TARIFFS AND TRADE

Arrangement Regarding Bovine Meat

Original: French

INTERNATIONAL MEAT COUNCIL

Inventory of Domestic Policies and Trade Measures and Information on Bilateral, Plurilateral or Multilateral Commitments

Reply to Parts G and H of the Questionnaire

SWITZERLAND

Revision

The participants have agreed to provide information concerning their domestic policies and trade measures, including bilateral and plurilateral commitments, on the basis of Parts G and H of the Questionnaire (Rule 16 of the Rules of Procedure). The documents containing replies to these parts of the Questionnaire are circulated under the symbol IMC/INV; they are revised as and when changes are notified.

This set of documents constitutes the inventory of all measures affecting trade in bovine meat, including commitments resulting from bilateral, plurilateral and multilateral negotiations, which the Council has instructed the secretariat to draw up and keep up to date, under the provisions of Article III of the Agreement (Note to Article III of the Arrangement and Rule 16 of the Rules of Procedure).

Note: This document has been revised in accordance with the three-year rule contained in Rule 16 of the Rules of Procedure, and replaces all previous IMC/INV/7/... documents.

PART GPart G.1. Information on Domestic Policies and Trade Measures

Owing to natural conditions and the large area of grazing land, cattle breeding plays a fundamental part in Swiss agriculture. The breeds raised are mainly dual-purpose animals. Milk production contributes about one third of gross income from agriculture, while production of bovine meat represents one fifth.

The measures taken by the Confederation in regard to meat come within the general context of Swiss agricultural policy, the objectives, guidelines and effects of which are described in document MTN/3E/D7C/2/Add.22 of 13 August 1974.

I. Production(a) Factors affecting meat productionBreeds

In Switzerland, the production of meat is closely related to that of milk, because the breeds generally raised are suitable for both milk production and meat. In the years to come, meat production will continue to be based on these breeds. It is intended further to improve productivity by measures of selection, by industrial cross-breeding and by productivity tests linked with artificial insemination.

Production methods

During the 1960s and 1970s, production of good-quality beef cattle (young heifers, young oxen and bull calves) was shifting to some extent from traditional farms to specialised undertakings. These may be undertakings which no longer raise any cows at all and are thus only concerned with fattening or which, besides raising cows, carry out intensive fattening of a certain number of animals. The object of production is the fattening of young animals, i.e. heifers and oxen which are ready for slaughtering at the age of 12 to 18 months (12 to 13 months for bull calves) and the final weight of which is between 450 and 600 kg.

(b) Policies and measures of governments or other bodies likely to influence production, other than support or stabilisation measuresQuota restrictions on milk production

Since a deduction from the base price for milk - sometimes as high as 6 per cent of the base price - together with measures to restrict fodder imports had not proved sufficiently effective to contain the increase in milk production, the Federal Council introduced a system

of individual quotas for milk deliveries on 1 May 1977. Under the system, a quota is allocated to each farmer in respect of which he will receive the guaranteed base price, which is at present Sw F 1.02/kg., less the collective deduction of Sw F 0.02/kg. For any quantities in excess of his individual quota the farmer has to bear a charge amounting to 80-85 per cent of the base price of milk. Up to 30 April 1981, farmers in certain mountain regions were exempt from this quota measure. Restrictions on milk production have generated strong pressure on the meat market; milk producers have returned to fattening young animals, using coarse fodder of which they have an abundant supply.

Restrictions on fodder imports

In this respect the objective is to limit fodder imports, in particular to adjust livestock production to disposal possibilities.

Two courses of action are provided under the relevant provisions:

- quantitative limitation of imports of the principal fodder crops (quotas);
- application of import charges, termed 'price supplements'.

The proceeds from the price supplements are used in the first place for measures to encourage field crops; they are also used to finance measures in favour of livestock disposal. Inter alia.

Since the end of the 1960s and taking into account the increasing needs of the domestic livestock sector, imports of fodder products under quota (feed grains and oil cake) were increasing from year to year, reaching a peak in 1973 (about 1.35 million tons). Since then they have been declining. In 1980, imports under quota totalled 366,000 tons, i.e. 30 per cent less than in 1973. Total imports of concentrated feed declined over the same period from 1.61 million to 0.72 million tons, i.e. by 55 per cent.

