INTERNATIONAL DAIRY PRODUCTS COUNCIL

Questionnaire Regarding Information on Domestic Policies and Trade Measures

AUSTRALIA

Revision - June 1988

Australia is one of the more efficient, relatively low-cost dairy-producing and exporting countries. The outlook in the mid-1970s was for world dairy trade to be chronically depressed for some time to come, largely as a result of lack of access to, and frequent disruption from dumping of surplus production on world markets. In response to these factors, commercial decisions by producers and manufacturers led to some contraction and rationalization of the Australian dairy industry with the result that milk production fell to a level more in line with remunerative outlets.

Milk production declined from 7,523 million litres in 1969/70 to 5,243 million litres in 1980/81 but has since experienced some recovery with output in 1986/87 reaching 6,172 million litres. There has also been some change in the mix of dairy products, away from butter and skimmed milk powder towards cheese and whole milk powder. Exports of butter (including the butter equivalent of butteroil) have fallen from 102,565 tonnes in 1969/70 to 35,034 tonnes in 1986/87. Exports of cheese and whole milk powder, however, increased from 40,847 to 62,560 tonnes and 15,326 tonnes to 51,518 tonnes, respectively, over the same period.

The introduction of new marketing arrangements which became operative on 1 July 1986 provides for a significant and progressive reduction in assistance levels within the industry. The Australian Government is committed to placing the industry in a position where it can compete in both the Australian domestic and export markets with undumped, unsubsidized product from other countries by 1992.

A. PRODUCTION

Support and stabilization measures

Due to changes in the international trading environment, Australia's dairy industry was forced to rationalize in the 1970s with major reductions in the number of dairy farms, milk production and the level of exports.

Since 1980-81 milk production has increased again but has tended to stabilize since 1984-85. While the world market for milk powders and cheese is currently buoyant, export returns from butter and butter oil have remained depressed in recent years due largely to high world stock levels and subsidized EC exports. Although there are indications of an improvement in

the world milk fats market, the continued low prices over an extended period of time have placed considerable pressure on the Australian dairy industry despite it being one of the lowest-cost industries in the world. In these circumstances the Australian Government reviewed its support and stabilization measures for the industry and new marketing and assistance arrangements were introduced from 1 July 1986.

These arrangements (outlined in brief below) have the objective of ensuring the development of a more efficient and profitable industry, able to respond as quickly as possible to changing market conditions and technology. In particular, the arrangements provide that the production of those products which are most profitable is encouraged and that the more profitable export markets are exploited and production for export that returns a loss is discouraged. In this regard distortionary assistance arrangements have been abolished so that market forces can play a larger rôle in decision making relating to product mix. In particular, the abolition of export pooling and "allowances" (which treated certain costs as costs to be met by the industry as a whole) ensures that producers and marketers themselves reap the benefits/costs of their own production and marketing decisions.

The new arrangements assist the industry by supporting higher domestic prices than would otherwise be the case. The level of domestic price support is, however, being reduced progressively to fair import parity with New Zealand products. The new arrangements involve inter-industry transfers through the imposition of a levy, however, the upper amount of the levy is fixed and the arrangements are due to expire in June 1992. Further legislation would be required for the arrangements to continue beyond 1992.

(a) Inventory of the instruments of support and/or stabilization

There are two distinct markets and Government support arrangements for milk. Milk used for liquid human consumption is termed "market" milk, whereas milk used for the manufacture of dairy products is termed "manufacturing" milk. In 1986/87, of total milk production of about 6,172 million litres, market milk accounted for about 1,656 million litres.

Production, distribution and pricing of market milk is controlled by individual State legislation whilst Australian Government (Federal) support is directed at manufactured dairy products.

The main provisions of the marketing arrangements for manufactured dairy products are:

- (i) Market Support Fund financed by a levy on all milk produced, including milk for the liquid market¹; this levy is imposed on the milk fat component and is limited by a ceiling of

¹The other special arrangements for the liquid market, which are under State and not Federal Government control, remain unchanged.

