Annex I: Statistical tables	2
Annex II: Statistical asymmetry in global current account balances	53

ANNEX IList of Tables

	<u>Page</u>
1. Balance-of-payments summaries, 1970-81.	4-6
2. Balance-of-payments summaries: selected developed countries, 1970-81	7
3. Balance-of-payments summaries: selected developing countries, 1970-81.	8-13
4. Growth of production and exports by commodity and country groupings, 1963-82	14
5. Merchandise exports to GDP ratios, 1960-80.	15
6. World exports by economic groupings, 1963-82.	16
7. World imports by economic groupings, 1963-82.	17
8. Exports of selected countries by structure and destination (developed countries), 1963-82.	18-23
9. Exports of selected countries by structure and destination (developing countries), 1963-82.	24-41
10. Export structure of the least-developed countries	43
11. Share of exports of selected developing countries in world exports, 1965-80.	44
12. Developing country trade with developed countries, 1970-82.	45
13. Distribution of the increment of trade, 1963-82.	46
14. Non-oil developing country external debt and debt ratios, 1973-82.	47
15. External debt of the eight largest developing country borrowers, 1982.	48
16. External debt and debt ratios for selected developing countries, 1972-81.	49-51
17. Non-oil developing countries: financing of current account deficits and reserve accretions, 1973-82.	52

Note: The designation of countries or areas and their categorization in different country groupings sometimes vary according to the manner in which statistical material is available for particular purposes. Country or area designations do not imply any judgement about the legal status of countries, nor do they necessarily imply any judgement about the stage reached in the development process by a country or area.

TABLE 1 : BALANCE-OF-PAYMENTS SUMMARIES, 1970-81

<sup>1/</sup> For these purposes developed countries have been defined as United States, Canada, EEC(10), EFTA, Japan, Australia, New Zealand and South Africa. Major petroleum exporting countries is a sub-category of developing countries comprising OPEC member States and Angola, Bahrain, Brunei, Congo, Mexico, Oman, Syria, Trinidad and Tobago. Data are not available for centrally-planned economies. The least-developed country category is defined according to the relevant United Nations resolutions.

<sup>2/</sup> In the case of developed countries the direct investment figure is net, whereas for the other groups of countries only inward investment is recorded. Foreign investment by developing countries represents comparatively small amounts.

<sup>3/</sup> Liabilities constituting foreign authorities reserves are included in this item.

<sup>4/</sup> The figures for 1981 exclude Yugoslavia, due to unavailability of data.

<sup>1/</sup> World excludes Albania, China and People's Democratic Republic of Korea.

<sup>2/</sup> Excludes trade between China, Mongolia, People's Democratic Republic of Korea and Vietnam.

<sup>3/</sup> All commodities include ores and other minerals.

<sup>4/</sup> 1973-81 growth rate.

- Notes:**
- The country classifications used in the table are as follows: developed countries - North America, Europe (other than Eastern Europe), Australia, Israel, Japan, New Zealand and South Africa; Eastern trading area - Bulgaria, Czechoslovakia, German Democratic Republic, Hungary, Poland, Romania and the Soviet Union; developing countries and territories in Africa, Asia, America and Oceania not specified above with the exception of China, Mongolia, Democratic People's Republic of Korea, Democratic Kampuchea, Vietnam.
  - Agricultural products are defined as food and raw materials falling under ISIC division 1 and SITC sections 0, 1, 2, 4 minus divisions 27 and 28.
  - Mining comprises ores and other materials, fuels and non-ferrous metals (ISIC division 2).
  - Manufactures comprise ISIC division 3 in the production series. For the trade series the figures on world manufactures exports include SITC sections 5 to 8 inclusive minus division 68. For the manufactures exports figures, broken down by region, division 68 (i.e. non-ferrous metals) is included.
  - No series of production and trade volume indices such as those contained in this table are to be found in any single publication, and it was therefore necessary to combine and where possible compare series from different sources. Apart from the inherent difficulties involved in compiling volume data of this nature, reliance on multiple sources which frequently vary somewhat in coverage also means that these statistics should be regarded as a broad indication of changes in production and trade. The world production and trade indices correspond closely to those published in GATT, *International Trade*. The production indices for all commodities and for manufactures, broken down by region, were taken from the UN *Monthly Bulletin of Statistics*. The production indices for agricultural products were taken from the FAO *Monthly Bulletin of Statistics* and the FAO *Production Yearbook*. The trade volume indices for all commodities and manufactures, broken down by region, were taken from the UN *Monthly Bulletin of Statistics* and GATT, *Networks of World Trade*. The trade volume indices for agriculture were taken from the FAO *Trade Yearbook*. Where possible, production and trade indices were compared and verified with those published by the IMF and OECD.

