I. INTRODUCTION

1.1 In a communication dated 13 March 2003, Antigua and Barbuda (hereinafter also "Antigua") requested consultations with the United States, pursuant to Article 4 of the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU) and Article XXIII of the General Agreement on Trade in Services (GATS) regarding measures applied by central, regional and local authorities in the United States of America that affected the cross-border supply of gambling and betting services. Antigua attached to its communication an Annex listing US Federal and State measures whose cumulative impact resulted, according to Antigua, in making unlawful the supply of gambling and betting services on a cross-border basis. In a communication dated 1 April 2003, Antigua issued a communication containing a corrected Annex aiming at clarifying "some of the references to the US legislation" which were contained in the original Annex.

1.2 Antigua and the United States held consultations on 30 April 2003, but these consultations did not resolve the dispute. Consequently, in a communication dated 12 June 2003, Antigua requested the DSU to establish a Panel. At its meeting on 21 July 2003, the DSU established a Panel pursuant to the request of Antigua in document WT/DS285/2, in accordance with Article 6 of the Dispute Settlement Understanding. At that meeting, the parties to the dispute agreed that the Panel should have standard terms of reference. The terms of reference are, therefore, the following:

"To examine, in the light of the relevant provisions of the covered agreements cited by Antigua and Barbuda in document WT/DS285/2, the matter referred to the DSU by Antigua and Barbuda in that document, and to make such findings as will assist the DSU in making the recommendations or in giving the rulings provided for in those agreements."

1.3 On 15 August 2003, Antigua requested the Director-General to determine the composition of the Panel, pursuant to paragraph 7 of Article 8 of the DSU. This paragraph provides:

"If there is no agreement on the panelists within 20 days after the date of the establishment of a panel, at the request of either party, the Director-General, in consultation with the Chairman of the DSU and the Chairman of the relevant Council or Committee, shall determine the composition of the panel by appointing the panelists whom the Director-General considers most appropriate in accordance with any relevant special or additional rules or procedures of the covered agreement or covered agreements which are at issue in the dispute, after consulting with the parties to the dispute. The Chairman of the DSU shall inform the Members of the composition of the panel thus formed no later than 10 days after the date the Chairman receives such a request."

1.4 On 25 August 2003, the Director-General accordingly composed the Panel as follows:

Chairman: Mr. B.K. Zutshi
Members: Mr. Virachai Plasai
Mr. Richard Plender

1.5 Canada, the European Communities, Japan, Mexico and Chinese Taipei reserved their rights to participate in the Panel proceedings as a third party.

---

1 WT/DS285/1 – S/L/110, dated 27 March 2003.

1.7 On 17 October 2003, the United States made a request for preliminary rulings, pursuant to paragraph 11 of the Working Procedures. On 20 October 2003, the Panel invited Antigua and Barbuda and the third parties to comment on the US request (Annex B). Antigua submitted its response on 23 October 2003, the European Communities and Japan on 24 October 2003. Chinese Taipei, Mexico and Canada informed the Panel that they would not submit any comments to the US request for preliminary rulings (Annex B). On 29 October 2003, the Panel replied to the US request in a communication to the parties, with copy to the third parties on 29 October 2003 (Annex B).

1.8 The Panel held the first substantive meeting with the parties from 10 to 12 December 2003. The session with the third parties took place on 11 December 2003. The second substantive meeting was held on 26 and 27 January 2004.

1.9 On 20 February 2004, the Panel issued the Descriptive Part of its Panel Report. On 27 February 2004, the parties and third parties provided their comments on the draft Descriptive Part.

1.10 Factual and legal arguments by the parties are reflected in Section III. In addition, Antigua and the United States have submitted a series of exhibits in support of their factual and legal allegations. These exhibits have been considered by the Panel in its findings in Section VI below. A list of these exhibits is contained in Annex G of this Report. Annex C to the Report contains written questions posed by the Panel to the parties during the first and second panel meetings, as well as questions posed to third parties during the first panel meeting.

1.11 On 24 March 2004, the Panel transmitted its Interim Report to the parties. On 7 April 2003, the parties provided their comments on the Interim Report. None of the parties requested that the Panel hold a further meeting with the parties to review part(s) of the Panel's Report. On 16 April 2003, the parties submitted further written comments on the comments that had already been provided on the Panel's Interim Report on 7 April 2003.

1.12 The Final Report of the Panel was issued to the parties on 30 April 2004.

II. CONCLUSIONS REQUESTED BY THE PARTIES

2.1 Antigua and Barbuda requests the Panel to find that the United States' prohibition on the cross-border supply of gambling and betting services and its measures restricting international money transfers and payments relating to gambling and betting services are inconsistent with:

(a) the United States' Schedule of specific commitments under the GATS; and
(b) Articles XVI:1, XVI:2, XVII:1, XVII:2, XVII:3, VI:1, VI:3 and XI:1 of the GATS.

2.2 The United States requests the Panel to reject Antigua and Barbuda's claims in their entirety.

III. ARGUMENTS OF THE PARTIES

A. FACTUAL ARGUMENTS

3.1 Antigua submits that a vast array of gambling and betting games and services are offered on a commercial basis in the United States and elsewhere. These games can typically be categorized into one of the following three broad categories: (i) betting on the outcome of events in which the gamblers do not participate, such as sports contests (for example, horse races, soccer, American football, basketball, and cricket); (ii) card games involving monetary stakes (such as poker, black
jack and baccarat); and (iii) random selection games which are games of chance based on the random selection of numbers or other signs and where the random selection is performed by a machine or the casting of dice. This type of gambling takes various forms, including lotto, keno and bingo; instant lotteries or "scratch card games"; gambling machines; and "table games" such as roulette or "craps". Antigua notes that "gambling," "gaming," "wagering" and "betting" are different terms for the same basic activity. While these terms are generally used interchangeably by the industry and by Antigua in its arguments to the Panel, the industry typically refers to itself as the "gaming industry" and terms such as "gambling and betting" more often refer to the activity.

3.2 The Antiguan government has taken steps since the mid 1990s to build up a primarily Internet-based, "remote-access" gaming industry as part of its economic development strategy. As the cross-border gaming industry in Antigua has developed and matured, the government believes that a standard business model has evolved that successful operators more or less conform to. Antiguan regulation provides for two kinds of gambling and betting licences – interactive gaming and interactive wagering. The gaming licence is for casino-type, random selection and card games and the wagering licence is for sports betting. Some operators possess both licences and players can access either type of service from one Internet site, while other operators offer only one service. Casino game operators create "virtual casinos" on their web sites with detailed graphics and enhancements designed to mimic land-based casino settings. These sites offer a variety of card and dice games such as poker, black jack, craps and keno, as well as arcade-type games that provide virtual imitations of video poker terminals, slot machines and other gambling machines. Because of the highly visual aspect of the casino-type games, these services are operated exclusively through Internet connection. The sports betting operators offer the chance to wager on the outcome of sporting contests in a number of different ways, such as straight wagers on match results, transacting in futures markets in player performances, team performances and outcomes of political campaigns and other uncertain future events, and other forms of traditional as well as inventive methods of wagering. All Antiguan sports book operators maintain an Internet web site on which players may place wagers, but many operators also make extensive use of telephone betting, as betting on contests or performances to occur in the future does not need to be visual and the events are independent of the operator's web site.

3.3 With respect to player accounts and player due diligence, the gambling and betting service providers in Antigua offer what is called "account betting" where a player must fund an account with money before being able to enter into wagers. The amount of a wager cannot exceed the funds on deposit in the account and players are not offered credit on which to gamble. If a wager is lost, the amount of the bet is taken from the player's account for the benefit of the operator. If the player wins, the winnings are credited to the account. To realize on their winnings players may request that all or any portion of the funds in their account are directed back to them. In practice as well as by requirement of Antiguan law, winnings and the balance of deposits are transmitted back to the account from which the initial deposit came or, if the deposit was by credit card, sometimes by credit back to the same credit card. In some cases, amounts are paid to players by cheque. To open an account with an operator, prospective players typically fill in a form and submit information directly on-line. The precise information requested at the time of establishing a new account differs from site to site, but the basic objective is to obtain enough information regarding the new player to allow the

---

4 Antigua notes that, in the context of a casino these will often be referred to as part of a wider group of "table games" also including random selection games such as roulette or craps.

5 Antigua indicates that the discussion in paras. 3.2 and 3.4 is based upon the experience and the records of the Antiguan Directorate of Offshore Gaming.

6 See, e.g., www.intertops.com www.wsex.com

8 Antigua notes that this is unlike many land-based casinos in the United States, which will offer some customers the ability to gamble on credit with funds advanced by the casino. Advancing of credit for gaming transactions is against Antiguan law.
operator to perform its own due diligence into the identity of a player. While almost every operator will let a person open an account without the operator having gone through the due diligence process, funding an account and commencing gambling or betting on the account cannot be done without the completion of the process. There are several common methods used by players to fund accounts with Antiguan gaming operators. These include payment by cheque drawn on a bank account or a bank certified or cashier's cheque, wire transfer, electronic transfer to money remittance service providers and credit card. The methods used by operators to perform due diligence on players differ from site to site, but all operators undertake some form of identity verification to come to a reasonable assurance of the identity of the player. In addition to satisfying Antigua's regulatory requirements for identity verification, anti-fraud prevention motivates operators to ensure identification. A number of operators use commercially available databases where large amounts of information on persons can be found, including dates of birth and employment, criminal records, credit history and residential addresses. Operators can also easily determine the location of a player through the tracing of the Internet service provider number generated by the person's computer.

3.4 Concerning fraud prevention, each Antiguan operator maintains an "anti-fraud" department with the objective of preventing abuses of the gaming systems, collusion among players, financial fraud and credit card abuse, under age playing and other occurrences which can result in financial losses to the operator. In general, anti-fraud departments perform the identity checks on prospective players, investigate suspicious conduct and develop strategies to deal with illegal or dishonest practices. It is obvious to the government through its oversight of the industry that with experience, operators have become extremely capable of discerning potentially fraudulent or dishonest players or conduct in a number of ways and mostly by recognisable patterns that have built up over the years. Under age gambling is expressly prohibited by Antiguan law. Experience has shown that under age gambling with Antiguan operators is relatively rare for several reasons. The first obstacle to gambling and betting by minors is the age verification that forms a part of the identification process. A second material obstacle is the need to fund an account before any wagering can commence, which requires access to financial instruments such as cheques and a funded bank account, the ability to send funds by wire transfer from a funded bank account or access to a valid credit card. This is a significant barrier which most minors are unable to overcome, particularly given the practice in the industry to either send winnings and deposits directly back to the account from which deposits were received or crediting winnings directly back to the applicable credit card – in essence denying the minor the ability to access any gaming rewards. Another obstacle to play by minors is market driven – in the rare cases where minors have been able to gamble the result has almost invariably been a refund to the parent or a credit back on a credit card. Another method of restricting the ability of minors to wager on operator web sites can be imposed at the user's end. In practice, many Antiguan operators provide direct links from their web sites to parental control providers such as "Cybersitter," "Net Nanny" and "Surf Watch." Some specifically register themselves with these parental control providers to ensure that access to their sites will be automatically blocked to subscribers. Finally, it is a requirement of Antiguan law that operators display on their sites a warning of the addiction possibilities of gambling and information to assist compulsive gamblers. In practice, this is usually done by a reference and link to organizations such as "Gamblers Anonymous." Furthermore, the government has found that the cross-border gaming industry in Antigua is generally adverse to gambling and betting by problem gamblers. Not only do these people tend to be more problematic for operators – demanding credit and refunds and occupying a disproportionate amount of personnel attention – but their conduct also frequently results in charge-backs on credit cards and reversals of financial transactions. Most operators appear to be able to detect patterns of problem gamblers either at the sign-up stage (where the operators refuse to authorize funding of or playing on an account) or later on during the course of the relationship with the player, in which event the person's account will often be closed and the balance returned to the player.

3.5 Antigua submits that, from a high of up to 119 licensed operators, employing around 3,000 and accounting for around ten per cent of GDP in 1999, by 2003 the number of operators has declined to 28, employing fewer than 500. The government believes that material factors in the decline of the
industry are the increased standards of regulation in Antigua and an increasingly aggressive strategy on the part of the United States to impede the operation of cross-border gaming activities in Antigua. Antigua’s regulatory framework for the remote-access gaming industry has two components. The first is the Gaming Regulations, adopted on 22 May 2001, which set out, *inter alia*, requirements for operators to have valid licences, the applications for which are subject to rigorous scrutiny by the Gaming Directorate. The Gaming Regulations also: (i) forbid under age gaming; (ii) contain provisions aimed at promoting responsible gaming (including rules requiring warnings of the addictive effects of gambling on operator’s websites); (iii) oblige operators to conduct full identity verification checks on prospective players; (iv) prohibit the receiving of payments in cash; and (v) provide that funds can only come from properly verified accounts in regulated financial institutions and that, if possible, winnings must be paid back to that same account. Licensees are obliged to report all suspicious activities to the Directorate. The Directorate itself has investigatory powers under the Gaming Regulations, and oversees, supervises and monitors licensees, key personnel and games offered by licensees. In practice, these powers are regularly used. The Gaming Regulations also address standards in advertising, requiring, among other things, that advertising not be false, deceptive or misleading and not contain indecent, pornographic or offensive content.

3.6 The second component of the regulatory scheme in Antigua is the anti-money laundering efforts of the government, evidenced principally by the Money Laundering (Prevention) Act, the Money Laundering Regulations, the Money Laundering Guidelines and the actions of the Office of National Drug and Money Laundering Control Policy (“ONDCP”). Antigua is a member state of the Caribbean Financial Action Task Force created under the auspices of the Financial Action Task Force on Money Laundering established by the G-7 in 1989. The Money Laundering Act is a comprehensive, up-to-date statute that criminalizes money laundering and sets up the regulatory authority and powers of the ONDCP. For a variety of reasons, Antigua does not consider the cross-border gambling and betting industry in Antigua as particularly susceptible to money laundering or other forms of financial or organized crime. In particular, operators in Antigua are prohibited from taking cash from players and are required to establish their identity. This is in stark contrast to land-based casinos and other gaming outlets in the United States, where not only can players wager with complete anonymity but also gamble almost exclusively with cash.

