub-Programme, relevant legal instruments and legislation, projects evaluation reports, and the terms of the loans granted to Airbus. See, Questions 279(a)-(k) and 280(a)-(l) from the Facilitator to the EC, Exhibit US-4 (BCI).

⁴⁹²² See, paras. 7.1476-7.1480 above.

⁴⁹²³ See, paras. 7.959 and 7.976 above addressing the United States' claims against the challenged EIB loans.

⁴⁹²⁴ We recall that the language of Article 2.1(c) suggests that it is intended to address the situation where a challenged subsidy does not appear to be specific within the meaning of the principles set out in Articles 2.1(a) and 2.1(b), but "there are reasons to believe that the subsidy may in fact be specific". When such

BCI deleted, as indicated [***]

7.1580 We recall that paragraph 7 of Annex V provides that a panel "should draw adverse inferences from instances of non-cooperation by any party involved in the information-gathering process". In the light of the foregoing, and consistent with our previous finding on the amount of the loan payments made to Airbus under the challenged PROFIT programmes,⁴⁹²⁵ we conclude pursuant to paragraph 7 of Annex V, that the challenged subsidies under the PROFIT I and II are specific within the meaning of Article 2.1(c) of the SCM Agreement.

(iv) *Grants under the UK Technology Programme*

Arguments of the United States

7.1581 The United States argues that the grants provided to Airbus under the UK Technology Programme ("TP") are specific within the meaning of Article 2 of the SCM Agreement because they were awarded through calls for proposals that are limited to aeronautics-related technologies, which have a scope determined by a narrow set of industry-specific criteria.⁴⁹²⁶ According to the United States, the European Communities has acknowledged that the TP is divided into 43 "research themes" targeting a limited set of industries. The United States asserts that each of these research themes has its own budget and tends to be highly industry-specific. For example, the United States argues that the "Advanced Materials" research theme targets composite materials development in the aeronautics industry, with calls under this research theme singling out the aeronautics industry. Finally, the United States also submits that the European Communities has admitted that the TP is a continuation of the CARAD/ARP, a programme for which the European Communities has not contested its claims of specificity.⁴⁹²⁷ Thus, for all of these reasons, the United States argues that the R&TD funding provided to Airbus and the aeronautics industry under the TP is specific within the meaning of Article 2.1 of the SCM Agreement.⁴⁹²⁸

Arguments of the European Communities

7.1582 The European Communities rejects the United States' allegations. The European Communities asserts that the TP is a broad research programme open to all industrial and service sectors, including the aeronautics sector.⁴⁹²⁹ The European Communities explains that the TP is devoted largely to collaborative R&TD, with a budget of GBP 370 million for the period 2005-2008.⁴⁹³⁰ Funding grants are limited to 50% of eligible costs and provided on a bi-annual basis in response to competitions calling for research falling within the scope of seven key technology areas: Advanced Materials; Bioscience and Healthcare Technologies; Design Engineering and Advanced Manufacturing; Electronics and Photonics; Emerging Energy Technologies; Information and Communication Technologies; and Sustainable Production and Consumption.⁴⁹³¹ The European

a situation arises, the first sentence of Article 2.1(c) stipulates that "other factors may be considered". The second sentence of Article 2.1(c) elaborates four "such factors" – "use of a subsidy programme by a limited number of certain enterprises, predominant use by certain enterprises, the granting of disproportionately large amounts of subsidy to certain enterprises, and the manner in which discretion has been exercised by the granting authority in the decision to grant a subsidy."

⁴⁹²⁵ See, paras. 7.1476-7.1480 above.

⁴⁹³¹ EC, FWS, paras. 1288, 1296-1304. Exhibit EC-230.

BCI deleted, as indicated [***]

Communities denies that the calls for proposals are determined by narrow industry-specific criteria, or that there has been any "earmarking" of a certain amount of support for the aerospace sector in general, for Airbus UK, or for any other aerospace-sector organisation.⁴⁹³² Thus, the European Communities argues that the R&TD grants available under the TP are not explicitly limited to "certain enterprises" and therefore not specific within the meaning of Article 2.1(a) of the SCM Agreement.⁴⁹³³

7.1583 The European Communities criticizes the United States for relying upon information brochures relating to three of 43 technology priority areas so far identified in the competitions undertaken under the TP, namely, the "Advanced Composite Materials and Structures" (April 2004 competition); "Smart Materials" (November 2004 competition) and "Design Engineering and Advanced Manufacturing" (Spring 2006 competition) brochures. The European Communities argues that although the areas will be relevant to the aeronautics industry, none of them is "limited to aeronautics-related technologies" and each of the brochures explicitly refers to other sectors to which the technology in question is relevant.⁴⁹³⁴

Evaluation by the Panel

7.1584 The United States argues that the grants provided to Airbus under the TP are specific within the meaning of Article 2 of the SCM Agreement. In particular, we understand the United States to argue that the grants provided to Airbus under the TP are specific within the meaning of Article 2.1(a) of the SCM Agreement. We do not understand the United States to argue that they are also specific within the meaning of Article 2.1(c) of the SCM Agreement.

7.1585 As already noted elsewhere in this Report, Article 2.1(a) of the SCM Agreement stipulates that a subsidy is specific to an enterprise or industry or group of enterprises or industries within the jurisdiction of the granting authority, if the granting authority, or the legislation pursuant to which the granting authority operates, explicitly limits access to a subsidy to certain enterprises.

7.1586 The main argument advanced by the United States to substantiate its claim that the grants provided to Airbus under the TP are specific within the meaning of Article 2.1(a) of the SCM Agreement is based on the assertion that they were awarded through competitions that were limited to R&TD activities in the field of aeronautics-related technologies. In this regard, the United States refers to information brochures publicising three competitions held in April and November 2004 and Spring 2006, respectively involving R&TD in the fields of "Advanced Composite Materials and Structures", "Smart Materials" and "Design Engineering and Advanced Manufacturing".⁴⁹³⁵

7.1587 However, our review of the evidence before us suggests that the subsidies provided under the TP are not limited, in the way the United States asserts, to entities active in the field of aeronautics research. We agree with the European Communities that the TP is a research programme intended to fund R&TD activities across a broad array of economic sectors. The TP operates on the basis of an overall budget for all supported activities set at GBP 370 million for the years 2005-2008.⁴⁹³⁶ Funding is provided for the purpose of "collaborative research and development" and "knowledge transfer networks"⁴⁹³⁷ through competitions held twice per year. The precise subject matter of the research themes addressed in each competition is shaped by the input of the "Technology Strategy

⁴⁹³² EC, FWS, para. 1305.

BCI deleted, as indicated [***]

Board", an advisory board comprised "mainly of experienced business leaders".⁴⁹³⁸ The Technology Strategy Board is tasked with ensuring "that the technology priorities within the Technology Programme are market-focussed, and" advising "on the broad allocation of resources to them."⁴⁹³⁹ The research themes it identifies for open competitions vary from year-to-year, but broadly fall within the seven key technology areas identified by the European Communities, namely: Advanced Materials; Bioscience and Healthcare Technologies; Design Engineering and Advanced Manufacturing; Electronics and Photonics; Emerging Energy Technologies; Information and Communication Technologies; and Sustainable Production and Consumption.⁴⁹⁴⁰ In the vast majority of cases, the research themes do not appear to focus on particular economic sectors.⁴⁹⁴¹

7.1588 Turning to the three competitions that are the focus of the United States' complaint, we note that the competition relating to "Advanced Composite Materials and Structures" does not limit the availability of grants under the TP to the aeronautics-related research. Under the "scope of the call" heading, there is no limitation at all with respect to the types of industries which might be eligible for grants thereunder. Indeed, the brochure explicitly identifies the aerospace, automotive, construction, consumer product, engineering, marine, rail and space sectors as being potential beneficiaries of research falling within the scope of this call for proposals.⁴⁹⁴² Similarly, multiple potential industry beneficiaries are identified in the competitions relating to "Smart Materials and Related Structures"⁴⁹⁴³ and "Design Engineering and Advanced Manufacturing".⁴⁹⁴⁴ Far from singling out the aerospace sector as the beneficiary of the relevant R&TD grants, it is clear that the three competitions at the centre of the United States' complaint are open to all industry sectors interested in the particular technology at issue; and in fact, numerous industries are identified as potential beneficiaries.

7.1589 As regards the United States' argument that each of the technology priority areas funded under the competitions had its own budget, we note that it is less than clear that this is in fact the case in respect of all 43 thematic areas addressed in the competitions. Nevertheless, indicative funding amounts were set for the three competitions at issue: GBP 10 million for "Advanced Composite Materials and Structures"; GBP 7 million for "Smart Materials and Related Structures" and GBP 12 million for "Design Engineering and Advanced Manufacturing".⁴⁹⁴⁵ However, as we have already explained, the availability of the allocated funds was not explicitly limited to entities active only in the field of aeronautics research. Unlike the situation in respect of EC Framework Programmes, the TP (and each of the three competitions at issue) did not set aside any portion of budgeted funding amounts for the sole purpose of the research efforts of enterprises or industries active in the aeronautics sector.

7.1590 Finally, the United States considers that the European Communities has admitted that the TP is a continuation of the CARAD/ARP, and that this is further confirmation that TP is specific.⁴⁹⁴⁶ We do not understand the European Communities to have made any such admission. In its first written

⁴⁹³⁸ Exhibit EC-229.

⁴⁹³⁹ Exhibit US-342.

⁴⁹⁴⁰ Exhibit EC-230.

⁴⁹⁴¹ The thematic research areas covered in the competitions held from 2004 to 2006 are identified in the European Communities' first written submission, at paras. 1298-1304. They are also set out in the information referred to in Exhibit EC-230.

⁴⁹⁴² Exhibit US-495a.

⁴⁹⁴³ Exhibit US-495b, stating in particular, "Smart Materials represent an enabling technology that has applications across a wide range of sectors including construction, transportation, agriculture, food and packaging, healthcare, sport and leisure, white goods, energy and environment, space and defence."

⁴⁹⁴⁴ Exhibit US-495c, stating in particular, "In addition to applications within the Chemicals and Oil and Gas sectors, some illustrative examples include: Food and Drink, ... Built Environment, ... Automotive, ... Aerospace, ...".

⁴⁹⁴⁶ US, FWS, para. 691.

BCI deleted, as indicated [***]

submission, the European Communities clearly states that the TP did not "replace" CARAD. The European Communities explains that the TP brought together all UK R&TD sectoral collaborative funding under one umbrella.⁴⁹⁴⁷ In addition, in its answer to a question posed by the Facilitator during the Annex V procedure, the European Communities stated that the TP "*replaced* all industrial collaborative programmes, including CARAD".⁴⁹⁴⁸ Thus, it is clear to us that the TP is a R&TD support programme that is of an entirely different nature to the CARAD/ARP, which as we explain further below, the European Communities does not contest amounts to a specific programme for civil aircraft research. In contrast, the TP may be characterized as a framework R&TD support programme that identifies and funds research into new and emerging technologies across a broad array of economic sectors that are considered to be critical to the growth of the UK economy.

7.1591 Having found that the grants at issue were not provided pursuant to competitions explicitly limited to entities active in aeronautics-related research; that the availability of the allocated funds under the relevant competitions was not explicitly limited to aeronautics-related research projects; and that the TP is not a continuation of CARAD/ARP, we conclude that the subsidies provided to Airbus under the TP that are the subject of the United States' complaint were not explicitly limited to "certain enterprises" and are therefore not specific within the meaning of Article 2.1(a) of the SCM Agreement.

(v) *Other R&TD measures*

French government grants

7.1592 The United States claims that the civil aeronautics R&TD grants that the French Government provided to Airbus are specific within the meaning of Article 2 of the SCM Agreement because they were provided pursuant to a budget that is dedicated to "aeronautic construction" and limited to aeronautics manufacturing companies.⁴⁹⁴⁹ Although the United States has not identified a particular sub-paragraph of Article 2 as the basis of its claim, we understand from the nature of the arguments it has advanced that its claim is grounded in Article 2.1(a) of the SCM Agreement. The European Communities does not contest the United States' allegation.

7.1593 Having carefully reviewed the evidence submitted by the United States,⁴⁹⁵⁰ it is apparent that the funding amounts at issue pertain to monies distributed to the French civil aeronautics sector as a whole, including but not limited to Airbus.⁴⁹⁵¹ The evidence indicates that the funding at issue was directed at research endeavours in the area of civil aeronautics construction, and granted pursuant to a dedicated budget.⁴⁹⁵² The Reports submitted by the United States indicate that the funding was essentially provided to the following aeronautics companies: "Aérospatiale-Matra", "Dassault Aviation" and "L'Onera".⁴⁹⁵³ In addition, a note from the "Direction des programmes aéronautiques et

⁴⁹⁴⁷ EC, FWS, Para 1286.

⁴⁹⁴⁹ US, FWS, para 685.

⁴⁹⁵⁰ See, at paras. 7.1467-7.1473 above.

⁴⁹⁵¹ For instance, see Budget 1997: Sénat, No. 89 (session ordinaire de 1999-2000), Rapport Général, Commission des Finances du Contrôle Budgétaire et des Comptes Économiques de la Nation sur le projet de loi de finances pour 2000, Tome III, Annexe No. 25, Equipment, Transport et Logement; III. – Transport; Transport Aérien et Météorologie et Aviation Civile, p. 88, in Exhibit US-337.

⁴⁹⁵² Sénat, No. 73 (session ordinaire de 2003-2004), Rapport Général, Commission des Finances, du Contrôle Budgétaire et des Comptes Économiques de la Nation sur le projet de loi de finances pour 2004, Tome III, Annexe No. 18 Équipement, Transport et Logement. III. - Transports et Sécurité Routière: Aviation et Aéronautique Civiles, p. 37, Exhibit US-337F. See, also, Exhibit EC-208 (BCI).

⁴⁹⁵³ Sénat, No. 73 (session ordinaire de 2003-2004), Rapport Général, Commission des Finances, du Contrôle Budgétaire et des Comptes Économiques de la Nation sur le projet de loi de finances pour 2004,

BCI deleted, as indicated [***]

de la coopération" submitted by the European Communities indicates that more than half of the support provided for research and studies for 100-seat-and-above range of aircraft between 1994 and 2005 was provided to Airbus.⁴⁹⁵⁴

7.1594 Given that the available funding was explicitly limited to the French civil aeronautics sector, we find the French government R&TD grants challenged by the United States to be specific to Airbus and/or the aeronautics industry, within the meaning of Article 2.1(a) of the SCM Agreement.

German Federal government grants

7.1595 The United States claims that German federal government grants for LCA-related R&TD projects in which Airbus participated under the LuFo I, LuFo II and LuFo III programmes are specific, within the meaning of Article 2 of the SCM Agreement, because disbursed from budgets that are dedicated to the civil aeronautics industry, with access explicitly limited to the civil aeronautics industry.⁴⁹⁵⁵ Although the United States has not identified a particular sub-paragraph of Article 2 as the basis of its claim, we understand from the nature of the arguments it has advanced that its claim is grounded in Article 2.1(a) of the SCM Agreement. The European Communities does not contest the United States' allegation.⁴⁹⁵⁶

7.1596 Having carefully reviewed the evidence submitted by the United States,⁴⁹⁵⁷ it is clear to us that the LuFo programmes are limited to the aeronautics sector. Indeed, in its responses to Questions from the Facilitator, the European Communities concedes that federal funding through the LuFo Programmes was exclusively provided to the aeronautics sector.⁴⁹⁵⁸ The budget plans submitted by the United States indicate, in addition, that the objective of these programmes is to support the competitiveness of the aviation industry in Germany.

7.1597 Thus, we have no doubt that the R&TD grants at issue were explicitly limited to the German aeronautics sector. We therefore agree with the United States that they are specific within the meaning of Article 2.1(a) of the SCM Agreement.

German sub-Federal government R&TD grants

7.1598 The United States claims that the R&TD grants received by Airbus from the German sub-federal governments of Bavaria, Bremen and Hamburg, are specific within the meaning of Article 2 of the SCM Agreement because they are explicitly limited to Airbus and/or the aeronautics industry.⁴⁹⁵⁹ Again, the United States has not identified a particular sub-paragraph of Article 2 as the basis of its claim. However, we understand from the nature of the arguments it has advanced, that its claim is grounded in Article 2.1(a) of the SCM Agreement. The European Communities does not contest the United States' allegations.⁴⁹⁶⁰

- Government of Bavaria R&TD grants

7.1599 In support of its claim of specificity, the United States has submitted various documents, including an extract from the website of the German Aerospace Center ("DLR") and a document from the Bavarian Parliament.⁴⁹⁶¹ The extract from the DLR website describes the goals and content of the grants at issue and identifies the eligible candidates. It indicates that the government of Bavaria made DM 15 million available at the end of 1999 for civil aviation research in Bavaria, in close coordination with the federal government's aeronautical research programme. The funding was made available for "companies from Bavaria's aviation industry", including Bavarian universities and non-university-affiliated research establishments located in Bavaria. Similarly, the document from the Bavarian Parliament indicates that the R&TD grants were made for the purpose of the development of aeronautics and aerospace technologies. In our view, it is clear from the evidence before us that the R&TD grants at issue were only provided in order to fund research activities undertaken in Bavaria for the purpose of the aeronautics sector. We therefore agree with the United States that the R&TD grants were explicitly limited to "certain enterprises", and are therefore specific within the meaning of Article 2.1(a) of the SCM Agreement.

- Government of Bremen R&TD grants

7.1600 In support of its claim of specificity, the United States has submitted various documents, including an extract from a Memorandum of the Bremen City Parliament and State Parliament;⁴⁹⁶² an extract from the "Fraunhofer Institute for Manufacturing Technology and Applied Materials Research in Bremen" online site;⁴⁹⁶³ and a press release issued by a Senator of Economics of the City of Bremen.⁴⁹⁶⁴

7.1601 The extract of the Memorandum of the Bremen City Parliament and State Parliament indicates that funds have been allocated to the AMST site project to pursue research and development with the aim of strengthening Bremen as an aircraft construction site.⁴⁹⁶⁵ Another document submitted by the United States consists of an extract from the website of the "Fraunhofer Institute for Manufacturing Technology and Applied Materials Research in Bremen". This extract indicates that within the framework of the reorganization of European aircraft builders, the purpose of the AMST was, in particular, to tap the scientific know-how of public institutions in matters of materials and processes available in Bremen for the Airbus plant and develop this further, in a targeted manner, for the needs of aircraft construction.⁴⁹⁶⁶ Finally, the press release issued by the Senator of Economics of the City of Bremen indicates that aircraft construction is traditionally one of the key industries in Bremen and that through provision of funds to implement the AMST project, the Senate expected to contribute significantly to improve the performance and competitiveness of the Bremen Airbus Plant. In our view, it is apparent that the R&TD grants at issue were aimed at supporting the aircraft construction sector in Bremen, referred to as "one of the key industries in Bremen", and in particular to Bremen Airbus' plant.⁴⁹⁶⁷ We therefore agree with the United States that the R&TD grants were explicitly limited to "certain enterprises", and are therefore specific within the meaning of Article 2.1(a) of the SCM Agreement.

- Government of Hamburg R&TD grants

7.1602 In support of its claim, the United States has submitted various documents, including an extract from the website of the German Aerospace Center ("DLR")⁴⁹⁶⁸ and a document that indicates the projects in which Airbus has participated, the dates in which those projects began and ended, and contains details on the payments to relevant Airbus entities.⁴⁹⁶⁹ The extract from the DLR website describes the goals and content of the grants at issue and identifies the eligible candidates. It explicitly states that the targeted funding projects are aimed at encouraging Hamburg's aerospace industry to increase its efforts in developing new technologies; *i.e.*, to strengthen the technological productivity of Hamburg's aerospace and supply industry. Hamburg-based companies operating in the aerospace sector are one of the eligible applicants, together with universities and research institutes. In our view, this evidence confirms that the R&TD grants at issue are explicitly limited to Hamburg's aerospace sector. We therefore agree with the United States that the R&TD grants were explicitly limited to "certain enterprises", and are therefore specific within the meaning of Article 2.1(a) of the SCM Agreement.

Loans under the Spanish PTA programme

7.1603 The United States claims that the loans received by Airbus under the two phases of the PTA programme are specific to Airbus and/or the aeronautics industry within the meaning of Article 2 of the SCM Agreement. With respect to PTA I, the United States argues that the government explicitly limited access to funding to aeronautics companies involved in the manufacturing, design, supply and maintenance of aircraft and aircraft parts, and to engineering services companies and research institutions and universities developing specific technologies with aeronautics use.⁴⁹⁷⁰ The United States argues that similar restrictions were applied with respect to PTA II.⁴⁹⁷¹ Although the United States has not identified a particular sub-paragraph of Article 2 as the basis of its claim, we understand from the nature of the arguments it has advanced that its claim is grounded in Article 2.1(a) of the SCM Agreement.

7.1604 In support of its claim and with respect to PTA I, the United States has submitted a one page document indicating that the enterprises that are eligible to participate are those involved in the manufacturing, design, supply and maintenance of aircraft and aircraft parts, and engineering services companies and research institutions and universities developing specific technologies with aeronautics use.⁴⁹⁷² In addition, and with respect to PTA II, the United States has submitted a letter from the European Commission to the Spanish Ministry of External Relations indicating that the objective of this programme is essentially to support the competitiveness of the aviation industry in Spain and pointing out that it had no objections to the proposed programme.⁴⁹⁷³

7.1605 Having carefully reviewed the evidence submitted by the United States, it is clear to us that the PTA programme is limited to the aeronautics sector. Indeed, this is explicitly recognized by the European Communities in its first written submission.⁴⁹⁷⁴ We therefore agree with the United States that the R&TD loans at issue are specific within the meaning of Article 2.1(a) of the SCM Agreement.

UK Government grants under CARAD

7.1606 The United States claims that the civil aeronautics R&TD grants that the UK Government provided to Airbus are specific within the meaning of Article 2 of the SCM Agreement because they were limited to entities carrying out research in aeronautics technologies.⁴⁹⁷⁵ Although the United States has not identified a particular sub-paragraph of Article 2 as the basis of its claim, we understand from the nature of the arguments it has advanced that its claim is grounded in Article 2.1(a) of the SCM Agreement. The European Communities does not contest the United States' allegation.⁴⁹⁷⁶

7.1607 In support of its claim, the United States has submitted an extract of the "Innovation Budget Guidelines" to officials of the CARAD which set out the procedures to be followed on CARAD projects. This extract indicates that [***].⁴⁹⁷⁷ We are satisfied that this evidence confirms the United States' uncontested assertion that the R&TD grants at issue were limited to entities carrying out research in aeronautics technologies. We therefore agree with the United States that the R&TD grants were explicitly limited to "certain enterprises", and are therefore specific within the meaning of Article 2.1(a) of the SCM Agreement.

(vi) *Conclusion*

7.1608 On the basis of the foregoing, we find that the United States has established that the following R&TD measures constitute specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement: the grants to Airbus provided under the Second, Third, Fourth, Fifth and Sixth EC Framework Programmes; the loans to Airbus provided under the Spanish PROFIT programme; the grants to Airbus provided by the French government; the grants to Airbus provided by the German Federal government; the grants to Airbus provided by certain German sub-Federal governments; the loans to Airbus provided under the Spanish PTA programme; and the grants to Airbus provided under the UK CARAD programme.

7.1609 On the other hand, we conclude that the United States has failed to establish that the grants to Airbus provided under the UK Technology Programme constitute specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement, and we will not consider them further in this dispute.

SECTION VII.E.10 ANNEXES

ANNEX I.1 – 2nd Framework Programme

	Project Acronym	Project Title
1	EASN	Contribution to European Aero Supercomputing Network
2	CAPRI	Civil Aircraft Protection Against Ice (CAPRI)
3	SCIA	Helicopter Rotor/Fuselage Interactional Aerodynamics
4	ODT	Optical Data Transmission
5	ELFIN	Investigation of Laminar Flow Technology (ELFIN)
6	EUROVAL	Validation CFD Codes (EURAVAL)
7	IMAGES	Integrated Modular Avionics Software (IMAGES)
8	EUROMESH	Multi - Block Mesh Generation for CFD (EUROMESH)
9	FANSTIC	Future Technologies Impact on Cockpit (FANSTIC)
10	DUPRIN	Ducted Propfan Investigations (DUPRIN)
11	All Electric Aircraft	All Electric Aircraft Flight Control Actuation
12	GEMINI	Airframe / Propulsion Integration (GEMINI)
13	ACOUFAT	Acoustic Fatigue and Related Damage Tolerance
14	ODA	Optimum Design in Aerodynamics
15	Supersonic Flow	Investigation of Supersonic Flow Phenomena
16	<i>None</i>	Development of Improved Damage Tolerant Carbon Fibre-Matrix Composites
17	<i>None</i>	Development of Advanced Non Contact methods for Non Destructive Detection of Defects and Damage in Aeronautical Structures
18	<i>none</i>	Low Cost MMC Made by Spray Deposition
19	<i>none</i>	Development of Techniques for Polymeric Diaphragm Forming of Continuous Fibre Reinforced Thermoplastics
20	<i>none</i>	New Plating Techniques for Aluminium Alloys
21	<i>none</i>	Damage Tolerance and Fatigue Design Methodology for Primary Composite Structures
22	<i>none</i>	Post-Buckling Behaviour of CFC Structures
23	<i>none</i>	Application of Feature Based Modelling for Complex Product Design and Manufacture
24	ASANCA	Advanced Study for Active Noise Control in Aircraft

BCI deleted, as indicated [***]

ANNEX I.2 – 3rd Framework Programme

	Project Acronym	Project Title
1	ELFIN II	"Fibre-Reinforcement of Precision Cast Parts" ("FIBRECAST")
2	FEAST	Investigation of the aerodynamics and cooling of advanced engine turbine components
3	CRASHWORTHINESS	"Efficient Turbulence Models for Aeronautics" ("ETMA")
4	IMAGES 2000	"Development of a High Strength Aluminum-Lithium Alloy"
5	BRE2-0153	"Basic Research in Aircraft Interior Noise" ("BRAIN")
6	DUPRIN II	"Aeroacoustics Methods for Fan Noise Prediction and Control" ("FANPAC")
7	Composite Fuselage	"Electrically Powered Integrated Control (SMART) Actuators" ("EPICA")
8	BRE2-0565	Research on organic primer concepts for aluminium substrates
9	LARA	"New Techniques for Paint Removal"
10	BRE2-0160	Advanced civil core compressor aerodynamics
11	BRE2-0313	"Crashworthiness for Commercial Aircraft" ("CRASHWORTHINESS")
12	EPICA flight tests	Future laser atmospheric measurement equipment
13	EPICA	"Generic Approach for ATM Systems" ("GAAS")
14	LAGER I	"Development of a New Aluminium Alloy for use at 150° C"
15	BRE2-0227	"Simulation of Resin Transfer Moulding Process for Efficient Design and Manufacture of Composite Components 3
16	BRE2-0151	"New Techniques for Paint Removal"
17	PICANT	"Process/Integrated Cost Analysis Tool"
18	PROTAILTHERM	Property tailoring and net shape processing of structures from textile preforms with thermoplastic matrices
19	ECARP	"European Computational Aerodynamics Research Project" ("ECARP")
20	FANSTIC II	"Future ATM New Systems and Technologies Integration in Cockpits" ("FANSTIC II")
21	MOSAIC	Measurement of ozone on Airbus in-service aircraft
22	NOSOST	New optical sensors and optical signal transmissions
23	GEMINI II	"Basic Test Rig for a Generic Model for Wind Tunnel Test on Airframe Propulsion Integration with Emphasis on Advanced Propeller II" ("GEMINI II")
24	ASANCA II	Advanced study for active noise control in aircraft
25	GAAS	"Generic Approach for ATM Systems" ("GAAS")
26	VERSATILE	Vision enhancement for reliable and safe air transport in limiting environment
27	SNAAP	Study of Noise and Aerodynamics of Advanced Propellers
28	NS Solvers	
29	FANPAC	Aeroacoustics Methods for Fan Noise Prediction and Control
30	AERONOX	The Impact Of Nox Emissions from Aircraft Upon the Atmosphere at Flight Altitude 8 – 15 km

BCI deleted, as indicated [***]

ANNEX I.3 – 4th Framework Programme

	Project Acronym	Project Title
1	ENHANCE	Enhanced aeronautical concurrent engineering (ENHANCE)
2	RAIN	Reduction of airframe and installation noise (RAIN)
3	HYLDA	Hybrid Laminar Flow Demonstration on Aircraft (HYLDA)
4	APRICOS	Advanced Primary Composites Structures (APRICOS)
5	SPIDERS	Specification Procedures for Industrial Distributed European Realisation of Systems (SPIDERS)
6	ENIFAIR	Engine integration on Future Transport Aircraft (ENIFAIR)
7	MDO	Multi-Disciplinary Design, Analysis and Optimisation of Aerospace Vehicles (MDO)
8	SMAAC	Structural Maintenance of Ageing Aircraft (SMAAC)
9	HYLTEC	Hybrid Laminar Flow Technology (HYLTEC)
10	MONITOR	Monitoring On-line Integrated Technologies for Operational Reliability (MONITOR)
11	CEDIX	To Establish Concurrent Engineering Based "Design for Integrated X-methodologies" for the preliminary and detailed design of aircraft sections (CEDIX)
12	BRPR-97-0551	Design of Human / Machine Interfaces and their Validation in Aeronautics
13	FLEXSHOP	Flexible Workshop for Airframe Assembly (FLEXSHOP)
14	CRASURV	Commercial Aircraft - Design for Crash Survivability (CRASURV)
15	DOCT	Development of Clean technologies for Aircraft Industry (DOCT)
16	CANDIA	Cost Reduction by Advanced non-Destructive Inspection of Aeronautical Structures (CANDIA)
17	MASSPS	Materials system for surface protection and sealing (MaSSPS)
18	3D-PTM	Assessment of Economic and Technical Advantages of 3-D Preform Transfer Moulding (3D-PTM)
19	AVTAC	Advanced Viscous Flow Simulation Tools for Complete Civil Transport Aircraft Design (AVTAC)
20	INDUCE	Advanced integrated NDT concepts for unified life-cycle (INDUCE)
21	EDAVCOS	Efficient Design and Verification of Composite Structures (EDAVCOS)
22	CATE	Composites and Advanced Aircraft Technologies Electromagnetic Protection (CATE)
23	ADPRIMAS	Advanced Concepts for Primary Metallic Aircraft Structures (ADPRIMAS)
24	ELGAR	European Landing Gear Advanced Research (ELGAR)
25	IAPPS	Integrated Automated Process Planning System (IAPPS)
26	EUROWAKE	Wake Vortex Formation of Transport Aircraft (EUROWAKE)
27	EUROSUP	Reduction of Wave & Lift-Dependent Drag for Supersonic Transport Aircraft (EUROSUP)
28	REAL	Robust and Efficient Autopilot Control Laws Design (REAL)

BCI deleted, as indicated [***]

	Project Acronym	Project Title
29	EuroShock II	Drag Reduction by Shock and Boundary Layer Control (EuroShock II)
30	EUROTRANS	European Program for Transition Prediction (EUROTRANS)
31	FASTFLO	Fully Automatic System for Three-dimensional Flow Simulations (FASTFLO)
32	3FMS	Free Flight - Flight Management System (3FMS)
33	ADSTREFF	Targeted Research Action in Advanced Structural Efficiency
34	APIAN	Advanced Propulsion Integration Aerodynamics and Noise (APIAN)
35	ASSET	The Development of Advanced Surface Engineering Techniques for Future Aerospace Transmissions (ASSET)
36	AWARD	All Weather Arrival & Departure (AWARD)
37	BRPR-95-0095	Control of Gas Phase and Condensed Matter Temperature in Industrial Processes
38	BRPR-95-0105	Development of Elevated Temperature Aluminium Alloys
39	BRPR-98-5050	Thematic Network Wake Vortex
40	CREEPAL	Long term creep and thermal-mechanical cycling behaviour of aluminium alloys (CREEPAL)
41	DMU-ES	Digital Mock-up Ergonomic Simulation (DMU-ES)
42	DMU-MM	Digital Mock-up Modelling Methodologies and Tools for Product Conception and Downstream Processes (DMU-MM)
43	DMU-VI	Digital Mock-up Visualisation in Product Conception and Downstream Processes (DMU-VI)
44	DRAGNET	European drag reduction network (DRAGNET)
45	DUCAT	Basic research on duct acoustics and radiation (DUCAT)
46	DYNASAFE	Development of Composite Aircraft Passenger Seats with 3-Point Shoulder Harnesses to Provide Enhanced Protection (DYNASAFE)
47	ELISA	Electrical innovative surface actuation (ELISA)
48	ENSPED	European Network of Surface and Prestress Engineering and Design (ENSPED)
49	EUROPIV	Cooperative Action to Apply Particle Image Velocimetry to Problems of Industrial Interest (EUROPIV)
50	EXT-HAZ	Improved methodological and technical approach to external hazards safety issues in the aerospace industry (EXT-HAZ)
51	FLITE	Forum for large improvement of air traffic in Europe (FLITE)
52	ISAWARE	Increasing Safety through collision Avoidance WARNING intEgration (ISAWARE)
53	LABWELD	Laser beam welding in the transportation industries (LABWELD)
54	NAWM	Novel Aluminium Welding Methods (NAWM)
55	NEVADA	Open Integrated Avionics for European Air Transport Aircraft (NEVADA)
56	PERFECT	Process Efficient Regulation for Economical Composites Technologies (PERFECT)

BCI deleted, as indicated [***]

57	PIVNET	PivNet - A European collaboration on development and application of PArticle Image Velocimetry between industry, research organizations and universities
58	PRECIMOULD	High Precision Composites Moulding prediction of Distortion Using Analytical Methods (PRECIMOULD)
59	PROFOCE	Product Focused Concurrent Engineering
60	RANNTAC	Reduction of aircraft noise by nacelle treatment and active control (RANNTAC)
61	RESOUND	Reduction of engine source noise through understanding and novel design (RESOUND)
62	SAMBA	Smart actuator and modular braking applications (SAMBA)
63	TRA3	Targeted research action in aerospace aerodynamics (TRA3)
64	UNSI	Unsteady Viscous Flow in the Context of Fluid Structure Interaction (UNSI)
65	X-NOISE	Aircraft external noise thematic network (X-NOISE)
66	AIRDATA	Aircraft Drag and Thrust Analysis
67	AERONET	The European Aeroemissions Network
68	AEROJET II	Prototyping a Non-Intrusive Exhaust Gas Measurement System for Gas Turbines
69	AEROPROFILE	Profiling spectrometry to simultaneously investigate the spatial distribution of temperature and chemical species in aircraft exhausts
70	AFMS	Advanced Flight Management System
71	VINTHEC	Visual Interactive and Human Effectiveness in the Cockpit
72	<i>none</i>	Investigation of the Viability of MEMS Technology for Boundary Layer Control on Aircraft
73	DAMASCOS	Damage Assessment in Smart Composite Materials
74	HICAS	High velocity impact of composite aircraft structures
75	WAVENC	Wake vortex evolution in far-wake region & wake vortex encounter
76	<i>none</i>	Non-Intrusive Measurements of Aircraft Engine Emissions

BCI deleted, as indicated [***]

ANNEX I.4 – 5th Framework Programme

	Project Acronym	Project Title
1	AWIATOR	Aircraft Wing Advanced Technology Operations
2	TANGO	Technology Application to the Near Term Business Goals and Objectives of the Aerospace Industry
3	FACE	Friendly Aircraft Cabin Environment
4	C-WAKE	Wake Vortex Characterization and Control
5	IARCAS	Improve And Assess Repair Capability Of Aircraft Structures
6	HIRETT	High Reynolds Number Tools And Techniques For Civil Transport Aircraft Design
7	VELA	Very Efficient Large Aircraft
8	WAFS	Welding Of Airframes By Friction Stir
9	LiSA	Light-Weight Low-Cost Surface Protection For Advanced Aircraft Structures
10	NEFA	New Empennage for Aircraft
11	INCA	Improved Nde Concepts For Innovative Aircraft Structures And Efficient Operational Maintenance
12	EUROLIFT	European High Lift Programme
13	ALTTA	Application Of Hybrid Laminar Flow Technology On Transport Aircraft
14	INDeT	Integration of Non Destructive Testing
15	ADFAST	Automation for Drilling, Fastening, Assembly, Systems Integration, and Tooling
16	ROSAS	Research On Silent Aircraft Concepts
17	M-DAW	Modelling and Design of Advanced Wing tip devices
18	EECS	Efficient And Economic Cabling System
19	TAURUS	Technology Development For Aeroelastic Simulations On Unstructured Grids
20	FALCOM	Failure, Performance And Processing Prediction For Enhanced Design With Non-Crimp Fabric Composites
21	AEROSHAPE	Multi Point Aerodynamic Shape Optimisation
22	AGEFORM	Ageformable panels for commercial aircraft
23	HELIX	Innovative Aerodynamic High Lift Concepts
24	BOJCAS	Bolted Joints in Composite Aircraft Structures
25	3AS	Active Aeroelastic Aircraft Structure
26	ADAMS 2	Human Centred Operations In Aircraft Dispatch And Maintenance
27	ADMIRE	Advanced Design concepts and Maintenance by Integrated Risk Evaluation for aerostructures
28	AERO2K	Global aircraft emissions data project for climate impacts evaluation
29	AEROMEMS II	Advanced Aerodynamic Flow Control Using MEMS
30	AERONET II	Aircraft Emissions and Reduction Technologies

32	ICE	Ideal Cabin Environment
33	LIGHTNING	Lightning protection for structures and systems on aircraft utilising lightweight composites
34	TURNEX	Turbomachinery Noise Radiation through the Engine Exhaust
35	ADLAND	Adaptive Landing Gears for Improved Impact Absorption
36	ARTIMA	Aircraft Reliability Through Intelligent Materials Application
37	ATENAA	Advanced Technologies for Networking in Avionic Applications
38	B-VHF	Broadband VHF Aeronautical Communications System Based On MC-CDMA (B-VHF)
39	DEEPWELD	Detailed multi-physics modelling of friction stir welding
40	DESIDER	Detached Eddy Simulation for Industrial Aerodynamics
41	EMMA	European airport Movement Management by A-smgcs
42	HILAS	Human integration into the life-cycle of aviation systems
43	HISAC	Environmentally friendly high speed aircraft
44	IFATS	Innovative Future Air Transport System
45	IPAS	Installed Performance of Antennas on AeroStructures
46	iTOOL	Integrated tool for simulation of textile composites
47	MESEMA	Magnetoelastic Energy Systems for Even More Electric Aircraft
48	MOWGLY	Mobile Wideband Global Link System
49	RETINA	Reliable, tuneable and inexpensive antennas by collective fabrication processes
50	UFAST	Unsteady effects in shock wave induced separation
51	SEFA	Sound Engineering For Aircraft
52	WISE	Integrated wireless sensing
53	ASAS-TN2	ASAS Thematic Network 2
54	C-ATM (PHASE 1)	Co-operative air traffic Management - Phase 1

BCI deleted, as indicated [***]

F. ADVERSE EFFECTS

1. General Overview of the Parties' Arguments

7.1610 The United States claims that subsidies to Airbus cause adverse effects to its interests within the meaning of Articles 5(a) and (c) of the SCM Agreement. Specifically, the United States asserts that through the use of these subsidies, the European Communities, France, Germany, Spain and the United Kingdom cause or threaten to cause: (i) "injury" to the United States' industry producing LCA; and (ii) "serious prejudice" to United States' interests in that the effect of the subsidies is (a) to displace or impede imports of United States' LCA into the EC market, (b) to displace or impede exports of United States' LCA from third country markets, and (c) significant price undercutting by EC LCA as compared with the price of United States' LCA in the same market, and significant price suppression, price depression and lost sales in the same market, within the meaning of Articles 6.3(a), (b) and (c) of the SCM Agreement.

7.1611 The United States argues that there is a single subsidized EC product and a single competing United States' like product, which it identifies as large civil aircraft manufactured by Airbus and Boeing respectively, and asserts that data for the period 2001 to 2005 demonstrates that the adverse effects it alleges existed at the time of this Panel's establishment in 2005. The United States acknowledges that the Panel may consider information for a period subsequent to its establishment in 2005, but maintains that the determination of adverse effects should be made as of the date of establishment.

7.1612 The United States alleges that the subsidies to Airbus are large, although it maintains there is no obligation under the SCM Agreement to quantify the magnitude of those subsidies in order to make out its case. The United States contends that LA/MSF was of sufficient magnitude to distort the LCA market by allowing Airbus to launch aircraft at times and at a pace that would have been impossible in its absence, and provided financial flexibility that Airbus could use to price aggressively to gain market share. The United States asserts that the other subsidies in dispute complement the effect of LA/MSF and have a cumulative effect with it, and should therefore be considered together with LA/MSF in the Panel's assessment of adverse effects.

7.1613 The United States contends that subsidies to Airbus resulted in Airbus being able to launch successive models of LCA, which it sold and continues to sell at prices that significantly depress and suppress the prices of competing Boeing aircraft. The United States asserts that Airbus' worldwide market share increased from 2001 to 2005, overtaking that of Boeing. The United States presents evidence concerning Boeing's sales and operating results, as well as the volumes and prices of subsidized LCA imports and US prices of Boeing LCA, which it contends demonstrates that imports of subsidized Airbus LCA into the US market cause and threaten to cause material injury to the United States' industry producing LCA. The United States also presents evidence and arguments concerning changes in the market share of Boeing and Airbus in the EC and third country markets, world price information for Boeing LCA, and information concerning sales to particular customers, in support of its claims of serious prejudice.

7.1614 The European Communities disputes each of the United States' claims of adverse effects, and presents a series of arguments in support of its position. First, the European Communities contends that there are multiple families of allegedly subsidized Airbus LCA, and argues that the Panel should reject the United States' view of a single subsidized product, and instead find four allegedly subsidized products, only three of which compete with three US-produced like products in distinct markets, defined by LCA seating capacity. The European Communities argues that one Airbus LCA, the A380, and one Boeing LCA, the 747, have no competitive counterparts, and therefore that there

BCI deleted, as indicated [***]

can be no adverse effects caused by subsidies to the A380, and no adverse effects to United States' interests with respect to the Boeing 747.

7.1615 The European Communities argues that the appropriate period for assessing present adverse effects is 2004 to 2006, and that the Panel should disregard data for the period 2001-2003, arguing that this information is too old to be relevant to a determination of present adverse effects. Moreover, the European Communities submits that data for the period 2001 to 2003 is not representative of "normal competitive conditions", and reflects the effects of the events of 11 September 2001, which the European Communities alleges constitute *force majeure* within the meaning of Article 6.7(c) of the SCM Agreement and thereby render the period 2001 to 2003 unreliable as a starting point for consideration of adverse effects.

7.1616 The European Communities asserts that the magnitude of any subsidies to any of the Airbus LCA "families" is negligible, and should be considered legally *de minimis*. In support of its position, the European Communities presents a calculation of the *ad valorem* amount of R&TD and LA/MSF subsidies allegedly provided with respect to certain Airbus LCA families. The European Communities asserts that it bases this calculation on United States' regulations governing the methodology for calculating subsidy amounts in countervailing duty investigations. On this basis, the European Communities calculates the amount of alleged R&TD and LA/MSF subsidies tied to the each of the Airbus LCA families, allocates these amounts over time, and over orders of the respective Airbus LCA, and concludes that the total magnitude of these subsidies is small and in some instances *de minimis*. According to the European Communities, it is inconceivable that subsidies of such small magnitude could cause adverse effects. The European Communities recognizes that precise quantification of subsidies is not strictly necessary in a dispute concerning adverse effects, but argues that its calculations demonstrate the *de minimis* magnitude of R&TD and LA/MSF subsidies for the A320, A330, and A340 LCA families, and should therefore be given significant weight, and lead the Panel to reject the United States' claims of adverse effects.

7.1617 The European Communities also contends that the nature of the subsidies in dispute does not support the United States' claims of adverse effects, again focussing on the R&TD funding and LA/MSF. With respect to latter, the European Communities contends that the beneficial effects were largely felt decades ago, and thus are not likely to create present adverse effects. The European Communities maintains that LA/MSF is product-specific project financing which does not finance production costs, but merely transfers a portion of the risk associated with an aircraft development programme. However, according to the European Communities, since Airbus bears most of that risk, such funding does not result in the launch of aircraft that are not otherwise commercially viable. With respect to the former, the European Communities contends that the United States fails to provide evidence or explanation of how the R&TD support measures cause adverse effects, and thus fails to meet its burden of proof in this regard.

7.1618 The European Communities presents evidence and arguments concerning alleged adverse effects specific to each of the allegedly subsidized families of Airbus LCA – the A380 family, the A320 family, the A330 family, and the A340 family, including respective derivative models. With respect to the A380, the European Communities asserts that there is no competition between it and the Boeing 747, that the failure of Boeing to launch a competing aircraft for the over-500 seat market does not constitute present serious prejudice from lost sales, and that the A380 did not cause significant price suppression or depression of Boeing 747 prices. With respect to each of the remaining Airbus LCA families, the European Communities argues that, in light of the conditions of competition in each of the respective markets, and given their nature, age and magnitude, the subsidies at issue do not cause any of the adverse effects alleged by the United States. The European Communities argues that the financial condition and operating performance of Boeing in 2006, including the large backlog of orders for future delivery, demonstrate that there are no present adverse effects. The European Communities also maintains that there is no injury, or threat of injury, to

BCI deleted, as indicated [***]

Boeing, given its excellent performance in 2006, and that in any event, the United States has failed to demonstrate that the use of the subsidies in dispute has caused any injury to Boeing.

2. Background

7.1619 Before beginning our analysis of the parties' arguments, we consider it useful to briefly describe the development of Airbus, and the LCA industry. We emphasize that this general background is not intended to substitute in any respect for our more detailed consideration of the evidence and findings elsewhere in this Report. It is intended merely as an introduction for the reader.

7.1620 In the mid 1960s, there were three manufacturers of LCA in the United States: Lockheed, McDonnell Douglas, and Boeing. These three accounted for the vast majority of all LCA sold in the global market.⁴⁹⁷⁸ Lockheed exited the LCA industry in 1985, while McDonnell Douglas exited the LCA industry as an independent manufacturer by merging with Boeing in 1997. In the meantime, as described below, Airbus entered the industry, with its first aircraft delivered in 1974. Thus, today, there are two participants in the LCA industry, Airbus and Boeing.

7.1621 Airbus began as a consortium of separate companies in France, Germany and Spain, formally established in 1970 following earlier discussions between France, Germany and the United Kingdom. British Aerospace, a UK company, joined the consortium in 1979. In 2001, there was a fundamental change in Airbus' structure, with the formation of the European Aeronautic Defence and Space Company ("EADS") in 2000 through a merger of the consortium companies in France, Germany and Spain. Between 2001 and 2004, the LCA activities of the four partners in the consortium were placed into subsidiaries under the control of a single, integrated company, Airbus SAS.⁴⁹⁷⁹

7.1622 Airbus launched its first LCA, the A300, and its modified version, the A310, in 1969 and 1978, and the aircraft entered into service in 1974 and 1985, respectively. Airbus ceased production of these aircraft in July 2007. Airbus' next LCA, the A320, was launched in 1984, and entered into service in 1988. Three variants, the A321, A319, and A318 were subsequently launched in 1989, 1993, and 1999, and entered into service in 1994, 1996, and 2003, respectively. Between the launches of the A320 and its first variant the A321, Airbus launched the A330 and A340, in 1987. Both entered into service in 1993, the A340 first, followed later in the year by the A330. Derivatives of these models, the A330-200 and A340-500 & 600, were launched in 1995 and 1997, and entered into service in 1998 and 2002, respectively. Airbus' next launch was of the A380, in 2000, which entered into service in 2007. Finally, in 2006, Airbus launched the A350XWB, which is expected to enter into service in mid-2013.

7.1623 The LCA industry is characterized by, *inter alia*, significant start-up costs for the development of each new model of LCA, which are invested long before any revenue from the resulting product is generated. Learning effects, both with respect to development, and in production, are significant. The customers for LCA are principally airlines, either directly or through leasing companies, whose operations are sensitive to external events, such that when there is a downturn in the airline industry, the LCA industry also suffers. Long lead times for LCA production mean that the LCA industry cannot respond rapidly to changes in demand from airlines. Thus, LCA manufacturers must engage in long-term planning to attempt to satisfy a market in which changes are expected but unforeseeable. The LCA industry, like the airline industry it serves, is global. LCA are priced in US

⁴⁹⁷⁸ LCA production has continued in Russia but difficulties in obtaining funding for the development of LCA that can meet international airworthiness certification standards have prevented Russian LCA producers from seriously competing with Boeing and Airbus for LCA sales outside the former Soviet bloc. *See*, US International Trade Commission, *The Changing Structure of the Global Large Civil Aircraft Industry and Market*, Inv. No. 332-384 (November 1998) at Ch. 4, Exhibit US-374.

⁴⁹⁷⁹ This background and development is described in more detail in Section VII.E.1 of this Report.

BCI deleted, as indicated [***]

dollars, and thus exchange rate movements may have an important effect on both manufacturers and customers.

3. Order of Analysis

7.1624 In addressing the United States' claims of adverse effects, there are two fundamental threshold questions that we believe it would be useful to settle before evaluating the substance of the United States' claims. The first question relates to the identification of the relevant "subsidized product" and the relevant "like product" in this dispute. The second question concerns the appropriate time period over which to conduct our examination of the alleged adverse effects, that is, the appropriate "reference period" for the assessment of the elements of injury and serious prejudice. After resolving these two threshold questions, we will turn to evaluate the merits of the United States' adverse effects claims, describing first, by way of background, the general conditions of competition existing in the LCA industry, before examining the arguments and evidence submitted concerning the various forms of alleged adverse effects and causation.

4. Subsidized Product and "Like Product"

(a) Arguments of the Parties

(i) *United States*

7.1625 The United States asserts that the relevant subsidized product in this dispute is the family of Airbus large civil aircraft, and the corresponding "like product" is the family of Boeing large civil aircraft.

7.1626 The United States argues that, from its inception, Airbus has followed a strategy of developing an LCA family to compete with United States' LCA producers, and used, *inter alia*, the subsidies at issue in this dispute in furtherance of that strategy.⁴⁹⁸⁰ The United States maintains that most customers require a range of aircraft that can operate efficiently over a variety of routes, and most of them see efficiencies and other advantages in operating fleets that contain LCA from a single supplier.⁴⁹⁸¹ Thus, according to the United States, Airbus has focused on developing an integrated family of aircraft with a high degree of commonality in operational aspects such as flight and cabin crew training and maintenance and spare parts.⁴⁹⁸² Producing a full LCA family also allows Airbus to achieve production efficiencies. Increasing production of one aircraft type reduces the marginal cost of producing related aircraft types, and the development of new aircraft also supports the development of production facilities and technologies across its LCA family.⁴⁹⁸³ The United States also argues that Airbus manages its LCA production activities on a family basis, so that the production and sales of one type of LCA supports the development of another LCA type.⁴⁹⁸⁴

7.1627 Thus, the United States argues, because subsidies are provided to Airbus for the development of an LCA family, and because subsidies for the development of each major Airbus LCA model

⁴⁹⁸⁰ US, FWS, para. 718-19.

⁴⁹⁸¹ The United States notes that the European Communities pointed to the failure of McDonnell Douglas to continue offering a full family of aircraft as a key factor in its exit from the LCA market. Commission Decision 97/816/EC, O.J. 1997 L336 at 16, (hereafter, *EC Merger Analysis*), para. 59, Exhibit US-375; see also, Thomas L. Boeder & Gary J. Dorman, *The Boeing/McDonnell Douglas Merger: The Economics, Antitrust Law, and Politics of the Aerospace Industry*, Antitrust Bulletin (Spring 2000), at 119, 137-38 (hereinafter "Boeder & Dorman"), Exhibit US-373

⁴⁹⁸⁴ US, FWS, para. 723.

BCI deleted, as indicated [***]

benefit the production and marketing of its full LCA family, the "subsidized product" is the Airbus LCA family as a whole.⁴⁹⁸⁵

7.1628 The United States also contends that, even if it were useful or reasonable to divide the LCA market into a number of submarkets, as the European Communities alleges, the European Communities fails to show why the effects of the subsidies are limited to competition within each of the specific LCA markets identified by the EC.⁴⁹⁸⁶ The United States argues that there are no clear dividing lines between the categories proposed by the European Communities, and considers those categories to be arbitrarily based on a standard seating capacity and class configuration that may or may not reflect the way airlines actually configure their LCA cabins. The United States also asserts that Airbus itself does not follow the market segmentation pattern proposed by the European Communities in this dispute, and that in any event, there are sales competitions between aircraft that are not in the same market segment. Finally, the United States points out that differences in seating capacities and other characteristics among aircraft are routinely "monetized" in comparing the values of different LCA, and that purchasers will make trade-offs between purchase price and seating capacity based on operating efficiencies and per-seat costs of operation, an aspect of competition ignored by the European Communities' analysis.⁴⁹⁸⁷

7.1629 The United States asserts that, having identified the subsidized product as the entire family of Airbus LCA, the corresponding "like product" is the entire family of Boeing LCA.⁴⁹⁸⁸ The United States notes that the SCM Agreement defines the term "like product" as:

"a product which is identical, *i.e.*, alike in all respects to the product under consideration, or in the absence of such a product, another product which, although not alike in all respects, has characteristics closely resembling those of the product under consideration."⁴⁹⁸⁹

The United States asserts that there is no product that is identical to Airbus's LCA family "in all respects," but that the Boeing family of LCA has "characteristics closely resembling" those of the Airbus family. The United States argues that this is a consequence in part of the fact that Airbus developed its LCA family to compete directly with the Boeing LCA family.⁴⁹⁹⁰ The United States describes specific aspects of the physical characteristics, end uses, consumer perceptions, and tariff classification of Boeing and Airbus LCA which it asserts demonstrate this close resemblance.⁴⁹⁹¹ Moreover, the United States argues that the Airbus family competes with the Boeing family, as demonstrated by the existence of demand substitution among different Airbus and Boeing models for the same routes.⁴⁹⁹²

7.1630 The United States relies on the report of the Panel in *US – Softwood Lumber V* interpreting the like product provision in Article 2.6 of the Anti-Dumping Agreement, which is identical to footnote 46 of the SCM Agreement, in support of its view that the "like product" is defined with reference to the "product under consideration."⁴⁹⁹³ The United States notes that the panel in that dispute rejected the argument that the definition of the "like product" requires that each item in the

BCI deleted, as indicated [***]

"product under consideration" must be "like" every other item within it.⁴⁹⁹⁴ Thus, the United States argues the "product under consideration" may include a range of specific goods, and the "like product" may also contain a range of specific goods, provided that the "like product" is "identical to" or "closely resembles" the "product under consideration" or subsidized product within the meaning of footnote 46 of the SCM Agreement.⁴⁹⁹⁵

(ii) *European Communities*

7.1631 The European Communities disputes the United States position that there is a single "Airbus LCA Family" that constitutes the "subsidized product," a single "like product," and a single "LCA product market."⁴⁹⁹⁶ The European Communities contends that the United States' position defies the reality of the markets for the LCA in question.⁴⁹⁹⁷ The European Communities asserts that there are, in fact, five distinctive product markets of Airbus and Boeing LCA, namely:

"the single-aisle 100-200 seat market, encompassing the Airbus A320 family and the competing Boeing 737NG family;

the 200-300 seat market, encompassing the Airbus A330 family and the Airbus A350XWB-800, and the competing Boeing 767 and 787 families;

the 300-400 seat market, encompassing the Airbus A340 family and the A350XWB-900/1000, and the competing Boeing 777 family;

the 400-500 seat market, encompassing the Boeing 747 family as the only market participant; and

the 500+ seat market, with the Airbus A380 family as the only market participant."⁴⁹⁹⁸

7.1632 The European Communities argues that once a complaining Member has asserted that certain subsidies benefit certain products, it is for the Panel to determine, based on an assessment of the evidence, under Article 11 of the DSU, whether the identified universe of allegedly subsidized products should be treated as a single subsidized product, or multiple subsidized products.⁴⁹⁹⁹ The European Communities asserts that a decision by the Panel on the identification and composition of the subsidized products is a prerequisite for the Panel to then determine the appropriate like product or products that compete in the relevant product market or markets with the subsidized product or products.⁵⁰⁰⁰

7.1633 In this case, the European Communities notes that the United States claims that a number of different subsidies, including LA/MSF, benefited a single subsidized product, the Airbus "family" of LCA. The European Communities maintains that this combination of subsidized products does not reflect the reality of the LCA industry.⁵⁰⁰¹ According to the European Communities, the Panel must

BCI deleted, as indicated [***]

consider different models of Airbus LCA, which it asserts benefit from different alleged subsidies, as separate and distinct "subsidized products". The European Communities maintains that an important factor to consider in identifying the subsidized products is the nature and terms of the subsidy measures challenged by the complaining party. In the European Communities' view, where measures relate to the development and production of a particular LCA or family of LCA, this would support the existence of a separate subsidized product.⁵⁰⁰²

7.1634 The European Communities argues that whether it is appropriate to combine multiple subsidized products into a single subsidized product for purposes of Articles 5 and 6 of the SCM Agreement is a question of fact, and that a key factor for the Panel to consider in deciding this question is whether each of the various allegedly subsidized products is properly found to compete in the same product "market."⁵⁰⁰³ The European Communities argues that the nature and extent of actual or potential competition between different models of Airbus aircraft is the fundamental prerequisite for determining whether they are in the same market and thus can be considered a single product.⁵⁰⁰⁴ This is, in the European Communities' view, largely a function of their physical and performance characteristics and economic substitutability. For the European Communities, if Airbus aircraft are so dissimilar that they do not compete for the *same* sales or orders, they cannot properly be found to belong in the same market, and cannot be grouped together as a single subsidized product. The European Communities asserts that there is no basis for products which compete in distinct markets to be grouped together as a *single* subsidized product.⁵⁰⁰⁵ The European Communities proposes a number of factors for the Panel to consider in determining which Airbus LCA properly constitute a subsidized product: physical and performance characteristics (from the perspective of market participants); actual or potential competition in the same market; purchaser perceptions; competition between Airbus and Boeing; whether the challenged subsidy measures provide benefits to specific Airbus aircraft; and whether the proposed "like" product includes Boeing aircraft that do not have characteristics that closely resemble each other, based on the perspective of market participants.⁵⁰⁰⁶ The European Communities then argues that the evidence it cites regarding these factors demonstrates that the Panel should find that there are four families of Airbus aircraft, each constituting a separate allegedly subsidized product.⁵⁰⁰⁷

7.1635 The European Communities argues that the United States' "choice" of a single subsidized product is not driven by the "identical" or "closely resembling" physical characteristics of the allegedly subsidized Airbus and corresponding like Boeing LCA products, and that Articles 5 and 6 of the SCM Agreement, read together with Article 11 of the DSU, require the Panel to conduct an objective assessment of the facts and matter before it, and not to merely rubber-stamp one Member's arguments.⁵⁰⁰⁸ The European Communities maintains that it would be "incoherent" to assess adverse effects by collapsing all LCA into a single subsidized and like product.⁵⁰⁰⁹

7.1636 With respect to like product, the European Communities argues that different families of Boeing LCA compete in different product markets with Airbus LCA.⁵⁰¹⁰ The European Communities argues that physical characteristics are key in linking like product to subsidized product, and that the United States has improperly combined Boeing aircraft with enormous physical differences in arguing

⁵⁰⁰² EC, FWS, para. 1551.

⁵⁰⁰³ EC, FWS, para. 1518.

⁵⁰⁰⁴ EC, FWS, para. 1519.

⁵⁰⁰⁵ The European Communities also argues that the definition of "like" product as a product *identical* to or having *characteristics closely resembling* a subsidized product is context for interpreting the identity and composition of a subsidized product. EC, FWS, para. 1520.

⁵⁰⁰⁶ EC, FWS, para. 1521.

⁵⁰⁰⁹ EC, SWS, paras. 738, 740-41.

⁵⁰¹⁰ EC, FWS, para. 1533.

BCI deleted, as indicated [***]

that there is one like product.⁵⁰¹¹ The European Communities concludes, after presenting evidence on the physical (and other) characteristics of Boeing aircraft, that there are three Boeing "like products" corresponding to three of the Airbus "subsidized" products.⁵⁰¹²

7.1637 The European Communities maintains that each of the Airbus LCA in these three families has physical characteristics that closely resemble the other Airbus LCA in that particular family, and the Boeing LCA in the assertedly corresponding Boeing family.⁵⁰¹³ The European Communities also argues that these groupings are perceived by Boeing, Airbus, and other market participants as being properly part of separate markets, supported by the existence of physical, price, and perception differences between Boeing/Airbus LCA in these three categories.⁵⁰¹⁴

7.1638 Thus, the European Communities requests that the Panel find that the following distinct families of Airbus LCA are separate allegedly "subsidized products": (i) the A320 family; (ii) the A330 family; (iii) the A340 family, and (iv) the A380 family.⁵⁰¹⁵ The European Communities further asks the Panel to find that the appropriate "like" products for the first three Airbus families are, respectively, (i) the 737NG family, (ii) the 767 and the 787 families, and (iii) the 777 family.⁵⁰¹⁶ The European Communities also requests the Panel to find that Boeing's 747 family is not a like product to, or a part of the "same {product} market" as, any of the Airbus LCA.⁵⁰¹⁷ The European Communities further requests the Panel to find that these subsidized and like products compete in the following markets: (i) the Boeing 737NG and Airbus A320 families compete in the 100-200 seat LCA market; (ii) the Boeing 767 and 787 families, Airbus A330 family, and the A350-800 compete in the 200-300 seat LCA market; and (iii) the Boeing 777 family, Airbus A340 family, and the A350-900/1000 compete in the 300-400 seat LCA market.⁵⁰¹⁸ Finally, the European Communities requests that the Panel find that there is no competition between the Boeing 747 family, which allegedly competes in the 400-500 seat market, and the Airbus A380 family, which allegedly competes in the 500+ seat market.⁵⁰¹⁹ The competing "subsidized product" and "like product" groups, as well as the markets, identified by the European Communities are set out graphically below:

Allegedly Subsidized Product	Like Product / Market of Competition
A320 family	Boeing 737NG family, competing in the 100-200 seat LCA market
A330 family	Boeing 767 & 787 families, competing in the 200-300 seat LCA market
A340 family	Boeing 777 family, competing in the 300-400 seat LCA market
A380 family	Alone in the 500+ seat LCA market
No Airbus LCA	Boeing 747 family, alone in the 400-500 seat LCA market

(b) Arguments of Third Parties

(i) *Australia*

7.1639 Australia notes that in order to demonstrate its claim of adverse effects the United States asserts that the "subsidized product" for the purposes of this dispute is the Airbus LCA family, and that the "like product" for the purposes of this dispute is the Boeing LCA family. Australia observes that the European Communities acknowledges the existence of some sort of "family concept" in relation to LCA.⁵⁰²⁰ Australia observes that there is little guidance in the SCM Agreement or WTO cases regarding the complaining WTO Member's determination of the "subsidized product". Based on its review of WTO cases addressing the question of like product, Australia posits a series of questions for the Panel's consideration in addressing the issues of "subsidized product" and "like product".⁵⁰²¹

7.1640 In response to questions from the Panel, Australia stated its view that the SCM Agreement did not require the Panel to make an independent determination regarding the "subsidized product" and therefore there is little guidance concerning the substantive elements of such a determination. In Australia's view, while panels are required by Article 11 of the DSU to make an "objective assessment of the matter" before them, taking into account the views of the respondent, it is for the complainant to determine the basis and nature of its own complaint including the scope of the "subsidized product".⁵⁰²² Citing the decisions of panels in *Korea – Commercial Vessels* and *US – Softwood Lumber V*, Australia argues that it is then up to the complainant to demonstrate causation in relation to this "subsidized product".⁵⁰²³ Australia observes that the Panel's report in *US–Softwood Lumber V* shows the linkage between the "like product" and "product under consideration", and was a case in which the "product under consideration" and the "like product" included a range of specific goods. Australia notes in this regard that the panel's decision also draws the linkage in dealing with injury analysis.⁵⁰²⁴ Australia considers that "like product" cases under the Anti-Dumping Agreement are relevant to the SCM Agreement, as long as the different contexts are taken into account, noting that footnote 46 in the SCM Agreement is identical to Article 2.6 of the Anti-Dumping Agreement in defining like product, and that the Panel in *Indonesia – Autos* stated that "useful guidance can nevertheless be derived from prior analysis of "like product" issues under other provisions of the WTO Agreement."⁵⁰²⁵

(ii) *Brazil*

7.1641 Brazil considers that the Panel should afford the United States substantial discretion as the complaining party to define the subsidized product or products to which its claims apply.⁵⁰²⁶ Brazil also agrees with the criteria proposed by the United States for determining the "like product" in this dispute, although Brazil did not take a position regarding whether the entire Boeing family of LCA is the appropriate like product or products.⁵⁰²⁷

7.1642 Brazil notes that the SCM Agreement provides no textual support for the proposition that the "subsidized product" has to conform to a particular configuration, narrow or wide.⁵⁰²⁸ In response to

⁵⁰²⁰ Australia, Third Party Submission, para. 41.

⁵⁰²⁸ Brazil, Third Party Oral Statement, para. 20.

BCI deleted, as indicated [***]

questions from the Panel, Brazil asserted that complainant should be allowed discretion to define the "subsidized product" in order to ensure that a panel complies with its terms of reference.⁵⁰²⁹ Brazil notes that a panel's terms of reference are set out in the request for establishment, which identifies the "matter" subject to dispute, including the specific measures at issue and the applicable claims.⁵⁰³⁰ In the present dispute, Brazil considers that, as a consequence of identifying the specific measures at issue (*i.e.*, the subsidies) in its request for establishment, the United States necessarily identified the products to which those measures apply (*i.e.*, the "subsidized product").⁵⁰³¹ In Brazil's view, in analyzing the complainant's claims under Articles 5(a) or 5(c) of the SCM Agreement, a panel may act inconsistently with its terms of reference if it makes an independent determination that expands or narrows the scope of the "subsidized product" to which the subsidies apply.⁵⁰³² Moreover, Brazil asserts that there is no provision in the SCM Agreement that authorizes or requires a panel to reformulate a complainant's claims based on multiple rather than a single "subsidized product."⁵⁰³³

7.1643 Brazil asserts that, under Article 11 of the DSU, a panel must "make an objective assessment of the matter before it." In doing so, a panel is limited to the "matter" within its terms of reference, which is based on the complainant's request for establishment and includes the measures (*i.e.*, the subsidies) and the products to which the measures apply (*i.e.*, the "subsidized products").⁵⁰³⁴ Accordingly, the DSU and the SCM Agreement do not require, nor, arguably, do they permit, the Panel to make an "independent determination" of the "subsidized product" when addressing claims of injury under Article 5(a) of the SCM Agreement and claims of serious prejudice under Article 5(c) of the SCM Agreement.⁵⁰³⁵ Brazil considers that the panel's findings in *US - Softwood Lumber V* and *Korea - Certain Paper* support the absence of any requirement for the Panel to find multiple categories of "subsidized product" and multiple categories of "like product" in this dispute.

7.1644 Brazil notes that the Panel may consider it necessary to rely on comparisons of particular "categories" of LCA within the "subsidized product" and the "like product" in order to examine, for example, price undercutting or lost sales, but considers that the Panel should not limit its analysis to categories that are too narrowly defined and should not rely exclusively on a segmented analysis to reach its conclusions, because LA/MSF subsidies to one aircraft model may have "spill-over" effects to a producer's entire family of aircraft and because competing product categories may change from sale to sale based on the particular circumstances involved.⁵⁰³⁶ In other words, the Panel may facilitate its analysis by examining certain categories of the "subsidized product," but it should make its conclusions regarding injury and serious prejudice based on the aggregate "subsidized product" as defined by the complainant. Brazil asserts that its views in this regard are consistent with the findings of the panel in *Korea - Commercial Vessels*.⁵⁰³⁷

(iii) *Canada*

7.1645 Canada considers it inaccurate to claim, as the United States does, that "because subsidies are provided to Airbus for the development of an LCA family.... the "subsidized product" is the Airbus LCA family as a whole."⁵⁰³⁸ In Canada's view, the identification of a "like product" and its corresponding subsidized product in the serious prejudice analysis, is, by virtue of the definition in footnote 46, focused on the characteristics of the products at issue, not the characteristics of the subsidy.⁵⁰³⁹

7.1646 Canada considers that the United States errs in supporting its "like product" claim by arguing that royalty-based financing for individual Airbus models actually benefits the entire Airbus LCA production, because what is relevant is the characteristics of the products being compared, while company-wide benefits of a subsidy have nothing to do with the actual characteristics of the products produced by that company.⁵⁰⁴⁰ Canada states that in light of the differences between the Airbus 380 and the Boeing 737, that A380 could not displace or impede or price undercut a 737, as they are simply not considered by the market to be in competition, and are not "like". Canada notes in this regard that the 737 is a narrow body aircraft with a seating capacity of approximately 120 to 200 seats and a range of approximately 3,000 to 6,000 km, while the A380 is a wide body aircraft of over 500 seats and a range of 15,000 km.⁵⁰⁴¹ Canada relies on the Panel Report in *Indonesia – Autos*, arguing that the panel in that case dismissed an argument similar to the one made by the United States here on the grounds of the lack of substitutability between the Timor, a small budget car, and passenger cars at the high end of the market, for example a Rolls-Royce.⁵⁰⁴² Recalling that the panel in *Indonesia – Autos* found that "one reasonable way" to approach the like product issue is to look at the manner in which the industry at issue has analyzed market segmentation, Canada invites the panel in this dispute to follow that approach.

7.1647 In response to questions from the Panel, Canada asserts that there is no basis in the SCM Agreement for deference to either of the disputing parties' views on subsidized product and corresponding like product.⁵⁰⁴³ Instead, Canada considers that Article 11 of the DSU requires the Panel, as trier of fact and interpreter of WTO obligations, to make "an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements", which requires the Panel to make an independent determination given the measures in the light of the relevant provisions of the SCM Agreement at issue in this dispute.⁵⁰⁴⁴ Canada considers the definition of like product in footnote 46 of the SCM Agreement to be highly relevant context for determining whether there are one or more subsidized products at issue. In particular, Canada considers that the requirement in footnote 46 that the subsidized product and like product be identical or closely resemble each other, based on their characteristics, would be rendered meaningless if the complainant could simply assert that a number of discrete products with very different characteristics constituted a single subsidized product.⁵⁰⁴⁵

7.1648 Canada argues that the panel's report in *US – Softwood Lumber V* is not particularly helpful with respect to a "like product" analysis in the context of Articles 5(a) and 5(c).⁵⁰⁴⁶ Canada states that that case involved a panel review of a domestic agency determination under the AD Agreement, in which a panel is obliged to exercise a degree of deference to agency determinations so that it is not

BCI deleted, as indicated [***]

engaging in *de novo* review, but only ensuring that the determination is reasoned and adequate. Canada considers this approach inappropriate for a panel assessing "likeness" under Articles 5(a) and 5(c), under which a panel is assessing an allegation of subsidy *de novo*. Canada recalls that footnote 46 of the SCM Agreement defines "like product" for purposes of the Agreement. For Canada, the footnote makes it clear that the scope of what is a "like product" is rather narrow, since the like product must be *identical* to the subsidized product, and *only* when there is the absence of an identical product will a product that has characteristics *closely* resembling the subsidized product suffice. Canada also referred to the panel report in *Indonesia – Autos*, which it asserts found that the scope of "likeness" to be quite narrow under the SCM Agreement.⁵⁰⁴⁷

7.1649 Canada considers that the object and purpose of the likeness analysis under Part III of the SCM Agreement is similar to that under GATT Article III(4), namely preserving the equality of competitive opportunities.⁵⁰⁴⁸ As a result, Canada observes that GATT Article III is likely to be relevant to informing the scope of "likeness" under Articles 5(a) and (c). In this regard, Canada notes that in *Japan – Alcoholic Beverages II*, the Appellate Body found "likeness" to be analogous to an accordion, in that what is considered to be "like" may be narrower or broader depending on the particular provision at issue and on the context and the circumstances that prevail in any given case to which that provision may apply.⁵⁰⁴⁹ It then went on to find that the scope of "likeness" in Article III:2, first sentence was particularly narrow given the content of that provision when compared with Article III:2, second sentence, which incorporates the concept of "directly competitive or substitutable" into a determination of likeness.⁵⁰⁵⁰ Canada asserts that, similarly to Article III, under Article 5 of the SCM Agreement, the United States is required to establish that the products are "like" by reference to, *inter alia*, the physical characteristics, end-uses and tariff classifications of the products.⁵⁰⁵¹

(c) Evaluation by the Panel

7.1650 There are two aspects of what may be termed the "product" issue raised in this dispute – the question of identifying the "subsidized product" and the question of identifying the appropriate United States' "like product" for purposes of certain aspects of the adverse effects analysis. The European Communities argues that we must reject the United States' definition of the subsidized product, and focus our adverse effects analysis on separate allegedly subsidized "families" of Airbus LCA, and competition between those allegedly subsidized families and "like" Boeing families in specific market segments. However, in our view, the European Communities' arguments import elements of analysis relevant to the determination of the "like product" into its identification of the "subsidized product". As discussed below, we consider that there is no legal requirement in the SCM Agreement for a panel to make a determination regarding the "subsidized product" independent of the complaining Member's allegations. Moreover, after carefully reviewing the United States' identification of the relevant subsidized product, we find that it is not precluded by the SCM Agreement. In these circumstances, we conclude that we may examine the question of adverse effects on the basis of the subsidized product put forward by the United States – *i.e.*, a single subsidized product, encompassing the entire range of Airbus large civil aircraft. We also conclude that it is appropriate to find that there is a

BCI deleted, as indicated [***]

single "like product", comprising all Boeing LCA, corresponding to the subsidized product, all Airbus LCA.

(i) *Subsidized product*

7.1651 The United States asserts that the "subsidized product" at issue is the entire family of Airbus LCA. That is, the United States has identified the entire family of Airbus LCA as the product which benefits from the alleged subsidies at issue in this dispute. The European Communities, however, maintains that the United States' assertion is in error, and that we must make an independent assessment of the matter, pursuant to Article 11 of the DSU, and determine that there are multiple subsidized products, corresponding to the model families of Airbus LCA the European Communities identifies. Thus, the question we must resolve is whether we should examine the United States' adverse effects claims on the basis of the subsidized product proposed by the United States, *i.e.*, all Airbus LCA, or whether, as the European Communities asserts, we are required to make an independent assessment as to the appropriate subsidized product, and conclude that, as a matter of fact, there are multiple subsidized products at issue, corresponding to the different model families of Airbus LCA.

7.1652 At the outset, we note that there is no specific guidance in Articles 5 or 6 of the SCM Agreement, or in any other provision of the SCM Agreement, regarding the identification of a "subsidized product" or a panel's role in that process. Indeed, the European Communities has not argued otherwise. Instead, the European Communities relies upon the obligation on the Panel to conduct an objective examination of the evidence under Article 11 of the DSU, and the assertion that the focus of Articles 5 and 6 of the SCM Agreement is on the effects of subsidies on competition between a subsidized product and a like product in the relevant geographic/product markets, to contend that the Panel must undertake its own determination of the subsidized product.⁵⁰⁵² We see nothing in these provisions that requires us to undertake such an analysis.

7.1653 While it is self-evident to us, and the parties do not disagree, that it is necessary to identify the "subsidized product" that is of interest to the complaining Member (and the corresponding "like product"), in order to assess the existence of material injury under Article 5(a), and some of the forms of serious prejudice under Articles 6.3(a), 6.3(b) and 6.3(c)⁵⁰⁵³, we are not persuaded that the SCM Agreement requires us to make an independent determination of the "subsidized product", as opposed to relying on the complaining Member's identification of that product. The European Communities focuses on the markets in which different models of aircraft allegedly compete, and differences in their physical characteristics, referring, *inter alia*, to Article 6.3, 6.4 and 6.5 of the SCM Agreement, to argue that a subsidized product must be one that competes in a single market. However, in our view, the fact that displacement or impedance under Articles 6.3(a) and (b), and price effects under Article 6.3(c), must be assessed with respect to particular markets, says nothing about how to identify the scope of the subsidized product. That the effects of a subsidy must be evaluated with respect to market share and prices in particular markets does not entail that a panel must make an independent assessment of the subsidized product that is at issue. Moreover, while Articles 6.3(a) and (b) refer to displacement or impedance of imports or exports of a "like product" from certain markets, and Article 6.3(c) refers to price undercutting by "the subsidized product" in the same market, there is no linkage in the text of these provisions between the terms like product and subsidized product, nor between those terms and "market" in any way that would suggest the definitional import posited by the European Communities.

⁵⁰⁵² EC, FWS, para. 1518.

⁵⁰⁵³ It is not clear that a consideration of like product is necessary for consideration of price effects, that is, price undercutting, price suppression, price depression, and of lost sales, although the complaining Member would, logically, have to identify a product or products with respect to which those effects were allegedly manifested. *See*, Panel Report, *Korea – Commercial Vessels*, para. 7.559.

BCI deleted, as indicated [***]

7.1654 The European Communities is correct in asserting that we must make an objective examination of the matter before us in determining whether the use of the subsidies in dispute is causing adverse effects to the interests of the United States. But we see nothing that would preclude us from making such an objective assessment on the basis of the case, including the subsidized product allegations, put forward by the United States. It may be that the case is more complicated than it would be if a different subsidized product were at issue. But it is not our role to direct a Member with respect to how it presents its complaint. In this regard, we note the views of the panel in *Korea – Commercial Vessels*, which stated:

"in any WTO dispute it is always for the complaining party to determine the basis and nature of its own complaint. Thus, a complaining party is free to *claim* that a given subsidy of another Member has caused price suppression or depression to the detriment of the complainant's interests. ...

In this regard, we would observe that the nature of the demonstration that the complainant will need to make to establish causation in any given case, and the difficulty of doing so, will depend on a number of factors and factual circumstances, including but not limited to the breadth of the description of the product on which the complainant brings its case. ... Whatever the factual situation in a given case, the burden will be on the complainant to furnish specific factual evidence affirmatively demonstrating the causal link alleged, and the difficulty and ways of meeting this burden may be very different from one case to another.²⁹⁶ In all cases, if the complainant fails to meet this evidentiary burden, its serious prejudice claim will fail.

²⁹⁶ For example, in a case involving alleged significant suppression or depression of the price for a given kind of narrowly-defined product due to product-specific subsidization of a physically identical product produced by another Member, product definition issues presumably would figure little if at all in respect of the evidence necessary to demonstrate causation. The situation presumably would be quite different where the alleged subsidy was in respect of an input product, while significant price suppression or depression was alleged in respect of a downstream product of the complainant, or where a subsidy in respect of one product was alleged to cause significant price suppression or depression in respect of a completely unrelated product. Clearly in the latter two cases, product definition issues would create a significant, if not insurmountable, evidentiary hurdle in respect of causation.⁵⁰⁵⁴

We agree with the view that it is for the complaining Member to structure its own case, which it must then prove with sufficient evidence. Were we to accept the European Communities' argument, conclude that there are multiple subsidized products at issue in this case, and proceed to evaluate the United States' claims on this basis, we would, in effect, be reformulating the United States' complaint. We can find no basis in the text of the SCM Agreement that would allow us, much less require us, to reformulate the United States' claims based on what might be our own view of what should constitute the "subsidized product" as opposed to that of the complaining Member, the United States.⁵⁰⁵⁵

⁵⁰⁵⁴ Panel Report, *Korea – Commercial Vessels*, paras. 7.559-560.

⁵⁰⁵⁵ We note that in *US – Upland Cotton*, the panel accepted "upland cotton lint" as the relevant "subsidized product," even as it acknowledged that some of the relevant payments were made to persons who did not produce upland cotton and that part of the subsidy benefit was captured by persons other than producers of upland cotton. Panel Report, *US – Upland Cotton*, para. 7.1226.

BCI deleted, as indicated [***]

7.1655 Certainly, if a complaining Member were to put forward a proposed "subsidized product" that does not benefit from the alleged subsidies in dispute, a panel would have to address whether that product is, in fact, a relevant subsidized product. However, this is not such a case, as the European Communities' arguments in this context are not based upon the contention that Airbus LCA are not subsidized. Moreover, the United States has presented evidence concerning linkages and spillover effects of the subsidies in question which it argues support the conclusion that subsidies primarily benefiting any one particular Airbus model also benefit other subsequent and previous models, and thus may have adverse effects beyond the model families posited by the European Communities as the appropriate subsidized products. In this regard, the United States argues that the subsidies in dispute are not limited to one model of Airbus LCA, but rather benefit the entire family of Airbus LCA.⁵⁰⁵⁶ In support of its view, the United States asserts, *inter alia*, that:

- subsidies that facilitate the development of one Airbus LCA model improve the marketability of all Airbus LCA models;⁵⁰⁵⁷
- "spill-over" benefits with regard to technologies or production facilities from one model benefit both subsequently developed and existing models;⁵⁰⁵⁸
- common elements in design and operation are a central feature in selling the entire Airbus LCA fleet to customers, indicating a significant degree of commonality;⁵⁰⁵⁹
- aircraft are sold in "package" deals, either simultaneous or consecutive, of different models;⁵⁰⁶⁰
- LA/MSF in particular reduces the debt burden on Airbus of building each individual LCA model, which in turn allows Airbus to move on to launch the next model much more easily and quickly than would otherwise have been possible;⁵⁰⁶¹ and
- additional cash flow allows Airbus to reduce prices of any LCA model.⁵⁰⁶²

Were we to accept the European Communities' views concerning the subsidized product, we would be precluding even the possibility of examining whether these linkages and spillover effects exist, and therefore whether the subsidies challenged by the United States are causing the adverse effects alleged.⁵⁰⁶³

7.1656 The European Communities argues that panels in adverse effects disputes must make an independent assessment of whether the subsidized product has been appropriately identified by the complaining Member. While the European Communities has proposed a methodology for making this assessment, there is no basis in the text of the SCM Agreement for that analysis.⁵⁰⁶⁴ Indeed, as

⁵⁰⁵⁶ US, SWS, para. 640.

⁵⁰⁵⁷ US, SWS, para. 633.

⁵⁰⁵⁸ US, SWS, para. 634.

⁵⁰⁵⁹ US, SWS, para. 635.

⁵⁰⁶⁰ US, SWS, para. 636-637.

⁵⁰⁶¹ US, SWS, para. 638.

⁵⁰⁶² US, SWS, para. 639.

⁵⁰⁶³ We note that the European Communities has challenged many of these aspects of the United States' arguments as a substantive matter. In referring to them here we do not mean to suggest that we accept the United States' arguments, merely that we consider it appropriate to consider them on the basis of the evidence, rather than preclude consideration of them on the basis of a finding regarding subsidized product.

⁵⁰⁶⁴ We do not consider, in the abstract, that the European Communities' proposed method of analysis is unreasonable. Simply, we are not persuaded that it is required by the SCM Agreement.

BCI deleted, as indicated [***]

we have already observed, there is a complete absence of any guidance in the text of the SCM Agreement as to the bases on which a decision as to the appropriate subsidized product might be made. In our view, it is unlikely that the drafters of the SCM Agreement intended panels to make independent, fact-based determinations of the appropriate subsidized product in disputes under Articles 5 and 6, but chose to provide no guidance and establish no criteria for such a determination. In the absence of any guidance in the text of the SCM Agreement, we are reluctant to undertake the task of developing relevant criteria and applying them to the facts of this case. Consequently, we agree with the view that a complaining Member may frame its case as it chooses. It is, of course, then for us to determine whether that case has been demonstrated, on the basis of the evidence and arguments put before us by the parties.

7.1657 The questions surrounding the identification of the appropriate "subsidized product" in this dispute may be analogized to the questions concerning the "product under consideration" in trade remedy cases. Both the SCM and AD Agreements require investigating authorities in countervailing duty and anti-dumping duty investigations to make a determination regarding material injury to the domestic industry, which is defined in terms of domestic producers of a "like product". Both Agreements require a determination of the appropriate "like product", and both define the term "like product" as a product which is "identical, *i.e.*, alike in all respect to the product under consideration, or in the absence of such a product, another product which, although not alike in all respects, has characteristics closely resembling those of the product under consideration."⁵⁰⁶⁵ Thus, the starting point for defining the "like product" in trade remedy investigations is the scope of the "product under consideration". However, the "product under consideration" is not defined in either agreement, just as the term "subsidized product" is not defined in the SCM Agreement.

7.1658 In *EC – Salmon (Norway)*, the panel specifically addressed the question whether the AD Agreement required an investigating authority to make a determination regarding the product under consideration. That panel recognized that, as a practical matter, investigating authorities would have to establish the scope of the allegedly dumped product subject to their investigation in order to carry out the investigation. However, the panel rejected Norway's claim that Article 2.6 of the AD Agreement, defining like product, taken together with the obligation to determine a dumping margin for a "product", established an obligation on investigating authorities to undertake a particular analysis to make and justify a determination regarding the product under consideration. The panel in that dispute concluded that there is no requirement in the AD Agreement that an investigating authority address the question of the scope of the product under consideration at all, and that therefore, there could be no violation of the AD Agreement with respect to the product under consideration identified by the investigating authority in that case.⁵⁰⁶⁶

7.1659 The panel in *EC – Salmon (Norway)* specifically rejected the argument that considerations of "likeness" in characteristics and uses, required in the context of defining the like product, had any relevance to the issue of product under consideration. In part, this was based on the fact that a determination of the scope of the allegedly dumped product under consideration must precede the determination of like product, as the question of "identical" or "similar in characteristics and uses" for determining like product must be assessed by reference to the product under consideration, which logically must already be defined. Otherwise, the analysis becomes circular.⁵⁰⁶⁷ In the absence of any guidance in the AD and SCM Agreements on identification of a "product under consideration" as the necessary prerequisite to determination of a "like product", the panel concluded that investigating

⁵⁰⁶⁵ AD Agreement Article 2.6, SCM Agreement footnote 46. The question of "like product" also arises in adverse effects cases, and is discussed further below.