Since pig and poultry production take up about three quarters of all fodder imports, the quota restrictions and charges on imported fodder products have only a limited direct effect on bovine meat supply. One can suppose, however, that the latter derives some advantage from higher prices of pork and poultry meat resulting from the measures applied on fodder imports.

(c) SUPPORT OF STABILISATION MEASURES

(1) Inventory of the instruments of support or stabilisation

Objectives

Most of the measures which affect the meat market are in pursuance of the Order on slaughter animals (OBB).

One of the first objectives of the OBB is to adapt domestic production of slaughter animals and meat to the market demand and absorption capacity, so that it will not exceed, on the average over several years, 85-90 per cent of the country's needs for adult beef cattle and 95 per cent of its needs for calves and pigs. In the last few years, these percentages have been attained, and even exceeded.

Under the OBB, the Federal Council fixes average target prices for all sorts, categories and commercial classes of slaughter animals (adult beef cattle, calves, pigs, sheep, goats and horses). These target prices are determined in accordance with the principles of the Law on Agriculture of 3 October 1931, under which the average costs of production of farms which are rationally operated must be covered. In fixing these prices, account is taken of the situation of other branches of the economy and of consumers.

In order to take account of seasonal variations in supply, margins below and above the average target price are fixed (target price bracket). The measures prescribed in the OBB must be applied in such a way that market prices vary between the lower and upper limits of the average target price and approach that price over the long term. It should be noted that since 1983, the Swiss authorities have on several occasions ceased supporting the price of bovine meat and pigmeat, in order to check the trends toward surpluses. The prices of these products have consequently fallen below the lower limit of the target price.

For the main categories of adult cattle and calves for slaughter, target prices have moved as follows:

Description	1.7.1986- 31.1.1988	1.2.1988- 31.12.1988	Since 1.1.1989
Average target prices with margins, per quintal, live weight	\$1 = Sw F 1.60	\$1 = Sw F 1.39 (February 1988)	\$1 = Sw F 1.56 (January 1989)
Heifers and oxen I A	Sw F 610 ± 25 \$381 ± 16	Sw F 630 ± 25 \$453 ± 18	Sw F 640 ± 25 \$410 ± 16
Cows, having not more than four permanent teeth II A	Sw F 560 ± 25 \$350 ± 16	Sw F 570 ± 25 \$410 ± 18	Sw F 580 ± 25 \$372 ± 16
Cows for sausage-making II E	Sw F 435 ± 30 \$272 ± 19	Sw F 435 ± 30 \$313 ± 22	Sw F 445 ± 30 \$285 ± 19
Fat bulls III A1	Sw F 615 ± 25 \$384 ± 16	Sw F 630 ± 25 \$453 ± 18	Sw F 640 ± 25 \$410 ± 16
Calves for veal AA	Sw F 945 ± 50 \$591 ± 31	Sw F 945 ± 50 \$679 ± 16	Sw F 975 ± 50 \$625 ± 32

Measures to promote the disposal of animals for slaughter

The joint organization of the economic groups (breeders, traders, users) which participate in the market for slaughter animals and meat, namely the 'Swiss Co-operative for the Supply of Slaughter Animals and Meat' (CSV), regulates and facilitates the clearance of the market and the disposal of surpluses.

The CSV fixes buying-in prices within the framework of the target price bracket, having regard to the situation and foreseeable trend for market prices. The latter should remain within the target price bracket, taking into account supply and demand. Producers who failed to find a purchaser for their animals on the free market can sell them to the CSV at the buying-in price in the framework of organized markets. These surplus animals are taken over voluntarily by butcheries which thus benefit from a storage allowance paid by the CSV. When a market is under strong pressure, commercial undertakings and butcheries permitted to import can be required to take over animals in a tolerable proportion in relation to imports.

Maximum numbers of animals intended for meat production

In order to guide meat production, an Ordinance was adopted in 1980, setting a ceiling for each farm for each of the following categories of animals:

250 head of adult cattle for fattening;
200 calves for fattening;
150 sows;
1,000 pigs for fattening;
12,000 chickens for fattening;
12,000 laying hens.

From 1992 on, no farm will be allowed to exceed those numbers unless it obtains a special permit or pays a charge.