3.7 Antigua submits that commercial gambling is an enormous industry in the United States. In 1999 gamblers in the United States wagered more than US $630 billion in state-sanctioned gambling activities and lost US $50 billion in the process. In 1998, 68 per cent of Americans gambled at least once and 86 per cent of Americans have gambled at least once in their lifetime. In 1999, a federal commission, the United States National Gambling Impact Study Commission (hereinafter, "NGISC"), completed a lengthy detailed study on gambling in the United States. The NGISC concluded that:

"Commercial gambling has become an immense industry. Governments are now heavily involved and increasingly active in pursuit of gambling revenues, either..."
directly through state-owned lotteries and Native American tribal gambling or through the regulation and taxation of commercial operators.\textsuperscript{15}

There was no single, overarching national decision to turn the United States into a world leader in gambling. Rather, games of chance spread across the map as a result of a series of limited, incremental decisions made by individuals, communities, states and businesses.\textsuperscript{16}

In the next 25 years, gambling could, at its present rate of growth, become more and more like other common and legal, but somewhat restricted, business activities, such as the sale of alcohol or cigarettes. Of course, over time, the basic rules of our economic system would be expected to play a greater role in shaping the pattern of gambling, as the quasi-monopolistic circumstances of the present are replaced by more routine competition.\textsuperscript{17}

3.8 Since 1999 state-sanctioned gambling in the United States has continued its expansion at an unprecedented rate, being available in 48 states and covering activities including bingo, horse race betting and other sports gambling, commercial casinos and state-operated lotteries. The omnipresence of fully lawful, state-sanctioned gambling makes the United States the largest national gambling market in the world. The US $630 billion in total amount wagered reported by the NGISC in 1998 and 1999 excludes the most widespread and popular form of gambling in the United States: non-sanctioned or "illegal" sports betting. The NGISC estimated that as much as US $380 billion in illegal wagers are placed annually by American gamblers on professional and amateur sporting events.\textsuperscript{18} Despite the enormous growth of this non-sanctioned gambling, the United States' efforts to crack down on illegal bookmakers in the United States have dwindled over the last 40 years. In the NGISC Final Report, the NGISC concluded that illegal sports betting in the United States is "easy to participate in, widely accepted, very popular, and, at present, not likely to be prosecuted."\textsuperscript{19}

3.9 Antigua further submits that many of the largest gaming companies in the world are of United States origin and many have overseas interests. These companies use sophisticated remote computer technology to control and monitor overseas operations via the Internet.\textsuperscript{20} United States gambling operators are allowed to advertise without restrictions throughout the United States. The NGISC described the advertising of lotteries in the United States as "deceptive", "misleading" and "manipulative."\textsuperscript{21} United States casinos, such as in Nevada and Atlantic City (New Jersey), use sophisticated marketing techniques, including direct marketing based on electronically collected data on the gambling behaviour of individual players. For instance, Nevada's modern casinos, especially those on the main casino area in Las Vegas – the so-called "Las Vegas Strip" – are self-contained mini-cities designed to offer non-stop gambling. For instance, the casino floor in the MGM Grand casino is over 170,000 square feet (approximately 16,000 square metres) and holds approximately 3,200 slot machines, 164 table games and a sports betting facility.\textsuperscript{22} In order to attract customers, Nevada casinos widely advertise discount travel fares, inexpensive hotel rooms, bargain meals, low-

\end{footnotesize}
cost entertainment and other special events. Some casinos even offer free travel to preferred customers. Under United States law, casinos are permitted to advertise gambling in every state of the nation, even within states which do not permit casino gaming. One particularly successful marketing tool of the Las Vegas casinos is to offer entertainment in the form of shows by major stars, Broadway-style musicals, revue spectacles and a variety of lounge acts. All of this entertainment has a single purpose – to bring customers into the casino. Entertainment events that boost a casino's gambling winnings are frequently held over, whereas those which do not, regardless of how many tickets are sold, are generally discontinued. The Las Vegas-style casinos are made to keep visitors in the resort complex and near the tables and slot machines. Pathways through a casino are built to emphasize the gambling equipment rather than directing visitors to exits. Gaming equipment is carefully arranged in a compact layout to provide secluded, intimate gambling areas, with the gambling equipment the dominant décor on the casino floor. The gambling areas of casinos are also designed to detach visitors from their daily routine and release their inhibitions and conventional responsibilities. The unusual noise and visual effects of the casino floor purposefully create a sensation which heightens the thrill and pleasant tension of gambling.

3.10 Additionally, most casinos are open 24-hours a day and use a number of techniques to diminish a player's sense of time and money. There are generally no clocks or views to the outside, making it difficult for gamblers to know the time. The casinos convert cash into readily-expendable chips at gaming tables, which has the effect of detaching gamblers from their customary value of money. To further encourage unchecked gambling, casinos offer free alcoholic beverages to anyone who is gambling. For ready access to cash, casinos house banks, automated teller machines, credit card cash machines and offer lines of credit on the casino floor. Gambling operators also use a variety of inducements to keep gamblers in the casino. Winning gamblers are commonly awarded free dinners, over-night stays and entertainment. The motive is quite simple – given a long enough stay, winning gamblers will inevitably return to the tables where the law of probability will ultimately catch up with them. Casinos also maintain electronic databases with data on the gambling behaviour of their individual customers. These data are used for direct marketing to the individual gamblers.

36 David G. Schwartz, *Suburban Xanadu: The Casino Resort on the Las Vegas Stripe and Beyond*, Routledge (2003), p. 7. An example is the "customer loyalty schemes" of the major casino companies. For instance, Harrah's has developed a sophisticated direct marketing system based on a "national patron database."
Casinos also exchange these data between each other.\textsuperscript{38} As of 2003, Nevada has over 2,100 licensed casinos that offer virtually every popular form of state-sanctioned gambling. These casinos host an aggregate of 189,193 slot machines and 6,358 tables for blackjack, craps, roulette and other table games\textsuperscript{39} and generate state-wide gaming revenues of US $9.5 billion per year.\textsuperscript{40} Las Vegas itself has hosted over 30 million visitors each year since 1997, with more than 35 million visitors in each of the past three years.\textsuperscript{41} Approximately 90 per cent of visitors come from places other than Nevada, including all other regions of the United States as well as from foreign countries.\textsuperscript{42} In addition to the well-recognised casino operations in Nevada and New Jersey, a number of other states offer casino gambling opportunities as well, including Louisiana, Illinois, Indiana, Missouri, Mississippi, South Dakota, Colorado and Michigan. Further, throughout the United States there are over 340 casino facilities owned by various Native American tribes who, through exemptions under federal law and in many cases with federal assistance, are permitted to offer a wide scope of gambling opportunities at facilities located on tribal lands. Even the United States federal government operates gaming facilities, with about 8,000 slot machines and video poker electronic gaming devices located on 94 United States military bases and installations located outside the United States.

3.11 Antigua submits that the United States horse race betting industry has successfully used advances in communications technology to expand gambling opportunities. As a result, 85 per cent of bets on horse races are made away from the track where the race is run by means of "simulcasting," or the live broadcasting of horse races via satellite communication or other remote means.\textsuperscript{43} This includes broadcasting to the television in the home with an opportunity to gamble from home via the

\textsuperscript{37} Mr Gary Loveman, Harrah's President and Chief Operating Officer stated that "[O]ur website is just one example of how we're revolutionizing the way the casino industry utilizes technology". (…) It enables us to communicate directly with our customers and potential customers outside of the casino environment, expanding our marketing reach through effective, efficient application of information technology." See "Casino player awards record 251 Honors to Harrah's" (5 July 2001) at www.gamblingmagazine.com

\textsuperscript{38} For instance the Las Vegas based Mandalay has recently concluded an agreement to share customer data with the Mohegan Sun casino in Connecticut (an "Indian casino" and the second largest casino in the world). Mandalay will send direct marketing pitches to customers of the Mohegan Sun living within 350 miles from the Mohegan Sun (which includes cities such as New York, Philadelphia and Boston). The Mohegan Sun will do likewise with Mandalay customers. Casinos that enter into such agreements will, for instance, offer high spending gamblers a free weekend trip to the more remote casino. See "Mandalay Bay, Conn. casino in deal for marketing," Las Vegas Sun (29 August 2003).

\textsuperscript{40} Ibid. (2001 figures).

Internet, the telephone or other means of communication. In 2000, the United States amended the Interstate Horseracing Act to permit betting on horse races over the Internet.

3.12 Antigua also notes that, as of 2002, Nevada had 160 licensed and regulated "bookmakers" which hosted wagering on all professional and amateur sports. When betting with a bookmaker a gambler bets against the bookmaker as opposed to betting against the other gamblers, as is the case with pari-mutuel betting. The most popular sports on which bets are made with Nevada bookmakers are American football, basketball and baseball. Wagers are also accepted on hockey, golf, auto racing, soccer and other sports and athletic events. In fiscal year 1998, sports betting in Nevada reached a high of US $2.3 billion (total amount wagered), generating US $77.4 million in revenues (profits). Primarily due to competition from foreign sports gambling operators, the total amount wagered with Las Vegas bookmakers has slightly decreased since 1998. In 2002, the total amount wagered was US $1.9 billion and industry profits were US $110 million. Nevada bookmakers offer their services to home users via the Internet and the telephone.

3.13 Antigua further submits that the lotteries offer a wide range of games including: (i) instant or scratch-card games, which are offered in all states with lotteries in a huge variety. For example, the California Lottery currently has 39 separate scratch-card lottery games while the Georgia Lottery offers 80 such games; (ii) Lotto is also offered in almost every state with a lottery and typically involves a very high money prize or "jackpot". The current record prize in the United States for one winning lottery entry is US $296 million; (iii) keno, which exists in two different types. The first type is a regular periodic drawing one or two times per week. The other type of keno lottery is known as "fast draw" keno, where drawings occur on an electronic monitor every five minutes. As of 2002, keno games were operated by lottery operators in 11 states; (iv) daily numbers games which, like lotto and keno, are a variety of random selection number games. The daily numbers games require players to make a three- or four-digit selection on a daily basis to win a fixed prize in the range of US

---

45 Antigua notes that, in December 2000, the definition of off-track wager was amended to include "pari-mutuel wagers, where lawful in each state involved, placed or transmitted by an individual in one State via telephone or other electronic media and accepted by an off-track betting system in the same or another State, as well as the combination of any pari-mutuel wagering pools.” See United States General Accounting Office, GAO – 03-89, Internet Gambling: An Overview of the Issues, December 2002 (hereinafter, "GAO Report"), p. 43.
47 Ibid.
48 NGISC Final Report, p. 2-14, citing Robert Macy, "Ban on college Sports Betting Could Cost State Books Millions", Las Vegas Review – Journal (18 May 1999), 4A. The state-sanctioned sports betting market in Nevada makes up only a small fraction, about two per cent, of the total gaming revenues generated in Nevada.

$500 to US $2,500. Some states hold numbers drawings as often as four times per day. Daily numbers games are offered in almost every state with a lottery; video lottery terminals (VLTs), which are the newest and fastest growing type of gambling offered by lottery operators in the United States. South Dakota introduced the first VLT network in the United States in 1989. Prior to the introduction of VLTs, the South Dakota lottery was struggling with total sales of US $21 million per year. A decade after introducing VLTs, the South Dakota lottery had grown to over US $500 million in annual total sales. Currently VLTs are operated in the States of Delaware, Oregon, New York, South Dakota, Rhode Island, West Virginia, Louisiana and Montana. As of 2000, there were over 60,000 VLTs in the United States with net sales of US $2.3 billion and profits of US $685 million. In the United States, VLTs are viewed as a complementary product to traditional lottery games because they are often located in bars and taverns, establishments which have not been successful as retailers for lottery tickets in the past. Historically, the primary opposition to the expansion of VLTs came from the horse race betting industry, which feared VLTs would reduce their turnover. However, with the successful installation of VLTs at racetracks in Delaware, Louisiana, New York, Rhode Island and West Virginia, the horse race betting industry has become an active proponent of video gambling and actively lobbies for the legalization of VLTs at racetracks and Sports betting. For instance, the Oregon lottery offers a sports betting game called "Sports Action".

3.14 Finally, Antigua stresses that it is important to keep in mind what this dispute is not about. First, it is not about the Internet gaming industry in general. This proceeding is being brought by the government of Antigua and Barbuda on behalf of its domestic industry and for no other. Second, this is not about unregulated, "free for all" gambling. Antigua is a regulated jurisdiction. When it started developing this industry some eight or more years ago, it did so in a regulated context. Since then, Antigua has overhauled its regulatory scheme twice – most recently with direct participation and assistance from US gambling law experts. And it continues to work on refinements of and improvements to its regulatory scheme. Antigua believes that any resolution of this dispute between Antigua and Barbuda and the United States should take place in an agreed regulatory context. In the consultations with the United States, Antigua and Barbuda expressed its willingness to cooperate with the United States on a mutually agreeable regulatory scheme. The United States showed no interest in doing so, saying only that Internet-based gaming cannot be regulated. Antigua disagrees, as do others – the United Kingdom for example.

58 La Fleur's 2001 World Lottery Almanac, p. 12. Examples on online promotions and instructions on how to play daily number games, as well as to receive updates on winning numbers, can be viewed at www.oregonlottery.org/pick4/index_beer.shtml.
60 Ibid., p. 14.
62 Ibid., p. 14. The Oregon legislature began offering video lottery gaming in 1991 in order to replace the 10,000 gaming machines operating in the grey market. The Oregon legislature contends that the benefits of state-run VLTs include the generation of revenue for state programs, ensuring VLTs were run honestly and fairly and ensuring that taxes were paid on VLT winnings (www.oregonlottery.org/video/aboutvideo.shtml).
63 La Fleur's 2001 World Lottery Almanac, p. 31.
66 Ibid., p. 14. See also "Match Made in heaven–Lotteries and tracks have proven to be a great partnership with VLTs", International Gaming and Wagering Business, July 2003. In this Article Mr John Musgrave of the West Virginia Lottery is quoted as follows: "A great deal of the success that can be found in West Virginia's racetrack video lottery is the result of the foresight held by lawmakers who recognized the virtue of allowing private businesses to undertake the cost and risk of development and general operation while giving the lottery a regulatory role."
3.15 The United States replies that the recent growth in the remote supply of gambling raises serious regulatory concerns for the Government of the United States. New technologies, including high-speed telecommunications and the Internet, have facilitated explosive growth in remote supply of gambling over the past decade. This dramatic increase, whatever its origin, has raised serious regulatory and law enforcement concerns in the United States, where authorities throughout US history have consistently imposed tight regulation on gambling and the remote supply of gambling. Gambling has been one of the staple activities of organized crime syndicates. Law enforcement authorities in North America have seen evidence that organized crime plays a growing part in remote supply of gambling, including Internet gambling. In 1999, the Racketeering Records Analysis Unit of the Federal Bureau of Investigation provided an analysis to the Senate Committee on the Judiciary confirming that "organized crime groups are 'heavily involved' in offshore gambling." On April 29, 2003, Deputy Assistant Attorney General John Malcolm testified at a Congressional hearing that the "Department of Justice is concerned about the potential involvement of organized crime in Internet gambling. ... We have now seen evidence that organized crime is moving into Internet gambling." The Canadian Criminal Intelligence Service has confirmed the involvement of organized crime in Internet gambling, and expects that it will further develop the criminal opportunities associated with Internet gambling.