⁵⁰⁶⁶ Panel Report, *European Communities – Anti-Dumping Measure on Farmed Salmon from Norway* ("EC – Salmon (Norway)"), WT/DS337/R, adopted 15 January 2008, and Corr.1, para. 7.76.

⁵⁰⁶⁷ Panel Report, *EC – Salmon (Norway)*, para. 7.64.

BCI deleted, as indicated [***]

authorities are not precluded from identifying a range of goods as the product under consideration.⁵⁰⁶⁸ In that case, the EC investigating authority had identified the "product under consideration" as "farmed (other than wild) salmon, whether or not filleted, fresh, chilled or frozen. ... ~~exclud{ing}~~ other similar farmed fish products such as large (salmon) trout, biomass (live salmon) as well as wild salmon and further processed types such as smoked salmon".⁵⁰⁶⁹ The panel concluded that Articles 2.1 and 2.6 of the AD Agreement do not establish an obligation on investigating authorities to ensure that, where the product under consideration is made up of categories of products, all such categories of products must individually be "like" each other, thereby constituting a single homogenous "product under consideration". The panel stated further that "whether the range of goods comprising the product 'farmed salmon' that was investigated by the EC are or are not all 'like' each other within the meaning of Article 2.6 is not a relevant question."⁵⁰⁷⁰

7.1660 Similarly, in the context of adverse effects claims, the scope of the subsidized product must already be known in order to assess the question of "identical" or "similar in characteristics and uses" in defining the relevant "like product". To argue, as the European Communities does here, that there must be "likeness" within the subsidized product would introduce into adverse effects cases the same untenable circularity identified by the panel in *EC – Salmon (Norway)*. The panel in that dispute observed that, essentially, Norway's arguments raised an issue of policy, suggesting that the absence of limits on the scope of the product under consideration might result in erroneous dumping determinations by investigating authorities. The panel rejected that argument, noting that:

"Any grouping of products into a single product under consideration will have repercussions throughout the investigation, and the broader such a grouping is, the more serious those repercussions might be, complicating the investigating authority's task of collecting and evaluating relevant information and making determinations consistent with the AD Agreement. Thus, it seems to us that the possibility of an erroneous determination of dumping based on an overly broad product under consideration is remote. That possibility is certainly not enough to persuade us to read obligations into the AD Agreement for which we can find no basis in the text of the Agreement."⁵⁰⁷¹

In the present case, proceeding on the basis of a single subsidized product does not raise similar concerns regarding an erroneous determination of whether a subsidy exists. Clearly, however, the United States' position regarding subsidized product has repercussions for the entire case in terms of whether the full range of Airbus LCA have been subsidized, and the evidence and arguments with respect to whether the subsidies in dispute cause the adverse effects alleged. This consequence does not, however, persuade us that, in the absence of any direction to do so, or any guidelines for determination, in the text of the SCM Agreement, we should undertake an independent assessment of the subsidized product.

7.1661 Moreover, we note that differences between the trade remedy context and a dispute concerning adverse effects suggest to us that even if it were appropriate to consider the scope of the "product under consideration" in reviewing a trade remedy determination, it would still be

⁵⁰⁶⁸ Panel Report, *EC – Salmon (Norway)*, para. 7.68.

⁵⁰⁶⁹ Commission Regulation (EC) No. 628/2005 of 22 April 2005 imposing a provisional anti-dumping duty on imports of farmed salmon originating in Norway (Official Journal, L104/5, published 23 April 2005), para. 10.

⁵⁰⁷⁰ Panel Report, *EC – Salmon (Norway)*, para. 7.68. In addition to *EC – Salmon (Norway)*, other panels have reached the same conclusion in addressing the question of like product and product under consideration in anti-dumping investigations in *United States – Softwood Lumber V*, and *Korea – Certain Paper*, Panel Report, *Korea – Anti-Dumping Duties on Imports of Certain Paper from Indonesia ("Korea – Certain Paper")*, WT/DS312/R, adopted 28 November 2005, DSR 2005:XXII, 10637.

⁵⁰⁷¹ Panel Report, *EC – Salmon (Norway)*, para. 7.58.

BCI deleted, as indicated [***]

unnecessary and inappropriate for us to address, much less to revise, the scope of the subsidized product identified by a complainant in an adverse effects dispute. First, in the context of anti-dumping and countervailing measures, ensuring that the dumped or subsidized product is appropriately identified is relevant to ensuring that the scope of the remedy is appropriate, as the measure will be imposed in respect of all future imports of the product found to be dumped or subsidized. In addition, the level of the measure is limited to the amount of dumping or subsidization found in respect of the dumped or subsidized product, so an excessively broad product scope could sweep in highly dissimilar goods and subject them all to the same level of duty. However, in the context of adverse effects disputes, neither of these considerations is relevant. The remedy in an adverse effects dispute is either withdrawal of the subsidy, or elimination of the adverse effects caused by the use of that subsidy, not a duty limited by the amount of the subsidy. The ability to implement either of the remedies for findings of adverse effects does not depend on circumscribing the scope of the subsidized product. Thus, even assuming there were a logical reason to review the scope of the dumped or subsidized product in question in a countervailing duty or anti-dumping case, in order to ensure that the scope of application and level of any anti-dumping or countervailing duty imposed is properly determined, that consideration does not arise in the context of an adverse effects dispute.

7.1662 In our view, the United States is entitled to frame its case as it chooses, and so long as the subsidized product it has identified, Airbus large civil aircraft, does in fact benefit from the subsidies in dispute, we will not intervene to alter its identification of the subsidized product. Moreover, there is no basis in the text of the SCM Agreement for the conclusion that it is necessary to group subsidized products according to either corresponding physical characteristics, or competition in particular markets.

7.1663 Even if it were appropriate or necessary for panels in disputes involving claims of adverse effects to consider the question of the subsidized product, it is not clear to us that a panel's role would be to identify the appropriate subsidized product on its own accord based on a review of the facts put in evidence by the parties. While we recognize that, pursuant to Article 11 of the DSU, a panel is required to make an objective assessment of the matter before it, including an objective assessment of the facts, we do not consider that this would require a panel to make a determination of the subsidized product *ab initio*. Rather, in our view, it would at most be appropriate for a panel to start with the complaining Member's allegations, and consider whether, having regard to the totality of the facts, the complaining Member has made a reasonable allegation regarding the product that benefits from the alleged subsidies in dispute. From this perspective, there are strong arguments in support of the United States' view that all Airbus LCA may be properly treated as the relevant subsidized product in the present dispute.

7.1664 All Airbus LCA share particular characteristics, and certainly the same general uses.⁵⁰⁷² In our view, while there are a variety of parameters along which LCA can be categorized, including number of aisles, number of seats, number of engines, range of operations, etc, there are no obvious reasons for choosing one among these as the single dividing line that must be respected, as suggested by the European Communities' argument. The choice of a particular model of aircraft by a customer is not driven purely by the number of seats, but depends on a number of factors related to the airline, the routes, the economics of operation, the existing fleet, as well as other characteristics of the available aircraft, such as range and operating costs.⁵⁰⁷³ Moreover, while seating capacity may be a relevant factor if one were trying to group aircraft into categories, we see nothing that suffices to

⁵⁰⁷² In this respect, we note that Airbus has, throughout its history, focused attention on the commonalities of its LCA in terms of technology, design, and operation, as a significant selling point. *See, e.g.*, Exhibit US-658. This lends further support to our conclusion that there is no reason to disturb the scope of the subsidized product identified by the United States.

⁵⁰⁷³ Statement of Rod P. Muddle, Exhibit EC-19, paras. 46-51.

BCI deleted, as indicated [***]

establish this as the single determinative factor. Indeed, it is not clear to us that seating capacity *per se* is an appropriate or necessary basis for drawing distinctions among aircraft in terms of market competition.⁵⁰⁷⁴ For instance, the European Commission, in examining the proposed merger of Boeing and McDonnell Douglas in 1997 under EC competition law, examined the questions of dominant position and market impact on the basis of a distinction between narrow body and wide body aircraft, corresponding to 100-200 seating capacity and 200-400+ seating capacity market segments.⁵⁰⁷⁵ In addition, Neven & Seabright in their analysis of the LCA market consider four different market segments: short-range/narrow body; medium-range/medium body; long-range/medium body; and long-range/wide-body.⁵⁰⁷⁶ Thus, based on the available evidence, in our view there are multiple ways in which the market for large civil aircraft could be divided into segments, and there is no obvious or necessary basis for choosing one such way, number of seats, much less a legal requirement that individual Airbus model families be considered separate subsidized products based on the number of seats in each model family.

7.1665 Since its inception, Airbus has recognized the importance to its continued success in the LCA market of developing a full line – a family - of different LCA models:

"Since Airbus was established for the precise purpose of becoming a viable, profitable, long term enterprise, it was necessary to plan for a family of aircraft. As early as 1973, Airbus Industrie proposed the development over time of five related aircraft types. With the recent launch of the A330 and A340 programs, these five types are now in place."⁵⁰⁷⁷

More recently, a report to shareholders by the EADS Board of Directors states, with reference to the "long-term strategic goal" of striving for a "leading position in commercial aircraft: A complete product portfolio is seen as necessary to serve the customer base and to maintain overall competitiveness."⁵⁰⁷⁸ Airbus's business strategy focuses on an integrated family of LCA:

"To achieve its market success, Airbus has pursued a consistent product strategy to offer competitive airliners across the market. The family of aircraft concept has enabled a high degree of commonality to be offered in all aspects of the aircraft operation from flight and cabin crew training to maintenance and spares."⁵⁰⁷⁹

⁵⁰⁷⁴ In this respect, we note that the European Communities refers to "three overlapping competitive markets (100-200 seat, 200-300 seat, 300-400 seat) and the two markets (400-500 seat and 500+ seat) in which Airbus and Boeing do not compete" in discussing the competitive conditions in which the aircraft industry operates. EC, FWS, para. 1403.

BCI deleted, as indicated [***]

"**{E}very Airbus aircraft belongs to a single family**, sharing the same cockpit, flight deck and spare parts, thus saving time and money for operators in terms of pilot training and maintenance as well as in other areas."⁵⁰⁸⁰

The European Communities itself acknowledged the importance of offering a full range of LCA:

"the need to offer separate products whose commonality keep operating costs down for customer airlines across the fleet but which can perform the various missions dictated by an airline's route structure has historically meant that no manufacturer of a single product or family of products, no matter how compelling, has survived in the LCA industry."⁵⁰⁸¹

7.1666 Commonality is important not only from the perspective of the purchasers of LCA, but also for the manufacturers. Producing a full family of different models of aircraft allows an LCA manufacturer to achieve production efficiencies. Increasing production of one aircraft type reduces the marginal cost of producing related aircraft types "due to the transferability of some production methods between different models in a manufacturer's range".⁵⁰⁸² Airbus recognizes that the development of new aircraft also supports the development of production facilities and technologies across its LCA family:

"In the 1980s, we were able to widen our family by launching the A310 that incorporated many systems and power plant improvements that had occurred in the years since the A300 was designed," an Airbus executive said. "Then we turned around and put many of the A310 improvements back into the A300 and came up with an updated aircraft that we designated the A300-600. The same philosophy will be followed with our new aircraft. Additionally, there is a strong possibility that the A320/A330/A340 technology can be used as well to create an advanced A300 and/or A310 in the 1990s."⁵⁰⁸³

"But the A350 is going to be the sistership of the A380 so it's technology you can already touch and see. It's tangible because the A380 is flying."⁵⁰⁸⁴

Airbus also manages its LCA production activities on a family basis. For example, recently, in response to an analyst's question as to whether increased production of other models could "offset the pain on the A380 delays," EADS CEO Thomas Enders commented that sustained higher production rates for the A320 would provide "upside" to offset the costs of the A380 delays.⁵⁰⁸⁵ Thus, the production and sales of one model of LCA support the development, production and sales of other

BCI deleted, as indicated [***]

LCA models.⁵⁰⁸⁶ As a consequence, it seems clear to us that subsidies benefiting one particular model of Airbus LCA can have spillover effects for other Airbus models.

7.1667 Thus, while it may be appropriate to consider individual models in some aspects of the adverse effects analysis, for instance when considering price effects, in our view, the identification of the "subsidized product" cannot ignore that Airbus has developed an entire range of LCA family comprising various models, that is marketed to customers as an integrated whole, and that the entire range of models has, at least potentially, been supported by the subsidies in dispute.⁵⁰⁸⁷ To divide the subsidized product along the lines proposed by the European Communities would preclude the panel from taking this into account.

7.1668 We cannot accept the proposition that there is no competition between LCA in the different model groups proposed by the European Communities. That is, while it may well be true that direct head-to-head competition between aircraft models at the ends of the range of models offered by each manufacturer may be limited or non-existent, it seems clear to us that there is at least some degree of competition between adjacent product groups identified by the European Communities, for instance, between a Boeing 747 and an Airbus A380.⁵⁰⁸⁸ Indeed, the European Communities itself states that "{c}ompetition exists *almost* exclusively between the Airbus and Boeing LCA families identified by the European Communities as competing in separate product markets."⁵⁰⁸⁹ Moreover, even by the European Communities' own standards, two different families of Airbus LCA compete in the same alleged product markets, with at least one of these (the A350 family) straddling two of the alleged product markets. In particular, according to the European Communities, the Airbus A330 family of LCA *and* one of the versions of the A350 family (the Airbus A350XWB-800) compete with the Boeing 767 and 787 families in the 200-300 seat market. Similarly, another version of the A350XWB family, the A350XWB-900/1000, *and* the A340 family of LCA allegedly compete with the Boeing 777 family in the 300-400 seat market.⁵⁰⁹⁰ These facts demonstrate that the dividing lines drawn by the European Communities are not sufficiently clear to allow us to conclude, were we required to consider the matter, that separate products **must** be defined on the basis of those lines.⁵⁰⁹¹

⁵⁰⁸⁶ Information in the A380 business case supports this conclusion. Exhibit EC-362 (HSBI), pp. 5, 6, 8, 24, 36.

⁵⁰⁸⁷ Indeed, as the European Communities itself has noted, no manufacturer of LCA has been able to survive without a full range of models to offer. EC, FWS, para. 30. From its early days, Airbus contemplated a full range of related LCA models. "Competitiveness of U.S. Commercial Aircraft Industry," Hearing before the Subcommittee on Commerce, Consumer Protection, and Competitiveness of the Committee on Energy and Commerce, House of Representatives, 100th Congress, June 23, 1987, Serial No. 100-59, at 34 (statement of Mr. Boyd, Chairman, Airbus Industrie North America) Exhibit US-386. Airbus has, in fact, introduced such a full range to the market since 1970, in competition with the full range of Boeing models.

⁵⁰⁸⁸ Indeed, the business case for the A380 [***]. Exhibit EC-362 (HSBI), p. 13. Other HSBI evidence also supports the conclusion that there is some degree of competition among aircraft across the model families identified by the EC. Exhibit EC-98 (HSBI), EC-375 (HSBI) and EC-398 (HSBI).

⁵⁰⁸⁹ EC, Answer to Panel Question 130 (emphasis added). *See, also*, EC, Answer to Panel Question 114, in which the European Communities addresses the "unusual circumstances" of a "cross-market sales campaign" between the A330-200 and the Boeing 777-200. The existence of such campaigns, even if unusual, precludes the conclusion that there is no competition across the model families identified by the EC.

⁵⁰⁹⁰ EC, FWS, para. 1509. The European Communities notes "Each Airbus LCA has distinctive physical and performance characteristics, and these aircraft can be categorized into four distinct markets based on these characteristics. With the exception of the A350 family LCA, which includes LCA intended to compete with two separate Boeing families (*i.e.*, the 777 and 787 families), these product groupings fall along Airbus' own "family" lines." EC, FWS, para. 1523. This suggests that even the European Communities recognizes a degree of ambiguity in the definition of the alleged Airbus families.

⁵⁰⁹¹ We note that the European Communities' expert, Mr. Scherer, stated that "Aircraft market segments typically are distinct from each other in about 15-20% seat increment." EC, SNCOS, para. 333. We understand from this that to the extent two LCA have seating capacity within 15-20 percent of each other, they compete

BCI deleted, as indicated [***]

7.1669 Moreover, the European Communities' approach to identifying the relevant subsidized product is premised on the view that the subsidies in dispute, in particular those granted in connection with the launch or development of a particular model of Airbus LCA, benefit only that model.⁵⁰⁹² However, the United States argues that subsidies to one model of Airbus LCA have effects on the development and production of other models, through learning effects and commonalities. Were we to define the subsidized product as suggested by the European Communities, we would preclude consideration of this argument.

7.1670 Thus, overall, the evidence and arguments before us suggest that the single product definition advanced by the United States is not inappropriate. While there may be a variety of parameters along which LCA can be categorized, there are no obvious reasons for choosing one among these as the single dividing line that must be respected, instead of treating LCA as a single subsidized product. Airbus itself recognizes the importance of developing one single "family" of LCA made up of different models of aircraft for its business; a factor that carries equal weight in the minds of LCA customers. Moreover, it is evident that different degrees of competition exist between at least the adjacent markets the European Communities alleges should be used to define the "subsidized product". In this light, we do not believe it would be appropriate to reject the United States' proposed subsidized product, and we will proceed with our analysis on that basis.⁵⁰⁹³

(ii) *Like product*

7.1671 The parties in this dispute take the position that a determination regarding like product is necessary in order to address the United States' claims of injury under Article 5(a), displacement and impedance under Articles 6.3(a) and (b), and price undercutting under Article 6.3(c).⁵⁰⁹⁴ We note that the Appellate Body in *US – Upland Cotton* raised but did not decide whether, in the case of a claim of significant price suppression under Article 6.3(c), the product identified by the complainant must be "like" the relevant subsidized product, and went on to note, but not address, the question whether, in a case involving alleged price suppression, price depression and lost sales, there is a requirement that the subsidized product and the relevant product of the complainant be "like".⁵⁰⁹⁵ The United States suggests that, even though the identification of a "like product" is not strictly required for claims under Article 6.3(c), the logical structure of Article 6.3(c) similarly requires the identification of a product of the complaining Member, the prices of which have been adversely affected by the subsidies.⁵⁰⁹⁶ In our view, it is not, strictly speaking, necessary to identify a "like product" within the meaning of footnote 46 of the SCM Agreement for purposes of assessing price suppression, price depression, or lost sales under Article 6.3(c).⁵⁰⁹⁷

with each other. In this regard, we note that there are overlapping seating capacities within that range between the A330 and A340 families posited by the European Communities, and seating capacities that are beyond that range in the A320 model family. EC, FWS, para. 1524 (tables).

⁵⁰⁹² The European Communities asserts that "many alleged subsidies" relate to specific families of Airbus LCA, but does not present evidence to substantiate its view, except with respect to LA/MSF, which is granted in connection with the launch of specific Airbus LCA models. EC, FWS, paras. 1551-1553 & 1637.

⁵⁰⁹³ HSBI evidence also supports the conclusion that there is some degree of competition among aircraft across the model families identified by the EC. Exhibits EC-98 (HSBI), EC-362 (HSBI), EC-375 (HSBI) and EC-398 (HSBI).

⁵⁰⁹⁴ US, FWS, para. 717; EC, FWS, para. 1515.

⁵⁰⁹⁵ Appellate Body Report, *US – Upland Cotton*, footnote 453.

⁵⁰⁹⁶ US, FWS, para. 717.

⁵⁰⁹⁷ See, Panel Report, *Korea – Commercial Vessels*, paras. 7.556-557, where the panel came to the same conclusion. However, as that Panel noted, it would seem logical that a complaining Member must identify the product(s) whose prices are allegedly undercut, suppressed, or depressed, or sales of which are allegedly lost. There is no dispute that the United States has done so in this case, and the European Communities makes no arguments in this respect.

BCI deleted, as indicated [***]

7.1672 The European Communities asserts that there are three Boeing "like products" corresponding to three of the Airbus "subsidized" products it has identified, and that there is no Boeing "like product" corresponding to the A380 "subsidized" product, and no Airbus "subsidized product" corresponding to the Boeing 747. However, in light of our conclusion regarding the subsidized product, we see no legal basis for the European Communities' position.

7.1673 As noted above, footnote 46 of the SCM Agreement defines like product as:

"a product which is identical, *i.e.*, alike in all respects to the product under consideration, or in the absence of such a product, another product which, although not alike in all respects, has characteristics closely resembling those of the product under consideration."⁵⁰⁹⁸

The definition of like product in footnote 46 specifically applies to the entire SCM Agreement.⁵⁰⁹⁹ In the context of an adverse effects dispute, the "product under consideration" referred to in footnote 46 must, we believe, be understood to be the subsidized product, which as we determined above, is in this case, all Airbus LCA.⁵¹⁰⁰ Thus, the like product for purposes of this dispute is a product that is "identical, *i.e.*, alike in all respects to the {subsidized product}, or in the absence of such a product, another product which, although not alike in all respects, has characteristics closely resembling those of the {subsidized product}.

7.1674 It seems clear to us that there is no United States' product which is **identical** to the subsidized product identified by the United States, all Airbus LCA. All the aircraft produced by both Airbus and Boeing have differences which preclude a finding of identity. On the other hand, it also seems clear to us that Boeing large civil aircraft, as a whole, is a product which has characteristics closely resembling those of Airbus large civil aircraft, as a whole. Thus, we consider that the relevant like product in this dispute is all Boeing LCA.

7.1675 The European Communities argues that because different Boeing LCA models compete in separate product markets with corresponding Airbus LCA models, and because physical characteristics are key to determining like product, the United States has improperly combined Boeing aircraft with enormous physical differences in arguing that there is one like product. This argument is essentially the same as that made by Canada in *US – Softwood Lumber V* and rejected by the panel in that dispute. As the definition of like product is the same for purposes of this case as for purposes of the AD Agreement, we consider decisions concerning like product under the AD Agreement to be relevant to our analysis in this case.⁵¹⁰¹ The report of the Panel in *US – Softwood Lumber V*, goes directly to the questions raised by the European Communities' argument. In that case, the United States had conducted countervailing and anti-dumping duty investigations of softwood lumber from Canada. Softwood lumber, the dumped product under consideration, included a broad range of articles. The United States' investigating authority found one like product, co-extensive with the

⁵⁰⁹⁸ SCM Agreement, footnote 46.

⁵⁰⁹⁹ "Throughout this Agreement the term "like product" (produit similaire) shall be interpreted..." SCM Agreement, footnote 46.

⁵¹⁰⁰ While the European Communities disputes the propriety of the subsidized product identified, it does not argue that the "product under consideration" in the context of this dispute is anything other than the subsidized product at issue.

⁵¹⁰¹ There is also a Ministerial Declaration on Dispute Settlement Pursuant to the AD and SCM Agreements, in which Ministers recognized the need for "consistent resolution of disputes arising from anti-dumping and countervailing duty measures." Given the focus of the Declaration on trade remedy disputes, it is not directly applicable in the context of an adverse effects dispute. However, since the term like product is defined for purposes of the entire SCM Agreement, we consider it appropriate to ensure that we apply a definition in this case which is consistent with that in applied by panels in the anti-dumping context, to avoid possible conflicts between the SCM and AD Agreements in this respect.

BCI deleted, as indicated [***]

dumped product under consideration. Before the Panel, Canada argued that "the individual products, constituting collectively the "like product", were not alike to each and every of the products collectively forming the product under consideration as they did not have characteristics closely resembling those of each and every of the individual products constituting collectively the product under consideration."⁵¹⁰² The Panel found no violation of Article 2.6 of the AD Agreement in the United States' investigating authority's definition of a single like product, coextensive with the product under consideration, rejecting Canada's argument that "the terms 'product under consideration' and 'like product' must be limited to a single group of products sharing characteristics".⁵¹⁰³

7.1676 Following this same line of reasoning, we conclude that the United States' product that is "like" Airbus LCA is Boeing LCA. We reach this conclusion despite the fact that there are clearly differences between individual Airbus models and even the most closely corresponding Boeing models, and the European Communities' arguments that the Airbus A380 does not compete with any Boeing aircraft, and that the Boeing 747 does not compete with any Airbus aircraft. As noted above, the A380 business case [***] this view.⁵¹⁰⁴ In addition, the United States has presented evidence that indicates that there is competition, specifically between the A380 and the Boeing 747, and that the A340 also competes with the 747 to a significant degree.⁵¹⁰⁵ That competition is based on similar characteristics of the aircraft which make it suitable for the same use, both generally, and specifically as large seating capacity aircraft. There is nothing in the definition of like product which, on its face, would require analysis of groups of articles within the subsidized product under consideration to determine a "most closely resembling" like product for each group, and we do not consider it appropriate or necessary to undertake such an analysis. Moreover, the definition of like product specifies that, in the absence of a product that is "identical, *i.e.*, alike in all respects to the product under consideration", the like product is defined as "another product which, although not alike in all respects, has characteristics closely resembling those of the product under consideration." Thus, even assuming we were to accept the European Communities' position that there are multiple subsidized products, and that there is no US-produced product which competes head-to-head with the A380, we would still have to find a United States' "like product" corresponding to a putative A380 subsidized product. In the absence of an identical product, another product with characteristics "closely resembling" those of the A380, which in this case would be the Boeing 747, would seem appropriate.

7.1677 The European Communities also argues, based on the report of the panel in *Indonesia – Autos*, that the determination of like product must be narrowly focused on the question of physical characteristics. However, the question the panel faced in that case was to determine which, of different models of automobiles produced by the complaining Members, could be considered the "like product" to the specific subsidized product, which was the single model, the Timor automobile, manufactured in Indonesia. The analogous circumstance, in the case of LCA, would be if the United States were complaining about subsidies to a single model of allegedly subsidized Airbus LCA, and the panel were seeking to decide which Boeing aircraft could be properly found to be "like" that single allegedly subsidized LCA model. Where, however, as here, the subsidized product under consideration includes the entire range of LCA models produced by Airbus, we see no bar to the conclusion that the corresponding range of aircraft produced in the complaining Member constitutes

⁵¹⁰² Panel Report, *US – Softwood Lumber V*, para. 7.155.

⁵¹⁰³ Panel Report, *US – Softwood Lumber V*, para. 7.157. In its report in *EC – Salmon (Norway)*, the Panel similarly rejected an argument that the product under investigation must comprise only goods that are all "like" one another, that is, be internally homogeneous.

⁵¹⁰⁴ Exhibit EC-362 (HSBI), p. 13.

⁵¹⁰⁵ US, Answer to Panel question 40, paras. 235-242 and references cited therein; US, FCOS, para. 63, US, SWS, paras. 654-56.

BCI deleted, as indicated [***]

an appropriate "like product" – that is, the "product which, although not alike in all respects, has characteristics closely resembling those of the product under consideration".⁵¹⁰⁶

7.1678 In *Indonesia – Autos*, the panel did state that "the analysis as to which cars have "characteristics closely resembling" those of the Timor logically must include as an important element the physical characteristics of the cars in question."⁵¹⁰⁷ However, an analysis of which goods produced in the United States are "like" the subsidized product can certainly consider the physical characteristics of the family of Airbus aircraft as a whole, similar to the analysis in *US – Softwood Lumber V*, and assess the correspondence between the range of aircraft on either side of the equation. Moreover, the Panel in *Indonesia – Autos* went on to observe:

"we do not see that the SCM Agreement precludes us from looking at criteria other than physical characteristics, where relevant to the like product analysis. The term "characteristics closely resembling" in its ordinary meaning includes but is not limited to physical characteristics, and we see nothing in the context or object and purpose of the SCM Agreement that would dictate a different conclusion."⁵¹⁰⁸

Thus, other criteria, including such matters as suitability for use, brand loyalty, customer perceptions, to the extent not dictated by physical characteristics, can also be taken into account.

7.1679 Finally, we note that, having concluded that there is a single subsidized product and a single corresponding like product, does not mean that we must conduct an undifferentiated or monolithic analysis of either injury under Article 5(a), or serious prejudice under Articles 6.3(a), (b), and (c). In the context of injury, which is defined for purposes of Article 5 as being used in the same sense as in countervailing duty cases,⁵¹⁰⁹ we note that the Appellate Body has stated that investigating authorities may examine injury in the trade remedy context by considering the effects of imports in market segments, so long as they do not ignore any market segments in such analysis, and the overall conclusions address the question of injury to the industry as a whole.⁵¹¹⁰ Similarly, we consider that, to the extent relevant, in our analysis of both injury and serious prejudice, we may examine alleged effects in particular market segments, for instance in individual sales campaigns, in which the subsidized and like products compete, or with respect to prices for specific models of LCA. Such a differentiated analysis will likely be relevant in our analysis of significant price undercutting, price suppression, price depression, and lost sales "in the same market".

7.1680 In summary, we conclude that it reasonable and appropriate to conduct the analysis of adverse effects on the basis of one subsidized product, all Airbus LCA, as proposed by the United States, and that there is a single United States' product that is "like" the subsidized product, namely all Boeing LCA.

⁵¹⁰⁶ We note that the range of aircraft on both sides of the question, subsidized product and like product, covers the full spectrum of existing large civil aircraft. No party has suggested that smaller aircraft should be considered a like product in this dispute, and we do not address that question.

⁵¹⁰⁷ Panel Report, *Indonesia – Autos*, para. 14.173.

⁵¹⁰⁸ *Id.*

⁵¹⁰⁹ Footnote 11, appended to Article 5(a) of the SCM Agreement, specifies: "The term "injury to the domestic industry" is used here in the same sense as it is used in part V {countervailing measures}."

⁵¹¹⁰ This view is based on the views of the Appellate Body to this effect in an anti-dumping dispute, Appellate Body Report, *US – Hot-Rolled Steel*, para. 204 ("it may be highly pertinent for investigating authorities to examine a domestic industry by part, sector or segment. ... where investigating authorities undertake an examination of one part of a domestic industry, they should, in principle, examine, in like manner, all of the other parts that make up the industry, as well as examine the industry as a whole. Or, in the alternative, the investigating authorities should provide a satisfactory explanation as to why it is not necessary to examine directly or specifically the other parts of the domestic industry.").

BCI deleted, as indicated [***]

5. Reference Period

(a) Arguments of the Parties

(i) *United States*

7.1681 The United States originally presented data and arguments covering the period 2001 through 2005 to support its claims of adverse effects. Subsequently, in its second written submission and oral statement and in response to questions from the Panel, the United States presented additional data for calendar year 2006.⁵¹¹¹ However, the United States argues that the Panel should not select a particular "reference period" for its examination of adverse effects.⁵¹¹² Rather, the United States argues that it is for the complaining Member, *i.e.*, the United States, to define the appropriate period, and then for the Panel to determine whether the complaining Member has set forth a *prima facie* case. In doing so, the United States argues that the Panel will be called upon to examine the evidence and arguments, including considering whether the time periods relied upon by the parties are adequate to meet their respective burdens of proof.⁵¹¹³

7.1682 With respect to its argument suggesting an end date for the consideration of adverse effects, *i.e.*, 2005, the United States argues that the "matter" the Panel is to examine is defined in the request for establishment, both in terms of substance, and in terms of temporal scope.⁵¹¹⁴ Thus, the United States contends that it is appropriate to consider data for the year in which the Panel was established, but not subsequent years, in deciding whether the subsidies in dispute cause adverse effects. The United States does, however, maintain that the adverse effects it has posited continued after establishment of the Panel, and continue to the present. The United States recognizes that evidence pertaining to any time period that is relevant to the matter before the Panel may be considered, but asserts that the contention that adverse effects ceased sometime after the Panel's establishment is not a defence to the United States' claim.⁵¹¹⁵ The United States argues that, as a matter of fact, any improvements in Boeing's situation in 2006 and subsequently do not demonstrate that adverse effects no longer exist.⁵¹¹⁶

7.1683 The United States recognizes the finding of the Panel in *United States – Upland Cotton* that serious prejudice should be found to exist "up to, and including a recent point in time".⁵¹¹⁷ However, the United States considers that "up to, and including a recent point in time" is appropriately understood as a period of several years up to and including the year in which the Panel was established, but does not include the period after that year.⁵¹¹⁸ The United States argues that a panel's terms of reference are fixed as of the date of its establishment, citing in this respect cases in which measures which expired or were terminated after establishment were nonetheless examined by Panels, and in particular the report in *EC – Biotech*.⁵¹¹⁹

7.1684 The United States submits that Article 6.7(c), relied on by the European Communities to argue that the Panel should exclude information from the period 2001-2003 from its analysis on the basis of *force majeure*, identifies a series of events that limit the ability of the complaining Member to export its product for reasons having nothing to do with subsidies. According to the United States, when such events can be established the causal link between subsidization and the loss of export

BCI deleted, as indicated [***]

market share will be broken. However, the United States argues that the downturn in the LCA market between 2001 and 2003 did not result from any inability of the United States' industry to produce or export LCA. The United States asserts that customers simply chose in increasing proportion to purchase LCA from Airbus rather than Boeing; a choice which meant that the burden of the market downfall fell disproportionately on Boeing.⁵¹²⁰

7.1685 The United States does acknowledge that data from any period, including the most recent, may be considered by the panel in conducting a long-term analysis of the effects of subsidies on the relevant market, but argues that neither the panel nor the Appellate Body in *US – Upland Cotton (Article 21.5 – Brazil)* endorsed the European Communities' view that only the most recent market trends were relevant. In particular, the United States disputes the view that adverse effects must be shown to exist during the most recent period in order for a panel to find present adverse effects.⁵¹²¹

(ii) *European Communities*

7.1686 The European Communities presents a series of arguments in support of its position that the appropriate reference period for the Panel's consideration should include data from the period 2004-2006, and where available and reliable, 2007, in determining whether subsidies cause adverse effects in 2006 (and 2007). First, the European Communities argues that use of data from the 2001-2003 period would be inconsistent with Article 6.7(c) of the SCM Agreement and with the requirement that the Panel undertake an objective assessment, on the basis that data from that period is distorted because of the effects of 11 September 2001 ("9/11").⁵¹²² The European Communities asserts that the LCA market, particularly in the United States, essentially crashed as result of the collapse in demand for air travel following the events of 9/11. This resulted in air carrier bankruptcies, cancelled orders, delayed orders, and efforts by customers to re-negotiate prices, leaving both Airbus and Boeing with aircraft in production which would not be taken by the original customer. The European Communities considers the events of 9/11 to constitute *force majeure* within the meaning of Article 6.7(c), and thus asserts that the period 2001-2003 must be considered unreliable as a starting point for assessing adverse effects.⁵¹²³

7.1687 Second, the European Communities asserts that the period used to assess trends relating to present material injury and serious prejudice must include a period of time that reflects, as closely as possible, the conditions of competition that exist today. The European Communities argues that the period 2004-2006 more closely reflects normal competition in the LCA markets, and should therefore be the relevant period. The European Communities considers that the data for 2001-2003 do not reflect normal conditions of competition, and therefore asserts that reliance on it is inappropriate, in addition to being inconsistent with Article 6.7(c) of the SCM Agreement.⁵¹²⁴

7.1688 Third, the European Communities notes that Article 6.4 of the SCM Agreement stipulates that the assessment of displacement or impedance be based on "an appropriately representative period ... which, in normal circumstances, shall be at least one year." The European Communities asserts that this is in line with what it describes as an "expressed preference" by the Appellate Body and panels

⁵¹²⁰ US, SWS, paras. 658-659; US, Answer to Panel Question 49(c).

BCI deleted, as indicated [***]

for a shorter period of time in the context of domestic trade remedy investigations, where the Appellate Body and panels emphasize that data and trends relating to the *most recent past* are the most relevant.⁵¹²⁵ In this respect, the European Communities relies on the decisions in disputes involving safeguard measures, *Argentina – Footwear (EC)*⁵¹²⁶ and *US – Lamb*⁵¹²⁷, as well as an anti-dumping dispute, *Mexico – Anti-Dumping Measures on Rice*.⁵¹²⁸ The European Communities argues that the guiding principle for injury investigations by investigating authorities is that the more recent the examined data, the more accurate the analysis of current injury will be. The European Communities notes that Footnote 11 to Article 5 of the SCM Agreement states that the term "injury to the domestic industry" is used in the same sense as in Part V, and argues that this preference should also apply in adverse effects cases.

7.1689 Finally, the European Communities argues that the time period 2004-2006 is consistent with the Panel and Appellate Body decisions in *US – Upland Cotton* and *US – Upland Cotton (Article 21.5 – Brazil)*. The European Communities asserts that the reference periods considered by the original panel and Appellate Body reports in that dispute covered years of high United States' upland cotton production and higher levels of United States' subsidies than previously, but based on arguments of the United States, it did not include marketing year 1998, which the United States asserted was a year of unusually high abandonment of United States' upland cotton acreage due to drought and, therefore, unusually low United States' upland cotton production.⁵¹²⁹ The European Communities argues that the principle to be derived from this report is that data in years with unusual conditions of competition should not be used for assessing trends offering guidance for present adverse effects under present normal conditions of competition. The European Communities asserts that this principle was supported by the United States in the implementation dispute in *US – Upland Cotton*, and was upheld by the panel and Appellate Body.⁵¹³⁰ The European Communities points out that in both the original and implementation disputes, information from after the date of panel establishment was presented and considered in order to assess whether "present" adverse effects existed.⁵¹³¹

7.1690 The European Communities submits that the events of 9/11 qualify as *force majeure* within the meaning of Article 6.7(c) of the SCM Agreement, and that as a consequence, data from 2001 to 2003 cannot be used to as a starting point for assessing adverse effects.⁵¹³² The European Communities recognizes that Article 6.7(c) of the SCM Agreement only refers to claims of displacement or impedance resulting in serious prejudice for the purpose of Article 6.3, but argues that it provides "important context" for determining the relevant time period for assessing other adverse effects claims.⁵¹³³ The European Communities argues that as a consequence, the three-year period from 2001 to 2003 must be excluded from the appropriate reference period for our evaluation of the United States' claims under Articles 6.3(a) and 6.3(b).⁵¹³⁴ In addition, the European Communities contends that conditions of competition between 2001 to 2003 do not reflect the present conditions of competition in the LCA industry. Thus, more generally, the European Communities questions the relevance of such "historical" data to a determination of whether or not there are *present*

adverse effects in the form of both injury and serious prejudice within the meaning of Articles 5(a) and (c), and Article 6.3(c), as well as Articles 6(a) and (b).⁵¹³⁵

(b) Arguments of Third Parties

(i) *Brazil*

7.1691 Brazil submits that the selection of an appropriate reference period is not a specific requirement of the SCM Agreement but rather is an analytical tool that should help a panel in the assessment of claims of adverse affects.⁵¹³⁶ It refers to the findings of the panel in *US – Upland Cotton* that an evaluation of an effects-based phenomenon cannot be "conducted in the abstract. Rather, discerning adverse effects of subsidies seems to us to require reference to a recent historical period."⁵¹³⁷ Thus, Brazil contends that the selection of the reference period should also take into account the specific nature and circumstances of the market in which the adverse effects are claimed to exist. This, according to Brazil, is consistent with the requirement that panels must conduct an objective assessment of the matter referred to them.⁵¹³⁸

(ii) *Canada*

7.1692 Canada submits that the SCM Agreement does not specify a particular reference period that must be used. Whatever period is chosen, it must be representative and allow for a thorough consideration of the issues.⁵¹³⁹

(c) Evaluation by Panel

7.1693 Articles 5(a) and (c) and 6.3(a), (b) and (c) do not specify any particular time period for a panel to consider in evaluating whether the subsidies in dispute cause adverse effects to the complaining Member's interests, either in the form of injury to the domestic industry of the complaining Member, or in the form of serious prejudice. Article 6.4 does indicate that, for purposes of analysis of impedance or displacement of exports under Article 6.3(b), a panel should examine changes in relative market shares "over an appropriately representative period sufficient to demonstrate clear trends in the development of the market for the product concerned, which, in normal circumstances, shall be at least one year." However, while this establishes a minimum period of data to be considered in normal circumstances, it does not provide any guidance regarding either a starting date, or an end date, of a relevant period. Nor does it provide any guidance as to the appropriate length of a relevant period, so long as a minimum of one year is generally respected in the context of an analysis under Article 6.4.

7.1694 It is clear that the finding we are required to make is whether there are "present" adverse effects caused by the subsidies in dispute, and the parties do not argue otherwise.⁵¹⁴⁰ Of course, it is impossible to assess the "present" situation, as immediate data is not available, and thus a review of the past is necessary to draw conclusions about present adverse effects. The issue we must consider here is what evidence we should take into account, what historical period we should refer to, in drawing such conclusions. In our view, in the absence of any specific guidance on this issue, we

⁵¹³⁵ EC, Answer to Panel Question 204, paras.279-280.

7.1198.

⁵¹³⁸ Brazil, Answer to Panel question 16, para.36.

⁵¹³⁹ Canada, Answer to Third Party Panel Questions, para. 17.

⁵¹⁴⁰ In this regard, we note that the text of Article 5 indicates a focus on the present, providing "{n}o member should **cause** ... adverse effects". The text of Articles 6.3 (a), (b) and (c) are even more plainly drafted with reference to the present, as each begins "the effect of the subsidy **is** ...". (emphasis added).

BCI deleted, as indicated [***]

should avoid making an *a priori* choice of reference period. The legal arguments of the parties do not establish that a panel is either precluded from, or required to, focus on either of the periods proposed by them, in the sense of a limitation on the panel's consideration of information in the abstract. Rather, we consider that it is our responsibility, in making a determination consistent with our obligations under Article 11 of the DSU, to examine the evidence put forward by the United States, and the rebuttal evidence put forward by the European Communities, including recent information where relevant and reliable, in determining whether the United States has demonstrated that subsidies cause present adverse effects within the meaning of Article 5 of the SCM Agreement. While this makes our task of assessment of the evidence more complicated, it serves to ensure that we carry out an objective examination, as required by Article 11 of the DSU, of all the evidence in reaching our conclusions.

7.1695 The European Communities argues that the reference period for our evaluation of the United States' claims under Articles 6.3(a) and 6.3(b) must exclude data from 2001 to 2003 because the events of 9/11 allegedly constitute *force majeure* within the meaning of Article 6.7(c). In our view, the European Communities' reliance on this provision for the purpose of identifying an appropriate reference period is misplaced. Article 6.7(c) provides:

"6.7 Displacement or impediment resulting in serious prejudice shall not arise under paragraph 3 where any of the following circumstances exist¹⁸ during the relevant period:

...

(c) natural disasters, strikes, transport disruptions or other *force majeure* substantially affecting production, qualities, quantities or prices of the product available for export from the complaining Member; ...

¹⁸ The fact that certain circumstances are referred to in this paragraph does not, in itself, confer upon them any legal status in terms of either GATT 1994 or this Agreement. These circumstances must not be isolated, sporadic or otherwise insignificant."

7.1696 Article 6.7(c) describes one particular circumstance, *force majeure*, which, if it exists "during the relevant period", precludes a finding of displacement or impediment resulting in serious prejudice under Article 6.3. Thus, Article 6.7(c) does not, by its own terms, concern the identification of the relevant period to be considered in a serious prejudice analysis. Indeed, its application is explicitly limited to the situation where the particular circumstance described occurs during the period relevant for a serious prejudice analysis. This implies that the relevant reference period must be established before consideration can be given to the applicability of Article 6.7(c). There is therefore no basis in Article 6.7(c) to support the European Communities' contention that the relevant reference period must be shortened by the three-year period during which the European Communities asserts that the effects of the alleged *force majeure* event (*i.e.*, 9/11) were felt.

7.1697 Moreover, we are not convinced by the European Communities' argument that the events of 9/11 constitute *force majeure* within the meaning of Article 6.7(c). Article 6.7(c) is one of six subparagraphs of Article 6.7 that describe circumstances which, if they exist during the relevant period, have the consequence that displacement or impedance resulting in serious prejudice under Article 6.3 "shall not arise". Thus, as we read it, Article 6.7 identifies six particular circumstances which affect

BCI deleted, as indicated [***]

the complaining Member in such a way as to make it unacceptable to attribute any market displacement or market impedance taking place during the relevant period to the use of subsidies by the defending Member. That is, the negotiators of the SCM Agreement agreed that, in the circumstances identified in Article 6.7(a)-(f), a finding of serious prejudice based on displacement or impedance should be legally precluded, without consideration of whether any such displacement or impedance is the effect of the subsidies in dispute.

7.1698 What amounts to *force majeure* is not defined in Article 6.7(c). However, "natural disasters, strikes {and} transport disruptions ... substantially affecting production, qualities, quantities or prices of the product available for export from the complaining Member" are identified as specific events that constitute *force majeure*. Moreover, it is clear that "other *force majeure*" events may fall within the scope of Article 6.7(c), provided they are also "substantially affecting production, qualities, quantities or prices of the product available for export from the complaining Member". Footnote 18 also provides that any *force majeure* event must not be "isolated, sporadic or otherwise insignificant". Thus, not all instances of what might, in a more general sense, be considered *force majeure*, will result in Article 6.7(c) being applicable.

7.1699 In our view, the plain meaning of the text of Article 6.7(c) indicates that a finding of displacement or impediment under Article 6.3 cannot be made where the market share effects alleged to constitute such displacement or impedance are the result of extraordinary ("*force majeure*") events which affect the supplies of the product available for export from the complaining Member, in this case the United States. In other words, as we read it, Article 6.7(c) contemplates *force majeure* events that have a substantial effect on supply, thereby limiting the ability of the complaining Member to export its product for reasons having nothing to do with subsidies. Thus, when a *force majeure* event, unrelated to subsidization, substantially affects production, qualities, quantities or prices of the product available for export from the complaining Member, a decrease in that Member's market share in an export market shall not constitute serious prejudice. The European Communities argues that the events of 9/11 and the resulting downturn in demand for LCA products in the market had a greater impact on Boeing's sales and prices, compared with Airbus. Even assuming this to be true, however, this does not demonstrate that the events of 9/11 substantially affected the availability of United States' LCA for export. According to the United States, Boeing's ability to produce, sell or export LCA in the period following 9/11 was unaffected.⁵¹⁴¹ Indeed, the European Communities does not present any evidence or argument suggesting that the events of 9/11 affected Boeing's ability to make LCA available for export. Thus, in our view, the downturn in the LCA market that followed the events of 9/11 did not substantially affect the supply of United States' LCA products, but rather affected demand for LCA. Thus, we do not consider that the events of 9/11 qualify as *force majeure* within the meaning of Article 6.7(c).

7.1700 However, even assuming that the types of *force majeure* contemplated under Article 6.7(c) include shocks affecting demand for particular products, we would nevertheless conclude that the events of 9/11 do not constitute *force majeure* within the meaning of that provision. In this regard, we note that each of sub-paragraphs of Article 6.7 describes a particular circumstance that in one way or another limits the volume of exports or imports of the relevant product from the complaining Member. It is significant, in our view, that each sub-paragraph identifies a circumstance that *does not also affect sales of the product of the defending Member in the same or similar way*. Article 6.7(a) refers to a "prohibition or restriction on exports of the like product from the complaining Member or on imports from the complaining Member into the third country market"; Article 6.7(b) describes a decision by an importing government monopoly or state trading entity, for non-commercial reasons, "to shift ... imports from the complaining Member to another country or countries"; Article 6.7(d) singles out the "existence of arrangements limiting exports from the complaining Member"; Article 6.7(e) focuses on a "voluntary decrease in the availability for export of the product concerned

⁵¹⁴¹ See, US, SWS, para. 660.

BCI deleted, as indicated [***]

from the complaining Member"; and Article 6.7(f) identifies a "failure to conform to standards and other regulatory requirements in the importing country". Thus, even assuming that demand-side shocks could fall within the scope of Article 6.7(c), in order to qualify as *force majeure*, such events would, like the other sub-paragraphs in Article 6.7, have to concern limitations on exports from the complaining Member that do not also affect the product of the defending Member in the same or similar way.

7.1701 In our view, to understand *force majeure* to include demand-side shocks that affect both the complaining and the defending Member's products in the same or similar way would undermine the purpose of Article 6.7, which as we have indicated above, is to identify a series of circumstances in which Members have agreed that the use of subsidies by a defending Member cannot be legally found to be the cause of serious prejudice in the form of market displacement or market impedance that may occur during the relevant reference period.

7.1702 Although the European Communities has submitted evidence showing that Boeing was affected more than Airbus by the events of 9/11,⁵¹⁴² it has not argued that Airbus' LCA business was not also negatively affected by the downturn following those events. Indeed, the European Communities has explained that:

"Data from 2001-2003 is heavily distorted because of the effect of the events of 9/11. LCA orders, deliveries, revenue, prices, and demand fell considerably as a result of the short-term collapse of demand for air travel, particularly into, within and from the United States. A number of US carriers and European airlines went bankrupt and cancelled LCA orders. Many other customers sought to delay the delivery of orders. These developments left both Airbus and Boeing with stocks of distressed aircraft, *i.e.*, aircraft under production, but for which the original customer would no longer take delivery."⁵¹⁴³

Furthermore, the European Communities has explicitly recognized that "as demand for LCA is driven by the demand from the airline industry, both Airbus and Boeing were directly affected by the severe impact" of 9/11.⁵¹⁴⁴

7.1703 Thus, the European Communities' own submissions do not pretend that Boeing was the only company affected by 9/11 or that Airbus was not also affected by those events in much the same way, albeit allegedly to a different degree. On the basis of the evidence before us, there is no doubt that the events of 9/11 were a major shock to the LCA market in general, and that demand for LCA from airlines in the United States was particularly hard hit. However, the effects of 9/11 were felt not only by Boeing but, as the European Communities has itself explained, they were also felt by Airbus, although allegedly to a lesser degree. Therefore, even assuming that the types of *force majeure* contemplated under Article 6.7(c) include events affecting market demand for particular products, the events of 9/11 were not of a kind that did not also affect Airbus in the same or similar way as Boeing. Consequently, even under this alternative view of the meaning of Article 6.7(c), we do not consider that they constituted *force majeure* within the meaning of Article 6.7(c) of the SCM Agreement.

7.1704 The second, and more general, argument made by the European Communities in reliance on the events of 9/11 concerns the relevance of data from 2001 to 2003 to a determination of whether or not there are *present* adverse effects in the form of both injury and serious prejudice within the meaning of Articles 5(a) and (c) and Article 6(c), as well as Articles 6(a) and (b). As we understand its argument, the European Communities is of the view that the Panel should either reject data from

⁵¹⁴² See, e.g., EC, FWS, paras. 1440-1467; EC, Answer to Panel Question 116.

⁵¹⁴³ EC, FWS, para. 1495 (footnotes omitted).

⁵¹⁴⁴ EC, Answer to Panel Question 204.

BCI deleted, as indicated [***]

this period as irrelevant to its analysis,⁵¹⁴⁵ or give that data very little probative value for the purpose of demonstrating *present* adverse effects. However, there are a number of factors specific to the LCA industry that lead us to consider that it is reasonable and appropriate, in an objective assessment of the United States' adverse effects claims, to review data over a relatively longer period of time. In particular, we note that there are long lead times for development of new LCA, and each model of LCA has a relatively long life once put into service.⁵¹⁴⁶ Moreover, orders for LCA are placed for future deliveries, sometimes over a period of many years, and sometimes starting well after the date of the order. Taken together with the long periods during which the subsidies have allegedly been supporting Airbus' development and production of LCA, these factors suggest to us that the consideration of data over a relatively longer historical period will better inform our understanding of the industry and market, and assist us in evaluating not only the allegations of adverse effects, but also the question of causation, than would be the case if we were to exclude information from a relatively recent, in the context of this industry, past.

7.1705 The European Communities insists that that we must assess whether subsidies "presently cause adverse effects, taking into account current factual conditions".⁵¹⁴⁷ We do not disagree. However, we see no contradiction between this proposition and a consideration of information over a longer historical reference period, particularly in this industry.⁵¹⁴⁸ Thus, we see no reason to exclude data from the years 2001 to 2003 *a priori* from our consideration.⁵¹⁴⁹ Of course, we will evaluate information concerning the more distant past carefully in assessing the relationship between the effects of subsidies as reflected in older data and the findings of present adverse effects the United States asks us to make in this dispute.

7.1706 The European Communities argues that shorter time periods are to be preferred in assessing the impact of subsidies, relying in part on statements by panels and the Appellate Body to that effect in disputes involving trade remedies (safeguards and anti-dumping measures).⁵¹⁵⁰ We consider that the European Communities has exaggerated the import of those reports for our analysis in this case. In particular, we consider that the differences between trade remedy disputes, and this dispute involving adverse effects of subsidies, supports the conclusion that there is, as a legal matter, no preference for a shorter period of time for examining adverse effects, whatever the case may be in trade remedy disputes.

⁵¹⁴⁵ The European Communities does not argue, in this context, that the Panel is precluded, as a matter of law, from considering information from 2001-2003, or any other period. EC, Answer to Panel question 204, para. 280.

⁵¹⁴⁶ Production of Airbus' first LCA model, the A300, launched in 1969 and first delivered to a customer in 1974 continued until March 2007. Production of the A310, launched in 1978 and first delivered to a customer in 1985, also continued until March 2007. All other LCA models Airbus has brought to market are currently in production, and Airbus LCA of all models remain in service world-wide.

⁵¹⁴⁷ EC, Comments on *US – Upland Cotton (Article 21.5 – Brazil)*, para. 24.

⁵¹⁴⁸ In this regard, we note the fundamental difference between the nature of the subsidies and the product in this dispute, and those in *US – Upland Cotton*. Allegations concerning the effects of largely one-off subsidies allegedly enabling the development of LCA, a product with a long life-span, as well as other subsidies benefitting the development and production of LCA over many years and allegations concerning annual production and income support subsidies to cotton farmers producing an annual crop, thus reflecting a more limited time frame, may well result in different time periods being relevant to the assessment of adverse effects under the SCM Agreement. We see nothing in the findings of the panels and Appellate Body in *US – Upland Cotton* which would limit our ability to consider information that is relevant to this dispute, simply because information from a corresponding time period might not have been relevant in that dispute.

⁵¹⁴⁹ We note that we have before us information and arguments relating to the period prior to 2001 as well, both with respect to the subsidies in dispute, and with respect to their effects. Our conclusions concerning the relevant reference period relate equally to such information, which we have taken into consideration in our analysis as relevant.

⁵¹⁵⁰ EC, FWS, paras. 1499-1501.

BCI deleted, as indicated [***]

7.1707 In trade remedy disputes, a panel is reviewing the decision of a national authority imposing, on a unilateral basis, a limitation on imports or an increase in tariff rates contingent upon a finding that a particular situation exists. In the case of safeguards, the necessary underlying determination is whether a "product is being imported ... in such increased quantities ... as to cause or threaten to cause serious injury to the domestic industry."⁵¹⁵¹ The focus of the Appellate Body on the importance of the recent past is related to the timing of the increase in imports, which it has found must be recent, in order to sustain imposition of the safeguard measure.⁵¹⁵² It is clear that if the triggering event is a recent increase in imports, then the injury must also be recent, and therefore, the analysis has focused on the recent past. However, this does not imply a necessary limitation on the time period for which information is gathered or analyzed by the investigating authority, which is undefined.⁵¹⁵³

7.1708 In anti-dumping cases, the necessary underlying determinations are that imports are dumped, and that "dumped imports are ... causing material injury" to the domestic industry.⁵¹⁵⁴ Similarly, in countervailing duty cases, the necessary underlying determinations are that imports are subsidized, and that "subsidized imports ... causing material injury" to the domestic industry.⁵¹⁵⁵ The Appellate Body pointed out in *Mexico – Anti-Dumping Measures on Rice*, that "because the conditions to impose an anti-dumping duty are to be assessed with respect to the current situation, the determination of whether injury exists should be based on data that provide indications of the situation prevailing when the investigation takes place."⁵¹⁵⁶ However, the Appellate Body went on to note that this did not mean that a past period was not to be examined.⁵¹⁵⁷ There is nothing in the Appellate Body's views, that imposes any limit on the length of the relevant period. Moreover, the Appellate Body made it clear that relying on evidence from a "remote investigation period" was not *per se* a violation of Article 3.1 of the AD Agreement.

7.1709 In trade remedy cases, investigating authorities routinely analyze information for a pre-determined period of investigation, and may not consider, or even accept information for any time after the end of that period. Indeed, for many investigating authorities, the period of investigation is defined in governing statute or regulation, which may prohibit the consideration of information outside that period.⁵¹⁵⁸ Thus, the determination ultimately made at the end of the investigation may be based on data that is quite old. In the disputes relied upon by the European Communities to argue that we must focus on the most recent data, complainants argued to the panels and the Appellate Body that the information on which the determinations were based was stale, and therefore could not be relied

⁵¹⁵¹ Agreement on Safeguards, Article 2.1 (emphasis added).

⁵¹⁵² See, Appellate Body Report, *Argentina – Footwear (EC)*, paras. 130-131. See, also, Panel Report, *US – Lamb*, paras. 7.129 and 7.132, and Appellate Body Report, *US – Lamb*, paras. 137 – 138, (importance of recent data in context of analysis of threat)..

⁵¹⁵³ In *US – Lamb*, the Appellate Body noted that, in analysing threat, "although data from the most recent past has special importance, competent authorities should not consider such data in isolation from the data pertaining to the entire period of investigation. ... If the most recent data is evaluated in isolation, the resulting picture of the domestic industry may be quite misleading." Appellate Body Report, *US – Lamb*, para. 138. The Appellate Body did not suggest any limitation on the relevant period of investigation.

⁵¹⁵⁴ AD Agreement, Article 3.5.

⁵¹⁵⁵ SCM Agreement, Article 15.5.

⁵¹⁵⁶ Appellate Body Report, *Mexico – Anti-Dumping Measures on Rice*, para. 165.

⁵¹⁵⁷ Appellate Body Report, *Mexico – Anti-Dumping Measures on Rice*, para. 166.

⁵¹⁵⁸ The Committee on Anti-Dumping Practices has adopted a recommendation on periods of data collection, which while not binding on Members, indicates agreement about practices in the conduct of anti-dumping investigations that Members believe are consistent with the requirements of the Anti-Dumping Agreement. Document G/ADP/6, 16 May 2000. That recommendation provides that the "period of data collection for injury investigations normally should be at least three years", but recognizes that "such guidelines do not preclude investigating authorities from taking account of the particular circumstances of a given investigation in setting the periods of data collection for both dumping and injury, to ensure that they are appropriate in each case." Similarly, we consider that the particular circumstances of this dispute should be taken into account in order to ensure that data for an appropriate period is examined in our analysis.

BCI deleted, as indicated [***]

upon to support the findings made, and panels and the Appellate Body have agreed. Indeed, both the panel and Appellate Body in *Mexico – Anti-Dumping Measures on Rice* questioned the relevance and pertinence of evidence from a period ending fifteen months before the initiation of the investigation and almost three years before the imposition of anti-dumping duties to the finding of material injury, and indicated that more recent data is likely to provide better indications about injury.⁵¹⁵⁹ Thus, this case stands for the proposition that when a determination is made with reference to information for a particular period of investigation, if the end of that period is too remote in time, the information may be insufficient to establish, as a matter of fact, the conditions necessary for imposition of the remedy at the time of the decision.⁵¹⁶⁰ The cases do not, however, establish any principles regarding the appropriate length of the period, or how far back its starting point may be.

7.1710 Moreover, unlike the cases relied upon by the European Communities, in this dispute, the information before us is not "stale". In this regard, we note that although this Panel was established in July 2005, we agreed, at the parties' request, to set aside our timetable until September 2006, with the result that the United States' first submission was not filed until November 2006, and our meetings with parties and third parties were held in March and July 2007. We continued to receive answers to questions, including further information we requested from the parties in January 2008, and further comments as late as July 2008.⁵¹⁶¹ Thus, we have before us information as recent as could feasibly be considered, consistent with considerations of due process. Particularly in a dispute involving an industry with long development and production time-frames such as the LCA industry, we see no reason to limit the length of time over which we will consider information to only the most recent period.

⁵¹⁵⁹ Panel Report, *Mexico – Definitive Anti-Dumping Measures on Beef and Rice, Complaint with Respect to Rice ("Mexico – Anti-Dumping Measures on Rice")*, WT/DS295/R, adopted 20 December 2005, as modified by Appellate Body Report WT/DS295/AB/R, DSR 2005:XXIII, 11007, para. 7.58; Appellate Body Report, para. 166.

⁵¹⁶⁰ How far in the past is too remote in time is a question to be assessed in each case on the particular facts. In *Mexico – Steel Pipes and Tubes*, a determination based on data from an investigation period that terminated about eight months prior to the initiation and about two years prior to the imposition of the definitive measures was found **not** inconsistent with the *AD Agreement*. Panel Report, *Mexico – Anti-Dumping Duties on Steel Pipes and Tubes from Guatemala ("Mexico – Steel Pipes and Tubes")*, WT/DS331/R, adopted 24 July 2007, para. 7.240. The Panel in the latter case distinguished its decision from the decision in *Mexico – Anti-Dumping Measures on Rice*. The Appellate Body stressed that the conclusion of the Panel in *Mexico – Anti-Dumping Measures on Rice* related to the specific circumstances of the case, such that a *prima facie* case was established that the information did not, in fact, provide reliable indications of current injury. Appellate Body Report, *Mexico – Anti-Dumping Measures on Rice*, para. 167. Among those circumstances were the fact that the investigation period had been proposed by the petitioner seeking the imposition of anti-dumping duties, there were no practical problems necessitating that period be considered, no attempt was made to update the information during the course of the investigation, it was not established that updating the information was not possible, and there were no reasons, other than general practice of the investigative authority, why more recent information was not sought. Appellate Body Report, *Mexico – Anti-Dumping Measures on Rice*, para. 167. Thus, the Appellate Body concluded, "it is not only the remoteness of the period of investigation, but also these other circumstances" that were the basis for the Panel's conclusion that Mexico's selection of the period of investigation was in violation of its obligations under the *AD Agreement*. Appellate Body Report, *Mexico – Anti-Dumping Measures on Rice*, para. 167.

⁵¹⁶¹ Following the issuance of the Appellate Body report in *US – Upland Cotton (Article 21.5 – Brazil)*, the Panel afforded both parties an opportunity to submit "comments, if any, on the Appellate Body Report in *US – Upland Cotton (Article 21.5 – Brazil)* circulated to the WTO Members on 2 June 2008, and the Panel Report as modified by the Appellate Body Report" noting that it was "interested in the comments of the parties to the extent that the parties deem the Appellate Body Report and the Panel Report as modified by the Appellate Body Report to be pertinent to the present dispute" The Panel further afforded both parties an opportunity to submit comments on each other's comments. In these later submissions, the European Communities continued to submit information relating to even later periods than that which we had requested.

BCI deleted, as indicated [***]

7.1711 In a dispute alleging adverse effects, a panel is called upon to decide, for itself, whether a Member is causing, through the use of subsidies, adverse effects to the interests of another Member. As the Appellate Body recognized in *US – Upland Cotton*, there may well be a time lag between the payment of a subsidy and the consequential adverse effects.⁵¹⁶² Particularly where, as here, the subsidies in dispute have been granted over a long period of time, and the industry and market operate on long time-frames, there seems to us no reason to conclude that consideration of evidence covering a shorter time period would be preferable to consideration of evidence covering a longer period. Indeed, we note that in both *US – Upland Cotton* and *Korea – Commercial Vessels*,⁵¹⁶³ parties submitted, and the panels considered, data covering longer periods of time, from six to ten years, in their analysis, without expressing a particular justification.

7.1712 We find rather curious the notion that we should exclude certain information submitted by a party from our consideration, because it relates to a period more remote in time than other information that has also been submitted. In our view, we might well be viewed as failing to fulfil our obligation to undertake an objective examination of the evidence, were we to decline to consider information which is, on its face, relevant to the issues that are before us.⁵¹⁶⁴ Thus, we believe that it is more appropriate to consider all the information that has been put before us, and assess it in light of the arguments of the parties, than to make *a priori* judgments as to a defined and limited reference period, beyond which we will not look.

7.1713 This is not to suggest that we would make a finding that adverse effects manifested at some time in the past are sufficient to support a finding of violation of Article 5.⁵¹⁶⁵ In our view, it is appropriate to take into account the most recent available, relevant and reliable data that we could evaluate in a manner consistent with the requirements of due process, and in light of practical limitations, including in this case data from 2006.⁵¹⁶⁶ However, we agree with the United States that the question before us is not whether serious prejudice in terms of displacement, impedance, or price effects, or injury to Boeing, has lessened since 2005, but whether, whatever changes there may have been in the most recent period, the subsidies in dispute cause present adverse effects. In this regard, we note that an improvement in the situation in the most recent period does not preclude a finding of present adverse effects. To the contrary, should we conclude that the present situation is worse than it would have been in the absence of the subsidies, and by a sufficient degree, we may find present adverse effects despite improvements in the most recent period.

7.1714 Finally, as implied by the discussion above, we reject the United States' view that we are required to make our determination concerning adverse effects "as of" the date of establishment of this panel in July 2005. While the exigencies of collecting, submitting, and analysing relevant information necessarily means that any decision will be based on a past period, we are nonetheless charged with making a determination of **present** adverse effects, and therefore consider that it behoves us to take into account the most recent information available to us, consistent with due process, that is relevant and reliable. Moreover, in both the original and implementation disputes in *US-Upland Cotton*, the panel took into account information from a period beyond the date of its

⁵¹⁶² Appellate Body Report, *US – Upland Cotton*, para. 273.

⁵¹⁶³ Panel Report, *Korea – Commercial Vessels*.

⁵¹⁶⁴ The probative value and weight to be accorded such evidence is, of course, to be considered through the course of our analysis.

⁵¹⁶⁵ We recall that the Panel in *US – Upland Cotton* observed that "{s}ubsidies granted under expired measures may have had adverse effects at the time they were in effect, and may still have lasting adverse effects." Panel Report, *US – Upland Cotton* para 7.1201, citing, Panel Report, *Indonesia – Autos*, para. 14.206. Certainly, in our view, subsidies granted with respect to products still being manufactured and sold may be found to still be having adverse effects, despite the fact that the subsidies causing these effects were granted at some time in the past.

⁵¹⁶⁶ While we have not excluded information relating to periods subsequent to 2006, we will not rely on it specifically in making our findings of fact in the context of adverse effects.

BCI deleted, as indicated [***]

establishment, at least in part based on arguments made by the United States. The United States argues that the "ordinary rules of WTO dispute settlement" indicate that a panel's terms of reference are fixed as of the time of panel establishment, and thus that we should make our ruling as of that date.⁵¹⁶⁷ The United States suggests that the willingness of the panel to take into account information from a period beyond the date of its establishment in *US – Upland Cotton (Article 21.5 – Brazil)* does not suggest any different understanding of its terms of reference, and that there is a difference between whether evidence is relevant and may be taken into account and whether a panel is to make findings with respect to events that happened after its establishment.⁵¹⁶⁸

7.1715 We consider the distinction the United States draws in this regard to be inaccurate. The United States acknowledges that market data regarding a period after establishment may be taken into account in making our determination.⁵¹⁶⁹ In our view, if evidence about a period after the establishment of the Panel is relevant and may be taken into account in our analysis, then our findings based on that analysis cannot logically be understood as being made "as of" the date of establishment.

6. Conditions of Competition

7.1716 Before proceeding to consider the parties' arguments concerning adverse effects, we consider it important to set out our understanding of the basic structure of the LCA industry overall, and the conditions and nature of competition in the market for LCA, in order to establish the background and context for our analysis of whether the subsidies we have found to exist cause, or threaten to cause, adverse effects within the meaning of Articles 5(a) and (c) of the SCM Agreement.

7.1717 The design, testing, certification, production, marketing and after-delivery support of LCA is an enormously complex and expensive undertaking, which requires huge up-front investments over a period of three to five years before any revenues are obtained from customers.⁵¹⁷⁰ A rough rule of thumb is that at least 600 airplanes of a new model must be sold before the revenues for a programme exceed the costs. Economies of scale arising from the huge sunk development cost give incumbent firms a considerable competitive advantage. Learning effects induce dynamic economies of scale which reinforce incumbents' advantage. Economies of scope make it difficult to enter one market segment only. Switching costs make it more difficult for new producers to enter, and most airlines prefer fleet commonality. Incumbent firms have a strong incentive to adopt entry deterring price strategies. Historically, according to one commentator, few airplane programmes have been financial successes.⁵¹⁷¹ Uncertainty is considerable, making it very difficult to finance the huge development cost on capital markets. Finally, the fact that aircraft are typically sold in USD exposes non-American manufacturers to exchange rate fluctuations which increase uncertainty and are costly to cover against.⁵¹⁷²

7.1718 Boeing and Airbus are at present the world's only LCA producers. Two other US producers, Lockheed and McDonnell Douglas, exited the LCA market in 1981 and 1997, respectively.⁵¹⁷³

⁵¹⁷³ Boeder & Dorman, 132-33, Exhibit US-373. Very limited LCA production exists in Russia. According to the United States, difficulties in obtaining the necessary funding for the development of LCA that can meet international airworthiness certification standards have prevented Russian LCA producers from

BCI deleted, as indicated [***]

Boeing is a long-established manufacturer of LCA, while Airbus launched its first model, the A300, in 1969, and first entered it into service in 1974.⁵¹⁷⁴ Both Airbus and Boeing now produce a full range of different models of LCA and sell to the full range of customers, primarily airlines and aircraft leasing companies.⁵¹⁷⁵ In this competitive duopoly, the United States argues that the two producers compete head-to-head for virtually all LCA sales, in a largely "zero sum" competition – a "win" for one producer, in terms of sales, is almost always a loss for the other.⁵¹⁷⁶ The European Communities agrees that the competitive duopoly between Airbus and Boeing has resulted in vigorous competition between the two companies, but asserts that this competition is welcomed by both companies, as well as by purchasers of aircraft,⁵¹⁷⁷ and has generated numerous new and innovative LCA products.⁵¹⁷⁸ The European Communities argues that the competition between the two companies fosters lower prices for LCA purchasers and increased demand for air travel by the flying public which is the ultimate driver of the financial health of both Boeing and Airbus.⁵¹⁷⁹ According to the United States, however, lower prices for LCA do not significantly increase demand,⁵¹⁸⁰ because demand for LCA is generally derived from demand for air travel services, and the cost of the aircraft itself is only a small portion of total airline operating costs.⁵¹⁸¹

seriously competing with Boeing and Airbus for LCA sales outside the former Soviet bloc. *See*, US International Trade Commission, *The Changing Structure of the Global Large Civil Aircraft Industry and Market*, Inv. No. 332-384 (November 1998) at Ch. 4, Exhibit US-374; *EC Merger Analysis*, Exhibit US-375. The European Communities does not consider the evolution of the current competitive situation relevant, but asserts that the United States has made false statements of fact regarding the market exits of McDonnell Douglas and Lockheed. According to the European Communities, Lockheed left the LCA business because of a combination of misjudgements in aircraft design and cost overruns in its military aircraft development operations, while McDonnell Douglas ceased operating because of an unwillingness to invest in the future, an over-reliance on derivative rather than new models of LCA, and a series of crashes. McDonnell Douglas' LCA operations merged with Boeing in 1997. EC, FWS, paras. 1386-88.

⁵¹⁷⁴ EADS offering memorandum (2000), Exhibit EC-24, pp. 68-70; EADS offering memorandum (2001) Exhibit EC-25, pp. 41-42.

⁵¹⁷⁵ Aircraft leasing companies essentially are an intermediary between LCA manufacturers and airlines – they purchase LCA, but do not operate them, leasing them to airlines, which thus do not have to themselves finance the purchase of the LCA. *See*, Statement of Christian Scherer, Exhibit EC-14 (BCI) at 30-36.

⁵¹⁷⁶ US, FWS, para. 711.

⁵¹⁷⁷ EC, FWS, paras. 1376, 1378, 2272.

⁵¹⁷⁸ Indeed, the European Communities contends that Boeing acknowledges that it *needs* a strong Airbus competitor, citing remarks by Randy Baseler, Boeing's marketing chief. EC, FWS, para. 1380, citing Boeing, "Randy's Journal: Staying focused," 6 October 2006, http://www.boeing.com/randy/archives/2006/10/staying_focused.html (visited 30 January 2007), Exhibit EC-277.

⁵¹⁷⁹ Paul Wachtel, "Critique of 'The Effect of Launch Aid on The Economics of Commercial Airplane Programs' by Dr. Gary J. Dorman," 31 January 2007 (hereinafter "Wachtel Report"), Exhibit EC-12, para. 9. Dr. Wachtel is a professor of economics at New York University's Stern School of Business. His educational credentials include a BA, cum laude, Queens College, CUNY, and an MA and PhD in Economics from the University of Rochester.

⁵¹⁸⁰ According to the US, "industry analysts recognize that lower prices for LCA do not significantly increase LCA demand – or, in economic terms, "the price elasticity of demand for aircraft in general will most likely be rather small.", citing Klepper, Exhibit US-377; *see also*, Dorman Report, Exhibit US-70 (BCI), p. 8. This is because demand for LCA is generally derived from demand for air travel services, and the cost of the aircraft itself is only a small portion of total airline operating costs. *E.g.*, Klepper, Exhibit US-377, at 785-86. The European Communities disputes the US view that "lower prices for LCA do not significantly increase LCA demand," asserting that the evidence regarding individual sales campaigns demonstrate otherwise. Thus, the European Communities asserts that not every order received by one company harms the other, but a lack of balance in market share creates an unhealthy competitive environment. EC, FWS, para. 1400.

⁵¹⁸¹ Gernot Klepper, *Entry into the Market for Large Transport Aircraft*, 34 European Econ. Rev., 775, 786 (1990), Exhibit US-377; *see also*, Dorman Report at 8, Exhibit US-70.

BCI deleted, as indicated [***]

7.1719 As noted, customers for LCA are primarily airlines and aircraft leasing companies. Sales of LCA tend to be very large, in terms of numbers of aircraft and dollar amounts,⁵¹⁸² but relatively infrequent. While orders tend to be very large and sporadic, deliveries of ordered LCA tend to be of individual aircraft, spaced over a period of several years subsequent to the order date, depending on the purchaser's anticipated needs and financing.⁵¹⁸³ In general, the terms and conditions of an aircraft purchase are set at the time of order, including aircraft specifications, net price, discounts, non-price concessions and financing arrangements. While the bulk of the purchase price is generally paid upon delivery, deposits are generally required at the time the order is placed, and pre-delivery payments may begin as early as the conclusion of the sales contract.⁵¹⁸⁴ However, most sales contracts include provisions for price escalation in line with inflation, and in addition, orders may be cancelled, deliveries pushed out over longer periods of time, and sales terms renegotiated.⁵¹⁸⁵

7.1720 Customers choose among the various LCA models available those they deem most suitable for their needs at the time of ordering. In making their purchase decisions, customers will consider such matters as the route structure to be served by the aircraft, the structure of the existing fleet, and operating costs, with a view to minimizing costs and maximizing revenues. Some airlines purchase a mix of LCA models to serve a variety of needs, while others may limit themselves to one LCA model because of the efficiencies generated by the operation of a single aircraft type. Once an airline orders any particular LCA model from a given manufacturer, efficiencies in operating a fleet of similar aircraft (including those related to spare parts, maintenance and training) favour follow-on orders of the same models, as well as orders of other aircraft models from the same manufacturer, in order to take advantage of commonalities across an LCA fleet.⁵¹⁸⁶ Leasing companies both purchase new LCA on a speculative basis for subsequent lease to airline customers, and act as intermediaries between airlines and manufacturers offering LCA financing or operating leases.⁵¹⁸⁷ Leasing companies account for a significant percentage of all orders for LCA, approximately 17 percent between 2000 and 2006, and accounted for approximately 25 percent of deliveries in that period.⁵¹⁸⁸

7.1721 Contrary to the United States' view that Airbus and Boeing compete head-to-head for virtually every LCA sale, the European Communities asserts that a significant number of orders secured by Airbus and Boeing do not involve competition between the two manufacturers. Rather, the European Communities asserts, customers often decide to order a certain aircraft model without considering the competitor's equivalent product, because they prefer, for one reason or another, one manufacturer's aircraft. In addition, the European Communities notes that an LCA manufacturer may decide that it does not want to be involved in a certain sales campaign, or cannot compete for lack of having a product that can fulfil the customer's requirements, citing as an example a customer needing a 555-seat aircraft, which need is only met by the Airbus A380. The European Communities also contends that LCA are sometimes ordered as a result of geopolitical considerations, especially when an airline is state-owned. An airline may also choose to exercise options or purchase rights without initiating a

⁵¹⁸² As noted above, LCA are priced and sold in US dollars.

⁵¹⁸³ *EC Merger Analysis*, Exhibit US-375, para. 25.

⁵¹⁸⁴ Statement of Rod P. Muddle, Exhibit EC-19, paras. 58-60.

⁵¹⁸⁵ US, Answer to Panel Question 132, para. 430.

⁵¹⁸⁶ US, FWS, para. 712. For example, the United States notes that AirAsia purchased 40 Airbus A320s and took options on 40 more in December 2004 after a vigorous competition between Boeing and Airbus. Air Asia's subsequent orders – an additional 20 A320s in 2005, followed by a firm order for 40 more A320s in July 2006 (plus 30 additional options) – allegedly flowed directly from the choice the airline made in the 2004 campaign, rather than from a new competition between the producers. AirAsia Press Release: *AirAsia Firms Up Option for 40 More Airbus A320s and Signs Another 30 Options* (July 20, 2006), Exhibit US-378. The European Communities also recognizes this tendency to follow a purchase from one manufacturer with further purchases of that manufacturer's LCA. EC, FWS, para. 1421.

⁵¹⁸⁷ Statement of Rod P. Muddle, Exhibit EC-19, paras. 18-26.

⁵¹⁸⁸ Statement of Rod P. Muddle, Exhibit EC-19, para. 20.

BCI deleted, as indicated [***]

bidding process.⁵¹⁸⁹ On the other hand, customers may decide to diversify, and follow-on orders can also be the subject of fierce competition.⁵¹⁹⁰ Moreover, life-time engine maintenance contracts have enabled airlines to operate more diversified fleets.⁵¹⁹¹

7.1722 In asserting that a significant number of orders do not involve competition between Boeing and Airbus, the European Communities relies on the statement of Mr. Christian Scherer, Head of Future Programmes for Airbus. Mr. Scherer states that in Airbus' view, an order results from a "competitive" sales campaign if Airbus has made a "formal binding offer to sell LCA under particular terms and conditions."⁵¹⁹² Mr. Scherer defines a "competitive {sales} campaign" as one in which Airbus provided the airline with such a formal binding proposal. Thus, in the absence of such a proposal, he considers that the campaign was non-competitive. He also concludes, based on documents and the collective memory of Airbus personnel, that where Boeing was not "involved, in one way or another", an order for Airbus LCA was the result of a non-competitive campaign, and that all orders [***].⁵¹⁹³ We consider this definition to be too narrow, in the circumstances of this industry, to reliably define whether or not there was competition between Boeing and Airbus with respect to any given sale. With only two producers in a highly competitive industry, and knowledgeable customers in both airlines and leasing companies, we consider that sales campaigns involve competition even in the absence of a "formal, binding proposal" by either manufacturer, albeit perhaps not to the same degree as when such a proposal is made. Given the importance of LCA costs to the customers' successful operations, we cannot accept the implication that customers knowledgeable about the market would not consider the competitive products available from the two producers in most cases, even if formal offers are neither requested nor made in a particular instance.

7.1723 The European Communities maintains that the best measure by which to assess the current competitive relationship between Airbus and Boeing is order data; while the United States takes the view that actual deliveries are the best measure of market share. There is generally about three years between order and delivery of aircraft, and the European Communities asserts that order data thus provide the best measure of the current competitive relationship, as well as the future health of both Airbus and Boeing. For the European Communities, delivery and order backlog data indicate what was sold in the past and what is and will be manufactured in the future, but they provide limited insight into the present competitive relationship between Airbus and Boeing.⁵¹⁹⁴ The European Communities rejects the view that an order won by one producer represents an order lost by the other. In this respect, the European Communities notes that customers can either order new LCA from either producer, purchase used LCA, or lease LCA. The European Communities argues that in a significant number of sales campaigns, competition is with a potential purchase of used LCA or a lease, rather than with the other manufacturer. For the European Communities, to the extent that Boeing is not involved in these sales, an Airbus "win" cannot be considered a "loss" to Boeing.⁵¹⁹⁵

⁵¹⁸⁹ See, Statement of Christian Scherer, Exhibit EC-14, (BCI).

⁵¹⁹⁰ EC, FWS, para. 1421.

⁵¹⁹¹ See, Statement of Rod P. Muddle, para. 33, Exhibit EC-19.

⁵¹⁹² Statement of Christian Scherer, Exhibit EC-14 (BCI), para. 45.

⁵¹⁹³ *Id.* at Annex I, paras. 54-56.

⁵¹⁹⁴ The European Communities cites statements by Airbus and Boeing officials, as well as financial and aerospace analysts to support the view that order market share is the more appropriate benchmark for evaluating the present. Statement of Christian Scherer, paras. 24, 26, Exhibit EC-14, (BCI), *Randy's Journal: Looking ahead*, 23 January 2007, Exhibit EC-286 (Non-BCI), *Boeing Management and Aftermarket Suppliers are Topics in Wall Street Transcript Aerospace/Defence Report*, Yahoo finance, 6 April 2005, Exhibit EC-287, *"Boeing Shares Could Reach \$140 By 2009"* Forbes.com, 12 April 2006 <http://www.forbes.com/markets/2006/04/12/boeing-0412markets11.html> (visited 4 January 2007), Exhibit EC-247

⁵¹⁹⁵ The European Communities asserts that approximately [***] of the A320 family orders, [***] of A330 family orders and [***] of A340 family orders resulted from competitive campaigns, while approximately

BCI deleted, as indicated [***]

7.1724 While it may well be that there is not clear head-to-head competition for each and every sale of LCA, it is apparent to us that, with only two manufacturers in the market, there is overall competition between Boeing and Airbus for all sales of LCA. It is also clear that competition for sales is, in effect, competition for orders, as LCA are generally ordered for future delivery.⁵¹⁹⁶ Thus, data concerning orders is informative as to the competition for sales between Airbus and Boeing. However, data for deliveries is also important, as there are many factors that can intervene between order and actual delivery. Changes in the terms and conditions of sales between order and delivery will affect the manufacturer involved and the situation in the market in ways which may be important to consideration of the question of adverse effects.⁵¹⁹⁷ Moreover, deliveries provide a picture of the number of LCA actually entering a given geographical market at a given time. Thus, an exclusive focus on either deliveries or orders would not allow for a complete understanding of the market and changes relevant to our analysis in this dispute.

7.1725 When choosing aircraft, airlines evaluate the economics of the competing aircraft from both Airbus and Boeing, and the impact those factors will have on the revenues that the aircraft can be expected to generate over its economic life of approximately 30 years.⁵¹⁹⁸ In doing so, customers quantify and weigh numerous factors, including price, net of concessions such as cash discounts, scheduled pre-delivery payments, provisions for price escalation,⁵¹⁹⁹ and guarantees related to performance, maintenance, or residual value;⁵²⁰⁰ financing, including consideration of elements such as direct financing support by the manufacturer; date of delivery; engine manufacturers; the make-up of existing LCA in the purchaser's fleet and cost of change and cost of diversifying,⁵²⁰¹ and direct operating costs, such as fuel efficiency.⁵²⁰² Each customer has different cost-related concerns, and so different aspects may be valued differently by different customers or at different times.⁵²⁰³ Each of

[***] of 737NG orders, [***] of 767 orders, [***] of 777 orders, [***] of 787 orders and [***] of 747 orders resulted from competitive campaigns. Statement of Christian Scherer, Exhibit EC-14 (BCI), paras. 54-56 and Annexes I and II. We do not agree with this categorization of "competitive" vs. "non-competitive" campaigns. *See*, para. 7.1722 above.

⁵¹⁹⁶ The parties agree that LCA manufacturers rarely have inventories of LCA. US, FWS, para. 746, footnote 934; EC, FWS, para. 2245. *See, also*, EC, FWS, footnote 2216.

⁵¹⁹⁷ As discussed further below, we have considered information concerning both deliveries and orders, albeit the two categories of information are not equally relevant to all aspects of our analysis. *See*, paras. 7.1745 - 7.1750.

⁵¹⁹⁸ Airbus North America Holdings Inc., Key Determinants of Competitiveness in the Global Large Civil Aircraft Market: An Airbus Assessment (March 2005) at 17-18 ("Airbus, Key Determinants"), Exhibit US-379 (BCI).

⁵¹⁹⁹ Because LCA are often delivered years after the original order, both Airbus and Boeing generally apply a standard "price escalation" formula that adjusts the order price (in order year dollars) for inflation in aircraft manufacturing costs to determine the price payable for the aircraft on delivery (in delivery year dollars).

⁵²⁰⁰ Residual value refers to the value of the aircraft upon resale by the original customer. For example as part of its sale of 120 aircraft to easyJet in 2002, Airbus guaranteed the residual value of Boeing aircraft owned by easyJet by offering to purchase the Boeing aircraft itself, if necessary, at a predetermined minimum price. Airbus also guaranteed that the cost of maintenance would not exceed easyJet's cost of maintaining its existing Boeing aircraft. EasyJet, Proposed Purchase of Airbus Aircraft and Notice of Extraordinary General Meeting at 8-9 (25 February 2003), Exhibit US-380.

⁵²⁰¹ Statement of Rod P. Muddle, Exhibit EC-19.

⁵²⁰² Operating costs can be impacted by price concessions. For example, according to the United States, when Airbus determined that its four-engine A340 was losing sales to Boeing's more fuel-efficient two-engine 777 during recent periods of high jet fuel prices, Airbus announced that the additional fuel burn penalty could be "traded off" by financial compensation to A340 operators. Andrea Crisp, *Squaring Up*, Airline Business (1 April 2006), Exhibit US-381.

⁵²⁰³ The European Communities asserts that subjective factors can also be important in an airline's evaluation and final purchase decision, including the value of product features such as cabin width and aesthetics; the long-term viability of a supplier and product; long-term risks of new technology and materials; risks associated with a single engine choice; and operational risks of two-engined versus four-engined aircraft.

