

# 1 INTRODUCTION

Imagine how different the world might look today if, in 1976, Apple Computers had not obtained the US\$ 15,000 in financing they needed to buy the parts to fulfil their first order. How many entrepreneurial visions with the potential to change the world have fizzled out of existence due to a lack of funds?

For many micro, small and medium-sized enterprises (MSMEs) around the world today, access to financing can mean the difference between prosperity and bankruptcy. Working to identify, understand, and ultimately overcome the challenges that MSMEs face in their quest for acquiring financing will help to ensure that the next Apple Computers does not cease to exist before it has a chance to change the world.

This publication seeks to identify some of the most pressing of these challenges, understand them, and explore the potential application of digital technologies to mitigating their impact. To that end, the authors conducted interviews and surveys with experts in the field of MSME financing, including in some cases trade financing, to shed light on these issues and explore the ways that technology can be used. A more detailed description of the research conducted can be found in Appendix A.

This publication will begin by examining some of the challenges that have been identified as impacting MSME financing, as well as the role that the COVID-19 pandemic has had in moulding the landscape. Next, it will move on to examine key digital technologies, their potential benefit to the industry – in particular to MSME financing – a selection of case studies and companies utilizing these technologies,<sup>1</sup> the adoption challenges they face, and recommendations for overcoming these challenges. The technologies in question include cloud computing, optical character recognition (OCR), the Internet of Things (IoT), big data analytics, artificial intelligence (AI), quantum computing, distributed ledger technology (DLT)<sup>2</sup> and application programming interfaces (APIs).

<sup>1</sup>The authors note that the case studies used throughout this white paper are not exhaustive; rather, they are a selection of use cases/case studies which are intended to illustrate the way technologies are used within MSME financing. Inclusion of case studies, companies, products or services does not imply their endorsement by TFG, ICC or WTO.

<sup>2</sup>From a technical standpoint, the terms “DLT” and “blockchain” are not interchangeable. However, it is currently very common to use them interchangeably in the vast majority of the non-technical literature, project descriptions and the business community. To avoid unnecessary discrepancies, this paper will follow the convention of using the terms DLT and blockchain interchangeably.

# TABLE OF ABBREVIATIONS

<b>ADB</b>	Asian Development Bank
<b>AI</b>	artificial intelligence
<b>AML</b>	anti-money laundering
<b>API</b>	application programming interface
<b>B2B</b>	business-to-business
<b>DID</b>	decentralized identifier
<b>DLT</b>	distributed ledger technology
<b>ERP</b>	enterprise resource planning
<b>fintech</b>	financial technology
<b>GVC</b>	global value chain
<b>ICC</b>	International Chamber of Commerce
<b>IFC</b>	International Finance Corporation
<b>IoT</b>	Internet of Things
<b>ITC</b>	International Trade Centre
<b>ITFA</b>	International Trade and Forfaiting Association
<b>KYC</b>	know your customer
<b>LEI</b>	legal entity identifier
<b>ML</b>	machine learning
<b>MLETR</b>	UNCITRAL Model Law of Electronic Transferable Records
<b>MSME</b>	micro, small and medium-sized enterprise
<b>OCR</b>	optical character recognition
<b>SME</b>	small and medium-sized enterprise
<b>SSI</b>	self-sovereign identity
<b>TFG</b>	Trade Finance Global
<b>UNCITRAL</b>	United Nations Commission On International Trade Law
<b>WCO</b>	World Customs Organization
<b>WTO</b>	World Trade Organization