3.16 Remote supply gambling businesses provide criminals with an easy vehicle for money laundering, due in large part to the volume, speed, and international reach of the transactions involved, as well as the offshore locations of most remote suppliers. The industry is far more cash-intensive than conventional forms of telephone or Internet commerce, yet it lies outside the special regulatory and monitoring structures developed for financial services. Individuals seeking to launder ill-gotten gains through remote supply gambling operations can do so in a variety of ways. The anonymous nature of the interactions and the use of encryption make such transactions difficult to trace. The NGISC, a body established by the US Congress with a mandate to conduct a comprehensive study of the social and economic impacts of gambling, observed in 1999 that:

"[G]ambling on the Internet may provide an easy means for money laundering. Internet gambling provides anonymity, remote access, and encrypted data. To launder money, a person need only deposit money into an offshore account, use those funds to gamble, lose a small per cent of the original funds, then cash out the remaining funds. Through the dual protection of encryption and anonymity, much of this activity can take place undetected."

---

68 The United States notes that Antigua refers to the supply of gambling services using communications technologies as "cross-border" supply. In the context of this dispute, overuse of the term "cross-border" may create confusion. In fact, a particular activity, such as placing a bet by telephone, may or may not involve communication across a national border. For greater clarity, the United States will therefore refer to supply of gambling services by telephone, Internet or other forms of distance communications as "remote supply" of gambling services. The United States will refer to "cross-border" supply only in the strict sense of GATS Article I:2(a), meaning supply of a service "from the territory of one Member into the territory of any other Member."

72 NGISC Final Report, p. 5-6 (June 1999). See also Financial Action Task Force, Report on Money Laundering Typologies 2000-2001 at para. 16 (2001) ("It seems that Internet gambling might be an ideal web-based 'service' to serve as a cover for a money laundering scheme through the net. There is evidence in some FATF jurisdictions that criminals are using the Internet gambling industry to commit crime and to launder the proceeds of crime...").
3.17 Gambling is also linked to other types of criminal activities, such as fraud schemes. Criminal fraud schemes have been committed by both the operators of the gambling activity and by the customers of the gambling activity. A prominent example is the problem of fraudulent lotteries, many of which are offered to remote purchasers. The leading US consumer protection agency, the Federal Trade Commission ("FTC"), has warned citizens in the United States about criminal operators that use telephone and mail solicitations to sell fraudulent foreign lottery tickets. In 2002, fraudulent prizes, sweepstakes, and lotteries were among the top ten consumer complaints to the FTC. The FTC has found that most promotions for foreign lotteries are fraudulent. The potential for fraud is heightened when gambling opportunities are supplied from remote locations. The barriers to establishing an online gambling operation are low and unscrupulous operators can appear and disappear within minutes. Criminal firms can obtain customer credit card numbers, take money to open wagering accounts, and then shut down without paying winnings. Moreover, unscrupulous operators can tamper with software in order to manipulate games in their favour. Computer hackers can also alter software to the detriment of consumers.

3.18 The availability of commercial gambling in homes, schools, and other environments where it has traditionally been absent raises special concerns, including concerns relating to the protection of the young. US law regards gambling as an adult activity. However, young people use the Internet more frequently than any other segment of the population. The NGISC reported that more than 69 per cent of 18- to 24-year-olds in the United States use computers for an average of four hours per day. Children make easy targets for remote suppliers of gambling: "[M]any of these gambling web sites have been designed to resemble video games, and therefore are especially attractive to children." The NGISC also found that "[b]ecause the Internet can be used anonymously, the danger exists that access to Internet gambling will be abused by under age gamblers." The American Psychiatric Association has similarly warned that "[y]oung people are at special risk for problem gambling and should be aware of the hazards of this activity, especially the danger of Internet gambling, which may pose an increased risk to high school and college-aged populations." A US Senate Committee considering Internet gambling legislation in 1999 was "particularly concerned about the growth of Internet gambling because young people have been shown, in recent studies, to have significant and growing problems with sports betting. For example, a 1998 study at the University of Michigan found that 35 per cent of student-athletes gambled on sports while attending college." A "growing consensus of research reveals that the rates of pathological and problem gambling among college students are higher than any other segment of the population," the report found. The US Supreme Court has more generally found that "[g]ambling . . . falls into a category of ‘vice’ activity that could be, and frequently has been, banned altogether." As the explosion in remote supply of gambling has reached homes, schools, workplaces – indeed, any location with an Internet connection – it has provoked greater concern than more isolated forms of gambling because it

is inherently more difficult to control.\textsuperscript{84} While many Americans participate in various limited forms of legalized gambling, it remains true nonetheless that restrictions on remote supply of gambling services in the United States reflect legislators' and citizens' concerns about their inability to control an activity as to which many individuals and groups harbour serious ethical and religious reservations.\textsuperscript{85}

3.19 Finally, the supply of gambling into private homes, workplaces, and other environments creates additional health risks. The Council on Compulsive Gambling reports that five per cent of all persons who engage in gambling become addicted to it. Dr. Howard J. Schaffer of the Harvard Medical School's Division on Addictive Studies compares Internet gambling to "new delivery forms for addictive narcotics,"\textsuperscript{86} and a US Senate committee has concluded that "Internet gambling threatens to expand the number of addicted gamblers."\textsuperscript{87}

3.20 The United States further argues that Antigua's statement of facts contains misleading statements, inaccuracies, and irrelevant material. Many of the disputable facts appear to have little bearing on the substance of this proceeding. For the sake of brevity and clarity, the United States focuses on the most broadly misleading elements of Antigua's statement. Contrary to what is asserted by Antigua, the United States actively enforces its laws against domestic illegal gambling. In fact, illegal gambling activity is in no way sanctioned by the United States, and arrest figures for illegal gambling remain impressive. Additionally, Antigua's data do not appear to include the many cases in which gambling was one of several charges, but not the main charge. For example, many cases against organized crime figures include gambling charges. Gambling in the United States is permitted only within particular locations and facilities designated by law, and only in forms that the United States believes can be effectively regulated. Where it exists, it operates under the most rigorous regulatory constraints. As the NGISC observed, "nowhere is gambling regarded as merely another business, free to offer its wares to the public."\textsuperscript{88} Instead, gambling "is the target of special scrutiny by governments in every jurisdiction where it exists."\textsuperscript{89} The purpose of that regulatory scrutiny is to protect the public, not to protect domestic industry. Indeed, if its purpose were protectionist, it would have failed miserably, since numerous foreign suppliers of gambling services are already present in the US market. Regardless of foreign or domestic origin, all providers of gambling services in the United States operate under severe restrictions. And when it comes to remote supply of gambling, those restrictions are particularly stringent.

3.21 The United States submits that it is puzzled by the breadth of Antigua's description of the gambling market in the United States. Antigua states that it licenses only two types of cross-border

\textsuperscript{84} Unlawful Internet Gambling Funding Prohibition Act and the Internet Gambling Licensing and Regulation Commission Act, Hearing before the Subcommittee on Crime, Terrorism, and Homeland Security of the Committee on the Judiciary, 108\textsuperscript{th} Cong., p. 7 (2003) (statement of the Honorable James A. Leach, Representative in Congress from the State of Iowa) ("Casino gambling as it has been sanctioned in all Western democracies has only been allowed to exist with comprehensive regulation. Internet gambling lacks such safeguards. It is a danger to the family and society at large. It should be ended. From a family perspective, the home may be considered a castle; but it should never be a casino.").

\textsuperscript{85} By way of illustration, an unsuccessful 1999 proposal for additional federal legislation restricting Internet gambling enjoyed support from, among others, the African Methodist Episcopal Church; the American Muslim Council; the Christian Coalition; the Church of Jesus Christ of Latter Day Saints; the Family Research Council; Focus on the Family; Friends United Meeting; the National Coalition Against Gambling Expansion; the National Council of Churches; the Presbyterian Church; Rev. Jay Lintner, Director, Washington Office of the United Church of Christ, Office of Church in Society; the United Methodist Church, General Board of Church and Society; the Southern Baptist Convention, Ethics and Religious Liberty Commission; and the Traditional Values Coalition. Senate Report No. 106-121, p. 9 (1999).

\textsuperscript{86} Internet Gambling Prohibition Act, Senate Report No. 106-121, (1999), p. 15.

\textsuperscript{87} NGISC Final Report, p. 4-1.

\textsuperscript{88} NGISC Final Report, p. 3-1.

\textsuperscript{89} Ibid.
gambling and betting – "virtual casinos" and sports betting ("sports book") operators, with the former supplied by Internet and the latter by Internet and telephone. These would therefore appear to be the only Antiguan services and service suppliers at issue in this dispute. Concerning casino gambling, Antigua highlights two locations where regulated casino gambling is available – Nevada and Atlantic City – but fails to acknowledge the extreme stringency with which officials in these and other US locations exercise regulatory control over gambling. Antigua also fails to cite any example of a "virtual casino" operating legally anywhere in the United States.

3.22 Antigua's description of lotteries in the United States is misleading. There is no nationwide lottery industry; rather, there are 39 state-operated and -controlled lotteries, each of which offers services solely within the borders of the state that authorized it. All are controlled by stringent legislation, rules and procedures. While there are some lottery games that are offered by lottery authorities of more than one state, they are not offered by remote supply. Similarly, Antigua's description of pari-mutuel wagering mistakenly states that the Interstate Horseracing Act permits betting on horse races over the Internet. The Interstate Horseracing Act does not provide legal authority for any form of Internet gambling. As clarified in the Presidential Statement on Signing accompanying the bill enacting the December 2000 amendments to the IHA, nothing in the IHA (a civil statute) overrides the previously enacted criminal laws applicable to Internet gambling. Specifically, then-President Clinton stated that:

"The Department of Justice, however, does not view this provision as codifying the legality of common pool wagering and interstate account wagering even where such wagering is legal in the various States involved for horseracing, nor does the Department view the provision as repealing or amending existing criminal statutes that may be applicable to such activity, in particular, sections 1084, 1952, and 1955 of Title 18, United States Code."

3.23 The Department of Justice has repeatedly affirmed the view that the Interstate Horseracing Act does not override pre-existing criminal laws applicable to Internet gambling and other forms of remote gambling. Indeed, Antigua's own evidence confirms this.

3.24 Finally, with respect to sport wagering, Antigua identifies no examples of the legal offering of sports book services outside Nevada. Nevada regulators have imposed stringent precautions to ensure that sports book services offered by computer and telephone in southern Nevada are provided only within the immediate vicinity, and not through Internet gateways accessible to the general public.

3.25 The United States submits that Antigua's attempts to regulate gambling and money laundering cannot address basic concerns relating to remote supply of gambling. Antigua states that it introduced "industry-directed" regulation of gambling as early as 1997, and that it maintains financial sector regulations that meet or exceed international standards. The United States wishes to comment on these statements briefly even though it notes that Antigua fails to link these assertions to its substantive arguments. Antigua asserts that Antiguan operators "undertake some form of identity verification" of persons who register to use Antiguan gambling services. Antigua further states that children do not register to play on Antiguan gambling sites because children lack access to payment instruments, or because their parents can stop them. In fact, such regulation is infeasible. Children have ready access to payment instruments, and no technology has yet been developed to enable
constraints on Internet gambling even approaching those that are possible in other settings where gambling can be confined and access to it strictly controlled.  

3.26 **Antigua** rejects the US argument that Antigua's arguments contain inaccuracies and misstatements. For instance, Antigua did not misrepresent the law enforcement efforts of the United States when it comes to controlling its non-sanctioned gambling activity. The statistics themselves – from about 123,000 arrests in 1960 down to around 15,000 arrests in 1995 – remain unchallenged and impressive. The United States also fails to describe, much less to establish, how Antigua's description of the lottery industry in the United States is misleading. There are other examples, in each case unfounded and unproven. For instance, the United States submits that the Las Vegas Internet sports betting service referred to by Antigua does not operate on the Internet but on a "local 'Private Network". In reality, the advertisement refers to a so-called "Virtual Private Network". This is a security technology used over the Internet, not a separate local network.

3.27 Antigua submits that the United States has in large part chosen to ignore the points made and evidence offered by Antigua and Barbuda as if they were not made and not offered – with the result being that many of Antigua's arguments have not been rebutted or even addressed. For example, the United States assumes that Antigua is an unregulated jurisdiction. This is not the case and the United States adduced no evidence contradicting Antigua's evidence regarding regulation. As a result the extensive discussion by the United States regarding the ills of unregulated gambling becomes irrelevant. Another striking feature of the US submission is its reliance on completely unsubstantiated, conclusory statements that it describes as "fact." On the few occasions an attempt is made at substantiation, most references are to self-serving statements of American politicians and government officials. In the rare instances where the United States does cite independent sources, the sources prove to be either taken out of context (such as the quote in paragraph 3.19 attributed to Dr. Howard Shaffer who was in fact referring to all forms of electronic gambling and betting), or of dubious value.

