PROGRESIVIDAD ARANCELARIA

Nota de la Secretaría

Note by the Secretariat

- In connexion with work on trade liberalization in the Committee on Trade and Development, tariff escalation was identified at the March meeting of the Committee by many delegations of developing countries as one of the areas of priority interest to them. The Chairman's summing-up of the discussion on trade liberalization reflected the general view that as an initial step in the work of the Committee, an adequate data base showing the post-MTN situation regarding conditions of access for exports of developing countries to developed country markets with respect to the areas of work indicated would need to be put together. There was a general feeling that the secretariat, basing itself on the suggestions made and in consultation with interested delegations, should set about the process of providing updated documentation and report on the results of its efforts, together with any documentation it has produced, to the next meeting of the Committee which would have a discussion on the modalities of its work on trade liberalization having regard to activities taking place elsewhere in GATT (COM.TD/104, para. 27).

- The purpose of this note is to provide information which would assist delegations to identify the broad situation relating to tariffs applying to areas of interest to developing countries at different stages of processing following the Tokyo Round.¹ Based on the industrial product categories utilized in the documentation for the tariff study, modified to the extent considered necessary to take account of the trade interests of developing countries, the attached tabulations provide information available on pre- and post-MTN (Tokyo Round) m.f.n. duty rates

(simple and weighted averages) for eight industrial markets², as well as relevant statistical data. As in general, GSP rates applying to products falling within CCCM chapters 25-99 in terms of tariff averages according to the product groupings shown are mostly low or zero, these have not been indicated in the attached tabulations. However, with respect to any further work that might be required at a greater level of detail, relevant GSP information could be provided giving the GSP rate of duty as well as information on any other measures applied under the GSP.

3. In the light of the examination of this material by delegations and any comments and suggestions that might be made with respect to the matter under consideration, the secretariat could see what more detailed information it could make available at the product level with respect to those categories identified as of particular interest to developing countries. This might provide a basis for the examination of specific areas where developing countries feel that tariff escalation represents an impediment to their exports of products at different stages of processing taking into account the GSP situation. It might also permit an exchange of views as the work proceeds on possibilities for further progress towards trade liberalization with specific reference to tariff escalation again taking into account the GSP relating to products of interest to developing countries having regard to factors which might have affected action in this area in the course of the Tokyo Round.

4. Delegations might note in this respect that while the further processing of their natural resources is an important objective of developing countries, the examination of the impact barriers to trade have in this respect, in terms of available tariff and statistical classifications, is somewhat more complex. Certain classification systems appear to have

¹ It might be noted in connexion with tariff escalation that as indicated in the Supplementary Report by the Director-General on the Tokyo Round (Geneva, January 1980), Tokyo Round m.f.n. concessions on industrial products will reduce the tariff differential between the three processing stages on average from 5 and 4 percentage points to about 3.5 and 2.5 points respectively.

²For technical reasons, the data provided does not cover all industrial countries. The secretariat is giving attention to this matter.

elements which make it more difficult to quantify the structure of production and trade according to stages of processing. For example, some production processes result in the semi-processed or processed items therefrom being classified under different headings in certain tariffs and for statistical purposes, while others do not. In addition, some processing chains are simply not identifiable in the standard data, as output at each stage is aggregated with data from several processing chains. There is also the situation where output in one or more stages of processing is used in several activities, so that the possibility of separately identifying the processing chain for market access purposes is lost. A further situation arises when processing chains tend to merge and produce a "mixed" product.

5. Touching on these matters, some recent literature has also cited the difficulty of measuring effective protection, in that in many cases the allocation of cost elements in production to individual items at different stages of processing is most difficult to assess for want of sufficiently detailed statistical information.

6. The point of this reference is to indicate that the use of standard tariff and statistical classifications in examining such questions as the effect of tariff escalation on processing in developing countries may lead to conclusions not directly linked to the relevant chain of production processes. It suggests that for the further examination of post-Tokyo Round tariffs applying to products of interest to developing countries at different stages of processing, it would be helpful to have the most detailed information available on products manufactured for export in the light of the existing industrial structures of these countries.