45 cents/kg. milk fat or the equivalent of 2 cents/litre of milk. Assistance is provided to manufactured products by supporting domestic prices above international market prices by a fixed percentage. This is achieved by paying manufacturers exporting all dairy produce a market support payment normally at the rate of 30 per cent of the estimated average export price for the season for the major dairy products, adjusted to a bulk ex-factory basis. For other dairy products, rates will be set having regard to those for the major products.

Under certain circumstances, a rate other than 30 per cent may be payable; less may be paid when funds are insufficient or other market-related reasons. The increases in world market prices together with the ceiling on the Market Support Levy on all milk produced is expected to result in a reduction in the rate of market support from 30 per cent in 1987/88 to 20.9 per cent in 1988/89. At a time of collapse in world market prices when underwritten prices are triggered, a rate of more than 30 per cent may be payable. The Australian Bureau of Agricultural and Resource Economics calculated a trend price for certain major products, i.e. the export price that would prevail if export prices were on their longer-term trend. When the average export price for these major products is less than 85 per cent of the trend value, the market support rate will be the difference between 110 per cent of the trend value and the estimated current average export price.

- (ii) Supplementary Market Support Fund aimed at smoothing the transition from the previous arrangements to the new one. It is financed by levies on domestic sales of butter/butter oil and cheddar-type cheeses credited to the Supplementary Market Support Fund. Supplementary market support payments will be made from this fund until the fund is exhausted. The levy on cheese is being phased out in five equal six-monthly steps terminating on 1 July 1989. As regards butter/butter oil the Government announced the accelerated phasing out of this product levy as part of the Economic Statement made in May this year.

As a result the rate of supplementary market support will fall from 10.9 per cent in 1987/88 to 3.6 per cent in 1988/89 and be completely phased out from 1 July 1989. These changes will reduce total assistance to the dairy industry from 40.9 per cent in 1987/88 to 24.5 per cent in 1988/89 and will have the effect of further encouraging the industry to respond to market realities.

(b) Levels of guaranteed prices or support prices

The Australian Government underwrites the average export returns for butter, cheddar-type cheeses, skimmed milk powder, casein and whole milk powder at 85 per cent of their respective long-term trend prices.

The trend price of a product is determined by ordinary least squared analysis over a period of eight years with observations of actual average export prices for seven years and the estimated average export price for the year in which underwriting applies.

The underwritten values for 1987/88 are shown below.

<u>Product</u>	<u>\$A/tonne</u>
Butter/butter oil (cbe) ¹	1,144
Cheese (cheddar types) ²	1,279
Skimmed milk powder ³	719
Whole milk powder	1,004
Casein	2,001

(c) Amount of producer subsidies

Apart from some assistance measures which operate for all primary producers (such as taxation allowances, income equalization, fertilizer subsidies), milk producers do not receive direct subsidies. Assistance for market milk is provided through the State Government marketing arrangements, which focus on the establishment of domestic retail prices, industry margins and production controls.

(d) Average returns to producers, including methods of determining those returns

The average farmgate return for manufacturing milk in 1987/88 is estimated at approximately 17.6 cents per litre. The average farmgate return for market milk during 1987/88 is estimated at 34.1 cents per litre. Note that average returns differ markedly from State to State. With little inter-state trade in market milk due to high transport costs, average returns to milk produced depend on the proportion of milk produced in a State used for market milk and manufacturing milk.

B. INTERNAL PRICES AND CONSUMPTION

1. Representative retail and wholesale prices

The theoretical domestic values for manufactured dairy products which provide indicative domestic wholesale prices, have been set as follows for 1987/88.

¹cbe = commercial butter equivalent

²Cheddar, cheddar types, cheedam, colby, monteray, granular and stirred curd

³Includes skimmed milk powder, buttermilk powder, skimmed milk powder/buttermilk powder mixtures and skimmed milk powder modified

<u>Product</u>	<u>\$A tonne</u>
Butter/butter oil (cbe) ¹	2,500
Leviabile cheese ²	2,500
Skimmed milk powder ³	1,800
Whole milk powder	2,000
Casein	4,500

Average retail prices for selected dairy products in the city of Sydney in the December quarter of 1987 were:

<u>Item</u>	<u>Unit</u>	<u>\$A</u>
Milk, carton, supermarket sales	1 litre	0.83
Milk - bottled, delivered	2 x 600 ml.	0.96
Butter	500 g.	1.80
Cheese - processed, sliced, wrapped	500 g.	2.41
Milk - powdered, full-cream	1 kg. can	4.98

2. Factors which constitute the evolution and level of internal consumption

The Australian retail food market is competitive and considerable media advertising and other sales promotion activities are a regular feature of retailing. Increasing awareness of health and nutrition aspects of diet by consumers has been a key factor in marketing strategies in recent years. In this regard, the dairy industry has been stressing the "naturalness" of its products.