**B. LEGAL ARGUMENTS**

1. **Applicability of the GATS**

3.28 **Antigua** submits that, in *Canada – Autos*, the Appellate Body found that a threshold question for the application of the GATS is whether the measure at issue is a measure "affecting trade in services." In this dispute it is clear that this is the case. First, there can be no real dispute that the offerings of the gaming industry of Antigua to consumers in the United States and elsewhere constitute "services". Second, it has been firmly established in WTO law that what constitutes "measures (...) affecting trade in services" is to be very broadly construed. As stated by the Appellate Body in *EC – Bananas III*:

"In our view, the use of the term 'affecting' reflects the intent of the drafters to give a broad reach to the GATS. The ordinary meaning of the word 'affecting' implies a measure that has 'an effect on', which indicates a broad scope of application. This interpretation is further reinforced by the conclusions of previous panels that the term 'affecting' in the context of Article III of the GATT is wider in scope than such terms

---

92 For example, in 2002, the Federal Trade Commission conducted an informal survey in which found that minors could easily access gambling websites. The survey also found that there was no effective mechanism to block minors from entering. Federal Trade Commission, Press release: FTC Warns Consumers about Online Gambling and Children (26 June 2002). See also NGISC Final Report, p. 5-4. ("In most instances, a would-be gambler merely has to fill out a registration form in order to play. Most sites rely on the registrant to disclose his or her correct age and make little or no attempt to verify the accuracy of the information. Under age gamblers can use their parents' credit cards or even their own credit and debit cards to register and set up accounts for use at Internet gambling sites.).

93 Appellate Body Report on *Canada – Autos*, para. 152. See also Article I:1 of the GATS.
as 'regulating' or 'governing'. (…) We also note that Article I:3(b) of the GATS provides that 'services' includes any service in any sector except services supplied in the exercise of governmental authority' (emphasis added), and that Article XXVIII(b) of the GATS provides that the "supply of a service' includes the production, distribution, marketing, sale and delivery of a service". There is nothing at all in these provisions to suggest a limited scope of application for the GATS.\textsuperscript{94}

3.29 The services at issue are supplied from Antigua by means of distant communication (in particular through Internet connection, telecommunications or postal or delivery services) into the territory of the United States. Antigua submits that this constitutes "mode 1" or "cross-border" supply of services, as defined in Article I:2(a) of the GATS. This view is supported by paragraph 19 the 1993 Scheduling Guidelines which gives examples for the four modes of supply; this same paragraph has been confirmed, unchanged, in paragraph 28 of the 2001 Scheduling Guidelines\textsuperscript{95}. Antigua further notes that a "Progress Report" adopted by the Council for Trade in Services on 19 July 1999 concerning the "Work Programme on Electronic Commerce" mentions that "there was particular difficulty" in making a distinction between supply under modes 1 and 2 ("cross-border supply" and "consumption abroad," respectively).\textsuperscript{96} While that may be the case in certain circumstances Antigua believes that this is not the case here.\textsuperscript{97} In any event whether the gambling and betting services at issue in this proceeding are supplied in mode 1 or mode 2 does not have a material impact on this dispute because the United States has made the same commitments for both modes of supply.

2. As to whether the United States has undertaken a specific commitment on gambling and betting services\textsuperscript{98}

3.30 Antigua argues that the GATS itself is a relatively brief document. The full nature and extent of each Member's obligations under the GATS can only be determined by reference to their respective "schedules of specific commitments" that are mandated by GATS Article XX:1. Once developed, the schedules of specific commitments of the Members "shall be annexed to [the GATS] and shall form an integral part thereof."\textsuperscript{99} Antigua submits that, in its Schedule of commitments under the GATS\textsuperscript{100}, the United States has made a full commitment for the cross-border supply of services classified under sub-sector 10.D "Other recreational services (except sporting)."\textsuperscript{101} In drafting its Schedule, the United States made use of the Services Sectoral Classification List prepared by the GATT Secretariat during the Uruguay Round multilateral trade negotiations.\textsuperscript{102} Sub-sector 10.D of W/120 is headed

\textsuperscript{94} Appellate Body Report on EC – Bananas III, para. 220.
\textsuperscript{95} Guidelines for the Scheduling of Specific Commitments Under the General Agreement on Trade in Services (GATS), adopted by the Council for Trade in Services on 23 March 2001, S/L/92, 28 March 2001 (hereinafter the "2001 Scheduling Guidelines").
\textsuperscript{96} S/L/74, para. 5
\textsuperscript{97} Antigua notes that the 1993 Scheduling Guidelines provide the following explanation about "consumption abroad": "This mode of supply is often referred to as 'movement of the consumer'. The essential feature of this mode is that the service is delivered outside the territory of the Member making the commitment. Often the actual movement of the consumer is necessary as in tourism services. However, activities such as ship repair abroad, where only the property of the consumer 'moves', or is situated abroad, are also covered." See Scheduling of Initial Commitments in Trade in Services – Explanatory Note, MTN.GNS/W/164, 3 September 1993, para. 19 (hereinafter the "1993 Scheduling Guidelines"). This definition is taken over without change in para. 29 of the 2001 Scheduling Guidelines.
\textsuperscript{98} In addition to the arguments presented here, see also parties' replies to Panel question Nos. 1-8 and 30-31 in Annex C of this Report.
\textsuperscript{99} GATS. Article XX:3.
\textsuperscript{100} The United States of America – Schedule of Specific Commitments, GATS/SC/90, 15 April 1994 (hereinafter the "US Schedule").
\textsuperscript{101} Antigua notes that, with regard to that sector, the United States has also made a full commitment for "consumption abroad."
\textsuperscript{102} Services Sectoral Classification List, Note by the Secretariat. MTN.GNS/W/120, 10 July 1991 (hereinafter the "W/120").
"Sporting and other recreational services" and lists "964" as the corresponding CPC number. Its heading 964 "Sporting and other recreational services" is broken down as follows:

- 964 Sporting and other recreational services
  - 9641 Sporting services
    - 96411 Sports event promotion services
    - 96412 Sports event organization services
    - 96413 Sports facility operation services
    - 96419 Other sporting services
  - 9649 Other recreational services
    - 96491 Recreation park and beach services
    - 96492 Gambling and betting services
    - 96499 Other recreational services n.e.c.

3.31 Sub-sector 10.D of the US Schedule is headed "Other recreational services (except sporting)". Thus the United States has clearly excluded CPC category "9641 Sporting services" from the commitments it has made in sub-sector 10.D of its Schedule. By the same token sub-sector 10.D of the US Schedule clearly includes CPC category "9649 Other recreational services" which encompasses CPC category "96492 Gambling and betting services". During consultations with the United States, Antigua fully disclosed its interpretation of the US Schedule and the legal basis for that interpretation to the United States, both orally and in writing. In reply the United States simply denied that it has made commitments for gambling and betting services. Despite being asked to do so by Antigua the United States has not explained: (i) why Antigua's interpretation of the Schedule is legally incorrect; (ii) what alternative approaches should be followed to interpret the US Schedule; or (iii) what type of activities are, in the view of the United States, covered by sub-sector 10.D "Other recreational services (except sporting)" in its Schedule.

3.32 Antigua submits that, because the US Schedule is made an integral part of the GATS by Article XX:3 of the GATS, it must be interpreted on the basis of the general rules of interpretation provided for in Article 31 of the Vienna Convention. Antigua's interpretation of the US Schedule follows from: (i) the ordinary meaning of the words "other recreational services" (Article 31:1 of the Vienna Convention); (ii) agreements and instruments connected to the conclusion of the GATS that are part of its context (Article 31:2 of the Vienna Convention); and (iii) practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation (Article 31:3 of the Vienna Convention). None of the interpretation methods permitted by the Vienna Convention contradicts Antigua's interpretation of the US Schedule.

3.33 Antigua argues that even an interpretation exclusively based on the ordinary meaning of the words "other recreational services" in the US Schedule leads to the plausible conclusion that gambling and betting services fall within this broadly worded category. It could perhaps be argued that, if only taking into account the "ordinary meaning" of the words, gambling and betting services might be classified under "Entertainment services" (sub-sector 10.A of the US Schedule). However, that would not change the conclusion because the United States also made a full commitment for cross-border supply of services under that category.

105 Antigua notes that the United States also has a full commitment for "consumption abroad" for sub-sector 10.A "Entertainment services".
3.34 Antigua argues that the two most important documents that are part of the context of the GATS for the interpretation of any GATS schedule are the W/120 list and the 1993 Scheduling Guidelines. Paragraph 16 of the 1993 Scheduling Guidelines provides that:

"[T]he legal nature of a schedule as well as the need to evaluate commitments, require the greatest possible degree of clarity in the description of each sector or sub-sector scheduled. In general the classification of sectors and sub-sectors should be based on [W/120]. Each sector contained in [W/120] is identified by the corresponding Central Product Classification (CPC) number. Where it is necessary to refine further a sectoral classification, this should be done on the basis of the CPC or other internationally recognized classification (e.g. Financial Services Annex)."

3.35 This paragraph was carried over in the 2001 Scheduling Guidelines without change. The US Schedule clearly follows the structure of W/120, with the exception of insurance services (sub-sector 7.A) in relation to which the Schedule explicitly states (no doubt pursuant to the Scheduling Guidelines) that "[C]ommitments in this sub-sector are undertaken pursuant to the alternative approach to scheduling commitments set forth in the Understanding on Commitments in Financial Services."

3.36 Antigua states that, during consultations, the United States submitted that W/120 is not a legally binding document. It also stated that the 1993 Scheduling Guidelines provide only general guidance and that the document itself provides in paragraph 1 that it "should not be considered as an authoritative legal interpretation of the GATS." The latter phrase, however, only confirms what is obvious in the light of Article IX:2 of the WTO Agreement which reserves the right to make such interpretations to the Ministerial Conference and the General Council. Furthermore this phrase does not relate to a provision such as paragraph 16 of the 1993 Scheduling Guidelines which provides no interpretation at all (unlike, for instance, paragraph 7 which interprets the national treatment principle). Paragraph 16 (and various others) merely explain how WTO Members should schedule items and how, in the interest of clarity, they should provide concordance with the CPC (or additional definitions) should they wish to use their own classifications or definitions. In doing so, these paragraphs simply set a standard for clear and unambiguous communication in a legal context requiring "the greatest possible degree of clarity." In the absence of such standards for communication, GATS schedules could have varied wildly in the drafting and WTO Members might not have been able to understand each other's schedules. In that light, documents such as the Scheduling Guidelines and W/120 obviously form a very important part of the context of the US Schedule.

3.37 Antigua submits that W/120's status as an "agreement" or "instrument" that is part of the context of the GATS (and the WTO Agreement in general) is further confirmed by Article 22 of the DSU concerning the suspension of concessions in relation to non-compliance with rulings and recommendations of the DSB. Paragraph (3)(f)(ii) of Article 22 provides that "for purposes of this paragraph, 'sector' means: [...] (ii) with respect to services, a principal sector as identified in the current 'Services Sectoral Classification List' which identifies such sectors". Given the clear importance and acceptance of W/120 in construing Member's commitments under the GATS, the United States had the ability unambiguously to exclude gambling and betting services from its commitments under its Schedule. Indeed, numerous WTO Members that made commitments for
sub-sector 10.D have totally or partially excluded gambling and betting services from the scope of their commitment in that sector.108 The United States has not done so.

3.38 Antigua observes that, since the entry into force of the GATS, WTO Members have consistently referred to W/120 (and its cross-references to the CPC) as the classification used for GATS purposes and as the main point of reference for any discussion on the classification of services. The Appellate Body has used the CPC as an interpretative tool even when the issue at stake was the scope of the GATS in general rather than the interpretation of a Member's schedule. In EC – Bananas III, for instance, the Appellate Body refers to the CPC when it draws the conclusion that banana traders of United States origin are service suppliers and that their activities come within the scope of the GATS.109 This qualification allowed the application of Article II of the GATS (application of which is not linked to Member's schedules) to the situation at issue in EC – Bananas III (US). In Canada – Autos, several WTO Members and the Panel itself referred to the 1993 Scheduling Guidelines and its addendum110 when discussing the interpretation of GATS schedules and the GATS itself.111 None of the parties in that dispute (nor the Panel) submitted that it would be inappropriate to make use of the 1993 Scheduling Guidelines for the interpretation of GATS schedules. Finally, even the United States International Trade Commission (hereinafter "USITC") uses W/120 and its cross-references to CPC as a tool to interpret the US Schedule. In 1997, the USITC published a document explaining the US Schedule.112 On page viii of that document, it is stated that "[T]he US Schedule makes no explicit references to CPC numbers, but it corresponds closely with the GATT Secretariat's list." The USITC Document also contains a "Concordance of Industry Classifications" which is described as follows:

"The concordance developed by the USITC clarifies how the services sectors referenced in the GATT Secretariat's list, the CPC System, and the US Schedule correspond. The first column of the concordance identifies the service sectors listed by the GATT Secretariat. The second column identifies the CPC classifications that correspond to the GATT Secretariat's list. The third column identifies the sectors addressed in the US Schedule, and the fourth column provides more detailed information regarding the structure and coverage of the US Schedule."

3.39 According to the actual concordance table included in the USITC Document, sub-sector 10.D of the US Schedule corresponds to sub-sector 10.D of W/120 and CPC code 964. The fourth column (in which more information is provided on the structure and coverage of the US Schedule) provides that sub-sector 10.D of the US Schedule excludes "sporting." It does not, however, state that gambling and betting services, which are covered by CPC code 964, are excluded from the US Schedule.

---

108 Antigua notes that, for instance, Austria, Bulgaria, the European Communities, Finland, Slovenia and Sweden excluded gambling from the scope of their respective commitments under sub-sector 10.D by specifically using the words "other than gambling" or similar words.
109 Appellate Body Report on EC – Bananas III, paras. 225-227. See also the Appellate Body Report on Canada – Autos, para. 157, where the Appellate Body draws the conclusion that there is "trade in services" in that case, inter alia, on the basis of a reference to the CPC.
111 Panel Report on Canada – Autos: for Canada, see para. 10.241; for Japan, see para. 6.1002; for both complaining parties (i.e. Japan and the EU), see para. 10.295; for the Panel itself, see para. 10.243.
112 United States International Trade Commission, US Schedule of Commitments under the General Agreement on Trade in Services – With explanatory materials prepared by the U.S. International Trade Commission (hereinafter "USITC Document"), dated May 1997. As is stated on page vii of the USITC Document, the USITC has "assumed responsibility for maintaining and updating, as necessary, the United States' Schedule of Commitments (...)."
113 Ibid., page viii.
3.40 The United States replies that Antigua has failed to explain why any particular US gambling measure(s) that might be relevant in this dispute apply to services or service suppliers operating in a specific services sector inscribed in the US Schedule to the GATS. Instead, Antigua simply asserts that all gambling falls within "other recreational services," or possibly within "entertainment services," and that the United States has made commitments in its schedule under "other recreational services" and "entertainment services." The commitments that a Member schedules for specific sectors under Part III of the GATS apply to the Member's measures affecting the supply of services in those sectors. Article XVI:2 thus refers to certain "measures which a Member shall not maintain or adopt," and Article XVII:1 refers to national treatment "in respect of all measures affecting the supply of services." Article XVIII refers to "commitments with respect to measures." Articles XIX:1 and XX:2 also refer to "measures." In order to establish the relevance of any commitment that the United States may have made, Antigua must therefore make a prima facie case: (i) that the United States has adopted or maintained some specific measure(s); (ii) that the scope and meaning of the specific measure(s) adopted or maintained is such that they affect the cross-border supply of gambling services; (iii) that the United States has inscribed a commitment in the relevant sector of its schedule to the GATS for measures affecting those services; and (iv) that the commitment prohibits the maintenance or adoption of such measure(s). In this case, Antigua has refused to make a case as to steps (i) or (ii). This in turn makes it impossible to carry out steps (iii) and (iv). Had Antigua argued the existence and meaning of particular measures, the United States would have been prepared to examine under step (iii) whether the measures affect services subject to one or more US sectoral commitments. By refusing to offer argumentation as to specific measures, however, Antigua has denied the Panel any means to examine whether the United States has made any relevant sectoral commitments under the GATS.

