Committe on Trade and Development Thirty-Sixth Session 8-9 November 1978

### DEVELOPMENTS IN INTERNATIONAL TRADE WHICH HAVE A BEARING ON THE TRADE AND PAYMENTS POSITION OF DEVELOPING COUNTRIES

#### Note by the Secretariat

1. The Committee undertakes, at each of its sessions, a review of developments in international trade which may have a bearing on the trade and payments position of developing countries in order to permit members to offer comments and suggestions on points of particular interest to them. A detailed examination of trends in the trade of developing countries in 1977 can be found in the GATT publication "International Trade 1977/78". The following paragraphs focus on developments in the trade and payments position of developing countries in 1978 on the basis of information generally of a preliminary nature available for the first half of the year.

2. Export earnings of the <u>oil-exporting developing countries</u> were slightly lower in January-June 1978 than in the first half of 1977, the volume of petroleum exports having dropped by around 10 per cent between the two periods. There have been two major reasons for the decline: first, the continued relatively low level of economic activity in industrial areas and, second, the growing share of the world oil market supplied by other producers.

3. The value of imports into the oil-exporting developing countries can be estimated to have increased by nearly 20 per cent between January-June 1977 and the first half of the current year, a considerably lower rate than in previous years. In particular the deceleration of import volume growth in the lowerincome oil-exporting developing countries, already noticed in 1977, appears to have continued in 1978.

4. Despite the slowdown in import growth, the trade surplus of the oil-exporting developing countries was considerably reduced in the first helf of 1978.

5. Exports from the <u>oil-importing developing countries</u> had increased by 16 per cent in 1977, reflecting, among other things, the significant price rises for tropical beverages during the first half of the year. Developments during the first half of 1978 suggest, however, that for the whole of this year the growth of their export earnings will be considerably lower than in 1977. COM.TD/W/281 Page 2

6. The average level of export prices of non-fuel primary products exported by developing countries during the first half of 1978 was about 9 per cent lower (in dollar terms) than in the corresponding period of 1977. This decline was due largely to the strong downward movement in prices of tropical beverages as supplies had recovered from their marked fall in the preceding season. Export prices of non-fuel minerals and non-ferrous metals exported by developing countries were also lower in the first half of 1978 as compared with their level in the first half of 1977, reflecting the continuous weakness of demand in industrial countries. (See Table 1 and, for detail on prices of individual commodities, Table 2.)

7. Exports of manufactures in dollar terms during the first half of 1978 by the oil-importing developing countries appear to have substantially exceeded exports during the same period of 1977. However, available data for the first half of the year, as well as the uncertainty about developments during the second half, do not make it possible to say at this stage whether the growth rate of developing countries' exports of manufactures in US dollars will reach or exceed the 18 per cent recorded in 1977. (In volume terms the growth in 1977 can be estimated to have represented about one half of the rise in value).

8. Imports into the oil-importing developing countries had risen by 12 per cent in 1977, reflecting mainly increased prices. In the first half of 1978 the value of their imports rose at a somewhat faster pace than in 1977. The rise of import prices in dollar terms can be estimated to have been of about the same order of magnitude as in 1977, but in volume terms there was some speeding up especially in the countries which had recorded a faster rise of export earnings in 1977.

9. As a result of these developments, the merchandise trade deficit of oil-importing developing countries widened considerably in January-June 1978 as compared with the corresponding period of 1977.

10. On the basis of developments during the first half of 1978, a provisional estimate of <u>current account balances</u> (goods and services and private transfers) by major areas for the whole of the year is shown in Table 3.<sup>1</sup> For the oil-exporting developing countries their surplus on current account is likely to be sharply reduced, from \$35 billion in 1977 to \$20 billion in 1978. Southern European countries are likely to see their current account deficit diminish only slightly, to \$8 billion, reflecting mainly the stagnation in their imports. The other developing countries could be expected to incur a wider deficit, of some \$30 billion (as compared with \$22 billion in 1977) basically for the reasons summarized in paragraphs 6-8 above. On the other hand, the industrial areas taken together are expected to experience a significant improvement in the level of their current account balances in 1978 after registering a decline over the previous three-year period.

<sup>1</sup>Date up to 1977 and forecasts for 1978 are those of the IMF. The figures <u>exclude</u> official transfers.

COM.TD/W/281 Page 3

11. The above summary would seem to broadly confirm a continuation of the 1977 situation referred to in the GATT publication "International Trade 1977/78" to the effect that by sustaining the growth in their levels of imports into 1978, developing countries are making a significant contribution to economic activity in developed countries. However, as the payment deficits of the oil-importing developing countries again widen, the maintenance of this situation will depend increasingly on relatively good earnings for developing countries from printry products, open markets for their manufactured exports and on the basis of the preceding two conditions, liberal access to international credit.