Explanatory notes to tabulations

1. Based on the industrial product categories utilized in the basic documentation for the tariff study, the attached tabulations provide information on the pre- and post MTN (Tokyo Round) m.f.n. duty rates (simple and weighted averages) of eight industrial markets¹, as well as relevant statistical data as indicated in paragraph 3 below. It is to be noted that information in the tabulations concerns m.f.n. tariffs only. Thus in assessing this material, delegations would need to take into account any other measures relating to the product categories covered which might be considered as having a protective effect.
2. The data have been compiled for industrial products as a whole (CCCN Chapters 25-99) excluding petroleum, subdivided according to the three stages of processing (i.e. raw materials, semi-manufactures and manufactures), as well as for twelve broad categories of products again sub-divided according to the degree of processing. A list of the categories and sub-categories used are shown on pages 5-7. The simple tariff averages are based on m.f.n. rates on all tariff lines of the industrial tariff concerned falling within the category or sub-category, and the weighted averages, on the m.f.n. rates and corresponding imports from "m.f.n. origin".
3. The statistical data provided includes total imports from m.f.n. origins distinguishing in addition imports from GSP beneficiary countries. Imports from GSP beneficiaries are further sub-divided according to their m.f.n. rate and GSP eligibility into m.f.n. duty-free and m.f.n. dutiable,

¹Austria, EEC, Finland, Japan, Norway, Sweden, Switzerland and the United States.

²It might be noted that imports of GSP items partly attract m.f.n. duties in cases where the level of imports under GSP may be subject to quantitative or country limitations.

Industrial product categories and sub-categories in respect of which tariff date have been compiled

Note du secrétariat

1. A l'occasion des travaux du Comité du commerce et du développement concernant la libéralisation des échanges, les délégations de nombreux pays en voie de développement ont signalé, lors de la réunion que le Comité a tenue en mars, que la question de la progressivité des droits de douane était l'une de celles qui étaient pour elles un intérêt prioritaire. Dans le résumé qu'il a fait du débat sur la libéralisation des échanges, le Président a relevé, que, de l'avis général, le Comité devrait commencer ses travaux en constituant une base de données suffisantes pour voir quelle était, après les NCM, la situation en ce qui concerne les conditions d'accès des exportations des pays en voie de développement aux marchés des pays développés dans les domaines indiqués. Le sentiment général était que, au vu des suggestions faites et en consultation avec les délégations intéressées, le secrétariat devrait commencer à constituer une documentation à jour et présenter au Comité, à sa prochaine réunion, un rapport sur les résultats de son travail ainsi que toute la documentation qu'il aurait constituée, le Comité devant alors procéder à un échange de vues sur les modalités d'exécution de son mandat concernant la libéralisation des échanges, compte tenu des activités en cours dans d'autres instances du GATT (COM.TD/104, paragraphe 27).

2. La présente note a pour but de donner aux délégations des renseignements qui les aident à appréhender l'ensemble de la situation en ce qui concerne les droits de douane qui s'appliquent, après les négociations de Tokyo¹, aux produits qui, à différents degrés d'ouverture, présentent de

l'intérêt pour les pays en voie de développement.
Fondés sur le classement par catégories des produits industriels utilisé dans la documentation établie pour l'Etude tarifaire et modifié dans la mesure jugée nécessaire en fonction des intérêts commerciaux des pays en voie de développement, les tableaux ci-joints contiennent les renseignements connus sur les taux de droits NPF (moyenne simple et moyenne pondérée) en vigueur, avant et après les NCM ('Tokyo Round), sur huit marchés industriels², ainsi que des statistiques s'y rapportant. Comme les taux SGP qui s'appliquent aux produits des chapitres 25 à 99 de la NCCD, exprimés en moyennes tarifaires par groupes de produits considérés, sont pour la plupart faibles ou nuls, ils n'ont pas été repris dans les tableaux ci-joints. Toutefois, s'il fallait par la suite travailler en plus de détail, il serait possible de donner les renseignements voulus au sujet du SGP en indiquant les taux de droit SGP et en donnant des renseignements sur toute autre mesure appliquée au titre du SGP.

