**Goods Trade Barometer**

**Goods barometer remains flat as Ukraine conflict, COVID-19 weigh on trade**

**Goods trade barometer**
Index value, March 2022 = 99.0

The Goods Trade Barometer is a composite leading indicator for world trade, providing real-time information on the trajectory of merchandise trade relative to recent trends. The latest reading of 99.0 stayed below the baseline value of 100 for the index, suggesting continued weakness in world trade. The barometer index might have risen above trend if some underlying data had not turned down in the month of March, partly due to the conflict in Ukraine and partly as a result of ongoing supply chain issues.

**World merchandise trade volume**

Quarterly trade statistics through the end of 2021 showed the volume of world merchandise trade expanding strongly in Q4 even as year-on-year growth slowed to 6.0% from 8.0% in Q3. Stronger year-on-year growth in Q3 was mostly due to the reduced volume of trade in the third quarter of 2020 following a pandemic induced slump. Trade growth in the first half of 2022 is likely to be slower due to the Russia-Ukraine conflict and new COVID-19 related lockdowns in China. In April, the WTO forecasted 3.0% growth in the volume of world merchandise trade in 2022, but this prediction is less certain than usual due to the unpredictable nature of the conflict.

**Drivers of goods trade**
Component index values, trend = 100

Many of the barometer’s component indices are close to or above their baseline value of 100, for example export orders (101.2), automotive products (101.5), air freight (99.9), electronic components (103.8), and raw materials (99.5). Meanwhile, the container shipping index remains below trend (95.0) due to persistent port backlogs. Component indices are smoothed to minimize the influence of extreme values, but this may make them appear more positive than is necessarily the case. For example, non-smoothed indices for export orders and air freight were above trend in February but below trend in March, resulting in on trend average values. As a result, all indices should be interpreted with an appropriate degree of caution.
Component indices

Export orders
(Index, trend = 100) 101.2

International air freight (IATA)
(Index, trend = 100) 99.9

Container port throughput
(Index, trend = 100) 95.0

Automobile production and sales
(Index, trend = 100) 101.5

Electronic components
(Index, trend = 100) 103.8

Agricultural raw materials
(Index, trend = 100) 99.5