Butter sales have recovered somewhat in recent years but still face continuing strong competition from margarine, which is cheaper than butter and holds some 70 per cent of the domestic table spread market. Cheese sales have increased markedly in recent years especially for non-cheddar types and imported varieties. Dairy product retail price increases have generally been less than for other food prices over recent years, which has also probably assisted sales.

3. Policies and measures and comments on their effect on consumption

Promotion of market milk (liquid milk for human consumption) including flavoured milk is carried out by State Government milk authorities. Expenditure in 1986/87 totalled about \$A 7.5 million including a contribution of \$A 900,000 from the Australian Dairy Corporation.

¹ cbe = commercial butter equivalent

² Cheddar, cheddar types, cheedam, colby, monteray, granular and stirred curd

³ Includes skimmed milk powder, buttermilk powder, skimmed milk powder/buttermilk powder mixtures and skimmed milk powder modified

Dairy products promotion is funded by a levy on milk production and expended by the Australian Dairy Corporation. In 1987/88 a levy of 3.82 cents per kg. butterfat is estimated to yield \$A 11.6 million which will be used for: butter and cheese advertising in the media; a health and nutrition education programme directed at medical practitioners, dietitians and nutritionists; and other promotional activities such as cricket sponsorship for primary school children and cooking seminars.

In addition to industry generic advertising, individual manufacturers and retailers advertise branded products. These promotion campaigns have been instrumental in raising butter and cheese sales over recent years and have helped foster positive consumer attitudes towards dairy products. Per capita consumption of dairy products in recent years has been as follows:

Consumption - Kg./Head

Product	1980/81	1981/82	1982/83	1983/84	1984/85	1985/86	1986/87
Market milk (litres)	104.8	104.8	103.8	102.6	103.3	101.7	102.9
Butter-retail	3.2	3.2	3.0	3.2	3.2	3.0	<u>5/</u>
Total butter/ butter _{1/} /oil (cbe) _{1/}	4.3	4.3	4.0	4.0	4.0	3.7	3.5

C. MEASURES AT THE FRONTIER

Customs tariff

Import duties are levied at the levels specified in Appendix A.

OTHER MEASURES

(i) Imports

As a member of the GATT since its inception Australia has placed considerable emphasis on avoiding measures contrary to the spirit of that Agreement. In the case of dairy products, the only constraints which Australia imposes on imports other than under the tariff are those relating to compliance with marking and packaging requirements and/or quarantine requirements (see Appendix B).

Australia has tariff rate bindings on dairy products under the GATT negotiated during the Multilateral Trade Negotiations 1973-79 (see Appendix C).

Australia has acceded to the Harmonized Commodity Description and Coding System Convention and is obliged to observe these requirements in its tariff.

Australia has a number of bilateral commitments relating to dairy products (see Section D).

(ii) Exports

Export measures at tariff line level

The new dairy marketing and assistance arrangements, introduced on 1 July 1986, provide for exports of all dairy produce to be eligible for market support payments equal to a maximum of 30 per cent of the estimated average export price for the period. This market support is funded through a levy on all milk produced with a ceiling of 2 cents per litre (or 45 cents per kg. butterfat).

To assist the industry in the adjustment to the new arrangements, supplementary market support payments are made which are funded by a product levy on domestic sales of butter/butter oil and cheddar-type cheese. These product levies are currently being phased out resulting in decreasing supplementary market support payments over time.