3. Se fondant sur l'examen de cette documentation par les délégations et des observations et suggestions qui pourraient être formulées au sujet de la question, le secrétariat serait en mesure de voir quels renseignements plus détaillés il pourrait fournir, concernant chaque produit des catégories signalées comme présentant un intérêt particulier pour les pays en voie de développement. Ces renseignements pourraient servir de base pour l'examen de domaines particuliers où les pays en voie de développement estiment que la progressivité des droits de douane représente une entrave à l'exportation de leurs produits à différents degrés d'ouverture, compte tenu de l'état du SGP. Ces renseignements

¹En ce qui concerne la progressivité des droits de douane, il convient de noter que, comme l'indique le rapport additionnel du Directeur général sur le Tokyo Round (Genève, janvier 1980), les concessions NPF sur les produits industriels résultant de ces négociations ramèneront en moyenne les différences de 5 et de 4 points de pourcentage entre droits relatifs aux trois degrés d'ouverture à environ 3,5 et 2,5 points, respectivement.

²Pour des raisons techniques, il n'a pas été fourni de données pour tous les pays industriels. Le secrétariat s'occupe actuellement de cette question.

pourraient aussi permettre un échange de vues, à mesure de l'avancement des travaux sur les possibilités de réaliser de nouveaux progrès dans la voie de la libéralisation des échanges concernant en particulier la progressivité des droits de douane, toujours en tenant compte du SGP, pour ce qui est des produits qui présentent de l'intérêt pour les pays en voie de développement et eu égard aux facteurs qui pourraient avoir influé sur ce qui a été fait dans ce domaine au cours du Tokyo Round.

4. Les délégations pourraient noter à ce sujet que si, pour les pays en voie de développement, l'ouvraison plus poussée de leurs ressources naturelles est un objectif important, l'étude de l'effet des obstacles au commerce, fondée sur les classifications tarifaires et statistiques existantes, est sensiblement plus complexe. Certains systèmes de classification paraissent comporter des éléments qui rendent plus difficile toute quantification de la composition de la production et des échanges par stades d'ouvraison. Par exemple, les demi-produits ou les fabrications obtenus par certains procédés de production sont classés sous des rubriques différentes dans certains tarifs douaniers ou à des fins statistiques, tandis que d'autres ne le sont pas. En outre, certaines filières d'ouvrasons ne sont même pas identifiables dans les statistiques normalisées, du fait que la production à chaque stade y est combinée avec celle de plusieurs autres filières. Il y a également le cas où la production à un ou plusieurs degrés d'ouvraison est utilisée à plusieurs fins, de sorte qu'il est absolument impossible de déceler la filière d'ouvraison pour déterminer l'accès aux marchés. Il arrive en outre que des filières d'ouvrasons tendent à se confondre pour aboutir à un produit "bâtarde".
5. A ce sujet, certains écrits récents ont également fait état de la difficulté de mesurer la protection effective, étant donné qu'il est souvent très difficile de ventiler les éléments du coût de production entre produits à différents degrés d'ouvraison, faute de statistiques suffisamment détaillées.

6. Il ressort de ce qui précède que l'utilisation des classifications tarifaires et statistiques normalisées pour l'étude de questions telles que l'effet de la progressivité des droits de douane sur les activités d'ouvraison dans les pays en voie de développement peut conduire à des conclusions qui ne soient pas directement en rapport avec les procédés employés dans la chaîne de production. Il en résulte que, pour approfondir l'étude des droits de douane applicables après les Négociations du Tokyo Round à des produits qui, à différents degrés d'ouvraison, présentent de l'intérêt pour les pays en voie de développement, il serait utile de pouvoir disposer des renseignements les plus détaillés possibles au sujet des produits manufacturés pour l'exportation, compte tenu des structures industrielles actuelles de ces pays.

