GENERAL AGREEMENT ON TARIFFS AND TRADE

Multilateral Trade Negotiations

Group "Sector Approach"

INFORMATION ON ORES AND METALS

Addendum

Part VII - Lead

- VII.1 - Importance of selected countries in world exports of lead, percentages based on quantities in 1971 and 1972.
- VII.2 - Share of lead in total exports of selected countries, percentages based on values in 1971 and 1972.
- VII.3 - Ratio of lead imports to production in selected countries, 1971 and 1972.
- VII.4 - Production and net trade in lead, ores and concentrates, unwrought metal and semi-manufactures in the Tariff Study countries and other major exporting countries, quantities for selected years between 1963-73.
- VII.5 - Volume and value of imports and/or exports of lead, selected countries, by processing stages, 1971 and 1972.
- VII.6 - Value of imports of lead into the Tariff Study countries by processing stages categories distinguishing principal m.f.n. and GSP suppliers and level of m.f.n. duties, 1971.
- VII.7 - Value of imports of lead into the Tariff Study countries from m.f.n., GSP and other preferential origins by BTN headings, and the corresponding m.f.n. tariff averages, 1971.

Notes: Production and trade of ores and concentrates is in general expressed in analyzed lead content, that of metal and semi-manufactures in actual weight of the product. Output of metal refers to total production by smelters or refineries of refined pig lead, plus the lead content of antimonial lead - including production on toll in the reporting country - regardless of the type of source material, i.e. whether ores, concentrates, lead bullion, lead alloys, mattes, residues, slags or scrap. Remelted pig lead and remelted antimonial lead are excluded. Trade in scrap is not included. Alloys are included in semi-manufactured products but excluded from unwrought metal. The definitions of these categories are therefore not strictly the same as in Tables VII.5 and 7./ La production et le commerce des minerais et des concentrés sont en général exprimés en contenu de plomb, déterminé par des analyses, et, dans le cas du métal et des demi-produits, en poids réel. La production de métal s'entend de la production totale, dans les fonderies ou usines d'affinage, de plomb affiné non transformé auquel s'ajoute le plomb contenu dans le plomb antimonieux, y compris les quantités produites à façon dans le pays considéré, quelles que soient les matières d'origine utilisées: minerais, concentrés, plomb d'œuvre, alliages de plomb, mattes, résidus, scories ou métal de récupération. Il faut exclure de cette rubrique le plomb ou le plomb antimonieux simplement refondu. Le commerce du plomb de récupération n'est pas pris en considération. Les alliages sont compris dans les demi-produits, mais exclus du métal brut. Les définitions de ces catégories ne sont donc pas rigoureusement les mêmes que celles des tableaux VII.5 et 7.

The estimates of metal content of ores exported from Ireland shown by the Monthly Bulletin of the International Lead and Zinc Study Group do not agree with the corresponding figures reported by the trade partners. Since a large part of Irish exports go to EC countries the trade balance calculated on the figures excluding Intra-EC shipments is not the same as that in Table VII.4 based on total (including Intra-EC) trade./Les estimations qui figurent dans le Bulletin mensuel du Groupe d'étude international du plomb et du zinc en ce qui concerne la teneur en métal des minéraux exportés par l'Irlande ne coïncident pas avec les chiffres correspondants communiqués par les partenaires commerciaux. Comme les exportations de l'Irlande sont destinées en grande partie aux pays des CE, le solde commercial calculé d'après des chiffres qui excluent les échanges intracommunautaires n'est pas le même que celui du tableau VII.4, qui est fondé sur le commerce total (y compris les échanges intracommunautaires).

Note: The volume of ores and concentrates, which in the trade returns is generally reported in actual weight, has been converted by the secretariat to metal content. The conversion is based on data shown in table VII.4./Le volume des minéraux et des concentrés qui est généralement indiqué en poids réel dans les statistiques du commerce a été converti en contenu de métal par le secrétariat, sur la base des données du tableau VII.4.

TABLE VII.6

Value of Imports of Lead into the Tariff Study Countries
by Processing Stages Categories Distinguishing Principal
Most-Favoured-Nation and GSP Suppliers and Level of
Most-Favoured-Nation Duties, 1971

Apart from the adjustments mentioned in the general note, the presentation of this table is the same as that published in the Basic Documentation for the Tariff Study: Imports by Industrial Product Categories, Principal Suppliers and Level of Duty. It shows imports of lead, broken down according to the following stages of processing: lead, ores and concentrates ("ores/minerals", BTN No. Ex 26.01 and Ex 26.03), unwrought lead ("metal unwr./brut", BTN No. 78.01) and lead semi-manufactures ("metal prodts.", BTN No. 78.02-05).

The first three stubs of the table show for each stage of processing, total imports (m.f.n., preferential and other) into each of the Tariff Study countries (see column headings) and into the eleven markets combined ("11 Tariffs"), distinguishing between imports from developed countries (DDC/DEV), imports from developing countries (DGC/PVD) and from countries in the Eastern trading area (ETA/EST).

