1962 CONSULTATION UNDER ARTICLE XII:4(b) WITH

D E N M A R K

Basic Document for the Consultation

1. Legal and administrative basis of the restrictions

The present system of import regulation applied in Denmark is based on the Currency Measures Act No. 302 of 21 December 1957 as amended by Act No. 54 of 29 February 1960 and Act No. 363 of 20 December 1961.¹

Certain powers provided for in the Act of 21 December 1957 which relate to extraordinary supply situations have been cancelled in the Act of 29 February 1960.

The Act follows the former legislation in this field in aiming at a normalization of economic conditions and competition through the freeing of imports within the possibilities of the balance-of-payments position.

The Currency Measures Act has been a suitable instrument for the dismantling of restrictions, and provides the legal basis for further liberalization.

When the amendment of 29 February 1960 was enacted, the scope of liberalization was extended appreciably as from 1 March 1960 and a time-table was adopted for the liberalization of specified commodities within the period 1 January 1961 - 1 July 1963. In accordance with this programme the liberalization of industrial goods was extended as from 1 January 1961, 1 July 1961, 1 January 1962, and 1 July 1962. Further commodities are scheduled for liberalization in January 1963 and July 1963.

The Ministry of Commerce is empowered with the administration of the licensing of imports. Through a special committee, the Parliament closely controls the implementation of the Act. In practice the Minister has followed the procedure of consulting the Parliamentary Standing Committee before decisive

steps are taken. Important general questions are discussed with commercial and industrial organizations represented in the Commodity Supply Board and with other interested parties, before being put before the Parliamentary Committee.

Complaints against administrative acts can be taken up at a Board of Appeal. Decisions of this Board are subject to review by the High Court of Justice.

2. Methods used in the restriction of imports

(a) Liberalized imports

Since 1959 import control in Denmark has been based upon a "negative list" system. Under this system all commodities except those on the restricted list (see Annex I) may be imported freely and without licence from countries in the "Free-List Area", provided that both the country of purchase and the country of origin belong to that area. (See Annex II.)

All imports from countries outside the "Free-List Area" are subject to licensing. In issuing licences for imports from these countries account is taken of bilateral trade agreement quotas and of traditional trade relations with the country or countries concerned.

(b) Restricted imports

Imports of commodities on the restricted list are subject to licence whether they are imported from Free-List Area countries or other countries. With a few exceptions, (see under 3 below) licences may be used for imports from any country in this area (regionalized imports).

Imports of restricted goods from sources outside the Free-List Area are subject to single country licences issued according to bilateral trade agreement quotas or subject to ad hoc licensing.

Total imports of goods subject to restrictions are fixed in the licensing budget. The budget is prepared in the light of foreign-exchange considerations and of Denmark's international obligations, for instance Denmark's obligations under the EFTA Convention. Quotas are established for all industrial goods which are subject to quantitative restrictions. In fixing quotas due account is taken of the rules established in connexion with the adoption by Parliament of the Currency Measures Act which provides for the dismantling of import restrictions for a number of commodities within specific time limits during the period 1 January 1961 - 1 July 1963. With regard to quota increases under the EFTA Agreement, Denmark has gone further than required by her obligations under EFTA. The extension of regional quotas covers all countries within the Free-List Area.

For some horticultural products and some agricultural products a phase-licensing system is in force under which such imports are liberalized except during the Danish season. For these products the amounts included in the licensing budget are, of course without direct influence on the issuing of licences in the periods during which imports take place on open general licensing. As a traditional important exporter of animal agricultural products Denmark normally does not import such items as bacon, beef, and butter. Bacon, beef, butter, eggs and most of the traditional Danish agricultural export products are under import restrictions on account of the risk of dumping or import of subsidized products. Imports of these items are subject to ad hoc licensing. Licences so issued are valid for imports from any country within the Free-List Area.

Apart from the issuing of licences for import under the seasonal system, according to which anybody can obtain licences for import except during the Danish season, two methods for the allocations of licences among importers are used: (i) in relation to their imports or consumption in a previous year or years, and (ii) in response to individual applications, i.e. a licence is applied for to cover some specific use by a particular enterprise. In regard to licence applications under (ii) above, important considerations for granting a licence are the amount reserved for this category of goods, the importance of the goods for production purposes, comparative prices, etc.

Licences are issued with the least possible delay, usually within ten days or two weeks after receipt of application. Import licences are normally valid for twelve months; this period may, if necessary, be extended for an additional period of six months. According to the Currency Measures Act the Minister concerned may prescribe a service charge for the issue of import licences, such charge is not to exceed 0.25 per cent of the nominal amount of the licence; the minimum charge is kr. 2 for each licence.

As a rule, values or quantities of regional quotas are not published, but are made known to the trade organizations concerned.

Under the Currency Measures Act no import embargos may be imposed for commercial reasons in Denmark. The only embargos are maintained for public health, veterinary, and similar reasons, as provided for in Article XX of the General Agreement.

Imports for re-exports are, in principle, free from all sources.

3. Treatment of imports from different countries or currency areas

For the purpose of this report, sources of supply may be classified in two main groups; (i) the Free-List Area (Annex II); and (ii) other countries.

(i) Imports from Free-List Area countries

- (a) All goods which are not listed in Annex I may be imported freely and without licence from countries in the Free-List Area.