Notes explicatives des tableaux

1. Les tableaux ci-joints, qui se fondent sur la classification des produits industriels par catégorie utilisée dans la documentation de base établie pour l'Etude tarifaire, contiennent des renseignements sur les taux de droits NPF (moyenne simple et moyenne pondérée) en vigueur avant et après les NCM (Tokyo Round) sur huit marchés industriels¹, ainsi que des statistiques s'y rapportant (voir le paragraphe 3 ci-après). Il convient de noter que les renseignements figurant dans ces tableaux ne concernent que les droits NPF. De ce fait, pour évaluer cette documentation, les délégations devront tenir compte de toutes autres mesures, appliquées aux catégories visées, qui pourraient être considérées comme ayant un effet de protection.

2. Les informations ont été rassemblées pour l'ensemble des produits industriels (Chapitres 25 à 99 de la NCCD), à l'exclusion du pétrole, qui ont été subdivisés en fonction des trois degrés d'ouvraison (matières premières, demi-produits et produits manufacturés), ainsi que pour douze grandes catégories de produits prises individuellement et subdivisées elles aussi par degré d'ouvraison. Les catégories et sous-catégories utilisées figurent aux pages 11 à 13. Les moyennes tarifaires simples sont fondées sur les taux NPF applicables à toutes les lignes tarifaires des produits industriels visés entrant dans une catégorie ou sous-catégorie, et les moyennes pondérées sur les taux NPF et les importations correspondantes "d'origine NPF".

3. Les statistiques portent sur les importations totales d'origine NPF et distinguent en outre les importations en provenance des pays bénéficiaires du SGP. Ces dernières sont encore subdivisées, suivant le taux NPF qui leur est applicable et leur statut SGP, en importations exemptes de droits NPF et en importations passibles de droits NPF, ces dernières étant ventilées en "produits bénéficiant du SGP" et en "produits ne bénéficiant pas du SGP", afin de donner une indication de la mesure dans laquelle le droit NPF s'applique aux importations en provenance des bénéficiaires du SGP².

4. Les chiffres des importations se rapportent à l'année 1977 (1976 pour l'Autriche et la Norvège). Les importations "d'origine NPF" ne comprennent pas les importations en provenance de pays bénéficiaire de la franchise de droits au titre de préférences spéciales, ni celles en provenance de pays auxquels sont appliqués des droits plus élevés que les droits NPF.

5. Dans tout le document, les données se rapportant à la situation antérieure aux NCM figurent sur la page de gauche, et celles se rapportant à la situation postérieure aux NCM sur la page de droite.

¹ Autriche, CEE, Etats-Unis, Finlande, Japon, Norvège, Suède et Suisse.

² Il convient peut-être de noter que les importations de produits bénéficiant du SGP sont en partie assujettis à des droits NPF dans les cas où les importations bénéficiant du SGP font l'objet de limites quantitatives ou de limites par pays.

PROGRESIVIDAD ARANCELARIA

Nota de la Secretaría

1. En relación con la labor del Comité de Comercio y Desarrollo en materia de liberalización del comercio, muchas delegaciones de países en desarrollo indicaron en la reunión celebrada por el Comité en marzo que la progresividad arancelaria era una de las esferas de interés prioritario para ellas. El resumen que hizo el Presidente de los debates en torno a la liberalización del comercio se hacia eco de la opinión general de que, como primer paso en la labor del Comité, sería menester reunir una adecuada base de datos que mostrase la situación existente después de las NCM en cuanto a las condiciones de acceso de las exportaciones de los países en desarrollo a los mercados de los países desarrollados con relación a las esferas de trabajo indicadas. Fue general el parecer de que la Secretaría, a partir de las sugerencias realizadas y en consulta con las delegaciones interesadas, debía iniciar el proceso de elaboración de una documentación actualizada y presentar en la próxima reunión un informe sobre los resultados de su labor, junto con la documentación que hubiese preparado. En dicha reunión, el Comité examinaría las modalidades de su labor sobre liberalización del comercio teniendo en cuenta las actividades que se desarrollaban en otros ámbitos del GATT (COM.TD/104, párrafo 27).
2. El propósito de la presente nota es facilitar información que ayude a las delegaciones a identificar la situación general en relación con los aranceles que se aplican después de la Ronda de Tokio en esferas de interés para los países en desarrollo y en las diferentes etapas de elaboración.¹ Establecidos

