Isomers, including stereoisomers of the above in the list of substances, and (except for the positions for which a value of concentration is indicated), in cases where the existence of such isomers, including stereoisomers is possible within the chemical notation.

Ethers and esters of the above in the list of substances, and (except for the positions for which the set of concentrations is indicated).

The salts of the above in the list of substances and, if the existence of such salts is possible, except salts of sulfuric, hydrochloric and acetic acids.

Preparations containing the above in the list and substance (except for the positions for which a value of concentration is indicated) in any form or physical state, regardless of their number and neutral components (water, starch, sugar, sodium bicarbonate, talc, etc. .), except for the drug combinations that are not listed in this list, as well as mixtures containing in its composition precursors at concentrations equal to or higher than those specified in the list.

Preparations containing the above in the list and substance (except for the positions for which a value of concentration is indicated) in any form or physical manner, regardless of their number and neutral components (water, starch, sugar, sodium bicarbonate, talc, etc. .), except for the drug combinations that are not listed in this list, as well as mixtures containing in its composition precursors at concentrations equal to or higher than those specified in the list

In regard to the position 396 "thionyl chloride" establish that licensing is used if the product is not controlled by the export control system.

Mixtures containing several precursors (substances for which in this section is set to the concentration), marked with an "*", to be controlled, if the total concentration equal to or greater than the concentration set for one of the substances, the value of which is most important.

Mixtures containing several precursors (substances for which in this section is set to the concentration) that are not marked with "*", or containing several precursors that are not marked with "*" in combination with marked with "*" are controlled, if total concentration of the members of the precursors of such mixtures is equal to or greater than the concentration set for one of the precursors, the value of which has the lowest value.

Note:

Assignment of a substance to the narcotic drugs, psychotropic substances and their precursors, inscribed on this list, does not depend on what brand (trade) names, synonyms, or abbreviations are used as its name.

For combination drugs containing, besides those included in this list or substance, other pharmacologically active components, the control set individually by adding this drug combination in this list.

Concentration of the substances referred to in this list are determined based on the mass fraction of a substance in the mixture (solution).

For the purposes of this list should be guided by a code of the Nomenclature for Foreign Economic Activity of the Customs Union and the international non-proprietary or other nonscientific name or chemical name or a brief description of narcotic drugs, psychotropic substances and precursor.

Annex 11 to the List

Export and import of toxic substances except for precursors of the drugs and substances with psychotropic effects *