D. BILATERAL, PLURILATERAL AND MULTILATERAL AGREEMENTS

The Australia/New Zealand Closer Economic Relations - Trade Agreement (ANZCERTA) entered into effect on 1 January 1983. Its objective is to further liberalize trade between Australia and New Zealand. Trade in dairy

products between the two countries is covered by a Memorandum of Understanding on Dairy Products (MOU) between the Australian and New Zealand dairy industries attached to an Annex of the ANZCERTA. A Joint Dairy Industry Consultative Committee has been established to allow for consultations between the Australian and New Zealand dairy industries and surveillance of the trade in dairy products. The level of New Zealand exports of cheese is specifically covered by the MOU - the growth in these exports being related to the growth in the Australian market for cheese. The MOU is being reviewed as a part of the general review of the CER Trade Agreement in 1988.

Within the Tokyo Round of GATT Multilateral Trade Negotiations Australia concluded agreements on dairy products with the EEC and the United States.

Under the MTN bilateral agreements on dairy products Australia received access to the EEC market for 2,500 tonnes a year of cheddar for direct consumption and 500 tonnes a year of cheese for processing. Initial arrangements provided for these exports to be subject to an import levy of 12.09 ECU/100 kg. and also minimum import prices which were to be adjusted from time to time. Because of marketing problems arising from the operation of the minimum import prices, negotiations were opened in 1983 to determine new terms of access. On 11 December 1984, an exchange of letters was signed between the Government of Australia and the EC Commission providing for the suspension of the minimum import price arrangements and, in turn, an increase in the import levy to 15.0 ECU/100 kg.

The new arrangements commenced on 16 December 1984 and remained in force initially until 31 December 1986. Since then the arrangements have continued on an indefinite basis subject of each party having the right to denounce them by giving six months notice in writing. If the current arrangements were to be denounced then the access arrangements would revert to the original arrangements, i.e. a levy of 12.09 ECU/100 kg. subject to minimum import prices.

Australia granted the EEC duty-free access for surface-ripened soft cheese, stilton, roquefort and goats' milk cheese (except fetta and kasseri). In addition it granted guaranteed access for not less than 1,000 tonnes of edam and gouda per annum at a rate of \$A 96/tonne and 2,500 tonnes of other cheeses (excluding in particular cheddar, fetta and kasseri) a year at a rate of \$A 96/tonne.

The United States granted Australia an aggregate annual quota entitlement of 4,000 tonnes of cheese divided up into a number of cheese varieties plus an annual entitlement of 2,000 tonnes of chocolate crumb over 5.5 per cent fat content.

E. PROVISION OF INFORMATION ON THE MEASURES TAKEN TO ENSURE THE OBSERVANCE OF THE GATT INTERNATIONAL DAIRY ARRANGEMENT'S MINIMUM PRICES

Australia - measures to ensure observance

The Dairy Produce Amendment Act 1987, of the Australian Parliament, which came into effect on 26 December 1987, provides the framework for the regulation and control of the export of dairy products. The Amendment Act replaces criminal penalties in the Dairy Produce Act 1986 for Australian exporters selling below GATT-IDA minimum prices for dairy products with an economic penalty.

Under current arrangements, exporters who breach IDA minimum prices will be required to pay the Australian Dairy Corporation the difference between the price for which they sold their dairy products and the current IDA minimum price for the particular dairy product. Failure to do so may lead to the ADC suspending or cancelling the exporter's licence. The Amendments bring Australia into line with the other major IDA members who impose economic penalties on breaching exporters.

Procedures are also in place to ensure that the export of dairy products from Australia is only undertaken by licensed exporters who have been issued with a current Certificate of Authority to Export (CAE) for that shipment by the Australian Dairy Corporation. Exporters are required to provide details of this CAE when making application for an export permit. The CAE carries a notification to the exporter of his obligations to observe the Arrangement's minimum prices.

The Australian Dairy Corporation has also been directed by the Minister for Primary Industries and Energy to ensure observance of the Arrangement's minimum prices and to notify the Government of any instance where the pricing of dairy products exported from Australia has been in breach of the Arrangement. To date the Corporation has not had occasion to make a report to the Government pursuant to the Ministerial directives it has received.

APPENDIX B

Quarantine requirements

Due to geographic isolation and to strict quarantine controls, Australia remains free of many of the serious animal diseases which occur in many other parts of the world. Food products of animal origin may only be imported into Australia in accordance with the provisions of the quarantine legislation. The specific purpose of the legislation is to prevent the entry to Australia of exotic diseases.