sobre la base de las categorías de productos industriales utilizadas en la documentación del estudio arancelario y modificados en la medida que se ha considerado necesaria para tener en cuenta los intereses comerciales de los países en desarrollo, los cuadros adjuntos proporcionan la información disponible sobre los derechos n.m.f. (medias simples y ponderadas) aplicables antes y después de las NCM (Ronda de Tokio) en ocho mercados industriales², así como los datos estadísticos pertinentes. Como, por lo general, los derechos SGP aplicables a los productos de los capítulos 25 a 99 de la NCCA, expresados como promedios arancelarios según los grupos de productos indicados, son en su mayoría bajos o nulos, no se indican estos derechos en los cuadros adjuntos. No obstante, para cualquier otro trabajo que pueda requerirse con mayor detalle, sería posible proporcionar la correspondiente información sobre el SGP, indicando los tipos de los derechos SGP, así como información relativa a cualesquiera otras medidas aplicadas en el marco del SGP.

3. A la luz del examen de este material por las delegaciones y de cualquier comentario o sugerencia que pudiera hacerse en relación con el tema considerado, la Secretaría podría ver qué otra documentación más detallada estaría en situación de suministrar a nivel de producto en relación con las categorías de productos designadas como de particular interés para los países en desarrollo. Ello podría constituir una base para el examen de las esferas concretas en que los países en desarrollo estimen que la progresividad arancelaria supone un impedimento para sus exportaciones de productos en distintas fases de elaboración habida cuenta de

¹Cabe señalar en relación con la progresividad arancelaria que, como se indica en el Informe complementario del Director General sobre la Ronda de Tokio (Ginebra, enero de 1980), las concesiones n.m.f. de la Ronda de Tokio otorgadas con respecto a los productos industriales reducirán las diferencias entre los aranceles aplicables a las tres fases de elaboración, en promedio, de 5 y 4 puntos porcentuales a aproximadamente 3,5 y 2,5 puntos, respectivamente.

²Por razones técnicas los datos facilitados no cubren todos los países industriales. La Secretaría se está ocupando de esta cuestión.

la situación del SGP. Ello podría permitir también proceder a un cambio de impresiones, a medida que avancen los trabajos, sobre las posibilidades de hacer nuevos progresos hacia la liberalización del comercio, con especial referencia a la progresividad arancelaria y teniendo en cuenta, una vez más, el SGP en relación con los productos de interés para los países en desarrollo y los factores que hayan podido influir en las medidas adoptadas en esta esfera durante la Ronda de Tokio.

4. A este respecto las delegaciones observarán que, si bien el dar un mayor grado de elaboración a sus recursos naturales es un importante objetivo para los países en desarrollo, el examen del impacto que tienen los obstáculos al comercio a este respecto, en función de las clasificaciones arancelarias y estadísticas disponibles, es algo más complejo. Ciertos sistemas de clasificación parecen tener elementos que hacen más difícil la cuantificación de la estructura de la producción y el comercio según las etapas de elaboración. Por ejemplo, algunos procedimientos de producción hacen que los productos semi-elaborados o elaborados resultantes se clasifiquen en partidas diferentes en algunos aranceles y también a efectos estadísticos, cosa que no ocurre con otros procedimientos. Además, ciertas cadenas de elaboración simplemente no son identificables en los datos uniformes, pues en cada etapa de la producción se agregan datos procedentes de diversas cadenas de elaboración. También se da la situación en que la producción resultante de una o más etapas de elaboración se utiliza en varias actividades, de manera que no hay posibilidad de identificar por separado la cadena de elaboración a efectos de acceso al mercado. Otra situación más es la de las cadenas de elaboración que tienden a fusionarse y cuyo resultado es un producto "mixto".