3.41 The United States argues that, even assuming arguendo the possible relevance of sector 10, Antigua’s claims to find there a US commitment for cross-border supply of gambling services rely on the W/120 and its references to the CPC. These arguments improperly treat W/120 as an agreement or instrument made in connection with the conclusion of the GATS under the customary rules of interpretation of public international law reflected in Article 31(2)(a) or 31(2)(b) of the Vienna Convention. In fact, W/120 is part of the negotiating history of the GATS, which is at best a supplementary means of interpretation pursuant to the customary rules of interpretation of public international law reflected in Article 32 of the Vienna Convention. The context for the US Schedule includes other Members' schedules. Accordingly, the proper context for the US Schedule includes the fact that some Members based their schedules, or parts of them, on the CPC, while others did not. There are a multitude of references to the CPC in some of the Members' schedules, while the US Schedule clearly does not reference or rely on the CPC. This context confirms that Members were free not to use CPC definitions – simply by not referring to them. In fact, many Members' schedules refer to the CPC for some commitments but not all, while others deviate from the W/120 correspondence table comparing W/120 to the CPC by identifying W/120 entries with CPC numbers that represent only a subset of the three-digit CPC numbers listed in W/120. The negotiating history of the GATS confirms that, while Members were encouraged to follow the broad structure of W/120,

---

114 The United States notes that, while not saying so explicitly, the EC – Bananas III (US) panel appears to have regarded W/120 as part of the negotiating history of the GATS. See Panel Report on EC – Bananas III (US), para. 7.289 (discussing W/120 in the context of the Uruguay Round negotiations). Moreover, W/120 was drawn up by the Secretariat for use in negotiations; as such it does not constitute an "agreement relating to the treaty which was made by all the parties" or an "instrument ... accepted by the other parties as an instrument related to the treaty." See Panel Report on US – Section 110(5) Copyright Act, para. 6.45. This is confirmed by the fact that some parties referred to it in their schedules and others did not.

115 According to the United States, the other schedules are "annexes" within the meaning of Vienna Convention Article 31(2). Article XX:3 of the GATS confirms this by providing that "[s]chedules of specific commitments shall be annexed to this agreement and shall form an integral part thereof."

116 The United States adds that some schedules include interpretive notes in which certain Members agreed that their schedules would have the meaning attributed to them by the CPC, while other schedules include different interpretive notes, or none at all.
it was never meant to bind Members to the CPC definitions, nor to any other "specific nomenclature." Because the United States did not bind itself to, or reference or rely on, the CPC in the text of its schedule, the CPC definitions cannot control the interpretation of the US Schedule.

3.42 The United States submits that the question of whether to tie commitments of the United States or any other Member to CPC definitions was a matter for negotiations, the answer to which should not be imposed post hoc through dispute settlement. To do so would contradict the principles relied upon by the Appellate Body in EC – Computer Equipment, where the Appellate Body found, with respect to a GATT schedule, that:

"Tariff negotiations are a process of reciprocal demands and concessions, of "give and take". It is only normal that importing Members define their offers (and their ensuing obligations) in terms which suit their needs. On the other hand, exporting Members have to ensure that their corresponding rights are described in such a manner in the Schedules of importing Members that their export interests, as agreed in the negotiations, are guaranteed. ... We consider that any clarification of the scope of tariff concessions that may be required during the negotiations is a task for all interested parties."\(^{118}\)

3.43 The reasoning in EC – Computer Equipment is equally applicable to negotiations over services schedules. The terms of the US offer, and of certain other Members' offers, were defined without reference to the CPC. All Members agreed to those schedules, and did so with full awareness that some parties had explicitly chosen to bind themselves to the CPC and others had not.\(^{119}\) The significance of the presence or absence of explicit CPC references in a commitment was confirmed by the panel in EC – Bananas III (US). The panel observed that "in scheduling commitments on 'wholesale trade services', the EC inscribed the CPC item number (622) in its services schedule."\(^{120}\) It was on the basis of this text that the panel reasoned that: "[T]herefore, any breakdown of the sector should be based on the CPC. Consequently, any legal definition of the scope of the EC's commitment in wholesale services should be based on the CPC description of the sector and the activities it covers."\(^{121}\)

3.44 The United States further submits that a proper interpretation of the US Schedule, without recourse to the CPC, would show that the United States made no commitment for measures affecting gambling services. In order to give effect to the terms of the wide variety of GATS schedules, the Panel must distinguish between "CPC commitments," which include textual references to numerical CPC codes, and "non-CPC commitments," the text of which make no reference to the CPC. The EC – Bananas III (US) panel addressed interpretation of CPC commitments\(^{122}\), but no panel has yet addressed the interpretation of non-CPC commitments. Because of the absence of a textual basis for

\(^{117}\) See Note on the Meeting of 27 May to 6 June 1991, MTN.GNS/42, paras.18-19 (24 June 1991) ("The representatives of the United States, Poland, Malaysia and Austria said that the [sectoral classification] list should be illustrative or indicative and not bind parties to any specific nomenclature.").

\(^{119}\) Ibid. ("while each Schedule represents the tariff commitments made by one Member, they represent a common agreement among all Members."). The United States submits that Antigua's CPC argument also improperly relies on a document by the USITC, which it refers to under the heading of "practice in the application of the treaty." This document does not constitute practice by parties to a treaty for purposes of the customary rule of interpretation reflected in Article 31.2(b) of the Vienna Convention. See Appellate Body Report on Chile – Price Band System, paras. 23-214. Moreover, the document in question has no legal significance. The explicit purpose of the concordance in the document is only to "facilitate comparison of the US Schedule with foreign schedules."

\(^{120}\) Panel Report on EC – Bananas III (US), para. 7.289.

\(^{121}\) Ibid.

\(^{122}\) Ibid.
referring to the CPC, the legal definition of the scope of a non-CPC commitment must be deduced through application of customary rules of treaty interpretation.

3.45 The United States notes that Antigua’s allegations regarding a possible US commitment for gambling services rely on sectors 10.A and 10.D of the US Schedule to the GATS. However, the relevant text makes no explicit reference to gambling services. The ordinary meaning of "recreational" is "[o]f or pertaining to recreation; used for or as a form of recreation; concerned with recreation."\(^{123}\) Recreation is "[a]n activity or pastime pursued, esp. habitually, for the pleasure or interest it gives."\(^{124}\) Recreation is also defined as "refreshment of strength and spirits after work" or "a means of refreshment or diversion."\(^{125}\) The ordinary meaning of "entertainment" is "[t]he action of occupying a person's attention agreeably; amusement" or "[a] thing which entertains or amuses someone."\(^{126}\) It is also defined as "the act of entertaining" or "something diverting or engaging."\(^{127}\) With regard to the "except sporting" notation in sub-sector 10.D of the US Schedule, the ordinary meaning of "sporting" according to the *New Shorter Oxford English Dictionary* is "[t]he action of sport," as well as "participation in sport; amusement; recreation;" and "[i]nterested in or concerned in sport; ... a person interested in sport from purely mercenary motives ... [n]ow esp[ecially] pertaining to or interested in betting or gambling."\(^{128}\) "Sporting" is defined in *Merriam-Webster's Collegiate Dictionary* as "of, relating to, used, or suitable for sport" or "of or relating to dissipation and esp[ecially] gambling."\(^{129}\) The ordinary meaning of "sporting" in "except sporting" thus encompasses gambling. Based on the ordinary meaning of the words "recreational," "entertainment," and "sporting," it is impossible to conclude that gambling and betting services must be considered to fall within sub-sector 10.A "entertainment" or sub-sector 10.D "recreational" services in the US Schedule. Moreover, Antigua has not explained why it thinks gambling services should fall within the "ordinary meaning" of those terms.

3.46 The United States submits that an examination of the US Schedule’s context – in particular, other Members’ schedules – also fails to demonstrate that the United States undertook a commitment with regard to gambling services. Some Members inscribed gambling-related limitations and restrictions under sub-sector 10.D "recreational services."\(^{130}\) However, notwithstanding references to the CPC, others included gambling restrictions under sub-sector 10.A "entertainment services,"\(^{131}\) others inscribed them under tourism services\(^{132}\), and at least one Member scheduled such restrictions under sub-sector 10.E "other."\(^{133}\) Significantly, other Members’ schedules confirm the existence of a residual "other" category that is within sector 10, but not captured by the text of its other subcategories (sub-sector 10.E). Two Members made commitments in sub-sector 10.E;\(^{134}\) the United States did not. The fact that Members were free to schedule this residual category provides further support that Antigua’s claims are in error. Scheduling of the 10.E residual category would have provided a default location in the US Schedule for services that could not be classified elsewhere in sector 10. As shown above, gambling is one such service. Without textual evidence placing...

\(^{124}\) Ibid.

\(^{130}\) The United States notes that, for example, eight European Members specifically excluded gambling from 10.D. They are Austria, Croatia, the EC, Finland, Lithuania, Slovenia, and Sweden. A few other Members, such as Australia and the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu, limited their commitments to CPC headings unrelated to gambling.

\(^{131}\) The United States notes that Bulgaria excludes gambling from sector 10.A entertainment services.

\(^{132}\) Egypt, Indonesia, Jordan, and Peru exclude or restrict gambling activities under the tourism sector.

\(^{133}\) Senegal.

\(^{134}\) Iceland and Senegal.
gambling services elsewhere in sector 10 (and still assuming arguendo that such services belong somewhere in that sector), the United States could only have a commitment for gambling services if it had scheduled the 10.E residual category. By not doing so, the United States made no commitment for gambling services. Thus, in the event that the Panel addresses the issue of whether the United States has recorded a commitment for cross-border gambling services in its GATS schedule, the Panel should find that Antigua has failed to prove that gambling services are covered under 10.D, 10.A, or any other commitment inscribed in the US Schedule. This finding would be consistent with the finding by the Appellate Body in EC – Computer Equipment that the burden of clarifying a schedule does not lie on the importing Member; rather "clarification ... that may be required during the negotiations is a task for all interested parties."  

3.47 The United States also points out that the US Schedule of Specific Commitments does not apply to measures of Guam, Puerto Rico and the US Virgin Islands challenged by Antigua. The United States is defined in the text of the US Schedule as "encompassing the 50 states of the United States, plus the District of Columbia." Guam, Puerto Rico and the US Virgin Islands are not part of the 50 states and the District of Columbia. As a result, commitments in the US Schedule do not apply to measures of Guam, Puerto Rico and the US Virgin Islands.

3.48 Antigua replies that the arguments and evidence it previously put forward, as well as the third party submissions of the European Communities, Canada and Japan make it very clear that the United States has, in sub-sector 10.D of its Schedule – interpreted with the assistance of the W/120 – made full mode 1 and mode 2 market access and national treatment commitments with respect to gambling and betting services. It is absurd for the United States to suggest that WTO Members abandon W/120 as well as the CPC in favour of dictionary references when interpreting the schedules of fellow Members. Antigua wishes to reiterate that both W/120 and the CPC form a part of the context of the GATS, and it is natural that Members would turn to them for assistance in reading schedules. Noting the US argument that, during trade negotiations, it is incumbent upon exporting countries to seek clarification of the scope of the commitments offered by other WTO Members, Antigua argues that the United States' communicaton of 7 December 1993, circulated during the Uruguay Round to Members of the Group of the Negotiations on Services comprises the United States' draft final schedule concerning initial commitments under GATS. Paragraph 5 of the introduction to this document states that "[e]xcept where specifically noted, the scope of the sectoral commitments of the United States corresponds to the sectoral coverage in the Secretariat's Services Sectoral Classification list (MTN/GNS/W/120, dated 10 July 1991)." Thus the United States' negotiating partners had no reason to doubt that the W/120 document provides the basis for the interpretation of sub-sector 10.D of the US Schedule. And, of course, fellow Members were not referred to the Merriam-Webster Collegiate or any other dictionary.

3.49 On the issue of the "ordinary meaning of the words," Antigua does not wish to revisit the United States argument on the dictionary definition of "sporting," which was adequately dealt with by the European Communities in its third party submission. With regard to the ordinary meaning of "recreational" and "entertainment", the United States stated that "Antigua has not explained why it thinks gambling services should fall within the "ordinary meaning" of those terms." However, as pointed out by the European Communities, even the dictionary definitions the United States itself quotes for these words would cover gambling and betting services. In this context, Antigua also refers to the NGISC Final Report, the first sentence of which states that "[T]oday the vast majority of Americans (…) gamble recreationally and experience no measurable side effects related to their gambling (…)". To the same effect, the first sentence of the study on pathological gambling by the United States National Research Council states that "[G]ambling in America has deep cultural roots

135 Appellate Body Report on EC – Computer Equipment, para. 110 (original emphasis).
and exists today as a widely available and socially accepted recreational activity."\textsuperscript{138} Further, on page 2 of this same study, it is stated that "[P]athological gambling differs from the recreational or social gambling of most adults, who view it as a form of entertainment and wager only small amounts."\textsuperscript{139} Throughout these two reports gambling is consistently referred to as "recreation" or "entertainment."

Finally, Antigua would also like to point out that although the United States tries to claim that gambling and betting services are covered by sub-sector 10.E of US Schedule – in which it has made no commitments – the United States fails to note that the concordance table produced by the USITC includes, immediately following the heading "E. Other" a parenthetical containing the words "No corresponding CPC." And, of course, gambling and betting services clearly have their own CPC – preventing sub-sector 10.E from being the location of the United States’ putative lack of commitments in the gambling and betting sector.