The Commonwealth Department of Primary Industries and Energy is responsible for the administration of quarantine provisions relating to the importation of foods. A number of foodstuffs are prohibited from importation unless the permission in writing from the Minister for Primary Industries and Energy has been granted.

The importation of foodstuffs of animal origin is subject to restrictions in the case of certain countries, or, made subject to certain conditions according to the disease status of the exporting country and the degree of assessed quarantine risk associated with the animal or animal product concerned.

Commercially manufactured dairy products including casein, milk (including dried or powdered milk, condensed or concentrated milk and milk albumen) cream, butter and ice cream, may be imported by sea or air, but only when produced in and consigned from Canada, Denmark, Finland, Japan, New Zealand, Norway, Sweden, Irish Republic, Great Britain and the United States, unless permission is granted by the Director of Animal and Plant Quarantine for importation for therapeutic or scientific purposes.

There is a general prohibition on the importation of non-commercially manufactured dairy products and commercially manufactured dairy products from non-approved countries with the exception of cheese and lactose.

Cheese from countries other than those mentioned above is subject to 120 days quarantine unless exempted by the Director of Animal and Plant Quarantine on the basis that the manufacturing process, as submitted, is such as would inactivate the virus of foot-and-mouth disease. Some 90 per cent of the European cheeses for which exemption has been sought have been so exempted. Lactose can be imported from any country without prior approval and without impediment.

Prepared infant food containing milk may be imported in a quantity not exceeding 1 kg. with an infant under two years of age arriving on a vessel or aircraft from any country.

The importation of cheese of the type which contains meat or meat products or which is enclosed in a casing of animal origin is prohibited.

Caseinates may also be imported from the Netherlands dependant on individual process and factory approval and must be accompanied by prescribed Government certification.

Marking and packaging requirements

The commerce marking requirements are designed essentially to:

- (a) protect those traders who correctly describe their goods, from the actions of competitors who, by false or misleading descriptions, deceive the consumer; and
- (b) protect the consumer by requiring, in cases where the proper maintenance of the public health or the public interest makes it expedient, that manufacturers shall indicate on their goods the nature of the ingredients or materials of which they are composed.

These regulations require specified goods to have applied to them a trade description in the form of a principal label which must contain:

- (a) the name of the country in which the goods were made or produced; and
- (b) for certain specified goods a true description

Following the introduction by Australian States of legislation to give effect to a uniform packaging code for locally produced goods the Commonwealth Government introduced complementary legislation for imported goods. The legislation requires principally:

- (a) the packing of certain basic commodities in simplified weight denominations allowing a ready comparison for value of one package with another of the same size;
- (b) clarity of weight and measure markings; and
- (c) elimination or restriction of use of descriptions intended to mislead.

APPENDIX C

Under the General Agreement on Tariffs and Trade, Australia has agreed:

- not to apply to imports from GATT countries rates of duty in excess of those set out below for the following goods:

Cheese and curd

0406.10	Fresh cheese (including whey cheese), not fermented, and curd	\$A 0.096/kg. ¹
ex 0406.20	Grated or powdered cheese - <u>except</u> cheddar	\$A 0.096/kg. ¹
ex 0406.30	Processed cheese, not grated or powdered - <u>except</u> . Cheddar . Emmenthaler or Gruyere . Types when in packs not exceeding 284 grammes	\$A 0.096/kg. ¹
0406.40	Blue-veined cheese - roquefort; stilton	Free
	- other	\$A 0.096/kg. ¹
ex 0406.90	Other cheese as follows:	
	- cheese made wholly from goats' milk	
	- <u>except</u> . Fetta . Kasseri	Free
	- surface-ripened soft cheese having:	
	(a) a fat content in the dry matter of not less than 50% by weight; and	
	(b) a moisture content of not less than 65% by weight of the non-fatty matter	Free
	- edam; gouda	\$A 0.096/kg. ²
	- other	
	- <u>except</u> . Cheddar . Fetta . Kasseri . Swiss or Emmenthaler types	\$A 0.096/kg. ¹

¹For not less than a combined total of 2,500 tonnes per annum

²For not less than 1,000 tonnes per annum