BCI deleted, as indicated [***]

the technical, physical and economic characteristics of aircraft under consideration is translated by customers into a revenue or cost element that is included in their assessment of an offer and its net present value. Despite the complexity of the factors involved in a sales campaign, LCA customers, as well as LCA manufacturers, are generally able to account for these factors in assessing the economic value of a sales proposal.⁵²⁰⁴ Thus, competition between Boeing and Airbus is driven by the performance characteristics of the aircraft that the two manufacturers have developed and the price (net of all concessions) and sales terms at which they offer their respective LCA. Since both Airbus and Boeing offer a range of competing LCA models suited for various customer needs, price is a significant factor in a customer's purchase determination, but not necessarily determinative.⁵²⁰⁵ That this competition may not be manifest in offers from each producer for each potential order does not, in our view, detract from the basic fact of intense competition between Airbus and Boeing for sales of LCA world-wide.⁵²⁰⁶

7.1726 The long-term viability of an LCA producer depends on continued innovation and periodic launches of new aircraft as technological advances and market conditions allow.⁵²⁰⁷ Thus, there is a need for both Boeing and Airbus to secure a continuous stream of orders and deliveries to be able to generate the necessary economies of scale and learning curve cost reductions to remain competitive in the long term. In addition, orders are crucial for a newly launched LCA model to be successful, due to the substantial economies of scale in production as well as the steep learning curve cost reductions generated thereby.⁵²⁰⁸ The European Communities asserts that both Airbus and Boeing have an incentive to secure high-volume orders, which it contends means that both will offer lower prices to generate new sales and orders, as well as volume discounts in strategic campaigns to capture volume sales that enable the manufacturer to recover sunk development costs. The launch of a new model with improved performance characteristics can give an LCA manufacturer a competitive advantage, but requires enormous up-front designing, engineering, and testing costs over a period of years before a single aircraft can be delivered to a customer.⁵²⁰⁹ As noted, common estimates are that many hundreds of aircraft must be sold in order for the manufacturer to recoup these costs.

7.1727 Thus, decisions with respect to product launches drive subsequent pricing and production decisions, and LCA manufacturers try to produce and sell aircraft in sufficient volume, and at a sufficient pace and price, to recover their development costs as quickly as possible. Economies of

See, Statement of Rod P. Muddle, Exhibit EC-19, para. 99. In our view, these subjective elements are encompassed by the general consideration of the characteristics of the various aircraft models for sale, and are not distinct elements.

⁵²⁰⁴ *See*, Statement of Rod P. Muddle, Exhibit EC-19, paras. 48-50. *See, also*, Statement of Christian Scherer, Exhibit EC-14 (BCI), paras. 69-77.

⁵²⁰⁵ Statement of Christian Scherer, Exhibit EC-14 (BCI), para. 60

⁵²⁰⁶ *See*, para. 7.1722 above.

⁵²⁰⁷ In some cases, the United States points out, LCA producers can reduce costs (and thus risks) to a certain extent by developing "derivative" aircraft that incorporate new technology or meet specific customer needs by adapting existing designs rather than creating an all-new model. For example, as the European Communities has observed, a significant reason for the ultimate demise of McDonnell Douglas was its limited product line, all "derivatives of earlier Douglas models, rather than entirely new designs" (in contrast to the "broader and more modern families of aircraft offered by Boeing and Airbus"), and "the perception of airlines that {McDonnell Douglas} is no longer committed to the commercial aircraft business and may leave the market over time." *EC Merger Analysis*, Exhibit US-375, para. 59; *see also*, Boeder & Dorman, at 137-38, Exhibit US-373.

⁵²⁰⁸ The learning curve effect is described in Neven & Seabright, Exhibit US-382, p. 15, (explaining that LCA production "involves the coordination of thousands of tasks{,} and this process can be improved as experience accumulates") Neven & Seabright report that the "basic rule of thumb used in the industry is that production costs decrease by 20% when output doubles". Exhibit US-382, p. 15.

⁵²⁰⁹ The United States asserts these costs can approach the entire market capitalization of the LCA producer itself. The United States noted that, in 2006, EADS had a market value of 16.6 billion Euro, not much greater than the anticipated projected development cost for either the A380 or the A350. US, FWS, para. 314.

BCI deleted, as indicated [***]

scale are an important part of the economics of LCA production; additional sales of a given aircraft model not only give the LCA producer additional units over which to recover its fixed costs, but also advance the producer further down the learning curve, reducing its marginal costs on future production. Lost sales represent not only lost revenues and profits, but also lost scale and learning efficiencies and, therefore, increased production costs.

7.1728 Finally, as we have already noted, the European Communities maintains that the events of 9/11 had a profound effect on the LCA industry, which must be taken into account as a relevant condition of competition. The European Communities notes that in the context of the global economic recession, demand for new LCA dropped during the entire 2001 to 2003 period.⁵²¹⁰ Airlines cut capacity in response to declining air passenger traffic, which in turn severely hit LCA manufacturers. According to the European Communities, the events of 9/11 had a particularly devastating effect on Boeing.⁵²¹¹ The United States notes, however, that the downturn in the LCA market in 2001 to 2003 did not result from any inability of the United States' industry to produce or export LCA, but simply from the purchase decisions and choices of customers. Moreover, the United States argues, the downturn in demand reflects conditions in the passenger airline industry, not the LCA industry.⁵²¹² While clearly there was a significant decline in the market for LCA after 9/11, in our view, this did not result from any changes in the fundamental nature of competition between Airbus and Boeing, but rather was driven by the general global economic downturn and decline in air travel, resulting in a decline in demand for new LCA. And while this decline in demand did not affect both producers to the same degree, the basic considerations described above continue to define the conditions of competition between Airbus and Boeing. The events of 9/11 certainly had a profound impact on the airline industry, and therefore on the LCA industry. As the European Communities states, "the LCA industry has an exaggerated business cycle which is particularly sensitive to external events."⁵²¹³ Thus, both negative events, such as the collapse of demand following 9/11, and positive events, will have a substantial impact on LCA sales and the operations of the producers. While we must take such impacts into account in our analysis of the evidence concerning adverse effects allegedly caused by subsidies, the fundamental determinants of competition in the LCA industry outlined above are the critical context for our assessment of adverse effects.

7. Whether the Subsidies Have Caused Serious Prejudice to the Interests of the United States

(a) Introduction

7.1729 The United States claims that subsidies to Airbus cause serious prejudice to its interests within the meaning of Articles 5(c) and 6.3(a), (b) and (c) of the SCM Agreement. In particular, the United States alleges that the European Communities, France, Germany, Spain and the United Kingdom have, through the use of the challenged subsidies, caused: (a) imports of United States' (Boeing) LCA into the European Communities market to be displaced or impeded by sales of Airbus LCA; (b) exports of United States' (Boeing) LCA to various third country markets to be displaced or impeded by sales of Airbus LCA; (c) significant price undercutting by Airbus LCA compared with the

⁵²¹⁰ Boeing Commercial Airplanes, "Boeing Current Market Outlook," June 2003, p. 6, Exhibit EC-295. Throttle-Up – Interview with Boeing CEO Scott Carson, Exhibit EC-280.

⁵²¹¹ The European Communities contends that Boeing's order book was dominated by US airlines, who were hit hardest by the events of 9/11; Boeing's role in financing LCA by setting up an in-house "leasing company" proved very harmful to Boeing as it added risk to Boeing's LCA business and resulted in an order book generally dominated by airlines that were more prone to cancelling and deferring orders than leasing companies; and the events of 9/11 caused Boeing to lose customer focus and ignore customer relations. The European Communities contends that that leasing companies are generally not affected by the cyclical nature of the LCA market. *See*, EC, FWS, para. 1369; EC, Answer Panel Question 116, paras. 356-367.

⁵²¹² US, Answer to Panel Question 49(c).

⁵²¹³ EC, FWS, para. 29.

BCI deleted, as indicated [***]

price of United States' (Boeing) LCA in the same market; and (d) significant price suppression, price depression and lost sales in the same market. The European Communities contests the United States' allegations, arguing that no such serious prejudice is caused by the use of any subsidies provided to Airbus. In essence, the European Communities submits that when the United States' claims are properly assessed on the basis of LCA families competing in the same market, it is impossible to find that the subsidies cause serious prejudice in respect of at least one of the alleged families of LCA, the A380 family. This is because, in the European Communities' view, Boeing LCA do not compete with this aircraft. Moreover, in the markets in which Airbus and Boeing do sell competing families of LCA, the European Communities asserts that the subsidies at issue are too old and in any case not of a magnitude that could cause serious prejudice to the United States' interests in the appropriate reference period, which according to the European Communities, is 2004 to 2006.

7.1730 The United States advances its serious prejudice claims by first focusing on showing that the phenomena described in Articles 6.3(a), (b) and (c) of the SCM Agreement are present over the time period it proposed as the relevant reference period. The United States then explains how the subsidies provided to Airbus have, in its view, caused the phenomena it argues can be observed over that period. The European Communities responds to the United States' claims adopting essentially the same methodology, albeit through the submission of data and arguments relating to different subsidized products and LCA market segments over different periods of time.

7.1731 Article 6.3 of the SCM Agreement is silent as to the sequence of steps to be followed for the purpose of assessing claims of serious prejudice. Thus, we see nothing in the language of Article 6.3 to preclude the path followed by the parties in the present case. In our view, the two-step approach followed by the parties is perfectly valid for the purpose of evaluating the claims that are before us, and we will therefore apply the same methodology in our own assessment of the United States' claims. We recall that in *US – Upland Cotton*, the Appellate Body appeared to entertain the possibility of applying a two-step approach when evaluating claims under Articles 6.3(a), (b) and (c), although it cautioned that it might be difficult to observe the relevant phenomena without also taking into account the effect of the challenged subsidies.⁵²¹⁴ As will be explained in the sections that follow, the arguments and evidence advanced by the United States (including in respect of price suppression) renders a two-step approach entirely appropriate to assessing its claims under Articles 6.3(a), (b) and (c) in the present controversy. Thus, in evaluating the United States' claims, we will first consider whether the particular phenomena identified in Article 6.3(a), (b) and (c) of the SCM Agreement can be observed as a matter of fact. In other words, we will begin our analysis of the merits of the United States' allegations by first examining the parties' arguments and the evidence submitted with a view to determining whether, over the period for which we have information, it can be established, as a matter of fact, that:

- (i) imports of Boeing LCA into the European Communities market were displaced or impeded by sales of Airbus LCA;
- (ii) exports of Boeing LCA to various third country markets identified by the United States were displaced or impeded by sales of Airbus LCA;
- (iii) there was significant price undercutting by Airbus LCA compared with the price of Boeing LCA, or lost sales, in the same market; and
- (iv) there was significant price suppression or price depression.

7.1732 We emphasize that in undertaking this first step of the analysis, we will not be addressing the question whether any particular phenomenon that can be observed is actually caused by the subsidies

⁵²¹⁴ Appellate Body Report, *US – Upland Cotton*, paras. 432-433 and footnote 521.

BCI deleted, as indicated [***]

we have found were provided to Airbus. This question of causation will be examined in the final section of our serious prejudice findings, where we will review the parties' theories of causation and related arguments and evidence.

7.1733 Before embarking upon the first part of our assessment of the United States' claims, we wish to address one argument raised by European Communities that we believe has horizontal implications for the entirety of the United States' serious prejudice claims. This argument concerns what can be understood as amounting to "serious prejudice" under the terms of the SCM Agreement.

7.1734 In arguing that the United States is not suffering serious prejudice caused by the subsidies to Airbus LCA in this dispute, the European Communities repeatedly refers to the alleged improvements in and excellent condition of Boeing over the period 2006 to 2007. Thus, for instance, the European Communities states that "today, Boeing stands as *the* dominant player in the competitive Boeing-Airbus duopoly".⁵²¹⁵ The European Communities contends that "{h}aving asserted adverse effect claims, the United States must prove that the United States – and its participant in the LCA markets: Boeing – suffers present *serious prejudice* and *adverse* effects by reason of the effects of the alleged subsidies."⁵²¹⁶ The United States argues that the SCM Agreement does not require any inquiry into the specific impact of the subsidies on the various economic indices of the "state of the industry" of the complaining Member in the context of a serious prejudice analysis.⁵²¹⁷ Thus, in the United States' view, the European Communities' argument that the financial condition of Boeing's LCA division in 2006 precludes a finding of serious prejudice is misplaced, as is its assertion that there is no serious prejudice because Boeing is currently not "in trouble".⁵²¹⁸ In our view, the European Communities' argument that the financial condition of Boeing's LCA division in 2006 and 2007 precludes a finding of serious prejudice⁵²¹⁹ is inapposite, and based on a flawed understanding of the concept of serious prejudice to the interests of the complaining Member.

7.1735 We recall that the United States alleges that subsidized imports of Airbus LCA cause and threaten to cause material injury to the United States' domestic industry, that is, Boeing, thereby causing adverse effects under Article 5(a). In that context, consideration of Boeing's condition over the relevant reference period is, of course, relevant. Specifically, Article 15.4 of the SCM Agreement, which sets forth guidance on the determination of injury, requires an inquiry into "the impact of the subsidized imports on the domestic industry", including all economic factors relating to the "state of the industry".⁵²²⁰ However, there is no counterpart to Article 15.4 with respect to claims of serious

⁵²¹⁵ EC, FWS, para. 1325. *See*, EC, SWS, para. 651: "While the United States claims to suffer greatly from decades-old alleged subsidies benefiting Airbus, the past three years have seen a record-setting commercial for Boeing, the United States participant in the LCA markets...This ...demonstrates that Boeing is not presently commercially prejudiced and the United States is not suffering adverse effects to its interests from alleged, often decades-old, subsidies to Airbus"; EC, FWS, para. 1671: to demonstrate serious prejudice from lost sales of 747 LCA, "the United States must demonstrate that, but for the effects of the alleged EC subsidies benefiting the A380, Boeing (a) would have launched the 747X; and (b) the United States and Boeing would have been in a better financial state compared to the state Boeing was in after the launch of the 747-8 in 2005."

⁵²¹⁶ EC, FWS, para. 1329.

⁵²¹⁷ US, SWS, para. 695.

⁵²¹⁸ US, SWS, para. 696. Brazil also disagrees with the European Communities' position that Boeing's healthy financial and market position at the peak of the business cycle precludes the possibility that the United States is suffering serious prejudice caused by the subsidy. The relevant issue, according to Brazil, is whether Boeing's market share would be greater absent the subsidized Airbus product. Brazil, Third Party Submission, para. 58.

⁵²¹⁹ EC, FWS, para. 1360: "If the Panel concludes that Boeing's LCA Division is not presently showing concrete signs of being commercially "injured" or not suffering significant competitive prejudice *vis-à-vis* Airbus, then there is no basis for the United States to prevail on its adverse effects claims under Articles 5 and 6 of the SCM Agreement." We recall that Article 6 of the SCM Agreement relates exclusively to claims of serious prejudice. *See, also*, EC, SNCOS, paras. 424-31.

⁵²²⁰ We consider the United States' claims of material injury in section VII.F.8(b)(ii) of this Report.

BCI deleted, as indicated [***]

prejudice under Articles 5(c) and 6. There is nothing in the text of Article 6, or any other provision of the SCM Agreement, that would even suggest, much less require, consideration of the "state of the industry" of the complaining Member in the context of a serious prejudice analysis. Moreover, no WTO panel considering a case involving allegations of serious prejudice has in the past taken the state of the domestic industry in the complaining Member into account in its determination of whether serious prejudice has been demonstrated to exist. Nor, to our knowledge, has any party argued in any of those cases that the condition of the domestic industry in the complaining Member precludes a finding of serious prejudice to the complaining Member's interests. Rather, those panels examined, as required under Article 6.3, whether the effect of the subsidies in question was significant price suppression or displacement or impedance of imports or exports.

7.1736 Indeed, we see nothing in the text of Article 6 that would preclude the possibility that serious prejudice could be found in a case in which the industry in the complaining Member is in good condition. We note, in this regard, that serious prejudice under Article 6.3(d) may arise where "the effect of the subsidy is an increase in the world market share of the subsidizing Member in a particular subsidized primary product or commodity." This provision does not suggest that a consideration of the condition of the industry in the complaining Member is relevant to the question whether there is serious prejudice to that Member's interests. The term "serious prejudice" certainly implies some notion of "harm", but Article 5(c) makes it clear that the "serious prejudice" to be considered is to the interests of the complaining Member, and thus the relevant "harm" is defined by the provisions of Article 6.3 – that is, the interests of the Member in trade in a given product through access to markets in volumes and at prices that are unaffected by another Member's use of subsidies,⁵²²¹ and not with reference to the interests of an industry in the complaining Member. We note, in this context, the finding of the panel in *US – Upland Cotton*, with which we agree:

"We therefore do not believe that, once we have concluded that the conditions in Article 6.3(c) are fulfilled, and thus that serious prejudice "in the sense of paragraph (c) of Article 5""may" arise, a separate examination of the existence of "serious prejudice" under the chapeau of Article 6.3 or Article 5(c) is necessary. Our examination of the text, in its context, indicates to us that the Article 6.3(c) examination is determinative also for a finding of serious prejudice under Article 5(c). That is, an affirmative conclusion that the effects-based situation in Article 6.3(c) exists is a sufficient basis for an affirmative conclusion that "serious prejudice" exists for the purposes of Article 5(c) of the SCM Agreement."⁵²²²

7.1737 While it seems to us self-evident that the trade effects set forth in Article 6.3 as demonstrating serious prejudice are likely to have an effect on the industry in the complaining Member, this is not the focus of our inquiry under Article 6 of the SCM Agreement. Thus, we see no basis on which improvements in the condition of Boeing, or consideration of whether it is more or less profitable, should be taken into account in our analysis of serious prejudice under Article 6.3. And, while a complaining Member's balance of trade, balance of payments or overall financial situation might seem more directly relevant to that Member's interests, we consider these to be immaterial, for purposes of a finding of serious prejudice, in the same way as whether the industry in the complaining Member is in bad condition has no relevance to a panel's consideration of whether there is serious prejudice to that Member's interests. In summary, we consider that it will be sufficient for the United States to

⁵²²¹ As noted by the panel in *US – Upland Cotton*, this view is consistent with the approach of three earlier GATT dispute settlement reports, which "indicate that serious prejudice involved the effects of subsidies on a Member's trade in a given product as such, *i.e.*, the volumes and prices and flows of such trade, rather any further effects on a Member's domestic industry, or other issues such as the significance of the particular industry producing the product in question to the overall "interests" of the complaining Member." Panel Report, *US – Upland Cotton*, footnote 1492.

⁵²²² Panel Report, *US – Upland Cotton*, para. 7.1390.

BCI deleted, as indicated [***]

prevail on its claims of serious prejudice in this case if it demonstrates that the use of the specific subsidies we have found to have been granted to Airbus caused the market effects described in Article 6.3(a)-(c), without any further examination.⁵²²³ Therefore, in our evaluation of serious prejudice under Article 6.3 of the SCM Agreement, we will not, as the European Communities does, take into account improvements in the condition of Boeing.

(b) Alleged displacement or impedance of imports into the EC market

7.1738 Article 6.3(a) of the SCM Agreement provides:

"Serious prejudice in the sense of paragraph (c) of the Article 5 may arise in any case where one or several of the following apply:

(a) the effect of the subsidy is to displace or impede the imports of a like product of another Member into the market of the subsidizing Member;"

The meaning of "displace" and "impede" was considered by the panel in *Indonesia – Autos*, which stated that "displacement relates to a situation where sales volume has declined, while impedance relates to a situation where sales which otherwise would have occurred were impeded".⁵²²⁴ We generally agree that this distinction between displacement and impedance is inherent in the ordinary meaning of the terms.

7.1739 In *Indonesia – Autos*, the panel evaluated the European Communities' claims of displacement and impedance by reviewing sales and market share data, finding that "market share data may be highly relevant evidence for the analysis of {a claim under Article 6.3(a)}".⁵²²⁵ The parties in the present controversy have equally focussed their submissions on market share information. We intend to proceed along the same lines. However, in doing so, we note that while data showing that Boeing's market share in the EC market decreased over the relevant reference period would, in our view, be sufficient to evidence a "displacement" phenomenon,⁵²²⁶ the same data could not also, on its own, demonstrate "impedance". As noted by the panel in *Indonesia – Autos*, the notion of "impedance" involves understanding whether sales which would otherwise have taken place were impeded – in other words, whether sales that would have otherwise actually occurred were obstructed or hindered. Thus, in order to conclude that imports of the United States' LCA were impeded over the relevant reference period, we would, *inter alia*, have to be satisfied that those sales would have actually taken place.

7.1740 The United States presents market share information comparing the relative positions of Airbus and Boeing in the EC LCA market for the period 2001 to 2006, in terms of annual deliveries of LCA as well as LCA value measured by list prices. Consistent with its position that there is one single subsidized product, Airbus LCA, and one single corresponding United States' like product, Boeing LCA, the information submitted by the United States discloses the alleged market shares on

⁵²²³ See, also, Panel Report, *Indonesia – Autos*, where the panel did not conduct any additional examination.

⁵²²⁴ Panel Report, *Indonesia – Autos*, para. 14.218.

⁵²²⁵ Panel Report, *Indonesia – Autos*, para. 14.211. Similarly, in examining the significance of the absence of any reference to the "like product" in the specific context of price suppression and price depression claims under Article 6.3(c) of the SCM Agreement, the panel in *Korea – Commercial Vessels* observed that "[d]etermining displacement or impedance {under Articles 6.3(a) and 6.3(b)} in turn involves an analysis and comparison of relative levels and trends in volume and market share of the subsidized product and the complaining Member's like product". Panel Report, *Korea – Commercial Vessels*, para. 7.555.

⁵²²⁶ Of course, it would have to be demonstrated that the phenomenon was the effect of the subsidies in dispute in order for the United States claim of serious prejudice to succeed.

BCI deleted, as indicated [***]

an aggregate basis. The United States does not break out the data on the basis of aircraft models or any other parameter.⁵²²⁷

7.1741 The European Communities does not dispute the accuracy of the data presented by the United States. However, it argues that the United States' claims are "improperly organized" for essentially three reasons.⁵²²⁸ First, the European Communities contends that the United States has failed to identify the proper subsidized products and corresponding like products and product markets. Consistent with its own view that there is not a single Airbus LCA product but rather multiple LCA products and thus multiple Boeing like products and markets, the European Communities submits that the market share analysis necessary for the purpose of evaluating the United States' claims of displacement and impedance must be undertaken in each separate product market in which the separate families of Boeing and Airbus LCA allegedly compete. Reflecting this position, the European Communities presents an alternative set of market share data measured in terms of both orders and deliveries.

7.1742 We have already rejected the fundamental premises underlying the European Communities' arguments, having concluded that it is appropriate to analyze adverse effects on the basis that all Airbus LCA constitute the subsidized product at issue in this dispute and all Boeing LCA are the relevant like product.⁵²²⁹ The clear dividing lines the European Communities argues exist between models and families of Boeing and Airbus LCA are not supported by the facts that are before us. This is not a case where the complainant's definition of the subsidized product and like product, and the data submitted corresponding to that definition, risks distorting the market displacement and impedance analysis that must be performed under Article 6.3(a). Thus, in the light of our findings on the subsidized product and like product, we will conduct our evaluation of whether the United States has demonstrated displacement or impedance of imports of United States' LCA into the EC market by looking at market share data for the subsidized product and like product defined by the United States, that is, Airbus LCA and Boeing LCA.

7.1743 The second EC objection to the United States' "organization" of its claims concerns the relevant reference period. As we have previously discussed, the European Communities argues that information from the period between 2001 and 2003 must be disregarded, as it alleges that disruptions to the LCA markets following the events of 9/11 constitute *force majeure* within the meaning of Article 6.7(c) of the SCM Agreement, and therefore displacement or impedance within the terms of Article 6.3(a) cannot arise over this period. Although the European Communities presents and examines data for the period 2001 to 2006,⁵²³⁰ it argues that the focus of the Panel's attention should be on the 2004 to 2006 period.⁵²³¹

7.1744 We recall that we have previously dismissed the European Communities' reliance on Article 6.7(c) of the SCM Agreement, and concluded that in assessing whether the subsidies to Airbus cause *present* serious prejudice, we will consider all information put before us, without making any *a priori* conclusions as to which time interval must be used.⁵²³² This does not mean that we consider the events of 9/11 to have had no impact on the LCA industry. In our view, it is clear that 9/11 did result in a severe collapse in demand for LCA, with adverse consequences for the LCA businesses of both

⁵²²⁷ US, FWS, paras. 766-770, US, SWS, para. 698, Table 1.

⁵²²⁸ See, e.g., EC, FWS, paras. 1933-1937.

⁵²²⁹ See, para. 7.1680 above.

⁵²³⁰ And in some cases, later, for instance, with reference to order data for the Airbus A340 and Boeing 777, "expected deliveries in the EC market" from 2007 to 2010. EC, FWS, para. 2132.

⁵²³¹ The European Communities further asserts that even later information, concerning 2007 and 2008, must be taken into account where available.

⁵²³² See, paras. 7.1694 and 7.1712 above.

BCI deleted, as indicated [***]

Boeing and Airbus. However, as we have explained elsewhere, in our view the events of 9/11 do not constitute *force majeure* within the meaning of Article 6.7(c).⁵²³³

7.1745 The third reason for the European Communities' opposition to how the United States has framed its claims centers on the United States' reliance on delivery data, as opposed to information about orders, in support of its claims of displacement or impedance.⁵²³⁴ According to the European Communities, the proper focus of an evaluation of market displacement or impedance must be order data. The European Communities argues that a focus on deliveries does not allow for a full assessment of present serious prejudice caused by subsidies but, at best, highlights the historical impact of subsidies. According to the European Communities, order data provides the most up-to-date picture of competition in the LCA market, and so must be considered in any objective assessment of the facts. Moreover, in the particular circumstances of "large capital goods such as LCA, with deliveries that take place years after orders are placed", the European Communities argues that the terms "import" and "export" found in Article 6.3(a) and (b) should be construed to include future imports and exports.⁵²³⁵

7.1746 The United States argues that claims of displacement or impedance under Articles 6.3(a) and (b) of the SCM Agreement involve the displacement or impedance of "imports" or "exports", terms which, according to the United States, refer to deliveries rather than orders.⁵²³⁶ In addition, the United States raises factual concerns with respect to the use of market share data based on orders which, it asserts, makes order information inappropriate as a basis for consideration of displacement or impedance. These include the fact that while the date of delivery is easy to determine, there is a certain flexibility concerning the date on which an order is reported. In addition, the Airclaims Database (on which both parties rely for information concerning sales of LCA) records orders made by leasing companies, which account for a not-insignificant percentage of LCA sales, on the basis of the location of the leasing company, while deliveries are recorded on the basis of the location of the operator to which the aircraft is leased and actually delivered.⁵²³⁷ Thus, an order by a leasing company in the United States for delivery to an airline in, for example, the United Kingdom, will be reported as a United States' order, and a UK delivery. Finally, the United States contends that an exclusive focus on order data distorts the reality of the market, as an increase in market share based on orders does not reflect current and future loss of market share caused by past orders for which deliveries are being made or which are yet to be made.⁵²³⁸

7.1747 Article 6.3 uses the terms "imports" and "exports" in the context of claims of displacement or impedance. Thus, Article 6.3(a) refers to displacement or impedance of the **imports** of a like product into the territory of the subsidizing Member, and Article 6.3(b) refers to the displacement or impedance of the **exports** of a like product from a third country market. "Import" is defined as "something imported or brought in, the amount or value of what is imported; an imported article or commodity" while "export" is defined as "an article that is exported...(the amount or value of) exported goods."⁵²³⁹ The European Communities argues that the terms "could be interpreted to include orders that will result in future imports and exports – *i.e.*, future deliveries based on *present* orders."⁵²⁴⁰ We do not agree that the ordinary meaning of these terms can be understood in this way. The European Communities bases its argument in this regard on the particular product at issue in this

BCI deleted, as indicated [***]

case, suggesting that the terms "import" and "export" can include orders that will result in future deliveries in the case of large capital goods with deliveries years after orders are placed.

7.1748 We are not persuaded by the European Communities' argument on this point. In our view, there is nothing in the text of the relevant provisions to indicate that the terms "import" and "export" should be understood differently in the context of different types of products. Thus, we agree with the United States that the ordinary meaning of the terms "imports" and "exports" suggests a focus on deliveries rather than orders. The European Communities argues that our duty under Article 11 of the DSU to conduct an objective assessment of the matter means that we must also consider order data when evaluating the United States' claims under Articles 6.3(a) and 6.3(b), effectively treating order data as information pertaining to future "imports" and "exports".⁵²⁴¹ However, our duty to conduct an objective assessment of the matter includes interpretation of the relevant provisions of the WTO covered agreements, in this case, Articles 6.3(a) and 6.3(b). The European Communities has pointed to nothing in the text of these provisions, their context or object and purpose, to convince us that they should be interpreted in accordance with its contention. Thus, for the purpose of considering a claim of displacement or impedance under Article 6.3 of the SCM Agreement, we consider that it follows from the ordinary meaning of the words "imports" and "exports" that a focus on deliveries is appropriate.

7.1749 Having said that, we recognize that order data reflect competition between Airbus and Boeing for LCA sales, that is, orders for future deliveries. Moreover, both orders and deliveries are important to the condition and continuing operations of aircraft manufacturers. But while Boeing and Airbus undoubtedly make future plans taking into account their current order book, and while market actors will take the future flows from those orders into account in evaluating each company, we do not agree with the European Communities' view that deliveries are a matter of historical interest only. It is at the time of delivery that a manufacturer receives the majority of proceeds from the sale of an aircraft.⁵²⁴² Thus, we do not accept the EC' assessment of deliveries as representing only the historical impact of subsidies. If Boeing does not receive an order (or receives an order at a lower price) as a result of the effect of subsidies, it will lose market share and revenue at the time of delivery. Thus, although the effect of subsidies may be manifested at the time an order is not obtained, it may also be manifested when deliveries are not made, or fewer deliveries are made, or deliveries are made at lower prices, in the form of lost market share and price effects. Accordingly, while we agree that present serious prejudice must be found for the United States to substantiate its claims, we do not consider that this requires a focus on order data in assessing impedance or displacement under Articles 6.3(a) and 6.3(b).

7.1750 Nonetheless, we do not mean to suggest that data concerning orders for LCA is irrelevant to our analysis in this dispute. It is apparent from the information before us that, from the perspective of production and financial performance, both orders and deliveries are important to an aircraft manufacturer. Boeing and Airbus primarily compete with each other to secure orders for new aircraft, to be delivered at some time in the future. At the moment an order is placed, the terms and conditions of the delivery of aircraft pursuant to that order will in large part be set. Aircraft specification, net price, discounts, non-price concessions and financing arrangements will be determined at the time of order.⁵²⁴³ Both Boeing and Airbus require a deposit at the time an order is placed, and further pre-delivery payments in accordance with a prepayment schedule prior to delivery. The total amount of payments prior to delivery is subject to negotiation with the purchaser. However, payments made at the time of order are generally nominal as a percentage of the total price of the aircraft involved, and

⁵²⁴¹ EC, Answer to Panel Question 132.

⁵²⁴³ Statement of Christian Scherer, Exhibit EC-14 (BCI), para. 27.

BCI deleted, as indicated [***]

payments prior to delivery would not be expected to exceed 30 to 35 percent of the total price.⁵²⁴⁴ In general, LCA are not purchased one at a time for immediate delivery, but rather tend to be ordered in large numbers with deliveries spread over a subsequent period of sometimes several years. Thus, orders are to some extent a proxy for future deliveries. Moreover, the competition between manufacturers for a sale to a particular customer is a competition for the order, and the delivery dates are negotiated as part of that competition. Thus, information concerning orders will be relevant to considering the question of lost sales, as well as assessing the United States' claims of price effects, given that the pricing of LCA is largely, albeit not entirely, determined at the time of ordering. Therefore, we will consider order information in certain aspects of our analysis of the United States claims under Article 6.3(c).

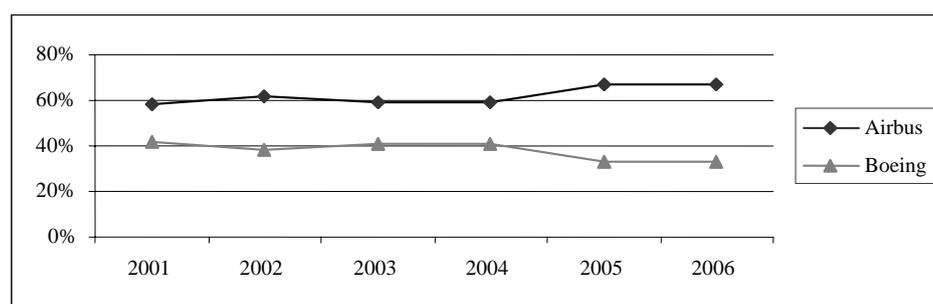

7.1751 Finally, the European Communities' arguments suggest that in order to make out its case under Article 6.3(a) and (b) of the SCM Agreement, the United States must demonstrate displacement or impedance on a sale by sale basis.⁵²⁴⁵ We disagree. While such an approach might be one way to present evidence of displacement or impedance, we see nothing in the language of Article 6.3(a) or (b) requiring such an approach. A complaining Member must demonstrate that the effect of the subsidies is to displace or impede imports or exports. However, nothing in the text of these provisions dictates the form of evidence which is to be used to demonstrate such an effect. A market share approach is consistent with previous dispute settlement reports.⁵²⁴⁶

7.1752 The data on LCA deliveries to the EC market submitted by the United States is reproduced in the following tables:

Table 18 – Market Share (Quantity of LCA delivered in the European Communities)⁵²⁴⁷

	2001	2002	2003	2004	2005	2006
Airbus	58%	62%	59%	59%	67%	67%
Boeing	42%	38%	41%	41%	33%	33%

Chart 1 Market Share (Quantity of LCA delivered in the European Communities)

⁵²⁴⁴ Statement of Rod P. Muddle, Exhibit EC-19. Mr. Muddle provides information indicating that the standard payment at order for Airbus is 5% of the list price and 1% of list price for Boeing. Total payments prior to delivery are 30% of list price of Airbus and 30-35% of list price for Boeing depending upon the aircraft order. As Mr. Muddles notes in his statement, these payments are the subject of negotiations between the carrier and the manufacturer.

Table 19 – Quantity of LCA delivered in the EC⁵²⁴⁸

	2001	2002	2003	2004	2005	2006
Airbus	114	114	98	109	103	116
Boeing	81	69	67	77	50	56
Total	195	183	165	186	153	172

Chart 2 Quantity of LCA delivered in the EC

7.1753 It is clear from Table 18 that Airbus' share of the EC market increased by 9 percentage points over the period 2001 to 2006. In 2001, Boeing's share of the EC LCA market, measured by quantity of LCA delivered, was 42%; it dropped to 38% in 2002, increased in to 41% in 2003 and 2004, and dropped to 33% in 2005 and 2006. Airbus' share of the EC market for LCA was 58% in 2001, increased to 62% in 2002 before declining to 59% in 2003 and 2004, then increasing again in 2005 and 2006, to 67%.

7.1754 The market share figures reflect the numbers of LCA delivered shown in Table 19. This information shows that Boeing delivered 81 LCA to the EC market in 2001. Its deliveries then declined to 69 LCA in 2002, and again to 67 in 2003, before increasing in 2004 to 77 LCA, and then dropping sharply to 50 in 2005, and increasing to 56 in 2006. Airbus, on the other hand, delivered 114 LCA to the EC market in 2001 and 2002, and although its deliveries declined 2003, 2004, and 2005, they were in each year higher than Boeing's deliveries, and increased to 116 LCA in 2006. Thus, in terms of the quantity of LCA delivered to the EC market, Boeing's sales volume in the European Communities has declined. Table 19 also shows that there was a overall decline in the total number of LCA deliveries to the European Communities from 2001 to 2003, and increase in 2004, and a further decline in 2005. Although deliveries increased again in 2006, they were 12 percent fewer than in 2001. Boeing LCA deliveries over this period declined more than did Airbus LCA deliveries, and the decline in Boeing deliveries is disproportionate to the decline in overall deliveries.

7.1755 The European Communities does not dispute the data presented by the United States. Rather, and reflecting its view that there are multiple Airbus subsidized products and Boeing like products, the European Communities presented different data on LCA deliveries (and orders) to the EC market for three alleged product markets – the single-aisle LCA market (comprising the Boeing 737NG and Airbus A320 families);⁵²⁴⁹ the 200-300 seat LCA market (comprising the Boeing 767, 787 and Airbus A330 families);⁵²⁵⁰ and the 300-400 seat LCA market (comprising the Boeing 777 and Airbus A340 families).⁵²⁵¹ Having rejected the premise underlying the European Communities' submission of data

BCI deleted, as indicated [***]

in this form, and proceeding on basis that the United States is entitled to make out its case with respect to Airbus LCA as a single subsidized product, the delivery information provided by the European Communities has little if any probative value for the purpose of answering the question of displacement that is before us.

7.1756 Moreover, having reviewed the European Communities' data, we believe that it provides an inaccurate and incomplete picture of LCA deliveries to the EC market between 2001 and 2006. There are several reasons for this. First, the European Communities does not count deliveries of the Boeing 747, which we have concluded is within the product like the subsidized Airbus LCA. The Airclaims database information relied on by the European Communities shows that there were 23 Boeing 747s owned by and delivered to EC airlines over the relevant period.⁵²⁵² Second, the European Communities has not included deliveries of the Boeing 757 model into the EC market, even though it apparently does include these LCA in presenting information on deliveries in the "single-aisle" market in third countries.⁵²⁵³ The European Communities has not explained why it chose to include Boeing sales of these aircraft in the data presented in respect of third country deliveries but not in respect of deliveries to the EC market. Again, the Airclaims information relied on by the European Communities indicates that six Boeing 757s were owned by and delivered to EC airlines between 2001 and 2006.⁵²⁵⁴ Third, in presenting the delivery information, the European Communities treats instances where a leasing company outside of the European Communities owns an LCA that was delivered to an airline operating in the European Communities as a delivery to the country of the leasing company and not a delivery to the country of the operating airline, *i.e.*, such deliveries were not counted as deliveries to the EC market.⁵²⁵⁵ We do not accept this as an appropriate approach to the counting of LCA deliveries to specific national markets. New LCA owned by a leasing company are, we understand, delivered directly to the operating airline which leases that LCA, not to the leasing company itself, and thus are, in our view, properly considered as a delivery to the country in which that airline operates.⁵²⁵⁶ According to the Airclaims database information, which identifies the "operator country" with respect to deliveries of LCA purchased by leasing companies, six Boeing 747 and four Boeing 757 were owned by leasing companies and delivered to airlines operating in the European Communities between 2001 and 2006.⁵²⁵⁷ A spot-check of the information in Exhibit EC-21 indicates that there were similarly deliveries of Boeing 737NG, 767, and 777 aircraft owned by leasing companies and delivered to airlines operating in the European Communities during this period. For all of these reasons, we do not consider the data presented by the European Communities on LCA deliveries to the EC market to be accurate or reliable for the purpose of evaluating the United States' claims of displacement and impedance under Article 6.3(a) of the SCM Agreement.

⁵²⁵² Exhibit EC-21, pp. 304-307.

⁵²⁵³ See, EC, FWS, footnote 1962, where, with respect to third country markets, the European Communities states: "For purposes of computing market share, the single-aisle market includes the Boeing 737 Classic, 737NG, 717, MD-90, 757 and Airbus A320 families". The data submitted by the European Communities in respect of third country markets is discussed in the following sub-section of this Report. It appears that there were no deliveries of 717 and MD-90 LCA to the EC market during this period, although this is based on our review of Exhibit EC-21, and is not explained by the European Communities itself.

⁵²⁵⁴ Exhibit EC-21, pp. 321-323.

⁵²⁵⁵ EC, FWS, footnotes 2056 (200-300 seat market) and 2168 (300-400 seat market). The European Communities does not explain its treatment of lease company deliveries in the 100-200 seat market.

⁵²⁵⁶ See, para. 7.1747 above. We note that the European Communities asserts, in another context, that Airbus does not know where an LCA purchased by a leasing company on a speculative basis will be delivered. EC, SCOS, para 165. However, as intent is not an element to be considered in assessing displacement or impedance, we do not see how whether or not Airbus knows at the time of ordering where the LCA it sells will be delivered affects our analysis.

⁵²⁵⁷ Exhibit EC-21, pp. 304-307 and 321-323.

BCI deleted, as indicated [***]

7.1757 Nevertheless, and notwithstanding the deficiencies we have identified, we note that, when aggregated, the information on LCA deliveries provided by the European Communities tells a story similar to that shown in the data submitted by the United States. We have aggregated the EC data in the following tables and charts.

Table 20 – Market Share (Quantity of LCA delivered in the European Communities) (EC data)⁵²⁵⁸

	2001	2002	2003	2004	2005	2006
Airbus	64%	63%	63%	62%	69%	66%
Boeing	36%	37%	37%	38%	31%	34%

Chart 3 Market Share (Quantity of LCA delivered in the European Communities) (EC data)

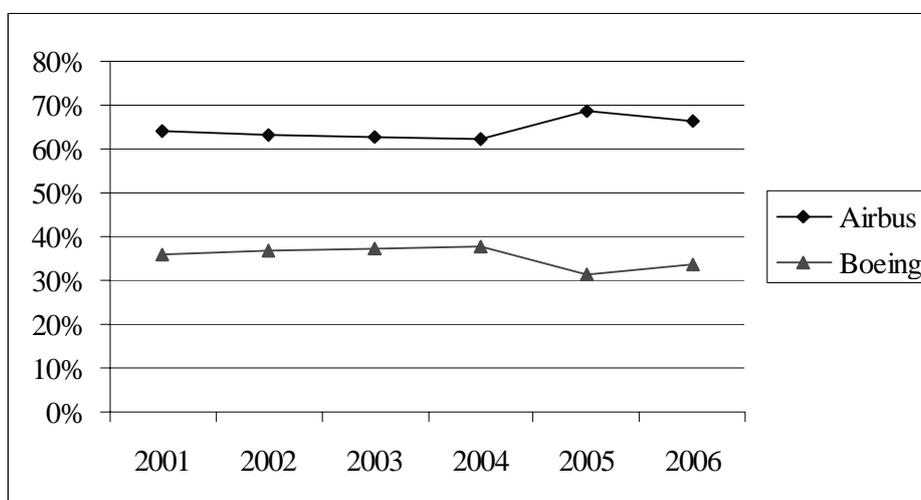

Table 21 – Quantity of LCA delivered in the EC (EC data)⁵²⁵⁹

Chart 4 Market Share (Quantity of LCA delivered in the European Communities) (EC data)

7.1758 Thus, on the basis of the data presented by the United States, it is clear that Boeing's share of LCA deliveries to the EC market declined over the period, while Airbus' share of that market increased. Despite the different values reflected, the data presented by the European Communities, when aggregated, supports the same conclusion, although, as we have explained, the EC data is not a reliable basis for our evaluation. As the only other competitor in the market was Airbus, it follows that the evidence we have reviewed demonstrates that imports of United States' LCA into the EC market were displaced by Airbus LCA over the relevant period. We address whether the displacement we have observed is an effect of the specific subsidies we have found were granted to Airbus with respect to LCA in Section (e) below.

(c) Alleged displacement or impedance of exports from a third country market

7.1759 Article 6.3(b) of the SCM Agreement provides:

"Serious prejudice in the sense of paragraph (c) of the Article 5 may arise in any case where one or several of the following apply:

(b) the effect of the subsidy is to displace or impede the exports of a like product of another Member from a third country market;"

7.1760 While Article 6.3(a) of the SCM Agreement concerns displacement or impedance of the complaining Member's imports into the market of the subsidizing Member, Article 6.3(b) concerns displacement or impedance of the complaining Member's exports from a third country market or markets. The phrasing of the two provisions, requiring consideration of an effect on imports in Article 6.3(a), and on exports in Article 6.3(b), is in our view of no consequence – imports of a like product of another Member are, by definition also exports of a like product of another Member. Thus, we consider that the two provisions address the same phenomenon, only in different markets. Therefore, the conclusions we have set out above concerning the meaning of displacement and impedance, and the analysis thereof on the basis of market share in terms of deliveries of LCA, in the context of a claim under Article 6.3(a), apply equally to our consideration of the United States' claim under Article 6.3(b).

BCI deleted, as indicated [***]

7.1761 There is, however, an additional element to be considered in the context of a claim under Article 6.3(b). Article 6.4 of the SCM Agreement provides:

"For the purpose of paragraph 3(b), the displacement or impeding of exports shall include any case in which, subject to the provisions of paragraph 7, it has been demonstrated that there has been a change in relative shares of the market to the disadvantage of the non-subsidized like product (over an appropriately representative period sufficient to demonstrate clear trends in the development of the market for the product concerned, which, in normal circumstances, shall be at least one year). "Change in relative shares of the market" shall include any of the following situations: (a) there is an increase in the market share of the subsidized product; (b) the market share of the subsidized product remains constant in circumstances in which, in the absence of the subsidy, it would have declined; (c) the market share of the subsidized product declines, but at a slower rate than would have been the case in the absence of the subsidy."

7.1762 The European Communities argues that the term "non-subsidized like product" as used in Article 6.4 should be understood as "a like product of the complaining Member asserting a serious prejudice claim under Articles 5 and 6.3 of the SCM Agreement that is not subsidized".⁵²⁶⁰ The European Communities maintains, accordingly, that displacement or impedance of exports from a third country market for purposes of Article 6.3(b) can be demonstrated **only** if the complaining Member does not provide a subsidy within the meaning of Article 1 of the SCM Agreement in respect of the like product exported. The European Communities argues that the burden is on the complaining Member to demonstrate that its like product(s) do(es) not benefit from subsidies, and that the United States has not done so in this case.⁵²⁶¹ Indeed, the European Communities alleges that LCA manufactured by Boeing do, in fact, benefit from subsidies, and submits information which it asserts demonstrates that fact.⁵²⁶²

⁵²⁶⁰ EC, SWS, para. 1104. The European Communities makes the same argument with respect to Article 6.5, which is discussed further at paras. 7.1798 - 7.1800 below.

⁵²⁶¹ In answer to a question from the Panel, the European Communities responded:

"the European Communities considers that the competing like product of the complaining Member can be considered "non-subsidized" if the complaining Member demonstrated that the like product does not benefit from firm specific subsidies. Conversely, if the like product benefits from specific subsidies, a complaining Member can not meet its burden of establishing that its like product is "non-subsidized"."

EC, Answer to Panel Question 202, para. 262.

⁵²⁶² EC, SWS, paras. 1110-1136. The European Communities notes that the alleged subsidization of Boeing LCA is the subject of a separate dispute brought by the European Communities, *United States – Measures Affecting Trade in Large Civil Aircraft*, DS353. In addition to subsidies challenged for the first time in that dispute, the European Communities asserts that prior to the end of 2006, Boeing had received tens of millions of dollars through the application to LCA of the US foreign sales corporation ("FSC") and extraterritorial income ("ETI") tax exemptions and exclusions. Both of these programmes have been found to be prohibited export subsidies in WTO dispute settlement. Panel Report, *United States – FSC*, para. 8.1(a); Appellate Body Report, *United States – FSC*, at paras. 177(a), 178; Panel Report, *United States – Tax Treatment for "Foreign Sales Corporations" – Recourse to Article 21.5 of the DSU by the European Communities ("US – FSC (Article 21.5 – EC)")*, WT/DS108/RW, adopted 29 January 2002, as modified by Appellate Body Report WT/DS108/AB/RW, DSR 2002:I, 119, at paras. 9.1(a), 9.1(b), 9.1(e); Appellate Body Report, *US – FSC (Article 21.5 – EC)*, at paras. 256(a), 256(b), 256(f), 257; Panel Report, *United States – Tax Treatment for "Foreign Sales Corporations" – Second Recourse to Article 21.5 of the DSU by the European Communities ("US – FSC (Article 21.5 – EC II)")*, WT/DS108/RW2, adopted 14 March 2006, as upheld by Appellate Body Report WT/DS108/AB/RW2, DSR 2006:XI, 4761, para. 8.1; Appellate Body Report, *United States – Tax Treatment for "Foreign Sales Corporations" – Second Recourse to Article 21.5 of the DSU by the European Communities ("US – FSC (Article 21.5 – EC II)")*, WT/DS108/AB/RW2, adopted 14 March 2006, DSR 2006:XI, 4721, para. 100(b). The United States has since repealed both measures. EC, SWS, para. 1116.

BCI deleted, as indicated [***]

7.1763 The United States maintains that the term "non-subsidized like product" is to be understood as calling for the comparison of the market share of the product which benefits from the subsidies in question (that is, the product of the subsidizing Member) with the market share of the like product which does not benefit from *that/those* subsidy(ies).⁵²⁶³ The United States argues that such a reading is consistent with the text of Article 6.3, which does not suggest any concern with subsidies other than those which are being challenged, and which refers to like product without any qualification as to whether or not the like product is subsidized or not. Moreover, the United States asserts that as the European Communities appears to read the term "non-subsidized," if the product of the complaining Member benefited from "indirect, non-specific, de minimis subsidies, such as public education or public health measures," such a Member would be precluded from asserting a claim under Article 6.3(b) or Article 6.3(c), "no matter how direct, targeted, and massive a subsidy causing adverse effects might be" because it does not have a non-subsidized like product.⁵²⁶⁴ According to the United States, this would eviscerate the entirety of Part III of the SCM Agreement, and cannot be the correct interpretation of the text.⁵²⁶⁵

7.1764 The European Communities contends that the United States' reading of Article 6.4 conflates the terms "non-subsidized like product" and "like product of the complaining Member", and thus fails to give meaning to the term "non-subsidized".⁵²⁶⁶ Moreover, the European Communities argues that its interpretation requires only that the complaining Member demonstrate that its competing like product does not benefit from specific subsidies.⁵²⁶⁷ However, the European Communities does agree that its view would preclude a finding of price undercutting and impedance and displacement in third country markets if the like product benefits from "any specific subsidy, however small."⁵²⁶⁸ In the European Communities' view, the object and purpose of Article 6.4 can only be achieved through an "untainted" assessment, and not through a comparison involving a subsidized product and a subsidized like product.⁵²⁶⁹

7.1765 We are not entirely persuaded by the United States' arguments concerning the meaning of the term "non-subsidized" as used in Article 6.4. While it is true that the term "like product" is used in Article 6.3, including Article 6.3(b), without the qualifier "non-subsidized," this does not suggest to us that the use of the term "non-subsidized" in Article 6.4 refers simply to a like product which does not benefit from the subsidy which is the subject of the dispute. In fact the use of different terms suggests to us that the term "non-subsidized like product" may well have a specific meaning in Article 6.4. If the intention of Article 6.4 were only to differentiate the like product from the product which benefits from the challenged subsidy we see no reason to have included the term "non-subsidized" in Article 6.4 – it seems self-evident that the like product of the complaining Member would not benefit from the challenged subsidy. Thus, we consider that Article 6.4 may well require that a complaining Member demonstrate, in the circumstances of that provision, that its like product, exports of which are allegedly displaced or impeded from third country markets, is not subsidized.

7.1766 However, an additional question thus arises: whether Article 6.4 is the necessary or exclusive mechanism for demonstrating displacement or impedance of exports to a third country market under Article 6.3(b), or whether, to the contrary, displacement and impedance under Article 6.3(b) can be demonstrated without reference to Article 6.4. The United States argues that while Article 6.4 provides that displacement or impedance "shall include" market conditions discussed therein, thus providing "further guidance" for the application of Article 6.3(b), it does not set out the exclusive

BCI deleted, as indicated [***]

ways in which serious prejudice in the form of displacements or impedances from a third country market may be demonstrated.⁵²⁷⁰ According to the European Communities, however, Article 6.4 describes the exclusive basis on which a claim of third-country market displacement or impedance under Article 6.3(b) may be demonstrated.⁵²⁷¹ For the European Communities, the meaning of like product in Article 6.3(b), as well as in Article 6.3(c), cannot be understood without reference to Articles 6.4 and 6.5, which in the European Communities' view make it clear that the "like product" must not benefit from any specific subsidies.

7.1767 The meaning of Article 6.4 was considered by the panel in *Indonesia – Autos*. That panel dealt with claims under Article 6.3(a) and considered whether the analysis contemplated by Article 6.4 applied to a claim under Article 6.3(a). The panel found that the Article 6.4 analysis did not apply to such a claim, concluding:

"We agree with Indonesia that Article 6.4 is not relevant in this case. The drafting of the provision is unambiguous, and the specific reference to Article 6.3(b) creates a strong inference that an Article 6.4 type of analysis is not appropriate in the case of Article 6.3(a) claims. The complainants have identified nothing in the context of the provision or the object and purpose of the SCM Agreement that would suggest a different conclusion."⁵²⁷²

The panel also noted that the issue was significant for the parties and the disposition of the claims in that case, because Article 6.4 provided, in certain circumstances, a lower threshold for demonstrating displacement and impedance than established in Article 6.3(a), stating:

"If the type of analysis set forth in Article 6.4 is appropriate in this case, then the complainants arguably could make a prima facie case of displacement and impedance by demonstrating that the market share of a subsidized product has increased over an appropriately representative period. If, on the other hand, the type of analysis set forth in Article 6.4 is not appropriate in this case, then the complainants must demonstrate that "the effect of the subsidy" is to displace or impede imports into Indonesia, that is, that they have lost export sales to Indonesia that they would have otherwise have made and that those export sales were lost as a result of the subsidies provided pursuant to the National Car programme."⁵²⁷³

The panel in *Indonesia – Autos* thus concluded that, while not relevant to a claim under Article 6.3(a), Article 6.4 established that, in certain circumstances, a consideration of comparative market share alone will suffice to demonstrate that "the effect of the subsidy" is to displace or impede exports. We agree with this reading of Article 6.4. In our view, Article 6.4 describes a particular situation, where the like product of the complaining Member is not subsidized, in which situation a demonstration that market share of the subsidized product complained of increased suffices to make a prima facie case of displacement or impedance under Article 6.3(b).

7.1768 In this case, unlike *Indonesia – Autos*, there is no question that Article 6.4 is relevant. However, while the United States has made a claim under Article 6.3(b), to which Article 6.4 refers, it

⁵²⁷⁰ US, Comments on EC Answer to Panel Question 202, para. 224.

⁵²⁷¹ EC, SWS, paras. 1102: "Article 6.4 then qualifies Article 6.3(b) by setting out the manner and means by which claims of displacement or impedance in third country markets can be asserted." As discussed further below, the European Communities takes a similar position with respect to claims of price undercutting under Article 6.3(c) and the provisions of Article 6.5. *Id.*, para. 1107: "As with Article 6.4 and third-country market displacement or impedance claims, Article 6.5 describes the complete universe in which a price undercutting analysis must be demonstrated."

BCI deleted, as indicated [***]

does not purport to rely on the special rule set out in Article 6.4, but rather, asserts that it has demonstrated that displacement or impedance of its exports from third country markets is the effect of the subsidies in dispute.

7.1769 Our reading of Article 6.4 leads us to the conclusion that if the circumstances set out in Article 6.4 are satisfied, a further assessment of whether the changes in market share are "the effect of the subsidy" is not necessary. Those circumstances include that the exports allegedly displaced or impeded are not themselves subsidized. We see nothing in the text of Article 6.4, or in its context or object and purpose, however, which would suggest that the analysis set out therein is the exclusive means of demonstrating displacement or impedance of exports for purposes of Article 6.3(b). As the United States observes, Article 6.4 provides that, for the purpose of Article 6(3)(b), displacement or impedance "shall include" the specific circumstances set out therein.⁵²⁷⁴ The use of the phrase "shall include" in our view indicates that there may be other circumstances, not set out in Article 6.4, in which a Member could demonstrate displacement or impedance for purposes of Article 6.3(b). Rather than limiting the circumstances in which Article 6.3(b) may be satisfied, we read Article 6.4 as simply setting out additional guidance for the application of Article 6.3(b) in certain particular circumstances. Thus, in our view, Article 6.4 establishes a particular set of circumstances in which displacement or impedance of exports shall be found – where the product of the complaining Member is not subsidized, and there has been a change in relative market shares to the disadvantage of that product – without additional consideration of whether that change is the effect of the subsidies.

7.1770 We consider that the contrary interpretation suggested by the EC – that Article 6.4 is the exclusive basis for a finding of displacement or impedance for purposes of Article 6.3(b) – would lead to the absurd result that the SCM Agreement establishes a remedy for displacement or impedance of exports in third country markets **only** in situations where the complaining Member's product is demonstrated to be unsubsidized – effectively, a sort of "clean hands" requirement for complaining Members as a prerequisite to a claim under Article 6.3(b). Not only is there no basis in the text for such a requirement, but, as a practical matter, such a requirement would enormously complicate the task of panels considering claims under Article 6.3(b). Not only would they have to consider whether the challenged measures at issue in the dispute constitute subsidies, but they would have to consider whether the Member challenging those measures itself provides any subsidy with respect to the exported like product. Moreover, while the European Communities states that it asserts only that the complaining Member's like product must not benefit from **specific** subsidies,⁵²⁷⁵ there is nothing in the term "non-subsidized like product" which suggests such a limitation. Thus, to accept the European Communities' interpretation would leave open the possibility that a complaining Member would be precluded from pursuing a claim under Article 6.3(b) (and 6.3(c)), because its like product benefits from subsidies that do not fall within the definition of Article 1 of the SCM Agreement. We cannot imagine on what basis a panel might undertake to examine this question. We simply cannot accept that so much can be derived from the mere use of the term "non-subsidized like product" in Article 6.4. We therefore reject the European Communities' view that Article 6.4 is the exclusive basis for a finding of displacement or impedance under Article 6.3(b) of the SCM Agreement.

7.1771 We note that, while our interpretation of the text of Articles 6.3(b) and 6.4 does not result in any ambiguity, and thus does not require resort to supplementary means of interpretation, our view is supported by consideration of the drafting history of the provisions. Article 6.3(b) of the SCM Agreement is derived from Article 6.2 of the Cartland Draft of 18 May 1990 (Cartland I). Article 6.2 of Cartland I set out four situations in which serious prejudice "may arise" in subsections (a) through (d), which correspond to subsections (a) through (d) of Article 6.3 of the SCM Agreement:

⁵²⁷⁴ US Comment on EC, Answer to Panel Question 202.

⁵²⁷⁵ EC, Answer to Panel Question 202, para. 262,

BCI deleted, as indicated [***]

"Serious prejudice may arise in any case where one or several of the following apply:

(a) the effect of the subsidy is to displace or impede the imports of like product into the market of the subsidizing country;

(b) the effect of the subsidy is to displace the exports like product of another signatory from a third country market;

(c) there is a significant price undercutting by the subsidized products as compared with the price of a like product of another signatory in the same market resulting in price suppression, price depression or lost sales;

(d) the world market share of the subsidizing country in a specific product has increase compared to the share it had during the previous period of {X years} and this increase results from a consistent trend over a period when subsidies have been granted."

Cartland I then went on to set out three Articles giving additional guidance with respect to subsections (a) through (c). Article 6.4 of Cartland I provided:

"For the purposes of paragraph 2(a), displacing or impeding imports shall include any case in which a subsidy has been granted or significantly increased on a product which directly competes with the product on which a GATT concession or another GATT benefit has been granted."

Article 6.5 of Cartland I provided:

"For the purpose of paragraph 2(b), displacing exports shall include any case in which, in the absence of circumstances enumerated in paragraph 8 below, there has been a change in relative shares of the market to the disadvantage of the non-subsidized product (over a period of one year or more)."⁵²⁷⁶

Finally, Article 6.6 of Cartland I provided:

"For the purpose of paragraph 2(c), price undercutting or price suppression should be demonstrated through comparing prices of the subsidized product with prices of like non-subsidized products supplied to the same market. However, if such direct comparison is not possible, the existence of price undercutting or price suppression may be demonstrated on the basis of export unit values."

These provisions remained in subsequent drafts of the SCM Agreement, with the exception of Article 6.4 of Cartland I. Articles 6.5 and 6.6 of Cartland I are substantially the same as Articles 6.4 and 6.5 of the SCM Agreement; Article 6.4 of Cartland I has no corollary in the SCM Agreement as adopted. In our view, both Articles 6.4 and 6.5 of Cartland I delineated particular factual situations in which serious prejudice would be found to exist without requiring the establishment of a causal link between the observed phenomena and the subsidies. Thus, where the product of the complaining Member is not subsidized, Article 6.4 of the SCM Agreement provides for a lesser burden to demonstrate serious prejudice. We consider that this interpretation fits with the overall architecture of Article 6 as originally negotiated and adopted, with different burdens for establishing serious prejudice, ranging from "deemed" serious prejudice in the case of certain subsidies under Article 6.1,

⁵²⁷⁶ Paragraph 8 of Article 6 of Cartland I set out "circumstances necessary to rebut the existence of displacement in the sense of" Article 6.5, which are largely reflected in Article 6.7 of the SCM Agreement.

BCI deleted, as indicated [***]

to a lesser burden for complaining Members with "clean hands", *i.e.*, an unsubsidized competing product, to the requirement to prove that the market effects of displacement or impedance are the effect of the subsidies.

7.1772 We now turn to consider the data and arguments the parties have submitted on the question whether United States' exports have been displaced or impeded from third country markets.

(i) *Market Share Information in Individual Third Country Markets*

7.1773 In support of its claim that Airbus LCA displaced or impeded exports of Boeing LCA from third country markets, the United States has submitted evidence similar to that submitted in support of its claim of displacement or impedance in the EC market under Article 6.3(a). The United States thus presents information concerning the number of LCA deliveries to customers in Australia from 2001 to 2005,⁵²⁷⁷ in China from 2001 to 2006,⁵²⁷⁸ as well as aggregate information on the number of deliveries to all customers outside the United States and the European Communities from 2001 to 2006.⁵²⁷⁹ The United States also provides information on allegedly increased Airbus market share between 2001 and 2005 in Singapore, Korea, Brazil, the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu ("Chinese Taipei"), Mexico and India, without providing specific quantity data.⁵²⁸⁰ The United States also asserts that information for 2006 shows that Boeing had increased market share in that year in some of these countries, and decreased market share in others; the United States asserts that in no case did Boeing's market share return to 2001 levels.⁵²⁸¹ The United States argues that Airbus made very large gains in third country market share in 2003 and 2004 and has maintained most of its gains in those growing markets.⁵²⁸² The United States also presents information on the number of orders for LCA by Indian customers during 2001-2005.⁵²⁸³

7.1774 The European Communities does not contest the accuracy of the information presented by the United States. Rather, it defends against the United States' claim under Article 6.3(b) by relying on the same arguments concerning the subsidized and like product, the appropriate reference period, and the use of order data rather than deliveries, as it did with respect to the United States claim under Article 6.3(a). Again, the European Communities presents its own data showing deliveries (and orders) for separate categories of LCA in individual third country markets. Thus, the European Communities submits data with respect to the "single aisle" LCA deliveries (comprising the A320 family and Boeing 737 Classic and NG and Boeing 717 and 757 families, and the MD-90) to customers in Australia, Brazil, China, Chinese Taipei, India, Korea, Mexico and Singapore,⁵²⁸⁴ deliveries of 200-300 seat LCA (comprising the Airbus A300, A310, A330, and A350 families, and the Boeing 767 and 787 LCA families) to customers in Australia, Brazil, China, Chinese Taipei, India, Korea and Mexico,⁵²⁸⁵ and deliveries of 300-400 seat LCA (comprising the Airbus A340 and

⁵²⁸⁵ EC, FWS, para. 2028.

BCI deleted, as indicated [***]

Boeing 777 and MD-11 LCA families) to customers in China, Chinese Taipei, India, Korea, and Singapore.⁵²⁸⁶

7.1775 Having presented data by aircraft type and individual country, the European Communities argues that, even where Airbus' market share of orders or deliveries increased during the period 2001 to 2006, for example with respect to the A320 in some third country markets, there is no basis to make a finding of impedance or displacement because the very limited number of orders and deliveries or the very sporadic nature of such orders or deliveries make it very difficult to draw any conclusions regarding trends in market share.⁵²⁸⁷ The European Communities suggests that the Panel cannot draw conclusions about trends in market share, and therefore it should make no findings under Article 6.3(b).⁵²⁸⁸ Moreover, the European Communities asserts, in some of these third country markets, Boeing's share of deliveries of single-aisle LCA has increased.⁵²⁸⁹ Based on the data it presents, the European Communities argues that a clear change in market share in Airbus' favour in individual third country markets cannot be discerned in the period 2001 to 2006.⁵²⁹⁰

7.1776 The United States argues that, if the Panel were to agree with the European Communities that there is insufficient data to examine any of the individual third country markets identified by the United States, the solution is not, as the European Communities suggests, to make no finding. Rather, the United States notes that both parties recognize that the LCA market is a world market, and therefore suggests that the Panel examine whether the effect of the subsidy is to displace or impede the exports of Boeing LCA to the world market or to the markets of all third countries taken as a whole.⁵²⁹¹ In support of this position, the United States points to the chapeau of Article 6.3, which provides that serious prejudice "may arise in any case where" one or more of the specific enumerated market effects applies, but it does not prevent a finding of serious prejudice in other situations as well.⁵²⁹² The European Communities argues that even if the Panel were to consider delivery data for all third country markets aggregated on the basis of aircraft type, it would be unable to ascertain any clear trends for the 2004 to 2007 period as many of these markets have only a few customers and demand is idiosyncratic.⁵²⁹³

7.1777 We recall that we have previously examined and rejected the European Communities' arguments in respect of the appropriate subsidized and like product, the reference period, and the use of order data rather than deliveries in evaluating claims of displacement or impedance.⁵²⁹⁴ We therefore begin our evaluation of the United States' claim under Article 6.3(c) by focussing on the information the United States has presented in respect of individual third country markets.

7.1778 The United States initially presented annual data for Airbus and Boeing LCA deliveries to Australia and China for the period 2001 to 2005, and updated the information for China to include data for 2006. In addition, the United States submitted information showing increases in Airbus' market share from 2001 to 2005 in Singapore, Korea, Brazil, Chinese Taipei, Mexico and India, without specifying the quantities involved.⁵²⁹⁵ Reflecting, as we understand it, its claim of threat of

BCI deleted, as indicated [***]

serious prejudice in the form of likely future displacement in the Indian market, the United States also submitted *order* data for the Indian market for the period 2001 to 2005.⁵²⁹⁶

7.1779 The European Communities submitted information on deliveries of LCA to the same markets over the period 2001 to 2006, but in disaggregated form, reflecting its view that there are multiple Airbus subsidized products and Boeing like products. The data presented by the European Communities in respect of deliveries to third country markets presents the same concerns as the information it presented on deliveries to the EC market, with respect to the failure to include deliveries of the Boeing 747 and the treatment of aircraft owned by leasing companies and delivered to operating airlines in individual third country markets, an approach we have rejected above.⁵²⁹⁷ Thus, for the reasons previously expressed we do not consider the data presented by the European Communities on LCA deliveries to third country markets to be accurate or reliable for the purpose of evaluating the United States' claims of displacement and impedance under Article 6.3(b) of the SCM Agreement. Nonetheless, in the analysis that follows, we consider the data submitted by the European Communities for the third country markets for which the United States provided quantity data.

Australia

7.1780 A review of the data presented by the United States for the period 2001 to 2005 shows that Boeing's share of the Australian LCA market decreased during that period, while Airbus nearly doubled its share. In 2001, Boeing's share of Australia's market by volume was 78%; it increased to 88% in 2002, then dropped to 63% in 2003, and to 50% in 2004 before increasing to 60% in 2005. Airbus' share of the Australian market for LCA, on the other hand, was 22% in 2001, dropped to 12% in 2002, increased to 37% in 2003 and 50% in 2004 before dropping to 40% in 2005. Overall, Airbus' share of Australia's market for LCA increased 18 percentage points from 2001 to 2005, while Boeing's market share declined by the same amount.

Table 22 – Australia – Number of LCA delivered⁵²⁹⁸

	2001	2002	2003	2004	2005
Airbus	2	4	11	12	6
Boeing	7	30	19	12	9
Total	9	34	30	24	15

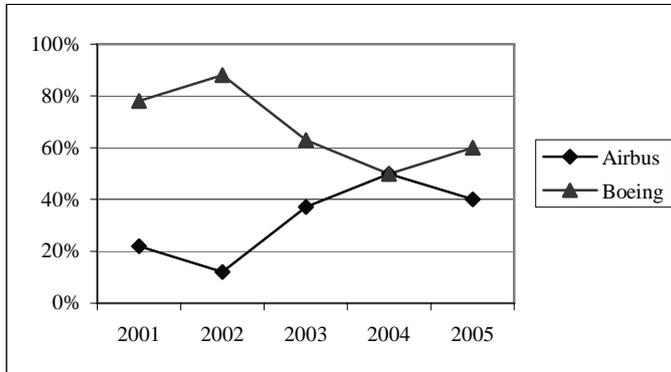

⁵²⁹⁶ US, FWS, paras. 773-774, US, SWS, para. 704.

⁵²⁹⁷ See, para. 7.1756 above. See, EC, FWS, footnotes 1962 (the European Communities counted Boeing 757 and MD-90 in computing market share in the single aisle market for third countries); 1964, 1974, 1980, 2048, and 2155, (explaining EC treatment of deliveries of LCA owned by leasing companies) .

⁵²⁹⁸ US, FWS, Table 12, para. 773.

BCI deleted, as indicated [***]

Chart 5 Australia - Market Share (Quantity of LCA delivered)⁵²⁹⁹

US	Airbus	Boeing
2001	22%	78%
2002	12%	88%
2003	37%	63%
2004	50%	50%
2005	40%	60%

A similar pattern appears when we aggregate and examine the data presented by the European Communities, which, we recall, we do not consider to be accurate or reliable.

Table 23 – Australia – Number of LCA delivered (EC data)⁵³⁰⁰

	2001	2002	2003	2004	2005	2006

Chart 6 Australia - Market Share (Quantity of LCA delivered) (EC data)

	2001	2002	2003	2004	2005	2006
Airbus	0%	11%	22%	44%	55%	39%
Boeing	100%	89%	78%	56%	45%	61%

China

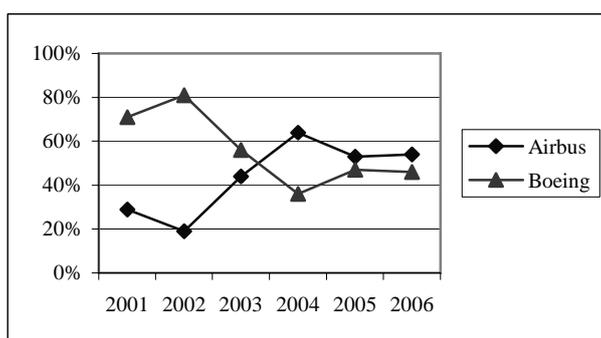

7.1781 A review of the data presented by the United States for the period 2001 to 2006 shows that Airbus gained a substantial share of the Chinese market during that period. In 2001, Boeing's share of the Chinese market by volume was 71%; it increased to 81% in 2002, dropped to 56% in 2003, and again to 36% in 2004, before increasing to 47% in 2005, and then dropping to 46% in 2006. Airbus' share of the Chinese market for LCA was 29% in 2001, dropped to 19% in 2002, increased to 44% in 2003 and 64% in 2004, dropped to 53% in 2005 and increased to 54% in 2006. Thus, Airbus' share of the Chinese market for LCA increased 25 percentage points from 2001 to 2006, while Boeing's market share declined by the same amount.

BCI deleted, as indicated [***]

Table 24 – China – Quantity of LCA delivered⁵³⁰¹

Boeing	67%	90%	42%	34%	38%	36%

India

7.1782 The United States does not present data on the number of LCA delivered to the Indian market, but does assert that Airbus' share of the Indian market, in terms of deliveries, increased from 0 in 2001 to 76 percent in 2005. The European Communities did present data on deliveries to the Indian market which similarly shows an increase in Airbus' market share, which we set out below, although, we recall that we do not consider this data to be accurate or reliable.

Table 26 – India – Quantity of LCA delivered (EC data)⁵³⁰⁴

	2001	2002	2003	2004	2005	2006
Airbus	0	0	0	0	4	17
Boeing	4	4	2	0	0	12
Total	4	4	2	0	4	29

⁵³⁰⁴ EC, FWS, para. 1962.

BCI deleted, as indicated [***]

Table 27 – India – Market share (quantity of LCA delivered)(EC data)

	2001	2002	2003	2004	2005	2006
Airbus	0%	0%	0%	no deliveries	100%	59%
Boeing	100%	100%	100%	no deliveries	0%	41%

7.1783 The United States also presented information concerning orders by Indian customers, arguing that large new orders threaten additional displacement of Boeing exports for years to come.⁵³⁰⁵ As discussed above, we do not consider data on orders to be persuasive evidence of current displacement or impedance, which in our view more appropriately involves a consideration of actual deliveries reflecting actual imports and exports. Nonetheless, orders are an indicator of likely future deliveries, albeit imperfect,⁵³⁰⁶ and thus we review the information presented as an indicator of threat of future displacement or impedance of exports from the Indian market. In this regard, although the United States did not extensively argue the issue, we recall that it did present a claim of threat of serious prejudice under Article 6.3(b) of the SCM Agreement, and requested findings in that regard.⁵³⁰⁷

7.1784 The data on orders for the period 2001 to 2005 presented by the United States demonstrates that Airbus gained most of the orders for LCA in the Indian market during that period. In 2000 and 2001 there were no orders for LCA by Indian customers. While Boeing obtained 100 per cent of orders in the Indian market in 2003, Airbus obtained 100 per cent in 2004. In 2005, Airbus' share of orders in the Indian market dropped to 70 per cent while Boeing's share increased to 30 per cent. However, the actual number of LCA represented by these orders paints a very different picture than the percentages. Boeing's 100 percent of orders in 2003 represents one LCA, while Airbus' 100 percent in 2004 represents two LCA. However, in 2005, there were 225 orders for Airbus LCA, compared with 98 orders for Boeing LCA, representing a massive increase in the Indian market. This indicates that, as these LCA are delivered over the ensuing years, it is likely that Airbus will have a significantly greater share of the Indian market than Boeing. While Boeing may obtain additional orders, and may even obtain orders for more LCA than Airbus, in the future, those LCA would likely be delivered at an even later date than the already-ordered LCA, and thus the more immediate future is likely to be an Indian market with more deliveries of Airbus LCA than of Boeing LCA.

Table 28 – India – Quantity of LCA ordered⁵³⁰⁸

	2001	2002	2003	2004	2005

Chart 10 India - Market Share Information on the basis of orders (EC data)

Other Individual Third Country Markets

7.1785 The United States also asserted that Airbus' market share of delivered LCA increased from 2001 to 2005 from 11% to 73% in Singapore, from 17% to 44% in Korea, from 50% to 86% in Brazil, from 38% to 56% in Chinese Taipei, and from 29% to 50% in Mexico.⁵³¹¹ In its second written submission, the United States noted, without providing further specifics, that "while Boeing's market share increased from 2005-2006 in some of {the countries listed} and decreased in others, in no case did Boeing's market share recover to 2001 levels".⁵³¹²

7.1786 The European Communities did submit data on the number of LCA delivered to these other third country markets. We recall that we have concluded that the EC data on deliveries to Australia, China and India is neither accurate nor reliable.⁵³¹³ Particularly in the case of these other third country markets, in view of the small number of deliveries involved, the effects of the European Communities' counting methodology may well be significant. As a result, the European Communities' information on deliveries to these markets is, in our view, even less accurate or reliable than the information presented by the European Communities on deliveries to Australia, China, and India. As a consequence, we are hesitant to even review the information, and we consider it impossible to draw any conclusions concerning trends in deliveries. Nonetheless, we have aggregated the information presented by the European Communities, with the results shown below.

⁵³¹¹ US, FWS, para. 773, following Table 12(B).

⁵³¹² US, SWS, para. 703.

⁵³¹³ See, paragraph 7.1756 above. The European Communities applied the same counting principles that led to our conclusion when counting deliveries to other third country markets. We recall that the European Communities does not count deliveries of the Boeing 747, but it has included deliveries of the Boeing 757 model into the "single-aisle" market in third countries. EC, FWS, footnote 1962, ("For purposes of computing market share, the single-aisle market includes the Boeing 737 Classic, 737NG, 717, MD-90, 757 and Airbus A320 families"). We also recall that we rejected the European Communities' approach treating deliveries of LCA owned by leasing companies as deliveries to the country of the leasing company, and not the country of the airline operating that LCA, see, para. 7.1756 above, which the European Communities applied in counting deliveries to third country markets. EC, FWS, fns. 2047 and 2155. In this particular instance, we have not undertaken to exhaustively review the data to determine the extent to which the European Communities' counting principles affect the data it has submitted, considering it apparent that the European Communities' methodology skews the number of deliveries to support our view that the information is neither accurate nor reliable.

7.1787 We note that the European Communities argues that the United States' allegation of displacement or impedance of exports from the 300-400 seat LCA market in China, Chinese Taipei, Korea, and Singapore "borders on the surreal", asserting that the deliveries of such LCA to those markets are based on orders for which Airbus did not compete, or orders by leasing companies which subsequently decided to lease the aircraft to airlines operating in these markets. According to the European Communities, "Airbus therefore cannot be accused of displacing or impeding Boeing from these third country markets."⁵³¹⁹ It is not clear to what extent, if any, the European Communities considers this argument applies with respect to other categories of LCA or other third country markets. We note, however, that we have elsewhere rejected the European Communities' view of whether a manufacturer "competes" for a given sale.⁵³²⁰ In addition, we do not agree that Airbus aircraft leased to an airline operating in a given market cannot be considered as displacing or impeding Boeing exports to that market simply because the lease post-dates the leasing company's order to Airbus. Whether Airbus knew or intended that a particular aircraft sold to a leasing company would be leased to a particular company operating in a particular country is simply irrelevant – the question, for purposes of assessing displacement or impedance, in our view, is the country to which Airbus actually delivered the aircraft, which is the country of the operating airline.

(ii) *Market Share information in Third Country Markets Considered as a Whole*

7.1788 While the United States argued that the Panel could, and if necessary should, consider information on all third country markets, that is, assess displacement of United States' exports from all markets other than the United States and EC,⁵³²¹ we do not consider it necessary in this case to do so, as we consider that the information before us is sufficient to draw conclusions concerning displacement or impedance from a third country market with respect to certain individual third country markets.

7.1789 In any event, we have serious doubts whether an analysis of all third country markets as a whole would be permissible under Article 6.3(b) in any case. Article 6.3(b) refers to whether the effect of the subsidy is to displace or impede exports from "a third country market", not "all third country markets" or "the global market outside the complaining and subsidizing Members". However, in this case, we are not required to resolve that question, and we do not address the United States' contentions and evidence concerning third country markets as a whole.

(iii) *Conclusion*

7.1790 On the basis of the information presented by the United States, the accuracy of which the European Communities does not dispute, it is clear that in certain individual third country markets, Airbus' market share increased significantly over the period 2001 to 2005, and even in 2006 remained higher than Boeing's market share, and that Airbus obtained a significantly larger number of orders in the Indian market than did Boeing. As the only other competitor in the relevant markets over the period we are considering was Airbus, it follows that the evidence demonstrates that Boeing's exports of LCA were displaced from the markets of Australia and China by sales of Airbus LCA over the period we examined, and that there is a likelihood of future displacement of Boeing LCA from the Indian market.

7.1791 The situation is less compelling with respect to the markets of Brazil, Chinese Taipei, Korea, Mexico and Singapore, where sales were sporadic and volumes were relatively small, making identification of any trends more difficult.⁵³²² Nonetheless, as Airbus was the only other competitor in these markets over the period we are considering, it follows that any market share achieved by Airbus was at the expense of Boeing. Thus, we consider that the evidence demonstrates that United States' exports of LCA were displaced from these markets by sales of Airbus LCA over the period we examined as well.

7.1792 We address whether the displacement we have observed in the third country markets at issue is an effect of the specific subsidies we have found were granted to Airbus with respect to LCA in Section (e) below.

(d) *Alleged price effects*

7.1793 Article 6.3(c) provides that

"Serious prejudice in the sense of paragraph (c) of Article 5 may arise in any case where one or several of the following apply:

⁵³²¹ US, FWS, para. 772, US, SWS, para. 705. Brazil agrees with the United States that if data on exports to certain third country markets is insufficient, the Panel may conduct an analysis of displacement or impedance under Article 6.3(b) of the SCM Agreement based on the aggregate of all third country markets. Brazil, Third Party Submission, para. 60 referring to Appellate Body Report, *US – Upland Cotton*, para. 427.

⁵³²² We note in this regard that Article 6.3(b) does not contain any requirement that the displacement or impedance of exports from a third country market rise to any particular level or degree.

BCI deleted, as indicated [***]

(c) the effect of the subsidy is a significant price undercutting by the subsidized product as compared with the price of a like product of another Member in the same market or significant price suppression, price depression or lost sales in the same market;"

The United States argues that each of these phenomena, namely, price undercutting, price suppression, price depression and lost sales, can be demonstrated as separate and individual claims on the basis of the facts that are before the Panel.

7.1794 Before addressing the parties' arguments and evidence on these allegations individually below, we note that in *US – Upland Cotton* the Appellate Body concluded, based on a plain reading of Article 6.3(c) and the phrase "in the same market" "that this phrase applies to all four situations covered in that provision, namely, "significant price undercutting", "significant price suppression, price depression {and} lost sales"." We agree.

7.1795 In *US-Upland Cotton*, the panel considered the meaning of the term "significant" in the context of price suppression and depression, observing that "{t}he ordinary meaning of the term "significant" is "important; notable ... consequential". The term "significant" therefore connotes something that can be characterized as important, notable or consequential.⁵³²³ The panel went on to observe that

"Such significance may be manifest in a number of ways. The "significance" of any degree of price suppression may vary from case to case, depending upon the factual circumstances, and may not solely depend upon a given level of numeric significance.¹⁴⁴¹ Other considerations, including the nature of the "same market" and the product under consideration may also enter into such an assessment, as appropriate in a given case. ... We cannot believe that what may be significant in a market for upland cotton would necessarily also be applicable or relevant to a market for a very different product.

¹⁴⁴¹In any event, we note that no such numeric standard is provided in Part III of the Agreement. This contrasts, to a certain extent, with the provisions of Part V of the agreement, which contain, for example, indications of "amount" of the subsidy which are *de minimis* (less than 1 per cent *ad valorem*) and volumes of the "subsidized product" which are negligible. See *e.g.*, Article 11.9 of the SCM Agreement."⁵³²⁴

The Appellate Body agreed with the Panel's understanding of the term "significant" in the context of "significant price suppression" in Article 6.3(c), and noted in addition that:

"Article 6.3(c) does not set forth any specific methodology for determining whether the effect of a subsidy is significant price suppression. There may well be different ways to make this determination."⁵³²⁵

⁵³²³ Panel Report, *US – Upland Cotton*, para. 7.1325, quoting *New Shorter Oxford English Dictionary*, (1993).

⁵³²⁴ Panel Report, *US – Upland Cotton*, para. 7.1329.

⁵³²⁵ Appellate Body Report, *US – Upland Cotton*, paras. 426-427.

BCI deleted, as indicated [***]

7.1796 We agree with this understanding of the term "significant" as used in Article 6.3, and consider that, as with the term "in the same market", based on a plain reading of the text of Article 6.3(c), the term "significant" applies to each of the situations addressed in the provision, that is "price undercutting", "price suppression", "price depression" and "lost sales". With these fundamental principles in mind, we turn to consideration of the evidence and arguments with respect to price effects.

(i) *Significant Price Undercutting and Lost Sales*

7.1797 In support of its allegations of significant price undercutting and lost sales, the United States relies principally on evidence concerning a series of sales campaigns in which the customers ultimately ordered Airbus LCA. The United States asserts that in general, a "'lost" sale is any sale that is captured by the subsidized product instead of the product of the complaining Member."⁵³²⁶

7.1798 In examining the United States' allegations of significant price undercutting, we must also consider Article 6.5 of the SCM Agreement, which provides:

"For the purpose of paragraph 3(c), price undercutting shall include any case in which such price undercutting has been demonstrated through a comparison of prices of the subsidized product with prices of a non-subsidized like product supplied to the same market. The comparison shall be made at the same level of trade and at comparable times, due account being taken of any other factor affecting price comparability. However, if such a direct comparison is not possible, the existence of price undercutting may be demonstrated on the basis of export unit values."

Mirroring its argument in respect of the relationship between Articles 6.3(b) and Article 6.4 of the SCM Agreement, the European Communities asserts that the use of the term "non-subsidized like product" in Article 6.5 means that a claim of price undercutting may only be made out if the complaining Member can demonstrate that its like products do not benefit from any subsidy. The European Communities argues that Boeing benefits from subsidies provided to the United States LCA industry and, consequently, that the United States cannot demonstrate price undercutting as a matter of law. The United States raises the same objections to the European Communities' view as it did in connection with the interpretation of Article 6.4.⁵³²⁷

7.1799 The argument advanced by the European Communities raises essentially the same question we addressed above with respect to the relationship between Articles 6.3(b) and 6.4, and in our view, the same result should be reached.⁵³²⁸ Thus, and for the same reasons as discussed above, we do not consider that Article 6.5 sets forth the exclusive means by which serious prejudice in the form of significant price undercutting can be demonstrated. Rather, in our view, Article 6.5 sets out a particular set of circumstances in which price undercutting can be found without further consideration of whether the price difference is the effect of the subsidy. That case is the one in which the like product of the complaining Member is not subsidized, and a comparison of prices (at the same level and at comparable times, taking due account of any other factor affecting price comparability) shows the subsidized product price to be lower than the price of the non-subsidized like product.

7.1800 In this dispute, the United States' claim of significant price undercutting is based on anecdotal evidence concerning particular sales campaigns, which it asserts demonstrates that the prices of Airbus LCA sold in those campaigns were below the prices offered by Boeing. However, the United States does not stop there, but goes on to assert that the lower prices offered by Airbus are an effect of

⁵³²⁶ US, FWS, para. 776.