Upon request a contribution was paid to farmers who eliminated or reduced their excess livestock in an appreciable proportion by 31 December 1983. Producer co-operation resulted in a reduction by 1.2 per cent in adult cattle from 1981 to 1983, and by 5.7 per cent for calves.

System of permits for the building or alteration of cowsheds

A new Order on the building of cowsheds was introduced in 1981 to replace that of 1977. It differed from the earlier measure in two essentials: first, permits will be granted mainly to farms needing to improve their production in order to earn an adequate income. Secondly, it now became possible to restrict the number of permits or even refuse them altogether, according to the trend of the market. In view of the difficult situation on the beef, veal and pigmeat market, no permits have been granted since 1 January 1980, except for cowsheds to replace old buildings. The measure does not apply to small-scale producers (e.g. having only 10 calves or adult cattle, 60 pigs for fattening).

(ii) Subsidies for producers in mountain areas

The various measures are primarily designed to improve conditions in mountain areas where animal husbandry is the principal, if not the only, means of livelihood. Assistance can thus be given to small farms in mountain areas, which are at a disadvantage because of their geographical situation and because of the climate.

The Confederation reimburses part of the expenditure of cantons which grant subsidies to cattle farmers on slaughter of stock cattle or dairy cattle in mountain areas that are of inferior quality and unfit for use. In addition, elimination programmes are organized in the lowland areas. Farmers wishing to receive bonuses under these programmes have to purchase replacement animals from the mountain areas. Milk producers in the lowland areas are entitled to a quota increase when they purchase a dairy cow or heifer in the mountain regions.

Subsidies are granted to align the price of exported stock cattle with those prevailing on traditional export markets. In addition, the Confederation covers the cost of transport to the Swiss frontier. In 1988, 12,300 head of stock and dairy cattle were exported. Switzerland does not export any cattle for slaughter.

Having regard to the unfavourable production conditions in mountain areas, the Confederation grants an annual contribution to the expenses of cattle farmers in those areas. This contribution is paid for a maximum of 15 units of adult cattle per farm. In 1988, the contribution was paid in respect of a total of 516,517 units of adult cattle.

The total amount of subsidies in this sector in recent years has been as shown below:

	1986 Sw F 1.80 = \$1		1987 Sw F 1.49 = \$1		1988 Sw F 1.46 = \$1	
	Mio Sw F	Mio \$	Mio Sw F	Mio \$	Mio Sw F	Mio \$
Promotion of sales within the country						
. subsidies to relieve market pressure	1.7	0.95	2.29	1.53	1.55	1.06
. subsidies for the elimination of dairy cattle	55.8	31.01	56.45	37.89	56.88	38.66
Promotion of exports of stock cattle						
. maintenance of exports	26.4	14.68	44.80	30.07	27.56	18.88
. contributions to transport costs	1.03	0.57	1.58	1.02	1.13	0.77
. publicity	0.19	0.10	0.17	0.12	0.19	0.12
Contribution to expenses of cattle farmers	170.6	94.79	201.87	135.48	209.20	143.29

(iii) Contributions to cattle farmers

In March 1988 the Federal Council adopted an Ordinance establishing contributions to cattle farmers, as had been decided in principle on 1 July 1987. The purpose of these contributions is to improve the competitiveness of small- and medium-sized holdings, and the grant is linked with ecological requirements.

An annual contribution of Sw F 2,000 is granted to holdings with at least five units of adult cattle and a usable agricultural area of at least six hectares. The contribution is progressively reduced for holdings with more than thirty-four adult cattle or located in the plain or Alpine foreland hill region and having a usable agricultural area of more than 15 or 20 hectares, respectively; the same applies to farmers whose income or wealth exceeds a specified amount. A total of Sw F 90 million has been allocated for this purpose for 1988.

(iv) Average returns to producers

Producer prices, per 100 kg. live weight

Category	1986		1987		1988	
	Sw F 1.80 = \$1	Sw F 1.49 = \$1	Sw F 1.49 = \$1	Sw F 1.46 = \$1	Sw F 1.46 = \$1	Sw F 1.46 = \$1
	Sw F	\$	Sw F	\$	Sw F	\$
Heifers and oxen I A	544	302	565	379	628	430
Cows, having not more than four permanent teeth II A	478	266	471	316	553	378
Cows for sausage-making II E	374	208	349	234	437	299
Fat bulls III A 1	549	305	580	389	652	447
Calves for the butcher's trade AA	917	509	908	609	969	664

As the comparison shows, producer prices remained below the average target prices fixed by the Government in 1986 and 1987, but reached and even exceeded them in 1988. While bovine meat prices rose quite sharply, pork prices fell in 1988.