- (b) Imports of practically all other goods from Free-List Area countries are subject to licensing under the regional quota system. This quota system applies to all countries within the Free-List Area, and is tantamount to a non-discriminatory treatment of imports from the countries in this area.

For wine, various species of fish and live plants licences are issued partly in accordance with quotas negotiated in bilateral trade agreements, and partly on a unilateral basis in view of traditional imports from certain countries. For coffee, a regional quota is established for imports from the dollar-area countries and one for imports from the other countries in the Free-List Area.

(ii) Other countries: For goods imported from countries other than those belonging to the Free-List Area the following import régimes are applicable:

For many Free-List commodities imported from countries outside the Free-List Area the import licences are issued without limit, and imports can in reality take place without restriction. For other commodities, imports are restricted by quotas which have been fixed either by agreement with the countries involved or in relation to previous imports. This practice is adopted both for Free-List commodities and for commodities listed on the restricted list. - Quota arrangements are in force with Israel, and Yugoslavia and with all Eastern European countries except Albania and Eastern Germany. Trade between Denmark and Eastern Germany is effected on the basis of an agreement between Danish trade organizations and the East German "Aussenhandelskammer".

As from 1 November 1961 the number of countries in the so-called Free-List Area was extended so that since that time the Free-List Area includes all countries except State-trading countries and a few other countries where there exist either special problems of a commercial-political nature, or where there is a special problem involving so-called "low-cost imports".

Denmark is at present negotiating with some non-Free-List Area countries and is considering an extension of the Free-List Area.

4. Commodities or groups of commodities affected by various forms of restrictions

For a listing of the goods subject to import control see Annex I.

A summary of the distribution of total imports in 1961 on the basis of the classification of imports for control purposes, as of August 1962, is shown in the following table:

(Million Danish Kroner)			
	"Free-list" goods	"Restricted" goods	Total
Dollar area	1,095	141	1,236
Other Free-List countries	9,828	771	10,599
Free-List Area total	10,923	912	11,835
Other countries	833	228	1,061
	11,756	1,140	12,896

Imports of "restricted" goods amounted to 8.8 per cent (1,140 million kroner) of total imports. Since imports of "Free-list" goods from non-free-list countries (amounting to 833 million kroner) are formally under licence the part of imports which has been subject to licences amounts to 1,973 million kroner (1,140 plus 833 million kroner) or 15.3 per cent of total imports during this period.

5. Use of State trading or governmental monopoly in restricting imports

No commodity is under State trading.

6. Measures taken in relaxing or otherwise modifying restrictions¹
(Statement by the Danish authorities)

As mentioned above the Free-List Area was extended by the addition of a number of countries as from 1 November 1961; further extensions are under consideration.

Danish quantitative import regulation have changed fundamentally in character during 1960, 1961 and 1962, although the legal and administrative basis of the restrictions has in principle, not been altered. The Currency Measures Act has proved to be a suitable and flexible instrument for dismantling and simplifying the administration of quantitative import regulations. The liberalization carried into effect as from March 1960 was very extensive, and at that time a programme was established for further liberalization of industrial goods to be put into effect over the next three years. In accordance with

¹For a review of progress in import liberalization see Annex III.

this programme, liberalization of industrial goods was extended as from 1 January 1961, 1 July 1961, 1 January 1962 (Annex I(a)), and 1 July 1962 (Annex I(b)).

On the other hand, on 13 September 1961, import control had to be re-imposed on coarse grains and related products (Annex I(c)). This step was necessary in order to limit bacon production in Denmark and consequently the exportable quantities for the market of the United Kingdom. Denmark is traditionally a large net importer of coarse grains, and the de-liberalization is thus not to be regarded as a protective measure against foreign competition. Licences for imports of coarse grains may be issued for imports from any country within the Free-List Area.

On the basis of 1948 imports, Denmark's percentage of liberalization vis-à-vis OEEC countries is 95 (manufactures 97). In terms of 1953 imports the percentage of liberalization vis-à-vis the dollar area is 95 (manufactures 98). Before the liberalization of 1 March 1960 quantitative restrictions vis-à-vis the Free-List Area covered approximately 2/3 of the production of manufactured goods in Denmark. As a result of the liberalization measures in 1960, 1961 and 1962 the proportion of Danish industrial production protected by restrictions is reduced to 9-10 per cent.

Further industrial commodities will be liberalized in 1963 in accordance with the three-year programme, and it is expected that the liberalization of all industrial imports may be completed before the ending of the ten-year period provided for in the EFTA agreement.

Denmark is in negotiation concerning access to the EEC and, provided membership, Denmark counts on dismantling the remaining import restrictions two years after the accession. If Denmark joins the EEC it is expected that Danish agriculture will be able to derive advantage from the internal liberalization which will take place in connexion with the establishment of a common agricultural policy inside the EEC. A total abolishment of import restrictions for agricultural products into Denmark depends on international arrangements for liquidation of agricultural protection.

The speed with which a liberalization can take place, for agricultural as well as for industrial products, depends primarily upon Denmark's foreign-exchange position. The Danish foreign-exchange position is badly affected by protection in other countries and consequently measures for reduction of this protection will increase possibilities for an early liquidation of the remaining Danish restrictions.

7. Effects of restrictions on trade and general policy in the use of restrictions for balance-of-payments reasons