⁵³²⁷ See, discussion of the parties' arguments in this regard at paragraphs 7.1762 through 7.1764 above.

⁵³²⁸ See, paragraphs 7.1765 through 7.1771 above.

BCI deleted, as indicated [***]

the subsidies. Thus, in our view, the United States has not sought to rely on the special circumstances set out in Article 6.5. Therefore, if the evidence demonstrates that the price of Airbus LCA was lower than the price of Boeing LCA, we will go on to consider whether this demonstrates significant price undercutting, and if so, whether such price undercutting is the effect of the subsidies in dispute.

7.1801 The United States supports its claims of significant price undercutting and lost sales principally by reference to various sales campaigns. In particular, the United States asserts that in sales campaigns involving purchases of LCA by easyJet, Air Berlin, Air Asia, Iberia, Czech Airlines, South Africa Airways, Thai Airways, Singapore, Emirates and Qantas, customers evaluated competing bids from Airbus and Boeing, and chose the Airbus LCA offered over the equally qualified LCA offered by Boeing. According to the United States, these sales were captured by Airbus "primarily by significantly undercutting the price offered by Boeing."⁵³²⁹ However, the United States also argues that Airbus won the sales because it was able to present a particular model of Airbus LCA with particular features at the time of the sales campaign.⁵³³⁰ The United States argues that any non-price factors which may have been relevant to those sales were monetized by both the manufacturers and the customers, such that when the customer made its decision, all such factors were incorporated into the price offered by the manufacturer for the particular model in question. In other words, the United States considers that a customer's monetization of non-price factors means the customer is able to determine which LCA model offers the lowest price, taking into due account all relevant factors affecting comparability. To this extent, the United States argues that non-price factors do not break the causal link between prices and lost sales.

7.1802 The European Communities does not dispute that in the sales campaigns identified by the United States, Boeing "lost" the sales in question, in the sense that it did not succeed in selling its LCA to the customer in question. However, it considers that the sales were lost for reasons other than price. In the European Communities' view, Boeing's failure to make certain sales was not the result of significant price undercutting on the part of Airbus but, rather, was due to Boeing's customer mismanagement and the perceived benefits of the particular Airbus product offered. According to the European Communities, Airbus sales campaigns were successful because Airbus LCA offered operating advantages to the carriers at issue and, especially during the period 2001-2004, because Boeing allegedly failed to focus on customer relations.⁵³³¹ In respect of campaigns where there is evidence of aggressive price competition, the European Communities argues that this is the result of competition which was often aggressive for strategic or economic reasons (especially following the collapse of aircraft demand during the 2001 to 2003 period). According to the European Communities, these factors not only demonstrate that there was no price undercutting, but further, that the lost sales cannot be considered to be an effect of the subsidies.

The Sales Campaigns

easyJet

7.1803 The United States asserts this was the largest single lost sale for Boeing during the period 2001 to 2005. According to the United States, easyJet was an exclusively Boeing customer until it

⁵³²⁹ US, FWS, para. 776.

⁵³³⁰ US, SWS, paras. 708-09, US, Answer to Panel Question 54, paras. 307-09.

⁵³³¹ The European Communities relies, *inter alia*, on the following statement in support of this argument, EC, FWS, para. 1465:

"As I mentioned, last year there were two large orders that Airbus may have won on pricing alone. In both instances Boeing was the incumbent and lost out to Airbus. I'm not sure pricing was the whole issue."

The European Communities attributes this statement to Henry Stonecipher, former CEO of Boeing. However, the source of the statement, Exhibit EC-287, clearly attributes it to a J.B. Groh, a market analyst with D.A. Davison & Co.

BCI deleted, as indicated [***]

announced, on 14 October 2002, an order for 120 Airbus A319s with options for 120 more.⁵³³² Following the announcement, a number of reports in the media, quoting senior officials, suggested that the company's decision was attributable to the lower price offered by Airbus. A report in the Financial Times stated that Stelios Haji-Ioannou, the founder of easyJet:

"said the price difference between the bids left the company with no choice: "The difference was so substantial we would have been in breach of our fiduciary duty; it would have been an offence to buy Boeing.""⁵³³³

The same article quoted easyJet CEO Ray Webster as saying that "it surprised all of us to see just how aggressive Airbus was in the final round of sealed bids".⁵³³⁴ Similarly, another article reported that easyJet CEO Ray Webster stated that speculation that Airbus won the sale by offering a 60 percent discount off list prices "is 'a bit ambitious, but not far off. . . . I've been buying aircraft for 20 years and I've never seen anything like it."⁵³³⁵

7.1804 The United States also refers to public disclosures by the company which, it asserts, demonstrate a substantial discount off the list price for the A319 of 56 percent as of January 2001. For instance, easyJet's 2005 annual report states that the only aircraft delivered to it in 2005 were 12 A319s, for which it paid GBP 167.7 million, a per-aircraft price of GBP 13.98 million. The United States asserts that, according to easyJet, this is the actual price, net of concessions, paid to Airbus in 2005, based on an order placed in 2001 US dollars. The delivery price of GBP 13.98 million in 2005 British pounds sterling thus corresponds to an estimated order price of \$19.36 million in 2001 US dollars – a discount of 56 percent off the \$44 million list price for the A319 as of January 2001.⁵³³⁶ In addition, the United States asserts that not only did Airbus discount the price of each aircraft sold to easyJet by more than 50 percent, it also granted additional concessions to offset the cost to easyJet of switching its fleet from Boeing to Airbus. The letter from easyJet to its shareholders seeking approval of the transaction spells out some of these concessions.⁵³³⁷ Finally, the United States asserts that easyJet estimated that the per-seat cost of the Airbus A319 to be about one-third lower than the per-seat cost of the Boeing 737 it had purchased just two years earlier, a price that easyJet calculated meant that the deal would reduce its overall operating costs by 10 percent.⁵³³⁸ The United States asserts that this evidence demonstrates that Airbus won the easyJet sale by undercutting the price offered by Boeing.⁵³³⁹

7.1805 The European Communities does not deny that Boeing lost this sale to Airbus, but argues, based on HSBI, that the reason was not the price of the Airbus LCA involved. The European Communities asserts that the easyJet sale was profitable to Airbus, and "cash positive".⁵³⁴⁰ The European Communities asserts that there is no evidence to support the United States' contention

⁵³³² US, FWS, para. 779. EasyJet exercised 20 options in 2005, 91 of the LCA ordered had been delivered by 31 December 2006, and delivery of the remaining LCA had been scheduled.

BCI deleted, as indicated [***]

except the reported statement of Ray Webster referring to a 60 percent discount and other concessions to offset the cost of switching from Boeing to Airbus. The European Communities argues that the reported 60 percent discount is false, and contends that the Airbus price was competitive, but not discounted to that level.⁵³⁴¹ Moreover, the European Communities asserts that Airbus was unwilling to offer final concessions sought by easyJet that would have "deteriorate{d} the deal to unacceptable level",⁵³⁴² despite its importance to Airbus. According to the European Communities, "even if low prices caused Boeing to lose {the} sale, this was not caused by subsidies, given their asserted low magnitude".⁵³⁴³ Moreover, the European Communities notes that this sale took place at a time when demand for LCA had collapsed, and asserts that both Airbus and Boeing offered "more competitive pricing" at this time in an attempt to stimulate demand.⁵³⁴⁴ The European Communities also argues that the earlier Boeing sale to Ryanair, which Boeing secured some 10 months earlier, allegedly by making an "exceptionally competitive offer",⁵³⁴⁵ must be taken into account as well. The European Communities asserts that Airbus competed strongly for that sale, and believed it had won it, but the sale actually went to Boeing.⁵³⁴⁶ In this circumstance, the easyJet sale became even more important for Airbus to establish its presence with the expanding low-cost carriers. The European Communities argues that the Ryanair price influenced Airbus' offer to easyJet.⁵³⁴⁷

7.1806 Having reviewed the information regarding this sales campaign, much of which is HSBI and thus cannot be disclosed in this report, we conclude that it is broadly consistent with the published statement of easyJet's founder concerning the sale.⁵³⁴⁸ The European Communities refers to other, "non-price" factors which allegedly supported Airbus' offer.⁵³⁴⁹ It is clear that Airbus sought to compete on the grounds that its product offering was superior,⁵³⁵⁰ but Airbus itself recognized the importance of price to its offer.⁵³⁵¹ While the HSBI suggests that levels of discounting did not approach the 60 percent discount referred to, it is apparent that price discounts were provided.⁵³⁵² Evidence before us, including HSBI, indicates that the Airbus' price advantage was, ultimately, the determining factor in its securing this sale.⁵³⁵³ However, that price advantage does include a number of elements, such as maintenance cost guarantees, technical dispatch reliability and residual value guarantees, and training support, which may be what the European Communities refers to as "non-price" factors.⁵³⁵⁴

Air Berlin

7.1807 On 4 November 2004 Air Berlin announced an order for 60 A320s. The United States alleges that, after the easyJet sale, Airbus again undercut Boeing's price in the campaign at Air Berlin and its Austrian affiliate, NIKI, which led Boeing to lose that sale for 70 firm orders. The United States

⁵³⁴¹ EC, FWS, para. 1875, citing Exhibit EC-431 (HSBI).

⁵³⁴² EC, FWS, para. 1877, citing Exhibit EC-432 (HSBI).

⁵³⁵⁴ US, FWS, para. 782.

BCI deleted, as indicated [***]

notes that during the sales campaign, Air Berlin executives were quoted as saying that "the total package offered by Boeing and Airbus, including the price of the planes and how to finance them, would determine who won the competition".⁵³⁵⁵ In addition, Air Berlin managing director Joachim Hunold stated that "{p}rice is always an issue, but we also looked at the delivery schedule that was possible and at financing."⁵³⁵⁶ Air Berlin, like easyJet, had operated only Boeing LCA until this campaign, and the United States alleges that, as in the case of easyJet: "{a}ccording to people familiar with the deals, Airbus trumped Boeing by offering steep discounts and other financial guarantees that {Boeing} was unwilling to match."⁵³⁵⁷

7.1808 The European Communities argues that Boeing, rather than Airbus, pushed down prices in this campaign and that Boeing did not lose this customer because Airbus lowered prices but because Boeing mismanaged customer relations, and implies that Airbus merely made a good offer.⁵³⁵⁸ The European Communities argues that Airbus securing the Air Berlin order was a surprise, in view of the fact that it had been a Boeing launch customer in 1994 for the 737-800. However, according to the European Communities, Air Berlin officials were unhappy with Boeing's insistence on maintaining price levels for the final aircraft delivered from the 1994 order, and had complained about production delays and errors, damaged aircraft, and eroding customer support.⁵³⁵⁹ Relying on HSBI evidence, the European Communities argues that the United States' argument that Boeing was "unwilling to match" Airbus' final offer is untrue.⁵³⁶⁰ Rather, the European Communities argues, it was Boeing that pushed prices down, a view that is contradicted by the United States, also relying on HSBI evidence submitted by the EC.⁵³⁶¹

7.1809 While the European Communities asserts that Air Berlin were unhappy with Boeing's business and production practices,⁵³⁶² the evidence before us, including HSBI evidence, clearly indicates that pricing was a crucial element in this sales campaign, with Airbus seeking to sell to a customer that seemed unhappy with Boeing, and making a very competitive offer in order to do so.⁵³⁶³ The evidence indicates that there were a number of proposals from both Airbus and Boeing⁵³⁶⁴ including a [***] from Boeing,⁵³⁶⁵ but the sale was ultimately won by Airbus.

Czech Airlines

7.1810 On 6 April 2005 Czech Airlines signed a purchase agreement with Airbus for the delivery of six A319 and six A320 aircraft. In support of its proposition that Airbus won this sale due to significant price undercutting, the United States cites the following:

"CSA strategic director Jan Vana explained: "Both offers met all of our technical specifications without exception. But Airbus offered the better price"".⁵³⁶⁶

The United States also points to a public statement in which the president of CSA, Jaroslav Tvrdek, gave more details about CSA's decision, stating that Boeing's offer was "truly super and lucrative

{and} hard to refuse," but explaining that the Airbus bid, evaluated for the net present value of the various cash flows involved, was more than 100 million Czech crowns (\$4 million) less than Boeing's offer.⁵³⁶⁷ According to the United States, that "better" Airbus price included a number of additional bonuses by which, Mr. Tvrđik explained, "Airbus is going to cover our transition costs." These included a free training simulator worth 250-300 million Czech crowns (\$10-12 million) to be used to train CSA pilots and pilots of other airlines on Airbus equipment, extensive customer service, spare parts at favourable prices and additional services, such as air crew training.⁵³⁶⁸

7.1811 The European Communities argues that this sale was won by Airbus largely based on political considerations, referring to a dispute between the Czech government and Boeing with respect to a state-owned company, Aero Vodochody. In 1997, Boeing had acquired 35 percent of Aero Vodochody, with effective management control. The expectation was that Boeing would help the company improve technology and make sales abroad. According to the European Communities, the company struggled, and in January 2004, the Czech Republic had "threatened to renew the fleet at state-held carrier CSA with rival Airbus".⁵³⁶⁹ It appears, on the basis of HSBI, that CSA was willing to make a decision regarding its fleet on the basis of considerations other than fleet structure.⁵³⁷⁰ The European Communities contends that the situation was exacerbated after Czech entry into the EU, when it was suggested it would be more advantageous to cooperate with European aerospace manufacturers than with Boeing.⁵³⁷¹ The European Communities argues that Airbus benefited from these political obstacles to Boeing's efforts to secure this sale, and that price was not the basis for Airbus' success in securing the sale.⁵³⁷² The European Communities also points to considerations with respect to the engines for the aircraft as a relevant factor in Airbus' securing this sale.⁵³⁷³

7.1812 The United States notes that, despite the European Communities' focus on political and other considerations, it does not dispute the veracity of the statement that Airbus offered a better price, and asserts that the European Communities' arguments on price are of little import.⁵³⁷⁴

7.1813 It appears, on the basis of the evidence before us, including HSBI evidence, that CSA was willing to make a purchase decision on the basis of elements other than the existing fleet structure, which might have argued for the purchase of Boeing LCA.⁵³⁷⁵ While there is evidence which suggests that CSA was not well inclined towards Boeing, and HSBI evidence regarding other factors relevant to this sale⁵³⁷⁶, we note that there is evidence that Airbus did offer the better price.⁵³⁷⁷

Air Asia

7.1814 On 25 March 2005 Air Asia announced that it had signed a purchase agreement for 60 A320 aircraft, and taken options for an additional 40 LCA.⁵³⁷⁸ In support of its price undercutting claim, the

BCI deleted, as indicated [***]

United States quotes a media report indicating that Boeing was not prepared to match the price offered by Airbus:

"People familiar with the Air Asia negotiations said Boeing hadn't stopped trying to sway the airline but one person said 'Boeing isn't willing to do a deal at any price' indicating Airbus is charging far less than Boeing is willing to accept."⁵³⁷⁹

7.1815 The European Communities argues, in the first instance, that Boeing's failure to win this sale was due to its allegedly "arrogant" and "inflexible" negotiating positions,⁵³⁸⁰ which it says was acknowledged by Lewis Platt, former Boeing co-chairman in an interview:

"We got into a mode where words like arrogant were used, or inflexible. I went around and visited a lot of customers and I had two or three of them – and one especially larger order (AirAsia) that went to Airbus. And I sat down with the CEO and he described the process and I always figured that we lost it on price. He said you guys just did not pay attention to us. He said they wanted to get a couple of airplanes quickly and (Boeing) said it would not happen."⁵³⁸¹

The European Communities also argues that while it was losing the campaign because of its attitude to customers, Boeing was also offering aggressive pricing, and that Boeing, not Airbus, was the driving force in terms of pricing. Moreover, the European Communities alleges that Boeing repeatedly undercut Airbus' price, and disputes the United States' argument regarding price escalation caps offered by Boeing.⁵³⁸² The European Communities acknowledges [***].⁵³⁸³ The European Communities refers to the statement of Christian Scherer that [***], apparently considering that an offer that [***] somehow cannot be found to undercut a competitor's price. Of course, this is not the case, and there is no basis in either law or fact for such an implication.

7.1816 The United States disputes the European Communities' contentions regarding the alleged concern cause by Boeing's attitude⁵³⁸⁴ and presents evidence indicating that price was a critical consideration for AirAsia.⁵³⁸⁵

7.1817 We have reviewed the HSBI evidence, which suggests that at various times in the sales campaign, both Boeing and Airbus were perceived as making the most aggressive offer. The evidence also indicates, however, that price was a critical consideration and that at the end of the day, AirAsia chose Airbus because its offer was perceived to be better than Boeing's.⁵³⁸⁶

Iberia

7.1818 On 31 January 2003, Iberia announced the purchase of five Airbus A340-600s over competing Boeing 777-300ERs.⁵³⁸⁷ The United States supports its claim of price undercutting in this sale with reference to an Iberia press release, announcing that the company was "taking advantage of exceptional terms" offered by Airbus.⁵³⁸⁸ The United States alleges that these "extraordinary

BCI deleted, as indicated [***]

conditions" were the decisive factor in the sale.⁵³⁸⁹ The United States also asserts that Airbus used residual value guarantees to undercut Boeing's price offer.⁵³⁹⁰

7.1819 The European Communities disputes the United States' contentions, and in particular asserts that the B777 and A340 aircraft in contention for this order were not equally qualified for Iberia's needs. According to the European Communities, the A340 had a significant performance advantage in this campaign with respect to operations at hot, high altitude airports served by Iberia.⁵³⁹¹ The European Communities also cites fleet commonality as an important factor.⁵³⁹² In addition, the European Communities indicates that Iberia sought price discounts to purchase the "white tail" aircraft being offered by Airbus, which were LCA originally ordered by Swissair and left without a purchaser when the latter went bankrupt and on which [***].⁵³⁹³ Iberia ultimately agreed to take delivery of three such aircraft, which had been built to Swissair's specifications.

7.1820 The United States disputes the European Communities' argument concerning the alleged performance advantage of the A340 in this campaign, relying on HSBI.⁵³⁹⁴ In addition, the United States maintains that price did play an important role in the Iberia sale.⁵³⁹⁵

7.1821 The information before us does suggest that Iberia considered that Airbus aircraft were better suited to operations at the hot, high altitude airports which were prime Iberia markets, and that this meant that the company favoured those aircraft.⁵³⁹⁶ However, the relevance and extent of any A340 overall stand-alone operational advantage is brought into question by other HSBI.⁵³⁹⁷ While it appears that Iberia did consider that there were advantages to purchasing Airbus LCA, stemming from commonality with its existing Airbus fleet,⁵³⁹⁸ HSBI evidence also indicates that price was an important element in this sale.⁵³⁹⁹ It also seems clear that having the white-tail aircraft which had been ordered by the bankrupt Swissair ([***]) available to offer to Iberia was important to Airbus' price offer.⁵⁴⁰⁰

South African Airways

7.1822 On 19 June 2002 South African Airways ("SAA") announced the purchase of 12 A340, 11 A319 and 15 A320 aircraft.⁵⁴⁰¹ The United States notes that, despite having recently ordered

Release the United States points to a Wall Street Journal Article which also suggests that Airbus won the sale, at least in part due to pricing:

"Airbus nosed ahead thanks to its planes' lower prices and common design with the rest of Iberia's fleet. By offering guarantees on the planes' future value and maintenance costs, plus attractive financing terms, Airbus edged out Boeing's aggressive package. The deal's final financial terms remain secret.

At Airbus, Mr. Leahy {head of sales} was relieved, but he faced one last slap. Iberia's news release crowed about Airbus's {residual} price guarantees on the planes – a detail that Mr. Leahy considered confidential. Iberia's Mr. Dupuy said he wasn't rubbing it in. But he had, he boasted, won "extraordinary conditions."

21 Boeing 737s in order to operate an all-Boeing fleet,⁵⁴⁰² SAA decided to switch to Airbus with this order.⁵⁴⁰³ The United States contends that Airbus was eager to offer a "heavy discount" on its A340s.⁵⁴⁰⁴ The United States also cites a SAA report in which the company described the LCA it bought from Airbus as "aggressively priced."⁵⁴⁰⁵ As in the Iberia sale, certain of the planes purchased by SAA were white-tail aircraft originally destined for Swissair.⁵⁴⁰⁶

7.1823 The European Communities asserts that, as in the sale to Iberia, a key reason Airbus won the SAA order was the superior operating performance of the A340 in hot, high altitudes, and that the failure of the Boeing 777 in performance tests in 2002 damaged its credibility. HSBI suggests that the A340 did present certain performance advantages, but also indicates the need for aggressive pricing.⁵⁴⁰⁷ The European Communities also argues that Boeing had lost SAA's trust by its mishandling of an earlier sale of 737NG aircraft, which led the company to decide to replace its 737 aircraft with A320s.⁵⁴⁰⁸ The European Communities alleges that the "heavy discounts" referred to are attributable to the fact that some of the LCA were white-tail aircraft, [***].⁵⁴⁰⁹

7.1824 The United States asserts that the price differential was clearly an important aspect of this sale⁵⁴¹⁰ and relies on general information about aircraft performance to rebut the European Communities' arguments concerning performance advantages of the A340.⁵⁴¹¹ While we do not discount the importance of performance advantages, which the United States does not specifically rebut in this instance, unlike in the case of the Iberia sale, HSBI also indicates the significant role of pricing, including [***], in the sale.⁵⁴¹²

Thai Airways International

7.1825 In 2003 Thai Airways ordered three A340-500s and five A340-600s.⁵⁴¹³ In support of its significant price undercutting claim the United States cites media reports noting "special price concessions" of USD 7 million each, "extra credits" of USD 9.75 million for each A340-500 and USD 10.25 million for each A340-600 as well as an existing aircraft subsidy phase out.⁵⁴¹⁴

7.1826 The European Communities argues that Airbus' pricing was not a competitive factor in this campaign, and asserts that the sales campaign evidence demonstrates that Airbus was not competing against Boeing in this sales campaign.⁵⁴¹⁵ In addition, the European Communities argues that Thai

We have rejected the definition of "competitive" sales campaign on which this assertion relies, see para. 7.1722 above, and thus, we do not accept the view that Airbus did not compete for this sale on the basis of Mr. Scherer's statement.

BCI deleted, as indicated [***]

Airways was looking for LCA to operate on ultra-long-range flights to the United States, and that the A340-500/600 was the only ultra-long-range aircraft in production at the time of the Thai Airways sales campaign, and thus could be delivered before the newly launched Boeing 777-200LR. This is not contested by the United States, which responds by arguing that the availability of the A340-500/600 prior to the Boeing aircraft is, itself, an effect of the subsidy.⁵⁴¹⁶

7.1827 While we do not agree that there was no competition between Boeing and Airbus for this sale⁵⁴¹⁷, it does appear, given the timing of this campaign, that the only LCA that met Thai Airways' operational needs in production at the time the sale was concluded was the A340-500/600. Thai Airways would have had to wait some period of time for the Boeing LCA, the 777-200LR, that would meet those needs, to become available.

Singapore Airlines, Emirates Airlines, Qantas

7.1828 Each of these airlines placed orders for the new Airbus A380 in 2000 and 2001 as initial launch customers. The United States alleges that the orders were made despite Boeing's offer of the 747-X, a proposed redesign of the 747. The United States alleges that the 747-X was not launched because it could not find sufficient initial customers in competition with the A380.⁵⁴¹⁸ The United States argues that the prices offered on these A380 orders were so low that the impact of subsequent delays in delivering the A380 turned them into loss-making contracts.⁵⁴¹⁹ Indeed, according to the United States, Airbus offered the A380 at low prices compared to those being offered by Boeing on the original versions of the 747.⁵⁴²⁰ Thus, the United States argues that the competition from low-priced A380 LCA was the reason the 747-X was not launched.

7.1829 According to the European Communities, Singapore Airlines, Emirates Airlines and Qantas each ordered the A380 not because of its price, but because it offered unique advantages in seating capacity, range, and operating economics not available from any competing LCA Boeing could then offer.⁵⁴²¹ The European Communities argues that the terms of sale were consistent with the [***] and normal practice for orders by initial launch customers.⁵⁴²² The European Communities dismisses the United States' allegations regarding the offer by Boeing of a competing redesign of the 747, the 747-X, that would have offered similar capabilities. The European Communities asserts that the 747-X was not a serious competitive effort, alleging that Boeing's proposal of several different variants of the 747 over the period 1996 to 2006 damaged its credibility in claiming that it intended to launch an LCA directly competitive with the A380.⁵⁴²³ According to the European Communities, Boeing never seriously considered launching such an aircraft,⁵⁴²⁴ but rather proposed it only to dissuade Airbus from proceeding with the A380 project.⁵⁴²⁵

7.1830 Turning to the specific orders, the European Communities contends that Emirates never considered the Boeing re-design of the 747 in competition with the A380,⁵⁴²⁶ asserting that Emirates sought information on the 747X only after it made its commitment to Airbus regarding the A380.⁵⁴²⁷

⁵⁴²⁷ EC, FWS, para. 1708, citing "*Boeing and Emirates Correspond About 747X, 400X*," Reuters, 2 July 2000, Exhibit EC-368.

BCI deleted, as indicated [***]

Thus, according to the European Communities, product characteristics explain this order, and price was not a deciding factor.⁵⁴²⁸ With respect to Singapore Airlines, the European Communities argues, based on HSBI, that the proposed 747-X was not a serious competitive offer by Boeing, and was never considered as such by the airline.⁵⁴²⁹ Regarding Qantas, the European Communities alleges that it ordered the A380 because it offered the airline unique growth capabilities that could not be matched by the 747-X.⁵⁴³⁰ The European Communities cites factors other than price as key, relying on HSBI.⁵⁴³¹

7.1831 In response, the United States asserts that the contention that Boeing could not offer an aircraft that could compete with the A380 has already been disproven by events, referring to the delays in A380 deliveries as demonstrating that Boeing would have sold more LCA if the European Communities and the Airbus governments had not provided subsidies to bring the A380 to market.⁵⁴³² In this regard, the United States cites a recent statement by the CEO of Singapore Airlines, stating "Boeing 777-300ERs, in our experience, would be a useful alternative to A380s. ... We could upsize the order if there are further delays with the A380."⁵⁴³³ The same article noted that other carriers, including Emirates and FedEx, have also turned to the 777 to replace the delayed A380. The United States points out that the European Communities acknowledges that factors such as seating capacity are routinely "monetized" in sales campaigns and, to the extent practicable, can be offset by price concessions, with the result that even if the A380 may be better suited to a particular airline's business plan than a smaller plane like the 777, the two aircraft can – and do – fly the same routes.⁵⁴³⁴ Thus, the United States maintains, it is simply not the case that airlines like Emirates Airlines, Singapore Airlines, or Qantas were indifferent to the price of the A380 compared to the price of other aircraft that could fly the same routes, and reiterates that Airbus was offering the A380 at very low prices compared with the 747.⁵⁴³⁵

7.1832 While it is clear that the A380 offered unique characteristics to these airlines, we do not agree that it did not compete with the 747. Information in the A380 business case contradicts the European Communities' position in this regard.⁵⁴³⁶ That evidence also supports the United States' view with respect to the competitive pricing of the A380: [***].⁵⁴³⁷ Thus, while we do not discount the importance of the specific characteristics of the A380, the evidence also indicates the significant role of pricing in these sales.

Overall Assessment of the sales campaigns evidence

Significant Price Undercutting

7.1833 A principal difficulty in assessing the United States' claim of significant price undercutting in this dispute is that it is not at all clear to us that the anecdotal evidence discussed above constitutes an appropriate or reliable evidentiary basis for drawing conclusions about price comparison, which are the basis for a finding of significant price undercutting under article 6.3(c) of the SCM Agreement. For the most part, the transaction prices of LCA sold in these campaigns are not available for

BCI deleted, as indicated [***]

comparison, and the sporadic evidence of actual LCA prices available to us is insufficient for purposes of assessing price undercutting. The parties are in agreement that list prices are not a relevant basis for comparison.⁵⁴³⁸

7.1834 In the usual case, we would expect evidence of price undercutting to be of the type that would allow a "comparison of prices" of the two products in question, as suggested by Article 6.5, made "at the same level of trade and at comparable times, due account being taken of any other factor affecting price comparability." Article 6.5 goes on to provide "However, if such a direct comparison is not possible, the existence of price undercutting may be demonstrated on the basis of export unit values." We recall that we have concluded that Article 6.5 does not establish the exclusive means by which serious prejudice in the form of significant price undercutting can be demonstrated, and that the United States' claim in this case is not premised on the special circumstances for a complaining Member with a non-subsidized like product provided for in Article 6.5. However, we do consider that Article 6.5 provides useful guidance for the nature of the analysis of price undercutting in general, when it describes the type of price comparison that should be undertaken. In this case, we do not have evidence that would allow us to undertake a direct comparison of the price of the subsidized and like products, adjusted to ensure the comparison is at the same level of trade and for other factors affecting price comparability. Indeed, neither party appears to consider that the Panel could or should undertake an effort to calculate "comparable" prices for LCA for purposes of a price undercutting analysis. The United States notes that "it would be impracticable, if not virtually impossible, for the Panel to try to undertake the vast number of adjustments that would be necessary to perform an accurate, apples-to-apples price comparison between Airbus and Boeing LCA prices in a given market".⁵⁴³⁹ While the European Communities asserts that the Panel must compare the prices of the Airbus and Boeing offers, taking account of factors affecting price comparability, it does not suggest how the Panel might undertake such a comparison. The European Communities asserts that the United States has not provided evidence demonstrating that the Airbus price in any campaign was lower than the Boeing price, but it has not itself relied on or submitted evidence that would allow a comparison of prices by the Panel.⁵⁴⁴⁰ Instead, both parties have relied upon anecdotal and other evidence concerning the sales campaigns in the context of price undercutting.

7.1835 The United States considers that it has provided evidence concerning the "actual prices" in a number of transactions in the information concerning the several sales campaigns on which it relies. In the United States' view, the customer in a given sale of LCA is the only "party that has access to all of the data necessary to compare the prices offered by Boeing and Airbus" and will "perform the analysis required by Article 6.5 – a comparison of the subsidized product and the like product, in the same market, at the same level of trade, at comparable times, taking "due account" of all relevant factors affecting comparability."⁵⁴⁴¹ The United States asserts that nothing in Article 6.5 prescribes how these factors are to be taken into account, and given the impracticability if not impossibility of either Boeing, Airbus or the Panel, undertaking such an analysis, the Panel should rely on the statements of customers indicating that Airbus LCA were purchased in a given transaction on the basis of price as probative on the question of price undercutting.⁵⁴⁴²

7.1836 The European Communities agrees with the United States that the customer generally monetizes the differences between competing aircraft offered by Boeing and Airbus in a particular

⁵⁴³⁸ US, Answer to Panel Question 281, para. 124: "list prices alone are not generally meaningful for conducting an analysis of LCA pricing under Article 6.3(c)"; EC, Answer to Panel Question 281, para. 190: "list prices are largely irrelevant to the Panel's assessment of injury under Article 5(a) or serious prejudice under Articles 5(c) and 6.3(c)".

⁵⁴³⁹ US, Answer to Panel Question 235, para. 61.

BCI deleted, as indicated [***]

sales campaign,⁵⁴⁴³ but it considers that the end result of this process is not a comparison by the customer of the prices of the competing aircraft, but of the net present value (NPV) of the competing offers. In the European Communities' view, the United States "conflates the concepts of price and NPV {implying} that price undercutting is demonstrated simply by evidence that the customer decided to order from Airbus due to the better value of the Airbus offer."⁵⁴⁴⁴ The European Communities considers that the NPV will be determined not only on the basis of price, but also based on consideration of non-price factors, and in such cases, a sale by Airbus does not necessarily indicate that Airbus' price was lower, but rather than the NPV of the Airbus offer was higher, which may be attributable to any of the non-price factors taken into account by the customer.⁵⁴⁴⁵ For the European Communities, it is important that the Panel consider actual prices, and not NPV, in its analysis of price undercutting,⁵⁴⁴⁶ although it does not provide any suggestions as to how such an actual price comparison could or should be undertaken. However, according to the European Communities, in order for the United States to establish significant price undercutting, it must prove, on a sale-by-sale basis, that Airbus offered a significantly lower price than Boeing, taking due account of factors affecting price comparability, and that such significantly lower price was caused by the alleged subsidies.⁵⁴⁴⁷ The European Communities asserts that the United States has failed to demonstrate this in respect of any of the sales campaigns it has relied upon to establish significant price undercutting.

7.1837 We do not agree that the evidence before us reflects the actual prices of LCA in the sales campaigns. Rather, in our view, that evidence relates to the value of the offers of competing manufacturers for a particular customer's order. It is clear to us this evidence demonstrates that the customer's evaluation of the competing offers for sale of LCA involves consideration of a range of elements, from the price of the airframe itself, to various discounts, guarantees, concessions, financing, support, engine choice, and other aspects.⁵⁴⁴⁸ It may well be true that the evaluation by a customer of competing offers or proposals involves a comparison similar to that described in Article 6.5. However, the NPV calculation as described by both the parties⁵⁴⁴⁹ involves a number of subjective and customer specific elements which, because we have no basis on which to evaluate them or consider their importance, makes it impossible for us to conclude that the customer's ultimate decision reflects a choice based on lower price. Moreover, the customer is not the Panel in this dispute, and we do not consider that we can abdicate our responsibility by simply accepting that the customer's ultimate choice of Airbus' offer to sell LCA on certain specific terms demonstrates that the price of the subsidized product involved in that sale was lower than the price of the competing United States' like product.

7.1838 Although we have concluded that the like product in this dispute is all Boeing LCA, it is clear that the LCA models offered by Boeing and Airbus each have their own particular features, and that

⁵⁴⁴³ EC, FWS, para. 1832 ("customers conduct a complex technical and economic of each LCA manufacturer's fleet proposal, translating each technical, physical and economical characteristic of each LCA into a "value" element...This process is highly subjective ... The significance of each factor will depend on where that airline's particular priorities lie. Seemingly small differences in the physical or economics {sic} characteristics of Boeing and Airbus competing LCA can thus be decisive in the purchasing decision of an airline.") (footnotes omitted).

⁵⁴⁴⁵ EC, Comments on US Answer to Panel Question 235, para. 115.

⁵⁴⁴⁶ And also in its analysis of price suppression, price depression, and lost sales. EC, Comments on US Answer to Panel Question 235, para. 119.

⁵⁴⁴⁷ EC, Comments on US Answer to Panel Question 236, para. 120.

⁵⁴⁴⁸ See, Statement of Rod P. Muddle, Exhibit EC-19, at paras. 52-93 describing various elements that may be taken into consideration in assessing an offer of LCA. The United States appears to accept that the elements identified by Mr. Muddle form part of the "price" of any LCA transaction, or otherwise affect the value of an LCA offer. US, Answer to Panel question 281, paras. 125-26.

⁵⁴⁴⁹ US, FWS, paras. 799-800, US, Answer to Panel question 235, para. 62, EC, FWS, 1429-1439, EC, Answer to Panel Questions 281 and 282.

BCI deleted, as indicated [***]

each model group, and each specific model within a group, is differentiated in order to offer specific characteristics to individual customers to meet their particular needs. HSBI concerning the sales campaigns indicates that the specific characteristics of the LCA in question are in all cases important elements of a customer's choice of LCA, but that these are not considered in a vacuum but in a complex negotiating process with the manufacturers. Airline customers consider the characteristics of individual LCA in relation to their existing fleets, their route structure and forecasts for changes in routes and traffic patterns, operating costs, maintenance costs, training costs, etc. The number and variety of factors considered is in all cases large, and varies for each individual customer. In each campaign, one or another of the LCA being considered will be the best fit for the particular needs of the customer at that time. Moreover, personal and political factors appear to have played a role in at least some of these sales. In addition, it is clear that competition between Boeing and Airbus for customers is fierce, and that both companies are willing to negotiate on price to secure an important sale.

7.1839 Even where there are other factors such as performance, fleet considerations, or personal factors relevant to a sale, price, in the sense of the overall value of the offer to the customer's business, remains one of the, if not the only, determinative factors in the customer's decision. It seems clear that an LCA manufacturer obtains a particular sale because its offer of a particular LCA (or group of LCA models) has a higher value, from the customer's perspective, than the competing offer of LCA from the other manufacturer. However, we cannot conclude that public statements reflecting this consideration of the value of competing offers constitute sufficient evidence for us to conclude that there was "price undercutting" in a given sale. Given that this calculus takes place in the purchaser's consideration of the offers, and is not apparent in the actual price of the aircraft, it seems difficult if not impossible for us to make conclusions about price undercutting, let alone significant price undercutting, within the meaning of Article 6.3(c) of the SCM Agreement, on the basis of customers' public statements which reflect calculation of the relative value of competing offers to sell LCA, but give us no basis on which to establish an actual comparison of prices. Such an approach in this case would seem to us to be far from what is contemplated by Article 6.5 when it describes how price comparisons might be undertaken.⁵⁴⁵⁰ While a statement such as that of CSA strategic director Jan Vana indicating that "{b}oth offers met all of our technical specifications without exception. But Airbus offered the better price",⁵⁴⁵¹ suggests some degree of price undercutting, even in this instance, we cannot conclude that such undercutting was significant, or that price was the deciding factor in which manufacturer won the order, given the other factors at play, such as political and fleet considerations.⁵⁴⁵²

7.1840 Thus, overall, while we accept that price was an important factor in each of these sales, and may in some instances have been decisive, in the sense that the overall value of Airbus' offer to the customer was higher than the value of Boeing's offer, we cannot, on the basis of the evidence before us, make any conclusions regarding significant price undercutting within the meaning of Article 6.3(c) of the SCM Agreement.

Significant Lost Sales

7.1841 The European Communities' arguments with respect to lost sales are premised on the notion that unless price was the determining factor in a particular sale, that sale cannot be considered a lost

⁵⁴⁵⁰ We do not preclude the possibility that, in a different case, a conclusion concerning price undercutting might be established based on evidence that does not suffice to establish a direct comparison of prices within the sense of Article 6.5. However, in this case, the anecdotal evidence, in the context of this product and this industry, and the way in which sales decisions are made, is simply insufficient to persuade us with respect to the allegations of significant price undercutting.

⁵⁴⁵¹ Dow Jones Newswire (15 October 2004), Exhibit US-424.

⁵⁴⁵² See, EC, Comments on US Answer to Panel Question 236, para. 158.

BCI deleted, as indicated [***]

sale.⁵⁴⁵³ However, the United States made clear that it is not relying exclusively on price in support of its claims of lost sales. Rather, the United States makes separate claims with respect to significant price undercutting, and significant lost sales, as separate and distinct effects of the subsidies within the meaning of Article 6.3(c) of the SCM Agreement. The United States acknowledges that some of the evidence it presents is relevant to both claims, but maintains that the claims are legally and factually distinct.⁵⁴⁵⁴ Specifically with respect to lost sales, the United States argues that a sale may be "lost" either because Airbus offered a particular LCA at a lower price, or because it was able to offer a specific model of LCA that it would not have had available but for the subsidies.⁵⁴⁵⁵

7.1842 The text of Article 6.3 gives no guidance to panels as to the methodology for evaluating allegations of lost sales, other than to specify that such lost sales must be "in the same market". Nor is there any further guidance in any other provision of the SCM Agreement. As this is the first dispute in which allegations of lost sales have been made in order to demonstrate serious prejudice under Article 6.3, there is no dispute settlement guidance on this point.⁵⁴⁵⁶

7.1843 Looking at the text of Article 6.3(c), it seems clear to us that it describes four different effects which, if found to apply, can support a finding of serious prejudice: significant price undercutting, significant price suppression, price depression or lost sales in the same market. There is nothing in the text of the provision that establishes or requires any connections or linkages between these four types of effect as a legal matter. We can certainly envisage that, as a matter of fact in a particular case, there may be linkages between, for instance, price undercutting and lost sales, or price undercutting and price depression or price suppression. However, we see nothing in the text that would require that a sale must be lost by reason of price in order for it to be considered a lost sale for purposes of Article 6.3(c).

7.1844 While the European Communities maintains that the United States relies on price undercutting to establish the existence of lost sales, considering the United States' arguments as a whole, this is clearly not the case. The European Communities asserts that "only if Airbus' winning lower price is significantly lower *and* that significantly lower price is caused by subsidies" can the United States prevail on its claim of significant lost sales.⁵⁴⁵⁷ In our view, there is no legal basis in the text of the SCM Agreement for the view that lost sales must be demonstrated on the basis of price undercutting, and the European Communities has not demonstrated otherwise.

7.1845 The European Communities does not dispute that Boeing lost sales to Airbus, in the sense that the customer purchased Airbus rather than Boeing LCA. While we have concluded that significant price undercutting cannot be found on the basis of the evidence before us, this does not mean that there were not significant lost sales. In our view, it is clear that Boeing lost sales to Airbus involving purchases by easyJet, Air Berlin, Czech Airlines, Air Asia, Iberia, South African Airways, Thai Airways International, Singapore Airlines, Emirates Airlines, and Qantas.⁵⁴⁵⁸ Moreover, it is

⁵⁴⁵³ EC, FWS, para. 1821.

⁵⁴⁵⁴ US, Answer to Panel Question 54, para. 307.

⁵⁴⁵⁵ US, Answer to Panel Question 54, paras. 309-310. Brazil considers that price need not be the only reason for lost sales, provided it is one of the material factors causing the lost sales. Brazil, Third Party Submission, para. 55.

⁵⁴⁵⁶ Although allegations of lost sales are not uncommon in the context of allegations of material injury in countervailing duty and anti-dumping investigations, neither Article 15 of the SCM Agreement nor Article 3 of the AD Agreement refer to lost sales, and we are not aware of any dispute in which consideration of lost sales allegations have been addressed in the trade remedy context.

⁵⁴⁵⁷ EC, FWS, para. 1821.

⁵⁴⁵⁸ We note that the European Communities argues extensively concerning other sales to different airlines, contending that these were not sales lost by Boeing for reasons of price. However, the United States did not rely on those sales in support of its claim of serious prejudice in the form of lost sales, and thus we do not consider them in this context.

BCI deleted, as indicated [***]

apparent to us that if winning a particular sale is of "strategic importance" to Airbus, as the European Communities asserts with respect to the easyJet campaign discussed above,⁵⁴⁵⁹ the loss of that sale to Boeing is similarly important, and can justifiably be considered a significant lost sale. In addition, lost sales are important to the extent that they delay a manufacturer's ability to benefit from the important learning effects and economies of scale in this industry, and thus have a significance beyond their direct revenue effects.⁵⁴⁶⁰ Moreover, both parties recognize the advantages to being the incumbent supplier with a given customer with respect to subsequent purchases, which also adds to the significance of lost sales. While it is true that a manufacturer may be able to recoup some of these disadvantages by finding another customer to take advantage of delivery slots, this does not, in our view, detract from the significance of a lost sale.⁵⁴⁶¹ Given the number of aircraft and the dollar amounts involved in those sales, as well as the considerations just described, we conclude that these lost sales are significant. We address whether these significant lost sales are an effect of the specific subsidies we have found were granted to Airbus with respect to LCA in Section (e) below.

(ii) *Significant price suppression and price depression*

7.1846 In *US – Upland Cotton*, the panel considered the meaning of the terms price suppression and price depression and concluded:

"Thus, 'price suppression' refers to the situation where 'prices' ... either are prevented or inhibited from rising (*i.e.*, they do not increase when they otherwise would have) or they do actually increase, but the increase is less than it otherwise would have been. Price depression refers to the situation where 'prices' are pressed down, or reduced."⁵⁴⁶²

This definition of price suppression was approved by the Appellate Body in its review of the panel report.⁵⁴⁶³ In *US – Upland Cotton (Article 21.5)*, the Appellate Body further elaborated on the notions of price suppression and price depression:

"At a conceptual level, we see some differences between the concepts of 'price depression' and 'price suppression' as defined in the original proceedings. While price depression is a directly observable phenomenon, price suppression is not. Falling prices can be observed; by contrast, price suppression concerns whether prices are less than they would otherwise have been in consequence of various factors, in this case, the subsidies. The identification of price suppression, therefore, presupposes a comparison of an observable factual situation (prices) with a counterfactual situation (what prices would have been) where one has to determine whether, in the absence of the subsidies (or some other controlling phenomenon), prices would have increased or would have increased more than they actually did".⁵⁴⁶⁴

⁵⁴⁵⁹ EC, FWS, paras. 1881-1883,

⁵⁴⁶⁰ See, paras. 7.1717 and 7.1726 - 7.1727 above, concerning learning effects and economies of scale.

⁵⁴⁶¹ The European Communities states that "even assuming, *arguendo*, that the effect of any alleged subsidies to Airbus caused Boeing to lose certain sales between 1999-2005, those "lost sales" are not today *significant* given the huge order backlog and the fact that Boeing sold all the early "lost" order slots to other customers at what were "likely higher prices." EC, SCCS, para. 21. As discussed further below, we do not consider that improvements in Boeing's condition, as evidenced by its order backlog, or any efforts by it to mitigate the adverse effects it has suffered, are relevant to our consideration of serious prejudice. We certainly do not consider that whether lost sales are "significant" must be assessed with respect to a period several years after the fact. Lost sales that are significant at the time may well support a finding of present serious prejudice.

⁵⁴⁶² Panel Report, *US – Upland Cotton*, para. 7.1277.

⁵⁴⁶⁴ Appellate Body Report, *US – Upland Cotton (Article 21.5 – Brazil)*, para. 351.

BCI deleted, as indicated [***]

7.1847 In the present case, the United States alleges that both significant price depression and significant price suppression can be observed over the period 2001 through 2006 in the world market prices for four models of Boeing LCA: the Boeing 737NG, Boeing 767, Boeing 747, and Boeing 777.⁵⁴⁶⁵ The United States contends, and the European Communities does not disagree, that the world market is the appropriate market for measuring the price effects of subsidies to Airbus.⁵⁴⁶⁶ For each of the four models of Boeing LCA, the United States presents a line chart mapping the movements of annual indexed Boeing LCA order prices and the United States Aircraft Manufacturers Producer Price Index ("PPI"). The United States argues that the charts it has presented show that indexed prices on the world market for each of the four models of Boeing LCA have declined over this period, demonstrating price depression.⁵⁴⁶⁷ Moreover, the United States contends that the fact that prices have not followed the PPI demonstrates price suppression. The United States describes the PPI as the producer price index for aerospace manufacturing in the United States – a measure of general industry costs, which the United States submits represents a "reasonable proxy for the amount by which LCA prices could be expected to rise in the absence of suppression by some external factor".⁵⁴⁶⁸ Thus, the United States alleges that in fact, the PPI is an objective benchmark for what changes in prices would have been expected over the period, and the fact that prices did not increase as would have been expected shows price suppression that can be directly observed in this case. According to the United States, the fact that the indexed prices of Boeing's LCA over the 2001 to 2006 period have not followed the PPI demonstrates significant price suppression.⁵⁴⁶⁹ Finally, the United States asserts that the observed price depression and price suppression is significant. The four charts presented by the United States are reproduced below. We examine each in turn before setting out our views in respect of the parties' arguments.

Chart 11: Boeing 737NG, Average Indexed Order Prices compared with PPI (2001-2006)

[***]

7.1848 The United States asserts that the indexed annual prices for the Boeing 737NG in the world market [***] between 2001 and 2005,⁵⁴⁷⁰ before [***].⁵⁴⁷¹ The United States notes that [***].⁵⁴⁷²

⁵⁴⁶⁵ US, FWS, para. 804. The United States originally presented data for the period 2001 through 2005, and submitted updated tables containing data for 2006 with its second written submission. US, SWS, para. 726, Exhibit US-612 (BCI). Although we are proceeding on the basis of consideration of all Boeing LCA as the product "like" all Airbus LCA, the subsidized product, we nonetheless consider it appropriate to examine the price trends for the individual models, as being the most accurate basis for our assessment. Neither party has suggested that an alternative, for instance some form of aggregation or averaging, would be possible or appropriate. However, while examination of the trends for individual models is appropriate, our conclusion as to whether the United States has demonstrated significant price depression or suppression must be made with respect to the like product, LCA. See, Appellate Body Report, *US – Hot-Rolled Steel*, paras. 195, 204 (Appellate Body concluded that, in assessing injury to a domestic industry "as a whole", an investigating authority could properly undertake an evaluation of particular parts, sectors or segments within that domestic industry, so long as the examination was done in an objective manner, either by examining all other parts as well, or explaining why it is not necessary to do so).

⁵⁴⁶⁶ US, FWS, para. 803, where, citing the geographic market definition used by the European Commission in its 1997 clearance Decision regarding the merger between McDonald Douglas and Boeing, *i.e.*, the world market, Exhibit US-375, para. 20, the United States asserts that "{i}n the context of this case, the world market is the appropriate market for measuring the price effects of the Airbus subsidies"; EC, FWS, paras. 1726-1758, 1798-1819, 1999-2023 and 2077-2086

BCI deleted, as indicated [***]

According to the United States, these adjustments to order prices demonstrate the price depressing effects of Airbus pricing practices, showing significant decreases over three years. The United States explains that the PPI increased by 21.19% from 2001 to 2006, reflecting, in its view, a [***]% price decline for the 737NG and therefore both significant price suppression and price depression.⁵⁴⁷³

Chart 12: Boeing 767, Average Indexed Order Prices compared with PPI (2001-2006)

[***]

7.1849 With respect to Boeing 767 prices, the United States alleges a similar trend, with order prices [***] by 2002. However, prices [***]. Again, the United States asserts that the increase in the PPI shows an inflation-adjusted decline of [***]% over the period 2001-2006, demonstrating the significant price suppression and price depression experienced by Boeing over the relevant period.⁵⁴⁷⁴

Chart 13: Boeing 747, Average Indexed Order Prices compared with PPI (2001-2006)

[***]

7.1850 The United States submits that the above chart shows that the price for the Boeing 747 declined over the relevant period, [***].⁵⁴⁷⁵ Again, the United States notes that these prices did not keep up with inflation as represented by the PPI, declining by more than [***]% by the end of the period, thereby demonstrating both significant price suppression and price depression.⁵⁴⁷⁶

Chart 14: Boeing 777, Average Indexed Order Prices compared with PPI (2001-2006)

[***]

7.1851 Finally, with respect to the 777, the United States argues that a different pattern emerges, with [***].⁵⁴⁷⁷ The United States attributes the increase in prices for the 777 in 2005 and 2006 to the effect of rising fuel prices on the competitiveness of the Airbus A340, which has four engines compared with twin-engine 777.⁵⁴⁷⁸

7.1852 The United States contends that, overall, the data concerning world market prices shows that Boeing LCA prices have declined, or at best have failed to keep pace with increased costs as represented by increases in the PPI. In the United States' view, this is evidence of significant price depression and price suppression within the meaning of Article 6.3(c) of the SCM Agreement.

7.1853 The European Communities does not dispute the pricing information presented by the United States. Instead, the European Communities argues, *inter alia*, on the basis of its calculation of per-aircraft subsidy amounts for each family of Airbus LCA, that the subsidies were too old, too small, and not of a nature which would make it possible for them to have caused the price effects

BCI deleted, as indicated [***]

observed.⁵⁴⁷⁹ We will address the European Communities' arguments with respect to causation later in this Report.

7.1854 Turning first to the question whether the United States has established that there was significant price depression over the relevant period, we recall that price depression is the situation where prices are observed to fall. As the Appellate Body noted in *US – Upland Cotton (Article 21.5)*, price depression is a phenomenon that may be directly observed. Moreover, we recall that significant price depression must be price depression that is "important, notable ... consequential".⁵⁴⁸⁰ On the basis of the data contained in the above charts, we consider that the United States has demonstrated the existence of significant price depression in the world price of three of the four Boeing LCA models over the period 2001 to 2006. However, we are not convinced that significant price depression is demonstrated in the case of world prices for the Boeing 777 over the same period. In only one of five years did prices for this model of LCA decline. In all other years, prices increased roughly in line with the changes in the PPI, with the exception of 2006 when prices rose by significantly more, leaving them at approximately the same level as the PPI.

7.1855 We note that sales of the Boeing 777 represented only a small proportion of Boeing's overall LCA sales over the reference period.⁵⁴⁸¹ Thus, the data in the pricing charts demonstrate that Boeing experienced significant price depression with respect to the vast majority of its sales of LCA. We therefore conclude that, overall, the United States has demonstrated significant price depression in the world price of Boeing LCA over the years 2001 to 2006.

7.1856 As regards significant price suppression, the European Communities asserts that the United States' Aircraft Manufacturers' PPI is not a reliable measure of the cost increases faced by Boeing, and that the failure of prices of certain aircraft to increase commensurate with that index is completely irrelevant to the question whether there was significant price suppression in the relevant period.⁵⁴⁸² According to the European Communities, the PPI is a theoretical construct that takes only United States' labour and materials costs into account, and thus provides little information about Boeing's actual manufacturing costs.⁵⁴⁸³ Moreover, the European Communities alleges that Boeing has introduced a number of cost-cutting and restructuring measures over the past decade, including increased reliance on suppliers to assume a greater role in LCA production and outsourcing, resulting in reduced costs of manufacturing. The European Communities also contends that Boeing has been able to take advantage of learning curve effects that have likewise reduced Boeing's manufacturing costs.⁵⁴⁸⁴

7.1857 The European Communities suggests that the appropriate measure for assessing inflation in Boeing's costs is Boeing's operating margin, which is a function of actual costs and revenue, such that an increased operating margin means costs are decreasing, or revenues are increasing (reflecting price increases) or both.⁵⁴⁸⁵ The European Communities points to evidence it argues shows that Boeing's operating margins increased in 2006 and were expected to increase in 2007 and 2008, including a statement made by Boeing's Chief Financial Officer in April 2007, noting that Boeing's operating margins resulted from "a combination of both better pricing as it stabilizes today and ... also our

⁵⁴⁷⁹ EC, FWS, paras. 1726-1758, 1798-1819, 1999-2023 and 2077-2086; EC, SWS, paras. 1148-1161, 1166-1174.

⁵⁴⁸⁰ See, discussion of the term "significant" at paragraphs 7.1795 and 7.1796 above.

⁵⁴⁸¹ On the basis of the data presented in Exhibit EC-21, orders of the Boeing 777 accounted for less than 15% of Boeing's total LCA orders between 2001 and 2006. We understand that the 777 prices are higher than 737 prices, but there is no information before us that would suggest that this difference is of a magnitude that would undermine our overall conclusion.

⁵⁴⁸² EC, Answer to Panel Question 213.

BCI deleted, as indicated [***]

productivity efforts".⁵⁴⁸⁶ Thus, the European Communities does not consider that, as a matter of fact, prices for Boeing's LCA have not increased in line with inflation, stating that "not only are Boeing's prices increasing, but its costs are also decreasing".⁵⁴⁸⁷

7.1858 The United States argues that the ratio of operating profits to costs can be expected to vary with the volume of units sold, entirely apart from any underlying changes to price levels. Thus, according to the United States, trends in actual operating margins, considered without reference to changes in the volume of deliveries over the relevant period, say nothing about price levels that might be expected in the absence of external price-suppressing factors.⁵⁴⁸⁸ Moreover, referring to various passages of a June 2005 press report submitted by the European Communities as Exhibit EC-926, the United States explains that "price escalation" clauses – by which order prices in LCA sales contracts are indexed to inflation to derive the actual price to be paid for LCA at delivery – are driven by the same factors that constitute the PPI, namely, changes in United States' aerospace industry labour and materials costs. Indeed, the United States notes that the same press report indicates that the typical price escalation clause applied by Airbus in its contracts is based on "U.S. labor costs in the aerospace industry, energy costs and costs of materials".⁵⁴⁸⁹ Similarly, the United States points to the following passage in a statement by Mr. Rod P. Muddle, an "expert in the acquisition of large civil aircraft", which the European Communities introduced as Exhibit EC-19:

"LCA prices are often negotiated several years prior to delivery. Manufacturers make allowance for this with a price adjustment according to date of delivery. The price to be paid at delivery depends on annual increases, or 'escalation', of the list price of the LCA, to which all additions and subtractions are applied. Airbus and Boeing have different escalation formulae. The formula are derived from changes in aerospace industry costs of material and labor".⁵⁴⁹⁰

Finally, the United States argues that the press report submitted by the European Communities in Exhibit EC-926 provides further support for the significant price suppression and price depression it alleges can be observed during the relevant period because it explains how customers ordering LCA between 1995 and 2000 were, as a result of escalation clauses, paying more for their LCA delivered subsequently than were customers who placed orders after this period, due to the fact that order prices had not risen or even decreased in the years covered by the relevant reference period.⁵⁴⁹¹

7.1859 We agree with the United States that, as a general matter, one would expect that in any manufacturing industry, all else being equal, prices would tend to increase when production costs increase. The evidence before us suggests that this is also expected in the LCA industry. In particular, both Boeing and Airbus typically try to ensure that the final price paid by a customer for an LCA delivered some years after the date it was ordered keeps pace with any increases in the costs of manufacturing over the intervening period by including a "price escalation" clause in their sales contracts. However, rather than tracking their own *actual* costs of manufacturing as the basis for calculating final delivery prices, the price escalation formulae used by the two companies appear to be derived from data that approximates those costs on a more general basis. This is evident from the press report the European Communities has submitted as well as the description of how LCA are priced provided by the European Communities' expert, Mr. Rod P. Muddle. Indeed, both sources indicate that the price escalation formulae of Boeing and Airbus are closely related to changes in

BCI deleted, as indicated [***]

United States' "aerospace industry costs of material and labor". In other words, the evidence before us shows that the "price escalation" clauses used by both Boeing and Airbus typically index LCA prices to a proxy for cost inflation that is based, in major part, on the same factors that go into calculating the PPI.⁵⁴⁹² Thus, we are satisfied that the PPI represents a reasonable proxy for cost inflation that both Boeing and Airbus would normally try to take into account in the pricing of their LCA.⁵⁴⁹³ It follows that the PPI may be used as a reasonable benchmark for the price trends and levels that would have been expected over the reference period. Therefore, the existence of price suppression in world market prices for Boeing LCA may be directly observed on the basis of a comparison of trends in actual indexed prices with the PPI.

7.1860 Comparing the PPI in each chart with the prices of Boeing LCA, there was clearly a degree of price suppression in respect of world market prices for each of the four Boeing LCA models. However, we consider the evidence to show **significant** price suppression in respect of prices for only the 737, 767 and 747. With respect to 777, the price suppression seen reflects a price decline that occurred in only one year (2004). In three of the four other years (2002, 2003 and 2006), the increase in indexed price levels experienced by the Boeing 777 was greater, in proportionate terms, than the PPI increases. Prices of the Boeing 777 also increased in 2005 at almost the same rate as the PPI. Thus, we do not consider the United States to have demonstrated significant price suppression over the relevant period for this model of Boeing LCA.

7.1861 Again, we recall that sales of the Boeing 777 represented only a small proportion of Boeing's overall LCA sales over the reference period.⁵⁴⁹⁴ Thus, we conclude that the evidence before us demonstrates that Boeing experienced significant price suppression with respect to the vast majority of its sales of LCA. We therefore conclude that, overall, the United States has demonstrated significant suppression in the world price for Boeing LCA over the years 2001 to 2006.

7.1862 Having concluded that the United States has demonstrated that, overall, Boeing experienced significant price depression and price suppression over the relevant period, we note that in respect of both phenomena, a large proportion of the absolute and relative price declines took place in 2002, coinciding with the deep industry downturn that followed the events of 9/11. We see this as an issue relevant to the question of causation, that is, whether the significant price depression and suppression we have observed was caused by the subsidies. It is to the question of causation, that is, whether the market effects alleged to demonstrate serious prejudice that have been demonstrated to have occurred during the period we examined are the effect of the specific subsidies to Airbus that we have found, that we now turn our attention.

⁵⁴⁹² US, FWS, para. 742, US comment on EC, Answer to Panel question 213, para. 303.

⁵⁴⁹³ One of the reasons why the European Communities considers the PPI to be irrelevant to the question of price suppression is the fact that Boeing allegedly outsources much of its LCA production to suppliers outside of the United States. EC, Answer to Panel question 213. However, we note that in making this point, the European Communities refers only to the manufacture of components for the Boeing 787, which was not yet in commercial production during the relevant period. *Id.* Moreover, even granting that a significant portion of current 787 component manufacture takes place outside of the United States, in our view, the European Communities' argument does not undermine the relevance of the PPI to the question of cost inflation in the LCA industry overall during the period we are considering.

(e) Whether Subsidies Are the Cause of the Observed Market Effects

(i) *Arguments of the United States*

7.1863 The United States argues that LA/MSF distorts competition in the market for LCA in at least two ways.⁵⁴⁹⁵ First, the United States argues that LA/MSF shifts some of the commercial risk of LCA launch decisions from Airbus to the Airbus governments, France, Germany, Spain and the United Kingdom, allowing Airbus to launch aircraft models that, in the absence of LA/MSF, it would not have launched. Second, the United States asserts that LA/MSF provides Airbus with significant additional cash flow and other financial resources on non-market terms which allows Airbus to price its aircraft more aggressively than it would otherwise be able to without LA/MSF. According to the United States, the other subsidies it has challenged in this dispute have essentially the same effects, because like LA/MSF, they also shift costs of LCA development from Airbus to the Airbus governments.⁵⁴⁹⁶ Thus, the United States argues that the effect of the subsidies granted to Airbus has been to enable Airbus to launch new LCA, and thereby to increase its market share, especially during the period 2001 to 2006, to the detriment of the United States LCA industry, causing serious prejudice to the United States' interests within the meaning of Articles 6.3(a), (b) and (c).

7.1864 The United States submits that in the absence of LA/MSF, and all of the other subsidies at issue in this dispute, Airbus would have, at best, fewer and different LCA models available to sell in the global LCA market. The United States argues that even if it is assumed that Airbus would exist in the absence of LA/MSF, its entry into the various segments of the LCA market would have occurred at a later date, and with different aircraft. In this respect the United States asserts:

"even if Airbus would have entered a particular LCA market segment at some other time with a different aircraft (in terms of technical capabilities, specifications, and other characteristics), the effect on the U.S. LCA industry would have been different. That Airbus enters a market segment at a time and in a way that it can only do because of subsidies cannot but have a distorting impact on the market."⁵⁴⁹⁷

7.1865 In support of its claim that subsidies have "facilitated and accelerated the introduction of every major Airbus model"⁵⁴⁹⁸ the United States relies principally on two types of evidence. The first is public statements made by both Airbus and Airbus government officials. The United States asserts that these statements demonstrate not only that Airbus has depended on subsidies in order to be able to bring its aircraft to market, but also that those subsidies were designed to target United States' products and producers and thereby gain market share for Airbus.⁵⁴⁹⁹ The second is a report prepared by Dr. Gary J. Dorman of NERA Economic Consulting.⁵⁵⁰⁰ The Dorman Report presents a simulation of a business case for a "typical" wide body aircraft, and purports to demonstrate, on the basis of the simulation, the impact of LA/MSF type measures on the economics of an LCA launch decision. According to the United States, the Dorman Report demonstrates how LA/MSF shifts risk to the Airbus governments, thereby making the "very fact of launch more likely".⁵⁵⁰¹

⁵⁴⁹⁵ The United States suggests that there may be other forms of market distortion. However, as the United States did not provide any evidence or arguments with respect to such "other" forms of alleged market distortion, our analysis is limited to the two aspects of market distortion that are the subject of the evidence and arguments presented by the United States.

⁵⁵⁰⁰ Dorman Report, Exhibit US-70 (BCI).

⁵⁵⁰¹ US, FCOS, para. 141.

BCI deleted, as indicated [***]

7.1866 The United States also asserts that LA/MSF, together with the other subsidies at issue in this dispute, have directly and indirectly lowered Airbus' marginal cost of capital, which allows Airbus to meet profitability targets while reducing prices. The United States argues that LA/MSF, by reducing the cost of capital in the initial years of an aircraft project, allows Airbus to be more flexible in the pricing of all of its LCA during that period while, at the same time, maintaining a rapid pace of development.⁵⁵⁰² In support of its arguments concerning the pricing effect of LA/MSF, the United States relies upon, *inter alia*, statements in the 2005 Airbus Annual Review, which it alleges indicate that market share was more important to Airbus than profitability.⁵⁵⁰³ It also refers to certain documents produced by Moody's credit rating agency, which allegedly demonstrate that LA/MSF results in Airbus' parent company EADS having a more favourable credit rating than would otherwise be the case, as well as a 2007 Deutsche Bank report, which indicates that LA/MSF accounted for nearly half of EADS' net "free cash flow".⁵⁵⁰⁴ The United States also relies upon the explanation of the [***] mechanism provided by the Executive Vice President of Airbus, Christian Scherer, in a statement prepared for the purposes of this dispute settlement proceeding.⁵⁵⁰⁵

7.1867 While the United States maintains that there is no obligation on it to quantify the benefit of the subsidies at issue, it presents as evidence of the magnitude of the subsidies a report prepared by NERA Economic Consulting, which calculates the total benefit of LA/MSF in terms of its impact on the present financial condition of Airbus as of year end 2006 at between USD 92.5 billion and USD 178.2 billion.⁵⁵⁰⁶ It also argues that irrespective of the methodology used to calculate benefit, the costs associated with equivalent financing on commercial terms would have been impossible for Airbus to meet.⁵⁵⁰⁷

7.1868 Thus, in essence, the United States argues that in the absence of the challenged subsidies, Airbus would have fewer and different LCA models and could not price the ones it has so aggressively. According to the United States, this is the market distorting impact of the subsidies that are at issue in this dispute. Drawing on this view, the United States posits a counterfactual in which the "U.S. LCA Industry would produce and sell more aircraft at higher prices than it does in the face of subsidized competition".⁵⁵⁰⁸ While the United States provides evidence and arguments in respect of each of the forms of serious prejudice set out in Article 6.3(a)-(c), these alleged market distortions and their alleged impact on LCA development and prices are at the heart of the United States' serious prejudice claims. As such, the United States argues that each form of serious prejudice alleged flows directly from the market distorting impact of the subsidies.⁵⁵⁰⁹

(ii) *Arguments of the European Communities*

7.1869 The European Communities submits that the United States cannot demonstrate that the various Airbus LCA programmes would not have been launched without LA/MSF. In respect of the A380, A340-500/600 and the A330-200 the European Communities has provided internal documents, the Airbus business cases, as evidence in support of its position. The European Communities asserts that the Airbus business cases demonstrate that all post-1992 launches of Airbus LCA would have occurred without LA/MSF.⁵⁵¹⁰ The European Communities also notes that neither the German nor UK governments provided any LA/MSF to Dasa or British Aerospace in respect of the A340-500/600,

BCI deleted, as indicated [***]

yet both of these entities participated in the project. According to the European Communities, in the absence of LA/MSF in the case of each of these aircraft launches, Airbus would have availed itself of higher levels of supplier risk financing.

7.1870 Concerning LA/MSF and the launch of the A300, A310, A320, A330 and A340 aircraft, the European Communities stresses that these measures were provided between 20 and 37 years ago, and argues that it is "wholly speculative" to assume "what Boeing's present prices, sales and market share would be, but for MSF loans tied to these products."⁵⁵¹¹

7.1871 The European Communities submitted a critique of the Dorman Report prepared by Professor Paul Wachtel of New York University's Stern School of Business.⁵⁵¹² Relying on that report, as well as on an internal Airbus analysis of the Dorman simulation,⁵⁵¹³ the European Communities argues that the Dorman simulation uses unrealistic parameters in order to manufacture the conclusion that no Airbus LCA would have been launched without LA/MSF. The European Communities also asserts that the Dorman Report is based on an incorrect premise, *i.e.*, that the LCA market is a natural monopoly, such that if Airbus did not exist Boeing would face no competition from any other LCA manufacturer. The European Communities argues that absent Airbus there would be "very active" competition in higher volume LCA markets, *i.e.*, single-aisle, 200-300 seat, and 300-400 seat.⁵⁵¹⁴

7.1872 The European Communities further argues that, even assuming that the alleged subsidies provided a competitive advantage to Airbus at the time of the launch of the A300, A310, A320, A330 and A340, that competitive advantage was short-lived and intervening events have "attenuated the causal link between the subsidies themselves and the adverse effects that the United States alleges resulted from the competitive harm."⁵⁵¹⁵ According to the European Communities, a key causation question in assessing the existence of present adverse effects is how long the competitive advantage flowing from subsidies lasts.⁵⁵¹⁶ The European Communities asserts that any generalized competitive and subsidized advantage secured by the launch of any Airbus LCA was relatively short-lived. Thus, the European Communities argues that even if the United States could prove that LA/MSF enabled Airbus to achieve a technological advantage with any given models of LCA, any such advantage would be fleeting. The European Communities argues that a rival manufacturer is normally capable of launching a competing aircraft with comparable or improved technology and bring it to market within approximately five years, thus eliminating any advantage enabled by the subsidy, or even turning it into a disadvantage.⁵⁵¹⁷ Further, the European Communities contends that if subsidies are used to create a product that creates its own demand and does *not* compete with any other product, then the effect of such subsidies may never become strong enough to cause adverse effects.⁵⁵¹⁸ Finally, according to the European Communities, since the subsidy element of LA/MSF does not

⁵⁵¹³ Declaration by Francisco-Javier Rianza Carballo, Vice President A380 Business, Attachment 1, Exhibit EC-665 (HSBI)(hereinafter "Carballo Declaration").

⁵⁵¹⁴ EC, SWS, para. 867. The European Communities' arguments in this regard are premised on its view that there are multiple subsidized products at issue in this dispute, which compete in separate markets with United States' like products. We recall that we have rejected the European Communities' position in this regard, and are considering adverse effects on the basis of a single subsidized product, all Airbus LCA, and a single corresponding like product, Boeing LCA. *See*, para. 7.1680 above.

⁵⁵¹⁸ EC, FWS, para. 2291.

BCI deleted, as indicated [***]

reduce recurring costs, any competitive advantage in the marketplace, and hence any potential adverse effects, are extinguished. In addition, the European Communities argues that other factors – such as rising fuel prices – may further reduce the effect of a subsidy over time.

7.1873 In keeping with its assertion of separate and distinct subsidized and like products, the European Communities argues that any serious prejudice caused by subsidies to the A320 family LCA has been diminished by (a) the intervening launches of the Boeing 737NG family LCA and (b) Boeing's abandonment of LCA offered at the time of the A320 series launches, as well as present unmet demand for Boeing 737NG LCA.⁵⁵¹⁹ With respect to alleged serious prejudice caused by subsidies to the A300/A310, the A330-300, and the A330-200 LCA, the European Communities asserts that the causal link between the launch of those Airbus LCA and the alleged competitive harms is eliminated by (a) the subsequent launches of 767 and especially 787 family LCA, (b) Airbus' abandonment of the A300 and A310 families, and (c) the competitive effect of the 787 on the older 767.⁵⁵²⁰ With respect to the A340-200/300 and A340-500/600, the European Communities argues that the causal link between the launch of those Airbus LCA and the alleged competitive harms to the Boeing 777 is attenuated or broken by (a) the later launches of highly successful variants of the Boeing 777, (b) the displacement of the A340 "basic" models which could no longer compete with the technologically superior 777, (c) [***], and (d) the enormous unmet demand and delivery backlog for the 777 series.⁵⁵²¹ Finally, the European Communities argues that the 1997 merger between Boeing and McDonnell Douglas increased Boeing's resources and market power, diminishing any competitive advantage enjoyed by Airbus due to pre-1997 LCA launches.⁵⁵²²

7.1874 The European Communities asserts that a consideration of the magnitude of the benefit of the alleged subsidies is necessary in order to consider the United States' claims of adverse effects, and argues that in order to assess the United States' serious prejudice claims the present per-aircraft amount of the alleged subsidies must be determined.⁵⁵²³ The European Communities, relying in principal part on its understanding of United States' law and regulations governing the calculation and allocation of subsidy amounts in countervailing duty investigations, calculates a per-aircraft amount of subsidization with respect to LA/MSF and R&TD support for fulfilled orders of different models of Airbus LCA in any given year.⁵⁵²⁴ According to the European Communities, the results show that the magnitude of the subsidy is very small on a per-aircraft basis, and simply too small to have caused the adverse effects alleged by the United States.

7.1875 The European Communities also argues that the benefit of LA/MSF is limited to the amount of the difference between the LA/MSF interest rates and the respective market interest rate benchmarks. Accordingly, the European Communities argues that any enhanced credit rating resulting from LA/MSF is captured by this difference as "the market benchmark rates derived from the Airbus risk-sharing suppliers presumptively capture all benefits following from this financing, including the reduction in project risk that enhances the credit rating".⁵⁵²⁵ Regarding the alleged "free cash flow" effect of LA/MSF the European Communities argues that in the period between 1996 and 2006 LA/MSF had a slight negative effect on Airbus cash flows, and that even if cash flow were an appropriate measure or determining factor in considering aircraft pricing, which the European

Communities claims it is not, the cash flow benefits associated with the LA/MSF would be *de minimis*.⁵⁵²⁶

(iii) *Evaluation by the Panel*

7.1876 We recall that in the previous section of this Report, we concluded that the evidence before us demonstrates that, during the period 2001 to 2006, United States' LCA were displaced by Airbus LCA from the EC LCA market and from certain third country LCA markets.⁵⁵²⁷ In addition, we found that the United States had shown that Boeing lost a number of LCA sales to Airbus, and that, overall, there was significant depression and suppression in LCA world market prices between 2001 and 2006.⁵⁵²⁸ Consistent with the two-step approach we have decided to adopt for the purpose of evaluating the United States' claims of serious prejudice,⁵⁵²⁹ we next turn to examine whether the United States has demonstrated that the particular market phenomena observed over the period 2001 to 2006 were caused by the specific subsidies we have found were provided to Airbus.

7.1877 The United States has advanced two lines of argument in respect of causation focussed on the alleged impact of LA/MSF and the other subsidies on: (i) Airbus' ability to launch and bring to the market models of LCA that the United States submits would not otherwise have been possible at the time and in the way that it did without the support of those subsidies; and (ii) the level of Airbus' cash-flow and other financial resources during the period between launch investment and the recovery of that investment, which the United States submits enabled Airbus to price aggressively and build long-term market share.⁵⁵³⁰ For convenience, we refer to the United States' respective arguments as the "product" and "pricing" theories of causation.⁵⁵³¹ Below we examine the merits of each of the two theories in turn, starting with the United States' "product" theory.

7.1878 Before doing so, however, we recall and describe briefly the five types of measures we have found constitute specific subsidies to Airbus with respect to LCA in this dispute:

- (a) LA/MSF: LA/MSF consists of loans provided on non-commercial terms to Airbus from 1969 to 2000 by the governments of France, Germany, Spain and the United Kingdom for the purpose of financing differing proportions of the development costs of Airbus' family of large civil aircraft;
- (b) Infrastructure measures: the governments of France, Germany and Spain funded some or all of the costs of development, expansion, and upgrading of infrastructure and Airbus facilities in connection with LCA production, including the development and provision of the Mühlenberger Loch site by German authorities on non-commercial terms, the extension and use on non-commercial terms of the runway at Bremen Airport by German authorities, the development and provision by French authorities of the ZAC Aéroconstellation site and associated EIG facilities on non-commercial terms, and regional grants by German authorities in Nordenham, and by Spanish authorities in Sevilla, La Rinconada, Toledo, Puerto de Santa Maria and Puerto Real, for Airbus LCA facilities;

⁵⁵²⁶ EC, SWS, 1058-1063; International Trade Resources LLC, "*Cash Flow Effect of member State Financing*", 20 May 2007, Exhibit EC-661, (BCI/HSBI), Tables 1-2.

⁵⁵²⁷ See, paras. 7.1758 and 7.1790 - 7.1791 above.

⁵⁵²⁸ See, paras. 7.1855 and 7.1861 above.

⁵⁵²⁹ See, para. 7.1731 above.

⁵⁵³⁰ US, SWS, paras. 556, 560.

⁵⁵³¹ We emphasize, however, that these are our short-hand references, and we note that there is not always a clear distinction between the two types of argument.

BCI deleted, as indicated [***]

- (c) German government share transfers: the German government, through KfW, provided capital on non-commercial terms to Deutsche Airbus by acquiring, in 1989, a 20 percent equity interest in Deutsche Airbus, and subsequently transferring that interest to MBB in 1992;
- (d) French government equity infusions: the French government provided equity infusions in 1987, 1988, 1992 and 1994, and in 1998, transferred a share of its capital investment in Dassault Aviation to Aérospatiale on non-commercial terms; and
- (e) R&TD funding: the European Communities, the governments of France, Germany, Spain, the United Kingdom, and certain sub-federal German government authorities provided grants, and some loans on non-commercial terms, to Airbus to fund research and technological development efforts in connection with the development of Airbus LCA.

The United States' "Product" Theory of Causation

LA/MSF

7.1879 The United States argues that LA/MSF "shifts much of the commercial risk of LCA launch decisions from Airbus to the Airbus governments, thereby causing Airbus to launch aircraft models that in the absence of the subsidy would not have been launched".⁵⁵³² The United States argues that LA/MSF has been fundamental to the development of Airbus as a producer of aircraft, as it was a necessary component of the launch of every Airbus model since the initial launch, in 1969, of the A300. The United States does not consider that its arguments depend on finding that, in the absence of LA/MSF, Airbus would not exist. Rather, the United States argues that in the absence of LA/MSF Airbus would not have been in a position to develop the aircraft it did when it did. For the United States, market distortion and adverse effects flow directly from Airbus' entry at a particular time with a particular aircraft, which in the United States' view would not have been possible but for the subsidies.⁵⁵³³

7.1880 The United States relies upon essentially two types of evidence to demonstrate that the impact of the LA/MSF provided to Airbus since 1969 was to enable Airbus to launch and develop the aircraft it did when it did and thereby cause present serious prejudice to the United States' interests. In particular, the United States relies upon: (i) a series of public statements and one State Aid Decision of the European Commission revealing the views held by various officials from Airbus and other relevant public bodies on the impact of LA/MSF on the ability of Airbus to launch LCA; and (ii) the Dorman Report, which purports to demonstrate the impact of LA/MSF-type measures on the decision to launch an LCA. In the following sections, we describe and examine each of the two types of evidence the United States relies upon, in light of the parties' arguments, making certain initial conclusions on the extent to which they support the United States' position. However, before doing so, we believe it is useful to briefly recall the salient features of LA/MSF and how it operates.

7.1881 We recall that the type of financing we have denominated LA/MSF in this dispute, and found constitutes specific subsidies to Airbus, consists of loans on non-commercial terms provided to Airbus from 1969 to 2000 by the governments of France, Germany, Spain and the United Kingdom. Each LA/MSF loan we have found to constitute a specific subsidy takes the form of a long-term, unsecured loan at a below-market rate of interest with success-dependent and generally graduated repayment terms. The success-dependent nature of the loans means that Airbus' repayment obligations arise only

⁵⁵³² US, SWS, para. 560.

⁵⁵³³ The United States makes this central argument in a variety of ways throughout its submissions. E.g., US, FWS, paras. 78, 810, US, FNCOS, para. 131 and US, SWS, para. 571.

BCI deleted, as indicated [***]

after it has successfully developed and begins selling the financed aircraft. Once repayment begins, it occurs through a levy on each delivery of financed aircraft and is generally graduated on an ascending scale, meaning that repayments on the first aircraft deliveries are lower than repayments on later deliveries. Should Airbus fail to sell enough of the financed aircraft to repay the entire loan, the government lenders have no contractual right to the outstanding balances. The nature of this financing shifts a portion of the commercial and financial risks of developing new models of LCA to the governments providing the LA/MSF. The extent of this risk-shifting varies with the proportion of the development costs being financed, which has decreased from 100 percent for the first Airbus LCA, the A300, in 1969, to 33 percent for the most recently financed aircraft, the A380, in 2000. Other features of LA/MSF that affect the degree of risk-shifting include the degree to which repayment is back-loaded and/or graduated and the assumptions concerning sales forecasts used as a basis for the repayment schedule. The questions addressed in the Dorman Report, and the parties' arguments, focus on the mechanics of the risk-shifting element of LA/MSF-type financing, and whether and the extent to which the provision of LA/MSF affects the behaviour of the recipient with respect to the decision whether to launch a particular LCA programme.

The Dorman Report

7.1882 The Dorman Report simulates the impact of LA/MSF-type financing measures on a decision to launch an LCA – that is, the decision to undertake the development of a particular model of aircraft. The Dorman Report simulates cash-flows generated by a hypothetical wide-body airplane programme under a variety of LA/MSF contribution, price, production and cost scenarios. Cash flows are forecast over a 20 year period and discounted in order to derive an overall programme net present value ("NPV"). The Dorman simulation is based on certain key assumptions, principally:

- (a) 850 deliveries of LCA over a 20 year period, with the first delivery taking place at the end of year five (the end of the development phase);
- (b) an annual discount rate of 10%; and
- (c) development costs of \$10 billion and forecast recurring costs that decline over time.⁵⁵³⁴

Six different LA/MSF programme examples are considered, patterned after: (i) the UK A320 LA/MSF "package"; (ii) the Spanish A380 LA/MSF "package"; (iii) an interest-free version of the Spanish A380 LA/MSF "package"; (iv) the French A380 LA/MSF "package"; (v) the French A340-500/600 LA/MSF "package"; and (vi) and the French A330-200 LA/MSF "package".⁵⁵³⁵ Each of

⁵⁵³⁴ Exhibit US-70 (BCI), pp. 3 and 4.

⁵⁵³⁵ The Dorman Report explains the six packages in the following terms: the UK A320 "package" and the Spanish A380 "package", "are patterned after actual development funding by the British government for the A320 ... and by the Spanish government for the A380. In both cases, the model's disbursement pattern and the imputed interest rate mirror actual experience." "In the model, the share of total launch aid received in each year mirrors the actual disbursement streams in the real-world examples". The "interest-free version of the Spanish A380 package was included as a third alternative" in order to "examine the financial effects of an interest-free loan package". The "three launch aid packages provided by the French government were" "derived from documents examined as BCI". The Dorman Report notes that "{a}ll examples were selected primarily on the basis of availability of information. In general, the details of actual launch aid packages are difficult to obtain, despite the fact that these are publicly funded programs. These programs were modelled as accurately as possible given the available data, but small discrepancies may result from their lack of transparency." Dorman Report, Exhibit US-70 (BCI) pp. 4-5, footnotes 11-13.

BCI deleted, as indicated [***]

these programmes is examined under three alternative repayment schedules.⁵⁵³⁶ A total of 54 different scenarios are modelled, with each grant of LA/MSF considered to provide funding of either 33.33%, 66.66% or 100% of development costs, which are to be repaid as aircraft are delivered.

7.1883 In order to demonstrate the alleged impact of LA/MSF, the net present value ("NPV") of a base case scenario is calculated (*i.e.*, the NPV of the modelled programme without LA/MSF). The Dorman simulation generates positive returns in the base case (*i.e.*, a NPV of USD 1.35 billion). The base case assumes that production, cost and pricing levels will be as forecast. However, relatively small variations to the forecasts give rise to uneconomic results. Thus, the Dorman Report predicts that if actual production in the base case is only 90% of forecast production, there will be negative returns (negative USD 3 million) in the absence of LA/MSF. Similarly, a decrease in forecast prices of 5% also results in negative returns (negative USD 191 million). Combining a 5 percent decrease in forecast prices with a 5% increase in recurring costs, the model predicts that negative returns will be even larger (negative USD 1.342 billion).

7.1884 The predicted impact of LA/MSF varies depending upon the particular repayment schedule applied, and the percentage of development cost funded by the particular LA/MSF programme. The NPV effect of LA/MSF is, not surprisingly, higher where such funding accounts for 100 percent of development costs than when such funding accounts for 33 percent of development costs. However, as shown in the Table reproduced below, the results of the Dorman simulation predict that the provision of LA/MSF will have a significant impact on the NPV of the modelled programme in each and every case. Thus, where base case forecasts for prices and costs are met, NPV increases if LA/MSF is provided. Similarly, where production levels and prices are lower than the base case, either a positive NPV is generated with LA/MSF as compared to the result without LA/MSF, or, where a negative NPV results with or without LA/MSF, the resulting losses are lower with LA/MSF than without LA/MSF. These results are set forth in Table 3 of the Dorman Report, which we reproduce below as Table 41.⁵⁵³⁷

⁵⁵³⁶ The three scenarios are: level repayment (equal per-aircraft payments set on the basis of forecast deliveries); graduated repayment (increasing per-aircraft payments); and delayed level repayment (equal per-aircraft payments starting with the 60th airplane delivery). Dorman Report, Exhibit US-70 (BCI), p. 5.

BCI deleted, as indicated [***]

7.1885 Referring to these results, the Dorman Report concludes that LA/MSF distorts competition by subsidizing non-recurring costs and by transferring risk from the manufacturer to the government provider of the funding. In particular, the Dorman Report concludes that LA/MSF:

"allows the recipient to undertake airplane development projects at a pace and scale that would be more difficult – perhaps impossible – for a competitor that does not have access to launch aid. It can even allow airplanes that are not commercially viable to be built anyway."⁵⁵³⁸

7.1886 To the extent that LA/MSF accelerates the introduction of new aircraft, or causes the introduction of new aircraft, the Dorman Report concludes that this will have negative consequences for other competing producers:

"An airplane program that is enabled by launch aid is likely to cause prices to decline in the market segment that it targets. Competing airplanes will need to lower their prices and will likely sell fewer units, since some customers will purchase the new airplane and most customers will leverage one seller against another to obtain larger discounts. If launch aid accelerates the pace of airplane development or if the program would only be undertaken with government-provided launch aid, normal competitive decisions become distorted due to resulting subsidy and transfer of risk. This distortion of the competitive process subjects the competing manufacturer to reduced prices, volumes and profitability for its airplane programs."⁵⁵³⁹

The Dorman Report acknowledges that reduced profitability for a competing producer following the introduction of a new competitive plane may be "the natural outcome of the competitive process in the commercial airplane business, *but only when a new airplane is launched on commercially viable terms*."⁵⁵⁴⁰

7.1887 We note that the Dorman Report does not explicitly conclude that each Airbus LCA model, or indeed any particular Airbus LCA model, would not have been launched in the absence of LA/MSF. Nevertheless, we consider this to be a clear implication of the conclusions it advances on the basis of the results it predicts. As the Dorman Report notes, commercial airplane programmes are expensive and contain a large inherent amount of risk. Given the long-term nature of an aircraft programme, it is difficult to predict costs, revenues and demand for any particular aircraft and, consequently, a prudent planner might well expect that all cost and revenue variables will not come to pass as forecast. The Dorman simulation generates a positive NPV in the base case scenario (*i.e.*, without LA/MSF and with costs, revenue and production levels as forecast). However, relatively small changes in forecast cost, revenue and production levels result in significantly poorer results, generating either lower or negative NPV in all cases. The Dorman Report implies, and we agree, that such variations in the forecast parameters constitute realistic scenarios which would need to be considered by a manufacturer when making a launch decision. Given that a realistic scenario includes a negative NPV in the absence of LA/MSF, it follows that an affirmative decision to launch is less likely upon consideration of the possible outcomes without LA/MSF. Accordingly, it is clear to us that the Dorman Report, and the simulation reported therein, supports the United States' position that Airbus product launches would not have occurred in the absence of LA/MSF.