II. Internal prices and consumption

(a) Wholesale and retail prices on major domestic markets

As a rule, meat sold retail comes from slaughtering by butchers. The figures given below are based on information supplied by butchers; they relate to quality categories which do not exactly coincide with the categories mentioned above (I(c)).

Type of meat	1986		1987		1988	
	Sw F	\$	Sw F	\$	Sw F	\$
<u>Heifers and oxen, quality A</u>						
Cost to butchers per kg. of carcass weight	10.58	5.88	11.03	7.40	12.35	8.46
Retail price at butchers per kg. of boned meat:						
- boiling and stewing	17.86	9.92	18.17	12.19	18.05	12.36
- roasting	25.81	14.34	26.21	17.59	28.07	19.23
<u>Calves, quality A</u>						
Cost to butchers per kg. of carcass weight	15.48	8.60	15.48	10.39	16.44	11.26
Retail price at butchers, per kg. of boned meat:						
- roasting	31.54	17.52	31.66	21.25	33.35	22.84
- stewing	23.22	12.90	23.42	15.72	22.77	15.59

(b) Factors which condition the evolution of internal consumption

In 1988, per capita consumption of bovine meat reached 26.7 kg., a decline of 4.3 per cent compared with 1987.

Total per capita consumption of meat, including fish, stood at the very high level of 90.1 kg. in 1988. No substantial increase is to be expected in future. In addition, consumer preference is increasing for meat such as poultry, game, rabbit and fish.

(c) Policies and measures affecting consumption

There is no government intervention at the consumption level. Retail meat prices are formed on the basis of supply and demand.

The groups concerned regularly collaborate in organizing temporary sales campaigns for certain cuts of meat at advantageous prices. Such a measure to stimulate demand is only possible when prices fall to near the lower limit of the target price, or even below it.

III. Measures at the frontier

(a) Description of the import system

Imports of slaughter animals and meat are subject to quotas. The quantities admitted (global quotas) are generally fixed by the authorities every fortnight at the meetings of the CBV (see I(c)(i)). In principle, imports are authorized when market prices reach the upper limit of the target price. For certain special cuts or categories of meat (sirloin, thigh, tripe, tongue and muzzle, sweetbreads, liver, corned beef), the quotas are usually fixed quarterly or annually, as the case may be. The quantities authorized for import depend on the supply-and-demand situation on the domestic market for like products.

When the markets organized by the trade groups and supervised by the CBV are no longer sufficient to keep the market price within the limits of the target price, importers may be required to participate in the utilization of surpluses of slaughter animals, in a proportion which is tolerable in relation to their imports of like products. The utilization of surpluses is effected mainly by the freezing of meat and its subsequent storage.

(b) Import charges

(i) Customs duties (see Annex I)

(ii) Payments by importers into the reserve fund (see Annex II)

Importers of slaughter animals and meat are required to contribute to a reserve fund intended to facilitate operations for stabilization of the market and the disposal of surpluses.

(iii) Veterinary tax

This tax serves to cover the cost of inspection operations at the frontier. The amount is Sw F 16 per head for live bovine animals. For meat and prepared and preserved products falling under heading 1602 it is Sw F 4 per 100 kg. gross.

(c) Foreign trade

In 1988, total imports of beef and veal reached some 17,000 tons, or slightly more than in the previous year.

In 1988, total exports of bovine meat (including prepared or preserved meat) amounted to about 680 tons, as against imports of some 15,000 tons.

PART H

Part H. Information on Bilateral or Plurilateral Agreements
in the Field of Bovine Animals, Meat and Offals

During the multilateral trade negotiations conducted within the framework of GATT, Switzerland undertook to open a minimum global quota (licences) of 2,000 tons a year for imports of fresh, chilled or frozen bovine meat falling within heading 0201.20/22 of the customs tariff.

These import possibilities relate to choice bovine meat: lean red meat from the carcass, firm and fine, slightly marbled, covered with an external layer of firm white fat. The cuts involved are as follows:

- (a) ribs;
- (b) sirloin, including fillet, entrecôte (faux-filet) and rumpsteak (whole or cut)
- (c) legs for making dried meat, including coin, tranche carrée, round and kernel;
- (d) tongue.

