

## Information note on trade in intermediate goods: second quarter 2023

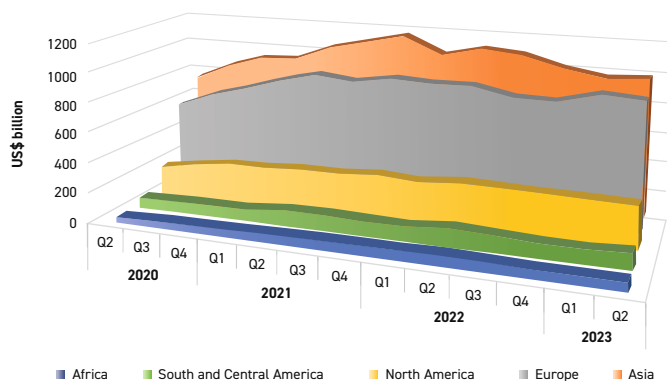

- World exports of intermediate goods (IGs) decreased by 8 per cent year-on-year (YoY) in the second quarter (Q2) of 2023, at a time of stagnant commodity prices and a marked contraction in global consumer demand due to high inflation and high interest rates.
- The exchange of industrial inputs between Asian economies fell 16 per cent YoY, with exports of high-tech components such as integrated circuits, memory chips and microprocessors most greatly affected.
- Although a major soybean producer, Argentina became the second largest importer of Brazilian soybeans in Q2 2023 (US\$ 1.3 billion compared with zero last year). This unprecedented development followed a halving of production due to drought.
- The accelerating global production of electric vehicles meant that the automotive sector was the only IG category with positive YoY growth in Q2 2023 (+13 per cent to US\$ 300 billion). China’s exports of lithium-ion batteries rose 40 per cent.

### IG exports by region, Q2 2023

Although falling 8 per cent compared to the peak in Q2 2022, IG exports remained relatively stable from the end of 2022 and were worth US\$ 2.3 trillion in Q2 2023.

Exports from South and Central America increased the most compared with Q1 2023, rising 14 per cent due to Brazil’s Q2 seasonal exports of soybeans, mostly destined for China (US\$ 15.3 billion).

The sharpest quarterly decline was in North America (-3 per cent compared to Q1 2023, US\$ 297 billion). European exports of industrial inputs also decreased in Q2 2023, by 2 per cent.

### World IG exports by category, Q2 2023

World exports of transport parts and accessories maintained an upward trend since the start of the year, with a 13 per cent YoY rise during the first two quarters of 2023 (US\$ 300 billion in Q2 2023). China’s exports of lithium-ion batteries (+40 per cent YoY) were boosted by accelerating global production of electric vehicles.

All other IG categories followed downward trends in Q2 2023. Other industrial supplies<sup>1</sup> registered the largest YoY drop, falling 14 per cent to US\$ 1.1 billion, mostly due to a high base of US\$ 1.3 billion in Q2 2022, the peak value in recent years. The decline was widespread among large economies. In Ireland, however, industrial supplies rose by 19 per cent owing to increased shipments of chemical compounds destined for US pharmaceutical and agrochemical industries.

Compared to the previous year, world trade in ores and precious stones remained stable in value terms (-1 per cent YoY in Q2 2023). Gold prices rose slightly, while prices of minerals fell around 20 per cent YoY.

Source: Trade Data Monitor.

IGs are inputs used to produce final products. They can include crops used in food production, textiles used to manufacture clothing and metals needed to make a wide range of goods. Trade in IGs is an indicator of supply chain activity, which was severely impacted by the COVID-19 crisis. The share of IGs in total merchandise trade (excluding fuels) in Q2 2023 was 47 per cent.

<sup>1</sup> "Other industrial supplies" cover a wide range of manufacturing inputs such as metal structures, articles and compounds, electrical conductors, and medical and pharmaceutical products.

## Top IG exporters, Q2 2023

IG exports from Singapore and Chinese Taipei were both down 19 per cent YoY in Q2 2023, following reductions that began near the end of 2022 and which extended into 2023. High-tech components such as integrated circuits, memory chips and microprocessors contributed most to the decline in both economies, reflecting weak consumer demand due to high inflation and high interest rates. The Republic of Korea's exports of IGs (-17 per cent YoY) were similarly affected by falling global demand for IT products.

While most EU members did not experience large reductions in IG trade, Belgium's exports of these products fell 14 per cent YoY. Since mid-2022, the economy reduced its exports of chemical compounds and semi-manufactured metal products essentially to its EU partners.

An unprecedented volume of soybeans was exported from Brazil to Argentina in Q2 2023. Despite being a major producer, Argentina became the second largest importer of soybeans from Brazil, with purchases of US\$ 1.3 billion – up from zero a year earlier. The sharp rise in imports was triggered by a halving of soybean production in Argentina following a drought and combined with an ongoing need for soybeans in Argentinian agricultural industry in the production of oils and meals to meet contractual agreements.

Top IG exporters			
Rank	Exporter	US\$ bn	YoY change (%)
1	China	344	-9
2	United States	195	-10
3	Germany	175	-3
4	Hong Kong, China	92	-11
5	Korea, Rep. of	85	-17
6	Japan	82	-13
7	Chinese Taipei	76	-19
8	Netherlands	76	-7
9	Italy	65	-5

## Inter- and intra-regional IG trade, Q2 2023

In Q2 2023, Asian and European regional supply chains accounted for more than half of world IG trade, 27 per cent (US\$ 606 billion) and 28 per cent (US\$ 629 billion), respectively.

While all intra-regional IG trade flows decreased, North America was least affected (-2%). As in previous quarters, intra-Asia trade was among the most impacted by the reduction in global demand, falling 16 per cent YoY.

Most inter-regional exchanges of industrial inputs were down in 2023 Q2 compared to the same period in 2022. Nevertheless, European exports to Asia, North America and South and Central America grew positively in Q2 2023, with increases of 5 per cent, 2 per cent and 1 per cent YoY, respectively. European shipments to Asia were backed by a rise in gold exports from Switzerland (+66 per cent YoY in Q2 2023 in value terms and +44 per cent YoY in net-weight terms).

## Top IG importers, Q2 2023

Singapore recorded the biggest decline among top IG importers in Q2 2023 (-20 per cent, similar to the drop in exports). Due to the contraction of electronics trade, the economy drastically reduced its imports of integrated circuits from Asian regional suppliers, of which Chinese Taipei is the largest.

Imports of IGs by UK industries increased by 3 per cent YoY in Q2 2023, the only positive trend among top IG importers, driven by deliveries of non-monetary gold from Kazakhstan (US\$ 5 billion).

The 12 per cent decline in IG imports of Germany was mostly due to the normalization of imports of lactam antibiotics for its pharmaceutical industry, from unprecedented shipments worth US\$ 15 billion in Q2 2022 to US\$ 2 billion in Q2 2023.

Top IG importers			
Rank	Importer	US\$ bn	YoY change (%)
1	China	357	-8