5. Con respecto a estos problemas, se ha mencionado asimismo en ciertas publicaciones recientes la dificultad con que se tropieza para medir la protección efectiva, pues en muchos casos, por falta de

información estadística suficientemente detallada, es muy difícil evaluar la asignación de elementos de coste en la producción a distintos productos en etapas diferentes de elaboración.

6. La finalidad de esta referencia es indicar que el empleo de clasificaciones arancelaria y estadística uniformes en el examen de cuestiones tales como el efecto de la progresividad arancelaria en la elaboración en los países en desarrollo puede llevar a conclusiones que no estén directamente relacionadas con los procedimientos de la cadena de producción de que se trate. De ello parece desprenderse que, para un ulterior examen de los derechos aplicables después de la Ronda de Tokio a los productos de interés para los países en desarrollo en las diferentes etapas de elaboración, sería útil contar con la información más detallada de que se disponga sobre los productos manufacturados para la exportación a la luz de las estructuras industriales existentes en esos países.

Notas explicativas de los cuadros

1. Establecidos sobre la base de las categorías de productos industriales utilizadas en la documentación básica del estudio arancelario, los cuadros adjuntos facilitan información sobre los derechos n.m.f. (medias simples y ponderadas) aplicados antes y después de las NCM (Ronda de Tokio) en ocho mercados industriales¹, así como los datos estadísticos pertinentes según se indica en el párrafo 3 infra. Cabe señalar que la información de los cuadros se refiere únicamente a los derechos n.m.f. y, por tanto, al evaluar este material las delegaciones deben tener en cuenta cualquier otra medida relacionada con las categorías de productos abarcadas que pueda considerarse que tiene un efecto protector.
2. Los datos reunidos se refieren a los productos industriales en su conjunto (capítulos 25 a 99 de la NCCA), salvo el petróleo, subdivididos en función de las tres etapas de elaboración (es decir, materias primas, semimanufacturas y manufacturas), así como a 12 grandes categorías de productos, también subdivididas según el grado de elaboración. La lista de las categorías y subcategorías utilizadas figura en las páginas 17 a 19. Las medidas arancelarias simples se basan en los derechos n.m.f. aplicables a todas las líneas del arancel industrial de que se trate comprendidas en la correspondiente categoría o subcategoría, y las medias ponderadas, en los derechos n.m.f. y las correspondientes importaciones de "origen n.m.f."
3. Los datos estadísticos facilitados se refieren a las importaciones totales de origen n.m.f., distinguiendo además las importaciones procedentes de países beneficiarios del SGP. Estas últimas se subdividen a su vez, según el derecho n.m.f. y según su admisibilidad en el SGP, en importaciones con exención de derechos n.m.f. e importaciones que adeudan derechos n.m.f., desglosándose estas últimas en "productos SGP" y "productos no SGP" con el fin de dar una idea del interés que presenta el arancel n.m.f. para las importaciones procedentes de beneficiarios del SGP.²
4. Las cifras correspondientes a las importaciones se refieren al año 1977 (1976 en los casos de Austria y Noruega). Las importaciones de "origen n.m.f." no abarcan las procedentes de países que gozan de exención de derechos en virtud de preferencias especiales ni las procedentes de países sujetos a derechos superiores a los derechos n.m.f.
5. En el presente documento, los datos relativos a la situación existente antes de las NCM figuran en las páginas de la izquierda y los relativos a la situación existente después de las NCM figuran en las páginas de la derecha.

¹Austria, CEE, Estados Unidos, Finlandia, Japón, Noruega, Suecia y Suiza.

²Cabe señalar que las importaciones de productos SGP en parte adeudan derechos n.m.f. en los casos en que el nivel de las importaciones en régimen SGP puede estar sujeto a limitaciones cuantitativas o por procedencias.