3.50 The United States notes that Uruguay Round negotiators made the GATS very broad; almost all services are within its scope. At the same time, the GATS negotiators explicitly preserved the right of Members to regulate services, subject to their specific commitments and obligations. Antigua's substantive challenge in this case is to prove that the United States has made a commitment that includes gambling. But beyond that, Antigua must then grapple with the fact that even assuming the existence of a commitment, Members remain free to regulate services, even to the extent of declaring particular activities to be illegal, so long as they do so in a manner consistent with their GATS commitments and obligations.

3.51 The United States notes that all parties to this dispute agree that the GATS schedules are an integral part of the treaty; they must be interpreted according to the customary international rules of treaty interpretation as reflected in Articles 31 and 32 of the Vienna Convention. Starting with the ordinary meaning of the terms, the terms of the US Schedule indisputably say nothing about gambling as such – neither the word "gambling" nor any synonym for that word appears anywhere in the text of the US Schedule. This means that Antigua bears the heavy burden of proving that the United States, without explicitly saying so, undertook an implicit commitment covering its longstanding and deeply rooted system of regulations on gambling. If the United States and its Uruguay Round negotiating partners had intended such a commitment on the part of the United States, especially on this very sensitive issue, the US Schedule would have said so explicitly. Needless to say, it does not. Antigua nonetheless proposes that gambling is implicit in the ordinary meaning of "other recreational services (except sporting)," or perhaps within "entertainment services." However, the United States has shown that Antigua has failed to prove that the ordinary meanings of the words "recreational" or "entertainment" encompasses gambling. In fact, dictionary definitions point to a very different conclusion. Of the three key terms at issue here, "recreational," "entertainment," and "sporting," the only one that dictionaries associate with gambling is "sporting." And the US Schedule explicitly excludes sporting.

3.52 Customary rules of treaty interpretation further instruct the interpreter to look at the ordinary meaning of words "in context." The context for the US Schedule includes other Members' schedules. Accordingly, the proper context for the US Schedule includes the fact that some Members inscribed references to the CPC in their schedules, while the United States and other Members did not. This makes clear that not all parties intended that their schedules refer to the CPC – and for good reason. The CPC was designed as a statistical device. It was not purpose-built to serve as a nomenclature for binding services commitments. It is hardly surprising then that some Members, including the United States, preferred not to inscribe references to it. This is not to say that the non-CPC Members have undertaken no commitments, nor is the United States suggesting that its obligations are defined by its own subjective expectations. To the contrary, non-CPC commitments are interpreted in exactly the

\textsuperscript{139} Ibid., p. 2.
same way as any normal term of a treaty is interpreted: they are to be given their ordinary meaning, in context, and in light of the object and purpose of the treaty. The United States notes that it has been suggested that the Panel should have recourse to the CPC in this dispute because the Appellate Body in the EC – Computer Equipment dispute found that panels in goods disputes should have recourse to the Harmonized System. This argument ignores the fact that Harmonized System numbers were an explicit and integral part of the schedule at issue in EC – Computer Equipment, while it is undisputed that the US Schedule makes no reference to the CPC.

3.53 The United States is of the view that context reveals another significant fact for the interpretation of the US Schedule. The United States has shown that even among Members who generally referred to the CPC, restrictions on gambling were thought to belong in sectors other than "entertainment services" and "other recreational services." A number of assertions have been made in an attempt to distinguish particular schedules of other Members. The important point is that the other schedules previously cited by the United States reveal that Members had difficulty with this issue even in the presence of CPC references. In their absence, Antigua has even less basis to assert that the United States undertook an implicit commitment for gambling. Antigua must be held to its burden of proving where gambling does fall in the US Schedule. Customary rules of treaty interpretation further instruct the interpreter to look at the ordinary meaning of words in light of the treaty's object and purpose. Two considerations about the object and purpose of the GATS are especially relevant here. First, the GATS recognizes "the right of members to regulate ... the supply of services within their territories in order to meet national policy objectives." Second, it provides a framework for "progressively higher levels of liberalization," exemplified by the adoption of a "positive list" approach to scheduling. That approach provided that Members' obligations would depend to a large extent upon the making of "specific" commitments. These objects and purposes of the GATS tend to confirm that Panels should respect a Member's decision to exclude CPC references from its "positive list" commitments.

3.54 The United States further notes that it has been suggested that the United States either failed to clarify its "other recreational services (except sporting)" commitment during negotiations, or that it fails to prove the scope of that commitment in this dispute. On the first issue, the Appellate Body has already made it clear that the importing party does not bear the burden of clarifying its commitments. On the contrary, in the EC – Computer Equipment case, the Appellate Body found that the job of clarifying a Member's schedule is a task for all interested parties to achieve through negotiations. This Panel need only point out to Antigua that, consistent with EC – Computer Equipment, no panel may impose such a clarification on the parties post hoc through dispute settlement rather than through negotiations. On the second issue, Antigua is the party asserting the existence of a US commitment for gambling services, and it alone bears the burden of proving the scope of any commitment that it alleges to be relevant. This is particularly true in this case, where the text reflects a conscious choice by the United States not to adopt CPC references. To throw the burden onto the United States to prove the negative would be nothing more than an unjustifiable attempt to reverse the burden of proof. Antigua bears the burden of proof and has not sustained its burden. Ultimately, the only piece of evidence that it has to support its arguments is the CPC. The United States has explained that the CPC is negotiating history, not context. And in the view of other negotiating history recording the intent of the parties not to be bound by the CPC, or any other extra-agreement nomenclature, it is clear that the CPC was not intended to control the interpretation of a Member's commitments in the absence of an explicit reference to the CPC in a Member's schedule. Without an explicit reference to the CPC in the US Schedule, Antigua has no viable argument for a US commitment. The most it can do is urge that, based on plain meaning, gambling somehow relates to recreation; that it somehow relates to entertainment; and that the Panel should therefore look for a way to fit it into the US sector 10 commitments, notwithstanding the "sporting" exception. As the United States already pointed out, at best that argument would lead to the conclusion that gambling services fall in a sub-sector 10.E "other" category, which the United States chose not to inscribe in its schedule. At the end of the day,

140 Panel Report on EC – Computer Equipment, paras. 2.10 and 2.15.
what Antigua really wants is for this Panel to validate Antigua’s subjective position that the US Schedule should be read as if it referred to the CPC, even though it clearly does not. The Panel should decline this invitation, particularly in a context where the text of the US Schedule provides no evidence of a specific intention of the parties to incorporate a commitment in the sensitive area of cross-border gambling services.

3.55 According to the United States, Antigua and the third parties are expending a great deal of rhetorical energy in an effort to seek to modify the text of the US Schedule through dispute settlement. They would like very much through this process to write in references to the CPC where none currently exist in the US Schedule. There is more than a little irony to this, because some of those same parties are right now asking us to do exactly the same thing in negotiations. That, in fact, is the proper forum for that effort, and it is the only proper forum. The dispute settlement system is specifically proscribed from adding to or diminishing the rights and obligations of Members. On this point, the Appellate Body in EC–Computer Equipment has already given us an unambiguous answer. The task of clarifying commitments in a GATS schedule, like the tariff schedule in EC–Computer Equipment, is one for all interested parties to achieve through negotiations. The US Schedule – without CPC references – is an integral part of the Agreement as accepted by all WTO Members. That Schedule, and not the schedule others would have liked, sets forth US commitments. And that schedule, like other WTO provisions, must be interpreted based on its ordinary meaning, in its context, and in light of the Agreement’s object and purpose.

3.56 The United States further argues that Antigua’s reliance on the CPC Prov. as the basis for a US commitment is misplaced. Members have unequivocally acknowledged the fact that the CPC does not define commitments made in a schedule that does not refer to the CPC. For example, this was repeatedly confirmed during a 1998 discussion in the Committee on Specific Commitments. 141 The Secretariat’s Note recording that discussion recounts the following statement by the United States:

"Time and resources should not be spent in exhaustive study of the CPC, which was inadequate not only for financial services and telecoms but more generally. That explained why some countries had chosen not to use the CPC as the basis for scheduling and why scheduling in some sectors had been done on a sui generis basis. ... Attention should focus on the improvement of W/120. Delegations should indicate which sectors seem to them poorly defined in W/120 or elsewhere and the Committee should work on an understanding to improve these definitions."

3.57 No Member expressed disagreement with the US premise that "some countries had chosen not to use the CPC." In fact, the European Communities agreed that "[d]issatisfaction with [CPC] descriptions was certainly one of the reasons why certain Members had chosen not to use the CPC as the basis for their schedules." 143 In the same discussion, Hong Kong confirmed that "[t]he provisional CPC was merely an individual option for members." 144 In sharp contrast to its position as a third party in the present dispute, the European Communities did not then assert that non-CPC schedules should be read according to the CPC (and thus in defiance of the intent of the parties). On the contrary, the European Communities stated that "[w]hen a schedule made no reference to the CPC, the interpretation of the extent of commitments was difficult." 145 In making this suggestion, the European Communities was acknowledging what the United States has argued from the outset of this

---

141 Committee on Specific Commitments, Report of the Meeting Held on 2 April 1998, Note by the Secretariat, S/CSC/M/5 (6 May 1998).
142 Ibid., para. 4.
143 Ibid., para. 6.
144 Ibid., para. 10.
145 Ibid. The United States notes that there was no mandatory requirement to take any such steps during or after the Uruguay Round negotiations.
dispute – that the CPC does not control the interpretation of the schedule of a Member that chose not to refer to it.

3.58 These statements all confirm the basic premises of the US position on this issue – i.e., that a Member scheduling GATS commitments during the Uruguay Round was free to choose or not to choose to inscribe references to the CPC descriptions; that the result of not choosing to inscribe such references is that the CPC does not control the interpretation of that Member's commitment; and that any elaboration that may be desired by another Member must be achieved through negotiations, not through dispute settlement. In light of these considerations, to now read the US Schedule according to the CPC would only improperly "add to or diminish the ... obligations provided in the covered agreements," in direct contravention of Article 3 of the DSU. It should come as no surprise that the United States did not schedule commitments for gambling services, given the overriding policy concerns surrounding those services, which are reflected in the extremely strict limitations and regulation of these services. The United States will further discuss those policy concerns in its arguments on GATS Article XIV (see below, section III.B.8). In fact, in view of those concerns, and the numerous bans or restrictions and strict controls on gambling, it would be surprising to find that the United States did schedule such a commitment.

3.59 Antigua submits that what the United States appears to have fallen back to are three, non-technical issues. First, the United States would like the Panel to read the general GATS scheduling methodology essentially in reverse – that is, unless a service sub-sector is expressly mentioned in a schedule, then it is ipso facto excluded. But that is not the case. The schedules of the Members are all organized around the concept of services sectors, with the understanding that once a particular service sector is listed in a schedule, then all its sub-sectors are also covered unless the Member clearly limits its commitment in relation to one or more of these sub-sectors. If a Member wanted to exclude an entire sector, it could either expressly say so or simply leave that sector off its schedule. However, the schedules of the Members may differ in one way or another, all schedules are consistent with this approach. Therefore, either gambling and betting services are expressly (or at least clearly) excluded by the United States in its schedule or they are committed to. Together with the third parties, Antigua has made a compelling case for the inclusion of gambling and betting services in sub-sector 10.D of the US Schedule. Secondly, contrary to the assertion made by the United States, Antigua is not trying to "force" the CPC on the United States and its GATS schedule. But Antigua considers it is appropriate that the W/L20 document and the CPC be used in the interpretation of the US Schedule under concepts of international law – and not the least because the USITC has expressly instructed us to do so in a public document.

3.60 For Antigua, the third defence of the United States seems to be the concept that, regardless of what its Schedule might say (or might be interpreted to say) the United States simply would not have made a commitment in the field of gambling services. At the outset, Antigua agrees with the United States when it said to the panel in Mexico – Telecommunications (emphasis added):\textsuperscript{146}

"To begin, the United States considers that whether or not Mexico was 'freezing' the level of market access prevailing at the time of the negotiations is irrelevant; the ordinary meaning of Mexico's Schedule speaks for itself and should control. The extent of a Member's commitments cannot depend upon what it alleges to have intended at the time of the negotiations. The ordinary meaning of Mexico's Schedule instead dictates its commitments."

3.61 In Antigua's view, WTO jurisprudence is in agreement with the United States' position in the Telmex dispute. The fact that the United States made its commitment "unintentionally" is not relevant for the interpretation of its Schedule. As the Appellate Body pointed out in EC – Computer

\textsuperscript{146} Second written submission of the Unites States of America, Mexico – Measures Affecting Telecommunications Services, WT/DS204 (5 February 2003), para. 20.
Equipment, in relation to a GATT schedule, schedules are an integral part of WTO law and need to be interpreted on the basis of Article 31 of the Vienna Convention – the purpose of which is to ascertain the common intentions of the parties. According to the Appellate Body "[t]hese common intentions cannot be ascertained on the basis of the subjective and unilaterally determined 'expectations' of one of the parties to a treaty." Antigua also cannot believe that the United States in particular would have made any commitment "unintentionally" and that, during the negotiations on its Schedule, the United States did not realize that the only proper interpretation of the scope of its sub-sector 10.D is that it covers gambling and betting services. As both Antigua and the EC pointed out, quite a few countries, including many with considerably fewer available resources than the United States, were able to recognize where gambling and betting commitments might be made and to expressly exclude these services from their schedules. Antigua may speculate about why the United States may have made full commitments in this area, although the reason, if any, is legally irrelevant. But the most plausible reason is that the United States, as the main advocate of the GATS and in an attempt to convince developing countries to open their services markets, made commitments in all sectors where it did not perceive an immediate competitive threat.