7.1888 The European Communities has submitted a critique of the Dorman Report in the Wachtel Report.⁵⁵⁴¹ The Wachtel Report makes three fundamental criticisms of the Dorman Report: (i) that it is based on an underlying premise that the LCA market is a natural monopoly, and hence it incorrectly assumes that if Airbus did not exist, there would be no other competitor; (ii) that it derives its conclusions about the effects of LA/MSF from sensitivity tests performed on a simulation that is constructed with unrealistic parameter values and assumptions of costs and demand, and (iii) that it fails to take into account the full economic implications of the structure of LA/MSF repayments.⁵⁵⁴²

7.1889 As we understand it, the principal focus of the first point made in the Wachtel Report is the conclusion reached in the Dorman Report that LA/MSF may cause an otherwise unprofitable LCA programme to be undertaken, allegedly implying that in the absence of LA/MSF granted to Airbus, Boeing would enjoy a monopoly position in the market for LCA, including monopoly profits.⁵⁵⁴³ According to Wachtel, most LCA markets (defined by the number of passenger seats)⁵⁵⁴⁴ are natural duopolies, *i.e.*, markets in which "the threshold of entry for a second firm is below the market size".⁵⁵⁴⁵ As such, Wachtel submits that it is incorrect to suggest that in the absence of a LA/MSF-supported entrant, an incumbent LCA manufacturer would enjoy a monopoly position.

7.1890 Drawing from publicly available sources, which suggest that the break-even point for the Airbus A380 and Boeing 747 is less than 500 units, the Wachtel Report posits a break-even or entry threshold of 500 production units for each alleged LCA market. The Wachtel Report notes that data from other publicly available sources suggests that LCA markets almost always exceed 1,000 units. Given that this demand is more than twice the break-even or entry threshold, the Wachtel Report asserts, on the basis of an approach adopted in an economic study conducted by Breshnahan and Reiss,⁵⁵⁴⁶ that there is room for two competitors in each of the identified markets, and by extension therefore that "if Airbus had not entered the market, it is more than likely that Boeing would have faced another competitor".⁵⁵⁴⁷

7.1891 It is true that among the effects the Dorman Report identifies as flowing from the entry into the LCA industry of a new competitor funded through LA/MSF is a reduction in the incumbent competitor's profits.⁵⁵⁴⁸ This implies that, according to the Dorman Report, profits of the incumbent competitor in the LCA industry would be greater in the absence of competition from an entrant provided with LA/MSF subsidies compared to the situation with that subsidized entrant. However, in our view, it does not automatically follow that the "situation" the Dorman Report envisaged in a world without a subsidized entrant is a Boeing monopoly. Indeed, the Dorman Report makes no explicit claim that if LA/MSF measures were not provided, Boeing would be a monopoly provider of LCA.

7.1892 The United States criticizes the Wachtel response to the Dorman Report, submitting that Dr. Wachtel has advanced no support for the proposition that "if Airbus had not entered the market, it is more than likely that Boeing would have faced another competitor". The United States asserts that Dr. Wachtel "does not, and cannot, say when that 'other competitor' would have entered the market, or

⁵⁵⁴² Wachtel Report, Exhibit EC-12; and Wachtel Report (Clarification), Exhibit EC-659.

⁵⁵⁴³ Wachtel Report, para. 3, Exhibit EC-12.

⁵⁵⁴⁴ We note, in this respect, that Professor Wachtel's critique reflects the European Communities' view that there are multiple subsidized and like products, which we have rejected. *See*, para. 7.1668 above.

⁵⁵⁴⁵ Wachtel Report, para. 3, Exhibit EC-12; Wachtel Report (Clarification), para. 2, Exhibit EC-659.

⁵⁵⁴⁶ Breshnahan, T, and Reiss, P., "Entry and Competition in Concentrated Markets", (1991) *Journal of Political Economy*, Vol. 95 (5), pp. 977-1009; referred to in Wachtel Report, footnote 2, Exhibit EC-12.

⁵⁵⁴⁷ Wachtel Report, paras. 7-8, Exhibit EC-12. Professor Wachtel provided a more specific, but similar, assessment of the entry threshold in respect of "middle-market aircraft" in the Wachtel Report (Clarification), para. 6, Exhibit EC-659.

⁵⁵⁴⁸ Dorman Report, pp. 8 and 9, Exhibit US-70 (BCI).

BCI deleted, as indicated [***]

what the technical capabilities and prices of the LCA produced by that 'other competitor' would be".⁵⁵⁴⁹ Moreover, the United States notes that to the extent that the Wachtel Report criticism may be correct, various facts suggest that the "other competitor" would have most likely been McDonnell Douglas, another United States company. Thus, the United States accepts that in the world without the provision of LA/MSF to Airbus "surely there would nonetheless have been competition". However, it considers that such competition would have been different from the actual competition from a subsidized Airbus.⁵⁵⁵⁰

7.1893 Reading the United States' response to the Wachtel Report together with the Dorman Report, we do not consider it accurate to characterise the Dorman Report as being premised on the view that Boeing would hold a monopoly position in the absence of a competitor subsidized through LA/MSF. Apart from the fact that the Dorman Report never actually claims that Boeing would hold a monopoly in the absence of a LA/MSF-supported competitor, it is clear that the Dorman Report does not conclude that it would be impossible for a company to enter the LCA business without access to LA/MSF. Thus, the Dorman Report concludes that LA/MSF "allows the recipient to undertake airplane development projects at a pace and scale that would be much more difficult – perhaps impossible – for a competitor that does not have access to launch aid".⁵⁵⁵¹ While a Boeing monopoly may be one way of understanding what the Dorman Report states about the implications of LA/MSF on the operations of the incumbent LCA manufacturer, it is also possible to understand those implications in the context of a world where the incumbent manufacturer would face competition from another player; a weaker entrant that entered without the assistance of LA/MSF. Finally, as we will explain further below, the real significance for us of the simulation presented in the Dorman Report is not so much what it says about the impact of LA/MSF on the operations of the incumbent manufacturer, but rather what it tells us about whether a potential new entrant, or an existing manufacturer, will decide to launch a new model of LCA.

7.1894 The conclusion in the Wachtel Report that individual LCA markets are a "natural duopoly" also informs Dr. Wachtel's criticism of the parameters used in the Dorman simulation. We understand Dr. Wachtel to be of the view that, assuming LCA markets are duopoly markets, a model which suggests that entry would not occur absent LA/MSF is suspect. The Wachtel Report therefore questions the reliability of the Dorman simulation, in which small changes to forecasts turn a positive NPV into a negative NPV which, in turn, suggests that a decision to launch would not be made. In this respect the Wachtel Report argues that the Dorman simulation implies that not only would Airbus not introduce a new aircraft because of the associated risks, but also that Boeing, itself, would not introduce a new aircraft. The Wachtel Report remarks:

"The base case makes aircraft production very unattractive. Since the model would apply to all producers, one wonders why Boeing launched all of the aircraft that it did? Clearly, the model and the assumed numerical values are chosen in a way that exaggerates the impact of launch aid."⁵⁵⁵²

We note, however, that Dr. Wachtel subsequently acknowledged that he assessed Dorman "on its face...{and} did not attempt to assess whether the specific parameter values and assumptions defined by Dorman were realistic."⁵⁵⁵³

BCI deleted, as indicated [***]

7.1895 The parameters relied upon in the Dorman simulation are also questioned in the declaration of Francisco-Javier Rianza Carballo, former Vice President A380 Business ("Carballo Declaration") submitted by the EC.⁵⁵⁵⁴ The Carballo Declaration asserts that the Dorman Report incorrectly assumes that non-recurring costs ("NRCs") will be expended within five years of launch and, more importantly, underestimates the number of deliveries over the life of a programme. According to Mr. Carballo, an estimated delivery stream of 850 units may have been reasonable in planning a launch twenty years ago but under current market conditions, Airbus or Boeing could expect 1,400 deliveries within a 15 year period.⁵⁵⁵⁵

7.1896 In support of the view that the Dorman simulation underestimates the number of expected deliveries, the Carballo Declaration cites public information in respect of Boeing's production plans for the 787, which estimate delivery of 1735 aircraft over 15 years. The Carballo Declaration also notes Airline Monitor's January 2005 estimate of 1375 aircraft deliveries in the first 15 years of commercial service.⁵⁵⁵⁶ Airbus reverse-engineered a simulation of the base case in the Dorman simulation, using the lower estimate of 1375 Boeing 787 aircraft, and the Carballo Declaration reports the result. Whereas the Dorman simulation reported a NPV of USD 1.35 billion in the absence of LA/MSF, the Carballo Declaration reports a NPV of between USD 6 and 7 billion, and an internal rate of return ("IRR") of between 17% and 18%⁵⁵⁵⁷, assuming the delivery of 1375 aircraft.⁵⁵⁵⁸ The European Communities claims that these figures are significant as they are [***].⁵⁵⁵⁹

7.1897 The United States finds the European Communities' assertion that the Dorman simulation underestimates the number of deliveries that could be achieved for a wide-body LCA programme to be surprising. Drawing from information available on Airbus' website on the number of deliveries for its wide-body LCA models, the United States asserts that "Airbus has never had a widebody program that has produced more than 600 aircraft in its history".⁵⁵⁶⁰ Indeed, according to the United States, no LCA manufacturer, including Boeing, has ever achieved 850 deliveries in the first 15 years of a wide-body programme. Moreover, drawing on an economic study undertaken by Neven and Seabright,⁵⁵⁶¹ the United States notes that Dr. Wachtel's approach ignores that LCA manufacturers will generally seek economies of scope across different LCA segments because of the importance of having a full LCA family to the development of each individual model. By ignoring such considerations, the United States submits that Dr. Wachtel's analysis implies that there should be 12 LCA manufacturers in the 100-200 seat LCA market segment (*i.e.*, the single-aisle, narrow-body segment), because the number of sales in this segment between 1991 and 2005 is 12 times a break-even point of 500 units.⁵⁵⁶² In any case, the United States argues that even if the European Communities' critique were valid, this would take nothing away from the conclusion established in the Dorman Report that LA/MSF significantly affects the probability that a launch will be profitable and therefore that

⁵⁵⁵⁴ Exhibit EC-665 (HSBI).

⁵⁵⁵⁵ We note that the Carballo Declaration considers the Dorman simulation assumptions about recurring costs and income to be reasonable and makes the same conclusion in respect of the \$10 billion NRC estimate if the business case assumes at least two variants of the base model. Exhibit EC-665 (HSBI), para. 9.

⁵⁵⁵⁶ Exhibit EC-665 (HSBI), para. 18, citing "The Airline Monitor" January/February 2005, *ESG Aviation Services*, Edmund S. Greenslet, Editor and Publisher.

⁵⁵⁵⁷ The Dorman Report does not set out an internal rate of return. The Carballo Declaration calculates an IRR of 11.92% for the Dorman simulation base case, as reverse engineered by Airbus. EC, SWS, para. 816.

BCI deleted, as indicated [***]

LA/MSF significantly influences the recipient's decision on whether to launch a new LCA model at all.⁵⁵⁶³

7.1898 We agree with the United States. In our view, the Dorman simulation demonstrates that LA/MSF will have a significant impact on the NPV of any given aircraft project, irrespective of the specific parameters used to model costs and income streams. In all cases, the Dorman simulation shows that LA/MSF will increase potential profits and limit potential losses. By limiting potential losses, LA/MSF transfers risk from Airbus to the governments supplying LA/MSF, thereby rendering it more likely, in any given case, that an LCA programme will be undertaken.⁵⁵⁶⁴ The conclusions of the Dorman simulation are, in this respect, consistent with other evidence before us, including the [***] discussed further below.⁵⁵⁶⁵

7.1899 The third criticism of the Dorman Report raised in the Wachtel Report is that it fails to take into account the economic impact of the structure of LA/MSF repayments. This criticism has two elements. First, the Wachtel Report argues that the Dorman Report fails to note that any subsidy associated with LA/MSF "is limited to the interest rate reduction in the loan, not the size of the principal".⁵⁵⁶⁶ According to Dr. Wachtel, this alleged deficiency means that the Dorman Report "overstates the impact of launch aid".⁵⁵⁶⁷ Second, the Wachtel Report argues that repayments of LA/MSF, which occur on delivery of the aircraft involved, could lead to higher prices.⁵⁵⁶⁸ In his Clarification, Dr. Wachtel expands on this point stating:

"The launch aid repayments are generally made with the delivery of aircraft, thus they are variable costs and as such tend to increase the price at which Airbus sells the aircraft. Were the repayments on the loans independent of the sales of the aircraft, they would be fixed costs with a much less direct and much less upward effect on aircraft prices."⁵⁵⁶⁹

7.1900 The United States considers that the Dorman Report takes repayments of LA/MSF fully into account in modelling the impact of LA/MSF. According to the United States, this is confirmed by the fact that the Dorman simulation shows that the impact of LA/MSF increases as fewer LCA are sold and fewer repayments made.⁵⁵⁷⁰

7.1901 Turning first to the proposition in the Wachtel Report that LA/MSF repayments will tend to increase the price at which Airbus sells its LCA because they are tied to LCA deliveries, we do not understand Dr. Wachtel to consider this alleged price effect to be an impact of LA/MSF that is *certain* to result from LA/MSF's sales-dependent repayment terms. Rather, it is clear from Dr. Wachtel's choice of words that the fact that LA/MSF is repaid with revenues generated from LCA deliveries may have an upward effect on the prices of those LCA.⁵⁵⁷¹ The fact that Dr. Wachtel does

⁵⁵⁶³ US, SNCOS, para. 172.

⁵⁵⁶⁴ The United States refers to the views of British economist Kim Kaivanto in this regard: "Launch Aid commits European governments to absorbing much of any possible losses, so even if Airbus is risk averse, it has little incentive not to adopt a risky, aggressive strategy." US, SWS, para. 563, citing *Premise and Practice of UK Launch Aid*, 40 *Journal of World Trade* 495, 498 (2006), Exhibit US-2.

⁵⁵⁶⁵ See, paras. 7.1922 - 7.1927.

⁵⁵⁶⁷ Wachtel Report, para. 17, Exhibit EC-12.

⁵⁵⁶⁸ Wachtel Report, para. 14, Exhibit EC-12.

⁵⁵⁶⁹ Wachtel Report (Clarification), para. 10, Exhibit EC-659.

⁵⁵⁷⁰ US, SWS, para. 572.

⁵⁵⁷¹ Initially, Professor Wachtel explained that LA/MSF repayments "*could* actually lead to higher prices". Wachtel Report, para. 14 (emphasis added), Exhibit EC-12. As noted above, Professor Wachtel

BCI deleted, as indicated [***]

not conclusively state that LA/MSF repayments will, as a matter of fact, result in higher prices reflects our own understanding of how prices are set for LCA products. There are a variety of often very different and sometimes transaction-specific factors that can affect the final price of an LCA.⁵⁵⁷² In our view, this suggests that the relationship between LA/MSF repayments that are tied to aircraft deliveries and the price at which those aircraft are ultimately sold is more complicated than what is implied by Dr. Wachtel's proposition. Thus, while we recognize that a repayment obligation explicitly tied to delivery of LCA is an expense accruing at the same time as that delivery, it does not necessarily follow that prices for that LCA will be greater than they otherwise would have been in the absence of that LA/MSF repayment. We examine the impact of LA/MSF (and the other subsidies) on LCA prices in the next section of this Report where we address the United States "price" theory of causation. For present purposes, however, we simply note that we are not persuaded that the proposition advanced by Dr. Wachtel discredits the conclusions reached in the Dorman Report. In any case, we recall that for the purpose of the present analysis, the importance for us of the Dorman Report is not what it says about prices after the launch of an LCA programme, but rather what it tells us about whether or not that particular LCA programme would have been undertaken in the first place.

7.1902 As to the allegation that the Dorman simulation does not take into account the amount of the subsidy associated with LA/MSF, as opposed to the principal amount actually loaned, we are equally not persuaded by Dr. Wachtel's submissions. We recall that the simulation in the Dorman Report involved the calculation of the NPV for particular LCA programmes funded with LA/MSF on the basis of projected cash-flows and a discount rate of 10%.⁵⁵⁷³ The projected cash-flows (inflows when LA/MSF disbursements, and outflows when LA/MSF repayments) are in two examples (the UK A320 "package" and the Spanish A380 "package") based on "the disbursement pattern and the imputed interest rate" from "actual experience". For the other examples, cash-flows were derived from information designated BCI.⁵⁵⁷⁴ The European Communities has not specifically contested the disbursement patterns or imputed interest rates used in the Dorman simulation. Indeed, comparing the imputed interest rates used in the Dorman simulation with our own findings in respect of the relevant LA/MSF contract interest rates⁵⁵⁷⁵ the only notable difference is in respect of the French A330-200 "package", where the imputed interest rate used in the Dorman simulation is approximately half of what we found it to be.⁵⁵⁷⁶ However, we do not consider these differences to detract from the credibility of the Dorman simulation's general results.

7.1903 The European Communities presented its own calculation of the amount of subsidization associated with each of the challenged LA/MSF contracts, apart from the A300 and A310, in three reports prepared by International Trade Resources LLC.⁵⁵⁷⁷ The first of these reports, the ITR Report, defines the amount of the subsidization conferred by each LA/MSF contract in the following terms:

subsequently suggested that LA/MSF repayments would "tend to increase price". Wachtel Report (Clarification), para. 10, (emphasis added), Exhibit EC-659.

⁵⁵⁷² See, discussion at paragraphs 7.1837 - 7.1839 above.

⁵⁵⁷³ We understand Dr. Dorman to have used a 10% discount rate throughout the simulation. See, paragraph 7.1882 above; US, Comments on EC, SNCOS, para.31.

⁵⁵⁷⁴ Dorman Report, p. 5 and footnote 13, Exhibit US-70 (BCI).

⁵⁵⁷⁵ See, Table 7 at para. 7.488 above.

⁵⁵⁷⁶ In particular, the imputed interest rate used for the Spanish A380 "package" is the same as our findings; the imputed interest rate used for the UK A320 "package" and the French A340-500/600 "package" are, respectively, [***] and [***] basis points above our findings; and the imputed interest rate used for the French A380 "package" is [***] basis points below our findings. Dorman Report, Table 2, Exhibit US-70 (BCI).

⁵⁵⁷⁷ ITR Report, Exhibit EC-13 (BCI/HSBI), ITR Report (Answer) Exhibit EC-660 (BCI/HSBI) and ITR Report (Update) Exhibit EC-839 (BCI).

BCI deleted, as indicated [***]

"The amount of subsidy conferred by each MSF loan is the difference, in the year of launch, between the present value of tax adjusted loan receipts and anticipated loan repayments discounted at the applicable project-specific benchmark rate".⁵⁵⁷⁸

The ITR Report (Answer) described the methodology applied to calculate the amount of subsidization associated with LA/MSF in the following terms:

"We calculate the difference between the return that the government anticipated when the MSF loan was agreed with the return that the US Ellis MSF benchmark rates would have required. Because the repayment schedules of the MSF loans are not standard annual repayments and instead are linked to delivery of aircraft, we calculated the present value ("PV") as of the date of the launch of the difference between the return that was anticipated by the MSF agreement and the return that would have been required by a commercial entity".⁵⁵⁷⁹

7.1904 Thus, as we understand it, the methodology applied in the ITR Report to identify the subsidy amount is not unlike that applied in the Dorman simulation to arrive at the NPV of the various LA/MSF "packages", with one major difference – instead of using a 10% discount rate used in the Dorman simulation, the ITR Report used the interest rate benchmark identified in the Ellis Report (which the European Communities did not accept) in its calculations. It follows that, by the European Communities' own proposed approach for calculating the amount of subsidization associated with LA/MSF, it cannot be concluded that the Dorman simulation is focussed on only the amounts of principal disbursed under the LA/MSF contracts and not the levels of subsidization. As we understand it, the Dorman simulation does, in effect, take into account the amount of subsidization, as defined by the European Communities. However, because Dorman uses a 10% discount rate, this amount is different from that determined by the European Communities, which uses the Ellis Report interest rate benchmarks.

7.1905 Compared with our findings on the appropriate market interest rate benchmarks for the LA/MSF "packages" modelled in the Dorman simulation, the 10% discount rate that is used is below the range of market interest rate benchmarks that we have determined for the LA/MSF contracts in respect of the UK A320 "package". To this extent, by the European Communities' own standards, the amount of the subsidy taken into account in the Dorman simulation simulations involving this LA/MSF "package" will typically underestimate its NPV.⁵⁵⁸⁰ It would therefore not be incorrect to describe the Dorman simulation results for this particular "package" to be overall conservative. For the other "packages", the 10% discount rate used in the Dorman simulation lies within the range of market interest rates we have concluded would be appropriate benchmarks for those relevant contracts. Thus, we are not convinced by Dr Wachtel's contention that the Dorman Report fails to note that any subsidy associated with LA/MSF "is limited to the interest rate reduction in the loan, not the size of the principal".⁵⁵⁸¹

7.1906 All else being equal, we consider that the provision of LA/MSF, which makes a project more profitable if successful and limits downside risk if unsuccessful, makes it more likely that any given aircraft will be launched. This does not, however, conclusively establish that, but for the grant of LA/MSF, any particular Airbus model would not have been launched when it actually was. The launch of a new model of LCA is an expensive proposition involving significant expenditures. In

⁵⁵⁷⁸ ITR Report, para. 19, Exhibit EC-13 (BCI).

⁵⁵⁷⁹ ITR Report (Answer), para. 6, Exhibit EC-660 (BCI).

⁵⁵⁸⁰ We note that for financing involving a pattern of profits (cash in-flows) early and costs (cash out-flows) later (such as LA/MSF), a lower discount rate makes the NPV smaller.

⁵⁵⁸¹ Wachtel Report, para. 13, Exhibit EC-12; Wachtel Report (Clarification), para. 9, Exhibit EC-659.

BCI deleted, as indicated [***]

considering a launch decision, not only will short-to-medium term development costs need to be estimated, but other recurring costs and revenue streams over the entire 15-20 year production cycle of an aircraft must also be estimated. An element of uncertainty is inherent in such estimates. Given such uncertainties, a prudent manufacturer will likely require there to be some scope for costs and revenues to deviate from forecast estimates without the project as a result becoming unprofitable. The sensitivity testing in the A380 business case (discussed below) in which the [***].

7.1907 The results of the Dorman simulation suggest that, in the absence of LA/MSF, relatively small changes in cost and revenue estimates would make the launch of any particular aircraft model unprofitable. We agree with the suggestion in the Wachtel Report that, in this situation, it seems that it would be unlikely that a hypothetical aircraft manufacturer, considering the results of the Dorman simulation alone, would decide to launch the aircraft programme contemplated. As noted above, the Wachtel Report seeks to counter this implication of the Dorman simulation by arguing that the LCA market is a natural duopoly.

7.1908 The United States criticizes this aspect of the Wachtel Report by arguing that the approach adopted in the Breshnahan and Reiss study, which Wachtel cites in support of his conclusion, is not applicable to the LCA market and that the Wachtel Report has failed to consider the implications of the economies of scope and scale in the LCA market.⁵⁵⁸² Ultimately, however, we consider the United States' arguments concerning this aspect of the Wachtel Report to be inapposite, as the United States is not arguing that Boeing, or indeed the United States, is entitled to a monopoly of the global LCA industry.⁵⁵⁸³ Indeed, as we have already explained, the United States goes further, indicating that not only does it not consider that Boeing is entitled to a monopoly but that, in fact, it considers that Boeing would face competition from at least some entity in the absence of LA/MSF.⁵⁵⁸⁴

7.1909 The implications of this apparent acceptance that Boeing would face competition in a world without LA/MSF (and the other subsidies at issue in this dispute) (the "counterfactual" world) are discussed below. At this stage, however, we note the United States' basic contention that, even if Airbus had entered the market in the absence of LA/MSF, it would have done so at different times and with different planes.⁵⁵⁸⁵ In this respect we understand the United States to be arguing that whether the United States faced competition in the counterfactual world from an Airbus that launched LCA without LA/MSF, or from some other entity, that competition would be different, and that one way in which that difference would be manifest would be that the product line of the competitor would not be the equivalent of the actual Airbus product line.

7.1910 If the United States concedes that Boeing would, in the absence of LA/MSF, face some competition it must, presumably, concede that at least some competing planes would have been launched (by Airbus or some other entity) over the period since Airbus launched its first LCA. The Dorman simulation does not provide a basis for assessing the circumstances of any competitive launches in the absence of LA/MSF. Insofar as its results suggest that there would be no entry, and insofar as it does not distinguish between the type of entry which is modelled and other forms of entry which might otherwise occur, we consider that it is not possible to conclude on the basis of the Dorman Report alone that, but for LA/MSF, any particular Airbus aircraft model would not have been launched.

⁵⁵⁸² US, SWS, paras. 564-570.

⁵⁵⁸³ US, SWS, para. 572.

⁵⁵⁸⁴ US, FNCOS, para. 151.

⁵⁵⁸⁵ In this respect the United States asserts "even if Airbus would have entered a particular LCA market segment at some other time with a different aircraft (in terms of technical capabilities, specifications, and other characteristics), the effect on the US LCA industry would have been different." US, SWS, para. 572.

BCI deleted, as indicated [***]

7.1911 This does not mean, however, that we do not consider that the Dorman Report supports the United States' argument regarding the impact of LA/MSF on Airbus launch decisions. As we have already observed, the Dorman Report **does** in our view demonstrate that LA/MSF will have a significant impact on the NPV of any particular project, and that irrespective of the specific parameters used to model costs and income streams, LA/MSF will increase potential profits and act to limit potential downside losses. It also demonstrates that in some circumstances, the availability of LA/MSF makes the difference between a positive or negative NPV, or alters the risk profile of a project sufficiently to make an affirmative decision to launch a particular aircraft more likely.

7.1912 In addition to relying on Airbus business cases, which we discuss below, to counter these conclusions, the European Communities also relies on a putative "Boeing 787 business case" it constructed based on public information and [***].⁵⁵⁸⁶ The cash flow analysis prepared for the European Communities for this exercise shows a NPV and IRR higher than those the European Communities asserts were generated by the Dorman simulation.⁵⁵⁸⁷ We do not consider that the results of an *ex post facto* business case for a Boeing LCA constructed on the basis of public information for purposes of this dispute has any relevance to our assessment of the effect of LA/MSF subsidies on Airbus. Even assuming the correctness of the exercise, which is unclear, we do not see how the conclusion that the NPV and IRR of this Boeing 787 business case are higher than those of the Dorman simulation informs our assessment of the effect of LA/MSF on Airbus. Thus, we conclude that the Dorman Report demonstrates that the provision of LA/MSF is likely to change the behaviour of the recipient with respect to a decision to launch a LCA by increasing the likelihood of an affirmative decision to go forward with the launch.

Public Statements and the EC State Aid Decision

7.1913 The second category of evidence presented by the United States consists of a series of public statements, and a decision by the European Commission concerning state aid to Aérospatiale, which the United States argues demonstrate that the subsidies in this dispute "facilitated and accelerated the introduction of every major Airbus model, precisely as the European Communities and the Airbus governments designed them to do."⁵⁵⁸⁸ The European Communities argues that such statements are hearsay and should not be given weight, and at best reflect the intent of Airbus to secure a viable market share, and do not constitute evidence of present adverse effects.⁵⁵⁸⁹ We consider this evidence below.

A300

7.1914 The first Airbus LCA model, the A300, was launched in 1969 and first delivered to a customer in 1974. In 1991 Jean Pierson, then Airbus Managing Director, spoke generally about the role of government support during the early 1970's during a speech at Cranfield University in the UK. He is quoted in a 1998 book:

"Let us go back to 1970 for one minute. Imagine if I had gone then to a bank and said, 'I have just started a management team from various European countries. I intend to make a large aircraft to compete with Boeing. Will you lend me \$1 billion?'"

⁵⁵⁸⁶ EC, SWS, paras. 804-808.

⁵⁵⁸⁷ International Trade Resources, 787 Business Case, Exhibit EC-662 (HSBI). We note that the Dorman Report does not, in fact calculate an IRR for its hypothetical launch programme; the estimate of 11.92 per cent referred to by the European Communities as generated by the Dorman simulation was actually inferred by Mr. Carballo, as described in the Carballo Report, Exhibit EC-665 (HSBI).

⁵⁵⁸⁸ US, FWS, para. 829.

⁵⁵⁸⁹ EC, FWS, paras. 2318-20, 2322.

BCI deleted, as indicated [***]

You may lose all of it. Or you may start to make some money twenty years from now! I leave it to your imagination the welcome I would have had. No financial institution would have taken such a risk, or if it had the interest rates would have been simply prohibitive. It was therefore up to the governments of each of the countries participating in Airbus Industrie to substitute themselves for the bankers and assume such risks".⁵⁵⁹⁰

A320

7.1915 In March 1984 Bernard Lathiere, then President and CEO of Airbus, announcing the launch of the A320, referred to the commitments of the governments of France, Germany, Spain and the United Kingdom to take measures enabling investments for this programme as fulfilling "the third and final prerequisite, the financial one".⁵⁵⁹¹ Earlier, in May 1983, the Chairman of British Aerospace, Sir Austin Pearce, commenting on the development of the A320 and the involvement of British Aerospace in that project, noted that income from the A300 and A310 was just beginning to be received and that, in such circumstances, the proposed A320 was "likely to be pushed further into the future".⁵⁵⁹² The article indicates that the British government had told British Aerospace that it expected it to finance its A320 development costs on the commercial market. The Article also states that British Aerospace had said in 1981 that, in the absence of LA/MSF, it would not be in a position to participate significantly in the A320 programme until 1987 or 1988.⁵⁵⁹³ The British Government agreed to provide British Aerospace with financing in March 1985.

A330/A340 and A340-500/600

7.1916 The United States has provided similar evidence with respect to the launch of the A330/A340 and the A340-500/600. Sir Austin Pearce is quoted in March 1987 as saying, with reference to the A330/A340, that "{f}inancing the project through commercial banks is not feasible ... because of the risks associated with the program".⁵⁵⁹⁴ Moreover, the United States notes that the French government notified the LA/MSF it intended to provide to Aérospatiale for the A340-500/600 to the European Commission, in accordance with Article 93(c) of the EC Treaty. In its Decision letter dated 26 July 1999, the European Commission determined that the French LA/MSF was not an "aid" within the meaning of the EC Treaty and did not require notification. In its Decision, the Commission made the following findings concerning the role of the proposed LA/MSF:

"Aérospatiale could not finance the costs connected with the development of the Airbus A340-500/600 by itself or with the help of bank loans. Accordingly, if it were to finance the development costs of the A340-500/600 solely from its own capital (or through bank loans), it would seriously weaken the financial structure of the company. The fact that aeronautical projects extend over very long periods of time and that any investment made in the A340-500/600 could be paid back, should the program be successful, only in the very long term, make the risk that much more unacceptable.

.....

BCI deleted, as indicated [***]

Through Aérospatiale, the entire A340-500/600 program has been made possible thanks to the measures reported by the French authorities. Indeed, in view of the industrial structure of *Airbus Industrie* and the configuration of the European aeronautics sector, this program cannot be contemplated without the participation of Aérospatiale. Consequently, the reimbursable advance from the French Authorities is helping to promote the A340-500/600 program, which could not be implemented without this government support".⁵⁵⁹⁵

While we have not been provided with a copy of the submissions of the French government to the European Commission, we consider, based on the decision letter itself, that these findings were consistent with those submissions.

A380

7.1917 Similar evidence is presented by the United States with respect to the A380. Responding to a question in the UK House of Commons on 3 March 2005, Patricia Hewitt, then Secretary of State for Trade and Industry, is quoted as saying "{w}e have recently seen, of course, the launch of the A380, which would not have been possible if it had not been for the commitment of the British Government to launch an extremely successful programme ...".⁵⁵⁹⁶ The provision of LA/MSF in circumstances where it was necessary to the launch of an LCA programme appears to have been the operating policy of the UK Department of Trade and Industry ("DTI"). The DTI described its rationale for providing LA/MSF on its website in October 2006 in the following terms:

"The fundamental rationale of launch aid is to address the apparent unwillingness of capital markets to fund projects with such high product development costs, high technological and market risks and such long pay back periods. ... An applicant must demonstrate: that the project is technically and commercially viable; that Government investment is essential for the project to proceed on the scale and in the time-scale specified in the application, and that the government will recoup the investment at a real rate of return".⁵⁵⁹⁷

7.1918 Similarly, a French Senate Report considering public support of the civil aircraft sector concluded that Aérospatiale would not be able to obtain outside financing to meet its requirements in respect of the A380, and even if such financing were available, "such external financing would apparently add excessively to the financial expenses incurred by the firms and would throw their balance sheets out of equilibrium because of the low level of their equity capital".⁵⁵⁹⁸

7.1919 In considering the above evidence, we recognize that the public statements of Airbus or participant company executives and public officials as to the need for LA/MSF in order to launch a given aircraft may involve a degree of self-interest. For example, comments attributed to Sir Austin Pearce appear to have been made in the midst of efforts by British Aerospace to lobby the government of the United Kingdom for additional support.⁵⁵⁹⁹ In these circumstances, it may well have been in the interest of the company to suggest that its participation in the A320 project would come to a halt without further commitment from the UK government. Having committed public monies, it is also

⁵⁵⁹⁹ Exhibit US-24.

BCI deleted, as indicated [***]

possible that public officials would be inclined to describe government participation in Airbus projects as essential. However, we note that the Decision letter of the European Commission seems to us to be in the nature of a quasi-judicial evaluation and finding, rather than mere statements by public officials, and therefore the same concerns do not arise in evaluating that decision. In any event, we consider it appropriate to take this evidence into account, making our own judgements as to its weight and probative value, together with other evidence in our evaluation of the United States claims.⁵⁶⁰⁰

7.1920 The European Communities has not disputed the truth of the public statements or of the facts stated, nor does it respond directly to the United States' allegations based on these statements, which the United States considers demonstrate that LA/MSF was necessary to the launch of the Airbus LCA models in question.⁵⁶⁰¹ In these circumstances, we conclude that the above evidence supports the United States' position. Although we do not draw specific conclusions as to the intent of the entities on behalf of which the statements were made, and while we recognize that there may have been a variety of motivations at play, taken together, we consider these statements and the European Commission's State Aid decision generally support the inference that, but for the provision of LA/MSF, Airbus would not have been able to launch any of its existing range of LCA, that is, the A300, A320, A330/A340, A340-500/600 and A380, as and when it did.

The business cases

7.1921 The European Communities argues, on the basis of the Airbus business cases for the A380, A340-500/600 and A330-200, that LA/MSF has not, at least since 1992, had any impact on the decision to launch any particular aircraft.⁵⁶⁰² In particular, the European Communities argues that these business cases demonstrate that the programmes provided robust returns in the absence of LA/MSF, such that Airbus could have launched each of these aircraft without LA/MSF. The European Communities also asserts that the business cases demonstrate that the Dorman simulation is

⁵⁶⁰⁰ In *Australia – Automotive Leather II*, the panel reached a similar conclusion in respect of public statements of Australian government officials reported in the press, noting:

"A commentator on the International Court of Justice's consideration of evidence and proof of facts has stated:

"It appears to be the case that press reports, when significant but not denied by the responsible state, or when reporting other events such as official statements by responsible officials and agencies of that state, are accepted; {footnote omitted} but when they are uncorroborated or do not otherwise contain material with an independent title of credibility and persuasiveness, the tendency of the Court is to discount them almost entirely".

Hight, *Evidence and Proof of Facts*, in Damrosch, *The International Court of Justice at a Crossroads*, 1987. Similarly, we take into account the circumstances in which the reported remarks were made, the source, and whether the information is corroborated elsewhere or contrary evidence is offered, in assessing the value of these Exhibits as evidence."

Panel Report, *Australia – Automotive Leather II*, footnote 210.

⁵⁶⁰¹ The European Communities does argue that other statements by EC officials and Airbus officers regarding the use of subsidies to "attack," "destroy" and "kill" Boeing aircraft and cited by the United States as demonstrating that LA/MSF has been granted to enable Airbus to develop LCA models designed specifically to capture market share from the US industry are neither credible nor relevant. EC, FWS, para. 2317, referring to US, FWS, paras. 836-838. The European Communities considers that such statements, even if correct, simply show the intent of company officials to secure a viable market share to compete against Boeing, and say nothing about present adverse effects. EC, FWS, para. 2319.

⁵⁶⁰² In addition the European Communities provided us with the business case for the A320, Exhibit EC-82 (HSBI) and the business case for the A330/A340, Exhibit EC-775. It does not however argue that these documents evidence that these aircraft would have been launched in the absence of LA/MSF. The European Communities submitted no such evidence in connection with the A300 or A310, and makes no argument that these LCA models would have been launched in the absence of LA/MSF.

BCI deleted, as indicated [***]

based on a fundamentally flawed set of assumptions and parameters.⁵⁶⁰³ We examine the European Communities' contentions in respect of these business cases below.

The A380 business case

7.1922 The A380 business case is dated December 2000.⁵⁶⁰⁴ It includes a NPV analysis of a contemplated A380 family of aircraft, which includes a core aircraft and a freighter version, as well as extended range and stretch versions of the core aircraft. An NPV is calculated assuming [***]. Like the Dorman Report, the A380 business case makes certain assumptions in respect of non-recurring costs, recurring costs, number of deliveries and pricing. The NPV for two baseline scenarios is calculated. One assumes that no LA/MSF is available and the other assumes the provision of LA/MSF amounting to 33 percent of development costs. In the no-LA/MSF scenario the A380 business case anticipates a positive NPV using [***]. However, the NPV using the [***] in the no-LA/MSF scenario is less than one-third of the NPV calculated using the [***], suggesting that the choice of [***] will make a significant difference to the NPV of the project.⁵⁶⁰⁵ Like the Dorman simulation, the A380 business case indicates that the NPV of the project will increase with LA/MSF, compared to the situation without LA/MSF. Depending upon which of the [***] is used, the difference in NPV is approximately [***] and [***].⁵⁶⁰⁶

7.1923 The A380 business case also contains five different sensitivity assessments in respect of the results obtained in the baseline case, one of which is the "Realistic Worst Case" scenario. Under this scenario, the NPV of the project is determined [***].⁵⁶⁰⁷ The results show that [***]. When the [***] is applied, the NPV falls by approximately [***]; when the [***] is used, the NPV drops by approximately [***]. Both results are deemed in the document to be [***].⁵⁶⁰⁸ The sensitivity testing in the A380 business case assumes that Airbus receives LA/MSF. Thus, the Realistic Worst Case scenario is not tested against a base case in which Airbus does not receive LA/MSF. In our view, the inference that can be drawn from this is that Airbus did not contemplate or provide for the possibility of launching the A380 in the absence of LA/MSF.

7.1924 The European Communities submitted an *ex-post facto* sensitivity analysis which, using the information in the A380 business case, applies the Realistic Worst Case scenario assuming that LA/MSF is not provided. The results of this analysis, provided in the Carballo Declaration,⁵⁶⁰⁹ indicate that, although NPV [***], there would be [***] in the NPV of the project in the absence of LA/MSF in the Realistic Worst Case scenario. However, while the A380 business case calculated the baseline NPV at [***] the Carballo Declaration only considers the impact of the absence of LA/MSF in the Realistic Worst Case scenario using the [***].

7.1925 The fact that the Carballo Declaration did not undertake the same sensitivity analysis with the [***] used in the original A380 business case means that we do not know whether the use of [***] would have resulted in a negative NPV in the Realistic Worst Case scenario. In general, for projects involving a pattern of costs (cash out-flows) early and profits (cash in-flows) later (such as the A380 project), [***] makes the NPV smaller. In this regard, we recall that the NPV calculated for the A380 project in the Airbus baseline business case using the [***] and assuming no LA/MSF scenario was [***] of the NPV calculated using the [***]. In other words, in a scenario without LA/MSF in the

baseline business case, a [***] had a significant impact on the project's NPV. We have no reason to believe that this would not also be the case for the NPV that would result from sensitivity testing the Realistic Worst Case scenario without LA/MSF using [***].

7.1926 Finally, as we mention in another context elsewhere in this Report, an important factor to consider is the credibility of the business case itself.⁵⁶¹⁰ While the business case may serve as the basis for Airbus' decision whether the launch of a new LCA programme is a worthwhile investment, it also serves as at least one of the bases for the government lenders to decide whether to support a programme and how that support will be structured. Because of the graduated levy-based and success-dependent nature of LA/MSF repayments, Airbus has an economic incentive to be optimistic in its forecasts of, *inter alia*, the number of aircraft likely to be sold and the pace of those sales, when preparing a business case in support of a programme for which LA/MSF is sought.⁵⁶¹¹ The greater the number of sales over which principal repayments and royalties must be paid, the less likely it is that Airbus will have to make those payments if the business plan estimates prove to be optimistic. The European Communities argues that the Airbus business case is the product of "an exhaustive internal analysis of the programme's technical and commercial prospects" and "relies on a host of conservative assumptions and methodologies".⁵⁶¹² Moreover, the European Communities submits that Airbus' business case delivery forecasts have been, by definition, "realistic and sober".⁵⁶¹³ It does not, however, suggest that those business case delivery forecasts are infallible. Indeed, the European Communities recognizes that forecasts are, by their very nature, "informed judgements about how events that have not yet occurred will unfold in the future", and therefore are not always reliable.⁵⁶¹⁴ While the European Communities contends that the business case delivery forecasts have been "often met, and indeed exceeded,"⁵⁶¹⁵ experience to date suggests that this may not be the case in respect of the A380.⁵⁶¹⁶

7.1927 A critical element of the credibility of the business case is the reasonableness of the demand predictions on which the sales and delivery projections are based. The A380 programme was launched in the face of basic disagreement between Airbus and Boeing about the size of the potential market for the aircraft.⁵⁶¹⁷ As the United States observes, "the main risk of non-repayment of {LA/MSF} is not a risk associated with development or manufacturing; it is a risk associated with sales".⁵⁶¹⁸ While we are in no position to judge at this time whether the sales estimates in the A380 business case were, in fact, reasonable, we note that the A380 business case reflects consideration of a rather limited range of possibilities in terms of failure to achieve sales targets, particularly in view of

⁵⁶¹⁰ See, paragraphs 7.412 - 7.414.

⁵⁶¹¹ We recognize that LA/MSF for the A380 accounted for only 33% of the development costs of the project, and that the A380 business case (in part or in full) may also have been used by Airbus to attract other investors. However, given the project's scope, the development costs covered by LA/MSF, approaching [***], was significant. Moreover, it seems clear to us that securing LA/MSF from the four governments had a positive impact on Airbus' ability to finance the remainder of the large amount of investment needed for the A380 programme.

⁵⁶¹² EC, FWS, para. 466.

⁵⁶¹³ EC, FWS, paras. 465 and 467.

⁵⁶¹⁴ EC, FWS, para. 467.

⁵⁶¹⁵ EC, FWS, para. 467. The European Communities notes, in this regard, that as of 31 December 2006 Airbus had sold approximately 3000 A320 aircraft, well above the original business case projections, which are not in the evidence before us. EC, FWS, para. 331. It makes no similar statement with respect to any of the other LCA programmes.

⁵⁶¹⁶ The difficulties Airbus experienced with the A380, resulting in substantial delays in production and customer concerns, are generally well known, and have had a significant effect on its parent company, EADS. EADS, *EADS 2006 Results Dominated by Airbus Loss*, 9 March 2007, Exhibit US-463,

the uncertainty of demand forecasts for the aircraft.⁵⁶¹⁹ Moreover, it appears that the Realistic Worst Case Scenario is not the worst with respect to all parameters considered in the sensitivity testing.⁵⁶²⁰ The A380 may yet succeed in reaching the sales levels predicted in the business case. However, the actual delays in ramping up production, and relatively limited sales and deliveries to date, make it clear that such success will, if it occurs, likely take a good deal longer than originally projected, thus delaying achievement of the break-even point of the programme.⁵⁶²¹ The financial consequences of the A380 production problems and resulting programme delays have been significant, with EADS reporting a consequent reduction in Airbus' earnings before interest and taxes of EUR 2.5 billion as of 2006.⁵⁶²² Thus, it is by no means apparent that the Realistic Worst Case Scenario actually captured what could reasonably have been envisioned to be the worst case scenario at the time the business case was developed. These concerns inform our consideration of the European Communities' contention that the A380 business case demonstrates that Airbus would have gone forward with the launch even in the absence of LA/MSF.

The A340-500/600 business case

7.1928 The A340-500/600 business case is dated October 1997.⁵⁶²³ It compares the effect of the launch of the A340-500/600 (a derivative aircraft) on the economics of the [***]. The results predict that the IRR and the NPV of the overall A330/A340 programme will [***] if a decision to launch were made. The business case includes a [***] analysis in respect of both the overall programme and the incremental effect of the A340-500/600 launch assuming [***]. The modelled results predict a [***] contribution to the overall programme and a [***] incremental NPV in circumstances where the [***].⁵⁶²⁴

7.1929 It is unclear, on its face, whether the A340-500/600 business case takes into consideration the grant of LA/MSF. The European Communities asserts that it does not, but provides no supporting evidence.⁵⁶²⁵ It also asserts that, assuming *arguendo*, that the business case did take into account the effect of LA/MSF, the [***] IRR, relative to the discount rate, indicates that the project would be commercially viable in the absence of LA/MSF. Its arguments in this respect are based on a comparison of the IRR in the A380 business case, [***].⁵⁶²⁶

⁵⁶¹⁹ Exhibit EC-362 (HSBI), pp. 33, 36. The demand forecasts reflected in the A380 business case include demand for LCA with over 400 seats, a category that includes not only the A380, but also the A340-600 and the Boeing 747 and 777-300. Thus, it is not at all clear that the A380 business case is based on a "realistic and sober" forecast for deliveries of the A380 *per se*, which is an aircraft with more than 500 seats.

⁵⁶²⁰ Exhibit EC-362 (HSBI); compare information at pp. 34 and 36.

⁵⁶²⁵ EC, SWS, para. 785.

⁵⁶²⁶ EC, SWS, para. 816. In the A380 business case the IRR [***] in the absence of LA/MSF, but remained [***] the discount rate. The European Communities argues that if the IRR in the A340-500/600 business case is reduced by the same amount it will result in a hypothetical IRR for the A340-500/600 which is commercially viable; that is, an IRR which exceeds the discount rate. The European Communities argues that applying a similar reduction to the IRR in respect of the A340-500/600 would, in fact, exaggerate the impact of LA/MSF, as while the [***] only France and Spain provided LA/MSF in respect of the A340-500/600. EC, SWS, para. 787. On the same basis the European Communities also argues that if the sensitivity testing undertaken in the Carballo Declaration were implemented in respect of the A340-500/600 "it is reasonable to assume that similar results would be obtained". EC, SWS, para. 788.

BCI deleted, as indicated [***]

The A330-200 business case

7.1930 The A330-200 business case⁵⁶²⁷ considers the introduction of two aircraft derived from the A340-300B, referred to in the document as the [***]. As with the A340-500/600 business case, the document considers the [***] are added to the Airbus range. The results predict that the IRR and the NPV of the overall A330/A340 programme would [***] if a launch decision were made. Sensitivity testing predicts that the NPV of the overall programme will [***] and be an improvement over the [***].⁵⁶²⁸ The European Communities asserts that the [***] implied incremental IRR for the A330-200 project [***] the expected IRR of the A380 and A340-500/600 programmes. On the basis of the same logic used in respect of the A340-500/600, the European Communities concludes that the [***] IRR demonstrates that LA/MSF had no role in respect of the launch of the A330-200.

7.1931 According to the European Communities, the lack of impact of the grant of LA/MSF on the launch of the A330-200 is further demonstrated by the fact that only Aérospatiale received LA/MSF amounting to only EUR 49.9 million. The European Communities asserts that this amount could have been financed in other ways, including through risk-sharing suppliers.⁵⁶²⁹

Conclusions Regarding the impact of LA/MSF on the Launch of Airbus LCA

7.1932 The European Communities argues that the A380, A340-500/600 and A330-200 business cases conclusively demonstrate that LA/MSF was inconsequential to the launch of these aircraft models, and that, as a consequence, the United States causation theory in respect of these three models "fails as a matter of fact".⁵⁶³⁰ The European Communities presents no equivalent evidence or arguments in respect of the earlier models of Airbus LCA (*i.e.*, the A300, A310, A320 and A330/A340 model families). The European Communities has submitted no internal documents or other evidence suggesting that Airbus would have proceeded with pre-1992 projects in the absence of government LA/MSF support. It has simply suggested that the United States has not done enough to demonstrate the link between LA/MSF and the launch of Airbus aircraft.⁵⁶³¹ However, in our view, the United States has met its evidentiary burden in this respect.

7.1933 The A300 was the first Airbus model of LCA, launched in 1969 with close to 100 percent of its development costs financed through LA/MSF at zero interest.⁵⁶³² We recall that the 1969 inter-governmental agreement set out the intention of the governments of France and Germany to cooperate in the field of aeronautics, and in particular to support the development by national manufacturers of a single LCA, and specifically envisaged that those governments would provide funding for the development of that LCA, the A300.⁵⁶³³ Prior to the 1969 Agreement, the companies that would eventually form part of Airbus Industrie GIE, which we recall was constituted in 1971, had not yet worked together on any endeavour of similar scope or ambition. Both parties have recognized the complexities and the risks involved in launching such a project. Indeed, as we have previously noted, the parties have described the development of LCA as an endeavour that requires "huge up-front investments"⁵⁶³⁴ and a commitment of "tremendous resources"⁵⁶³⁵ in the face of a business

environment that is shaped by factors "whose very foreseeability is impossible by definition".⁵⁶³⁶ In our view, the degree of risk associated with Airbus' first venture into LCA manufacturing was probably the greatest among all of its LCA projects. This level of uncertainty appears to be clearly reflected in the statement attributed to Airbus' Managing Director Jean Pierson:

"Let us go back to 1970 for one minute. Imagine if I had gone then to a bank and said, 'I have just started a management team from various European countries. I intend to make a large aircraft to compete with Boeing. Will you lend me \$1 billion? You may lose all of it. Or you may start to make some money twenty years from now! I leave it to your imagination the welcome I would have had. No financial institution would have taken such a risk, or if it had the interest rates would have been simply prohibitive. It was therefore up to the governments of each of the countries participating in Airbus Industrie to substitute themselves for the bankers and assume such risks'.⁵⁶³⁷

7.1934 In our view, the United States has demonstrated that LA/MSF functions as a risk transferring device which significantly alters the economics of a decision to launch any given LCA programme. This we believe is adequately demonstrated by the Dorman Report which, in this respect, is supported by the sensitivity testing included in the A380 business case. According to both pieces of evidence, the provision of LA/MSF improves the predicted results of the aircraft programme in question, indicating that an affirmative launch decision is more likely than it would be in the absence of such financing. As noted above, we do not consider that the Dorman Report proves that any particular Airbus model would not have had a positive NPV in the absence of LA/MSF. It does, however, demonstrate how LA/MSF, by transferring risk to the government lenders, reduces the manufacturer's risk, and improves the potential profitability of any particular aircraft programme, making a decision to go ahead with LCA programme launch more likely. This dual impact of risk reduction and profit enhancement would have been particularly pronounced for the A300, given that LA/MSF covered close to 100 percent of its development costs at zero interest, when the interest rate that would have been offered by a market lender for a comparable loan would have, at a minimum, fallen within the range of 15.18 percent and 16.60 percent.⁵⁶³⁸ In our view, having to borrow the necessary funds for the A300 launch at those interest rates would have been a significant disincentive to a decision to go ahead with the programme. Irrespective of its limitations in demonstrating whether any particular aircraft would have been launched without LA/MSF, the Dorman Report persuasively illustrates how LA/MSF transfers risk and improves the NPV of any particular aircraft project. Together with the above-quoted statements and our own understanding of the history and risks associated with development of LCA in general, and of the A300 in particular, we consider that the United States has demonstrated that LA/MSF was necessary for Airbus to have launched the A300 as originally designed and at the time that it did. We come to the same conclusion with respect of the remaining models of Airbus LCA, as we explain below.

7.1935 LA/MSF was used to finance between 90 percent and 100 percent of the development costs of the A310, which was launched in 1978.⁵⁶³⁹ The United States has not adduced any evidence of direct statements of any Airbus or government officials suggesting that LA/MSF for the A310 was necessary for its development. However, it has argued that the development of one Airbus LCA model supports the development of production facilities and technologies that are used across all other

BCI deleted, as indicated [***]

LCA models.⁵⁶⁴⁰ According to the United States, such a relationship between Airbus LCA models was recognized by Airbus:

"In the 1980s, we were able to widen our family by launching the A310 that incorporated many systems and power plant improvements that had occurred in the years since the A300 was designed', an Airbus executive said. 'Then we turned around and put many of the A310 improvements back into the A300 and came up with an updated aircraft that we designated the A300-600. The same philosophy will be followed with our new aircraft. Additionally, there is a strong possibility that the A320/A330/A340 technology can be used as well to create an advanced A300 and/or A310 in the 1990s'."⁵⁶⁴¹

"But the A350 is going to be the sistership of the A380 so it's technology you can already touch and see. It's tangible because the A380 is flying'."⁵⁶⁴²

7.1936 That static and dynamic ("learning curve") economies of scope and scale achieved in the context of one model of LCA are an important part of the development and production of other LCA models has also been recognized by economists.⁵⁶⁴³ It is undisputed that LCA projects involve complex development and production technology. Therefore, knowledge and experience gained in the development and production of one model of aircraft will tend to lower the costs of development and production of subsequent aircraft. We are satisfied from the evidence before us that the A310 benefited from Airbus' earlier successful development of the A300. To this extent, had Airbus not obtained LA/MSF for the A300, and therefore not launched, developed, and starting in 1974, sold the A300 as designed, we have little doubt that it would not have been able to launch the A310 as originally designed in 1978. Even if Airbus had successfully launched the same A300 in 1969 without LA/MSF, relying upon market-based financing to do so, we consider that the costs of that financing would have made it extremely difficult, if not impossible for Airbus to have subsequently launched the A310 in 1978, without LA/MSF.⁵⁶⁴⁴ We recall that LA/MSF was provided for close to 100 percent of the development costs of the A300 at zero interest, whereas we have found that the interest rate that would have been offered by a market lender for a comparable loan would have, at a minimum, fallen within the range of 15.18 percent and 16.60 percent.⁵⁶⁴⁵ Similarly, LA/MSF for the A310 covered between 90 percent and 100 percent of its development costs, and it too was provided at zero interest, compared with what we found would have been a minimum of between 13.99 percent and 18.88 percent demanded by a market lender for comparable financing.⁵⁶⁴⁶ The Dorman simulation demonstrates that LA/MSF will make it more likely that an LCA project will be launched. In the particular context of the launch of the A310, the Dorman simulation provides persuasive support for our conclusion that had Airbus not obtained LA/MSF for the A310, it would not have been able to launch it as originally designed and at the time that it did.

⁵⁶⁴³ Neven & Seabright, Exhibit US-382. *See, also*, A-380 business case, Exhibit EC-362 (HSBI) p. 36.

⁵⁶⁴⁴ We note, in this regard, that while the A300 was launched in 1969, it was first delivered to a customer in 1974. Thus, revenues were only just beginning to flow from deliveries to customers at the time the decision to launch the A310 was being contemplated, and repayments of LA/MSF were limited at most.

⁵⁶⁴⁶ *See*, para. 7.488 above.

BCI deleted, as indicated [***]

7.1937 The A320 was the next model of LCA launched by Airbus, in 1984. It too was financed with LA/MSF, covering up to 90 percent of its development costs.⁵⁶⁴⁷ The United States has submitted two reported statements made by officials of Airbus and British Aerospace which support the conclusion that LA/MSF was in fact necessary for the launch of the A320. While the statement made by Sir Austin Pearce may have been directed towards the role of LA/MSF in allowing British Aerospace to participate in the project, we do not consider this to be a deficiency in the United States' arguments. There is no suggestion in the evidence before us, and the European Communities does not argue, that if British Aerospace (or any other Airbus company) could not participate in the project unless LA/MSF were provided, the project would nonetheless have continued without its participation.⁵⁶⁴⁸ Given the nature of the Airbus enterprise from the first inter-governmental agreements onward, it seems clear to us that the participation of all four national enterprises was and remained an important element of every launch of Airbus LCA.⁵⁶⁴⁹

7.1938 There is also little doubt in our minds that the launch of the A320 in 1984, as originally designed, was to a very large degree made possible by Airbus' successful launches of the A300 and A310 over the previous decade with the assistance of LA/MSF. Therefore, it is clear that the LA/MSF for these earlier models of LCA also benefited the launch of the A320. Moreover, as we have already noted, the cost of obtaining market financing for the A300 and A310, compared with LA/MSF, was significant. However, even assuming Airbus had been able to launch both LCA models as originally designed in 1969 and 1978, relying only on market-based financing (something we consider would have been highly unlikely), it would have been extremely difficult, if not impossible, to launch the A320 in 1984 as originally designed, without access to LA/MSF.⁵⁶⁵⁰ In this regard, we recall that the interest rate benefit associated with LA/MSF provided for the A320 ranged, at a minimum, between [***] and [***].⁵⁶⁵¹ Taking the above evidence and considerations together

⁵⁶⁴⁷ The 1990 German Federal Budget introduced a standard development aid ceiling for Airbus of 90 percent. See, Budget Plan 09 (Ministry of Economics), Part 02, Chapter 09, comments to line item 892 91-634, Exhibit US-17X. For France (75%): Collin (Yvon), Rapport d'Information No 367 (96/97), Mission de contrôle effectuée sur le soutien public à la construction aéronautique (hereinafter "1997 Senate Report"), at 63, 67, Exhibit US-18. For Spain (70%): Boletín Oficial de las Cortes Generales, Congreso de los Diputados, Cuenta General del Estado de 1992, Serie A, Núm. 34, at 122 (13 January 1997), Exhibit US-19

⁵⁶⁴⁸ Indeed, there is evidence to the contrary. "Through Aérospatiale, the entire A340-500/600 program has been made possible thanks to the measures reported by the French authorities. Indeed, in view of the industrial structure of *Airbus Industrie* and the configuration of the European aeronautics sector, this program cannot be contemplated without the participation of Aérospatiale." Letter from Karel Van Miert to Hubert Vedrine, Reimbursable Advance to Aérospatiale for the Airbus A340-500/600 Program, Exhibit US-3.

⁵⁶⁴⁹ The development and production of Airbus LCA was divided among the national companies participating in the in the Airbus consortium. Thus, as of 1999, the French company, Aérospatiale, was responsible for flight control systems, cockpits, power plant integration, ground and flight testing, complex structural sections, equipped subassemblies and technical publications. The German company, DASA, produced the major fuselage sections containing hydraulic equipment, secondary flight control systems, wing assemblies and commercial furnishing, as well as equipping the wings furnished by BAE Systems. DASA also carried out final assembly of A321 and A319 aircraft, as well as some cabin outfitting and customization of the cabins of the A300/A310 and the A320 family. The British and Spanish companies, BAE Systems and CASA, were in charge of other distinct areas. See, Aérospatiale-Matra Offering Memorandum, 25 May 1999, pp. 90-91, Exhibit EC-053. It is clear from the evidence before us that this division of labour continued with subsequent models of Airbus LCA.

⁵⁶⁵⁰ We note, in this regard, that while the A310 was launched in 1978, it was first put in service and delivered to a customer in 1985. Thus, the LA/MSF for the A310 project was still outstanding, and significant revenues were not yet being generated by that LCA at the time the decision to launch the A320 was being made and implemented. The A300 had only been in service since 1974, and we understand most of the LA/MSF for this project was also still outstanding at the time the decision to launch the A320 was made in 1984.

⁵⁶⁵¹ See, para. 7.488 above.

BCI deleted, as indicated [***]

with the results of the Dorman simulation,⁵⁶⁵² we conclude that the United States has demonstrated that LA/MSF for the A320 was necessary for Airbus to have launched the A320 at the time it did and as originally designed.

7.1939 Likewise, on the basis of a similar set of considerations, we find that the United States has also established that LA/MSF was necessary for Airbus to have launched the A330/A340 in 1987, with LA/MSF covering between 60 and 90 percent of its development costs.⁵⁶⁵³ First, we note the statement made by a British Aerospace official indicating that commercial financing for the A330/A340 project was not a feasible option at the time. As we have already observed, the participation of all four national Airbus companies was and remains an important element of every launch of Airbus LCA. Thus, without the participation of British Aerospace in the A330/A340 project, it seems highly unlikely that Airbus would have gone ahead with that launch in 1987. Again, we consider that LA/MSF provided for the previous LCA models, the A300, A310 and A320, played a significant role in placing Airbus in a position to be able to launch the A330/A340 project in 1987.⁵⁶⁵⁴ However, even assuming Airbus had been able to launch these earlier models without access to LA/MSF, (which we consider would have been even less likely than the launch of the A320, but for the earlier provision of LA/MSF for that model, as well as for the A300 and A310), it would have been extremely difficult, if not impossible, to launch the A330/A340 project in 1987 as originally designed, without access to LA/MSF. In this regard, we recall that the interest rate benefit associated with LA/MSF provided for the A330/A340 ranged, at a minimum, between [***] and [***].⁵⁶⁵⁵ When considered together with the results of the Dorman simulation,⁵⁶⁵⁶ we conclude the United States has demonstrated that LA/MSF for the A330/A340 was necessary for Airbus to have launched this project at the time when it did and as originally designed.

7.1940 We now consider the impact of LA/MSF on the launch of the A330-200 and the A340-500/600. The business case for the A330-200 indicates that the expected development costs for this model were comparatively small. The expected NRC constitute a small fraction of the "typical" wide-body NRC used in the Dorman simulation. Furthermore, as the European Communities notes, only Aérospatiale was provided with LA/MSF, amounting to EUR 49.9 million. Given this relatively small amount, it seems less unlikely that Aérospatiale would not have been able to finance this amount for this LCA in some other manner. Further, given that the aircraft at issue was a derivative of an existing aircraft, its potential success or failure involved a smaller risk for Airbus' overall operations. In this light, it seems more likely that the A330-200 could have been launched even in the absence of the specific LA/MSF granted in respect of that programme than the other programmes we have examined. However, as previously discussed, LCA have a complex production technology which results in strong learning effects. Knowledge and experience gained in the development and production of one model of aircraft will lower the costs of development and production of subsequent aircraft launches. This is particularly true for derivative aircraft, where the subsequently launched model is a variant of an existing model, as is the case with these LCA models.⁵⁶⁵⁷ Consequently we

⁵⁶⁵² See also, US, Comments on EC Answer to Panel Question 262 (HSBI Appendix), para. 3.

⁵⁶⁵³ BT-Drs. 12/1080, at 46, Exhibit US-26; 1997 Senate Report, at 63, 68, Exhibit US-18; Boletín Oficial de las Cortes Generales, Congreso de los Diputados, Contestaciones del Gobierno, Serie D, Núm. 547, (June 5, 2003), at 153, Exhibit US-27.

⁵⁶⁵⁴ Again, we note that while the A320 was launched in 1984, it was first delivered to a customer in 1988, after the launch of the A330/A340 in 1987. Thus, revenues were not yet being generated by this model LCA at the time the decision to launch the A330/A340 in 1987 was made, and repayment of LA/MSF received for the A320 had not yet begun.

⁵⁶⁵⁵ See, para. 7.488 above.

⁵⁶⁵⁶ See also, US, Comments on EC Answer to Panel Question 262 (HSBI Appendix), paras. 4-6.

⁵⁶⁵⁷ "[S]ome production stages are not specific to a particular type of aircraft, such that learning effects which are realized in the production of a generic aircraft can influence marginal cost of producing another generic aircraft." Klepper, Exhibit US-377. The fact that such cross effects are strong for updated versions of

BCI deleted, as indicated [***]

consider that the economic viability and, indeed the very existence of the A330-200, is dependent on the aircraft which preceded it, including in particular the original A330 aircraft from which it is derived. The relatively small development costs of the A330-200 in our view are a function of the fact that it is a derivative of the A330/A340, the launch of which, as we concluded above, would not have occurred as and when it did but for the LA/MSF granted in respect of that aircraft.⁵⁶⁵⁸ Thus, while the particular grant of LA/MSF specific to the A330-200 may not have been necessary to its launch, on the whole, we conclude that LA/MSF was necessary to the launch of the A330-200, as without the grant of LA/MSF for the development of the original model (and all models preceding that model), the A330-200 could not have been launched when it was without significantly higher costs.

7.1941 Like the A330-200, the A340-500 and 600 are derivative aircraft whose development was dependent upon the prior development and production of the original A340 model from which they are derived. For the reasons discussed above, in considering the impact of LA/MSF on the launch of such a derivative aircraft, we consider it appropriate not only to consider the LA/MSF directly linked to the particular aircraft model but also to consider the role that LA/MSF played in the launch of the aircraft on which it is based, as well as all other Airbus LCA launched before it. The A340-500/600 was derived from the A340, whose launch, as we have found above, depended upon the provision of LA/MSF. In these circumstances, we consider that LA/MSF was also essential to the development of the A340-500/600.

7.1942 Even considered on a stand-alone basis, the evidence suggests that the A340-500 and 600 were dependent upon the provision of LA/MSF. As noted above, the European Commission found, in response to the French government State Aid notification in respect of the A340-500/600 measures: "Aérospatiale could not finance the costs connected with the development of the Airbus A340-500/600 by itself or with the help of bank loans."⁵⁶⁵⁹ This statement suggests that, even assuming a business case which predicts [***], Aérospatiale, at the very least, could not have participated in the programme in the absence of LA/MSF. As we noted above, there is no indication that any of the aircraft launches would have proceeded without the participation of all the Airbus companies, and thus, the participation of Aérospatiale was required if the project was to proceed.⁵⁶⁶⁰ In this respect we do not consider the fact that the UK government did not provide LA/MSF to British Aerospace, or that British Aerospace was able to secure outside funding to develop this model of LCA, is sufficient to substantiate the European Communities' position that the A340-500 and 600 would have been launched even in the absence of LA/MSF. While British Aerospace's ability to secure outside funding suggests a confidence in the project on the part of those entities supplying the financing, that decision presumably rests on those entities' overall assessment of British Aerospace's financial position, and also the terms of the financing agreement. We doubt that the same would have been true for Aérospatiale. The European Communities itself states that the launch of the A320, A330, and A340, even with LA/MSF, had left Aérospatiale in a position in which "internally generated cash flow was not sufficient" to fund its investments, given that "a prudent debt/equity ratio placed limits on the amount of new debt that could be borne."⁵⁶⁶¹ [***].⁵⁶⁶² Funding even just a portion of its LCA launches without subsidies had left Aérospatiale in a position that was "repellent" to private

an aircraft, the so-called derivatives, is illustrated for the Airbus A300 and its derivative the A310 in Klepper, Exhibit US-377, p. 778.

BCI deleted, as indicated [***]

investors.⁵⁶⁶³ There is no basis to conclude that Aérospatiale could have obtained outside financing simply because British Aerospace did, as the state aid finding of the European Commission demonstrates.

7.1943 Turning to the A380, the evidence before us indicates that, as compared with both the A330-200 and the A340-500/600, the A380 was a massive project with respect to both the technical aspects of development of the aircraft, and its associated costs. Thus, in our view, the A380 programme has more in common with the project contemplated by the Dorman simulation than either of the immediately preceding derivative programmes. The A380 business case clearly demonstrates that LA/MSF has a significant impact on the economics of the programme. That said, the A380 business case predicts a positive NPV for the programme even assuming no LA/MSF is provided, as well as a positive NPV in circumstances where a Realistic Worst Case scenario is contemplated in situations where the project is supported by LA/MSF. Likewise the Carballo Declaration indicates that in a no-LA/MSF Realistic Worst Case scenario a smaller but still positive NPV would be predicted on the basis of the [***] used in the Airbus business case. Assuming that the business case, or rather the numbers underlying the business case as applied in the Carballo Declaration, demonstrate a positive NPV in a no-LA/MSF and a Realistic Worst Case scenario,⁵⁶⁶⁴ the relevant question for us is whether the United States has demonstrated that the A380 would not have been launched in the absence of LA/MSF. The United States makes two principal arguments in this respect.

7.1944 First, the United States suggests that given the high risk involved in a programme such as the A380, LA/MSF increases confidence in the business model, including confidence that the Realistic Worst Case scenario is, in fact, the realistic worse case. If market conditions are more adverse to Airbus than those considered in the realistic worse case scenario, LA/MSF ensures that the project may nevertheless result in a positive NPV, or at a minimum, as the Dorman simulation predicts, will limit losses. In this way the launch decision remains dependent upon the provision of LA/MSF. The United States also argues that the sensitivity analysis provided by Airbus overstates likely sales volumes and understates the risk of a shortfall.⁵⁶⁶⁵ For similar reasons, we have concerns about the A380 business case, as discussed above,⁵⁶⁶⁶ and we are thus not persuaded that the A380 business case alone demonstrates that Airbus would have launched the A380 even in the absence of LA/MSF.

7.1945 Second, the United States argues that even if Airbus were confident that the A380 project would be viable without LA/MSF, it does not follow that Airbus would have been able to fund the project from its own resources and outside financing. In this respect the United States points to the comments of the French Senate Report considering the provision of LA/MSF to Aérospatiale, which suggests that even if Aérospatiale could find outside funding in respect of the A380 programme (which it considered it could not) the impact of such funding on the balance sheet of Aérospatiale would be such that it would have difficulties following this strategy. As noted above, the Report concluded that "such external financing would apparently add excessively to the financial expenses incurred by the firms and would throw their balance sheets out of equilibrium because of the low level

⁵⁶⁶³ *EC to Review France's Aérospatiale Capital Injection*, Aerospace Daily (9 February 1994), Exhibit US-275.

⁵⁶⁶⁴ We recall that because the Carballo Declaration did not undertake the sensitivity analysis with the [***] would have resulted in a negative NPV in the Realistic Worst Case scenario without LA/MSF. Given what we know about the effects of the [***] rate on the NPV of the project without LA/MSF in the baseline business case, we suspect that a [***] would have also had a significant impact on the project's NPV in the Realistic Worst Case scenario without LA/MSF. *See*, para. 7.1925 above.

⁵⁶⁶⁵ In this respect the United States notes that the impact of unanticipated delivery delays and higher than expected development costs actually experienced in connection with the A380 were reported by EADS in 2006 to be EUR 2.5 billion. US, SWS, para. 582, citing EADS press release, *EADS 2006 results dominated by Airbus loss*, 9 March 2007, Exhibit US-463.

⁵⁶⁶⁶ *See*, para. 7.1927 above.

BCI deleted, as indicated [***]

of their equity capital".⁵⁶⁶⁷ Moreover, the United States has submitted a record of a statement made by the then UK Secretary of State for Trade and Industry, who in response to a question in Parliament answered: "We have recently seen, of course, the launch of the A380, which would not have been possible if it had not been for the commitment of the British government to launch an extremely successful programme ...".⁵⁶⁶⁸

7.1946 The European Communities contests the United States' reliance on the French Senate Report, noting that this report addresses the role of Aérospatiale only and that it was prepared in 1996-1997, prior to the creation of EADS in 2000 which, according to the European Communities, increased Airbus' financial flexibility. In addition, it asserts that the Senate Report only considers "on balance sheet debt financing" and does not consider "off balance sheet financing" such as risk-sharing arrangements with suppliers. Noting that the A380 business plan already included off-balance sheet financing through suppliers, that Boeing has reportedly financed 60 percent of the non-recurring costs of the 787 through such methods and the supply by Alenia of such financing to the German Airbus partner Dasa when the German government did not provide LA/MSF in respect of the A340-500/600, the European Communities argues that absent LA/MSF, Airbus could have increased its use of risk-sharing suppliers to secure the necessary financing.⁵⁶⁶⁹

7.1947 While the financial situation of Airbus France in 2000 would have clearly been different from the position of Aérospatiale in 1997 (when the French Senate Report was released) the European Communities has submitted no persuasive evidence to suggest that Airbus France was in a better position than Aérospatiale to fund its part of the A380 project without LA/MSF. Although it is evident from the EADS offering memorandum that the corporate restructuring of Airbus Industrie GIE, Aérospatiale, CASA and Deutsche Airbus was intended to improve the companies' operations by rationalizing resources, eliminating duplication and consolidating overall management under a more integrated corporate structure, it is not so clear precisely how, or indeed if or to what degree, this move affected the ability of Airbus France (or Airbus SAS) to raise the very large amounts of capital needed for the A380 project. Likewise, the European Communities has submitted no evidence to support the contention that merely because, reportedly, Boeing was able to finance a significant portion of the non-recurring costs of development of the 787 through risk-sharing supplier arrangements, Airbus would necessarily have been able to do the same with respect to the A380. Airbus does use risk-sharing supplier arrangements, but there is no indication that it could have increased its use of such arrangements so as to replace the entire amount of financing provided by LA/MSF, which, we recall, was up to 33 percent of the development costs of the A380. We do not consider the availability of risk-sharing supplier arrangements in respect of the A340-500/600 to be persuasive in this regard. Those were derivative aircraft which entailed much smaller development costs and a much lower level of risk to Airbus' overall operations. The willingness of suppliers to take on some of the risk of that much smaller programme does not demonstrate that any supplier or suppliers would be prepared to do so in respect of up to 33 percent of the much greater costs of the A380. Moreover, as we have previously noted, information in the Airbus A380 business case suggests that the risk-sharing participants' involvement in the A380 project may not have been on strictly market terms for all participants.⁵⁶⁷⁰

7.1948 Finally, but for LA/MSF provided with respect to Airbus' launches of earlier models of LCA, we do not consider that it would have been possible for Airbus to be in a position to launch the A380 in 2000. We have found that the cost for Airbus of obtaining market financing for the A300, A310,

BCI deleted, as indicated [***]

A320 and A330/A340 would have been many percentage points greater than what it actually was because of LA/MSF in each instance. Given the amount of funding transferred to Airbus under the individual LA/MSF contracts, and in the light of the formidable risks associated with the LCA business and the learning curve effects that are necessary to successfully participate in this sector, we have found that it would not have been possible for Airbus to have launched all of these models, as originally designed and at the times it did, without LA/MSF. Even assuming this were a possibility, and that Airbus had actually been able to launch these aircraft relying on only market financing, the increase in the level of debt Airbus would have accumulated over the years would have been massive.⁵⁶⁷¹ Thus, while the A380 business case suggests, but by no means demonstrates, that as a stand-alone proposition the project might have been economically viable even without LA/MSF, in our view, that conclusion rests in part on the assumption that at the time of the launch, Airbus would have been in a position to not only design and manufacture the A380, *i.e.*, had the necessary development and production technologies available to it, but also would have been able to obtain all the necessary financing on market terms. However, Airbus' technical capabilities derived in part from its experience in the development of its earlier model LCA funded in significant part by LA/MSF. Moreover, because of the significant amount of debt that developing its previous models of LCA would have generated, we consider Airbus would not have been in a position to obtain market financing for the A380, had it not financed the development of its earlier model LCA in significant part through LA/MSF. It follows that the view that Airbus could have launched the A380 as a stand-alone proposition is dependent upon Airbus having received LA/MSF to develop all of its previous models of LCA. Thus, either directly or indirectly, LA/MSF was a necessary precondition for Airbus' launch in 2000 of the A380.

7.1949 In summary, we conclude that the United States has demonstrated that LA/MSF shifts a significant portion of the risk of launching an aircraft from the manufacturer to the governments supplying the funding, which we recall is on non-commercial terms. Based on our review of the development of successive models of Airbus LCA, we conclude that Airbus' ability to launch, develop, and introduce to the market, each of its LCA models was dependent on subsidized LA/MSF.

The alleged "product" effect of the other subsidies in dispute

7.1950 The United States argues that while LA/MSF is the primary subsidy benefiting Airbus LCA, the other challenged subsidies have similar effects.⁵⁶⁷² Thus, the United States contends that the other subsidies also shift costs of LCA development from Airbus to the governments, giving Airbus an edge, and allowing it to enter the LCA market with new LCA models at a pace that would otherwise not have been possible.

7.1951 The United States asserts that infrastructure subsidies relieve Airbus of the need to fund infrastructure necessary for the development and production of LCA, shifting the costs of aircraft development from Airbus to the Airbus governments.⁵⁶⁷³ The United States argues that infrastructure grants for the A380 assembly sites at Hamburg and Toulouse relieved Airbus of development costs, in

⁵⁶⁷¹ The United States asserts that if Airbus had funded all of its LCA launches by obtaining LA/MSF at market rates rather than the subsidized rates provided by the Airbus governments, the resulting impact on its balance sheet would have been an additional US\$ 178.2 billion in debt, far greater than anything Airbus could have sustained. US, SWS, para. 612-613, US, Answer to Panel Question 228, para. 14, citing NERA Economic Consulting, *Quantification of Benefit of Launch Aid* (24 May 2007), Exhibit US-606; US, SWS, paras. 610-612. While we do not necessarily accept the United States' calculation, it is clear to us that the additional debt burden for Airbus of commercial financing of all its LCA launches would have been massive, and potentially prohibitive. Indeed, the European Communities itself states that this cumulative impact is several times greater than the entire market capitalization of EADS. EC, SWS, para. 960.

⁵⁶⁷² US, FWS, para. 819.

⁵⁶⁷³ US, FWS, para. 821.

BCI deleted, as indicated [***]

this case for the A380, and when provided together with LA/MSF, shifted commercial risk away from Airbus and to the governments involved, limiting the risk of A380 failure to Airbus and making it more likely that Airbus would launch the A380 in the first place.⁵⁶⁷⁴

7.1952 Similarly, the United States contends that R&TD funding for particular LCA models or aspects thereof also relieves Airbus of costs it would have otherwise had to incur itself in launching those LCA models.⁵⁶⁷⁵ In addition the United States asserts that HSBI evidence demonstrates that Airbus needed R&TD subsidies in order to launch particular models.⁵⁶⁷⁶ The United States asserts that at least some of the R&TD subsidies provided to Airbus are clearly related to LCA development, citing as an example EUR 3,000,000 for a study of the A380 wake vortex, which it asserts was an important issue related to the development of the A380 and its placement into commercial service.⁵⁶⁷⁷ The United States maintains that where research subsidies are provided to fund projects that would clearly otherwise be part of the launch of a given LCA model, the effects of such subsidies are also properly considered together with LA/MSF.⁵⁶⁷⁸

7.1953 The United States argues that debt forgiveness⁵⁶⁷⁹ and equity infusions increased the capital available to Airbus, enabling Airbus to maintain a level and pace of product development that could not have been sustained without subsidies, thus complementing the effect of LA/MSF by offsetting the build-up of debt on Airbus' balance sheet associated with the pace of its product development.⁵⁶⁸⁰ The United States maintains that debt forgiveness and equity infusions have played a significant role in improving Airbus's balance sheet and enabling it to attract additional private investment and maintain its product development and pricing strategies.⁵⁶⁸¹

7.1954 The United States maintains that each of the above-mentioned types of subsidies, together with LA/MSF, support Airbus' long-term plan to develop and maintain a competitive LCA family, and each of them has economic effects similar to that of LA/MSF, *i.e.*, reducing the costs and shifting the risk of LCA development (thus making launch more likely) and alleviating the financial strain of product launches (thus affording pricing flexibility with respect to all models).⁵⁶⁸² The United States therefore considers that the measures should be considered together with LA/MSF.⁵⁶⁸³

7.1955 The European Communities argues that the nature of the challenged measures, in terms of their structure, operation and design, precludes considering them in the aggregate.⁵⁶⁸⁴ The European

⁵⁶⁸² US, FWS, para. 826. We address the United States' contentions regarding pricing further below.

⁵⁶⁸³ Brazil agrees that the challenged subsidies should be cumulated in examining whether they are causing adverse effects to US interests if such subsidies "manifest themselves collectively," but does not take a position regarding whether that standard is satisfied in this case. Brazil, Third Party Submission, para. 56

⁵⁶⁸⁴ Canada considers that the United States errs by aggregating the subsidies without consideration of their nature and effect, citing *US – Upland Cotton* for the proposition that aggregation should be undertaken with caution, as otherwise parties may be left with inadequate guidance as to what actions are required by a subsidizing Member to comply with a recommendation from the DSB to withdraw the adverse effects caused by subsidies in the aggregate. Canada, Third Party Submission, paras. 61-63. According to Canada, the

BCI deleted, as indicated [***]

Communities argues that, unlike the subsidies in *US – Upland Cotton*, which were found to be appropriately aggregated, not all of the subsidies in this case have a nexus to a particular subsidized product, they are not contemporaneous, and some are recurring while others are not.⁵⁶⁸⁵ The European Communities argues that the United States causation theory focuses on the impact of subsidies on launch decisions, and contends that aggregation is inconsistent with this argument.⁵⁶⁸⁶ With respect to the different types of measures, the European Communities contends that each grant of LA/MSF is tied to a specific LCA, and thus to a specific subsidized product, and each was granted at a different time. The European Communities asserts that some of the infrastructure measures are tied to a specific LCA model, and notes that they were provided at different times, and that some are recurring while others are not. In addition, the European Communities contends that none of the equity infusions is tied to a particular LCA model, and that these non-recurring measures were granted at different times. Finally, with respect to the non-recurring R&TD grants, the European Communities points out that they were granted at different times.⁵⁶⁸⁷ In its first written submission, the European Communities asserted that the United States failed to explain how R&TD subsidies caused adverse effects, arguing that the United States failed to provide evidence showing how the nature of these grants caused specific lost sales, price depression, or other material injury or serious prejudice.⁵⁶⁸⁸ The European Communities also argues specifically that infrastructure measures provided by Hamburg are not of a nature that causes adverse effects to United States' interests.⁵⁶⁸⁹ The European Communities asserts that the structure and operation of the measures at Mühlenberger Loch are such that they are incapable of causing adverse effects. Indeed, according to the European Communities, these measures led to an [***].⁵⁶⁹⁰ The European Communities maintains that [***] and the availability of the reclaimed land in Hamburg led Airbus to split the A380 Final Assembly Line ("FAL") between Toulouse and Hamburg, as opposed to creating a single site FAL in Toulouse, as initially contemplated, which decision, the European Communities asserts, [***] cost of locating and operating the A380 FAL, resulting in a [***] in the [***].⁵⁶⁹¹

7.1956 We do not agree with the European Communities' view that differences in the structure, operation, and design of the different subsidies at issue in this dispute preclude their being considered in the aggregate in examining whether their effect is serious prejudice. We have concluded that LA/MSF was necessary to the launch of each successive model of Airbus LCA, and that the individual and cumulative effect of those measures was fundamental to Airbus' ability to launch the particular LCA models it launched at the time that it did. That is, but for LA/MSF, Airbus would not have been able to accomplish these successive launches.⁵⁶⁹² This "product" effect of LA/MSF is, we

United States fails to establish a nexus between alleged subsidies and the adverse effects claimed. Canada, Third Party Submission, paras. 64-71.

⁵⁶⁸⁸ EC, FWS, paras. 1658-1659.

⁵⁶⁸⁹ EC, SWS, para. 1077.

⁵⁶⁹⁰ See, Airbus Industrie Supervisory Board Meeting Re: A3XX Programme Status (following Pre-ATO Campaigns), 8 June 2000, Exhibit EC-794, (HSBI).

⁵⁶⁹¹ EC, SWS, para. 1079. See, Airbus Industrie Supervisory Board Meeting Re: A3XX Programme Status (following Pre-ATO Campaigns), 8 June 2000, Exhibit EC-794, (HSBI). The European Communities notes that the assessment of the [***] assumed that all deliveries would take place from Toulouse. Ultimately, deliveries were split between Toulouse and Hamburg. If anything, two delivery centers marginally increased costs [***].

⁵⁶⁹² See, footnote 5671 and associated text above. Having rejected the European Communities' view that different models of Airbus LCA are distinct subsidized products, we do not consider the fact that the grants of LA/MSF were provided with respect to the development of specific models of LCA to undermine the conclusion that each of these measures benefited the subsidized product, Airbus LCA. Moreover, we note that, with the exception of the A300 and A310, with respect to which the United States alleged only LA/MSF

BCI deleted, as indicated [***]

consider, complemented and supplemented by the other specific subsidies we have found to exist in this dispute.⁵⁶⁹³ The fact that the LA/MSF subsidies were granted over a long period of time, and the first and last grants were decades apart does not, in our view, demonstrate that it is not appropriate to consider them all together, as we have concluded that they were all provided in connection with the subsidized product, Airbus LCA, and they all had the same effect on Airbus' ability to launch the LCA it launched at the time that it did.⁵⁶⁹⁴

7.1957 The equity investments and share transfer measures of the French and German governments ensured the continued existence and financial stability of the respective national entities engaged in the Airbus enterprise. Those entities were a necessary element of the overall Airbus effort, as it is clear to us that without their participation in the overall effort, Airbus would not have been able to continue to develop, launch and produce LCA in fulfilment of the goal of developing a full range of LCA for the market.⁵⁶⁹⁵ Moreover, as noted above, Aérospatiale required the additional equity to fund investments in fixed assets and inventory, and advances to suppliers, in connection with the development of new aircraft. As the European Communities acknowledges that Aérospatiale could not have undertaken these investments without the government's assistance through equity infusions,⁵⁶⁹⁶ it seems clear to us that these equity investments directly supported the development of LCA in a manner that was as direct as LA/MSF.

