A. SCHEDULE OF CONCESSIONS: OTHER DUTIES AND CHARGES

"Other duties and charges (ODCs)" on bound tariff items form part of the concessions on goods and are likewise listed in the schedule of WTO members. Like the customs tariff, ODCs are bound at the tariff line level and are expressed either in *ad valorem* or non-*ad valorem* format. This information is stored in the Consolidated Tariff Schedules database of the WTO. Summary statistics of concessions on ODCs are presented below.

TECHNICAL NOTES

The commitments on ODCs are interpreted in the following manner. Null value in the ODC column of the schedule means the ODC is duty free. On the other hand, commitments established as a note of legal nature (usually, a reference to some law or regulation), are treated as non-*ad valorem* ODCs. Specific, mixed and compound duty types are aggregated into the non-*ad valorem* duty type. *Ad valorem* equivalents (AVEs) for these non-*ad valorem* duties are calculated using the unit value based on average trade for the years 1999 to 2001 and at the average exchange rate for these years. When it is not possible to generate a unit value from the trade data at country level because of unavailability of data, the world trade unit value at six digits of the Harmonized System is used. In cases where there is no world trade for the specific product, the AVE is not calculated. Similarly, when the ODC cannot be expressed into a quantifiable measure (e.g. legal notes mentioned above), no AVE is available either.

All simple averages are based on pre-aggregated HS six-digit averages. Pre-aggregation means that duties at the tariff line level are first averaged to HS six-digit subheadings. Subsequent calculations are based on these pre-aggregated averages.

Column heading	Description or method of calculation					
ODC Coverage	Share of HS six-digit subheadings containing at least one bound tariff line with other duties and charges. Unbound tariff lines are not taken into account. Full coverage is indicated by 100 without any decimal. If some tariff lines have no ODC but the result still rounds to 100 this is reflected by maintaining one decimal, i.e. 100.0. Partial coverage at tariff line level is taken into account on a pro rata basis.					
Simple average	Simple average of the <i>ad valorem</i> or AVE HS six-digit duty averages.					
Maximum	Maximum tariff line level ad valorem duty or AVE.					
Share of non-ad valorem ODCs in total ODCs	Share of HS six-digit subheadings subject to non- <i>ad valorem</i> duties. When only part of the HS six-digit subheading is subject to non- <i>ad valorem</i> duties the percentage share of these tariff lines is used.					

Description of column headings