3.62 Finally, Antigua rejects the United States’ dictionary-based arguments. The New Shorter Oxford Dictionary provides differences for the use of "sporting" as a verbal noun and "sporting" as an adjective. As a verbal noun it means "the action of sport" and "participation in sport; amusement, recreation." According to the dictionary it is used in combinations with other words in the sense of "concerned with." This is of course precisely the type of usage one can expect in a classification such as W/120 or the US Schedule referring to "sporting services." Indeed, this is how the word "sporting" is used in the United States' own NAICS. As an adjective it means "sportive; playful," "engaged in sport or play," "interested in or concerned in sport" or, in more colloquial and ironic language "designating an inferior sportsman or a person interested in sport from purely mercenary motives. Now esp. pertaining to be interested in betting or gambling. Chiefl y in sporting man." It is clear on the face of these definitions that "sporting" is not normally used as an adjective in relation to a word such as "services." The Panel should also note that according to the United States, the term "sporting" does not only refer to gambling but, as stated in its response to the Panel's question 8 the term "sporting" also covers "other (non-gambling) forms of sporting." Thus, rather than arguing that "sporting" should be given its ordinary meaning, the United States submits that "sporting" should be given all the meanings that can be found in a dictionary. In this case this would include: (i) services concerned with sport; (ii) prostitution; (iii) services related to the spontaneous producing by a plant of an abnormal form or variety; (iv) services related to gambling; and (v) services relating to the taking of risks. Even if it is true that dictionaries mention all these divergent meanings, the term "sporting" cannot simultaneously have all of these different meanings in a document if it is used just once.

3.63 The United States notes that both parties disagree as to whether the United States has made a commitment, but appear to agree that the US commitments are part of the text of the GATS, and thus the issue is one of treaty interpretation. As a matter of ordinary meaning, Antigua has argued that gambling services are both "other recreational services" and "entertainment services." The United States has already discussed the ordinary meaning of these terms, and Antigua's arguments to date only confirm the US view that gambling services do not fit properly within the plain meaning of either category. Some sources may refer to gambling casually as "entertainment" or "recreation," yet gambling services also involve considerations of financial gain and other considerations not typically associated with recreational or entertainment services. Indeed, the Solicitor General of Antigua has himself described remote gambling service suppliers as "financial institutions." All of this taken together indicates that this sui generis service at most belongs in the residual "E. Other" sub-sector, where the United States made no commitment.

147 Appellate Body Report on EC – Computer Equipment, para. 84 (original emphasis).
3.64 Additionally, focusing on "other recreational services," the ordinary meaning of the "except sporting" notation in the US Schedule confirms that the United States has made no commitment for gambling under 10.D "other recreational services (except sporting)." In response to the US point that the ordinary meaning of "sporting" includes gambling, Antigua has referred solely to the arguments of a third party to this dispute, the European Communities. The United States would like to note, however that, first, the EC states that "sporting" is not "commonly used" to refer to gambling. But it provides no evidence to support that assertion; indeed, a stack of dictionaries would seem to contradict it. Second, the EC states that the use of "sporting" in the sense of gambling refers to persons rather than services. If "sporting" means gambling when used to describe the consumer or supplier, it could hardly be said to lose that meaning entirely in reference to the service they consume or supply. Other dictionary definitions provided by the United States imply no such limitation. Third, the EC states that the use of "sporting" in reference to gambling is referred to in one dictionary as an "Americanism," and therefore not within the "ordinary meaning" of a term used in the US Schedule of specific commitments. The New Shorter Oxford English Dictionary, which is usually scrupulous in such matters, places no such qualification on the use of sporting to refer to gambling. And, all linguistic prejudices aside, no rule of treaty interpretation provides that the "ordinary meaning" of a word in the English language cannot originate in the United States. Indeed, the fact that the schedule at issue is that of the United States makes it all the more absurd to exclude any meaning a priori on the basis that one dictionary calls it an "Americanism." The United States therefore submits once again that the ordinary meaning of the term "sporting" includes gambling services.

3.65 The United States notes that, against the US arguments based on ordinary meaning, Antigua offers an interpretation based on the CPC. In this regard, the United States submits that the text of the US Schedule, viewed in context, shows an affirmative choice on the part of the United States not to refer to the CPC. The negotiating history confirms that parties following W/120 did not intend to be bound by the CPC or any other nomenclature absent explicit references to such nomenclature. The EC itself has subsequently confirmed that "[d]issatisfaction with [CPC] descriptions was certainly one of the reasons why certain Members had chosen not to use the CPC as the basis for their schedules." This statement by the EC undermines the credibility of assertions in the present dispute that Members are somehow bound by the CPC notwithstanding having chosen not to use it. Seeking another way to make the CPC binding on the United States, Antigua has seized on the USITC Document. Should this document state – contrary to the fact – that "the United States has no GATS commitment for gambling services", it would have no interpretive value in a WTO dispute settlement proceeding. A Member may not unilaterally adopt a multilaterally binding interpretation of any provision of a WTO agreement, and such statements by themselves do not constitute subsequent practice under the customary international rules of treaty interpretation as embodied in Article 31 of the Vienna Convention. In any event, the USITC Document makes it clear that the Document is not purporting to interpret the US Schedule. The document itself confirms that the USITC has only been delegated the responsibility to undertake ministerial duties – to "maintain" and "compile" the US Schedule, not to interpret the US Schedule on behalf of the US Government. Indeed, given that a Member may not unilaterally adopt a multilaterally binding interpretation of any provision of a WTO agreement, a delegation of unilateral interpretive authority would make no sense with respect to provisions of the WTO agreements.

3.66 The United States notes that a third party has asserted that the USITC Document may have probative value for the "purpose of throwing light on a disputed question of fact." This statement might be correct if the issue under discussion were factual in nature. It is not. The issue here is the legal interpretation of an annex to the GATS pursuant to the customary rules of treaty interpretation of international law – an area in which the USITC's unilateral document carries no weight in this dispute. Moreover, given that this is an issue of treaty interpretation, Antigua's arguments comparing the

150 See above para. 3.57.
151 Canada's reply to Panel question No. 2.
USITC Document to the US Statement of Administrative Action (hereinafter "SAA") are off point. The SAA has been referenced in WTO dispute settlement to help interpret US domestic law, not WTO agreements. Antigua's various arguments for giving independent force to the USITC Document are untenable, but also unpersuasive for the simple reason that obligations in a GATS schedule must be based on the schedule itself, not on some extrinsic, unilateral document.

3.67 With respect to Antigua's assertions regarding the cover note to draft versions of the US Schedule, the United States disagrees with Antigua's statement that the cover note was not included in the final US schedule annexed to the GATS "simply because such a cover note is not formally part of a GATS schedule as it is attached to the GATS by Article XX.3." Several Members included such notes in their schedules. For example, Australia's schedule begins with a note stating that "[t]he classification of sectors is based on the 1991 provisional Central Product Classification (CPC) of the United Nations Statistical Office, while the ordering reflects the Services Sectoral Classification List (MTN.GNS/W/120 of 10 July 1991)". Needless to say, the final US Schedule includes no such statement. The United States has already confirmed in this proceeding that it used W/120 for the ordering of the US schedule. That is consistent with the note accompanying drafts of the US Schedule. However, unlike Australia and a number of other Members, the United States never adopted the CPC nomenclature. The cover note to draft US Schedules does not indicate otherwise and, as Australia's note further confirms, these were understood to be distinct issues.

3.68 Concerning the 1993 and 2001 Scheduling Guidelines, the United States argues that Antigua lacks any basis for its assertion that "the 2001 Scheduling Guidelines comprise a subsequent agreement between the parties (as per Article 31(3) of the Vienna Convention) regarding the interpretation of existing schedules in the light of the 1993 Scheduling Guidelines." The 2001 document, like its 1993 predecessor, explicitly states that it "should not be considered as a legal interpretation of the GATS." Indeed, both documents were adopted by the Council for Trade in Services, not the General Council or the Ministerial Conference, which have the "exclusive authority" to adopt legal interpretations of the WTO agreements under Article IX:2 of the Marrakesh Agreement Establishing the World Trade Organization. Moreover, Antigua's assertion that the 1993 Scheduling Guidelines and W/120 are context within the meaning of Article 31(2)(b) of the Vienna Convention fails for the simple reason that neither document was "made by one or more parties in connection with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty," as required under that Article. The United States and Antigua seem to agree that these documents were not made by any party, and insofar as they refer to the CPC, the schedules to the GATS demonstrate that numerous parties accepted them only partially, or not at all, for that purpose.

3.69 The United States considers that Antigua's arguments on the issue of non-existence of a US commitment represent a series of attempts to turn the rules of treaty interpretation on their head by using preparatory work and other extrinsic sources, which could never be more than secondary means of interpretation, to override text of the Agreement. Antigua even goes so far as to assert that the text of a GATS commitment cannot diminish the interpretive value of preparatory work – a statement that is inconsistent with the fundamental principles of treaty interpretation. Certainly the CPC was discussed in the preparatory work for the GATS. Some Members decided to use it always. Some decided to use it when it suited them. Some decided not to use it at all. The texts of the schedules reflect those choices, and show the United States to be in the third category. Mere preparatory work cannot override the text in this case. But the preparatory work can and does confirm the US reading of the text in regard to the CPC. Specifically, it shows that the United States and other Members spoke explicitly of their desire that Members not be bound by any particular nomenclature. Finally, the United States reiterates that if some Members would prefer that all schedules be read according to

152 Antigua's reply to Panel question No. 3.
153 Antigua's reply to Panel question No. 1.
154 Ibid.
the CPC, that is a matter for negotiations rather than dispute settlement. The Appellate Body report in EC – Computer Equipment confirms that principle.

3.70 The United States further notes that Antigua quoted the US argument in Mexico – Telecom that "the ordinary meaning of Mexico's Schedule speaks of itself and should control." That statement applies equally to the US Schedule – its ordinary meaning speaks for itself and should control. That ordinary meaning does not include gambling services, and does not include references to the CPC. The same text-based approach applies equally to sectors that were not inscribed in the US Schedule, such as 10.E "Other." Notwithstanding Antigua’s arguments to the contrary, the United States cannot be found to have made a commitment in sub-sector 10.E when it has declined to inscribe that sub-sector while simultaneously inscribing other sub-sectors under sector 10. Moreover, in paragraph 3.62, Antigua appears to concede that the definition of "sporting" includes gambling. It argues, however, that this meaning is somehow not correct, apparently because Antigua intuits, without any basis, that "sporting" in the US Schedule is a gerund (or "verbal noun") rather than an adjective. Moreover, according to Antigua, a word used only once in a document can only have one meaning, and in this case that meaning cannot encompass gambling. In the view of the United States, these unfounded assumptions represent nothing more than an attempt to artificially limit the ordinary meaning of "sporting."

3. The measure(s) at issue

3.71 Antigua argues that, in its request for the establishment of a panel submitted to the WTO on 13 June 2003, the government of Antigua attached an Annex in which it listed a large number of US federal and state statutes that adversely affect the ability of Antiguan service suppliers to provide cross-border gambling and betting services to consumers in the United States. The Annex also included references to a number of illustrative actions by US federal and state authorities that also constitute measures that inhibit the provision of cross-border gambling and betting services into the United States. During the consultations as well as in meetings of the DSB, the United States expressed itself confused by the nature, extent and impact of the measures cited in the Annex. Antigua believes these expressions of confusion to be merely a "red herring" – not only is the United States better positioned than Antigua to coherently construe its own laws, but crucially the United States has unambiguously stated in the context of this dispute that the provision by Antiguan service suppliers of cross-border gambling and betting services into the United States is illegal under United States law. Under such circumstances, the United States should not be allowed to in essence "hide behind" the complexity and opacity of its own legal structure to deflect attention from the fundamental simplicity of this complaint.

3.72 The rules applying to the cross-border supply of gambling and betting services in the United States are complex and comprise a mixture of state and federal law the precise meaning of which is often unclear. The debate on the interpretation of these rules has often been conducted in terms of the legality of "Internet gambling" (because the Internet has become one of the main tools to supply gambling and betting services on a cross-border basis). A recent report by the United States General Accounting Office (hereinafter, "GAO") describes the legal framework for Internet gambling in the United States as "complex."

Both federal and state laws apply to Internet gambling in the United States. In general, gambling is a matter of state law, with each state determining whether individuals can gamble within its borders and whether gaming businesses can legally operate there. Since Internet gambling typically occurs through interstate or

---

155 In addition to the arguments presented here, see also parties' replies to Panel question Nos. 9-14 and 32-36 in Annex C of this Report.

156 GAO Report, p. 3.
international means, with a Web site located in one state or country and the gambler in another, federal law is used to protect the states from having their laws circumvented. To date, the Wire Act is the federal statute that has been used to prosecute federal Internet gambling cases, although courts sometimes disagree on the applicability of certain provisions of the statute. In addition, the Travel Act and the Illegal Gambling Business Act have been used to prosecute gambling entities that take interstate or international bets over the telephone and would likely be applicable to Internet gambling activity. Some states have taken specific legislative actions to address Internet gambling, in some cases criminalizing it and in others relying on existing gambling laws to bring actions against entities engaging in or facilitating Internet gambling.

3.73 The GAO Report directly addressed some of the ambiguities in US law on this issue. Some of these ambiguities are discussed more extensively in a report prepared by Mr. Jeffrey R. Rodefer from the Department of Justice of the State of Nevada. This complexity and ambiguity as well as the overlap between federal law and the laws of the more than 50 states and territories makes it very difficult to identify with complete precision all laws and regulations of the United States that could be applied in the prohibition of the cross-border supply of gambling and betting services.

3.74 Antigua submits that the existence of a complete prohibition is not in dispute. In the context of this dispute, the United States government has stated that the provision of cross-border gambling and betting services (into the United States from abroad) is always unlawful in the entire territory of the United States and under whatever form. Antigua accepts this premise for the purpose of this dispute settlement procedure. Consequently there is no need to conduct a debate on the precise scope of specific United States laws and regulations. The subject of this dispute is the total prohibition on the cross-border supply of gambling and betting services – and the parties are in agreement as to the existence of that total prohibition. The precise way in which this import ban is constructed under United States law should not affect the outcome of this proceeding.