7.1958 The infrastructure subsidies similarly provided essential support to the development and production of Airbus LCA, relieving Airbus of significant expenses in connection with the development of facilities for the production of, most particularly, the A380, and thus enabling it to continue with the launch of successive models of LCA. Even assuming, as the European Communities contends, that the establishment of an A380 final assembly line in Hamburg [***], the establishment of that line was necessary in order to ensure [***],⁵⁶⁹⁷ which we consider to have been necessary to the ability of Airbus to launch the A380.

7.1959 Finally, the R&TD subsidies enabled Airbus to develop features and aspects of its LCA on a schedule that it would otherwise have been unable to accomplish. Even in the case of those R&TD subsidies directed to pre-competitive research, the ability to fund such efforts at a time when it would likely have been unable to do so in light of other demands on its resources was, in our view, significant in ensuring the launch of successive models of Airbus LCA. While we recognize that the

subsidies, we have found subsidies to Airbus that were granted during the period each succeeding model of Airbus LCA was being developed and brought to market. For instance, since 2000, when LA/MSF was first provided in respect of the A380, Airbus has received infrastructure and R&TD subsidies. During the period the A340 was being developed with financing provided by LA/MSF, Airbus was also benefiting from infrastructure, RT&D and equity infusion subsidies. Similarly, when the A320 was being developed with LA/MSF financing, Airbus also received infrastructure, RT&D and equity infusion subsidies. Moreover, Airbus was receiving LA/MSF with respect to more than one model of LCA at a time during much of the period from 1978 on. Thus, with the exception of the A300 and A310, Airbus has received a range of subsidies with respect to each model of LCA it has developed, and subsidies have overlapped with one another.

⁵⁶⁹³ We recall that we have concluded that while the EIB loans in dispute are subsidies, they are not specific. *See*, Section VII.E.5(c) above.

⁵⁶⁹⁴ Moreover, we recall that the Appellate Body has recognized that "there could be a time-lag between the payment of a subsidy and any consequential adverse effects." Appellate Body Report, *US – Upland Cotton*, para. 273. In our view, that subsidies were granted at different times does not determine when their effects were manifested and felt, and thus does not determine whether it is appropriate for a panel to consider them together.

⁵⁶⁹⁵ *See*, footnote 5649 above.

⁵⁶⁹⁶ EC, FWS, para. 1135.

⁵⁶⁹⁷ EC, Answer to Panel Question 219, para. 546; US, Comments on EC Answer to Panel Question 219, para. 22; EC, Comments on US Answer to Panel Question 219, para. 381; US, SCOS, paras. 51-53.

BCI deleted, as indicated [***]

impact of pre-competitive R&TD subsidies on Airbus' market presence was perhaps more attenuated, compared with the other subsidies at issue, or with R&TD subsidies that funded research and technology actually used on LCA that were launched, we believe that combined with the others, the RT&D subsidies complemented and supplemented the impact of LA/MSF.

7.1960 In *US – Upland Cotton*, the panel concluded that the reference to the effect of the "subsidy" in the singular in Article 6.3(c), did not mean that a serious prejudice analysis of price suppression must clinically isolate each individual subsidy and its effects.⁵⁶⁹⁸ Thus, in that panel's view, "textual references to "any subsidy", "the subsidy" and the "subsidized product" in Articles 5(c) and 6.3(c) suggest that while due attention must be paid to each subsidy at issue as it relates to the subsidized product, a serious prejudice analysis may be integrated to the extent appropriate in light of the facts and circumstances of a given case."⁵⁶⁹⁹ The panel concluded that:

"textual references to "any subsidy" and "the effect of the subsidy" permit an integrated examination of effects of any subsidies with a sufficient nexus with the subsidized product and the particular effects-related variable under examination. Thus, in our price suppression analysis under Article 6.3(c), we examine one effects-related variable – prices – and one subsidized product – upland cotton. To the extent a sufficient nexus with these exists among the subsidies at issue so that their effects manifest themselves collectively, we believe that we may legitimately treat them as a "subsidy" and group them and their effects together."⁵⁷⁰⁰

We agree with the panel's views in this regard, and consider that the ability to consider the effects of subsidies together extends to all aspects of a claim of adverse effects under Articles 5(a) and (b), and Articles 6.3(a), (b), and (c).

7.1961 In our view, based on the facts and circumstances outlined above, the subsidies at issue in this dispute all have a "sufficient nexus with the subsidized product". Moreover, inasmuch as those subsidies enabled Airbus to launch successive models of LCA when it did, they also have a sufficient nexus with "the particular effects-related variable{s} under examination", since the United States claims of serious prejudice that we are examining are based, at least in part, on the presence of a given Airbus LCA available on the market at a particular time. Therefore, we conclude that it is appropriate to undertake our analysis of the effects of the subsidies on an aggregated basis in this dispute.

Additional considerations with respect to the "product" theory of causation

7.1962 In addition to arguing that LA/MSF and the other subsidies in dispute do not have the effect of increasing the likelihood that any given LCA programme will be launched, and thus resulting in the presence of each succeeding model of Airbus LCA on the market, the European Communities makes several overarching arguments seeking to demonstrate that the market effects we have observed are not an effect of the subsidies. We address these arguments below.

⁵⁶⁹⁸ Panel Report, *US – Upland Cotton*, para. 7.1192. The panel noted in this regard that:

"Taken to an extreme, this could mean that separate dispute settlement proceedings, or at least separate claims, would need to be brought with respect to the serious prejudice caused by each and every individual subsidy, even where these subsidies exist contemporaneously and interact in concert in respect of a single subsidized product to produce a single result in the form of a price phenomenon."

Panel Report, *US – Upland Cotton*, para. 7.1192, footnote 1307.

BCI deleted, as indicated [***]

Magnitude of the Subsidies

7.1963 The European Communities argues that the amount of the subsidies in this dispute is simply too small to have the effects asserted by the United States. Relying in principal part on its understanding of United States' law and regulations governing the calculation and allocation of subsidy amounts in countervailing duty investigations⁵⁷⁰¹, the European Communities calculated what it alleges is the per-aircraft magnitude of the LA/MSF and R&TD subsidy amounts that can be allocated to fulfilled orders of different models of Airbus LCA in any given year.⁵⁷⁰² The European Communities first determined what it defines to be the amount of subsidy provided under each LA/MSF contract (for all but the A300 and A310 LA/MSF contracts), by identifying the difference between the "present value of tax adjusted loan receipts and anticipated loan repayments discounted at the applicable project-specific benchmark rate".⁵⁷⁰³ The European Communities then allocated these amounts over orders for the LCA for which the LA/MSF was provided, from the year of launch and extending over its anticipated marketing life.⁵⁷⁰⁴ The European Communities applied a similar methodology to allocate the R&TD subsidies. First, the European Communities identified the amount of the subsidies (the entire amount of each grant), and then it allocated these amounts over all Airbus LCA orders during an 18 year period, beginning with the date of receipt of the R&TD subsidy.⁵⁷⁰⁵ According to the European Communities, the results of its calculations show that, on a per-aircraft basis, the magnitude of the subsidies allocated to each relevant model of Airbus LCA is "*de minimis*" and simply too small to have caused any of the adverse effects alleged by the United States.⁵⁷⁰⁶ In response to the United States' assertion that the "cash flow effect" of the alleged subsidies currently exceeds \$100 billion, the European Communities, on the basis of an alternative cash flow methodology, asserted that the present per-aircraft cash flow effects are *de minimis*.⁵⁷⁰⁷

7.1964 The United States did not originally present any calculation with respect to the magnitude of the subsidy, which it characterized as "massive".⁵⁷⁰⁸ In response to the European Communities' arguments and calculation of the alleged per aircraft subsidy amount, the United States argued that it was not obliged to provide a detailed quantification and allocation of the subsidy benefit. The United States also disputed the European Communities calculation of the per-aircraft magnitude of the subsidy, considering it "riddled with significant errors".⁵⁷⁰⁹ In this regard, the United States asserts that the European Communities erroneously: (1) calculates the LA/MSF subsidies as grants based on the projected impact on net present value at the time the LA/MSF was committed, rather than as a

⁵⁷⁰¹ The details of the methodology, and its application in this case, are set out in the ITR Report, Exhibit EC-13. The European Communities describes the methodology as entailing the following steps:

calculation of the amount of subsidy conferred;;

tying the amount of subsidy to the aircraft programme;

allocation of the subsidy over the aircraft's anticipated marketing life;

allocation of the assigned subsidy over orders fulfilled for that programme; and

reducing the subsidy magnitude to account for alleged subsidies that were extinguished or extracted.

EC, FWS, para. 1589. The European Communities notes that it does not agree with or adopt this methodology for its own. EC, FWS, para. 1574. However, the European Communities, while reserving the right to do so, does not present any alternative methodology. The United States did not endorse the benefit calculation and allocation methodologies relied on by the European Communities, considering them to contain errors at direct variance with the CVD methodologies used by the United States and the European Communities itself. US, Answer to Panel Question 42, para. 250, footnote 313.

loan at below-market interest rates providing current benefits from interest savings; (2) calculates the subsidy based on the projected schedule of LCA deliveries and repayments rather than on actual repayments made, while using actual rather than projected disbursements; and (3) calculates the subsidy net of the (theoretical) impact of taxation, and fails to implement its own stated methodology correctly by [***].⁵⁷¹⁰

7.1965 Nonetheless, the United States asserted that any reasonable calculation of the magnitude of the subsidy in this dispute demonstrates that it was very large. In this respect, the United States presented its own calculation of the magnitude of the LA/MSF subsidy, based on an entirely different methodology from that used by the European Communities, which indicates that the total benefit to Airbus from LA/MSF is between USD 92.5 and USD 178.2 billion.⁵⁷¹¹ The United States' calculation assumed a 17-year loan period for each set of LA/MSF disbursements and, using the commercial benchmarks it had previously developed (which ITR also used in its calculation for the European Communities), considered how much of the actual or projected loan disbursements plus accumulated interest at the benchmark commercial rate still remained or would remain unpaid at the end of the 17 year loan period. Any repayments made after the 17-year loan period were used to reduce the outstanding balance. When calculated in this way, the total outstanding balance of all of the particular provisions of LA/MSF as of December 2006, based on the "stated rate" – that is, projected disbursements and repayments – was \$92.5 billion. The United States also undertook the calculation on the "realized rate" – that is, actual disbursements and repayments, yielding a total of \$129.9 billion.⁵⁷¹² These figures include loan balances assumed to have been left unpaid in the past. To ensure an apples-to-apples comparison, the United States brought forward such balances using the government risk-free borrowing rate so as to express the total uniformly in 2006 dollars, resulting in a total of \$122.1 billion using projected disbursements and repayments, and \$178.2 billion using actual disbursements and repayments. The United States suggests that Airbus's general, non-project-specific corporate borrowing rates would be a more accurate way to measure the impact of LA/MSF on the present financial condition of Airbus, which would yield an even larger accumulated benefit.⁵⁷¹³ It also argues that irrespective of the methodology used to calculate benefit, the costs associated with equivalent financing on commercial terms would have been impossible for Airbus to support while at the same time developing and launching all the aircraft it did.⁵⁷¹⁴

7.1966 We agree with the United States that there is no obligation in a dispute under Part III of the SCM Agreement for the complaining party to precisely calculate or allocate the benefit of the subsidies in dispute. Looking at the text of Article 6.3(c), the Appellate Body in *US – Upland Cotton* observed that the provision does not state explicitly that a panel needs to quantify the amount of the challenged subsidy.⁵⁷¹⁵ The Appellate Body concluded that while a panel must determine that the challenged payments constitute a specific subsidy in order to "find that a subsidy has the effect of significant price suppression, or some other effect mentioned in Article 6.3(c) ... the definitions of a specific subsidy in Articles 1 and 2 do not expressly require the quantification of the "benefit"

⁵⁷¹⁰ US, SWS, para. 605, referring to US, Answer to Panel Question 42, para. 252.

⁵⁷¹³ NERA Quantification Report at 4, Exhibit US-606.

⁵⁷¹⁴ US, SWS, para. 612. In this regard, we note that the United States calculated the amount by which it considered per-aircraft repayments for subsidized Airbus LCA would have been greater in order to repay LA/MSF at the commercial rates determined in the Ellis Report, concluding that Airbus would have been required to repay an additional [***] to France, Germany, and Spain, plus an additional [***] to the United Kingdom. US, Comments on EC Answer to Panel Question 289, paras. 221-225. See also, US, SNCOS, paras. 184-186.

⁵⁷¹⁵ Appellate Body Report, *US – Upland Cotton*, para. 461.

BCI deleted, as indicated [***]

conferred by the subsidy on any particular product."⁵⁷¹⁶ Turning to the context of Article 6.3(c), the Appellate Body noted that the only provision concerning quantification was in the now expired Article 6.1(a), and concluded that the lack of provisions concerning quantification in Article 6.3(c) suggested that no precise quantification is envisaged in that provision.⁵⁷¹⁷ The Appellate Body also rejected consideration of the methodologies set out in Part V of the SCM Agreement as providing relevant context for the interpretation of Articles 5(c) and 6.3(c) of the SCM Agreement, noting that the apparent rationale for Part III differs from that for Part V of the SCM Agreement.⁵⁷¹⁸ The Appellate Body also noted the absence of any indication in Article 6.3(c) as to what method of quantification might be appropriate as indicating that precise quantification was not necessary for a panel's analysis under Article 6.3(c), and that Annex V did not mandate precise quantification of subsidies in order to determine their effect under Article 6.3(c).⁵⁷¹⁹ Thus, the Appellate Body concluded that while in many cases it may be difficult to decide whether the effect of a subsidy is significant price suppression in the absence of some assessment of the magnitude of the challenged subsidy, "this does not mean that Article 6.3(c) imposes an obligation on panels to quantify precisely the amount of a subsidy benefiting the product at issue in every case. A precise, definitive quantification of the subsidy is not required."⁵⁷²⁰

7.1967 While the Appellate Body in *US – Upland Cotton* was considering a claim of price suppression under Article 6.3(c), we see no reason why the same conclusion should not apply equally to other claims of serious prejudice under the remainder of Article 6, and indeed, to the entire universe of claims of adverse effects. This does not mean that the magnitude of the subsidy is irrelevant to the consideration of adverse effects. It is clear that the subsidy or subsidies in dispute must cause the adverse effect(s) alleged. However, whether a particular subsidy or subsidies cause particular alleged adverse effects is clearly not a function simply of their magnitude, however measured, but must also take into account the nature and effects of the particular subsidies in question, and the nature of the subsidized product and market, in order to assess whether the necessary causal link exists. Thus, there is no necessary correlation between the magnitude of a subsidy and the determination whether it causes certain alleged adverse effects. While logic may indicate that a larger subsidy is likely to have more significant effects, in some circumstances, even a relatively small subsidy may have significant effects, for instance, where it enables market participation that would otherwise not occur. Certainly a case such as this one, where the subsidies have, as we concluded, enabled Airbus to launch LCA that it otherwise would not have been unable to launch when it did, and where the subsidies are, by any realistic measure, extremely large, a causal link can be found between the use of the subsidies and the effects.

7.1968 In addition, we are not persuaded by the European Communities' premise that an allocation of the benefit of the subsidies on a per-aircraft basis is required in order for the United States to sustain its claims of serious prejudice in this dispute. The European Communities' submission assumes that a per-aircraft allocation of the subsidy benefit over time in order to determine a "current" per-plane subsidy amount is necessary, but the European Communities nowhere explains why such a calculation is necessarily the way to determine the magnitude of the subsidy.⁵⁷²¹ The notion of allocation of benefit applied by the European Communities in its calculation is derived from the practice of investigating authorities in the context of countervailing duty investigations. In the countervailing duty context, the remedy for any violation of the SCM Agreement is the imposition of a countervailing duty on future imports of the exported product benefiting from the subsidies found to

BCI deleted, as indicated [***]

exist. The SCM Agreement specifically limits the amount of any countervailing duty applied to any imports to the amount of subsidy per unit of product.⁵⁷²² Thus, in the countervailing duty context, it is critical, in order to act consistently with the SCM Agreement, for the investigating authority to determine the amount of benefit from the subsidy per unit of product, in order to ensure that the remedy, countervailing duties on imports, is collected in the correct amounts. There is no corresponding reason to undertake a similar calculation in the context of a dispute under Part III of the SCM Agreement.⁵⁷²³ In this context, the relevant question is not the precise amount of subsidy attached to each unit of the subsidized product, but rather whether the subsidies in question are of sufficient magnitude, in light of their nature and effect, to have caused the serious prejudice alleged. We therefore conclude that allocation of the benefit of the specific subsidies we have found, on a per Airbus LCA basis, is not necessary in this dispute.

7.1969 In any case, we believe there are a number of deficiencies with the European Communities' calculation, which renders it unreliable for the purpose of identifying the magnitude of the subsidies at issue, even without allocation on a per-plane basis. First, we note that in identifying the magnitude of the LA/MSF subsidies, the European Communities has focussed its analysis on the amount of the subsidy benefit (*i.e.*, the interest rate differentials), without also taking into account the nature of the financial contributions at issue. In our view, in order to properly consider the magnitude of a subsidy provided under a loan for the purpose of informing a panel's consideration of a serious prejudice claim, it is important to examine the interest rate differential in the context of the amount of funding borrowed under the loan. Such an approach is not only consistent with Article 1 of the SCM Agreement, which we recall defines a subsidy as a financial contribution that confers a benefit upon a recipient,⁵⁷²⁴ but it also makes sense in the particular context of a serious prejudice analysis, where it is important to focus on the effects of the challenged subsidies. In this respect, we note that, all things being equal, the effects of a loan involving a financial contribution covering 1 percent of the costs of a particular project at an interest rate that is 100 basis points below the market rate for a comparable loan, are likely to be less pronounced than a loan providing the same interest rate benefit but covering 100 percent of the costs of a project.

7.1970 A second flaw we believe is manifest in the European Communities' calculation of the alleged subsidy benefits associated with LA/MSF lies in its discounting of taxes allegedly paid on the principal loaned under the LA/MSF contracts. Elsewhere in this Report, we have concluded that consideration of such a tax effect in the context of the present dispute is inappropriate.⁵⁷²⁵ Moreover, the European Communities relies upon repayment amounts for the purpose of its present value calculations concerning the Spanish A340-500/600 contract and the French A330/A340 contract that we have found to be erroneous or non-verifiable on the basis of the evidence before us.⁵⁷²⁶ Thus, even following its own methodology for identifying the amount of the subsidy benefit provided under each LA/MSF contract, the European Communities' calculations underestimate the total benefit we consider could be reasonably associated with the provision of LA/MSF. Finally, we note that, the European Communities has included in its calculations the alleged amount of LA/MSF subsidy associated with only *five* of the seven Airbus LCA programmes and only *some* of the R&TD subsidies we have determined to exist.

⁵⁷²² Article 19.4 of the SCM Agreement provides that "no countervailing duty shall be levied on an imported product in excess of the amount of the subsidy found to exist, calculated in terms of subsidization per unit of the subsidized and exported product." (footnote omitted).

⁵⁷²³ See, Appellate Body Report, *US – Upland Cotton*, para. 464.

⁵⁷²⁴ We note that, in the context of a grant, the magnitude of the subsidy is properly determined on the basis of the amount of funding actually transferred by means of the grant. In other words, where a subsidy takes the form of a grant, the amount of the financial contribution and the amount of the benefit are the same.

⁵⁷²⁵ See, para. 7.430 above.

⁵⁷²⁶ See, para 7.415 above.

BCI deleted, as indicated [***]

7.1971 Following the European Communities' methodology corrected for the technical errors noted above, we sought to arrive at our own estimates of the amounts of subsidy benefit associated with the LA/MSF contracts counted by the European Communities. These estimates indicate that the European Communities' totals of LA/MSF benefit of EUR [***] and [***] understate the actual amount of LA/MSF subsidy benefit on the A320, A330/340, A330-200, A34-500/6000, and A380, by approximately [***] with respect to the Euro amount, and approximately [***] with respect to the pound amount. Our estimate of the amounts of R&TD subsidies are approximately twice the amount, EUR 381 million, calculated by the European Communities for subsidies conferred by the European Communities, France, and Germany, not even counting the Spanish loans we determined constitute specific subsidies. In addition, the European Communities did not include LA/MSF for the A300 and A310 in its calculations. We recall our findings that LA/MSF was provided at a zero rate of interest for the A300 and A310, while the market benchmarks we determined were at least 16.52 percent for the A300 contract and at least 18.88 percent for the A310, on 100 percent of the development costs of those planes, indicating a significant additional amount of subsidy. Thus, with respect to even the limited portion of the specific subsidies we have found to exist in this dispute that it counted, the European Communities' calculations vastly underestimate their magnitude.

7.1972 In addition, and significantly, the European Communities' calculations fail entirely to take into account the other specific subsidies we have found to exist, namely, the subsidies with respect to the infrastructure grants, equity infusions and share transfers. While we have not precisely calculated the amounts of the subsidies conferred, we note that with respect to the Mühlengberger Loch and ZAC Aéroconstellation infrastructure subsidies, the hundreds of millions of Euro expended by government authorities in developing the sites are not included in the basis on which the rent or the purchase prices paid by Airbus were calculated, making the amount of the difference akin to grants to Airbus. The [***] for the Bremen airport runway extension and noise reduction measures, and the more than EUR 200 million in regional grants for Airbus production facilities by German and Spanish authorities between 2001 and 2004, are not included in the European Communities calculations. Nor does the European Communities count the value of the transfer of KfW's 20 percent equity interest in Deutsche Airbus to MBB in 1992 on non-market terms, or the FF 3.54 billion in equity investments in Aérospatiale by the French government and Crédit Lyonnais in 1987, 1988, 1992, and 1994, or the transfer by the French government of its interest in Dassault Aviation to Aérospatiale in 1998. Thus, taking into account all of the specific subsidies we have found to have been provided to Airbus, it is apparent that the European Communities' calculation greatly understates the amount of the benefit associated with the specific subsidies we have found were provided in respect of Airbus LCA, which in our estimation is substantial and significant. Moreover, considering that the proportion of development costs covered by LA/MSF for the early models of Airbus LCA was close to 100 percent and that even 33 percent of development costs of the post 1992 models is a significant amount of subsidized funding, we conclude that the magnitude of the specific subsidies is certainly sufficient to have had the effect of enabling Airbus to launch successive models of LCA at a pace it could not otherwise have achieved.

The Age of the LA/MSF Subsidies

7.1973 The European Communities submits that several of the LA/MSF subsidies in this dispute are "decades old" and cannot, for that reason, be causing present serious prejudice to the United States' interests.⁵⁷²⁷ It is true that the first grant of LA/MSF, for the A300, was agreed by the governments of Germany and France in 1969 and by Spain in 1970. However, this was but the first of a series of grants of LA/MSF provided in respect of each subsequent model of Airbus LCA. Thus, LA/MSF was

⁵⁷²⁷ "The notion that subsidies conferred decades ago could significantly affect current pricing decisions or otherwise cause serious prejudice is fanciful, at best." EC, FWS, para. 1656. See, also, EC, FWS, paras. 7, 1323, 1335, 1606, 1643, 1645, 1656, 1794, 2261, 2270, 2272.

BCI deleted, as indicated [***]

provided by those same governments with respect to the A310 in 1978. The governments of France, Germany, Spain and the United Kingdom provided LA/MSF with respect to the A320 in 1984,⁵⁷²⁸ and with respect to the A330/A340 in 1987. LA/MSF was again provided by the government of France for the A330-200 in 1995, and by the governments of France and Spain for the A340-500/600 in 1997. The most recent grant of LA/MSF was in 2000, by the governments of France, Germany, Spain and the United Kingdom, with respect to the A380.

7.1974 The LCA supported by those grants of LA/MSF entered into service in each case several years after the grant of LA/MSF, and with the exception of the A300 and A310, production of which ceased in July 2007 (after the period we examined in this dispute), each of these aircraft is still in production and being sold by Airbus. Although the European Communities notes that [***],⁵⁷²⁹ this does not detract from the fact that LA/MSF enabled Airbus to launch that model at the time it did, and thus ensure its presence on the market and consequent effects. Moreover, LA/MSF is not the only specific subsidy we have found to benefit Airbus LCA in this dispute, and each of these other specific subsidies has also been repeatedly granted over a number of years with respect to the same product, Airbus LCA. Thus, we have found specific subsidies in the form of R&TD funding, granted from 1986 onward, with the most recent grants in 2003, as well as in the form of infrastructure grants, involving the Bremen runway extension in 1989-90, the Aéroconstellation site in 1999, the Mühlenberger Loch site in 2000, and various Spanish and German sites from 2001 to 2004. These subsidies, together with LA/MSF, as well as the share transfers and equity infusions we have found constituted specific subsidies to Airbus between 1988 and 1998, have conferred benefits on Airbus at intervals over its entire existence, supporting its ability to launch successive models of LCA, and thus its participation in the LCA market.

7.1975 Thus, we are not concerned here with a one-off grant of a single subsidy, or even a number of subsidies, "decades" ago, but with repeated grants of subsidies benefiting the same product⁵⁷³⁰ over a period of decades, which product has been produced and sold throughout that period and continues to be produced and sold now and into the future. We have concluded that LA/MSF and the other subsidies played a vital role in permitting Airbus to not only launch and develop the model of LCA actually funded by each grant of LA/MSF, but also each of the subsequent models.⁵⁷³¹ Moreover, advantages in technology and production flowed from the development of each succeeding model of LCA supported by LA/MSF and other subsidies to production of earlier models, and the development of derivative and improved versions of earlier models.

7.1976 While the effect of a single subsidy may well dissipate over time, in our view, the fact that the subsidies at issue in this dispute were repeatedly granted over the entire history of Airbus' LCA development with respect to that same product has had rather the opposite effect, through the learning and spillover effects, and production synergies that are inherent in this industry, which spread the effect of LA/MSF for the development of one model of LCA, and of other subsidies, to both

⁵⁷²⁸ Airbus began the A320 Development programme in 1980, which ultimately resulted in the launch of four models in the A320 group, the A320 basic, A321, A319, and A318.

⁵⁷²⁹ EC, FWS, para. 1655, referring to Comparison of Actual Deliveries [***], Exhibit EC-327 (HSBI). We understand that with the exception of loans provided in respect of the A300 and A320, substantial amounts of LA/MSF loans remain outstanding, including the entirety of the amount loaned with respect to the A380. The European Communities does not make specific allegations with respect to [***], but even if this were the case, it would not affect our conclusions.

⁵⁷³⁰ We recall our conclusion that there is a single subsidized product at issue, Airbus LCA.

⁵⁷³¹ While we have found that the United States has not demonstrated the existence of a "LA/MSF programme" *per se*, based on the evidence before us, we consider that the governments of France, Germany, Spain, and the United Kingdom, and the European Communities, have pursued a policy of providing support for LCA development and production since 1969.

BCI deleted, as indicated [***]

subsequent and earlier models.⁵⁷³² We recall the observation of the panel in *US – Upland Cotton* that "{s}ubsidies granted under expired measures may have had adverse effects at the time they were in effect, and may still have lasting adverse effects."⁵⁷³³ Indeed, the nature of the product at issue in this case, LCA, with its long lead times for development and long-term presence in the market, suggests that the subsidies granted at different periods in the life of the product may well continue to have effects long after the original grant. This is particularly so, in our view, in light of the fact that the product, LCA, benefiting from those subsidies continues to be manufactured and sold. We therefore do not consider that that age of the LA/MSF subsidies (or any of the other subsidies at issue) undermines our conclusion that, but for those subsidies, Airbus would not have been able to launch and develop each model of LCA as originally designed and at the time that it did.

Competition in the Absence of the Subsidies

7.1977 As noted above, a key critique of the Dorman Report advanced by the European Communities in the Wachtel Report is that it is allegedly premised on the assumption that Boeing would face no competition in the absence of an Airbus which received LA/MSF. The Wachtel Report asserts that LCA "markets" are natural duopolies and, accordingly, if Airbus did not exist, some competitor other than Boeing would have arisen to take its place in those markets. Thus, in the counterfactual in which Airbus did not exist or did not launch the aircraft it did when it did, some other competitor would have launched aircraft to compete with Boeing.⁵⁷³⁴ In circumstances where Boeing would face competition in the counterfactual there is not, according to the European Communities, sufficient evidence to conclude that in the absence of LA/MSF, the United States' LCA industry would enjoy a higher market share and/or receive higher prices for its products.⁵⁷³⁵

7.1978 The European Communities asserts that the United States itself admits that Boeing would face active competition in the absence of LA/MSF and that their proposed counterfactual is inherently speculative. The European Communities notes, *inter alia*, the following statement:

"To be clear, the United States does not contend that the LCA industry should be a Boeing or even a U.S. monopoly. No one can say with certainty how the LCA industry would have developed over the last 40 years without the EC and Airbus government subsidies designed to ensure that Europe would be the home of one producer in a competitive duopoly. But for the EC provision of Launch Aid, surely there would nonetheless have been competition. But the nature and type of that competition would surely have been different. The United States seeks only what the SCM Agreement seeks – that the competition not be subsidized competition."⁵⁷³⁶

Insofar as "there would nonetheless have been competition" in the absence of LA/MSF the United States cannot, according to the logic of the European Communities, demonstrate how LCA competition has been affected by LA/MSF and that those competitive effects have caused serious prejudice to the United States.⁵⁷³⁷

⁵⁷³² See, US, FCOS, paras. 62-67, citing Exhibits EC-98 (HSBI), EC-362 (HSBI), EC375 (HSBI), and EC-498 (HSBI), US, SNCOS, paras. 151-154, citing *inter alia*, Exhibits US-182 (efficiency of combining production facilities for A380 with existing facilities for A319/A321 facilities at Mühlenberger Loch), EC-776 (HSBI)(commonality as part of rationale for launching new derivative models).

BCI deleted, as indicated [***]

7.1979 We note, as a factual matter, that the LCA market has been a duopoly market since the merger of McDonnell Douglas with Boeing in 1997. The fact that competition in the market is currently limited to Boeing and Airbus is, not surprisingly, reflected in the evidence presented by the United States in support of its serious prejudice claims. For example, the United States uses the phrase ""zero sum" competition" in the sense that "a win for one producer is almost always a loss for the other" to describe the competition between the two producers.⁵⁷³⁸ This 'zero sum' assumption does, at times, colour the United States description of the causal link between the subsidies and the effect on the United States interests. Thus, for instance, after reiterating its position that absent the subsidies Airbus would have fewer and different LCA products, the United States asserts that "{i}n this duopoly market, that means that the U.S. LCA Industry would produce and sell more aircraft at higher prices than it does in the face of subsidized competition".⁵⁷³⁹ We do consider that in certain instances the United States may proceed too hastily from a conclusion that certain Airbus products would not exist but for the subsidies to the conclusion that Boeing would sell more aircraft and prices would be higher. If there were competition from some other producer, that competitor might have been in a position to introduce competitive aircraft to the market that Airbus could not have introduced but for LA/MSF, with a similar effect on Boeing sales and prices. Nonetheless, we do not agree with the premise of the European Communities' argument, that the possibility, or even the likelihood, of competition in the absence of subsidies to Airbus, requires us to conclude that the United States has failed to demonstrate a causal link between the Article 6.3 phenomena and the use of subsidies by the European Communities and certain of its member States.

7.1980 As both parties acknowledge, any consideration of a counterfactual in the context of this particular dispute is inherently speculative. However, to differing degrees both the United States and the European Communities appear to accept that had Airbus not entered the LCA market when it did, there would have been some other market participant than Boeing, albeit perhaps not a new entrant.⁵⁷⁴⁰ The United States also posits a situation where Airbus would have entered at a much later stage with a different quality LCA offering.⁵⁷⁴¹ A review of the economic literature, much of which has been introduced as evidence in this dispute, can help narrow down the range of possibilities.

7.1981 To begin with, certain fundamental characteristics of the LCA market are well described in the literature,⁵⁷⁴² and are not disputed by the parties. First, entry barriers into the LCA market are formidable. The design, testing certification, production, marketing and after-delivery support of LCA is an enormously complex and expensive undertaking, which requires huge up-front investments over a period of three to five years before any revenues are obtained from customers.⁵⁷⁴³ A rough rule of thumb is that at least 600 airplanes of a new model must be sold before the revenues for a programme exceed the costs. Economies of scale arising from the huge sunk development cost give incumbent firms a considerable competitive advantage. Learning effects induce dynamic economies of scale which reinforce incumbents' advantage. Economies of scope make it difficult to enter one market segment only. Thus, producers of a full range of LCA are at an advantage. Switching costs, *i.e.*, the costs of customers moving from one aircraft manufacturer's LCA to another's, make it more difficult for new producers to enter. Most airlines prefer fleet commonality. Incumbent firms have a strong incentive to adopt entry deterring price strategies. Uncertainty is considerable. This makes it

⁵⁷⁴³ Boeder & Dorman, Exhibit US-373.

BCI deleted, as indicated [***]

very difficult to finance the huge development costs on capital markets.⁵⁷⁴⁴ Finally, the fact that aircraft are typically sold in US dollars exposes non-American manufacturers with a production base outside of the United States to exchange rate fluctuations which increase uncertainty and are costly to cover against.⁵⁷⁴⁵

7.1982 Economists generally consider that with such high entry barriers, entry into the manufacture of LCA without government support is difficult if not impossible. Consideration of alternative scenarios that have been analyzed in the literature provides a sense for what economists consider to be the most likely counterfactuals. For instance, Klepper posits two scenarios that could have become reality since 1970, had Airbus not entered the market.⁵⁷⁴⁶ The first is a Boeing monopoly, and the second is a duopoly with two established producers, Boeing, and either McDonnell Douglas or Lockheed.⁵⁷⁴⁷ The difference between this and the actual situation is that there would be two established US producers, rather than one incumbent US producer and a new non-US entrant. Neven and Seabright consider three alternative scenarios to their base case, which attempts to reproduce the actual development of the aircraft market from the early 1960s.⁵⁷⁴⁸ The first is a Boeing-McDonnell Douglas duopoly, the second is an Airbus, Boeing duopoly (without McDonnell Douglas), while in the third, Boeing remains a monopoly throughout the period. Baldwin and Krugman, which is quoted in the Dorman Report, notes that "{i}n the world market there are only three significant manufacturers of airframes for jets that seat more than one hundred passengers. It is arguable that in the absence of government support there would be only one."⁵⁷⁴⁹

7.1983 We are not convinced by the view expressed in the Wachtel Report that, because of the alleged size of the segments in the LCA market, the LCA industry is a "natural duopoly". The fundamental reasoning behind the Wachtel Report in this regard is clear. Relying upon the methodology applied in a study undertaken by Bresnahan and Reiss, Wachtel segments the LCA market and compares an estimate of the average break-even point for sales of any given model of LCA with the size of individual market segments. Where the segment market size is larger than twice the break-even point, he concludes that there is room for two producers and thus the segment is a natural duopoly. A major weakness of this reasoning is that it ignores the linkages between market segments. Because of scope economies and switching costs, entry into one of the segments alone is almost impossible. This problem is acknowledged by Bresnahan and Reiss, who note in their conclusion that "{w}hen markets overlap, it becomes less clear how one should compute entry thresholds".⁵⁷⁵⁰ There are further reasons to question the applicability of the Bresnahan and Reiss approach to the LCA market. Bresnahan and Reiss assume that firms have U-shaped average total costs, while learning effects in the LCA industry tend to reduce marginal costs, at least up to a certain, rather significant, production level. The theoretical industrial organization literature suggests that learning curves can provide strong strategic incentives to firms.⁵⁷⁵¹ For instance, Cabral and Riordan

show that in a duopoly with strong learning curve efficiencies there is a tendency for the firm with lower costs to increase its lead,⁵⁷⁵² while Dasgupta and Stiglitz show that when learning is strong, an oligopoly may tend toward monopoly.⁵⁷⁵³

7.1984 Thus, our evaluation of the arguments and evidence the parties have submitted leads us to conclude that there are multiple possibilities for the LCA industry in the counterfactual world that would exist in the absence of subsidies to Airbus. In one scenario, Airbus would not have entered the LCA market at all and Boeing would be in a monopoly position, holding 100 percent of the market. In this scenario, the link between the subsidies that enabled Airbus to enter the LCA market and Boeing's loss of market share and sales is self-evident. Any market displacement and lost sales actually suffered by Boeing would be directly attributable to the subsidies granted to Airbus, which enabled it to launch and develop its own family of LCA. In a second plausible scenario, Airbus would not have entered the market, but there would nevertheless have been two players, which on the basis of the evidence before us, would most likely have been Boeing and McDonnell Douglas, the latter having merged with Boeing in 1997.⁵⁷⁵⁴ As both Boeing and McDonnell Douglas are (or were) US LCA manufacturers, there would once again be no question about the nexus between the subsidies which enabled the non-US company, Airbus to enter the LCA market and serious prejudice to the United States' interests (displacement of Boeing and/or McDonnell Douglas LCA from the LCA markets and lost sales). Finally, in a third and a fourth scenario, Airbus might have entered the LCA market without subsidies, either in competition with Boeing alone, or in competition with a United States' industry comprising Boeing and another US producer. In either case, Airbus could not conceivably have been present in the LCA market with the same aircraft and at the same times as it actually was, given our conclusions concerning the cumulative effect of LA/MSF and the other subsidies in dispute on Airbus' ability to launch successive models of LCA as and when it did. In our view, it is simply not feasible that, without LA/MSF and the other subsidies, relying entirely on non-subsidized financing, Airbus could have undertaken the pace of aircraft development that would have enabled it to launch the range of LCA that it has successfully launched to date, which has resulted in its present position in the market for LCA. It follows that even in the unlikely event that Airbus would have been able to enter the LCA market as a non-subsidized competitor, we are confident that it would not have achieved the market presence it did over the period 2001 to 2006 and that we have described in the previous sections of this Report.⁵⁷⁵⁵

Factors other than competition with subsidized Airbus LCA

7.1985 The European Communities asserts that the United States' claim that subsidies to Airbus LCA cause present adverse effects cannot be sustained because the United States fails to take account of various "non-attribution" factors, which the European Communities contends are responsible, distinct from competition with Airbus LCA, for a "significant portion of any present lower Boeing prices, sales, deliveries, and market share."⁵⁷⁵⁶ In this context, the European Communities raises alleged mismanagement of customer relations, geopolitical considerations, and the role of engine manufacturers in sales campaigns as contributing to lost sales, rather than Airbus pricing. We have

⁵⁷⁵² L. Cabral & M.H. Riordan, *The learning curve, market dominance, and predatory pricing*, 62(5) *Econometrica* 1115, (1994).

⁵⁷⁵³ P. Dasgupta & J. Stiglitz, *Learning-by-doing, market structure and industrial and trade policies*. 40 *Oxford Economic Papers* 246, (1988).

⁵⁷⁵⁴ We note in this regard the United States' assertion that competition from Airbus was a factor in McDonnell Douglas' exit from the LCA industry. US, FCOS, para. 68. In addition, we note that Lockheed, the other competitor in the market at an earlier date, had already exited the market in 1981, and neither party has suggested that any other pre-existing entity was or would have been in a position to enter the LCA industry, or that any entity other than Boeing sought to purchase McDonnell Douglas.

⁵⁷⁵⁵ See, paras. 7.1752, 7.1757, 7.1780, 7.1781, 7.1782, 7.1784 and 7.1786 above.

⁵⁷⁵⁶ EC, SWS, para 1090.

BCI deleted, as indicated [***]

rejected above the view that lost sales must be by reason of lower price in order to constitute adverse effects.⁵⁷⁵⁷ As discussed above, there is no dispute that Airbus succeeded in the sales campaigns we have considered, and we have therefore concluded that the United States has demonstrated that Boeing suffered substantial lost sales during the period 2001-2006. We noted that there are numerous factors involved in a customer's decision as to which LCA to purchase. However, one factor which is essential is the availability of a particular model or models of LCA suitable for a particular customer's needs at the time of the sale. We have concluded that, but for LA/MSF and the other subsidies in dispute, Airbus would not have been able to launch the particular LCA it did at the time it did. Thus, the presence of these subsidized LCA in the market is a fundamental cause of the lost sales observed. But for the subsidies, Airbus would not have been competing for these sales with the LCA it actually sold.⁵⁷⁵⁸ Similarly, Airbus' market share is directly attributable to its ability to sell and deliver to the European Communities and relevant third country markets, LCA which it would not have had available but for the subsidies which supported the launch of every model of Airbus LCA.

7.1986 We note the European Communities' general view that subsidies in a previous period cannot be the cause of changes in market share during the period we are considering. We do not agree with this view, given that, as we have discussed, in the LCA industry, the effect of subsidies which support the development of new models of LCA is felt long after the subsidies have been granted, in the years in which LCA supported by those subsidies are sold and delivered to customers which otherwise would not have had the option of purchasing such LCA.⁵⁷⁵⁹ In any event, however, we do not consider that it is necessary in the circumstances of this dispute to link the particular changes in market share we have observed to the timing of the grant of the subsidies in order to make a finding of displacement in either the EC or third country markets. We have found that the effect of LA/MSF, complemented by the other subsidies in dispute, is to enable Airbus to launch and bring to market LCA that it otherwise would have been unable to – that is, the subsidies support the presence of Airbus in each segment of the LCA market with each of its LCA models. Since we have concluded that, but for the subsidies, Airbus would not have had the market presence it did have during the period we examined, it is clear that those LCA have displaced Boeing LCA from the relevant markets and caused lost sales in the same market.

7.1987 The European Communities also points to the severe downturn in the market in 2001-2003 following the events of 9/11 (exacerbated by the start of the war in Iraq and the outbreak of SARS in Asia). The European Communities argues that the severity of this downturn, and its allegedly greater impact on Boeing than on Airbus, compel the conclusion that it was responsible, at least in part, for declining demand and declining prices of Boeing LCA.⁵⁷⁶⁰ We certainly recognize that there was a severe downturn in the market for LCA following the events of 9/11. However, as we have previously discussed, this downturn affected both Boeing and Airbus. Even if we accept the European Communities' view that the downturn had a greater impact on Boeing's sales than it did on Airbus, this does not, in our view, detract from our conclusions concerning the effect of the subsidies in this dispute, which enabled Airbus to have available the particular models of LCA that it sold and delivered in the distressed market.

7.1988 The European Communities contends that, even if the effect of the subsidies is to allow Airbus to launch an LCA model it would not otherwise have launched, any adverse effects caused by such subsidies are eliminated when Boeing launches an aircraft that competes with the subsidized

⁵⁷⁵⁷ See, paras. 7.1841 - 7.1845 above.

⁵⁷⁵⁸ Whether it might have been competing at all for those sales, for instance with a different LCA developed without subsidies, is questionable, as the lost sales all involved aircraft we have concluded would not have been developed by Airbus at the relevant times had earlier models not benefited from subsidies.

⁵⁷⁵⁹ See, discussion at para. 7.1976 above.

⁵⁷⁶⁰ EC, SWS, para. 1093-94.

BCI deleted, as indicated [***]

Airbus model.⁵⁷⁶¹ The United States argues that this is both logically and factually incorrect.⁵⁷⁶² We agree.

7.1989 As the United States points out, if Airbus launched a subsidized LCA, either Boeing would have launched its own subsequent, competing aircraft even if Airbus had not launched, based on Boeing's own evaluation of the demands of customers and the market and its capabilities, or Boeing would not have done so. If Boeing would have launched the aircraft anyway, then it would not have had to compete with the subsidized Airbus model, but for the subsidies, as without the subsidies, the Airbus model would not have been launched at that time and with those characteristics. On the other hand, if Boeing only launched the competing aircraft to respond to the subsidized Airbus model, then Boeing had to expend capital and resources to do so, which it might otherwise not have done. Thus, but for the subsidies, Boeing might have used those resources in some other fashion. In either case, displacement of imports from the EC market, displacement of exports from certain third country markets, and lost sales that resulted from the competition with the subsidized Airbus LCA would all be effects of the subsidies, without which the Airbus LCA would not exist at that time. Thus, whether Boeing launched an LCA in response to Airbus or not, adverse effects would ensue.

7.1990 The European Communities' argument in this respect seems to suggest that the subsidies granted to Airbus are somehow beneficial in that they enable Airbus to compete with Boeing, which competition is good for the consumers of LCA, airlines and leasing companies, and the travelling public, and that this militates against a finding that those subsidies cause adverse effects to the United States' interests. Indeed, the European Communities asserts that Boeing welcomes the competition with Airbus, which it asserts has "generated numerous new and innovative LCA products" and fosters lower prices for LCA purchasers and increased demand, which ultimately is the basis of the financial health of both Boeing and Airbus. The European Communities maintains that airlines and other purchasers of new LCA insist that such competition is vital for their economic success and for their financial health and survival.⁵⁷⁶³ It may well be true that Boeing welcomes competition, and that competition between Boeing and Airbus benefits purchasers of LCA. But that does not mean that the United States is not entitled to relief under the SCM Agreement if that competition is fuelled by subsidies used by another Member that cause adverse effects to the United States' interests.

7.1991 Moreover, we see no basis in the SCM Agreement for the notion that an increase in "consumer welfare" constitutes a defence to a claim of adverse effects caused by subsidies. Nothing in the text of the Agreement, or in its object and purpose, supports the proposition that the panel can or should take into account possible "positive" effects on competition of subsidies in evaluating claims of serious prejudice. It may often be the case that subsidies in fact contribute positively to consumer welfare – for instance, in *US – Upland Cotton*, the panel found price suppression caused by subsidies, and concluded that the United States' use of subsidies caused adverse effects to Brazil's interests. However, that price suppression presumably also resulted in prices for textiles and clothing that were lower than they otherwise would have been, which is a "positive", while it also reduced revenues to cotton farmers, which is a negative. There is no mention of this in either the panel's or the Appellate Body's decision, and absolutely no basis to think that panels should somehow engage in a consideration that might "balance" these competing effects.

⁵⁷⁶¹ EC, FWS, paras. 2288-2304.

⁵⁷⁶² US, SWS, para. 585. Brazil disagrees with the European Communities' assertion that adverse effects are extinguished by the launch within two or three years of a technologically equal or superior competing aircraft by Boeing. According to it, the continuing distortive effect of subsidies in the market does not disappear with the launch of a competing aircraft. Brazil, Third Party Submission, para. 57.

⁵⁷⁶³ EC, FWS, paras. 1378-1381.

BCI deleted, as indicated [***]

7.1992 In our view, that Boeing chooses to meet subsidized competition from Airbus to the best of its ability cannot be considered to eliminate the adverse effects caused by the subsidies in dispute. To conclude otherwise would in our view eviscerate the SCM Agreement's remedies for subsidies that cause adverse effects, as it would imply that a Member must not seek to respond to or mitigate adverse effects caused by subsidies for fear of being unable to demonstrate their existence in a dispute. We cannot believe that such an outcome is warranted.

7.1993 It is in our view clear that Airbus would have been unable to bring to the market the LCA that it launched but for the specific subsidies it received from the European Communities and the governments of France, Germany, Spain and the United Kingdom. We reiterate that we do not conclude that Airbus necessarily would not exist at all but for the subsidies, but merely that it would, at a minimum, not have been able to launch and develop the LCA models it has actually succeeded in bringing to the market. Had Airbus successfully entered the LCA industry without subsidies, it would be a much different, and we believe, a much weaker LCA manufacturer during the period we examined, with at best a more limited offering of LCA models. Thus, under either scenario, Airbus would not have had the market presence and ability to win orders for LCA that it did have during the period 2001-2006, and the United States' LCA industry, at a minimum, would not have lost sales to Airbus and would have had a larger market share in the EC and certain third country markets than it actually did over that period. We consider that Airbus' market presence during the period 2001-2006, as reflected in its share of the EC and certain third country markets and the sales it won at Boeing's expense, is clearly an effect of the subsidies in this dispute. We therefore conclude that the displacement of United States' LCA from the EC and certain third country markets and lost sales we have found during the period 2001-2006 are an effect of the specific subsidies to Airbus that we have found.

The alleged "product" effect of the subsidies on prices

7.1994 Finally, the United States also asserts that because the subsidies at issue have been necessary to Airbus' ability to develop and successfully bring to market its full range of LCA models, they have also created supply side pressure which must perforce have had an impact on prices in the LCA market.⁵⁷⁶⁴ This supply-side pricing argument is advanced in the Dorman Report⁵⁷⁶⁵ and in the statement of Professors Joseph Stiglitz and Bruce Greenwald, submitted by the United States in response to a question from the Panel ("Stiglitz/Greenwald statement").⁵⁷⁶⁶ The Stiglitz/Greenwald statement, in particular, argues that a pricing impact is a direct and inevitable result of the introduction of a new model aircraft, observing:

"The new model introduction inevitably represents an increase in supply which just as inevitably has a negative impact on prices. The most extreme example of such an impact is that in which, but for the subsidy, the new model could not have been

⁵⁷⁶⁴ US, SWS, para. 594.

⁵⁷⁶⁵ In this respect the Dorman Report states:

"An airplane program that is enabled by launch aid is likely to cause prices to decline in the market segment that it targets. Competing airplanes will need to lower their prices and will likely sell fewer units, since some customers will purchase the new airplane and most customers will leverage one seller against another to obtain larger discounts."

Dorman Report, Exhibit US-70 (BCI), p. 9.

⁵⁷⁶⁶ Statement of Professors Joseph E. Stiglitz and Bruce C. Greenwald, *On the Question of the Impact of Subsidies on Supply and Prices in the LCA Market* (Jan 21, 2008), Exhibit US-676 (hereinafter "Stiglitz/Greenwald statement").

BCI deleted, as indicated [***]

economically introduced, since the potential returns would not have justified the unsubsidized investment involved."⁵⁷⁶⁷

The European Communities argues that both the arguments of the United States and the Stiglitz/Greenwald statement are premised on the assumption that, in the absence of Airbus, Boeing would face no competition, whereas the United States has acknowledged that in the absence of Airbus or LA/MSF, Boeing would face competition.⁵⁷⁶⁸ We understand the thrust of the European Communities' argument to be that, because there would be active competition among two or more LCA manufacturers even in the absence of Airbus, any price effects resulting from increases in supply in the LCA market cannot be attributed to subsidies to Airbus.

7.1995 As we understand it, the argument that Stiglitz and Greenwald make is that in a duopoly situation, like the one characterizing the LCA industry at present, a subsidy that makes possible the launch of a new model aircraft is likely to increase supply and thereby to reduce the price of LCA on the market. The Stiglitz/Greenwald statement seems to raise two possible scenarios. In the first, one of the duopolists is already producing a specific aircraft and the subsidy allows the other duopolist to launch a directly competing plane. In this case, the subsidy increases supply and lowers the price in this specific segment of the market. In the second, the subsidy allows one of the duopolists to launch an aircraft in a segment of the market that is not yet occupied. In this case, the subsidy will push down the price of aircraft in adjacent segments of the market. Overall, the Stiglitz/Greenwald statement supports the view that prices in the aircraft market are lower than they would be in the Boeing monopoly counterfactual. The subsidized entry of Airbus and the subsequent launches of Airbus aircraft clearly increased the supply of aircraft and reduced the prices of Boeing aircraft.⁵⁷⁶⁹ However, in our view, the Stiglitz/Greenwald statement does not help us assess whether the prices that prevailed in 2001 to 2006 were higher or lower than those that would have resulted in the second and the fourth of the counterfactual scenarios we posited in paragraph 7.1984 above, *i.e.*, if the market had evolved towards either (i) a duopoly with two relatively equal unsubsidized United States producers of LCA, or (ii) a situation with two relatively equal unsubsidized United States producers in competition with each other and with a third unsubsidized, but relatively weaker, producer, Airbus. Competition between the producers in either of these circumstances could very well have been even more fierce than competition between a subsidized new entrant, with presumably a corresponding initial cost disadvantage, and an incumbent producer. The resulting price levels in the two former scenarios could then have been lower than the one in the latter, which corresponds more closely to the actual Boeing-Airbus duopoly.

7.1996 Based on the foregoing, we are of the view that we cannot draw any firm conclusions on the price effect of the presence of subsidized Airbus LCA in the market, and thus cannot conclude that the United States has demonstrated, in this context, that the effect of the subsidies is the significant price suppression and price depression we observed over the period 2001-2006.

The United States' "Price" Theory of Causation

7.1997 The principal focus of the United States "price" causation theory is the argument that the challenged subsidies, and in particular LA/MSF, provided Airbus with the financial means to be flexible with its pricing of LCA in competitions against Boeing, thereby enabling it to win sales, capture market share and significantly depress and suppress the prices of LCA between the years 2001

⁵⁷⁶⁷ Stiglitz/Greenwald statement, p. 2.

⁵⁷⁶⁸ US, FCOS, para, 151; US, SWS, 571

⁵⁷⁶⁹ We note in this regard the conclusion of Baldwin & Krugman, quoted in Neven & Seabright, Exhibit US-382 p. 22, that, with respect to the market segment encompassing the A300 and Boeing 767, "the entry of Airbus resulted in ... large losses of profits to Boeing {t}he United States suffered as a whole..."

BCI deleted, as indicated [***]

and 2006. The United States explains that there are essentially two reasons for this alleged price effect of LA/MSF. First, the United States submits that the nature and magnitude of the cumulative provision of LA/MSF to Airbus had a direct and significant impact on EADS' free cash flow, allowing Airbus to be more aggressive in its approach to investments, including price concessions aimed at building market share over the long-run. Second, the United States asserts that LA/MSF decreased Airbus' marginal production cost by indirectly lowering its marginal cost of capital, which in turn, the United States argues, could be expected to lower the price of Airbus LCA.⁵⁷⁷⁰

7.1998 The European Communities disputes the United States' assertions, arguing that the United States fails to calculate the alleged cash flow effect, which the European Communities contends is zero or *de minimis*.⁵⁷⁷¹ In any event, the European Communities contends that the United States failed to demonstrate that Airbus has actually used any additional cash flow to reduce its prices. The European Communities argues that Airbus lacks the incentive and commercial opportunity to use the benefit of subsidies to price down its LCA.⁵⁷⁷² The European Communities also argues that any impact of LA/MSF on EADS' credit rating or a lower cost of production is not a "benefit" within the meaning of Article 1.1(b) of the SCM Agreement, because the same benefit would accrue from alternative market financing. Thus, for the European Communities, the difference between LA/MSF interest rates and market benchmarks fully captures this effect.⁵⁷⁷³

Alleged Effect on EADS' Free Cash Flow

7.1999 The United States argues that in the absence of LA/MSF, the financial condition of Airbus would have been significantly worse than it has actually been. Assuming, *arguendo*, that Airbus had launched each of its LCA programmes without subsidies by obtaining funds from market lenders, the United States argues that "{a}t some point, the cumulative risk of the projects and the cumulative exposure of Airbus to high levels of debt at full market rates would have made it impossible to obtain additional investment funds".⁵⁷⁷⁴ Indeed, the United States considers that even with LA/MSF, Airbus faced significant difficulties in funding its LCA projects. For instance, the United States refers to evidence which it submits reveals that [***].⁵⁷⁷⁵ The United States contends that the European Communities has recognized this fact by stating in its first written submission that "{i}t is not surprising that Aérospatiale required additional equity capital to fund the new investments. Internally generated cash flow was not sufficient, and a prudent debt-to-equity ratio placed limits on the amount of new debt that could be borne".⁵⁷⁷⁶ Furthermore, to substantiate the same point, the United States recalls the comment made in the 1997 French Senate Report concerning the provision of LA/MSF for the A380, expressing the view that market financing for the project "would apparently add excessively to the financial expenses incurred by the firms, and would throw their balance sheets out of equilibrium because of the low level of their equity capital".⁵⁷⁷⁷ Thus, the United States argues that in addition to evidence of the direct impact of LA/MSF on individual Airbus launch decisions, the cumulative impact of LA/MSF on the overall financial condition of Airbus must also be considered.

BCI deleted, as indicated [***]

7.2000 According to the United States a relevant measure of the impact of LA/MSF on the overall financial condition of Airbus is its impact on EADS' net free cash flow. Citing a January 2007 Deutsche Bank Company Research Report,⁵⁷⁷⁸ the United States notes that over the period 2001 to 2005, nearly half of the net free cash flow of EADS was accounted for by changes in net LA/MSF. The United States asserts that the Deutsche Bank Report demonstrates that EADS' net free cash flow in 2001 and 2002 would have been negative without the provision of LA/MSF. Yet, according to the United States:

"... it was precisely in this period, when the market was at its low, that Airbus intensified its effort to win sales and gain market share by aggressively underpricing Boeing and winning several major long-term sales. If during this period Airbus had been relying on its own resources to fund the ongoing development of the A340-500/600 and the A380 and preparing to fund the A350 – if in fact could have done those things without government subsidies – its financial flexibility to pursue its pricing strategy would have been quite different."⁵⁷⁷⁹

7.2001 The United States also notes that the Deutsche Bank Report concludes that without the cash inflows obtained from net LA/MSF disbursements and customer advances received from LCA orders, "EADS must materially improve its underlying free cash generative performance in the future", or else it will probably be unable to "avoid future refinancing of the group through either additional debt, equity or hybrid bond issues".⁵⁷⁸⁰ Thus, the United States argues that the Deutsche Bank analysis of EADS' free net cash flow confirms that LA/MSF had a material impact on the financial constraints facing Airbus, showing that LA/MSF was decisive in giving Airbus positive free cash flow, and therefore also the "ability to make the very pricing decisions at the heart of the serious prejudice about which the United States complains".⁵⁷⁸¹

7.2002 The European Communities argues that nothing in the Deutsche Bank Report suggests that LA/MSF provided Airbus with pricing flexibility. It asserts that the United States, in relying on the Deutsche Bank Report, exhibits a conceptual flaw in that, instead of considering the benefit of the subsidy, its arguments rely on the total amount of the financial contribution provided by LA/MSF.⁵⁷⁸² Moreover, the European Communities submits that during the 2001 and 2002 period, LA/MSF did not represent a source of cash that would permit Airbus to price down LCA. According to the European Communities, the loan principal from the A380 LA/MSF contracts was used for the purpose for which it was borrowed – that is, the development of the A380.⁵⁷⁸³ In any case, the European Communities submits that because, in its view, Airbus could have replaced the LA/MSF loans received for LCA launched after 1992 with risk-sharing supplier financing, the same amount of financial contribution, and thus the same level of cash flow, would have accrued to EADS even in the absence of LA/MSF. Consequently, the European Communities argues that any "material impact on the financial structure of EADS" resulting from these inflows would have occurred with or without LA/MSF loans. In this light, the European Communities submits that the principal disbursed through LA/MSF cannot, in and of itself, confer an advantage on Airbus relative to the market.⁵⁷⁸⁴ Finally, the European Communities argues that when the period 1999 to 2007 is considered, Airbus repaid the

BCI deleted, as indicated [***]

relevant member States more cash than it received in LA/MSF financing, such that over this longer period of time LA/MSF did not add to its free cash flow, but actually consumed it.⁵⁷⁸⁵

7.2003 The Deutsche Bank Report is an eighteen page document which analyses a number of "key issues" affecting EADS' business activities for the purpose of arriving at a recommendation on how to trade shares in EADS. Among these are the financial and technical risks associated with the aircraft development projects underway or in the pipeline as of January 2007, namely, the A380, A350XWB and the A400M. In this context, the Deutsche Bank Report identifies what is "arguably the key issue for EADS", as the maintenance of a level of free cash flow sufficient to cover the demands of its business activities.⁵⁷⁸⁶ This amount is assumed to be EUR 1 billion per year until 2013. The Report observes that this level of free cash flow "may not see{m} demanding at first", going on to note that a large part of EADS free cash flow between the years 2001 to 2005 has come from LA/MSF and "strong inflows" of advance order payments.

7.2004 When the data on EADS' free cash flow that is presented in the Deutsche Bank Report is reviewed, it is evident that in the absence of the inflows from net LA/MSF disbursements, EADS' free cash flow would have been negative in 2001 and 2002. However, it is also apparent that net inflows from LA/MSF represented a much smaller proportion of total overall free cash flow in subsequent years, declining steadily to 2005. Moreover, in 2001, 2004 and 2005, the cash inflows generated from advance order payments were significantly greater than those from net LA/MSF inflows.⁵⁷⁸⁷ Thus, while it is true that net LA/MSF inflows amounted to approximately half of the free cash flow that accrued to EADS between 2001 and 2005, inflows from advance order payments were more than double LA/MSF inflows over the same period. The Deutsche Bank Report goes on to reason that LA/MSF will no longer be available for future projects and that inflows from advance order payments are likely to "reverse". In this light, it concludes that in the absence of LA/MSF disbursements and the expected decline in advance order payments, it would be difficult for EADS to "avoid refinancing of the group through either additional debt, equity or hybrid bond issues".⁵⁷⁸⁸

7.2005 In our view, the Deutsche Bank Report demonstrates that net LA/MSF inflows were an important component of EADS' free cash flow over the years 2001 to 2005, but less so than advance order payments. Moreover, apart from 2001 and 2002, we do not consider the impact of net LA/MSF inflows to be as significant to Airbus' free cash flow as the United States' argument intimates. Nevertheless, it is clear that without the net LA/MSF inflows reported in the Deutsche Bank analysis, EADS would have been in a worse position in terms of free cash-flow, and particularly so in 2002, when advance order payments were negative.

7.2006 The European Communities argues that the Deutsche Bank Report is focussed on the effect of LA/MSF principal on EADS' free cash flow position, and not on the effect of any LA/MSF subsidies. According to the European Communities, this means that the Report cannot be used to substantiate the United States' claim of serious prejudice. We agree with the European Communities that for the purpose of determining whether the United States has established that LA/MSF has caused serious prejudice to its interests, it not sufficient to focus on the effects of only the principal amounts disbursed under the LA/MSF contracts. As the European Communities points out, had Airbus obtained comparable loans from the market place, its cash inflows from those loans would have been

⁵⁷⁸⁵ EC, Comments on US Answer to Panel Question 229; EC, SWS, para, 1057.

⁵⁷⁸⁶ Deutsche Bank Report, p. 6, Exhibit US-459.

⁵⁷⁸⁷ Cash inflows from advance order payments were more than double inflows from LA/MSF in 2001, more than six times greater than inflows from LA/MSF in 2004, and almost 24 times greater in 2005. Deutsche Bank Report, figure 6, p. 7, Exhibit US-459.

⁵⁷⁸⁸ Deutsche Bank Report, p. 7, Exhibit US-459.

BCI deleted, as indicated [***]

the same as those obtained via LA/MSF.⁵⁷⁸⁹ Therefore, a focus on how LA/MSF principal effects EADS' free cash flow would not be relevant to the question that concerns us here – whether the effect of the LA/MSF (and other) subsidies was the serious prejudice alleged by the United States.

7.2007 However, in our view, it is not accurate to say that the Deutsche Bank Report's analysis is concerned with only LA/MSF principal. As we understand it, the cash flow analysis examines **net** LA/MSF inflows, taking into account both LA/MSF receipts (*i.e.*, loaned principal) and repayments.⁵⁷⁹⁰ Thus, while the Deutsche Bank Report does not directly analyze the effect of the amount of the subsidy associated with LA/MSF, the fact that it takes into account both LA/MSF receipts and repayments means that it is possible to indirectly draw some general conclusions about how the amount of LA/MSF subsidies affected EADS' cash flow.

7.2008 We recall that had Airbus funded its LCA development programmes with loans from the market, its repayments would have been greater than those actually required under the LA/MSF contracts. It follows that without LA/MSF, the contribution of net inflows from market-based loans to EADS' overall free cash flow position would have been smaller. Thus, it is possible to conclude from the Deutsche Bank Report, when considered in the light of our findings on the appropriate market interest rate benchmarks for LA/MSF, that the LA/MSF subsidies had a positive impact on EADS' free cash flow. However, the precise magnitude of this impact cannot be determined from the Deutsche Bank analysis. Therefore, we do not know whether the effect of the LA/MSF subsidies on EADS' free cash flow was, as the United States argues, to significantly alleviate financial constraints on Airbus ability to price its LCA.⁵⁷⁹¹

7.2009 In any case, even assuming *arguendo* that it could be understood from the Deutsche Bank Report that the LA/MSF subsidies did have a significant impact on EADS' free cash flow in the years between 2001 and 2005, the United States would still have to show that it actually had the effect of lowering the price of Airbus LCA in order to make out its case of serious prejudice. While we accept that a greater free cash flow could translate into more pricing flexibility, this does not demonstrate that Airbus actually used that pricing flexibility in respect of the alleged lost sales and with the effect of depressing and suppressing prices in the LCA market. Given what we know about how prices are set in the LCA industry,⁵⁷⁹² it is, in our view, too simplistic to conclude that merely because LA/MSF improved Airbus' financial condition (perhaps even significantly so in 2001 and 2002), it also led to Airbus winning the sales we have found Boeing lost, by enabling Airbus to offer a lower price than it otherwise would have in the particular sales campaigns relied on by the United States. Indeed, we recall that on the basis of the evidence before us, we determined that the United States has failed to demonstrate that Airbus actually undercut the price offered by Boeing in the competitions the United States relied upon to demonstrate price undercutting as serious prejudice to its interests.⁵⁷⁹³ Moreover, on the basis of the same considerations, we conclude that the United States has not shown that the effect of the subsidies on Airbus' cash flow caused the price depression and suppression we observed over the relevant period.

7.2010 Based on the foregoing, we consider that the United States has failed to demonstrate the effect of LA/MSF on EADS free cash flow caused Airbus to lower prices on LCA during the period 2001-

⁵⁷⁹² See, discussion at paragraphs 7.1837 - 7.1839 above.

⁵⁷⁹³ Of course, this does not affect our conclusion that those same sales were lost to Boeing due to the ability of Airbus to offer the particular LCA at issue at that time as a result of the subsidies in dispute.

BCI deleted, as indicated [***]

2006 with the effect of causing significant price suppression, price depression or lost sales⁵⁷⁹⁴ in the LCA market.

Alleged Effect on Airbus Cost of Capital

7.2011 In addition to the alleged direct financial benefits flowing from the provision of LA/MSF, the United States argues that LA/MSF, by transferring much of the commercial risk of LCA development away from Airbus to the Airbus governments, also indirectly benefits Airbus by improving its credit rating and thereby reducing its marginal cost of capital in respect of those portions of its LCA development projects and other activities that are not funded with LA/MSF.⁵⁷⁹⁵ The United States submits that a lower marginal cost of capital will reduce Airbus' marginal cost of production, which in turn could be expected to lower Airbus' pricing.⁵⁷⁹⁶

7.2012 Relying on parts of the evidence submitted and arguments made in support of its free cash flow theory,⁵⁷⁹⁷ the United States asserts that had Airbus funded all of its LCA projects by obtaining financing at market rates rather than at the subsidized rates provided by the Airbus governments, the resulting impact on its balance sheet would have been far greater than anything that Airbus could have sustained. The United States submits that this evidence alone is sufficient to demonstrate that LA/MSF has a significant impact on the creditworthiness of Airbus, and thereby, also its marginal cost of capital.⁵⁷⁹⁸ However, the United States also submitted other evidence it considers substantiates its position.

7.2013 First, the United States points to an assessment made in the Deutsche Bank Report of the financial risks associated with the development of the A350XWB in the light of Airbus' perceived "inability to use government launch finance" for this project.⁵⁷⁹⁹ According to the United States, the Deutsche Bank analysis expresses the view that in the absence of LA/MSF for the A350XWB, "'far more' of the exposure of EADS 'equity and debt holders' will be 'risk' rather than 'risk free', than has been the case with prior Airbus LCA launches".⁵⁸⁰⁰ Thus, the United States submits that the Deutsche Bank Report shows that the impact of LA/MSF on EADS' private investors is significant.

7.2014 Second, the United States relies upon a series of statements made by Moody's Rating Agency and Credit Suisse.⁵⁸⁰¹ In particular, the United States refers to a press release issued by Moody's in 2003, where, it argues, Moody's stated publicly that its debt rating for EADS "considers the expectation for continuing government support, which is primarily in the form of refundable advances

⁵⁷⁹⁴ We note that our rejection of the United States' position that the effect of subsidies to Airbus was lost sales **by reason of price** does not affect our determination that the United States has demonstrated that those same lost sales were an effect of the subsidies through their effect on Airbus' ability to launch LCA as and when it did, thereby making available LCA for those sales that it otherwise would not have had.

BCI deleted, as indicated [***]

for up to 1/3 of the development cost of each new aircraft programme on the Airbus level."⁵⁸⁰² Moreover, the United States asserts that Moody's stated in the same communication that it was "comforted" notwithstanding the large \$12 billion investment in the A380 programme, by, *inter alia*, "continuing government support in the form of refundable advances of up to 1/3 of the required development expenses for Airbus' commercial aircraft". The United States has also pointed to an announcement by Moody's in March 2007 that it would maintain its high credit rating of EADS, notwithstanding losses related to the delay in A380 deliveries and other pressures. According to the United States, the announcement noted that government support to Airbus provides a "helping hand in times of financial difficulties" and "reflects an entrenched inclination for state protection and a low appetite for exposing private bond holders to losses".⁵⁸⁰³

7.2015 The United States submits that this evidence confirms that EADS' credit rating would be lower – and its cost of capital higher – in the absence of LA/MSF. Consequently, the United States concludes that by reducing the cost of capital, LA/MSF also reduces the price that Airbus can accept while sustaining its profitability targets.

7.2016 In responding to the United States' arguments, the European Communities rejects the notion that an improved baseline credit rating could be viewed as an "additional benefit" of LA/MSF, and it contests the United States' reliance on the announcements concerning EADS' credit ratings.

7.2017 The European Communities recalls that in order to identify a benefit flowing from LA/MSF, a comparison must be made between the terms provided under the government financing instrument and those available on the market. The European Communities asserts that LA/MSF impacts EADS' credit rating to the extent that it transfers project risk for Airbus LCA programmes to governments. According to the European Communities, precisely the same benefits would flow directly from market financing alternatives such as risk-sharing arrangements and delivery-based financing through private banks. Thus, the European Communities submits that any impact of LA/MSF on EADS' credit rating due to a reduction of risk is equivalent to what the company would enjoy if it employed risk-sharing supplier financing, instead of LA/MSF.⁵⁸⁰⁴ In other words, the European Communities argues that the United States cannot establish that but for the provision of LA/MSF, Airbus would not have obtained a similarly enhanced baseline credit rating through market-based risk-sharing financing.⁵⁸⁰⁵ Therefore, in the European Communities' view, the amount of any and all benefits associated with LA/MSF are captured by the difference between interest paid on LA/MSF and the benchmark, not any impact on the recipient's credit rating.⁵⁸⁰⁶

7.2018 The European Communities rejects the contention that the 2003 Moody's credit rating statements support the United States position. The European Communities argues that Moody's did not raise EADS' credit rating because of the "indirect effect" of the interest subsidy associated with these loans. According to the European Communities, Moody's had no way of knowing the terms of the LA/MSF loans, which remain confidential. Thus, the European Communities asserts that the 2003

⁵⁸⁰² US, Answer to Panel Question 229, referring to Moody's Investor Service Press Release, 6 February 2003, Exhibit US-56.

⁵⁸⁰³ US, Answer to Panel Question 229, referring to Moody's Investor Service Press Release, 12 March 2007, Exhibit US-450.

⁵⁸⁰⁴ EC, SWS, para. 1037.

⁵⁸⁰⁵ The European Communities asserts that because both Airbus and Boeing have relied upon risk-sharing supplier funding for the A380 and the 787, "even in the total absence of MSF loans for the A350XWB, it is reasonable to assume that Airbus SAS will transfer all or most of the risk formally transferred to the member States for, e.g., the A380, to risk-sharing suppliers, with no additional programme risk to the equity holders". EC, Comments on US Answer to Panel Question 228.

BCI deleted, as indicated [***]

Moody's report confirms only that EADS' improved baseline credit rating flows from the risk-sharing aspect of LA/MSF, which the European Communities emphasizes, is equally present under market alternatives such as risk-sharing supplier financing.⁵⁸⁰⁷ Similarly, the European Communities argues that the United States' reliance on the Moody's press release from March 2007 is misplaced because, in its view, the change in Moody's credit rating of EADS announced in this communication was linked to Moody's conferral of "Government Related Issuer" status on EADS, not LA/MSF. Moreover, according to the European Communities, Moody's decision to confer GRI status also itself had nothing to do with LA/MSF, but rather with the fact that governments are shareholders in EADS.⁵⁸⁰⁸ In any event, the European Communities considers that the effect of EADS' "classification as a GRI" on its cost of capital is negligible, referring to two reports prepared by two banks that examined its impact on EADS' bond yields, in support of its position.⁵⁸⁰⁹

7.2019 The United States asserts that according to its stated methodology, the aspect of Moody's GRI analysis that relates to "government support" takes into account only extraordinary subsidies in the event of catastrophic failure of the business. According to the United States, Moody's explains that all other "aspects of the entity's existing (or anticipated) business model, including benefits (such as regular subsidies or credit extension)" are included within the "baseline risk assessment" as they would be for any company.⁵⁸¹⁰ Thus, the United States contends that the ongoing impact of LA/MSF is included in the baseline assessment of EADS, not the GRI-specific support factor on which the European Communities focuses its argument. The United States recalls that Moody's 2003 statement clearly shows that its baseline credit assessment of EADS is affected by LA/MSF.⁵⁸¹¹

7.2020 In our view, there is some logic to the European Communities' argument that the credit-rating implications of the transfer of risk associated with LA/MSF could well be mirrored by those that would flow from comparable market financing. As the European Communities notes, LA/MSF involves the same transfer of risk from Airbus to the member State governments that would be transferred through a comparable loan from a market based lender. However, we can see at least two reasons why the European Communities' line of argument cannot apply to the circumstances before us in this case. First, we have found that the interest rates associated with market financing that is comparable to LA/MSF would require Airbus to increase its loan repayments in respect of all developed models of LCA, in some cases by significant margins.⁵⁸¹² As we have noted above, increased loan repayments would reduce Airbus' free cash flow, increase its debt, and therefore, naturally, also adversely affect its credit rating. Second, the strength of the European Communities' argument depends upon accepting that in the absence of LA/MSF, Airbus would have been able to call upon risk-sharing suppliers to fund that portion of development costs of its LCA projects. However, we have seen little evidence to suggest that this could have been a possibility, even for the one-third of A380 development costs funded by LA/MSF, let alone for the earlier models of Airbus LCA for which LA/MSF funded an even larger portion of the development costs. Moreover, as we have previously noted, information in the Airbus A380 business case undermines the contention that the risk-sharing supplier contracts are an appropriate benchmark for market-based financing.⁵⁸¹³

BCI deleted, as indicated [***]

7.2021 Turning to the parties' arguments on the probative value of the various credit rating statements relied upon by the United States, we agree with the European Communities that in the absence of any evidence of the rating agencies' awareness that LA/MSF is not granted on market terms, it is difficult to conclude that they demonstrate that LA/MSF has in fact had any impact on EADS' credit rating that could not also have been achieved from market financing. The United States has not even asserted that Moody's or Credit Suisse were aware of LA/MSF's non-commercial terms and conditions. Thus, we are not convinced that the statements concerning EADS' credit rating support the case the United States is seeking to make.

7.2022 Nevertheless, as we have indicated above, on the basis of the other evidence and argument the United States has advanced, it is clear to us that LA/MSF subsidies do have a positive impact on Airbus' creditworthiness. In our view, this is most apparent from the evidence the United States has submitted (and our own findings) on the effect that market-based financing for all of Airbus LCA projects would have had on its level of cash flow and debt compared with its situation having received LA/MSF.⁵⁸¹⁴

7.2023 To the extent that LA/MSF improves EADS' creditworthiness, the United States argues that it also reduces its cost of capital and marginal cost of production, thereby enabling Airbus to be more flexible on price. We do not understand there to be any dispute about whether better creditworthiness results in a lower cost of capital. However, we are not convinced that this will necessarily translate into a reduction in the marginal cost of production. The United States has provided very little, if any, explanation for why it considers this relationship would hold. In any case, even assuming the United States were correct, we note that it has itself argued that Airbus [***].⁵⁸¹⁵ In this respect, the United States considers that the A380 business case demonstrates that Airbus' [***]. However, nothing in the A380 business case [***].⁵⁸¹⁶ Thus, even assuming that LA/MSF improves EADS' creditworthiness, and thereby reduced its cost of capital and marginal cost of production, the United States has failed to demonstrate that it necessarily also led to Airbus winning the sales we have found Boeing lost by enabling Airbus to offer a lower price than it otherwise would have in those particular sales campaigns. In this regard, we recall again that the United States has failed to demonstrate that Airbus actually undercut the price offered by Boeing in the competitions the United States relied upon to demonstrate significant price undercutting as serious prejudice to its interests.⁵⁸¹⁷

7.2024 Based on the foregoing, we consider that the United States has failed to demonstrate the effect of LA/MSF on cost of capital was such that it led Airbus to lower prices on LCA during the period 2001-2006. Therefore, we conclude that the United States has failed to demonstrate that an effect of the subsidies is the significant price depression, price suppression and lost sales⁵⁸¹⁸ observed during that period.

⁵⁸¹⁴ See, paras. 7.2012 and 7.2020 above.

⁵⁸¹⁵ US, FCOS, para. 59.

⁵⁸¹⁶ A380 Business Case, pp. 21-27, Exhibit EC-362 (HSBI).

⁵⁸¹⁷ Of course, this does not affect our conclusion that those same sales were lost to Boeing due to the ability of Airbus to offer the particular LCA at issue at that time as a result of the subsidies in dispute.

⁵⁸¹⁸ As above, *see* footnote 5794, our rejection of the United States' position that the effect of subsidies to Airbus was lost sales **by reason of price** does not affect our determination that the United States has demonstrated that those same lost sales were an effect of the subsidies through their effect on Airbus' ability to launch LCA as and when it did, thereby making available LCA for those sales that it otherwise would not have had.

BCI deleted, as indicated [***]

(iv) *Conclusion*

7.2025 For all of the foregoing reasons, and recalling our findings in respect of the Article 6.3 phenomena observed during the 2001 to 2006 period,⁵⁸¹⁹ we are satisfied that the specific subsidies the United States has shown to exist enabled Airbus to bring to the market LCA that it would not otherwise have been able to develop and launch as and when it did, and thus caused displacement of United States' imports of LCA from the EC market and of United States' exports from the markets of certain third countries, as demonstrated in the data concerning market share before us. Furthermore, we conclude that those subsidies caused lost sales of United States' LCA because, but for the subsidies, Airbus would not have had available the LCA that it was able to sell to the customers at issue in the sales we have found were lost by Boeing between the years 2001 and 2006. Thus, we conclude that the United States has established that the European Communities and the governments of France, Germany, Spain, and the United Kingdom have, through the use of specific subsidies, caused serious prejudice to the United States' interests over the period 2001 to 2006 in the form of:

- (i) displacement of United States' imports of LCA into the EC market, within the meaning of Article 6.3(a) of the SCM Agreement;
- (ii) displacement of United States' exports of LCA from the markets in Australia, China, Brazil, Chinese Taipei, Korea, Mexico, and Singapore, within the meaning of Article 6.3(b) of the SCM Agreement, and threat of displacement of United States' exports of LCA from the market in India; and
- (iii) lost sales of United States' LCA in the same market, within the meaning of Article 6.3(c) of the SCM Agreement.

7.2026 However, we find that the United States has not demonstrated that the specific subsidies at issue, by allowing Airbus to launch and develop its family of LCA and thereby achieve a notable presence in the LCA market, were also the cause of the significant price depression and price suppression we have observed in the period 2001 to 2006. In addition, we conclude that the United States has failed to demonstrate that the financial effect of the subsidies in dispute on Airbus has enabled it to lower its prices so as to cause the significant price depression, price suppression and lost sales we have observed in the period 2001 to 2006.

7.2027 We recall that, in addition to its claims of displacement of United States' imports into the EC market, and of United States' exports from the markets of certain third countries, on which our conclusions are set out above, the United States asserted claims of impedance of United States' imports into the EC market, and of United States' exports from the markets of certain third countries. However, the United States did not assert specific evidence or make specific arguments in support of these claims in addition to its arguments concerning displacement. In the absence of a sufficiently elaborated presentation of its claims in this respect, we find that United States has failed to demonstrate that the effect of the subsidies in dispute was to impede United States' imports into the EC market, and United States' exports from the markets of certain third countries, during the period 2001-2006.

7.2028 Finally, we recall that the United States asserted a claim of threat of serious prejudice with respect to all the forms of serious prejudice it alleged in this dispute. However, with the exception of evidence concerning threatened displacement of United States' exports from the Indian market, the United States did not assert specific evidence or make specific arguments in support of such a claim in addition to its arguments concerning present serious prejudice. In the absence of a sufficiently

⁵⁸¹⁹ See, paras. 7.1758, 7.1791, 7.1840, 7.1845 and 7.1861.

BCI deleted, as indicated [***]

elaborated presentation of its claim in this respect, we find that United States has failed to demonstrate that the effect of the subsidies in dispute was a threat of serious prejudice, except as set forth above concerning threatened displacement of United States' exports from the Indian market.

8. Alleged injury to the United States' industry producing LCA

(a) Overview of Parties' Arguments

(i) *United States*

7.2029 The United States argues that the provision of the challenged subsidies to Airbus by the European Communities and the Airbus governments is inconsistent with Article 5 of the SCM Agreement because the European Communities has, through the use of those subsidies, caused adverse effects to the United States' interests within the meaning of Article 5(a), that is, injury to the United States' domestic industry.⁵⁸²⁰ The United States further contends that the demonstrated intent of the European Communities and the Airbus governments is to continue to provide subsidies to Airbus that will perpetuate the adverse effects to the interests of the United States.⁵⁸²¹

7.2030 The United States notes that the SCM Agreement clarifies that the "term 'injury to the domestic industry' is used in Article 5(a) in the same sense as it is used in Part V of the Agreement."⁵⁸²² The United States also notes that Article 16.1 of the SCM Agreement, which is in Part V, defines the "domestic industry" as "the domestic producers as a whole of the like products" to the imported subsidized product. The United States asserts that the subsidized product in this dispute is all Airbus LCA,⁵⁸²³ that the like product is all Boeing LCA,⁵⁸²⁴ and that the only LCA producer in the United States at the present time is Boeing, which therefore constitutes the United States' domestic industry.⁵⁸²⁵ Therefore, the United States considers that the question for the Panel under Article 5(a) is whether subsidized imports of Airbus LCA into the United States have caused injury to Boeing's LCA production in the United States, as defined in Article 15 of the SCM Agreement, including both material injury to a domestic industry and threat of material injury to a domestic industry.⁵⁸²⁶

7.2031 The United States contends that the Panel must examine the factors set out in Article 15.1 of the SCM Agreement, and determine whether subsidized imports of Airbus LCA into the United States have caused injury to the United States' LCA industry. In this regard, the United States refers to the *Thailand – H-Beams* case, where the Appellate Body explained that Article 3.1 of the Anti-Dumping Agreement – which parallels Article 15.1 of the SCM Agreement – "is an overarching provision that sets forth" the fundamental aspects of an injury analysis and "informs the more detailed obligations in succeeding paragraphs."⁵⁸²⁷ In particular, Article 15.1 provides that a determination of injury:

"shall be based on positive evidence and involve an objective examination of both (a) the volume of the subsidized imports and the effect of the subsidized imports on

BCI deleted, as indicated [***]

prices in the domestic market for like products and (b) the consequent impact of these imports on the domestic producers of such products."⁵⁸²⁸

The United States further contends that the Panel should examine the additional factors set forth in Article 15.7, which the United States submits demonstrate that subsidized imports threaten additional injury to the domestic industry.⁵⁸²⁹

7.2032 The United States originally presented data and arguments concerning the factors set out in Articles 15.1 and 15.7 of the SCM Agreement for the period 2001 – 2005. Subsequently, in its second written submission and in response to questions from the Panel, the United States presented additional information for 2006, while maintaining its view that the Panel should make its determination of injury as of the time establishment of this Panel was requested, *i.e.*, June 2005.⁵⁸³⁰ The United States argued that improvement in Boeing's financial condition in 2006 did not demonstrate a lack of current injury to the United States' LCA industry, but rather, demonstrated how "relief from subsidized competition improves the fortunes" of that industry.⁵⁸³¹

7.2033 The United States contends that the European Communities is legally incorrect in arguing that the "effect of the subsidy" standard under Article 6.3 also applies in the context of a material injury inquiry under Article 5(a).⁵⁸³² In any event, however, the United States asserts that the effect of the subsidies, as measured by changes in market share, lost sales, price undercutting, and price suppression or depression in other markets or the world market is not dissimilar to the effect of the subsidy as measured by changes in market share, lost sales, price undercutting, and price suppression or depression in the US market. Thus, even if it were necessary to show, in a claim under Article 5(a), that the material injury is not only, as required by Article 15.5, the effect of the subsidized imports, but also the effect of the subsidies, the United States considers that, on the facts of this case, the showing that the serious prejudice it has suffered is the effect of the subsidies applies, *mutatis mutandis*, to the effects of the subsidies in the US market.⁵⁸³³

(ii) *European Communities*

7.2034 The European Communities disputes the United States' claim of injury to its domestic LCA industry. The European Communities recalls its view that there are multiple allegedly subsidized products and corresponding like products for three of those allegedly subsidized products, and argues that an injury claim must be made out with respect to individual domestic industries producing each like product.⁵⁸³⁴ The European Communities contends that the United States' failure to do so constitutes a fatal flaw in its claim of material injury under Article 5(a) of the SCM Agreement.⁵⁸³⁵ Assuming *arguendo* that an assessment of the United States' claim of material injury could be properly based on data pertaining to a single domestic industry, comprising all of Boeing's LCA business, the European Communities maintains that Boeing is not presently suffering any injury, let alone "material" injury.⁵⁸³⁶ Nor is there any evidence that the effects of any subsidies to Airbus are

⁵⁸³⁵ EC, FWS, para. 2137.