The quota provided for is opened under the Swiss system of imports. If extraordinary circumstances make it impossible to release the whole of this quota, Switzerland is willing to hold consultations at the request of the countries concerned.

Minimal imports of 700 tons may be made of bovine meat conforming to one of the following two definitions:

- (i) Quarters of beef, cut in bulk, prime and second quality, boned or pieces cut from the carcass having the following characteristics:
 - (a) thickness of external fat over the rib eye muscle at the level of the twelfth rib: at least 1.0 to 2.3 cm. (0.4-0.9 inches);
 - (b) weight of carcass: 270 to 383 kg. (600 to 850 lb.);
 - (c) minimum area of the rib eye muscle at the level of the twelfth rib: 56.3 cm.² (9 square inches);
 - (d) maximum age: thirty months. The carcass must not show visible ossification of the vertebral cartilages from the first to the eleventh dorsal vertebra;

- (e) minimal intermuscular fat content for lean meat of the rib eye muscle (rib covered, without hide or fat) at the level of the twelfth rib: at least 6.0 per cent fat in relation to muscle tissue. Remark: this condition does not apply to other muscles of the carcass;
 - (f) colour: the lean meat must be of a light cherry tint when the carcass is cut up;
 - (g) carcasses or pieces of carcasses freshly chilled must be at a temperature of less than 4°C (inside the rib eye muscle) when they are packed for despatch.
- (ii) Carcasses or pieces from animals thirty months old or more, fed for 100 days or more on a balanced diet of high energy value, containing at least 70 per cent of cereals, at a rate of at least 9 kg. (20 lb.) of feed a day.

These import possibilities are granted according to demand from Swiss importers.

ANNEX I

Import Tariff

I. Live Animals, Animal Products

Section notes

1. Any reference in this Section to a particular genus or species of an animal, except where the context otherwise requires, includes a reference to the young of that genus or species.
2. Except where the context otherwise requires, throughout the Nomenclature any reference to 'dried' products also covers products which have been dehydrated, evaporated or freeze-dried.

1. Live Animals

Note:

1. This Chapter covers all live animals except:
 - (a) fish and crustaceans, molluscs and other aquatic invertebrates, of heading Nos. 03.01, 03.06 or 03.07;
 - (b) cultures of micro-organisms and other products of heading No. 30.02; and
 - (c) animals of heading No. 95.08.

IV. Prepared foodstuffs; beverages, spirits and vinegar;
tobacco and manufactured tobacco substitutes

Section note

1. In this Section the term "pellets" means products which have been agglomerated either directly by compression or by the addition of a binder in a proportion not exceeding 3 per cent by weight.

16. Preparations of Meat, of Fish or of Crustaceans, Molluscs
or Other Aquatic Invertebrates

Chapter notes

1. This Chapter does not cover meat, meat offal, fish, crustaceans, molluscs or other aquatic invertebrates, prepared or preserved by the processes specified in Chapter 2 or 3.
2. Food preparations fall in this Chapter provided that they contain more than 20 per cent by weight of sausage, meat, meat offal, blood, fish or crustaceans, molluscs or other aquatic invertebrates, or any combination thereof. In cases where the preparation contains two or more of the products mentioned above, it is classified in the heading of Chapter 16 corresponding to the component or components which predominate by weight. These provisions do not apply to the stuffed products of heading No. 19.02 or to the preparations of heading No. 21.03 or 21.04.

Sub-heading notes

1. For the purposes of sub-heading No. 1602.10, the expression "homogenized preparations" means preparations of meat, meat offal or blood, finely homogenized, put up for retail sale as infant food or for dietetic purposes, in containers of a net weight content not exceeding 250 gr. For the application of this definition no account is to be taken of small quantities of any ingredients which may have been added to the preparation for seasoning, preservation or other purposes. These preparations may contain a small quantity of visible pieces of meat or meat offal. This sub-heading takes precedence over all other sub-headings of heading No. 16.02.
2. The fish and crustaceans specified in the sub-headings of heading No. 16.04 or 16.05 under their common names only, are of the same species as those mentioned in Chapter 3 under the same name.