Notes: 1. See attached sheet for details of commodity classification.  
2. Country classifications are those employed in GATT's annual report on international trade.  
3. The dots signify export shares of less than 0.5 per cent.  
4. Dashes signify that data are not available.  
5. 1963 export figures for New Zealand have not been included.

Notes: 1. See attached sheet for details of commodity classification.  
2. Country classifications are those employed in GATT's annual report on international trade.  
3. The dots signify export shares of less than 0.5 per cent.  
4. The figures in this table relate to the exports of 46 non-oil developing countries, selected on the basis of data availability. The following countries are included: Argentina, Bolivia, Brazil, Chile, Colombia, Congo, Costa Rica, Egypt, El Salvador, French Guiana, Ghana, Guadeloupe, Guatemala, Honduras, Hong Kong, India, Israel, Ivory Coast, Jordan, Republic of Korea, Madagascar, Malawi, Malaysia, Martinique, Mexico, Morocco, Nicaragua, Niger, Pakistan, Panama, Paraguay, Peru, Philippines, Reunion, Samoa, Senegal, Singapore, Somalia, Sri Lanka, Sudan, Thailand, Togo, Tunisia, Turkey, Upper Volta and Yugoslavia.  
5. While the data for most countries relate to 1966, 1972 and 1981, that for Chile, Congo, India and Somalia relate to 1966, 1972 and 1980, and that for Bolivia, Ghana, Mexico and Paraguay relate to 1966, 1972 and 1979.

TABLE 9.1: Exports of Selected Countries by Structure and Destination

- Notes: 1. See attached sheet for details of commodity classification.  
 2. Country classifications are those employed in GATT's annual report on international trade.  
 3. The dots signify export shares of less than 0.5 per cent.  
 4. Dashes signify that data are not available.  
 5. In 1981, approximately 20 per cent of the exports of the Philippines are classified as a residual. This is largely accounted for by manufactures from materials imported on a consignment basis.

<u>Ratio of external debt to exports of goods and services<sup>4/</sup></u>	115.4	104.6	122.4	125.5	126.4	130.2	119.2	112.9	124.9	143.3

<sup>1/</sup> Non-oil developing countries are defined by the IMF as all Fund members with the exception of "industrial countries" comprising Australia, Austria, Canada, EEC(9), Finland, Iceland, Japan, New Zealand, Norway, Spain, Sweden, Switzerland, United States) and "oil exporting countries" (comprising Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Oman, Qatar, Saudi Arabia, United Arab Emirates, Venezuela). Data for the People's Republic of China are excluded before 1977.

<sup>2/</sup> On long-term debt only. Estimates for the period up to 1981 reflect actual amortization payments. Estimates for 1982 reflect scheduled payments, modified to take account of rescheduling agreements.

<sup>3/</sup> Payments as percentages of exports of goods and services, on both short and long-term debt.

<sup>4/</sup> Ratio of year-end debt (both short and long-term) to exports or GDP for year indicated.

TABLE 15: External Debt of the Eight Largest  
Non-oil Developing Country Borrowers, 1982

(in US\$ billion)

	Total outstanding debt	Short- term debt
Brazil	86.3	16.7
Mexico	84.6	25.8
Argentina	38.8	7.3
Korea, Republic of	37.2	10.4
Turkey	22.6	4.4
Egypt	21.8	3.2
Philippines	20.7	7.8
Chile	17.2	3.2
<u>Total for top 4 countries</u>	246.9	60.2
As % of total non-oil developing country debt	40.3%	53.4%
<u>Total for top 8 countries</u>	329.2	78.8
As % of total non-oil developing country debt	53.8%	70%
<u>Total for all non-oil developing countries<sup>1/</sup></u>	612.4	112.7

<sup>1/</sup>The total figure is taken from statistics published by the IMF. As a result of possible discrepancies between the compilation of the total figure by the IMF and the individual country figures by Morgan Guaranty Trust Company, the percentages shown should be treated only as indicators of the share of total non-oil developing country debt accounted for by the largest borrowers.

ANNEX II

Statistical Asymmetry in Global Current Account Balances

1. The current account balance for the world as a whole, calculated by the aggregation of the current account balances of individual countries, exhibits a large and growing statistical discrepancy.<sup>1</sup> While the global current account balance would be zero in the absence of statistical imperfections and omissions in reporting, existing statistics yield a balance of US\$47 billion for 1981 and US\$89 billion for 1982 (See Table 1).