⁵⁸³⁶ EC, FWS, para. 2138. The European Communities also asserts, however, that "Boeing is performing so well in all four of the LCA markets where Boeing LCA products are marketed, that it is irrelevant whether the Panel examines a single or four different US domestic industries." *Id.*, footnote 2180.

BCI deleted, as indicated [***]

causing Boeing material injury. Thus, the European Communities argues, there is no basis for the United States' claims under Article 5(a) of the SCM Agreement.

7.2035 The European Communities disagrees with the United States' description of the legal standard for establishing a material injury claim under Article 5(a) of the SCM Agreement. The European Communities recognizes that Article 15 of the SCM Agreement defines the term "injury" to mean, *inter alia*, "material injury to a domestic industry" or "threat of material injury to the domestic industry," and that pursuant to footnote 11, the term "injury" in Article 5(a) is used in the same sense as in Part V, where the definition of injury is located in footnote 45.⁵⁸³⁷ For the European Communities, this confirms that the degree and nature of the "injury" covered by an Article 5(a) claim must be "material."⁵⁸³⁸ The European Communities asserts that a claim under Article 5(a) involves two cumulative steps: First, an assessment of whether the domestic industry of another Member is suffering from "material injury;" and, second, an assessment of whether any material injury is caused by reason of the "use of any subsidy."⁵⁸³⁹ The European Communities asserts that Article 15.4 of the SCM Agreement provides contextual guidance for assessing whether there is "material injury" to the domestic industry, by requiring an "evaluation of all relevant economic factors and indices having a bearing on the state of the industry," and setting out a non-exhaustive series of factors to be in determining the state of the domestic industry.⁵⁸⁴⁰

7.2036 The European Communities submits that Article 5(a) of the SCM Agreement requires a determination whether adverse effects in the form of material injury are caused by reason of the use of any subsidy.⁵⁸⁴¹ The European Communities bases this position on the view that the causal link in an adverse effects case under Part III of the SCM Agreement must be between the "effects", in this context, alleged material injury, and the "use of any subsidy". The European Communities argues this is necessary in order to give meaning to the text of Article 5(a), including the terms "cause," "use of any subsidy" and "adverse effects", in the context of a material injury claim under Article 5(a).⁵⁸⁴² Thus, the European Communities disagrees with the United States' view that the question before the Panel is whether the subsidized imports of Airbus LCA into the United States have caused injury to Boeing's LCA production in the United States, arguing that it must be the "use" of any subsidies that "causes" the "effects."

7.2037 The European Communities asserts that, as it must in considering serious prejudice claims under Article 5(c), in making an objective assessment of an injury claim under Article 5(a) a Panel must consider the magnitude and nature of the challenged subsidies and how their use causes effects, in this context material injury, in light of the conditions of competition in the market or markets at issue.⁵⁸⁴³ The European Communities contends that the United States does not examine the magnitude, age or nature of the subsidies in its Article 5(a) claims, but rather labels as subsidized all Airbus LCA imported into the United States, and then examines the effects of those imports in asserting causation.

7.2038 The European Communities argues that contextual guidance for interpreting the terms "effects," "caused" by the "use" of subsidies in a claim of "material injury to a domestic industry of another Member" is found in Article 15.5 of the SCM Agreement, which provides that "{i}t must be demonstrated that the subsidized imports are, *through the effects of subsidies*, causing injury within

BCI deleted, as indicated [***]

the meaning of this Agreement."⁵⁸⁴⁴ The European Communities notes that footnote 47, appended to the word "effects" in Article 15.5 in the SCM Agreement, states "{a}s set forth in paragraphs 2 and 4," and that Articles 15.2 and 15.4 refer to a variety of different forms of "effects" that are related to "subsidized imports." Article 15.2 concludes by cautioning that "{n}o one or several of these factors can necessarily give decisive guidance." Further, Article 15.4 concludes with the statement that "{t}his list is not exhaustive, nor can one or several of these factors necessarily give decisive guidance." Article 15.5 states that "{t}he demonstration of a causal relationship between the subsidized imports and the injury to the domestic industry shall be based on an examination of all relevant evidence before the authorities." The European Communities then asserts that "all relevant evidence" that must be considered in a dispute involving Article 5(a) includes the magnitude, nature and age of the alleged subsidies.⁵⁸⁴⁵ The European Communities argues that the United States' approach is flawed because it assumes that the effects of all the disputed subsidies are the same, regardless of their magnitude, age or nature, as long as they subsidize the imports analyzed. However, for the European Communities the causation question in a claim under Article 15(a) is not solely whether subsidized imports cause material injury, but rather whether the *effects* of subsidies (which may be manifest in subsidized imports) cause material injury.⁵⁸⁴⁶

7.2039 The European Communities also considers that the provisions of Article 11.9 of the SCM Agreement, which it asserts requires immediate termination in countervailing duty cases "where the amount of a subsidy is *de minimis* ..." and Article 15.3 of the SCM Agreement, which requires that subsidized imports be excluded from an assessment of the effects on the domestic industry in a countervailing duty case if the level of subsidization is *de minimis*, are important context for a Panel in considering a claim under Article 5(a) of the SCM Agreement.⁵⁸⁴⁷ The European Communities considers that the United States' arguments on injury and causation under Article 5(a) fail to address the "use" of any subsidies allegedly causing the effect of material injury. According to the European Communities, Airbus imports, which at most benefit from subsidies of less than 1 percent *ad valorem*, which are in the European Communities' view legally *de minimis*, cannot be presumed to cause lost sales, price suppression or depression or displace market share simply because they are minimally subsidized.⁵⁸⁴⁸

7.2040 The European Communities considers that this interpretation of the causation requirement under Article 5(a) is consistent with the causation requirement for other type of adverse effects claims under Articles 5(c) and 6.3 of the SCM Agreement.⁵⁸⁴⁹ Thus, the European Communities argues, while Articles 6.3(c), 6.3(d), 6.4 and 6.5 refer to a "subsidized product," demonstration of serious prejudice requires proof that the "effect of the subsidy" is the cause of the various forms of serious prejudice. The European Communities asserts that it would be anomalous for there to be two completely different causation standards for a finding of adverse effects by the use of subsidies under Article 5 of the SCM Agreement. The European Communities considers that in assessing the question of causation under Article 5(a), the Panel must distinguish the effects of the challenged subsidies from the effects of imports that are subsidized to any degree. The European Communities points to evidence it maintains demonstrates that, even assuming, *arguendo*, that Boeing is materially injured, such injury is not caused by the effects of subsidies – *i.e.*, their magnitude, nature and age in the context of the competitive conditions in the various LCA markets.⁵⁸⁵⁰

BCI deleted, as indicated [***]

7.2041 The European Communities argues, based on evidence relating to financial and market indicators, that Boeing's LCA division was performing remarkably well as of 2006, relying principally on data for the period 2004 to 2006, but also referring to the period 2001 to 2006. In its second written submission and in its answer to a Panel question, the European Communities provided further information for 2007.⁵⁸⁵¹ The European Communities asserts that not only was Boeing in excellent financial condition as of 2006 and into 2007, but that it had achieved a dominant competitive position *vis-à-vis* Airbus. On the basis of this evidence, the European Communities asserts that the Panel should dismiss the United States' claims by finding that Boeing is not "materially injured" and that there is no threat of material injury.⁵⁸⁵² The European Communities concludes that, even assuming, *arguendo*, that Boeing is experiencing material injury, such material injury or threat of material injury is not caused by the effects of any subsidies to the various Airbus LCA families.⁵⁸⁵³

(b) Evaluation by the Panel

7.2042 In addressing the United States' claims of injury and threat of injury to the United States' LCA industry, we will first address several overarching issues, the resolution of which affects the entirety of our analysis. We will then consider the evidence and arguments presented by the parties on the questions of material injury, threat of material injury, and causation.

(i) *Preliminary issues*

Domestic industry

7.2043 The parties' arguments raise several preliminary questions that must be considered and addressed before we can consider their evidence and arguments on the question of injury, including threat thereof. The first point of disagreement between the parties concerns the subsidized and like products relevant to the Panel's analysis. As previously discussed,⁵⁸⁵⁴ we have rejected the European Communities' position that there are multiple allegedly subsidized Airbus products and three corresponding Boeing like products, and are considering adverse effects, including the question of injury to the United States' domestic LCA industry, on the basis of the allegations of the United States, *i.e.*, that there is one subsidized product, all Airbus LCA, and one corresponding like product, all Boeing LCA. We turn next to the identification of the relevant domestic industry.

7.2044 Article 16.1 of the SCM Agreement defines the domestic industry. It provides

⁵⁸⁵¹ EC, SWS, paras. 1177- 1182; EC, Answer to Panel Question 261. We note that our question did not, in fact, request additional or updated information from the European Communities in this regard. The United States noted, in its comment on the EC Answer, that this information was "not responsive to the Panel's question, which was limited to a clarification of the data through 2006 previously provided by the EC." US, Comments on EC Answer to Panel Question 261, para. 86. We agree. While we could, in accordance with paragraph 15 of our Working Procedures, exclude that information from the record of this dispute, as it was in our view not "necessary for purposes of rebuttals or answers to questions" we have chosen not to do so, as we had not yet expressed a view as to the relevant reference period and data to be considered when the European Communities submitted the information. However, in light of our views set out in this report concerning the appropriate reference period and data, we have not relied on data for 2007 in reaching our conclusions on the United States' claim of injury. We take the same view with respect to data for 2007 (and 2008) submitted and discussed by the European Communities in its Comments on the Panel and Appellate Body Reports in *US – Upland Cotton (Article 21.5 – Brazil)* and its Comments on the US Comments on those Reports.

⁵⁸⁵² EC, FWS, para. 2230, 2246; EC, SWS, para. 1182, 1193.

⁵⁸⁵³ EC, FWS, para. 2259

⁵⁸⁵⁴ See, paras. 7.1651 - 7.1668 and paras. 7.1671 - 7.1680 above.

BCI deleted, as indicated [***]

"For the purposes of this Agreement, the term "domestic industry" shall, except as provided in paragraph 2, be interpreted as referring to the domestic producers as a whole of the like products or to those of them whose collective output of the products constitutes a major proportion of the total domestic production of those products, except that when producers are related⁴⁸ to the exporters or importers or are themselves importers of the allegedly subsidized product or a like product from other countries, the term "domestic industry" may be interpreted as referring to the rest of the producers."

⁴⁸ text of original footnote omitted."⁵⁸⁵⁵

The text of Article 16.1 is explicit: the definition of domestic industry it sets forth applies "for purposes of" the SCM Agreement. Thus, it is clear to us, from the plain meaning of the text, that the definition of "domestic industry" should be the same in the context of assessing "injury to the domestic industry" of a Member in an adverse effects analysis under Article 5(a) as it would be in a case under Part V of the SCM Agreement to determine material injury to a domestic industry in a countervailing duty investigation. As the only producer in the United States of the like product LCA during the relevant period, Boeing constitutes the whole of the domestic industry in this dispute. Thus, in this dispute, we shall be examining the question of material injury to Boeing.⁵⁸⁵⁶

Reference period

7.2045 Another point of disagreement between the parties concerns the appropriate period to be considered by the Panel in making its determination. As previously discussed,⁵⁸⁵⁷ it is clear that the finding we are required to make is whether there are "present" adverse effects - in this context, present material injury or present threat of material injury to the United States' LCA industry. It is, as a practical matter, of course impossible to assess the "present" situation, as immediately current data is not, and can never be, available as of the date of a panel's decision, and thus a review of the past is necessary to draw conclusions concerning the present. Indeed, this is how investigating authorities in the context of countervailing duty investigations under Part V of the SCM Agreement typically proceed, and that practice has been approved in dispute settlement.⁵⁸⁵⁸ However, there is no specific guidance in the SCM Agreement concerning the period for which data should be collected and examined, either in the context of countervailing duty investigations, or specifically in the context of Article 5(a). As previously discussed,⁵⁸⁵⁹ we have determined not to make an *a priori* choice of reference period in the context of our assessment of serious prejudice, but rather to examine the evidence and arguments put forward by the United States, and the rebuttal evidence and arguments presented by the European Communities, including recent information where relevant and reliable, in determining whether adverse effects have been demonstrated by the United States. We consider that the same approach is appropriate in the context of our assessment of the question of injury.

⁵⁸⁵⁵ Paragraph 2 of Article 16, which provides for the examination of regional industries is not relevant here, and there are no allegations concerning related producers.

⁵⁸⁵⁶ In this respect, both parties agree that the domestic industry refers to the LCA Division of Boeing Commercial Aircraft, which comprises the LCA operations of Boeing Corporation, and it is evidence concerning that industry we will consider. *See*, US, Answer to Panel Question 239; EC, FWS, footnote 2173.

⁵⁸⁵⁷ *See*, paras. 7.1693 - 7.1694 above.

⁵⁸⁵⁹ *See*, paras. 7.1694 above.

BCI deleted, as indicated [***]

7.2046 In the context of its injury arguments, the United States originally provided evidence concerning the volume and market share of imports of Airbus LCA into the United States, pricing in the United States' market for three models of Boeing LCA, the 737NG, 747, and 777, and the condition of the United States' industry, for the period 2001 through 2005,⁵⁸⁶⁰ arguing that the Panel should make its determination of injury as of the date of the Panel's establishment. The European Communities provided information on various indicators of Boeing's performance for the period for the period 2001 through 2006,⁵⁸⁶¹ which the United States did not specifically accept, but the accuracy of which it largely did not dispute, and upon which it did comment, and information relating to Airbus orders and market share in the United States for that same period.⁵⁸⁶² The United States subsequently provided updated information concerning imports and market share for 2006, and pricing information for the Boeing 737 in the United States' market updated to include data for 2006 in its second written submission.⁵⁸⁶³

7.2047 In order to enable the Panel to make its decision on the basis of more recent data concerning the United States' LCA industry, on 12 December 2007, we requested the United States to update the information it had provided concerning Boeing operations to include information for calendar year 2006, which the United States submitted on 22 January 2008.⁵⁸⁶⁴ Thus, we continued to collect relevant updated information even after the meetings with the parties, and provided the parties an opportunity to comment on such information.⁵⁸⁶⁵

7.2048 We did not request any more recent information beyond calendar year 2006, and have not considered any such evidence submitted as relevant to our decision concerning material injury, however, as we consider that it would be inappropriate, and impractical, to continue gathering and considering information concerning the operations of the United States' domestic industry, and concerning the volume and market share of imports into the United States and prices in the United States' market, without an opportunity for comment and arguments concerning such information by the parties. The process of gathering information and comment and argument by the parties cannot continue indefinitely, even if that means that by the time our decision is issued, the information on which we base our conclusions is not completely current. This is, however, a result of the size and complexity of the case before us, and therefore in our view, does not undermine our conclusions as to present adverse effects. We note that the first submission in this dispute was filed in November 2006, and second submissions were filed in May 2007, and the second meeting of the Panel with the parties was held in July 2007. Thus, both parties had an opportunity to gather, present, and comment on, information concerning calendar year 2006, including in their answers to questions and comments thereon in January and February 2008. Our Working Procedures only allowed for the submission of factual information after the first written submissions "except with respect to evidence necessary for purposes of rebuttals or answers to questions ... upon a showing of good cause." We do not consider this to constitute a license to the parties to continue to present new factual information well after the second meeting of the panel with the parties. Nor do we consider it imposes any obligation on us to consider such information where it is not necessary to respond to our questions. In our view, the end of 2006 is a reasonable cut-off date for information concerning the question of injury to the domestic industry.

⁵⁸⁶⁴ US, Answer to Panel question 238.

⁵⁸⁶⁵ Answers to the Panel's third set of questions were submitted on 22 January 2008, and comments on those answers were submitted on 8 February 2008, by both parties, and included additional evidence as necessary to respond to those questions.

BCI deleted, as indicated [***]

7.2049 The European Communities, however, considers that the United States must demonstrate present material injury "in 2008, on the basis of the most recent complete and reliable data."⁵⁸⁶⁶ The European Communities asserts that, while in a countervailing duty case, it is justified to make a determination on the basis of a fixed period of investigation ending just prior to the initiation of the investigation, the situation is different in a dispute under Part III of the SCM Agreement, implying that we must consider data more recent than that concerning 2006. We do not agree. While we recognize that the passage of time while this complex dispute has been *sub judice* means that there is a degree of historicity to a decision based on data no more recent than 2006, we consider that the interests of due process, in allowing the parties an opportunity to comment on the information on which we base our decision, justifies putting a period to the data we will consider as of the end of 2006.

7.2050 Moreover, unlike the situations in *Mexico – Rice*, a dispute concerning an anti-dumping investigation relied on by the European Communities in this regard, the information we have concluded it is appropriate to consider in this dispute is not from a period "remote" from the time of our analysis and determination. In *Mexico – Rice*, the Panel and Appellate Body questioned the relevance and pertinence of evidence from a period ending fifteen months before the initiation of an investigation and almost three years before the imposition of anti-dumping duties based on the finding of material injury.⁵⁸⁶⁷ The Appellate Body stressed that in that case, a *prima facie* case was established that the information did not, in fact, provide reliable indications of current injury.⁵⁸⁶⁸ Among the reasons for this conclusion were that the investigation period had been proposed by the petitioner seeking the imposition of anti-dumping duties, there were no practical problems necessitating that period be considered, no attempt was made to update the information during the course of the investigation, it was not established that updating the information was not possible, and there were no reasons, other than general practice of the investigative authority, why more recent information was not sought.⁵⁸⁶⁹ Thus, the Appellate Body concluded, "it is not only the remoteness of the period of investigation, but also these other circumstances" that were the basis for the Panel's conclusion that Mexico's selection of the period of investigation was in violation of its obligations under the AD Agreement.⁵⁸⁷⁰

7.2051 The situation is very different here. As indicated above, we did seek, and the parties did provide, updated information during the period the dispute was pending. Indeed, we did not, *ab initio*, establish a particular time period for information to be considered in our determination. Although the European Communities submitted information relating to even later periods than that which we sought, we have concluded that it is not appropriate to consider such information which is not complete, and which was not subject to the opportunity for comment and argument in written submissions and oral proceedings by both parties, except to the extent we requested such information ourselves.

7.2052 In addition, we note that in a countervailing (or anti-dumping) case at the national level, the remedy is the imposition of additional duties on all future imports of the product in question after the final determination.⁵⁸⁷¹ Thus, the immediate and continuing effect of the remedy on imports of the

BCI deleted, as indicated [***]

product into the affected Member supports a concern that the remedy be necessary in light of the current situation. By contrast, in an adverse effects dispute, the remedy under Article 7.8 of the SCM Agreement is either the withdrawal of the subsidy, or the removal of the adverse effects. With either of these remedies, there is no necessary or immediate effect on imports of the product concerned, and thus, in our view, less concern for a close conjunction between the data on which a finding of injury is based and the date of imposition of the remedy.

7.2053 The United States argues that we are to make our determination concerning adverse effects "as of" the date of establishment of this Panel, in September 2005, as in the United States' view, that is the matter that is within our terms of reference. Thus, the United States argues that the question before us is not whether the condition of Boeing, in terms of the factors to be considered in assessing injury, has worsened since 2005, but whether the information before us demonstrates material injury to the United States' domestic industry. We agree that whether the condition of Boeing worsened after 2005 is not determinative on the issue of material injury. Nonetheless, as previously discussed,⁵⁸⁷² we do not agree with the United States' view that we must make our determination of injury as of the date of establishment of the Panel. We will therefore take into account information for the period after the date of establishment, in order to make a determination of present adverse effects in the form of injury that reflects (but is not necessarily determined by) the available information through 2006.

Method of analysis

7.2054 Turning to the method of analysis the Panel should apply in assessing the question of injury, the European Communities has posited that we must undertake a two-step inquiry, pursuant to which we should examine the question of "material injury" first, and only if we find such injury, should we go on to assess the question of causation of such injury. The United States has not directly addressed the European Communities' arguments about the appropriateness of a two-step analysis of material injury and causation, but it has presented its claim by asserting that Boeing is materially injured, and that subsidized imports are causing that material injury, indicating that the United States accepts that a two-step analysis is appropriate. In order to address the European Communities' argument concerning the nature of the analysis to be undertaken in considering the United States' claims of injury and threat of injury, we will first review the relevant provisions of the SCM Agreement, to determine if that, or indeed, any particular analytical approach, is required.

7.2055 This case is the first in which a Panel has been asked to consider adverse effects under Article 5(a) of the SCM Agreement, which provides:

"No Member should cause, through the use of any subsidy referred to in paragraphs 1 and 2 of Article 1, adverse effects to the interests of other Members, *i.e.*:

(a) injury to the domestic industry of another Member¹¹;

¹¹ The term "injury to the domestic industry" is used here in the same sense as it is used in Part V."

We recall that Part V relates to the imposition of countervailing duties, which is only permitted if, *inter alia*, the investigating authorities determine that subsidized imports are causing injury to the domestic industry in the importing country producing the like product. Thus, in evaluating the United

⁵⁸⁷² See, paras. 7.1714 - 7.1715 above.

BCI deleted, as indicated [***]

States' claim of injury to the domestic industry in the sense of Article 5 of the SCM Agreement, we are directed to Part V of that Agreement for guidance.

7.2056 Article 15 of the SCM Agreement, which is in Part V of the SCM Agreement, is entitled "Determination of Injury", and includes a definition of the term "injury" in footnote 45, which states:

"Under this Agreement the term 'injury' shall, unless otherwise specified, be taken to mean material injury to a domestic industry, threat of material injury to a domestic industry, or material retardation of the establishment of such an industry and shall be interpreted in accordance with the provision of this Article."

Article 15.1 is a general provision, which provides that a determination of injury shall be based on "positive evidence" and involve an "objective examination" of the volume of subsidized imports, their effect on prices in the domestic product for like products⁵⁸⁷³ and the consequent impact of these imports on the domestic producers of such products. Article 15.2 gives further guidance with regard to the volume of subsidized imports, specifying that that the investigating authorities "shall consider" whether there has been a significant increase in subsidized imports, either absolutely, or relative to domestic production or consumption. With regard to price effects, Article 15.2 specifies that the authorities shall consider whether there has been significant price undercutting, a significant degree of price depression, or significant price suppression. With regard to the consequent impact of subsidized imports, Article 15.4 sets out a series of factors regarding the "state of the industry", which shall be evaluated by the investigating authorities. The list is not exhaustive, and the provision makes clear that no one or several of the factors listed can give decisive guidance. Article 15.7 sets forth several additional factors which should be considered in making a determination of threat of material injury, which determination shall be based on facts, and not allegation, conjecture, or remote possibility. Finally, Article 15.5 provides:

"It must be demonstrated that the subsidized imports are, through the effects⁴⁷ of subsidies, causing injury within the meaning of this Agreement.

⁴⁷ As set forth in paragraphs 2 and 4 {Articles 15.2 and 15.4}."

7.2057 These provisions of the SCM Agreement have been considered by several panels in the context of disputes concerning the decisions of domestic investigating authorities in countervailing duty investigations.⁵⁸⁷⁴ In addition, the parallel, and largely identical, provisions in the AD Agreement, Articles 3.1, 3.2, 3.4, 3.5, and 3.7, have been the subject of a number of disputes concerning the decisions of domestic investigating authorities in anti-dumping investigations.⁵⁸⁷⁵

⁵⁸⁷³ As previously discussed, the term "like product" is defined in footnote 46, which definition applies throughout the SCM Agreement.

BCI deleted, as indicated [***]

Given that the text of the relevant provisions of the SCM and AD Agreements regarding determination of injury is almost identical, we consider WTO dispute settlement reports concerning the corresponding provisions of the AD Agreement to be equally relevant to our consideration of the issues before us as reports concerning the SCM Agreement. Of course, the decisions of investigating authorities in trade remedy cases are highly specific and dependent on the facts of the particular investigation. Thus, the outcomes of disputes regarding those decisions with respect to issues of fact provide little guidance to us in our review of the evidence presented in this case. However, dispute settlement reports with respect to interpretation of the SCM and AD Agreements, and concerning the methods of analysis of injury and causation, are relevant and we will look to them for guidance in considering the parties' arguments and our own analysis in this case.⁵⁸⁷⁶

7.2058 Not all the questions raised by the parties' arguments in this case have been addressed in dispute settlement in trade remedy cases. For instance, no panel has directly addressed the question whether a two-step analysis, as suggested by the European Communities and used by the United States in presenting its case, is appropriate (or required) in a countervailing or anti-dumping duty investigation.⁵⁸⁷⁷ Therefore, we do not consider it clearly established that a Panel considering injury under Article 5(a), fulfilling essentially the same role in that context as an investigating authority in a

⁵⁸⁷⁶ We note in this regard the "Declaration on Dispute Settlement Pursuant to the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 or Part V of the Agreement on Subsidies and Countervailing Measures" adopted by Ministers at Marrakech, which provides that

"Ministers,

Recognize, with respect to dispute settlement pursuant to the Agreement on Implementation of Article VI of GATT 1994 or Part V of the Agreement on Subsidies and Countervailing Measures, the need for the consistent resolution of disputes arising from anti-dumping and countervailing duty measures."

Since the term "injury" is used in Article 5(a) in the same sense as in Part V of the SCM Agreement, we consider that this injunction suggests that a similarly consistent resolution in dispute settlement under Article 5(a) is appropriate where possible.

⁵⁸⁷⁷ Indeed, this topic has been the subject of proposals in the current round of negotiations on the AD Agreement, which suggests that it is not established that such analysis is a requirement under either the AD or SCM Agreement as presently in force. See, Working Document from the Chairman, document TN/RL/232 (28 May 2008), Annex A, setting forth a consolidation of text-based proposals submitted to the Rules Negotiating Group on anti-dumping issues up to November 2007. An earlier compilation of proposals can be found in document TN/RL/W/143 (22 August 2003), with references to the documents containing the proposals submitted by Members.

BCI deleted, as indicated [***]

countervailing duty or antidumping investigation, **must** first consider the question of injury, and only if it finds such injury, go on to consider whether the necessary causal link can be established. However, by the same light, in the absence of any clear obligations in this regard, in our view, nothing precludes us from undertaking such an analysis, that is, considering first the question of injury, and only turning subsequently to the question of causation of such injury, if it was found to exist in the first step. As neither party has argued that we should apply a different method of analysis, and as nothing in the SCM Agreement precludes such an analysis, we consider it unnecessary to opine definitively on the question of the nature of the causal analysis to be undertaken in considering material injury to a domestic industry. In addition, we understand that a two-step analysis of injury and causation is commonly employed by investigating authorities in the context of countervailing duty investigations. In light of our view that analysis of injury under Article 5(a) should be consistent with analysis under Part V of the SCM Agreement, we conclude that we may appropriately undertake a two-step analysis of injury and causation in this dispute.

Injury caused by subsidized imports, or injury as the effects of the subsidy

7.2059 A further, and critical, point of disagreement between the parties concerns the issue of what must be found to be causing injury to the United States' LCA industry in order for the United States to prevail on its claim of adverse effects under Article 5(a). The parties have taken sharply different positions regarding the agent of causation. The European Communities argues that the "effect" of injury must be caused by the "use of the subsidies".⁵⁸⁷⁸ The United States contends that the European Communities wrongly seeks to read the "effect of the subsidy" standard of Article 6.3 into a material injury inquiry under Article 5(a),⁵⁸⁷⁹ arguing that Article 15.5 requires that the material injury be the effect of subsidized imports.⁵⁸⁸⁰

7.2060 This is an issue that has not previously been addressed by any panel or the Appellate Body, since, as we have noted, this is the first dispute under Part III of the SCM Agreement in which a claim of injury under Article 5(a) has been raised. In our view, the European Communities' attempt to read the "effect of the subsidy" standard set out in Article 6.3 into the context of an injury inquiry under Article 5(a) is legally incorrect.

7.2061 Considering the text of the SCM Agreement in this regard, we note that the chapeau of Article 5 provides that "No Member should cause, through the use of any subsidy" adverse effects, including those set out in Article 5(a), *i.e.*, "injury to the domestic industry of another Member". Footnote 11 to Article 5(a) specifies that the term "injury to the domestic industry is used in the same sense as in Part V of the SCM Agreement". Thus, the text of Article 5 specifically references Part V of the SCM Agreement with respect to defining the term "injury" as used in Article 5(a).

7.2062 Part V, of course, governs the imposition of countervailing duties, including various procedural and substantive issues in the investigations that must be undertaken and determinations that must be made by national investigating authorities before such imposition can be justified. Article 15, which is in Part V of the SCM Agreement, sets out the criteria for a "determination of injury", and in doing so, refers repeatedly to consideration of subsidized imports. For instance, Article 15.1 refers to the "volume of the subsidized imports", the "effect of the subsidized imports on prices" and the "consequent impact of **these** imports". Article 15.2 refers to the "volume of the

⁵⁸⁷⁸ EC, FWS, paras. 2144-2158.

⁵⁸⁷⁹ US, SWS, para. 741.

⁵⁸⁸⁰ US, SWS, para 740. The United States goes on to assert that, were it required to make a showing that material injury is the effect of the subsidies in dispute, "on the facts of this case, the showing that the serious prejudice is the effect of the subsidy applies, *mutatis mutandis*, to the effects of the subsidy in the U.S. market." *Id.*

BCI deleted, as indicated [***]

subsidized imports", a "significant increase in subsidized imports", "the effect of the subsidized imports on prices", "significant price undercutting by the subsidized imports" and "the effect of **such** imports". Article 15.4 refers to "The examination of the impact of the subsidized imports on the domestic industry". Article 15.5 refers to the "causal relationship between the subsidized imports and the injury to the domestic industry" and requires that injuries caused by "any known factors other than the subsidized imports ... must not be attributed to the subsidized imports". Article 15.8 refers to "cases where injury is threatened by subsidized imports." In our view, these repeated references strongly imply that the "something" which must cause injury for purposes of Article 15 is the subsidized imports. It seems to us that, if we are to apply the term "injury to the domestic industry" consistently with Article 15 in this dispute under Article 5(a), the same causal factor, *i.e.*, the subsidized imports, should be considered in assessing the question of causation in both contexts. Thus, we conclude that for purposes of determining whether there are adverse effects in the sense of injury under Article 5(a) of the SCM Agreement, we must examine whether subsidized imports, in this case, subsidized Airbus LCA imported into the United States, are causing injury to the United States' domestic LCA industry.

7.2063 The single reference to "effects of subsidies" in Article 15 is in Article 15.5, which provides, in pertinent part:

"It must be demonstrated that the subsidized imports are, through the effects⁴⁷ of subsidies, causing injury within the meaning of this Agreement.

⁴⁷ As set forth in paragraphs 2 and 4."

7.2064 The European Communities argues that footnote 47 provides contextual support for its view regarding the appropriate assessment of causation in an adverse effects dispute.⁵⁸⁸¹ Panel and Appellate Body reports in a recent dispute dealt specifically with the meaning of footnote 47 in the context of a countervailing duty investigation under Article 15.5, and addressed and rejected essentially the same argument as that made by the European Communities in this dispute.

7.2065 In that dispute, *Japan – DRAMs*, Korea argued that the Japanese investigating authority acted inconsistently with, *inter alia*, Article 15.5 by failing to demonstrate that subsidized imports were causing injury "through the effects of subsidies", because while it considered the volume and price effects of those imports, it did not demonstrate that the volume and prices of those imports, and their consequent impact on the domestic industry, were affected by the subsidies in a manner sufficient to cause injury. Korea argued that if an investigating authority could not demonstrate that the subsidies altered the volume or price of the imports, there was no basis for a finding that injury caused by those imports occurred "through the effects of the subsidies".⁵⁸⁸²

7.2066 The panel rejected Korea's view. The panel concluded that "the ordinary meaning of the first sentence of Article 15.5 and its accompanying footnote is to define the phrase "through the effects of subsidies" to mean the effects of subsidized imports ("{a}s set forth in Article 15.2 and 15.4)".⁵⁸⁸³ The panel found that Article 15.5 could not be read to mean, as Korea contended, that "it must be demonstrated that the *subsidies* are causing injury *through the effects of subsidized imports*", as Articles 15.2 and 15.4, referred to in the footnote, indicate that consideration must be of the effects of

⁵⁸⁸¹ EC, FWS, para 2151.

⁵⁸⁸² Panel Report, *Japan – DRAMs*, para. 7.399.

⁵⁸⁸³ Panel Report, *Japan – DRAMs*, para. 7.411.

BCI deleted, as indicated [***]

the subsidized imports, and not the subsidy.⁵⁸⁸⁴ The panel also rejected Korea's argument that the "through the effects of subsidies" language of Article 15.5 should be interpreted as requiring the same type of causation analysis as panels have developed under the "effect of the subsidy" language in Article 6.3 of the SCM Agreement. The panel noted, as the *US – Upland Cotton* Panel had found, that references in Articles 5(c) and 6.3(c) to the "effect of the subsidy" contrast with the language used in the countervailing duty provisions in Part V of the Agreement."⁵⁸⁸⁵

7.2067 The Appellate Body came to the same conclusion, stating that:

"Article 15.5 as a whole deals with the causal relationship between subsidized imports and injury to the domestic industry. ... By virtue of footnote 47 to Article 15.5, which forms an integral part of the first sentence, the demonstration of the causal relationship envisaged in the first two sentences of Article 15.5 is to be carried out by following the analysis set forth in Articles 15.2 and 15.4 for examining the 'effects' of the subsidized imports. According to these paragraphs, such an examination will comprise of: (i) whether there has been a significant increase in subsidized imports; (ii) the effect of the subsidized imports on prices; and (iii) the consequent impact of the subsidized imports on the domestic industry."⁵⁸⁸⁶

Thus, the Appellate Body concluded that it was:

"clear from the architecture of Articles 15.2, 15.4, and 15.5 that, for determining whether the 'subsidized imports are, through the effects of subsidies, causing injury' to the domestic industry, what is required is the examination of the effects of the subsidized imports as set forth in Articles 15.2 and 15.4. These paragraphs neither envisage nor require the two distinct types of examinations suggested by Korea, namely, an examination of the effects of the subsidized imports as per Articles 15.2 and 15.4; and, a second examination of the effects of the subsidies... . {I}f an investigating authority carries out the examination required under Articles 15.2, 15.4, and 15.5, such examination suffices to demonstrate that 'subsidized imports are, through the effects of subsidies, causing injury' within the meaning of the SCM Agreement."⁵⁸⁸⁷

7.2068 We agree with this view, and consider that it applies equally to our analysis in this case. In our view, the term "injury to the domestic industry", which we are to apply in the same way under Article 5(a) as an investigating authority would in the context of a countervailing duty investigation, includes the question of causation. Thus, we consider that a consistent interpretation of the concept of "injury to the domestic industry" requires us to examine, in considering causation, the effects of subsidized imports as set forth in Articles 15.2 and 15.4 in our analysis of material injury under Article 5(a). Any other conclusion would, we believe, inappropriately establish a different legal standard and obligations for analysis of injury in the context of Part III from that developed under Part V of the SCM Agreement, which in our view would be contrary to footnote 11.

7.2069 In addition, as the United States notes in response to the European Communities, Article 6.3, by its terms, defines conditions in which "serious prejudice" may arise, not conditions in which

⁵⁸⁸⁷ Appellate Body Report, *Japan – DRAMs*, paras. 264, 268.

BCI deleted, as indicated [***]

"material injury" may arise.⁵⁸⁸⁸ We agree with the United States that if the drafters of the SCM Agreement had intended the causation aspects of Article 6.3 to apply to claims of adverse effects in the form of injury under Article 5(a), they would not have used only the term "serious prejudice" in the chapeau of Article 6.3. The use of the term "serious prejudice" alone suggests that the provisions of Article 6.3 do not apply when considering other forms of adverse effects, which, include injury, in the sense of Part V of the SCM Agreement, under Article 5(a), and nullification and impairment under Article 5(b).

7.2070 With respect to the latter, we note that footnote 12 to Article 5(b) of the SCM Agreement provides:

"{t}he term 'nullification or impairment' is used in this Agreement in the same sense as it is used in the relevant provisions of GATT 1994, and the existence of such nullification or impairment shall be established in accordance with the practice of application of these provisions."

Unlike the question of injury under Part V of the SCM Agreement, there is no methodological guidance in the text of GATT 1994 on the determination of nullification or impairment. This explains, in our view, why there is a specific reference to "practice" in the application of nullification and impairment provisions in footnote 12. On the other hand, Part V of the SCM Agreement contains extensive, albeit not complete, methodological guidance on the determination of injury, including the question of causation.

7.2071 In response to a question from the Panel on a related matter, the European Communities reiterated its view that a claim of injury under Article 5(a) can only be made out if the "use of any subsidy" causes that injury, relying in this regard on the chapeau of Article 5.⁵⁸⁸⁹ According to the European Communities, its position is consistent with the views of the Appellate Body in *Japan-DRAMS* referring to the fact that the Appellate Body relied in part on the differences between Part III and Part V of the SCM Agreement in concluding that there was no basis for importing the specific obligations of Part III into the provisions of Part V.⁵⁸⁹⁰ However, in our view, footnote 11 clearly not only provides a basis for, but indeed **obliges** a panel to apply Part V, and all the obligations in Article 15, including with respect to causation, in an analysis of injury under Part III. That footnote specifically incorporates the meaning of the term "injury to the domestic industry" as set out in Part V into Part III (Article 5(a)), and thus in our view incorporates into Part III of the SCM Agreement the obligations with respect to determination of injury, including those relevant to determining causation of injury, set out in Part V of the SCM Agreement. There is no similar provision even suggesting, much less requiring, the application of the obligations of Part III in disputes under Part V of the SCM Agreement, as noted by the Appellate body in *Japan-DRAMS*. Thus, we consider that unlike that case, here there is a sound legal basis in the text of the SCM Agreement itself for our conclusion that the obligations concerning determinations of injury under Part V of the SCM Agreement, including the consideration of subsidized imports as the causal factor, apply in the analysis of claims under Article 5(a) of Part III.

7.2072 On the basis of the foregoing, we reject the European Communities' view that in an examination of injury under Article 5(a), we must determine whether the use of the subsidies in dispute cause the effects asserted to demonstrate the existence of injury. Rather, we consider that an examination of the effects of subsidized imports, as set forth in Articles 15.2 and 15.4, is appropriate. As the Appellate Body has concluded, this is what is required in an assessment under Article 15 of the

⁵⁸⁸⁸ US, SWS, para. 742.

⁵⁸⁹⁰ EC, Answer to Panel Question 284, citing Appellate Body Report, *Japan – DRAMS*, para. 272.

BCI deleted, as indicated [***]

SCM Agreement, and therefore, in our view, is also what is required in an assessment under Article 5(a).

7.2073 We recall that we have concluded that the subsidized product at issue in this dispute is all Airbus LCA.⁵⁸⁹¹ Therefore, in assessing the effects of subsidized imports, we will consider the effects of all Airbus LCA imported into the United States.

7.2074 The European Communities argues that we must consider the nature and effect of the subsidies, and their magnitude, in evaluating the question of injury, in order to ensure that any injury found is an effect of the subsidies. As we have just discussed, we do not agree that our analysis should focus on the effects of the subsidies, but rather should focus on the effects of the subsidized imports on the United States' LCA industry. Thus, for purposes of our injury analysis, it is in our view not necessary to consider whether the nature and effect of the subsidies in dispute is such as to cause material injury. The nature and effects of the subsidies are not, independently, an element to be addressed in our analysis of injury, except as may be relevant in the context of threat of injury, in light of Article 15.7(i) of the SCM Agreement.

7.2075 With respect to the magnitude of the subsidies, we have a similar view. The European Communities asserts that the *ad valorem* level of subsidy for imports of A320 LCA into the United States was *de minimis* in 2006, and similarly low in previous years, and that "these Airbus imports or sales cannot be presumed to cause lost sales, price suppression, or displaced market share simply because they are marginally "subsidized"."⁵⁸⁹² We note that the European Communities does not make similar assertions with respect to imports of other models of Airbus LCA, although it has undertaken to calculate an *ad valorem* subsidy rate with respect to LA/MSF and R&TD subsidies for Airbus LCA over the period 1999-2006, and argues that these subsidies are *de minimis* in the context of arguing that the subsidies do not cause the serious prejudice alleged by the United States.⁵⁸⁹³ Thus, to the extent the European Communities makes arguments concerning causation specific to the question of material injury, as opposed to its arguments with regard to the effect of the subsidies in dispute more generally, it appears to contend that the magnitude of the subsidies benefiting imports of Airbus LCA into the United States is too small to cause or threaten material injury.

7.2076 We do not, however, consider it necessary to consider the *ad valorem* rate of subsidization on a per aircraft basis in evaluating the United States' claim of injury and threat of injury, even assuming we were satisfied with the European Communities' calculations in this regard.⁵⁸⁹⁴ There is nothing in the text of Article 15 linking the magnitude of the subsidy to the question of injury or the assessment of causation. This is in contrast to Article 3.4 of the AD Agreement, which includes "the magnitude of the margin of dumping" as a relevant factor that must be evaluated in examining the question of injury. There is no corresponding provision with respect to the magnitude of the subsidy in the parallel provision, Article 15.4, of the SCM Agreement, suggesting that there is no linkage between the amount of subsidy and the determination of material injury caused by subsidized imports. It is true that Article 11.9 provides that an application shall be rejected and an investigation terminated if

⁵⁸⁹¹ See, para. 7.1668 above.

⁵⁸⁹² EC, FWS, para. 2156

⁵⁸⁹³ EC, FWS, para. 1624; ITR report, Exhibit EC-13)(BCI/HSBI). Rates are calculated for A318, A319, A320, A321, A330-200, A330-300, A340-300, A340-500, A340-600, and A380 model LCA. The European Communities refers to the allegedly *de minimis* level of subsidization repeatedly in arguing that the alleged adverse effects are not the effect of the subsidies in dispute, e.g., paras. 1800, 1855, 1913, 1937, 1977, 2010, 2062, 2088, 2100, 2120, 2128, 2134. Although we conclude that the magnitude of subsidization is not a relevant consideration in the context of our injury analysis, we note that we have rejected the European Communities' calculations as an appropriate basis for considering the magnitude of the subsidies in the context of our analysis of serious prejudice. See, paras. 7.1969 - 7.1972 above.

⁵⁸⁹⁴ See, paras. 7.1969 - 7.1972 above.

BCI deleted, as indicated [***]

the level of subsidization is *de minimis*, which is defined as a level of subsidization of 1 percent *ad valorem*.⁵⁸⁹⁵ However, it is clear from previous dispute settlement that there is no basis for the proposition that a *de minimis* subsidy is non-injurious, even in the context of a countervailing duty investigation:

"there is nothing in Article 11.9 to suggest that its *de minimis* standard was intended to create a special category of "non-injurious" subsidization, or that it reflects a concept that subsidization at less than a *de minimis* threshold *can never* cause injury. For us, the *de minimis* standard in Article 11.9 does no more than lay down an agreed rule that if *de minimis* subsidization is found to exist in an original investigation, authorities are obliged to terminate their investigation, with the result that no countervailing duty can be imposed in such cases."⁵⁸⁹⁶

As the Appellate Body has noted, "injury is not defined in the SCM Agreement in relation to any specific level of subsidization".⁵⁸⁹⁷

7.2077 Thus, in our view, an evaluation of injury for purposes of Article 5(a) of the SCM Agreement does not require consideration of the magnitude of the subsidy, because the question to be answered is not whether the subsidy(ies) cause injury, but whether the subsidized imports, that is, the imports of the subsidized product, do so. We have determined in this case that the subsidized product is all Airbus LCA, and we will proceed to examine the question of causation by imports of subsidized Airbus LCA into the United States according to the guidance set out in Article 15 of the SCM Agreement, and relevant dispute settlement reports.⁵⁸⁹⁸

Evidence

7.2078 With respect to the analysis of evidence, we note Article 15.1 of the SCM Agreement, which provides:

"{a} determination of injury for purposes of Article VI of *GATT 1994* shall be based on positive evidence and involve an objective examination of both (a) the volume of the subsidized imports and the effect of the subsidized imports on prices in the domestic market for like products and (b) the consequent impact of these imports on the domestic producers of such products. (footnote omitted)."

7.2079 In the context of countervailing (and anti-dumping) determinations of investigating authorities, panels have made clear that an investigating authority must ensure that its determination of injury, and specifically its findings under Articles 15.2, 15.4 and 15.5 of the SCM Agreement, are

⁵⁸⁹⁵ The AD Agreement contains a similar provision in Article 5.9.

⁵⁸⁹⁶ Appellate Body Report, *United States – Carbon Steel*, para. 83.

⁵⁸⁹⁷ Appellate Body Report, *United States – Carbon Steel*, para. 81.

⁵⁸⁹⁸ We note that footnote 35 of the SCM Agreement specifies that

"{t}he provisions of Part II or III may be invoked in parallel with the provisions of Part V; however, with regard to the effects of a particular subsidy in the domestic market of the imposing Member, only one form of relief (either a countervailing duty, if the requirements of Part V are met, or a countermeasure under Articles 4 or 7) shall be available."

The availability of the two tracks simultaneously suggests to us that it is not precluded that one track might yield an affirmative result, resulting in relief, while the other does not. Thus, while a level of subsidization that is *de minimis* would, in the case of a countervailing duty investigation, preclude the imposition of countervailing measures on imports of the subsidized product, we see nothing in the SCM Agreement that would preclude, as a matter of law, an affirmative determination of adverse effects, including injury, with respect to subsidies benefiting that product in a dispute under Part III.

BCI deleted, as indicated [***]

made on the basis of "positive evidence" and involve an "objective examination."⁵⁸⁹⁹ In this regard, the Appellate Body has interpreted "positive evidence" as follows:

"{t}he term 'positive evidence' relates, in our view, to the quality of the evidence that authorities may rely upon in making a determination. The word 'positive' means, to us, that the evidence must be of an affirmative, objective and verifiable character, and that it must be credible."⁵⁹⁰⁰

We also note that the Appellate Body has defined an "objective examination":

"{t}he term 'objective examination' aims at a different aspect of the investigating authorities' determination. While the term 'positive evidence' focuses on the facts underpinning and justifying the injury determination, the term 'objective examination' is concerned with the investigative process itself. The word 'examination' relates, in our view, to the way in which the evidence is gathered, inquired into and, subsequently, evaluated; that is, it relates to the conduct of the investigation generally. The word "objective", which qualifies the word 'examination', indicates essentially that the 'examination' process must conform to the dictates of the basic principles of good faith and fundamental fairness."⁵⁹⁰¹ (footnote omitted)

The Appellate Body summed up the requirement to conduct an "objective examination" as follows:

"an 'objective examination' requires that the domestic industry, and the effects of {subsidized} imports be investigated in an unbiased manner, without favouring the interests of any interested party, or group of interested parties, in the investigation. The duty of the investigating authorities to conduct an 'objective examination' recognizes that the determination will be influenced by the objectivity, or any lack thereof, of the investigative process."⁵⁹⁰²

We also note that the Appellate Body in *Thailand – H-Beams* confirmed the fundamental nature of Article 3.1 of the AD Agreement, which is the parallel provision to Article 15.1, as a guiding principle underlying all aspects of an injury determination.

"Article 3 as a whole deals with obligations of Members with respect to the determination of injury. Article 3.1 is an overarching provision that sets forth a Member's fundamental, substantive obligation in this respect. Article 3.1 informs the more detailed obligations in succeeding paragraphs. These obligations concern the determination of the volume of dumped imports, and their effect on prices (Article 3.2), investigations of imports from more than one country (Article 3.3), the impact of dumped imports on the domestic industry (Article 3.4), causality between dumped imports and injury (Article 3.5), the assessment of the domestic production of the like product (Article 3.6), and the determination of the threat of material injury (Articles 3.7 and 3.8). The focus of Article 3 is thus on *substantive* obligations that a Member must fulfil in making an injury determination."⁵⁹⁰³ (emphasis in original)

BCI deleted, as indicated [***]

7.2080 Like previous panels and the Appellate Body in the trade remedies context, we understand Article 15.1 of the SCM Agreement as an overarching provision which informs the more detailed obligations set forth in the remainder of Article 15 of the SCM Agreement. Since in this case we are essentially fulfilling the role that would be taken by the investigating authority in a countervailing or anti-dumping duty investigation, this means that we must base our examination and determination with respect to injury on positive evidence and an objective examination of the various injury elements as required by the more specific provisions of Article 15.

7.2081 With the foregoing in mind, we consider below the evidence and arguments presented by the parties in support of their contentions regarding injury and threat of injury.

(ii) *Material injury*

7.2082 As discussed above, we have concluded that it is appropriate to undertake a two-step analysis of the question of injury, that is, to determine in the first instance whether the condition of the United States' LCA industry is such as to justify a conclusion that it is materially injured. Only in the event that we find in the affirmative on this question and conclude that the United States' industry producing LCA is materially injured will it be necessary for us to go on to determine whether such material injury is caused by the subsidized imports, in view of the volumes and price effects of such imports and their consequent impact on the domestic industry. Therefore, we consider it appropriate to first analyze the information before us relevant to the condition of the United States' LCA industry, that is, Boeing, before considering developments in the volume and prices of subsidized imports. The latter information is, in our view, more relevant to consideration of the question of causation of injury than to consideration of the question of whether material injury exists.

Condition of the United States' LCA industry

7.2083 Article 15.4 of the SCM Agreement provides that an examination of injury within the meaning of Article 15:

"shall include an evaluation of all relevant economic factors and indices having a bearing on the state of the industry, including actual and potential decline in output, sales, market share, profits, productivity, return on investments, or utilization of capacity; factors affecting domestic prices; actual and potential negative effects on cash flow, inventories, employment, wages, growth, {and} ability to raise capital or investments This list is not exhaustive, nor can one or several of these factors necessarily give decisive guidance."

These factors all bear on the performance or condition of the domestic industry, and thus inform our judgment concerning whether the industry is in a condition which can be termed material injury. In this regard, we note that there is no elaboration of the word "material" in the SCM Agreement, and thus no standard for determining whether a particular degree of "injury" is material. In our view, the determination whether a particular degree of injury, as evidenced by the Article 15.4 factors, is "material" is fact-specific in each case, depending on the nature of the product and the industry in question. Developments in various of the relevant factors, such as for instance a particular decline in production, sales, or profit levels, that in one industry may support a finding of material injury, may not in another industry. Thus, our determination must be based on an overall evaluation of the condition of the industry before us, taking into account the particularities brought to our attention concerning its operations and the relative importance of the relevant factors with respect to its performance.

BCI deleted, as indicated [***]

7.2084 In our view, it is clear that it is not necessary that all relevant factors, or even most or a majority of them, must show declines in order to make a finding of injury. As the text of the Article 15.4 makes clear, no one or several factors can necessarily give decisive guidance. In our view, this means that an overall evaluation of the information, in context, is necessary, as well as an explanation of how the facts support the determination.⁵⁹⁰⁴ But this does not mean that injury may not be found in the case of an industry whose performance is improved or improving. The outcome of the inquiry will depend on the particular facts and the particular industry.

7.2085 The United States provided the following data on the Article 15.4 factors for Boeing's United States' production operations for LCA.⁵⁹⁰⁵

⁵⁹⁰⁴ See, Panel Report, *Mexico – Olive Oil*, para. 7.372. We note that the factual circumstances in which injury may or may not be found are also the subject of proposals in the Rules Negotiations. See, Working Document from the Chairman, document TN/RL/232 (28 May 2008), Annex A, setting forth a consolidation of text-based proposals submitted to the Rules Negotiating Group on anti-dumping issues up to November 2007. An earlier compilation of proposals can be found in document TN/RL/W/143 (22 August 2003), with references to the documents containing the proposals submitted by Members.

⁵⁹⁰⁵ The United States originally presented information on these factors for the period 2001-2005, US, FWS, Table 4, para. 746. The United States subsequently presented the updated information reproduced in the text in answer to a question from the Panel. US, Answer to Panel question 238, para. 81, table 2.

BCI deleted, as indicated [***]

Table 42 – Trends in Boeing's LCA Operations (US data)⁵⁹⁰⁶

	2001	2002	2003	2004	2005	2006
Production (aircraft)	518	377	273	280	284	387
Capacity Utilization ⁵⁹⁰⁷	[***]%	[***]%	[***]%	[***]%	[***]%	[***]%
Sales (US dollars, millions) ⁵⁹⁰⁸	35,056	28,387 27,202	22,408 21,380	21,037 19,925	22,651 21,365	28,465
Operating income (US dollars, millions)	1,911	2,107	707	753	1,432	2,733
Return on assets	[***]%	[***]%	[***]%	[***]%	[***]%	[***]%
Cash flow (US dollars, millions) ⁵⁹⁰⁹	[***]	[***]	[***]	[***]	[***]	[***]
Employees	[***]	[***]	[***]	[***]	[***]	[***]
Wages paid (US dollars, millions) ⁵⁹¹⁰	[***]	[***]	[***]	[***]	[***]	[***]
Productivity (US dollars, thousands) ⁵⁹¹¹	[***]	[***] [***]	[***] [***]	[***] [***]	[***] [***]	[***] [***]

7.2086 The United States did not submit information on inventories, because, with rare exceptions, Boeing produces to order and does not carry inventories of unsold aircraft.⁵⁹¹² With respect to "ability to raise capital or investments", the United States provided the following chart showing the evolution of Boeing's credit rating.

⁵⁹⁰⁶ US, Answer to Panel Question 238 (table 2).

⁵⁹⁰⁷ Reflects 2006 reduction in total capacity from [***] aircraft per month to [***] aircraft per month, due to the closure of the Boeing 757 production line in 2005.

⁵⁹⁰⁸ The United States notes that Boeing changed its accounting policy in 2006 with respect to concessions received from vendors. The sales data provided for 2006 reflect this change in accounting methodology. For comparative purposes, the United States provided sales data for prior years (available for 2002, 2003, 2004, and 2005) using the adjusted methodology. US, Answer to Panel Question 238, para. 81, Table 2, footnote 106.

⁵⁹⁰⁹ Corrected figure for 2001. US, Answer to Panel Question 238, para. 81, Table 2, footnote 107.

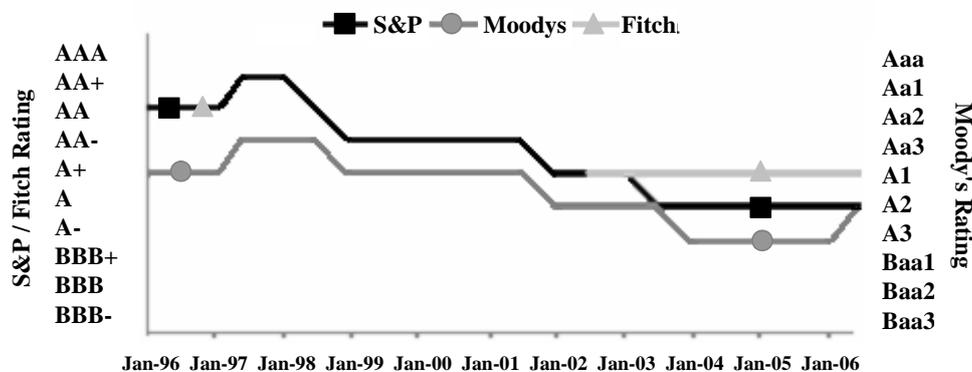

⁵⁹¹⁰ Corrected calculation. US, Answer to Panel Question 238, para. 81, Table 2, footnote 108.

⁵⁹¹¹ Because productivity is calculated as sales per employee, the 2006 change in Boeing's accounting methodology for sales also affects the calculation of productivity. US, Answer to Panel Question 238, para. 81, Table 2, footnote 109.

⁵⁹¹² US, FWS, para. 746, footnote 934. The European Communities agrees that inventories are generally unimportant. EC, FWS, para. 2245. *See, also*, EC, FWS, footnote 2216. Based on the shared view of the parties, and our own understanding of the operations of the LCA industry based on the evidence before us, we do not consider information concerning inventories to be relevant to our analysis of injury, and the lack of such information before us does not affect our conclusions.

BCI deleted, as indicated [***]

Chart 15: Boeing's credit ratings in recent years⁵⁹¹³

7.2087 With respect to sales and market share, the United States relied on the information it presented with respect to the volume and market share of deliveries of LCA in the United States' market. That information is set out in full at paragraph 7.2113 below. It shows that deliveries of Boeing LCA in the United States' market declined dramatically, from 280 units in 2001, to 126 in 2002, and declined still further to 75 units in 2003, before increasing to 88 units in 2004, dropping again to 78 units in 2005, and increasing to 81 units in 2006.⁵⁹¹⁴ However, the declines in the early part of this period reflect in significant part a collapse of demand in the United States' market for LCA, as declines in Boeing's market share of deliveries were far less dramatic. Boeing's share of the United States' LCA market was 70 percent in 2001, declined to 58 percent in 2002, and further to 56 percent in 2003, increased to 59 percent in 2004, fell again to 52 percent in 2005, and increased to 57 percent in 2006.

7.2088 The United States argues that this information demonstrates that Boeing is materially injured, in light of the decline in its financial results, despite deep cuts in costs and steady gains in productivity, which could not offset the bottom-line impact of declines in production, capacity utilization, and sales revenue. The United States points out that Boeing's income on LCA operations declined by nearly two-thirds in 2003 and 2004 as compared with 2002, and increased only slightly in 2005. Thus, the United States attributes the increase in income in 2005 almost entirely to improved productivity.

7.2089 The European Communities argues that Boeing is not materially injured. In the European Communities' view, a finding of material injury requires that the condition of the United States' LCA industry, as reflected in the Article 15.4 factors, be poor, and/or reflect declines over the relevant period. Thus, the European Communities focuses on its contention that in 2006, Boeing is in "robust financial health, dominant in global and United States' LCA markets, in improved financial health relative to 2004 and 2001 and on a sharply upward trend."⁵⁹¹⁵ The European Communities presents information regarding the Article 15.4 factors which it argues demonstrates that there are no actual or potential declines in Boeing's performance, and no negative effects on its financial condition, over the period examined.

⁵⁹¹³ Exhibit US-403.

⁵⁹¹⁴ See, para. 7.2116 above, explaining our decision to consider deliveries, rather than order data, in this context.

⁵⁹¹⁵ EC, FWS, para. 2159.

BCI deleted, as indicated [***]

Table 43 – Trends in Boeing's LCA Operations (EC data)⁵⁹¹⁶

	2001	2002	2003	2004	2005	2006

Utilization of capacity	n/a	n/a	n/a	~100%	~100%	~100%
Productivity (US dollars)	[***]	[***]	[***]	[***]	[***]	505,505

7.2090 The European Communities notes, based on the above, that Boeing sales of LCA (calculated as orders for LCA world-wide) in 2005 and 2006 exceeded by far sales in any prior year. The European Communities argues that in 2006, Boeing captured more than 50% of United States' sales in each of the single-aisle, 200-300 seat, and 300-400 seat markets, as well as capturing the only United

⁵⁹¹⁶ EC, FWS, para. 2162 (column labelled "change – 2004-2006", and rows reflecting "global market share" deleted). The European Communities presented additional information on some of these factors for 2007, EC, Comments on US Answer to Panel Question 238, para. 200, and some preliminary data for 2008, during the later stages of the proceedings before the Panel. As we have discussed, we have considered information for the period 2001-2006 to be most pertinent for our analysis, and have not relied on later data in reaching our conclusions regarding injury. See, paras. 7.2051 and 7.2053 above. We have not set forth the later submitted information in the body of our report.

BCI deleted, as indicated [***]

States' orders for LCA sized 400 seats or greater.⁵⁹¹⁷ The European Communities contends that Boeing's production increased from 2004 to 2006, and is likely to increase sharply in coming years as a result of Boeing's record-setting backlog of orders as of 2006. The European Communities asserts that net earnings in 2006 exceeded those of any prior year, 2001-2005, while operating margin in 2006 was nearly three times the 2004 level and substantially exceeded the 2001 level. The European Communities asserts that Boeing's 2006 cash flow and return on assets exceeded that of any prior year, 2001-2005, and credit ratings at year end 2006 exceeded its ratings in 2004 and were industry-leading. The European Communities observes that wages per employee increased substantially between 2001 and 2005 and considers that this trend presumably continued in 2006, although relevant data was not available. The European Communities asserts that Boeing has operated at or near full capacity between 2004 and 2006. According to the European Communities, this evidence demonstrates not only that Boeing is not in an economically distressed condition, but that it could not be much farther from such a condition, absent a monopoly position in all LCA markets.⁵⁹¹⁸

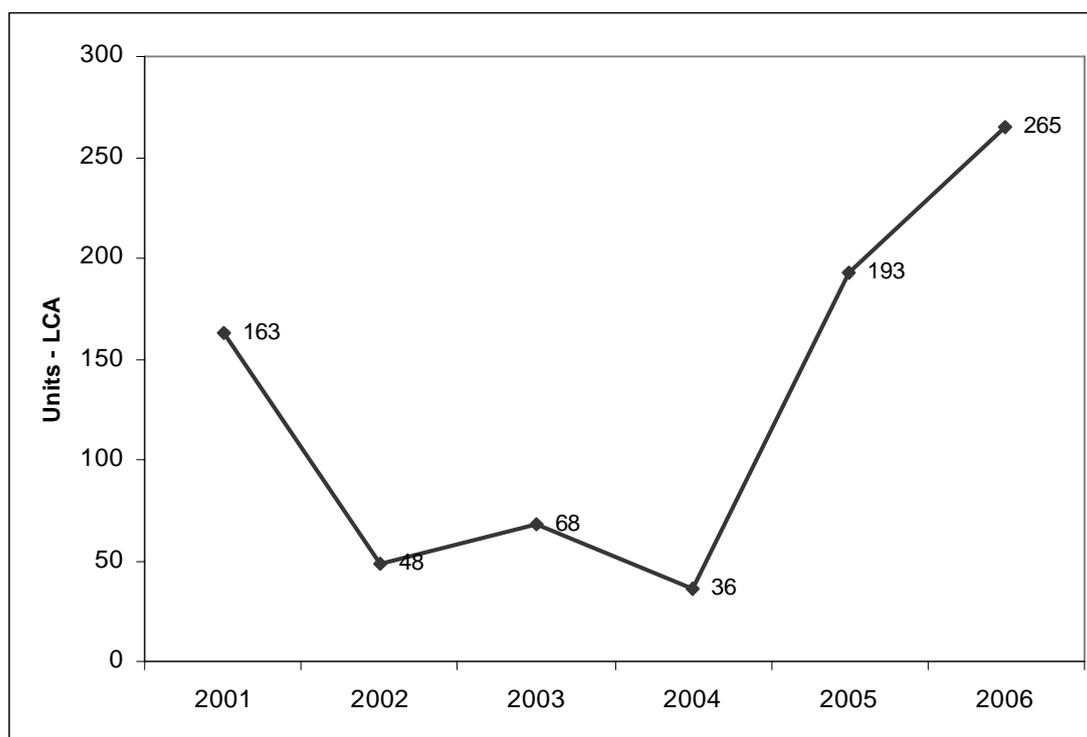

7.2091 With respect to sales, the European Communities asserts, on the basis of orders for Boeing LCA by United States' customers, in addition to the information presented above, that there is no actual or potential decline in sales over the most recent period, relying in part on the following chart:

⁵⁹¹⁷ As previously discussed, we have rejected the European Communities' position regarding consideration of separate markets for single-aisle LCA, for 200-300 seat LCA market, for 300-400 seat LCA market, for 400-500 seat LCA market and for 500+ seat LCA market. We note here that, despite its contention that LCA in the 400-500 seat and 500+ seat markets do not compete, the European Communities compares Boeing's 747 LCA with Airbus' 500+ seat A380 to demonstrate the relative success of the Boeing 747. EC, FWS, para. 2161, footnote 2182.

⁵⁹¹⁸ EC, FWS, para. 2161.

Chart 16: Boeing LCA Orders By United States' Customers⁵⁹¹⁹

According to the European Communities, the United States has presented no credible evidence to suggest that the sharply rising trend evident in the chart will change in the near future.

7.2092 We note that the data in Chart 16 represent orders by United States' customers, while the data in the Table 43 above represent orders by customers world-wide. The LCA market is global in scope, and thus Boeing's LCA operating results in the United States, which reflect the condition of the relevant domestic industry, include sales to customers world-wide. Indeed, in response to a question from the Panel asking the extent to which the data presented by the United States includes results relating to sales for export, the United States stated that it had presented "data on economic factors and indices affecting the entire U.S. domestic industry" and went on to observe that the relevant domestic industry "includes U.S. production 'as a whole' of LCA products, including production for export".⁵⁹²⁰ While the United States asserts that it has limited its injury claim to the impact of subsidized imports on the United States' market,⁵⁹²¹ this appears to be reflected in the data only with respect to United States' sales (deliveries), market share and prices. With respect to Boeing's financial results, the information presented by the United States appears to relate to Boeing's world-wide LCA sales. While the United States has calculated sales volume on the basis of deliveries in the United States, the dollar amounts set out above in Table 42 appear to reflect world-wide sales. We see no impediment to conducting our analysis of injury on the basis of the data presented which reflects global sales of LCA, as we agree that we are to consider the United States' domestic industry "as a whole" in our analysis.

⁵⁹¹⁹ EC, FWS, para. 2164.

⁵⁹²⁰ US, Answer to Panel Question 239, para. 83.

⁵⁹²¹ US, Answer to Panel Question 239, para. 83.

BCI deleted, as indicated [***]

7.2093 The European Communities argues that Boeing is the dominant player in terms of market share, calculating market share on the basis of orders for LCA. The following charts summarize the European Communities' position with respect to market share:⁵⁹²²

Chart 17: Airbus United States' Orders and Market Share, Single-Aisle LCA, 2001 - 2006⁵⁹²³

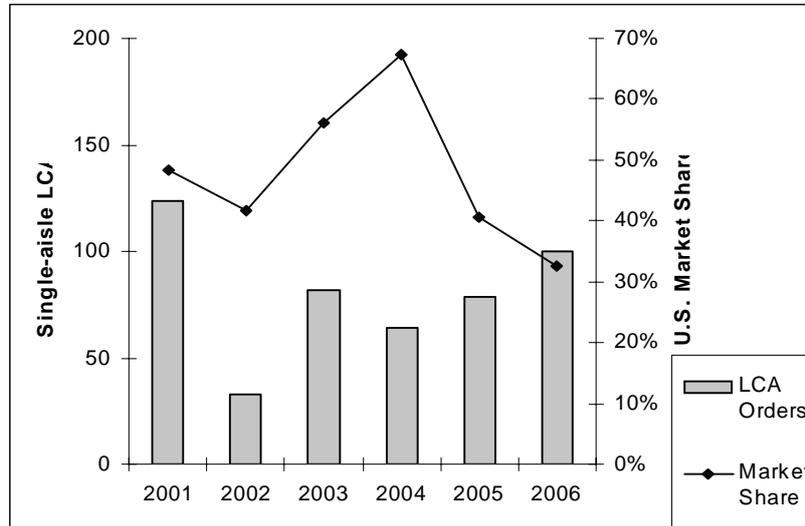

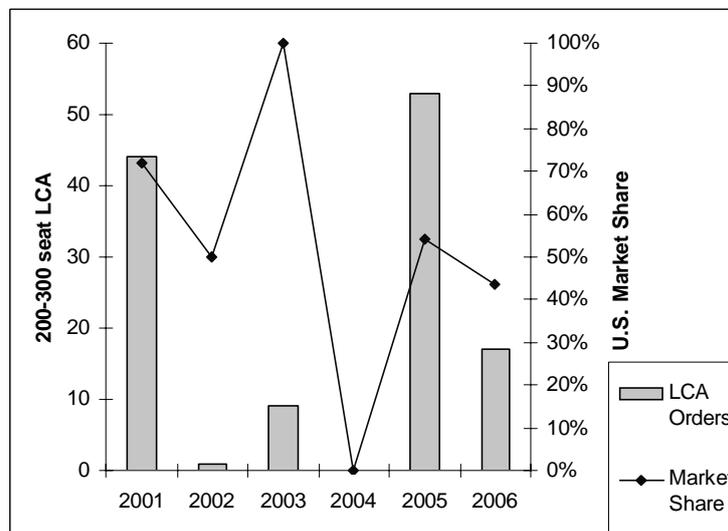

Chart 18: Airbus United States' Orders and Market Share, 200-300 Seat LCA, 2001 - 2006⁵⁹²⁴

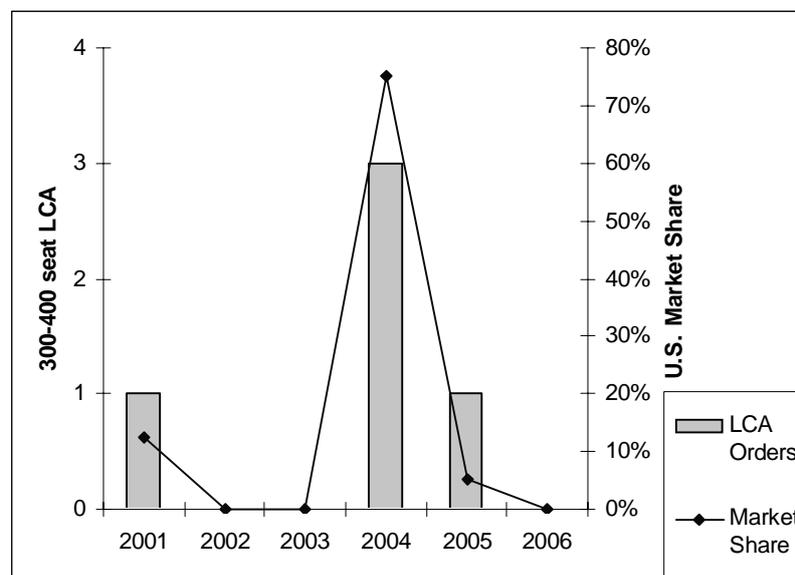

⁵⁹²² The European Communities also presented a series of tables setting forth the number of US orders of Boeing and Airbus LCA, counted by seats, and for each of the product markets the European Communities had defined. EC, FWS, paras. 2168-2172. We understand the charts reproduced in the text to be a different presentation of the same data, and thus do not discuss the seat-based information separately.

⁵⁹²³ EC, FWS, para. 2252.

⁵⁹²⁴ EC, FWS, para. 2253.

BCI deleted, as indicated [***]

Chart 19: Airbus United States' Orders and Market Share, 300-400 seat LCA, 2001 - 2006⁵⁹²⁵

7.2094 While we have carefully considered the information and arguments of the European Communities in this regard, we conclude that information on orders disaggregated by market segments is not probative on the issue of market share in this case. As we have previously discussed in the context of displacement or impedance, we consider that deliveries are the more appropriate basis for consideration of market share.⁵⁹²⁶ In addition, Boeing's financial performance is to a large extent linked to deliveries, when the bulk of revenues are recorded, and which reflect orders during an earlier period. Thus, in our view, information concerning deliveries is more relevant in assessing changes in the share of the United States' market held by Boeing and Airbus during the period in the context of considering current material injury, as Boeing's performance will reflect in large part those deliveries. We consider the information on orders further below, in the context of our assessment of threat of material injury. The European Communities also presents information on global orders for LCA in the product markets it has defined, and on the basis of total seats in charts at paragraphs 2173-2178 of its first written submission. However, we do not find this information to be of relevance to our consideration of market share in the context of injury, which we consider is appropriately limited to share of the United States' market, and not share of the global market.

7.2095 With respect to output, the European Communities presents information concerning global deliveries of LCA on the basis of the number of seats, rather than numbers of LCA, as well as the information concerning production volumes set out in the consolidated Table 43.⁵⁹²⁷ Measured on the basis of seats, the European Communities asserts that Boeing's production has increased. The European Communities acknowledges that Boeing's LCA production was significantly below 2001 levels in 2006, but asserts that future deliveries will reach and even exceed those levels.⁵⁹²⁸ In this regard, the European Communities refers to Boeing's year-end backlog, as well as its delivery schedule for existing LCA orders, as of 31 December 2006. Based on the latter, the European

⁵⁹²⁵ EC, FWS, para. 2254.

⁵⁹²⁶ See, paras. 7.1745 - 7.1750 above.

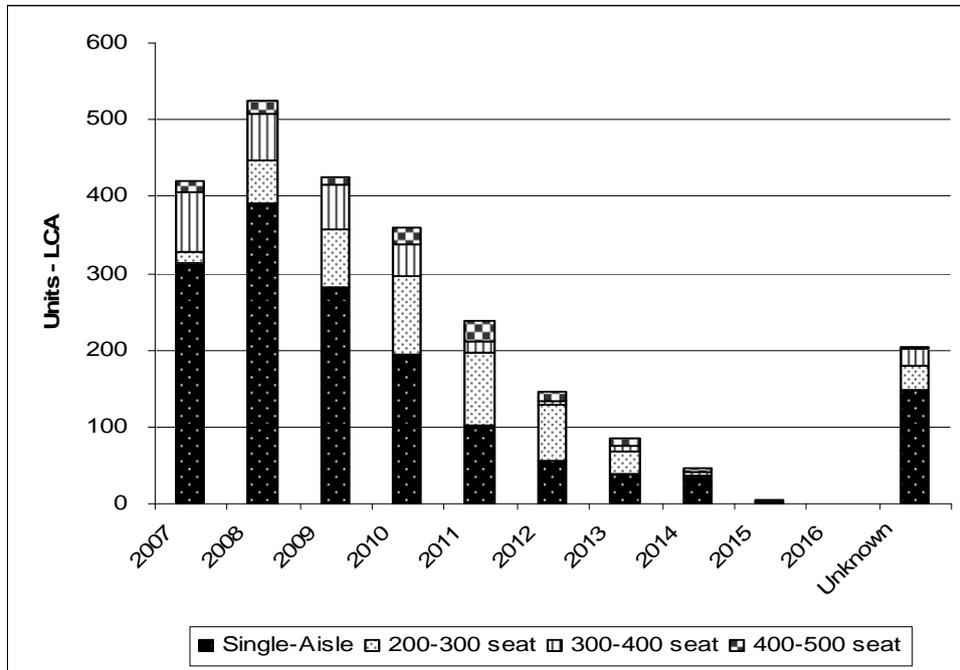

⁵⁹²⁷ The European Communities notes that the production figures it reports are slightly above those reported by the United States, by between 4 and 10 LCA in each period, but acknowledges that this does not significantly affect the trend over the period 2001-2006. EC, FWS, footnote 2216.

⁵⁹²⁸ EC, FWS, para. 2182.

BCI deleted, as indicated [***]

Communities asserts that Boeing will make 421 or more deliveries in each year 2007-2008, as indicated in the following chart:

Chart 20: Boeing Delivery Schedule for Existing LCA Orders, as of 31 December 2006⁵⁹²⁹

The European Communities considers that this information demonstrates that Boeing's production has increased, and will continue to increase. We note that this information does not address production levels during the period we are considering, which the European Communities acknowledges were lower in 2006 than in 2001. Rather, this information relates to periods after 2006, and we consider that to the extent that it is relevant, it pertains to the question of threat of material injury, which we address below.

7.2096 The European Communities contends that there is no actual or potential decline in Boeing's profits, which it asserts have increased in both absolute terms and as a ratio to sales each year over every prior year, from 2001 to 2005.⁵⁹³⁰ However, the European Communities information shows a significant decline in Boeing's net earnings from 2001 to 2003, with a slight improvement in 2004, and significant improvement in 2005 and 2006.⁵⁹³¹

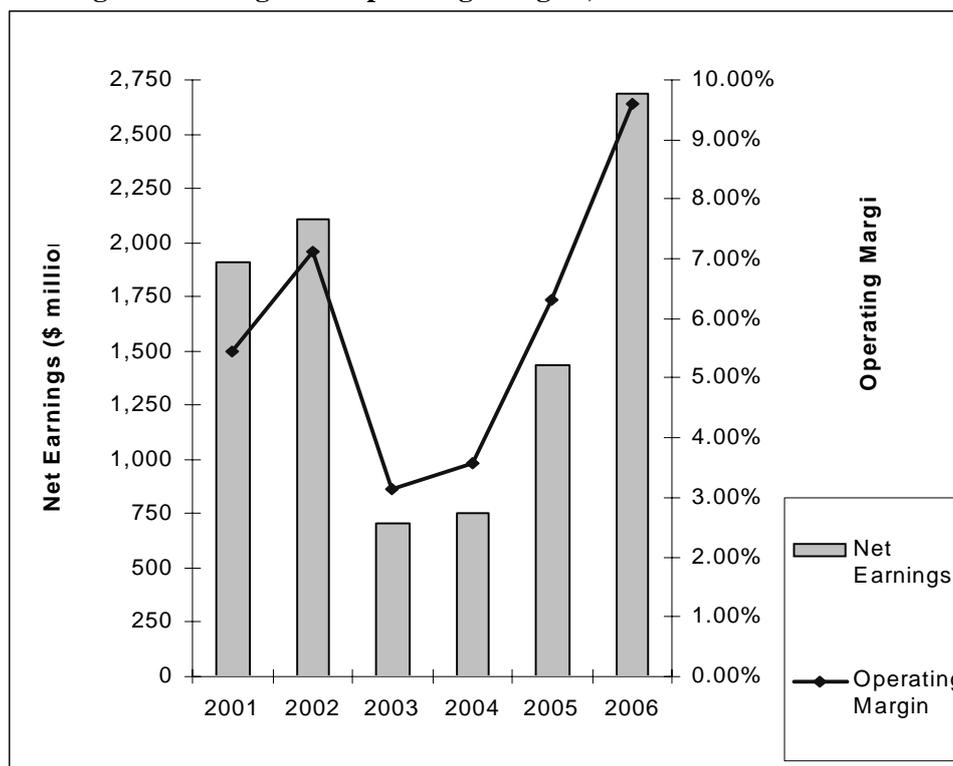

⁵⁹²⁹ EC, FWS, para. 2183.

BCI deleted, as indicated [***]

Chart 21: Boeing Net Earnings and Operating Margins, 2001 - 2006⁵⁹³²

The European Communities contends that increased deliveries have driven the increase in net earnings in 2004-2006, and not, as the United States argues, increased productivity, pointing to Boeing filings with the US Securities and Exchange Commission (SEC) and statements to investors that increased net earnings in 2005 were due in large part to increased deliveries of LCA.⁵⁹³³ The European Communities also points to substantial increases in Boeing's operating margins (earnings as a ratio to sales) from both 2001 and 2004 to 2006, without commenting on the substantial decline in that margin from 2001 to 2004 (from 5.45 percent to 3.6 percent).⁵⁹³⁴ The European Communities presents the following data on historic operating margins:

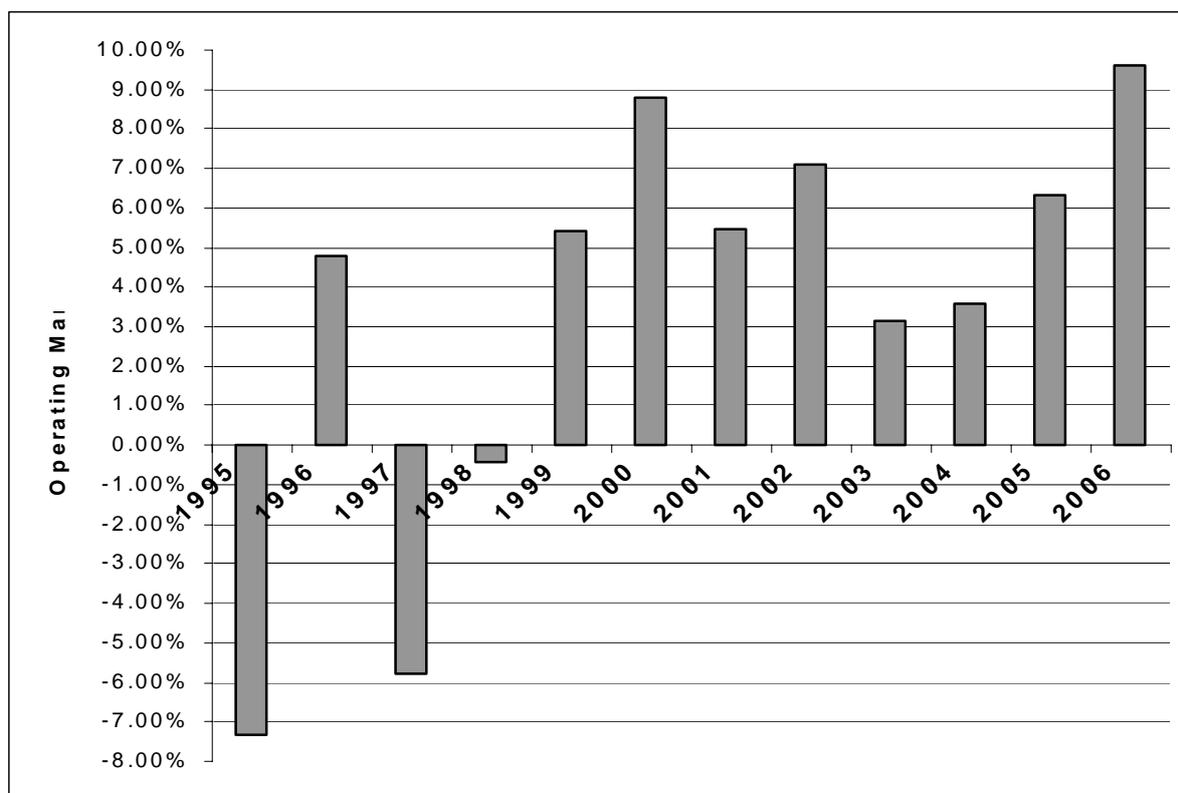

⁵⁹³² Boeing LCA Division Economic Data for 1995 – 2006, Exhibit EC-240. 2006 figures are estimated.

⁵⁹³³ EC, FWS, para. 2188, Exhibits EC-242, 266.

⁵⁹³⁴ EC, FWS, para. 2190.

BCI deleted, as indicated [***]

Chart 22: Boeing Operating Historic Operating Margin, 1995 – 3rd Quarter 2006⁵⁹³⁵

The European Communities considers Boeing's performance to be impressive in light of its expenses during this period, notably those related to the launch and development of the 787 LCA in 2004, and the 747-8, the 737-ER, and the 777 freighter version. The European Communities suggests that Boeing had only begun to recoup development costs for earlier LCA in 2005, when it launched the latter two LCA, and contends that is "financial strength" permitted it to undertake these massive expenditures while preserving growing profits.⁵⁹³⁶ We note, however, that with the exception of the 787, these are all variants of existing Boeing LCA, and thus do not entail the same level of development expense as an entirely new LCA model.

7.2097 The European Communities asserts that Boeing's return on investments, considered as return on assets,⁵⁹³⁷ has more than doubled since 2004 and has increased substantially compared to every prior year since 2001. The European Communities takes issue with the United States' calculation of return on assets, which included a share of Boeing corporate assets allocable to Boeing's LCA Division.⁵⁹³⁸ The European Communities asserts that return on assets is commonly measured as net earnings or operating income divided by assets. The European Communities calculated return on assets by dividing the LCA Division's net earnings, as reported in Boeing's 10-k filings with the US

⁵⁹³⁵ EC, FWS, para. 2190. The European Communities notes that Boeing merged with McDonnell Douglas in 1997, and the table includes the combined Boeing and McDonnell Douglas revenue and net earnings for 1995 and 1996 as provided in the Boeing 1997 10-K; 2001 and 2002 figures based on 2003 restatement of net earnings for those years. *Id.* footnote 2242.

⁵⁹³⁶ EC, FWS, para. 2191.

⁵⁹³⁷ The United States agreed that return on assets is the most reasonable measurement of the US LCA industry's return on investments. US, Answer to Panel Question 242, para. 98.

⁵⁹³⁸ EC, FWS, para. 2195, referring to US, FWS, footnote 935.

BCI deleted, as indicated [***]

SEC, by the value of LCA Division assets, also reported in Boeing's 10-k filings, thus excluding entirely Boeing corporate assets. Based on its methodology, the European Communities estimated Boeing's 2006 estimated return on assets as 28.2 percent, a 175 percent increase over 2004 and a 77 percent increase over 2001.⁵⁹³⁹ According to the European Communities, based on predicted increases in deliveries and net earnings, Boeing's return on LCA assets should continue to increase.⁵⁹⁴⁰ To the extent the European Communities relies on this predicted increase, we note that it is more relevant to a consideration of threat of injury, which we discuss further below.

7.2098 In response to a question from the Panel, the United States argued that since Boeing's corporate investments do not represent a separate profit center, but rather support the company's operations in each of the different industries in which it is active, it is appropriate to include a portion of those assets in determining Boeing's return on assets in the context of its LCA operations.⁵⁹⁴¹ However, the United States concluded that the basic trend was similar whether the United States' or the European Communities' methodology was used, and therefore suggested the Panel need not decide which method was more accurate for purposes of this dispute.⁵⁹⁴² The European Communities agreed that this disagreement over methodology in calculating return on assets is "of no practical consequence."⁵⁹⁴³ Under either calculation, Boeing's return on LCA assets increased each year since 2003, and therefore we do not consider it necessary to opine on the choice of methodology.