In the subsequent stubs, the table distinguishes the following trade flows, broken down according to the level of m.f.n. duty¹ (1st column):

- (i) total imports of m.f.n. origin (including imports from countries entitled to the GSP);
- (ii) the network of m.f.n. trade among the Tariff Study countries;
- (iii) imports from other principal suppliers listed in decreasing order of importance.

Since only imports of m.f.n. origin are reported, intra-community (EC) trade, trade between the EC and the EFTA countries as well as trade under other free-trade area or preferential agreements do not appear in this table; this applies even to products which do not enjoy the free-trade area or preferential treatment.

¹Only those duty ranges carrying import values are reported. For the detailed information on duties applicable in this category, see I.5.

Tariff and trade data are based on the Tariff Study documentation. The m.f.n. duties considered are those generally in force as of 1 January 1973. The trade figures are expressed in thousands of United States dollars and refer to the year 1971 except for Australia (1971/72) and New Zealand (1970/71). For more detailed definitions and sources, see introductory notes to the Tariff Study publication mentioned above. Since import data for ores and residues (BTN headings Ex 26.01 and Ex 26.03) are not always reported separately for each metal in the Tariff Study documentation, adjustments had to be made on the basis of available data and the figures shown may be incomplete.

Table VII.7

Value of imports of lead into the Tariff Study countries from m.f.n.,
GSP and other preferential origins by BTN headings, and the corresponding
m.f.n. tariff averages, 1971

The data shown in this table are derived from the Basic Documentation for the Tariff Study: Summary by BTN Headings. However, for the purpose of this study, imports from both m.f.n. and preferential origins were further sub-divided to distinguish imports originating in countries entitled to the Generalized System of Preferences. Apart from the adjustments mentioned in the general note, the definitions of m.f.n. and preferential trade are the same as in the Basic Documentation. The GSP information reflects the most recent situation.

Tariff and trade data are based on the Tariff Study documentation. The m.f.n. duties considered are those generally in force as of 1 January 1973. The trade figures are expressed in thousands of United States dollars and refer to the year 1971 except for Australia (1971/72) and New Zealand (1970/71). For more detailed definitions and sources, or averaging procedures, see introductory notes to the Tariff Study publication mentioned above.

For each metal the BTN headings are shown in the sequence of the stages of processing. For each BTN heading the table shows, for the Tariff Study countries, separately (see column headings) and as a whole ("11 tariffs"), the simple (first line) and weighted (second line) tariff averages calculated on all m.f.n. tariff lines within the heading.

On the subsequent lines the table shows import values in thousands of United States dollars. The third line of the table ("Total" row "T") shows imports from all origins (m.f.n., preferential and other). On the subsequent four stubs, the following trade flows are distinguished wherever applicable:

- (i) m.f.n. imports originating in countries (whether developed or in the Eastern trading area) not entitled to the GSP ("m.f.n. origin-DDC") entering under:
 - m.f.n. duty-free lines (row "A")
 - m.f.n. dutiable lines (row "B");
- (ii) m.f.n. imports originating in countries entitled to the GSP ("m.f.n. origin-GSP") entering under:
 - m.f.n. duty-free lines (row "A")
 - m.f.n. dutiable lines and enjoying preference under the GSP ("covered" row "B")
 - m.f.n. dutiable lines and not covered by the respective GSP schemes ("not covered" row "B");

- (iii) imports originating in countries both entitled to the GSP and signatory to a free-trade area or preferential agreement ("orig.pref./GSP"), entering under:
 - m.f.n. duty-free lines (row "A")
 - m.f.n. dutiable lines and enjoying preference either under the GSP or under a free-trade area or preferential agreement ("covered" row "B")
 - m.f.n. dutiable lines and not enjoying any preference ("not covered" row "B"); and finally,
- (iv) imports originating in countries not entitled to GSP but signatory to a free-trade area or preferential agreement ("FTA and other pref. orig."), entering under:
 - m.f.n. duty-free lines and covered in the relevant agreement ("covered" row "A").
 - m.f.n. dutiable lines and enjoying preference under the relevant agreement ("covered" row "B")
 - m.f.n. duty-free lines and not covered in the agreement ("not covered" row "A")
 - m.f.n. dutiable lines and not enjoying any preference ("not covered" row "B").

In general, the tariff average is reported as 0.0 only if all tariff lines in the BTN heading are duty free; the weighted average for a BTN heading, carrying no trade but including dutiable lines is shown as 0*.

Since import data for ores and residues (BTN headings 26.01 and 26.03) are not always reported separately for each metal in the Tariff Study documentation, adjustments had to be made on the basis of available data. Where import figures for one country could not be collected separately the corresponding column was left blank.

It should also be noted that the benefits of the GSP are generally granted under certain conditions which cannot be reflected in the tabulations. For instance it had to be assumed that all imports originating in countries benefiting from the GSP fully comply with the rules of origin. It has furthermore been impossible to determine the volume of trade which is admitted under tariff lines partly covered in the GSP schemes, or subject to tariff quotas, ceilings or other limitations; consequently all imports in such cases are reported combined.

Finally it should be noted that differences between total imports shown in these tabulations and totals reported in the Basic Documentation for the Tariff Study are due to rounding and, in a few cases, to revisions of the earlier data.