2. According to International Monetary Fund statistics, the current account balance stood at US\$1 billion for industrial countries and US\$90 billion for developing countries in 1982. This means that the global statistical asymmetry in 1982 was almost 100 per cent of the reported deficit of developing countries. Moreover, since the global current account balance represents the sum of the balances of all countries on the various transactions that comprise the current account, it is quite likely that errors and omissions in opposite directions have netted out, thus hiding discrepancies even greater in magnitude than the overall asymmetry suggests. There is, therefore, a need to exercise caution in interpreting movements in the current account on the basis of available statistics.

3. Table 1 shows that the statistical asymmetry in the global current account balance typically comprises a surplus in the merchandise account and a deficit in the services account. While the former exhibits no discernible trend, the latter has been increasing consistently both in magnitude and as a share of total gross flows of services (see Table 2). The discrepancy in the service account also represents a much greater percentage of respective gross flows than does the discrepancy in merchandise trade flows.

1. Asymmetry on Merchandise Trade

4. There is at least one reason to expect a discrepancy on the world merchandise account, arising from statistical reporting procedures. International transactions are recorded in such a way that there is a lag between the time when a product is recorded as an export in the country of origin and the time when the same product is recorded as an import in the country of destination. As a result of the practice of recording imports and exports at the time they cross frontiers, the balance on trade will yield a surplus during periods when trade is growing. Similarly, when trade is declining, the existence of goods in transit will result in the value of imports exceeding that of exports. Estimates of the impact of this "timing asymmetry" are shown in Table 1. The figures show that the total asymmetry has increased in periods of fast trade growth such as 1973-74 and 1978-79 in line with the expected increase in the timing asymmetry. Similarly, in a period of decline in world trade, such as 1981-82, the world balance on merchandise trade was negative.

---

<sup>1</sup> For a fuller discussion of this problem see IMF, World Economic Outlook, 1983 and "The World Current Account Discrepancy", in OECD Economic Outlook, Occasional Studies (OECD, June 1982).

5. Table 1 also provides estimates of the residual asymmetry that exists in these balances, that is, the discrepancy that exists even after adjusting for the timing asymmetry. These figures are quite small and fluctuate randomly around zero for all years shown in the table, except for 1980 and 1981, when the residual asymmetry is quite large. The development may be attributed in part to the strong appreciation of the dollar over the period from late 1980 through to most of 1982. During this period, the US dollar value of trade invoiced in other currencies is expected to have declined from the time of its recording by the exporting countries to the time of its recording by the importing countries, thus yielding a surplus of recorded exports over imports for the world as a whole.

6. The reliability of the data underlying the asymmetry in the global merchandise trade balance is not seriously hampered in the light of the following considerations: (1) the asymmetry is quite small as a percentage of total gross merchandise flows, (2) the asymmetry has not displayed an increasing trend, and (3) most of the biases in the reported figures are explained by imperfections in the statistical practices of reporting countries. Adjusting for the timing asymmetry would reduce the global aggregate of trade balances to well under US\$10 billion for most of the past decade. This would amount to less than 0.5 per cent of the value of merchandise transactions.

## 2. Asymmetry in Services and Private Transfers

7. The rapid increase in the deficit on world invisibles transactions accounts for the worsening of the asymmetry in the global current account balances. The balance on world invisibles transactions stood at US\$1 billion in 1973, and from then on it steadily deteriorated, reaching US\$81 billion in 1982. This represented an increase not only in absolute terms but also as a percentage of total gross flows of services and transfers (over 10 per cent in 1982). The overall asymmetry, however, hides significant surpluses and deficits on individual items comprising the services and transfers account. In fact, the summation of the absolute values of the discrepancies in each item would give a better indication of the total asymmetry in global invisibles transactions. From the figures reported in Table 2, this would yield a total discrepancy of US\$99 billion in 1981 rather than the US\$ 55 billion reported in the table.

8. While the underlying reasons for these discrepancies will not be discussed in detail here, it is worth mentioning a few points. Table 2 shows that the direction of the bias in each individual category has remained consistent over time (i.e. positive balances have remained positive and negative balances have remained negative). In addition, as a percentage of underlying gross flows, the statistical asymmetries have remained fairly stable for all components except for "other official services" and "direct investment income". Three reasons account for the increase in the absolute value of the asymmetry in the invisibles balance: (1) the increase in the gross flows underlying the balance, (2) the disproportionate increase in the few items which exhibit historically higher than average asymmetries, and (3) the worsening of asymmetries in the balances of individual components. The last of these factors seems to have been prominent in relation to "investment income" and "other services", transactions whose growth has been closely related to changes in interest rates and the current account balance of oil-exporting countries.