7.2099 The European Communities suggests that Boeing operated at or near total capacity in the last three years of the period, which the European Communities defines at production at or near its delivery forecast. The European Communities notes the United States' calculation of capacity utilization in 2005 of [***] percent, and argues that this is impossible to reconcile with the evidence that Boeing was sold out during 2005 and 2006, turning away orders, had met (or nearly) its delivery forecasts, and had a substantial order backlog.⁵⁹⁴⁴ The European Communities maintains that the United States based its calculation on a historical figure from a period of unusually high production in 1999, with no explanation, and that this is not an appropriate basis for calculating capacity utilization in 2005-2006. The European Communities also considers that the United States' figure inappropriately aggregates production lines for different LCA, while the European Communities contends that these are not fungible. Thus, the European Communities contends that its calculation, based on delivery forecasts adjusted to year to year changes is more meaningful.⁵⁹⁴⁵

7.2100 With respect to "capacity utilization," the parties do not appear to disagree on the basic fact that in the LCA industry, production capacity is planned and established years in advance based on actual orders and anticipated demand. As the European Communities recognizes, "{c}apacity is a more complex concept in the LCA industry than in many other industries because it cannot be based on machine rated capacity or factory floor bottlenecks."⁵⁹⁴⁶ The United States maintains that Boeing determines its production levels, and consequently capacity over the medium term, based on the level of orders it has received and expects to receive.⁵⁹⁴⁷ The United States contends that because Boeing received fewer orders for deliveries of LCA after 2001, it reduced employment and other factors of production, but did not reduce its "basic capacity to produce LCA at prior levels".⁵⁹⁴⁸ Thus, the

BCI deleted, as indicated [***]

United States considers it appropriate to assess Boeing's capacity utilization as actual production divided by Boeing's historic actually attained capacity level. The European Communities contends, on the other hand, that because Boeing did not produce aircraft beyond the number of orders and reduced the number of planned delivery slots in anticipation of fewer deliveries, its capacity utilization should be defined as actual production divided by the number of planned delivery slots.⁵⁹⁴⁹

7.2101 In our view, because LCA manufacturers generally produce only in response to orders received or expected to be received, the European Communities' methodology for determining "capacity utilization" would generally produce a figure approaching 100 percent regardless of what was occurring in the market to which the manufacturer was reacting and the reasons for any decline in production. Thus, on the whole we consider that the United States' methodology is more appropriate for evaluating capacity utilization. It is clear that Boeing reduced both LCA production levels and the number of scheduled LCA delivery slots, compared to historic levels, and thus that its utilization of capacity declined from 2001 to 2003, and increased thereafter, albeit not to the level recorded in 2001.⁵⁹⁵⁰

7.2102 The European Communities contends that Boeing is not experiencing any negative effects on cash flow, asserting that not only is 2006 cash flow higher than every prior year since 2001, but the rising trend of net earnings suggests that it will continue to grow. Moreover, the European Communities considers that even if large capital expenditures reduced cash flow, it would not necessarily be a sign of economic distress, as it might indicate investment in Boeing's future.⁵⁹⁵¹ The European Communities also maintains that rising trends in Boeing's performance indicate that its performance will continue to be strong, with growth in output likely, indicating no actual or potential negative effects on growth.⁵⁹⁵² With respect to its ability to raise capital or investment, the European Communities contends that Boeing is strong, improved relative to 2004, and anticipated to strengthen further.⁵⁹⁵³ In support, the European Communities points to growth to record levels of Boeing's share price 2004-2006, and its high, albeit not top-of-the-scale, credit ratings, which have improved 2004-2006.⁵⁹⁵⁴

7.2103 The European Communities maintains that no actual or negative effects on employment have been "conclusively established."⁵⁹⁵⁵ The European Communities notes that Boeing employment – measured as the number of full-time employees of Boeing's LCA division, excluding executives and contract labour – increased from 2004-2006.⁵⁹⁵⁶ The European Communities considers that the United States' reliance on the decline in employment between 2001 and 2005 is of no value in assessing material injury, because employment declines since 2001 are due in large part to Boeing's restructuring, cost cutting, and outsourcing efforts. With respect to wages, the European Communities asserts that it is not possible to determine wages per employee on the basis of available information, and that the total wage information relied on by the United States is uninformative and, at worst, misleading, as a basis for assessment of injury. The European Communities asserts that given the evidence that wages per employee have increased significantly over this period, the

⁵⁹⁵⁶ EC, FWS, para. 2221. The European Communities notes that the figures on which it relies, taken from Boeing's website, Exhibit EC-515, do not precisely match the figures provided by the United States in its first written submission, but that this discrepancy varies per year upward or downward by [***] and does not substantially affect the trend. *Id.*, footnote 2296.

BCI deleted, as indicated [***]

explanation for a substantial decline in total wages paid must be a decline in employment, which is consistent with Boeing's efficiency initiatives and outsourcing. But in this context, the European Communities contends that neither employment or wage information is of any utility for assessing material injury.

7.2104 As we noted at the outset of our analysis, we are undertaking a two-step analysis of the issue of injury. Turning to our assessment of the condition of the United States' LCA industry, we note that the trends in the data presented by the two parties show largely the same picture, although the parties emphasize different aspects, and draw different inferences and conclusion. For the most part, the European Communities does not dispute the figures presented by the United States, but relies on the data it has presented in making its arguments, which the United States similarly does not dispute for the most part. With respect to the operating performance of Boeing's LCA division, we see no reason not to accept the information presented by both parties as accurate, and address differences where relevant. Although neither party has explicitly referred to the conditions of competition in the United States' market, we consider the discussion set out elsewhere in our report⁵⁹⁵⁷ reflects conditions of competition in the United States' market.

7.2105 In general, the information presented by both parties demonstrates that Boeing's condition deteriorated significantly from 2001 to 2003, and thereafter improved, with significantly better performance in 2006, albeit not at the levels reported for 2001 for all factors. As we have indicated, we have focussed our assessment on Boeing's performance during the period 2001-2006, which we consider to be an appropriate period as a basis for reaching conclusions in the context of our analysis of injury.

7.2106 With respect to sales of LCA, the European Communities reports sales in terms of the number of LCA ordered. For our analysis, the dollar sales figures reported by the United States are more pertinent to a consideration of the condition of the United States' LCA industry. Aircraft manufacturers earn the bulk of the revenue on a sale not at the time the aircraft are sold, *i.e.*, ordered, but at the time of delivery. Thus, the operating performance of the manufacturer at any given time will not reflect the anticipated revenues attributable to LCA already ordered but not yet delivered.⁵⁹⁵⁸ However, the strength of a manufacturer's order book is important in assessing its overall condition, as it provides indications as to the future performance of the company, which is likely to be reflected in such factors as its share price and credit rating. In this respect, while these are not factors set out in Article 15.4, we note and consider relevant the undisputed information presented by the European Communities which reflects significant increases in Boeing's share prices from 2004 to 2006, and industry-leading credit ratings from Moody's, Standard & Poor's and Fitch.⁵⁹⁵⁹

7.2107 It is clear from the information before us that Boeing suffered significant declines in sales from 2001 to 2004. Sales improved slightly in 2005, and then improved more significantly in 2006, although they remained well below the levels reported for 2001. Capacity utilization followed a similar trend, declining significantly from 2001 to 2003, and increasing annually thereafter. Boeing's operating income showed a slightly different trend, increasing slightly from 2001 to 2002, before dropping precipitously to less than half the 2002 level in 2003, improving slightly in 2004, almost doubling in 2005, and increasing significantly in 2006. Operating margins, presented by the European Communities and not disputed by the United States, showed a similar trend, improving from 2001 to 2002, before dropping by more than half in 2003, improving slightly in 2004, almost doubling in 2005, and improving significantly in 2006. The United States attributes the improvement in 2002 to

⁵⁹⁵⁷ See, Section VII.F.6 of this Report above.

⁵⁹⁵⁸ In addition, orders for LCA, if ultimately delivered, represent future production and revenues, although that is a consideration more relevant to the question of threat material injury.

⁵⁹⁵⁹ EC, FWS, paras. 2216-17.

BCI deleted, as indicated [***]

cost-cutting efforts and improvements in productivity. However, the data presented by the United States on productivity does not, in fact, show gains until 2004, when productivity (unadjusted for the changes in Boeing's accounting methodology in 2006) was above that reported for 2001, and continued to improve in 2005, and substantially in 2006. While we recognize, as does the European Communities, that Boeing engaged in significant cost-cutting efforts during this period, and particularly during 2001-2004, the United States has not presented data on those efforts, with the exception of information showing continuing and significant declines in wages and employment since 2001. In our view, cost-cutting efforts do not in themselves reflect injury to an industry, and thus the declines in wages and employment undertaken to cut costs and improve production efficiency similarly do not necessarily indicate that the industry is injured.

7.2108 Information on return on assets presented by the parties shows the same trend as operating income, improving slightly from 2001-2002, then declining precipitously in 2003, improving slightly in 2004, more notably in 2005, and almost doubling in 2006.⁵⁹⁶⁰ With respect to cash flow, the parties presented very similar information, with the exception of 2006. That data shows a slight decline from 2001 to 2002, then a collapse to less than half the 2002 level in 2003, a further decline in 2004, and a significant improvement in 2005. For 2006, the United States' data shows an increase of 57 percent, while the European Communities data shows an increase of just over 100 percent. The United States did not comment on this discrepancy when given the opportunity to do so, and we therefore are not in a position to reconcile it.⁵⁹⁶¹

7.2109 We recognize that wages and employment declined steadily throughout the period, ending at levels just slightly above half those reported in 2001. However, this decline clearly reflects the significant cost-cutting and efficiency programmes instituted by Boeing, as well as increased outsourcing, which as we noted, do not necessarily indicate that the industry is injured. The United States does not dispute the European Communities' argument that declines in employment and total wages reflect Boeing decisions to increase efficiency and reduce costs by, *inter alia*, significantly decreasing its workforce. Indeed, the United States noted that "Boeing has remained competitive despite its loss of market share in its home market and depressed prices, particularly in the downturn, by cutting costs and improving productivity."⁵⁹⁶² The United States went on to assert that despite the "recovery in the financial health of Boeing", employment did not increase.⁵⁹⁶³ In our view, this fact does not support the conclusion that Boeing is injured, but rather, indicates that the cost-cutting efforts of Boeing have had the desired effect of improving Boeing's performance, allowing it to record significant improvements in its financial condition.

7.2110 As noted, the declines in Boeing's performance happened during the early part of the period we are considering, principally in 2002 and 2003, and the condition of the industry improved significantly thereafter. The United States argues that the improvements must be viewed in the context of unusually high demand in 2005 and 2006, and asserts that Boeing has remained competitive despite lost market share in the United States' market and depressed prices, by cutting costs and improving productivity.⁵⁹⁶⁴ While we do not disagree with the United States' assertion, we consider it to be of little weight in terms of determining whether the United States' LCA industry is materially injured. The parties agree that the LCA industry is strongly affected by cyclical demand conditions. Merely because improved performance occurs at a time of increased demand does not

⁵⁹⁶⁰ As discussed above, this trend is the same whether the calculation is that made by the United States, or by the EC. We do not rely on the absolute levels reported, and thus the difference in the absolute values in question is of no consequence to our analysis.

⁵⁹⁶¹ US, Answer to Panel question 240, para. 85 ("areas of agreement include ... cash flow").

⁵⁹⁶² US, SWS, para. 737.

⁵⁹⁶³ US, SWS, para. 737.

⁵⁹⁶⁴ US, SWS, para. 737.

BCI deleted, as indicated [***]

mean we cannot conclude that the improved performance reflects a lack of material injury to the industry. The United States argues that any injury resulting from decreased demand is distinguishable from the injury resulting from subsidized imports, asserting that if Boeing's market share had remained at the 2002 level through 2005, Boeing would have delivered significantly more aircraft, and had significantly higher sales.⁵⁹⁶⁵ However, this is an argument relating to other factors which may be causing injury, and does not directly address the question whether the condition of the United States' LCA industry reflects material injury.

7.2111 Having reviewed the evidence and arguments of the parties, we conclude that overall, Boeing's performance in 2006, and in 2005 with respect to a number of factors, reflects significant improvement over the earlier part of the period. While it is true that the levels reported in 2006 for production, capacity utilization, sales, and cash flow were lower in 2006 than in 2001, figures for operating income, and return on assets not only improved after the early declines, but were well above the levels reported in 2001. Productivity also showed significant improvement after the early declines, and was well above the 2001 level in 2006. The data demonstrate that following the collapse of demand in the LCA market after the events of 9/11, Boeing's performance began to recover in 2004, and by the end of the period we examined, it was operating at levels which, in our view, do not warrant a finding that the United States' domestic industry producing LCA is materially injured.

7.2112 Having concluded that the United States' LCA industry is not materially injured, we do not consider it necessary to make findings on the question of whether subsidized imports, in view of their volumes and effects on prices, and consequent impact on the domestic industry, are causing material injury. As previously discussed, and in the absence of any disagreement between the parties on this approach, we have concluded that a two-step analysis is appropriate in this dispute, and are applying that methodology. Nonetheless, we will go on to discuss below the principal evidence and arguments concerning import volume, effects on prices, and causal link, in order to establish a factual basis for further consideration of that issue, should it become necessary in the context of an appeal of our decision.

Volume of subsidized imports

7.2113 With respect to the volume of subsidized imports, Article 15.2 of the SCM Agreement requires consideration of "whether there has been a significant increase in subsidized imports, either in absolute terms or relative to production or consumption in the importing Member."

7.2114 The United States provided the following information concerning the volume of subsidized imports:⁵⁹⁶⁶

Table 44 – Quantity of LCA delivered in the United States' market

	2001	2002	2003	2004	2005	2006
Airbus	122	91	60	60	71	61
Boeing	280	126	75	88	78	81
total	402	217	135	148	149	142

⁵⁹⁶⁵ US, FWS, para. 748.

⁵⁹⁶⁶ US, SWS, para. 731, table 3.

BCI deleted, as indicated [***]

Table 45 – Market share (quantity of LCA delivered) in United States' market

	2001	2002	2003	2004	2005	2006
Airbus	30%	42%	44%	41%	48%	43%
Boeing	70%	58%	56%	59%	52%	57%

Table 46 – Market share of United States' market by value (list price)

	2001	2002	2003	2004	2005	2006
Airbus	28%	34%	44%	50%	53%	49%
Boeing	72%	66%	56%	50%	47%	51%

7.2115 The European Communities does not dispute the information presented by the United States. Nor does the European Communities present any information or make any arguments regarding the volume of subsidized imports *per se*. To the extent the European Communities presents information on orders for Boeing and Airbus LCA in the United States' market, and the consequent "market share" represented by those orders, this information does not, in our view, provide any basis for drawing conclusions concerning the volume of imports.

7.2116 We have previously concluded that, in the context of consideration of displacement or impedance under Article 6.3, consideration of deliveries is more relevant than information concerning orders.⁵⁹⁶⁷ We take the same view with respect to consideration of the volume of imports in the context of injury under Article 5(a). Based on the plain meaning of the text of Article 15.1, 15.2, 15.4, and 15.5, those provisions all require consideration of subsidized imports. In view of the ordinary meaning of the term "import", as previously discussed,⁵⁹⁶⁸ we consider that a focus on deliveries is appropriate, and we therefore consider the information provided by the United States concerning deliveries, which the European Communities does not dispute, to be the most directly relevant and probative information for considering the volume of subsidized imports. In our view, data about orders for LCA has limited relevance to the consideration of the volume of subsidized imports required by Article 15.2 of the SCM Agreement. Moreover, while order information gives a good indication of the likelihood of future imports, orders for LCA, even firm orders, do not necessarily result in actual deliveries. In addition, orders may result in deliveries years later, and if placed by a leasing company, may result in deliveries to a country other than the country of that ordering company, and never actually be imported into the country of that company. Thus, we conclude that consideration of whether there "has been a significant increase in subsidized imports, either in absolute terms or relative to production or consumption in the importing Member" as required by Article 15.2, should focus on the number of Airbus LCA actually delivered into the United States.

7.2117 Moreover, we have rejected the European Communities' view that we should focus our analysis on separate product categories.⁵⁹⁶⁹ Thus, even were we to consider the information presented

⁵⁹⁶⁷ See, para. 7.1748 above.

⁵⁹⁶⁸ See, para. 7.1747 above.

⁵⁹⁶⁹ See, para. 7.1680 above.

BCI deleted, as indicated [***]

by the European Communities with respect to orders to be relevant, we would only consider it to the extent it is related to orders for all LCA. The European Communities does present a table setting forth United States' orders of Boeing and Airbus LCA, by seats.⁵⁹⁷⁰ As we understand it, this information does not count units of LCA, but rather the total number of seats represented by the units of LCA ordered. Again, as this information concerns orders, we do not find it probative on the question of the volume of actual imports of Airbus LCA into the United States. Moreover, while in principle the number of seats might be a relevant basis for aggregating information across different models of LCA, the European Communities has provided no explanation how this information describes the volume of imports of LCA into the United States – at best it describes the volume of LCA seats ordered by United States' customers, including US-based leasing companies, for delivery at some time in the future to unspecified locations. It is less than clear to us, and the European Communities provides no explanation of, how this information informs consideration of the volume of imports into the United States during the period we examined.

7.2118 Finally, the European Communities presents information on the volume of LCA ordered over the period 2001-2006 by seats, and by number of LCA for four product categories, on a global basis.⁵⁹⁷¹ We do not consider this information to be probative on the question of the volume of imports for the same reasons as set out above. In addition, and more importantly, we do not consider information about global market share to be relevant to the question of imports into the United States, or more generally, to analysis of the United States' market for purposes of analysing injury to the United States' LCA industry. Therefore, we base our consideration of the volume of imports on the data presented by the United States.

7.2119 Measured in terms of number of aircraft delivered, imports of Airbus LCA declined significantly during the period for which we have data. However, the total number of aircraft delivered in the United States' market during this period also declined significantly, from 402 in 2001 to less than half that many in 2006. In the context of this decline, we consider that that the information on market share gives a better understanding of the market, representing the volume of imported Airbus LCA relative to domestic consumption.

7.2120 In terms of market share, imports of Airbus LCA increased over the period we are considering, notably from 2001 to 2003, increasing by 14 percentage points during that period, then declined slightly in 2004, increased in 2005, and declined again in 2006, ending with a 43 percent share of the market, 13 percentage points higher than in 2001. The information on market share by value, calculated by list price, we consider to be of little weight, as the parties are agreed that list prices of LCA are not a realistic indicator of the value of the aircraft actually ordered and delivered.⁵⁹⁷² Given that there are only two producers, every gain in market share in the United States' market by Airbus represents a commensurate loss of market share by Boeing. Thus, although the number of imported Airbus LCA delivered into the United States' market declined, the market share represented by those imports increased significantly, from 30 percent in 2001 to 43 percent in 2006, an increase in market share of more than 40 percent over the period. Most of that increase, however, occurred from 2001 to 2003, during which period Airbus' market share increased from 30 percent to 44 percent, or by 47 percent.

⁵⁹⁷⁰ EC, FWS, paras. 2168, 2169-2172.

⁵⁹⁷¹ EC, FWS, paras. 2173-2178.

⁵⁹⁷² We note that the market share by value information presented by the United States shows Airbus' market share increased steadily from 2001 to 2005, from 28 percent to 53 percent, and then declined in 2006 to 49 percent, while Boeing's market share declined overall correspondingly. US, SWS, para 732 table (C). This largely tracks the changes in market share by volume, suggesting, as the US argues, that the proportion of higher and lower value LCA sold by the two companies was relatively similar at any given time. US, FWS, para 734.

BCI deleted, as indicated [***]

Price Effects of Subsidized Imports

7.2121 Article 15.2 of the SCM Agreement requires that, with respect to "the effect of the subsidized imports on prices," consideration must be given to:

"whether there has been a significant price undercutting by the subsidized imports as compared with the price of a like product of the importing Member, or whether the effect of such imports is otherwise to depress prices to a significant degree or to prevent price increases, which otherwise would have occurred, to a significant degree."

7.2122 The United States observes that "the record does not contain comparable LCA pricing data for all U.S. sales," and seeks to demonstrate on the basis of public information that Airbus achieved its growth in the United States' market by undercutting Boeing on price, and that the subsidized imports have depressed or suppressed prices.⁵⁹⁷³ With respect to its allegations of price undercutting, the United States presents anecdotal evidence regarding the sales of Airbus LCA to JetBlue, Frontier and America West Airlines, accounting for nearly 40 percent of Airbus deliveries during 2001-2005. The United States notes that all three of these airlines placed their first orders for Airbus LCA in 1999, and then made substantial additional follow-on orders with Airbus through 2005, which the United States considers to be losses stemming from the earlier sales campaigns, and which are reflected in lost market share to Boeing.⁵⁹⁷⁴ The United States asserts that in each case, Boeing was a strong competitor for the initial order, and that while the actual price that each airline paid to Airbus, taking into account all concessions on the sale, is not available to the United States, publicly available information indicates that Airbus price undercutting played a key role in its winning these customers.⁵⁹⁷⁵ The United States also contends that Boeing lost the "most significant" sales campaigns in the United States' market during 2001-2005 due to price undercutting by Airbus, citing in this regard a statement by the head of Virgin America following the purchase (including options) of nearly 100 LCA that while there were "very compelling proposals" from both manufacturers, the airline was "pleased with the favourable economic terms" received from Airbus.⁵⁹⁷⁶

7.2123 The European Communities does not specifically address the United States' contentions of price undercutting in responding to the United States' claim of injury. Instead, the European Communities "incorporates and references all of the evidence and argument refuting the United States' serious prejudice claims".⁵⁹⁷⁷ Thus, the European Communities apparently considers that the Panel should revisit this information and determine for itself in what respect it is relevant and/or probative as a response to the specific allegations of the United States in the context of injury. We consider this method of presenting its case to be less than satisfactory, as it leaves the Panel uncertain as to the specific arguments the European Communities seeks to make and which evidence it would rely upon in response to the specific arguments and information presented by the United States in support of its claims of price undercutting by subsidized imports in the United States' market. Moreover, in the context of injury, as discussed, we are considering the effects of subsidized imports on the United States' LCA industry, rather than considering the effects of the subsidies themselves, as we are in the context of serious prejudice. Thus, it is not entirely clear how the European Communities' arguments in the context of serious prejudice are apposite to the analysis of injury. Nonetheless, we have reviewed the arguments and information referred to by the European Communities, focussing on the specific sales relied upon by the United States in support of its claim of price undercutting, involving Jet Blue, Frontier, America West, and Virgin America.

BCI deleted, as indicated [***]

7.2124 The European Communities addresses the sales to Jet Blue, Frontier, America West, and Virgin America in the context of its argument that subsidies to A320 model LCA did not cause significant lost sales of Boeing 737 aircraft, and did not have significant price undercutting effects.⁵⁹⁷⁸ The European Communities argues that the United States has the burden of proving in each challenged sales campaign that the magnitude, nature, and age of the subsidies at that point in time caused Airbus A320 family prices to be significantly lower than Boeing's price. The European Communities asserts that a lower winning price does not equal "significant price undercutting" or even "undercutting," and that it is not sufficient if Airbus' winning prices were lower than Boeing's last offer. In the European Communities' view, only if Airbus' winning lower price is significantly lower and that significantly lower price is caused by subsidies that the United States can prevail on its significant lost sales claims.⁵⁹⁷⁹

7.2125 The European Communities argues that "significant price undercutting" involves an objective assessment of whether the subsidies have caused Airbus prices to be significantly lower, and asserts that the United States has not met its burden in this regard.⁵⁹⁸⁰ The European Communities contends that the amount of alleged A320 subsidies in each of these alleged lost sales was *de minimis*, and thus too small to provide Airbus sales personnel with sufficient funds to significantly lower A320 family prices, that in some of these sales, Airbus' winning price was actually higher than Boeing's final offer and that there were other important non-price-related reasons why the company won the particular sale which break the causal link between the effects of subsidies and lower pricing.⁵⁹⁸¹ The European Communities asserts that while price is a relevant consideration, particularly for low-cost carriers, it is only one of the many factors a customer will consider in determining the value of a particular offer, and the decision of each customer on the value of an offer to sell is subjective, based on its own particular needs at the time.⁵⁹⁸² Finally, the European Communities asserts that by 2001-2006, any initial effects from the 1984 launch of the A320 were dissipated by Boeing's 1993 launch of the 737NG, and thus, the effects of the subsidies are attenuated.⁵⁹⁸³

7.2126 The European Communities' arguments in this context are concerned with demonstrating that the subsidies to A320 LCA did not cause the lost sales in question, principally because those subsidies did not cause price undercutting. The European Communities does not dispute that Airbus made these sales, and Boeing did not. However, the United States does not rely on these "lost sales" as evidence of injury. Rather, the United States relies on these sales as evidence of price undercutting by subsidized Airbus LCA. The European Communities argues, specifically with respect to the JetBlue sale in 1999⁵⁹⁸⁴ and the Frontier Airlines sale in 2000,⁵⁹⁸⁵ that Airbus's price was not lower than Boeing's. In both cases, the European Communities' contention is supported by public statements of airline officials, as is the United States' contention to the contrary.

7.2127 The United States argues that in each case, Boeing was a strong competitor for the initial order, which Airbus eventually won. The United States acknowledges that it has no information regarding the actual price that each airline paid to Airbus, taking into account all concessions on the sale, and thus relies on public statements.⁵⁹⁸⁶ For instance, with respect to Frontier Airlines, the United States alleges that Boeing withdrew from the competition in the face of aggressive Airbus

discounting, citing a remark by Boeing's CEO that: "There are places where there is very intense price competition. We've always said we're in business to make money, and if that gets too intense we don't go there – that's what happened at Frontier, for example."⁵⁹⁸⁷ The United States also points to the statement of Frontier Airline's chief financial officer in response to being asked whether Boeing's claims of Airbus's price undercutting were accurate: "We seem to be hearing that from people around us – we're pretty pleased."⁵⁹⁸⁸ The European Communities asserts that Frontier Airlines decided to order the A320 family LCA because of the product advantages of the Airbus aircraft, and not because of price.⁵⁹⁸⁹ It cites in this regard comments of Frontier Airline's chief financial officer concerning improved operating economics and increased customer comfort of the Airbus LCA, and concluding that "both operationally and from a marketing standpoint," the airline was "excited" about the A320.⁵⁹⁹⁰ The European Communities also points to HSBI in support of its contention that Airbus was forced to match Boeing's price in this sales campaign.⁵⁹⁹¹

7.2128 With respect to America West, the United States cites W.A. Franke, the chairman of America West Holdings, who stated, concerning his company's October 1999 Airbus order, that the Airbus aircraft were "very competitively priced."⁵⁹⁹² The European Communities argues that the United States incorrectly asserts that this was America West's first Airbus purchase, noting that America West had already ordered nine A320s and 22 A319s in 1997,⁵⁹⁹³ and contending that this does not demonstrate that low prices were the ultimate reason for America West to buy the A320.

7.2129 Finally, the United States cites JetBlue's CEO David Neeleman as stating that JetBlue "fully expected to choose the {Boeing} 737" until the low A320 price offered by Airbus got its attention.⁵⁹⁹⁴ The European Communities points to different statements by Mr. Neeleman,⁵⁹⁹⁵ indicating that JetBlue ended up paying more than it would have, had it chosen the Boeing 737-80,⁵⁹⁹⁶ and stating "{w}e bought the airplane for no other reasons than because it was the right product."⁵⁹⁹⁷

7.2130 As we have previously discussed in the context of our analysis of price undercutting in the serious prejudice analysis, this type of anecdotal public evidence is of limited value in determining which manufacturer's LCA were lower priced, as opposed to determining which offer the customer considered to be of higher value to it overall.⁵⁹⁹⁸ While the evidence clearly indicates that price was an important element of these sales campaigns, the conclusion posited by the United States, that each airline, based on having monetized all elements of an offer, makes a purchase decision that will

BCI deleted, as indicated [***]

maximize its profitability in operating the LCA purchased does not, in our view, demonstrate that the price of the LCA of the successful manufacturer undercut the competing manufacturer's price.

7.2131 The European Communities also argues that several of these sales [***].⁵⁹⁹⁹ We do not see, and the European Communities makes no attempt to explain, how this responds to the United States' argument that these imports of Airbus LCA entered the United States' market at prices that enabled them to take sales that Boeing, as the only other manufacturer, would have made, thereby increasing Airbus' market share. The [***] were negotiated at the time of the original sales, which we do not understand the European Communities to suggest [***].

7.2132 With regard to its allegations of price depression, the United States asserts that the pricing pressures of the Airbus sales to Jet Blue, Frontier, America West, and Virgin America affected the prices Boeing obtained on other sales in the United States' market. In support of this contention, the United States presented indexed average order prices, net of all discounts and concessions, obtained by Boeing from its United States' sales of B737 aircraft, reproduced in Chart 23 below.⁶⁰⁰⁰ The line in Chart 23 with diamonds indicating the data points represents the average actual prices for orders placed in each year of the 2001-2005 period, indexed to the 2001 price. On the basis of the comparison, the United States asserts that the average price for B737s fell by [***] through 2005. The United States asserts that US pricing for the 737 [***].⁶⁰⁰¹

7.2133 The United States also argues that downward trends in market pricing led to Boeing having to reduce prices on undelivered aircraft for certain major customers. The line in Chart 23 with circles indicating the data points is asserted to show how retroactive price decreases over the period have further lowered Boeing's actual prices.⁶⁰⁰² For example, the United States contends that Boeing was forced to reduce the price of B737s ordered in 2001 by [***] percent before those aircraft were actually delivered, and that adjusted prices for B737 aircraft ordered in 2005 were [***] percent below their original 2001 levels.⁶⁰⁰³ Moreover, to the extent that many of these aircraft have not yet been delivered, they remain subject to possible additional repricing.

7.2134 The line with triangles indicating the data points in Chart 23 shows increases in the US Aircraft Manufacturing Producer Price Index (PPI), which rose by nearly 17 percent from 2001 to 2005.⁶⁰⁰⁴ The United States asserts that, ordinarily, one would expect that producers would over time increase prices generally in line with increases in their costs. The United States asserts that Chart 23 shows, however, that Boeing has been unable to maintain its US pricing for B737s in line with cost increases, demonstrating price suppression.⁶⁰⁰⁵

7.2136 The United States asserts that the data in Charts 23 to 25 demonstrate that Boeing has experienced price depression (actual price decreases) and price suppression (price increases lower than would otherwise occurred) for its United States' LCA sales. The United States maintains that, given the evidence of aggressive Airbus pricing in United States' sales campaigns, the price depression and price suppression shown in these figures are plainly attributable to the subsidized imports.⁶⁰⁰⁹

7.2137 The European Communities does not dispute the information on pricing in the US market presented by the United States. Nor does it present any additional or different information concerning price levels in the US market. Rather, it relies on its arguments that Boeing lost sales in the US market for reasons entirely unrelated to subsidies to Airbus, and that the magnitude and age of any subsidy available to Airbus for use in the relevant sales campaigns would not have resulted in price effects sufficient to make the difference for the customer in choosing between Boeing and Airbus LCA.⁶⁰¹⁰ The European Communities also asserts that many of the orders from United States' airlines to Boeing during the period 2001-2006 did not involve any competitive presence by Airbus. In the

⁶⁰⁰⁶ Exhibit US-444(BCI).

⁶⁰⁰⁷ The United States did not present pricing information for Boeing 767 aircraft, stating that there were insufficient sales of the 767 in the US market during the period to generate data to show average price trends. US, FWS, footnote 933.

⁶⁰¹⁰ EC, FWS, para. 2256-57.

BCI deleted, as indicated [***]

European Communities' view, there is little basis to find that subsidies cause adverse effects where there is not direct competition between Airbus and Boeing.⁶⁰¹¹ In this latter regard, the European Communities does not specify the sales campaigns in the US market in which there was allegedly no competitive presence by Airbus.⁶⁰¹² We have considered the European Communities' view that several of these sales [***] and found it unpersuasive, as it does not directly respond to the United States' contention of price suppression in the context of its injury arguments.⁶⁰¹³

7.2138 The European Communities also argues, in the context of its contention that subsidies to A320 Aircraft did not cause suppression of world market prices for Boeing 737NG LCA, that the magnitude of the subsidies is too small to account for the difference between actual Boeing prices and the prices that would reflect increases in the Aircraft Manufacturers Producer Price Index.⁶⁰¹⁴ Again, assuming this to be the European Communities' argument with respect to price suppression in the US market in the injury context, which is not clear as the European Communities has not specifically asserted it, we do not see that it responds to the question whether the imports of subsidized Airbus LCA caused price suppression, as it focuses exclusively on the effect of the subsidies, which is a different question. As discussed above, we do not consider the magnitude of the subsidies to be a factor which is required to be considered in assessing whether injury is caused by subsidized imports.⁶⁰¹⁵

7.2139 With respect to the question of price depression, the undisputed price information submitted by the United States shows that over the period we examined, prices for Boeing 737NG aircraft increased slightly from 2001 to 2002, then declined precipitously in 2003, increased in 2004 but did not reach the 2002 level, and then declined in 2005 and remained essentially the same in 2006. Post-price levels show the same trends at slightly different levels. Prices for the 747 model LCA in the US market declined from 2001 to 2002, and were markedly lower in 2005, although there were apparently no sales during the intervening years. The picture is slightly different with respect to the 777 model LCA, whose prices were well above the 2001 levels in 2003, and despite being substantially lower in 2005, were nonetheless above the level reported for 2001. Thus, the evidence before us clearly demonstrates price depression, that is, actual declines in price levels, for the 737NG and 747 model LCA, over the entire period being considered, and price depression from 2003 to 2005 for the 777 model LCA.

7.2140 With respect to price suppression, we note that, all else being equal, one might well expect that producers would increase prices in line with increases in costs. The European Communities asserts that the United States Aircraft Manufacturers Producer Price Index ("PPI") is not a reliable measure of the cost increases faced by Boeing, and that the failure of prices of certain aircraft to increase commensurate with that index is completely irrelevant to the question whether there was significant price suppression in the relevant period.⁶⁰¹⁶ We have rejected the European Communities' view in this regard, concluding that, as argued by the United States, as a general matter, one would

⁶⁰¹¹ EC, FWS, para. 2258.

⁶⁰¹² We note that the Annexes to the statement of Christian Scherer, Exhibit EC-14(BCI) present information on what the European Communities considers to be "competitive" and "non-competitive" sales campaigns. However, even if we considered it appropriate for us to review that the information in the Annexes to the Statement of Christian Scherer relied on by the European Communities in this regard in an attempt to determine which campaigns the European Communities might be referring to in this regard, which we do not, we recall that we rejected the European Communities' position with regard to which sales may be considered "competitive". See, para. 7.1722 above. Moreover, those Annexes do not include all of the lost sales referenced by the United States, as they do not contain information for 1999

BCI deleted, as indicated [***]

expect that in any manufacturing industry, all else being equal, prices should tend to increase with production costs, and that the PPI represents a reasonable proxy for cost inflation, and may be used as a reasonable benchmark for the price trends and levels that would have been expected over the period we examined.⁶⁰¹⁷ Thus, to the extent Boeing LCA indexed prices in the US market declined relative to the US Aircraft Manufactures PPI, this suggests that there was price suppression.

7.2141 Comparing the PPI in Charts 23 through 25 with the prices of Boeing 737NG, 747, and 777 LCA in the US market, we consider the information demonstrates that there was a degree of price suppression in respect of prices for all three models. This is most apparent in the case of the 737 prices, where the indexed original order price for 737 LCA increased slightly more than the PPI in 2002, then dropped precipitously in 2003 while the PPI continued to rise, increased more rapidly than the PPI in 2004, and then dropped again in 2005 while the PPI continued to rise, and remained virtually unchanged in 2006. Indexed post-reprice averages show generally the same trends, albeit at slightly different rates of change. With respect to the 747, indexed prices declined from 2001 to 2002, while the PPI rose slightly, and indexed prices were lower again in 2006, while the PPI had continued to rise. For the 777, indexed average prices were approximately 17 percentage points lower in 2005 than in 2003, while the PPI increased by just under 11 percentage points. For these latter two categories of aircraft, the lack of price information in the intervening years makes it difficult to draw conclusions, as it is not clear whether the later price points are anomalous, or demonstrate a trend. Nonetheless, it is clear to us that Boeing's average prices did not keep pace with increased costs as represented by the PPI, and by a substantial degree, supporting the conclusion that there was significant price suppression in the US market prices for LCA.

7.2142 The European Communities argues that "for purposes of the US Article 5(a) claim it is essential to examine the collective effects of any subsidies on Boeing's commercial health", which the European Communities maintains requires a "world-wide assessment" of the effects of the subsidies, and, therefore, the European Communities incorporates all of the arguments and evidence presented to rebut the United States' serious prejudice claims by reference.⁶⁰¹⁸ In the European Communities' view, this evidence is "highly relevant to show the absence of any effects from the largely *de minimis* magnitude and old age of any subsidies {a}nd ... is sufficient to refute any United States' arguments that "subsidized Airbus LCA" cause material injury to Boeing".⁶⁰¹⁹ The European Communities also refers to its discussion of sales campaigns involving United States' customers in the context of its response to the United States' serious prejudice claims to argue that those sales were lost for reasons "entirely unrelated to alleged Airbus subsidies", and asserts that the *de minimis* magnitude and age of subsidies would not have resulted in price effects sufficient to make a difference for an airline choosing between Airbus or Boeing LCA when ordering.⁶⁰²⁰

7.2143 We are in something of a quandary with respect the European Communities' arguments in this regard, as they focus on whether the effect of subsidies to Airbus LCA is serious prejudice to the United States' interests, while we are here considering whether the subsidized imports of Airbus LCA into the United States cause material injury to the United States' LCA industry. Thus, in our view, arguments concerning the age and magnitude of the subsidies, even if accepted as a matter of fact, have little if any relevance to the question whether subsidized imports caused price suppression or depression in the US market. With respect to the sales campaigns, as indicated above, the information provided by the European Communities makes clear that pricing was an important factor in each of those sales, as indeed would be expected, as the cost of aircraft, both in terms of purchase costs and operating costs, is a major component of an airlines' ability to operate, and to operate profitably, but

⁶⁰¹⁷ See, para. 7.1861 above.

BCI deleted, as indicated [***]

that there were a number of elements considered by the customers in choosing between competing offers from Airbus and Boeing in the first instance.

Causal link

7.2144 The United States argues that Airbus' gains in US market share have come at the expense of Boeing, thus linking the subsidized imports to the significant adverse impact on Boeing's LCA production and sales figures. Moreover, the United States contends that the decline in the prices Boeing has been able to command (or failure of those prices to increase commensurate with inflation as indicated by the PPI) for the LCA it has been able to sell in the US market is a function of the pricing of subsidized imports from Airbus. The deterioration in the other relevant indicators of the economic health of Boeing's LCA operations follows, in the United States' view, directly from this loss of market share and loss of revenue. The temporal correlation of this deterioration with Boeing's loss of market share to Airbus, both in the US market and worldwide, is for the United States further evidence of the causal relationship between imports of subsidized Airbus LCA and the injury to the United States' LCA industry. The United States asserts that the Appellate Body has recognized that a temporal correlation between a claimed cause and its effect, while not in itself decisive, is relevant evidence that "one would normally expect" to find in examining the effects of a subsidy.⁶⁰²¹

7.2145 The United States argues that the decline in the financial results of Boeing's LCA business over the period 2001-2005 occurred despite deep cuts in costs and steady gains in productivity. The cost-cutting effort led to a rise in operating income in 2002 over 2001, even though Boeing's sales and capacity utilization were lower in 2002 than they had been in 2001. The cost cutting and efficiency gains continued in succeeding years, but according to the United States could no longer offset the bottom-line impact of declining production, capacity utilization, and sales revenue. In absolute terms, Boeing's income on its LCA operations fell by nearly two-thirds in 2003 and 2004, as compared with 2002. Further, the partial recovery in Boeing's LCA income in 2005 is, according to the United States, due almost entirely to improved productivity, as revenues increased only slightly from their 2004 levels.⁶⁰²²

7.2146 The European Communities relies principally on its argument that the United States' LCA industry, *i.e.*, Boeing, is "in robust financial health, dominant in global and United States' LCA markets, in improved financial health relative to 2004 and 2001 and on a sharply upward trend"⁶⁰²³ to rebut the United States' arguments concerning the effects of subsidized imports on the United States' LCA industry.⁶⁰²⁴ The European Communities asserts that the United States failed to address "non-attribution" factors in its arguments generally and with respect to material injury, and thus improperly attributes negative market effects resulting from the events of 9/11 to subsidized Airbus LCA.⁶⁰²⁵ Finally, the European Communities recalls its assertion that many Boeing orders from United States' airlines did not involve competition from Airbus, and that there is "little basis" to find that the effects of subsidies could cause adverse effects where there is not direct competition.⁶⁰²⁶

7.2147 The European Communities argues that Boeing was particularly badly affected by the events of 9/11 because its orders were predominantly from United States' airlines which were themselves particularly hard hit by the collapse of the travel industry, with four major United States' airlines, Northwest, United, US Airways, and Delta, filing for bankruptcy protection in the subsequent

BCI deleted, as indicated [***]

period.⁶⁰²⁷ Information presented by the European Communities, not disputed by the United States, shows that from 1998 to 2001, United States' airlines accounted for between 47 and 32 percent of Boeing's orders annually, but in 2002 that percentage dropped to 16 percent.⁶⁰²⁸ Orders by United States' airlines fell from 106 in 2001 to 40 in 2002, or by 62 percent.⁶⁰²⁹ The United States disputes the European Communities' argument, noting that Airbus also was present in the US market prior to 2001-2003 and itself was a significant supplier to United States' airlines that entered bankruptcy in this period, noting that 82 of Airbus' 122 United States' deliveries in 2001, or 67 percent, were to Northwest Airlines, United Airlines, and US Airways.⁶⁰³⁰

7.2148 The United States argues that injury resulting from the decline in total demand for LCA following 9/11 – a factor that affected both Airbus and Boeing – is clearly distinguishable from injury resulting from Boeing's loss of market share in the United States to Airbus. The United States asserts that while both Airbus and Boeing were affected by the decline in overall LCA demand in the US market, through the downturn, Airbus increased its market share and has since maintained that increased market share, largely through deliveries to new customers such as JetBlue, Frontier Airlines, and Virgin America, which it gained in head-to-head campaigns against Boeing from 1999 onwards.⁶⁰³¹

7.2149 It is clear that both Airbus and Boeing were badly affected by the collapse of the LCA market following the events of 9/11. However, we agree with the European Communities that the US market was particularly badly affected, and Boeing was particularly hard hit in the US market, resulting in the significant decline in its market share from 2001 to 2003. In this regard, we note that Airbus principally gained market share in the early part of the period we are considering, with its market share increasing by 14 percentage points during this same period, from 30 percent in 2001 to 44 percent in 2003.

7.2150 With respect to pricing, as noted above, the European Communities does not dispute the United States' information showing declines in indexed prices over the period 2001-2006 for Boeing 737NG, 747 and 777 aircraft. Nor does the European Communities dispute that in 2005, and in 2006 for the 737NG aircraft, the Boeing indexed price was substantially below the Aircraft Manufacturers PPI. The European Communities does, however, contend that these declines were not caused by subsidies to A320 LCA, and does not agree that as a matter of fact, prices for certain LCA have not increased in line with inflation.⁶⁰³²

7.2151 The United States does not explicitly rely on lost sales in support of its claim of material injury, although it does assert that sales lost to Airbus in 1999 and between 2001 and 2005 demonstrate price undercutting. As noted above, the European Communities seeks to rebut the United States' arguments by incorporating by reference its argument asserting a lack of price suppression caused by subsidies to A320 LCA, an argument which we find difficult to evaluate in the context of an evaluation of whether subsidized imports caused material injury. Nonetheless, for the same reasons as discussed in the context of our analysis of price undercutting for Article 6.3 (c), we do not consider that the anecdotal information relied on by the United States is sufficient to support its assertion of price undercutting, particularly in light of the conflicting anecdotal information submitted by the EC.⁶⁰³³ The information also indicates that while price is clearly an important factor in LCA

BCI deleted, as indicated [***]

sales, it is not in all cases determinative, which undermines the United States' position with respect to price undercutting, and thus with respect to the price suppressive and depressive effect of subsidized imports.

7.2152 With respect to alleged other causes of injury, the United States recognizes that much of the decline in the condition of Boeing's LCA operations may be attributed to the post-2000 drop in LCA demand, particularly in the United States. Nonetheless, the United States argues that any injury resulting from this decreased demand is clearly distinguishable from the alleged injury caused by subsidized imports of Airbus LCA. According to the United States, the data concerning LCA deliveries and market share show that if Boeing's share by volume of the US market had held constant at its 2001 level during 2002-2005, Boeing would have delivered 23 percent more aircraft than it actually did over the period.⁶⁰³⁴ Likewise, the United States contends that if Boeing's share by value of the US market had held constant at its 2001 level, its United States' sales would have been 54 percent greater in 2005. To this, the United States contends, must be added the negative price impact of Airbus' sales on the aircraft that Boeing did deliver during this period. Thus, the United States argues that the direct impact of subsidized Airbus imports in the US market on Boeing's operating performance is "material" by any reasonable standard.⁶⁰³⁵

7.2153 The United States also argues that improvements in Boeing's financial condition in 2006, relied upon by the European Communities to argue that there is no present material injury, are irrelevant, as the relevant question for an adverse effects claim under the DSU and the SCM Agreement is whether the European Communities was in breach of its obligation under Article 5(a) when the Panel was established, and thus that the Panel must make its determination as of 2005. As we have discussed, we do not agree, and consider the period 2001-2006 is appropriate for purposes of determining whether subsidized imports of Airbus LCA cause present material injury to the United States' industry producing LCA. The United States argues that improvement in the financial condition of Boeing must be placed in the context of unusually high demand in 2005 and 2006 in this cyclical industry. According to the United States, Boeing remained competitive despite its loss of market share in its home market and depressed prices, particularly in the downturn, by cutting costs and improving productivity. With respect to employment, the United States contends that despite the recovery in the financial health of Boeing, most of the jobs that were lost in the downturn had not returned to the industry.⁶⁰³⁶ Indeed, the United States argues that the events of 2006 demonstrate how significantly relief from subsidized competition improves the fortunes of the United States' LCA industry. The United States points out that in 2006, Airbus could not effectively market either its A380 (because of production problems) or its A350 (which had to be redesigned), and asserts that what 2006 shows is how the absence of a subsidized and aggressively marketed new Airbus aircraft improves the fortunes of the United States' LCA industry – and, by contrast, how significant the adverse effects of LA/MSF and the other Airbus subsidies have been.⁶⁰³⁷

7.2154 In this respect, the United States' argument suggests that, but for the presence of subsidized Airbus imports in the US market, and the prices of those imports, during the period 2001 – 2005, and continuing in 2006, Boeing would have been in a materially better position in terms of its performance, and thus considers that the subsidized imports caused material injury to Boeing. We have serious doubts about the appropriateness of such an analysis in the context of this case. In a duopoly market, with one supplier of subsidized imports and one domestic producer, it could be argued that subsidized imports will always cause material injury, because in the absence of such imports, the domestic industry would capture the entire market.

⁶⁰³⁴ US, FWS, para 748.

⁶⁰³⁵ US, FWS, para. 748.

⁶⁰³⁶ US, SWS, para. 737.

⁶⁰³⁷ US, SWS, para. 738.

BCI deleted, as indicated [***]

7.2155 In response to a question from the Panel raising this proposition, the United States acknowledged that in such a case, "the legal standard for determining material injury is the same as it would be in any other case". The United States went on to assert that its demonstration on material injury did not depend on the Panel finding that the United States' industry would have supplied the entire market in the absence of subsidized imports.⁶⁰³⁸ Rather, the United States argued that relevant indicators such as production, revenues, operating margins, and employment levels demonstrated material injury. The United States further contended that (1) much of Boeing's loss of market share could be traced to sales lost to Airbus during and before the period 2001-2005, and (2) price declines, much of which can be traced to price undercutting by Airbus, were together a not insignificant cause of that injury, such that the Panel need not consider the proposition.⁶⁰³⁹

7.2156 The European Communities agreed that the Panel need not decide whether the proposition in the Panel's question is valid, but for different reasons.⁶⁰⁴⁰ In the European Communities' view, the proposition is neither legally correct, nor appropriate in the factual circumstances of this dispute.⁶⁰⁴¹ The European Communities asserts that in a two-step analysis, it is possible for a domestic industry to face competition from subsidized imports and still not be in a condition that constitutes "material injury". Moreover, the European Communities asserts that the possibility that Boeing might have more revenue in the absence of subsidized imports does not prove causation.⁶⁰⁴²

7.2157 Having found that the United States' domestic industry is not in a condition that can be considered "material injury", we consider that we need not resolve the question of the validity of the proposition we raised with the parties. We note, however, that, as suggested by our conclusion, we agree with the view that it is possible for a domestic industry to compete with subsidized imports and not be materially injured. That is, in our view, what the facts show in this case – following the collapse of the LCA market after the events of 9/11, Boeing has managed to successfully compete with subsidized imports and better its performance to the extent that we cannot conclude that it is materially injured as of the end of the period we examined.

(iii) Threat of Material Injury

7.2158 Article 15.7 of the SCM Agreement requires that a determination of threat of material injury shall be "based on facts and not merely on allegation, conjecture, or remote possibility." Moreover, it establishes that "the change in circumstances which would create a situation in which the subsidy would cause injury must be clearly foreseen and imminent", and sets out the following series of factors which should be considered in making the determination:

(i) nature of the subsidy or subsidies in questions and the trade effects likely to arise therefrom;

(ii) a significant rate of increase of dumped imports into the domestic market indicating the likelihood of substantially increased importation;

(iii) sufficient freely disposable, or an imminent, substantial increase in, capacity of the exporter indicating the likelihood of substantially increased subsidized exports to the importing Member's market, taking into account the availability of other export markets to absorb any additional exports;

BCI deleted, as indicated [***]

(iv) whether imports are entering at prices that will have a significant depressing or suppressing effect on domestic prices, and would likely increase demand for further imports; and

(v) inventories of the product being investigated."

7.2159 As we have noted, in the context of our assessment of injury, including threat of material injury, we consider our role in this dispute to be essentially similar to that of an investigating authority in a trade remedy investigation. Previous panels have considered the meaning of Article 15.7 in reviewing the determinations of investigating authorities concerning threat of material injury in countervailing duty determinations. We consider those reports to be relevant guidance for our analysis in this dispute. In addition, given that the provisions of Article 3.7 of the AD Agreement parallel those of Article 15.7 of the SCM Agreement, with the exception of Article 15.7(i), and for the same reasons as discussed above,⁶⁰⁴³ we also consider reports addressing Article 3.7 of the AD Agreement to be equally instructive.

7.2160 The panel in *Mexico-HFCS* concluded that Article 3.7 of the AD Agreement sets forth a series of factors that must be considered in each case in assessing threat of material injury, but recognizes that factors other than those set out in Article 3.7 itself will necessarily be relevant to the determination.⁶⁰⁴⁴ The panel went on to conclude that "{a} determination that material injury would occur cannot, in our view, be made solely on the basis of consideration of the Article 3.7 factors. Rather, it must include consideration of the likely impact of further dumped imports on the domestic industry."⁶⁰⁴⁵ This, the panel observed, was because:

" the Article 3.7 factors do not relate to the consideration of the impact of the dumped imports on the domestic industry. The Article 3.7 factors relate specifically to the questions of the likelihood of increased imports (based on the rate of increase of imports, the capacity of exporters to increase exports, and the availability of other export markets), the effects of imports on future prices and likely future demand for imports, and inventories. They are not, in themselves, relevant to a decision concerning what the "consequent impact" of continued dumped imports on the domestic industry is likely to be. However, it is precisely this latter question – whether the "consequent impact" of continued dumped imports is likely to be material injury to the domestic industry - which must be answered in a threat of material injury analysis."⁶⁰⁴⁶

The panel concluded that "consideration of the Article 3.4 factors in examining the consequent impact of imports is required in a case involving threat of injury in order to make a determination consistent with the requirements of Articles 3.1 and 3.7".⁶⁰⁴⁷

7.2161 Thus, the panel concluded that Article 3.4 of the AD Agreement, which is mandatory and requires examination of the listed injury factors in every case, also applies in consideration of threat of

BCI deleted, as indicated [***]

material injury, along with any other relevant factors, in order to make a determination consistent with the requirements of Articles 3.1 and 3.7.⁶⁰⁴⁸ The panel opined that

"an investigating authority cannot come to a reasoned conclusion, based on an unbiased and objective evaluation of the facts, without taking into account the Article 3.4 factors relating to the impact of imports on the domestic industry. These factors all relate to an evaluation of the general condition and operations of the domestic industry – sales, profits, output, market share, productivity, return on investments, utilization of capacity, factors affecting domestic prices, cash flow, inventories, employment, wages, growth, ability to raise capital. Consideration of these factors is, in our view, necessary in order to establish a background against which the investigating authority can evaluate whether imminent further dumped imports will affect the industry's condition in such a manner that material injury would occur in the absence of protective action, as required by Article 3.7. ... Such an analysis would be necessary in order to explain the present, and anticipated future, condition of the domestic industry sufficiently to support the conclusion that 'material injury would occur', as provided in Article 3.7, unless protective action is taken."⁶⁰⁴⁹

Similarly, in this case, our evaluation of the condition of the United States' industry producing LCA provides a background for our consideration of the Article 15.7 factors, and the likely effect of future subsidized imports on that industry.

7.2162 In *US – Lumber VI*, the panel stated that "consideration" of the factors listed in Article 15.7 must "go beyond a mere recitation of the facts in question, and put them into context. However, the investigating authorities are not required by Articles 3.7 and 15.7 to make an explicit "finding" or "determination" with respect to the factors considered".⁶⁰⁵⁰ The panel went on to note that, unlike in consideration of the injury factors listed in Articles 15.4 of the SCM Agreement and 3.4 of the AD Agreement,

"consideration of each of the factors listed in Articles 3.7 and 15.7 is not mandatory. Consequently, a failure to consider a factor at all, or a failure to adequately consider, a particular factor would not necessarily demonstrate a violation of the provisions. Whether a violation existed would depend on the particular facts of the case, in light of the totality of the factors considered and the explanations given."⁶⁰⁵¹

In this case, we have information and arguments concerning all of the Article 15.7 factors, and we address them below.

7.2163 With respect to the nature of threat of injury as opposed to injury, and the possibility of the two existing in the same case, we note that in the context of safeguards, "serious injury" is defined as "a significant overall impairment in the position of a domestic industry", and threat of serious injury is defined as serious injury that is clearly imminent".⁶⁰⁵² In addressing the question whether a discrete determination of either serious injury or threat of serious injury, but not both, must be made by the investigating authorities in a safeguards investigation, the Appellate Body noted:

⁶⁰⁴⁸ Panel Report, *Mexico – Corn Syrup*, paras. 7.127 – 128.

⁶⁰⁴⁹ *Id.*, paras. 7.132 – 133.

⁶⁰⁵⁰ Panel Report, *US – Softwood Lumber VI*, para. 7.67 (footnotes omitted, citing generally Panel Report, *Thailand H-Beams* and paras. 7.170 and 7.161).

⁶⁰⁵¹ Panel Report, *US – Softwood Lumber VI*, para. 7.68 (footnote omitted).

⁶⁰⁵² Agreement on Safeguards, Article 4.1 (a) and (b).

BCI deleted, as indicated [***]

"these two definitions reflect the reality of how injury occurs to a domestic industry. In the sequence of events facing a domestic industry, it is fair to assume that, often, there is a continuous progression of injurious effects eventually rising and culminating in what can be determined to be "serious injury". Serious injury does not generally occur suddenly. Present serious injury is often preceded in time by an injury that threatens clearly and imminently to become serious injury."⁶⁰⁵³

While the SCM Agreement does not contain a similar definition distinguishing present material injury and threat of material injury, the relationship between the concepts is in our view the same.

7.2164 The European Communities argues that the United States has not demonstrated a "clearly foreseen and imminent" "change in circumstances which would create a situation in which" the alleged subsidies would cause material injury to Boeing. According to the European Communities, the United States faces a "heavy burden" to demonstrate new or changed circumstances that would change the "improving financial strength and increasing market dominance" of Boeing in 2005-2006 to material injury.⁶⁰⁵⁴ This raises a question concerning the consideration of the "the change in circumstances which would create a situation in which the subsidy would cause injury" referred to in the chapeau of Article 15.7, and its import for our analysis.

7.2165 On this issue, the views of the panel in *US-Softwood Lumber VI*, are particularly apposite. In that case, the complaining Member, Canada, argued before the panel that Article 15.7 of the SCM Agreement requires that the "change in circumstances" from the non-injurious period of investigation that will create a situation in which the dumping or subsidy will cause injury must be "clearly foreseen and imminent", calling this the "logical predicate" for an affirmative finding of threat of material injury, and that this change in circumstances must be clearly anticipated and on the brink of happening. Canada asserted that the investigating authority in that case had failed to explain how the evidence provided a basis for a conclusion that the situation would change such that imports that did **not** cause injury to the domestic industry during the period of investigation **would** cause material injury in the imminent future.

7.2166 In its report, the panel considered the meaning of the "change of circumstances" element of Article 15.7, noting that it was "not a model of clarity".⁶⁰⁵⁵ The Panel observed that the provision seemed, on its face, to require that some "'change of circumstances' must be clearly foreseen and imminent, and that it is this change of circumstances that would create a situation in which injury would occur."⁶⁰⁵⁶ The panel referred to footnote 10 to the parallel provision, Article 3.7, in the AD Agreement, which provides an example of what might constitute a change in circumstances: "One example, though not an exclusive one, is that there is convincing reason to believe that there will be, in the near future, substantially increased importation of the product at dumped prices". That example, however, is effectively repeated in Article 15.7(ii), which sets out "likelihood of increased imports" as a factor to be considered. The panel noted that "both the change of circumstances, and further dumped or subsidized imports, must be imminent, and the likelihood of increased imports is both a relevant change of circumstances and a factor to be considered in determining the existence of threat."⁶⁰⁵⁷ The panel concluded that:

⁶⁰⁵³ Appellate Body Report, *United States – Definitive Safeguard Measures on Imports of Circular Welded Carbon Quality Line Pipe from Korea ("US – Line Pipe")*, WT/DS202/AB/R, adopted 8 March 2002, DSR 2002:IV, 1403, para. 168.

⁶⁰⁵⁶ *Id.*

⁶⁰⁵⁷ Panel Report, *US-Softwood Lumber VI*, para. 7.54.

BCI deleted, as indicated [***]

"the relevant 'change in circumstances' referred to in Articles 3.7 and 15.7 is one element to be considered in making a determination of threat of material injury. However, we can find no support for the conclusion that such a change in circumstances must be identified as a single or specific event. Rather, in our view, the change in circumstances that would give rise to a situation in which injury would occur encompasses a single event, or a series of events, or developments in the situation of the industry, and/or concerning the dumped or subsidized imports, which lead to the conclusion that injury which has not yet occurred can be predicted to occur imminently."⁶⁰⁵⁸

7.2167 Overall, based on these reports, we understand that an industry that is not materially injured, and whose performance is robust and improving, is less vulnerable to a deterioration of its performance which might be considered material injury in the near future. Conversely, an industry whose performance, while not reflecting present material injury, is generally weak or declining, would be more vulnerable to such deterioration, and the likelihood of its being materially injured in the near future would be greater. Of course, whether any such future material injury would be caused by subsidized imports must also be considered, and consideration of the Article 15.7 factors is pertinent to this aspect of the analysis.

7.2168 We have concluded, based on our consideration of information concerning relevant Article 15.4 factors, that the United States' industry producing LCA is not presently materially injured. Based on that same information, and in particular considering the trends over the most recent period and information concerning future trends in deliveries of Boeing LCA presented by the European Communities, we see no indication that the condition of the United States' industry is likely to deteriorate in the near future to a degree that would result in it experiencing material injury. The information before us shows improvements in Boeing's performance in 2006 over 2005, and the significant number of orders booked in 2005 and 2006 suggests that Boeing's performance will continue to be strong, if not even further improved. Thus, we do not consider the United States' industry to be vulnerable to injury caused by subsidized imports in the near future.

7.2169 Having established the framework for and context of our analysis, we proceed to review the evidence on the Article 15.7 factors, which, as mentioned, concern primarily the likely volumes and prices of future imports.

Nature and effects of the subsidies

7.2170 The United States argues that the European Communities and the Airbus governments tailored the subsidies at issue so as to give Airbus a structural advantage over Boeing. According to the United States, LA/MSF and the other subsidies in dispute transfer much of the cost and risk of LCA development from Airbus to the European Communities and the Airbus governments, and the continued effects of these subsidies give Airbus flexibility that it would not otherwise have to launch new aircraft and price all models to gain market share.⁶⁰⁵⁹ The United States asserts that subsidies already bestowed, and already committed for the A350, as well as further anticipated subsidies, perpetuate Airbus's structural advantages in the United States' LCA market, and give Airbus the financial flexibility to capture additional orders at aggressively discounted prices, while absorbing loss-making A380 sales and designing the A350.⁶⁰⁶⁰

⁶⁰⁵⁸ Panel Report, *US - Softwood Lumber VI*, para. 7.57.

⁶⁰⁵⁹ US, FWS, para. 755.

⁶⁰⁶⁰ US, FWS, para. 756.

BCI deleted, as indicated [***]

7.2171 We have earlier in this report found that the United States has failed to establish that as of the establishment of this Panel, the Airbus governments had committed to provide Airbus with LA/MSF for the A350 on unsecured, backloaded, success-dependent and below-market interest rate repayment terms. On the other hand, we have also concluded that the subsidies that we have found to exist have had the effect of enabling Airbus to launch new models of LCA that it would otherwise not have been able to, or at least not at the time that it did. Moreover, we have concluded that LA/MSF granted with respect to each successive model of Airbus LCA has effects with respect to both later- and previously-launched models. The most recently launched Airbus LCA, the A380, was just entering the market at the end of the period we examined, and all earlier models were still being manufactured and sold.⁶⁰⁶¹ Thus, we consider that, apart from subsidized LA/MSF to the A350, for which the United States has not established a commitment that it will be provided, imports of Airbus LCA in the near future will continue to be subsidized. However, there is nothing to suggest that there is likely to be an increase in subsidization in the near future, as almost all of the subsidies with respect to currently-marketed models of Airbus LCA have already been provided.⁶⁰⁶² Nor is there anything in the nature of the subsidies we have found to exist which suggests that there is likely to be an increase in subsidized imports in the near future as a consequence of the subsidies themselves.

7.2172 The European Communities contends that there are no trade effects likely to arise from the measures in dispute that are likely to threaten material injury to Boeing. In this regard, the European Communities refers to its argument that Boeing is not suffering present material injury.⁶⁰⁶³ Again, by referencing other portions of its argument, the European Communities leaves the Panel in something of a quandary to determine what aspects of its argument are to be considered. It would appear that the European Communities refers in this respect to its arguments concerning "potential" declines or negative effects on Boeing in its discussion of the Article 15.4 factors. It is not entirely clear how this relates to the nature and effect of the subsidies in dispute, as these portions of the European Communities' arguments relate to its view that improvements in Boeing's performance, as reflected in the Article 15.4 factors, are likely to continue. While this may support the view that Boeing will not be materially injured in the future, it is difficult to see how it relates to the nature and effect of the subsidies.

Rate of increase of subsidized imports

7.2173 The United States argues that Airbus' market share in the United States has significantly increased in recent years, and asserts that the strength of its firm order backlog for new LCA deliveries confirms that the volume of imports will remain high for the foreseeable future.⁶⁰⁶⁴ We have concluded that order data is relevant in assessing threat of injury, as it is a good, albeit not a perfect predictor of future deliveries, and thus can serve as a basis for assessing likely trends in future imports.

7.2174 The European Communities states that imports into the United States' LCA market increased moderately in absolute terms during when the market improved from 2004 to 2005, but declined in 2006 and continue to lose market share to domestic production.⁶⁰⁶⁵ The European Communities

⁶⁰⁶¹ Production of Airbus' first LCA models, the A300 and A310, ceased in 2007.

⁶⁰⁶² Of course, it is possible that new or additional subsidies will be granted. However, these would presumably benefit existing models of Airbus LCA. If they were with respect to a newly launched model, imports of such a new LCA would not be likely in the near future, given the development time necessary for a new model.

⁶⁰⁶³ EC, FWS, para. 2239.

⁶⁰⁶⁴ US, FWS, para. 757.

⁶⁰⁶⁵ EC, FWS, para 2240. The data on imports in terms of deliveries presented by the United States shows that imports of Airbus LCA were the same in 2004 as in 2003, increased in 2005, and decreased in 2006, albeit to a level just above that for 2005. Market share followed the same trend. *See*, paragraph 7.2113 above.

BCI deleted, as indicated [***]

reiterates that Airbus' share of orders in the US market decreased substantially between 2004 and 2006, and between 2001-2006. The European Communities contends that as United States' LCA markets rebound from the 2002-2004 recession and grow, Airbus is capturing an ever-declining share of those markets.⁶⁰⁶⁶

7.2175 The United States presents information concerning orders for LCA, based on sales allegedly lost during the period 2001-2006. That information indicates a total of 198 firm orders for Airbus LCA unfilled as of August 2006, specifically from JetBlue (89), U.S. Airways (49), America West (26), Virgin America (19), and Frontier (15).⁶⁰⁶⁷ The United States argues that these scheduled deliveries are already contracted for and are therefore "clearly foreseen and imminent."⁶⁰⁶⁸ In addition, the United States notes that 20 A380s and 41 A350s had been ordered by United States' customers,⁶⁰⁶⁹ and asserts that more such orders can be anticipated in the near future as these programs advance. In addition, the United States argues that once an airline has chosen one LCA manufacturer over the other, it tends to make additional follow-on orders from that same manufacturer in order to enhance its efficiency and minimize its operating costs, and thus that Airbus' increased share of the US market places it in a stronger position to win additional follow-on sales and capture a higher share of orders and deliveries in future years.

7.2176 The European Communities has also submitted information on United States' orders of Boeing and Airbus LCA for the period 2001 to 2006. The European Communities' data, following the principles on which it has structured its arguments, is presented separately for each of four categories of LCA. We have compiled the information presented by the European Communities in the following chart:

⁶⁰⁶⁶ EC, FWS, para. 2240.

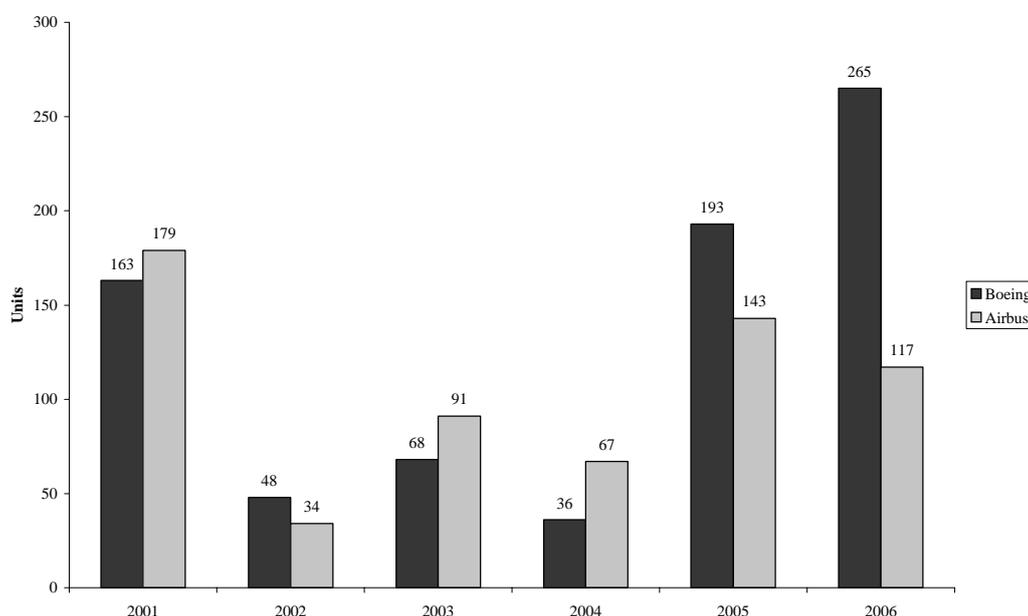

⁶⁰⁶⁷ US, FWS, para. 758, referencing Airclaims CASE database, data query as of August 14, 2006.

⁶⁰⁶⁸ SCM Agreement, Art. 15.7.

BCI deleted, as indicated [***]

Chart 26: United States' orders of Airbus and Boeing LCA, 2001-2006⁶⁰⁷⁰

7.2177 We note that there are certain constraints in considering order information with respect to likely trends in future imports. The Airclaims database (on which both parties rely for information concerning orders and deliveries of LCA) records orders made by leasing companies, which account for a significant percentage of LCA sales, on the basis of the location of the leasing company, while deliveries are recorded on the basis of the location of the operating airline to which the aircraft is ultimately delivered.⁶⁰⁷¹ Thus, an order by a leasing company in the United States for delivery to an airline in, for example, the United Kingdom, will be reported as a US order, and a UK delivery.⁶⁰⁷² Our review of the information from which this chart is derived, Exhibit EC-21, bears out this concern in the context of evaluating likely future imports into the United States. Thus, for example, Exhibit EC-21 indicates that of the 20 total Airbus A380 LCA reported by the European Communities as United States' orders for the period 2001 – 2006, 10 were ordered by a leasing company, ILFC, in 2001.⁶⁰⁷³ The first scheduled delivery date for any of those aircraft is May 2010, with further deliveries scheduled through 2015. The "operator country" for two of the aircraft ordered by ILFC is listed as the United Arab Emirates, suggesting that at least those two aircraft will not, in fact, be imported into the United States. The "operator" for the remaining 8 aircraft ordered by ILFC is listed as ILFC. Of course, ILFC is not an airline and does not actually operate aircraft. Thus, this information gives no indication as to the country to which those 8 aircraft will eventually be delivered. Similar concerns arise with respect to the order information for other models of LCA, and thus with respect to the data as a whole.

7.2178 Overall, while the information on orders does demonstrate that there will continue to be imports of subsidized Airbus LCA into the US market, these types of concerns make this information a less than reliable basis on which to draw conclusions concerning an imminent increase in subsidized

⁶⁰⁷⁰ Compilation of information presented in tabular form, EC, FWS, paras. 2169-2172. We note that this information is based on a query to the Airclaims CASE database as of 19 January 2007, submitted as Exhibit EC-21.

⁶⁰⁷¹ See, Exhibit EC-21.

⁶⁰⁷³ The other 10 were ordered by UPS, a freight/cargo carrier, in 2005.

BCI deleted, as indicated [***]

imports. In addition, it is clear that even firm orders do not inevitably result in deliveries, as orders are sometimes cancelled, for instance by an airline that goes bankrupt, and delivery is sometimes subject to unanticipated delays as a result of production problems, or re-negotiation of terms with customers. Moreover, the time frame for the deliveries of these booked orders is often significantly longer than could reasonably be deemed "imminent". While the notion of "imminent" in the context of the LCA industry, with its long lead times for orders and extended delivery schedules, may well be longer than in other industries with a shorter interval between order, production and delivery, we do not consider that orders for deliveries of LCA that will not occur within two or three years can reasonably be considered "imminent", even if those aircraft are eventually delivered to the United States. Lastly, merely because an order is booked as a US order does not mean that the aircraft involved will actually be delivered to a customer in the United States, and thus it remains unclear whether that order actually represents a future import. While the impact of this latter factor is incalculable, given the significant number of LCA purchased by leasing companies, we consider it likely to be significant. Thus, we do not consider that this information demonstrates a likelihood of substantially increased importation in the near future, although it clearly demonstrates that there will continue to be a substantial number of subsidized imports of Airbus LCA.

Additional capacity

7.2179 The United States argues that Airbus is increasing its LCA capacity by adding two entirely new LCA production lines for the A380 and the A350, a substantial number of which aircraft have already been ordered by United States' customers. According to the United States, Airbus has also announced that it is increasing its capacity to produce its other aircraft and is considering even further increases. The United States considers that this makes it clear that Airbus is substantially increasing its LCA production capacity, and argues that at least some of this capacity can be expected to be available to supply additional subsidized LCA to the US market, even taking into account expected growth of Airbus LCA sales in other markets as well.⁶⁰⁷⁴

7.2180 The European Communities does not dispute the United States' evidence concerning Airbus' capacity, arguing only that any capacity added to Airbus' existing capacity could not threaten material injury to Boeing, given Boeing's dominant and improving position in the LCA market.⁶⁰⁷⁵ The European Communities notes that deliveries of the A380 will begin in 2007, while deliveries of the A350 will not begin before 2013-2014.⁶⁰⁷⁶ For the European Communities, the increase in orders booked by Boeing in 2005 and 2006 "virtually guarantees" that Boeing will dominate deliveries to United States' customers for the ensuing three years, even given the likelihood of eventual increases in Airbus deliveries to the US market as a result of increased production capacity.⁶⁰⁷⁷

7.2181 It seems clear to us that, with the introduction of new model Airbus LCA, manufactured in part in newly added production lines, the capacity of Airbus to deliver LCA, including the US market, will increase. Of course, whether that increase translates to increases in imports is a different question. The order information does not suggest that recently-added additional capacity to produce A380 aircraft will have a significant imminent effect on imports, and any increases as a result of increased capacity to produce A350 aircraft would seem even more remote in time.⁶⁰⁷⁸ Thus, while

⁶⁰⁷⁴ US, FWS, para. 760.

⁶⁰⁷⁵ EC, FWS, paras. 2241.

⁶⁰⁷⁶ EC, FWS, para. 2242-43.

⁶⁰⁷⁷ EC, FWS, para. 2243.

⁶⁰⁷⁸ Although we have concluded that the United States has failed to demonstrate a commitment to grant subsidized LA/MSF with respect to the A350, we have found that the spillover effects of LA/MSF subsidies to particular models of Airbus LCA benefit other earlier and subsequent models, and, in addition, a number of the subsidies we have found to exist benefit Airbus LCA as a whole.

BCI deleted, as indicated [***]

increased capacity does suggest an eventual increase in production of Airbus LCA, we cannot conclude that it supports finding an imminent increase in imports into the United States.

Continued price depression and suppression

7.2182 The United States asserts that available data indicate that Airbus has systematically priced its aircraft below Boeing's prices, particularly in seeking initial customers for new aircraft, trying to capture a Boeing account, or trying to win business at a new airline. According to the United States, recent Airbus sales, both in the US market and elsewhere, have driven global LCA prices to new lows. Each new campaign is conducted in the prevailing price environment, and the United States argues that United States' LCA prices are therefore likely to remain depressed or suppressed for the foreseeable future.⁶⁰⁷⁹

7.2183 The European Communities considers that the United States has failed to establish that imports are suppressing or depressing prices, and would likely increase demand for further imports. The European Communities argues that the United States has failed to demonstrate price suppression or depression in the global market, and in view of the lack of any link between subsidies and any price effects, there is no basis for a conclusion that there will be future price effects.⁶⁰⁸⁰

7.2184 It seems clear that prices in the US market showed declines and suppression during the period we are considering. However, given the complexities of pricing in the LCA market, where each sales campaign involves considerable negotiation between customer and manufacturer, we find it difficult to draw any conclusions about likely future pricing, particularly given the evidence of improvements in the market and Boeing's order backlog. Thus, we conclude that the information before us does not demonstrate that subsidized imports are likely to have price depressing or suppressing effects in the near future.

Inventories

7.2185 The parties are agreed that LCA producers rarely keep inventories, and therefore this factor does not suggest any likelihood that imports of subsidized Airbus LCA will increase in the near future.⁶⁰⁸¹

(iv) *Conclusion*

7.2186 We have concluded, based on our assessment of Boeing's operating performance over the period examined, that it is not presently materially injured. Moreover, the improvements in Boeing's performance toward the end of the period we examined appear likely to continue in the near future and result in continued strong and even improved performance, particularly in light of strong demand in the market, and the surge in orders obtained by Boeing in 2005 and 2006. In addition, Boeing's improved efficiency and productivity over the period of 2001-2005, as well as increased out-sourcing of various operations, also supports the view that its strong performance as of 2006 is likely to continue into the near future. Lead times for LCA production and deliveries are long, and while it is clear that Airbus has, and will continue to have, increased capacity to deliver subsidized LCA to the US market, there is nothing in the information before us to suggest that any significant increases in such imports are likely to occur in the near future. Moreover, while indexed price levels declined during the period 2001-2005, and in 2006 for the 737NG, and prices in the US market were suppressed with respect to the US Aircraft Manufacturers' PPI, in view of the many factors that

⁶⁰⁷⁹ US, FWS, para. 762.
⁶⁰⁸⁰ EC, FWS, para. 2244.
⁶⁰⁸¹ See footnote 5912.

BCI deleted, as indicated [***]

determine LCA pricing and the increased demand in the market, as well as the significant number of orders Boeing obtained in 2005 and 2006, we cannot conclude that subsidized imports are likely to have price depressing or suppressing effects in the near future. On balance, therefore, and considering all the evidence and arguments before us, we conclude that the United States has not demonstrated a threat of material injury to the United States' LCA industry.

VIII. CONCLUSIONS AND RECOMMENDATION

A. CONCLUSIONS

8.1 In light of the findings set out in the foregoing sections of our Report, we conclude that the United States *has established* the following concerning the existence of subsidies:

- (a) concerning the provision of LA/MSF;
 - (i) that each of the challenged LA/MSF measures constitutes a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement, and
 - (ii) that the German, Spanish and UK A380 LA/MSF measures are subsidies contingent in fact upon anticipated export performance, and therefore prohibited export subsidies within the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement.
- (b) concerning the provision of infrastructure and infrastructure-related grants;
 - (i) that the provision of the Mühlenberger Loch site constitutes a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement,
 - (ii) that the provision of the lengthened Bremen Airport Runway constitutes a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement,
 - (iii) that the provision of the ZAC Aéroconstellation site and associated EIG facilities constitutes a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement, and
 - (iv) that challenged grants provided by authorities in Germany and Spain for the construction of manufacturing and assembly facilities in Nordenham, Germany, and Sevilla, La Rinconada, Toledo, Puerto de Santa Maria and Puerto Real, Spain, and by the governments of Andalusia and Castilla-La Mancha to Airbus in Puerto Real, Sevilla, and Illescas (Toledo) are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement.
- (c) concerning the German government's transfer of its ownership share in Deutsche Airbus to the Daimler Group;
 - (i) that the 1989 acquisition by KfW of a 20 percent equity interest in Deutsche Airbus is a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement, and

BCI deleted, as indicated [***]

- (ii) that the 1992 transfer by KfW of its 20 percent equity interest in Deutsche Airbus to MBB is a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement.
- (d) concerning the equity infusions that the French government and Crédit Lyonnais provided to Aérospatiale;
 - (i) that the 1987, 1988, 1992 and 1994 equity infusions to Aérospatiale are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement, and
 - (ii) that the 1998 transfer by the French government of its 45.76 percent interest in Dassault Aviation to Aérospatiale is a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement.
- (e) concerning the research and technological development funding provided by the European Communities and certain EC member States;
 - (i) that grants under the Second, Third, Fourth, Fifth and Sixth EC Framework Programmes identified in Annexes I.1, I.2, I.3, I.4 and I.5 are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement,
 - (ii) that French government grants amounting to a maximum of EUR 391 million between 1986 and 1993 and EUR [***] between 1994 and 2005 are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement,
 - (iii) that German Federal government grants under the LuFo I, LuFo II and LuFo III programmes amounting to EUR [***] are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement,
 - (iv) that German sub-Federal government grants amounting to EUR [***] from the Bavarian authorities under the OZB and Bayerisches Luftfahrtforschungsprogramm, EUR 11 million from the Bremen authorities under the AMST programmes, and EUR [***] from the Hamburg authorities under the Luftfahrtforschungsprogramm are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement,
 - (v) that loans under the Spanish government PROFIT and PTA programmes amounting to, respectively, EUR 62.2 million and EUR [***], are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement, and
 - (vi) that UK government grants under the CARAD and ARP programmes amounting to GBP [***] are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement.

8.2 Furthermore, in light of the findings set out in the foregoing sections of our Report, we conclude that the United States *has established* the following with respect to adverse effects:

- (a) that the effect of the subsidies is to displace the imports of a like product of the United States into the European market within the meaning of Article 6.3(a) of the SCM Agreement, constituting serious prejudice to the interests of the United States within the meaning of Article 5(c) of the SCM Agreement,

BCI deleted, as indicated [***]

- (b) that the effect of the subsidies is to displace the exports of a like product of the United States from the markets of Australia, Brazil, China, Chinese Taipei, Korea, Mexico, and Singapore within the meaning of Article 6.3(b) of the SCM Agreement, constituting serious prejudice to the interests of the United States within the meaning of Article 5(c) of the SCM Agreement,
- (c) that the effect of the subsidies is likely displacement of exports of a like product of the United States from the market of India within the meaning of Article 6.3(b) of the SCM Agreement, constituting a threat of serious prejudice to the interests of the United States within the meaning of Article 5(c) of the SCM Agreement, and
- (d) that the effect of the subsidies is significant lost sales in the same market within the meaning of Article 6.3(c) of the SCM Agreement, constituting serious prejudice to the interests of the United States within the meaning of Article 5(c) of the SCM Agreement.

8.3 On the other hand, in light of the findings set out in the foregoing sections of our Report, we conclude that the United States *has not established* the following concerning the existence of subsidies:

- (a) concerning the provision of LA/MSF;
 - (i) the existence, as of July 2005, of a LA/MSF commitment measure for the A350 constituting a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement,
 - (ii) that the French A380, French A340-500/600, Spanish A340-500/600 and French A330-200 LA/MSF measures are subsidies contingent in fact upon anticipated export performance within the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement,
 - (iii) that the French A380, German A380, Spanish A380, UK A380, French A340-500/600, Spanish A340-500/600 and French A330-200 LA/MSF measures are subsidies contingent in law upon anticipated export performance within the meaning of Article 3.1(a) and footnote 4 of the SCM Agreement, and
 - (iv) the existence of an unwritten LA/MSF Programme measure constituting a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement.
- (b) concerning the challenged EIB Loans;
 - (i) that each of the challenged loans and the 2002 credit facility for the A380 constitutes a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement.
- (c) concerning the provision of infrastructure and infrastructure-related grants;
 - (i) that the road improvements by French authorities constitute specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement,

BCI deleted, as indicated [***]

- (ii) that the GBP 19.5 million provided to Airbus UK in respect of its operations in Broughton, Wales, is a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement, and
 - (iii) that the grant provided by the government of Andalusia to Airbus in Puerto Santa Maria is a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement.
- (d) that the 1998 settlement by the German government of Deutsche Airbus' government debt constitutes a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement.
- (e) concerning the research and technological development funding provided by the European Communities and certain EC member States;
- (i) that the German Federal government's commitment to provide Airbus with EUR [***] under the LuFo III programme is a specific subsidy within the meaning of Articles 1 and 2 of the SCM Agreement, and
 - (ii) that the challenged grants under the UK Technology Programme are specific subsidies within the meaning of Articles 1 and 2 of the SCM Agreement.

8.4 Furthermore, in light of the findings set out in the foregoing sections of our Report, we conclude that the United States *has not established* the following with respect to adverse effects;

- (a) that the effect of the subsidies is significant price undercutting by the subsidized product as compared with the price of a like product of the United States in the same market within the meaning of Article 6.3(c) of the SCM Agreement,
- (b) that the effect of the subsidies is significant price suppression within the meaning of Article 6.3(c) of the SCM Agreement,
- (c) that the effect of the subsidies is significant price depression within the meaning of Article 6.3(c) of the SCM Agreement, and
- (d) that, through the use of the subsidies, the European Communities and certain EC member States cause injury to the United States' domestic industry within the meaning of Article 5(a) of the SCM Agreement.

B. RECOMMENDATIONS

8.5 Under Article 3.8 of the DSU, in cases where there is an infringement of the obligations assumed under a covered agreement, the action is considered *prima facie* to constitute a case of nullification or impairment. We conclude that, to the extent that the European Communities, France, Germany, Spain and the United Kingdom have acted inconsistently with the SCM Agreement, they have nullified or impaired benefits accruing to the United States under that Agreement.

8.6 Article 4.7 of the SCM Agreement provides that, having found a measure in dispute to be a prohibited subsidy, a panel "**shall** recommend that the subsidizing Member withdraw the subsidy without delay" (emphasis added). Furthermore, that provision provides that a panel "**shall** specify in its recommendation the time-period within which the measure must be withdrawn" (emphasis added). Accordingly, taking into account the nature of the prohibited subsidies we have found in this dispute,

BCI deleted, as indicated [***]

we recommend that the subsidizing Member granting each subsidy found to be prohibited withdraw it without delay and specify that this be done within 90 days.

8.7 Article 7.8 of the SCM Agreement provides that "{w}here a panel report or an Appellate Body report is adopted in which it is determined that any subsidy has resulted in adverse effects to the interests of another Member within the meaning of Article 5, the Member granting or maintaining such subsidy shall take appropriate steps to remove the adverse effects or shall withdraw the subsidy". Accordingly, in light of our conclusions with respect to adverse effects set out in paragraph 8.2 above, we recommend that, upon adoption of this report, or of an Appellate Body report in this dispute determining that any subsidy has resulted in adverse effects to the interests of the United States, the Member granting each subsidy found to have resulted in such adverse effects "take appropriate steps to remove the adverse effects or ... withdraw the subsidy".

8.8 Finally, we note that the special and additional rules applicable under Parts II and III of the SCM Agreement do not require a panel to specify how the implementation of recommendations under Articles 4.7 and 7.8 should be effected by the subsidizing Member(s). In this context, we recall that the second sentence of Article 19.1 of the DSU provides that a panel "may" suggest ways in which a recommendation could be implemented. Assuming that this provision also applies to recommendations under Articles 4.7 and 7.8 of the SCM Agreement, we note the observation of the panel in *US – Hot Rolled Steel* that the means of implementation is, pursuant to Article 21.3 of the DSU, for the Member concerned, in the first instance.⁶⁰⁸² Further, the Appellate Body has made clear that the second sentence of Article 19.1 "does not oblige panels to make ... a suggestion".⁶⁰⁸³ In this case, it is possible to speculate as to the approaches that might be used to implement our recommendations. However, in the absence of any requirement to do so, and given that the United States has not even requested that we do so, we do not make any suggestions concerning steps that might be taken to implement those recommendations.

⁶⁰⁸² Panel Report, *US – Hot-Rolled Steel*, para. 8.11.

⁶⁰⁸³ Appellate Body Report, *US – Anti-Dumping Measures on Oil Country Tubular Goods*, para. 189.