9. As far as the reasons for these discrepancies are concerned, a particular problem arises with respect to shipping. In the recording of shipping transactions, the existence of open registry fleets or flags of convenience provides the explanation for the consistently high deficit on the global balance. While the payments for these services are duly recorded in the balance-of-payments statistics of the user countries, the credits are often not recorded by either the country of residence of fleet owners or by the flag state. The large asymmetry on "other investment income" (interest on loans and dividends on portfolio investment) results from the greater ease of tabulating debits since payers seem to be larger and more readily identifiable than the final recipients. This systematic under-reporting of credits may also result from the tax-related behaviour of recipients.

### 3. Conclusion

10. Given the size of the asymmetry in the global current account balance, the question arises as to how reliable balance-of-payments statistics are for the groups of countries considered in this note. The IMF concludes that it is doubtful that the deficits of the non-oil developing countries have been over-estimated. The bulk of the rise in the global asymmetry seems to involve transactions conducted by residents of the developed and oil-exporting countries. While the balance-of-payments statistics seem to reflect fairly accurately the broad outline of the international transactions of non-oil exporting developing countries, the external payments statistics of the developed countries are likely to contain substantial estimation errors and reporting inaccuracies. The increasing size of the errors and omissions reported in the balance-of-payments of certain countries provides evidence for this. For all developed countries, errors and omissions in 1980 amounted to US\$38.4 billion, with the United States alone accounting for US\$25.5 billion in that year.

TABLE 1: World Payments Balances on Current Account, 1973-83<sup>1/</sup>

(In billions of U.S. dollars)

	1973	1974	1975	1976	1977	1978	1979	1980	1981	1982
Industrial countries <sup>2/</sup>	20	-11	20	1	-2	33	-6	-40	1	-1
Developing countries <sup>2/</sup>	7	68	35	40	30	2	69	114	65	-2
Oil exporting countries	7	68	35	40	30	2	69	114	65	-2
Non-oil developing countries	-11	-37	-46	-31	-29	-41	-61	-89	-108	-87
Sub-total	16	20	9	9	-1	-6	2	-15	-42	-90
Other countries <sup>3/</sup>	-1	-4	-13	-16	-8	-10	-6	-5	-5	1
TOTAL	15	16	-4	-7	-9	-16	-4	-20	-47	-89
Total asymmetry above, by selected categories										
Trade balance asymmetry	16	21	9	9	11	5	23	25	20	-8
Of which:										
Timing asymmetry on trade <sup>4/</sup>	12	16	1	12	9	12	30	12	-4	-10
Residual asymmetry on trade	4	5	8	-3	2	-7	-7	13	24	2
Asymmetry on account of services and private transfers	-1	-5	-13	-16	-20	-21	-27	-45	-67	-81

<sup>1/</sup> Goods, services, and private transfers.

<sup>2/</sup> Industrial countries are defined as Australia, Austria, Canada, EEC(9), Finland, Iceland, Japan, New Zealand, Norway, Spain, Sweden, Switzerland, United States. Developing countries comprise all other IMF members.

<sup>3/</sup> This group comprises a number of countries outside IMF membership, the most important of which are the USSR and other non-member countries of Eastern Europe. The figures are rough estimates based on incomplete information.

<sup>4/</sup> IMF staff estimates of the difference between the beginning-of-year and end-of-year "float", that is, the value of those exports that have not yet been recorded as imports (usually because the goods are in transit or because of delays in the processing of the documentation). The estimates should be viewed only as orders of magnitude.

TABLE 2: World Payments Balances on Services and Private Transfers, 1976-81

	Average 1976-79	1980	1981
In Billion of U.S. dollars			
Shipment	-17	-25	-25
Other transportation	-2	-3	-4
Travel	-	-2	-
Reinvested earnings	7	10	7
Other direct investment income	-	-4	-4
Other investment income	-8	-18	-29
Other official services	-5	-14	-14
Other private services	8	9	5
Private transfers	6	10	11
TOTAL	-12	-37	-55
In per cent of average of respective gross flows			
Shipment	-38	-36	-37
Other transportation	-5	-4	-5
Travel	-	-2	-
Reinvested earnings	64	58	51
Other direct investment income	-3	-13	-14
Other investment income	-10	-10	-13
Other official services	-18	-39	-38
Other private services	10	8	4
Private transfers	23	27	29
TOTAL	-3	-6	-7

Note: These figures do not match with those of Table 1 because of different data coverage.