3.75 Antigua submits that, to facilitate the legal discussion, it has made a distinction between two broad types of measures: (i) those which act to prohibit the offering of gambling and betting services per se and (ii) those restricting international money transfers and payments relating to gambling and betting services. While the former include statutes criminalising the provision of the services (such as those used by the United States in 2000 to prosecute and imprison a licensed Antiguan operator), the latter category comprises enforcement measures, such as the actions by the Attorney General of New York against Paypal, Inc., a company that provides Internet payment services. The two categories

158 Interstate or Foreign Travel or Transportation in Aid of Racketeering Enterprises, 18 U.S.C. §1952, (hereinafter “Travel Act”).
160 GAO Report, p. 11.
161 Ibid., pp. 12-17.
163 See, e.g., the statement of the United States’ representative at the DSB meeting of 24 June 2003: "[...] the United States had made it clear that cross-border gambling and betting services were prohibited under US law." (WT/DSB/M/151, p. 11).
164 Press Release by the New York Attorney General, dated 21 August 2002 and the "Assurance of Discontinuance" signed between the New York Attorney General and Paypal, Inc. dated 16 August 2002. The New York Attorney General started an inquiry against Paypal because it provided payment services to companies that supply gambling and betting services to persons resident in New York without being expressly authorized to do so under New York law. Because, in the opinion of the Attorney General, this supply of
of measures identified by Antigua are not two rigidly distinct categories. In fact, the measures in the second category of payment-related measures are actions by law enforcement authorities based on the legislative measures in the first category (and are therefore a practical manifestation of the measures in that first category). The only reason why the distinction is made is to facilitate the discussion on the application of specific provisions of the GATS to the facts of this dispute.

3.76 Antigua argues that Article 6.2 of the DSU provides that a request for the establishment of a panel shall "identify the specific measures at issue." The Appellate Body has repeatedly stated that there are two reasons why a Panel request must be precise. First, it forms the basis for the terms of reference which define the scope of the dispute. Second, it serves the due process objective of notifying the defendant and the third parties of the complainant's case. The complexity of the United States' legislation has made it relatively difficult for Antigua to "identify the specific measures" (despite the obvious simplicity of the effect of the United States total prohibition). To avoid misunderstanding and procedural difficulties Antigua adopted the following approach in its Panel request: Section I and Section II of the Annex attached to the Panel request list specific references to United States laws (at both the federal and the state level) that Antigua believed could reasonably be construed as adversely impacting the cross-border supply of gambling and betting services; and Section III of the Annex provides examples of non-legislative measures, such as court decisions, criminal prosecutions or statements and actions by state Attorneys General, that apply some of these laws to the cross-border supply of gambling and betting services. This approach was clearly explained in the Panel request and, for the avoidance of doubt, it was added that "[T]he measures listed in the Annex only come within the scope of this dispute to the extent that these measures prevent or can prevent operators from Antigua and Barbuda from lawfully offering gambling and betting services in the United States under conditions of competition compatible with the United States' obligations." Further Antigua explicitly stated in the Panel request that: "[a]lthough this is not always clear on the face of the text of these laws, relevant United States authorities take the view that these laws (separately or in combination) have the effect of prohibiting all supply of gambling and betting services from outside the United States to consumers in the United States." In the circumstances Antigua has used its best endeavours to "identify the specific measures at issue" and submits that it has done more than could reasonably be required from a complainant by conducting a detailed investigation of an arcane area of law of the United States (and by attempting to provide examples of legislation and other measures that adversely impact on Antiguan service suppliers). Clearly, given that United States itself has stated that the offering of gambling and betting services into the United States from Antigua is unlawful in every instance, the United States has been given fair notice of Antigua's claim.

3.77 Antigua notes that at the DSB meeting of 24 June 2003, the United States representative mentioned three procedural concerns with the Panel request of Antigua: (i) the Annex to Antigua's Panel request contained items that "did not constitute 'measures' that could properly be included within the scope of a Panel request"; (ii) the Annex to the Panel request "included several measures which appeared not to have been included in the 1 April 2003 consultation request"; and (iii) "not all of the measures cited in the Annex were related to cross-border gambling and betting." The United States' first apparent concern that some of the US measures listed in the Annex to the Panel request are not "measures" presumably relates to the matters listed in Section III of the Annex (which lists gaming services is illegal under New York and United States federal law it would therefore also be illegal for Paypal to provide Internet payment services to businesses offering these unauthorized gambling services. The matter was settled when Paypal agreed to cease processing payments for such gaming companies and pay the sum of US $200,000. Other examples of such measures are provided by the New York Attorney General's press releases of 14 June 2002 and 11 February 2003 announcing similar settlements with 11 banks that provide credit card services.

\[165\] For instance, Appellate Body Reports on EC – Bananas III, para. 142, and US – Carbon Steel, para. 126.

\[166\] WT/DS285/2, 2nd paragraph, last sentence.
court decisions and statements of law enforcement and administrative agencies either taking or explaining actions against cross-border gaming services). However, the measures listed in Section III of the Annex to the Panel request clearly are "measures" within the meaning of the GATS. The United States entities that have taken these measures include the United States Second Circuit Court of Appeals, the Supreme Court of the State of New York, the Gaming Control Board of Michigan and the Attorneys General of the States of Florida, Minnesota and New York. The measures listed in Section III of the Annex to the Panel request come within the meaning of "measure" specified in Article XXVIII(a) of the GATS as either "procedure, decision, administrative action or any other form" taken by "central, regional or local governments and authorities." Further, the measures described in Section III of the Annex are based upon or arise out of a number of the statutory provisions listed in Sections I and II of the Annex and are therefore in any event caught by the GATS in that capacity.

3.78 Antigua notes that the United States' second stated concern relates to measures that "appeared not to have been included" in the consultation request of Antigua. There are a number of differences between the list of measures annexed to the consultation request and the list of measures annexed to the Panel request. The main difference between the two is that the Annex to the Panel request contains considerably fewer measures than the Annex to the consultation request. The United States suggests, however, that certain measures were added in the Annex to the Panel request that do not appear in the consultation request. Presumably the United States' concern is related to three references that contained typographical errors in the Annex to the consultation request, which were corrected in the Annex to the Panel request. These are the following (with the differences underlined):

<table>
<thead>
<tr>
<th>Incorrect reference in consultation request</th>
<th>Correct reference in Panel request</th>
</tr>
</thead>
<tbody>
<tr>
<td>New York Constitution art. II, § 9</td>
<td>art. I, § 9</td>
</tr>
<tr>
<td>Rhode Island Constitution art. I, § 22</td>
<td>art. VI, § 22</td>
</tr>
</tbody>
</table>

3.79 The request for consultations (and the addendum thereto) submitted by Antigua made it clear that the subject matter of this dispute is the United States' prohibition on the cross-border supply of gambling and betting services as it results from the application of a great number of separate laws. In this respect it should have been clear to the United States that these typographical errors are indeed nothing but typographical errors. The reference to the Colorado statutes contained in the consultation request simply makes no sense and it is clear on the face of this reference that it contains an error. Article II, § 9 of the New York Constitution concerns suffrage and Article I, § 22 of the Rhode Island Constitution concerns the right to bear arms. Each of the constitutional articles as corrected in the Annex to the Panel request concern gambling. Here too, it should have been clear to the United States that these were mere typographical errors. In each case, it is difficult to believe that the United States could have been prejudiced by the corrections. Furthermore, in Brazil – Aircraft the Appellate Body stated that Articles 4 and 6 of the DSU do not require "(…) a precise and exact identity between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel." If "precise and exact identity" were to be a requirement it would never be possible for a complainant to obtain a more precise understanding of the other WTO

---

167 Article I:3(a) of the GATS. See also the Appellate Body Reports on US – Gasoline, p. 28 and US – Shrimp, para. 173, where it is stated that a Member bears responsibility for acts of all its departments of government, including legislative, executive and judiciary. This concept is also clear in Article I:3(a) of the GATS which provides that "each Member shall take such reasonable measures as may be available to it to ensure [observance of the Member's obligations and commitments] by regional and local governments and authorities and non-governmental bodies within its territory."

168 Appellate Body Report on Brazil – Aircraft, para. 132.
Member's measures during consultations – and that would undermine the effectiveness of the dispute settlement process.\textsuperscript{169} Finally, the objectives underlying Articles 6.2 and 4.4 of the DSU\textsuperscript{170} are the need to define the scope of the dispute and the due process objective of notifying the defendant and the third parties of the complainant's case. Correcting three rather obvious typing errors has certainly not harmed these objectives.

3.80 The United States' third procedural concern that not all the measures cited in the Annex are related to cross-border gambling and betting, is answered in the Panel request itself which explicitly states that the listed measures only come within the scope of this dispute to the extent that they do relate to cross-border gambling and betting. If there are measures in the Annex that do not relate to cross-border gambling and betting in the way described in the Panel request, they are not within the scope of this dispute. Further, Antigua believes that the key issue regarding the measures in this proceeding is whether or not there are measures that impede the ability of Antigua to offer cross-border gambling and betting services into the United States. Logically then, if simply one of the measures listed in the Annex to the Panel request has this effect then this matter has been established, even if \textit{(quod non)} the remaining scores of listed measures are irrelevant.\textsuperscript{171}

3.81 The United States argues that rather than providing an analysis of specific US laws as they relate to gambling, Antigua is asking this Panel to accept a mere assertion as to the effect of such laws – that they represent a "total prohibition" on cross-border gambling – as proof that the United States is in violation of its WTO obligations. The United States recalls the Appellate Body's observation that "...we find it difficult, indeed, to see how any system of judicial settlement could work if it incorporated the proposition that the mere assertion of a claim might amount to proof."\textsuperscript{172} Ignoring this finding, Antigua has refused to provide the Panel with the text of actual laws or regulations, and the reasons for why it views such laws and regulations to be inconsistent with the GATS. Simply put, Antigua has not provided evidence and argumentation regarding specific measures at issue. This approach cannot form the basis for a \textit{prima facie} case in a WTO dispute settlement proceeding. A party cannot advance a \textit{prima facie} case without linking its evidence and argumentation to some specific measure(s), and a mere assertion is not itself a measure.

3.82 The United States submits that, as the complainant, Antigua bears the burden of establishing a \textit{prima facie} case demonstrating that the United States has adopted specific measure(s) and that the measure(s) are inconsistent with obligations that the United States has assumed as a Member of the WTO. As the Appellate Body has consistently found, the burden of proof in WTO dispute settlement proceedings generally rests on the complainant, which must make out a \textit{prima facie} case by presenting sufficient evidence and argumentation to create a presumption in support of its claim.\textsuperscript{173} If the complainant succeeds in establishing such a presumption, the respondent may rebut this presumption.\textsuperscript{174} Thus, a respondent's measures – such as the gambling-related measures of the United States at issue in this proceeding – must be treated as WTO-consistent until proven otherwise.\textsuperscript{175}

\textsuperscript{169} According to the Appellate Body "the claims that are made and the facts that are established during consultations do much to shape the substance and the scope of subsequent panel proceedings." \textit{(India – Patents (US), para. 94).} See also the Panel Report on \textit{Brazil – Aircraft}, para. 7.9.

\textsuperscript{170} In the Preliminary Rulings in \textit{Canada – Measures relating to exports of wheat and treatment of imported grain}, WT/DS276/12, para. 15, the Panel stated that: "(…) Article 4.4 omits the term ‘specific’ in referring to the ‘measures at issue’. We believe this difference in language is not inadvertent and must be given meaning. Indeed, in our view, this difference in language supports the view that requests for consultations need not be as specific and as detailed as requests for establishment of a panel under Article 6.2 of the DSU.”

\textsuperscript{171} Antigua notes that this point is particularly salient given the agreement of the parties on the legal position of the United States government regarding the legality of these services. See para. 3.74 above.

\textsuperscript{174} Ibid.

the balance of evidence is inconclusive with respect to a particular claim, Antigua must be found to have failed to establish that claim.\footnote{For instance, Appellate Body Report on EC – Hormones, para. 109.}

3.83 The United States notes that Antigua claims that one or more US measure(s) are inconsistent with WTO treaty obligations; Antigua therefore bears the burden of providing evidence and argumentation in support of this claim. In \textit{US – Carbon Steel}, the Appellate Body found that a party making such a claim regarding another party's municipal law "bears the burden of introducing evidence as to the scope and meaning of such law to substantiate that assertion."\footnote{Appellate Body Report on \textit{US – Carbon Steel}, WT/DS213/AB/R para. 157.} The Appellate Body went on to describe the type of evidence as to the scope and meaning of municipal law that can be introduced by the complaining party challenging the law of a WTO Member, stating that "[s]uch evidence will typically be produced in the form of the text of the relevant legislation or legal instruments," and "may be supported, as appropriate, by evidence of the consistent application of such laws, the pronouncements of domestic courts on the meaning of such laws, the opinions of legal experts and the writings of recognized scholars."\footnote{Ibid.}

3.84 The United States points out that, ignoring the most basic burden of proof requirements, Antigua goes so far as to insist that it is under no obligation to adduce evidence as to specific US laws or regulations. Antigua is mistaken. As the Appellate Body found in \textit{India - Patents (US)}, where the measure alleged to be in breach took the form of domestic legislation, an examination of relevant provisions of such a law is essential to determining whether a Member has complied with its obligations.\footnote{Appellate Body Report on \textit{India – Patents (US)}, para. 66: "It is clear that an examination of the relevant aspects of Indian municipal law and, in particular, the relevant provisions of the Patents Act ... is essential to determining whether India has complied with its obligations under Article 70.8(a). There was simply no way for the Panel to make this determination without engaging in an examination of Indian law." The Panel in \textit{US – Section 301 Trade Act}, para. 7.18, applied the same principle, stating that "[w]e are ... called upon to establish the meaning of Sections 301-310 as factual elements and to check whether these factual elements constitute conduct by the US contrary to its WTO obligations. The rules on burden of proof for the establishment of facts ... also apply in this respect."} Conducting such an examination necessarily means that a panel or the Appellate Body "must look at the specific provisions" of domestic law.\footnote{Appellate Body Report on \textit{India – Patents (US)}, paras. 68-69 (emphasis added).} Antigua appears to agree that the "total prohibition" it identifies as the measure at issue in this dispute must be actually comprised of one or more US laws or regulations. Consistent with \textit{India – Patents (US)} and \textit{US – Carbon Steel}, Antigua must provide the laws or regulations that it views as relevant, as well as evidence and argumentation as to their scope and meaning. Antigua, however, has flatly refused to say exactly which provisions it views as relevant. Indeed, it has neither provided the text of, nor offered evidence or argumentation as to the meaning of, a single word of any US law or regulation restricting gambling.\footnote{The United States notes that Antigua provides a single discrete example in support of its claim that certain law enforcement actions applying US legislative measures are inconsistent with WTO obligations. That example – the Assurance of Discontinuance between the New York Attorney General and PayPal, Inc. – is among the measures in section III of the Annex to the Panel request that the Panel has declined to examine as "separate, autonomous measures." In any event, the United States notes that the example contains a specific restriction on a single company, the scope of which explicitly depends on the scope of underlying laws authorizing or restricting particular gambling transactions.} This represents a total failure of proof.

3.85 According to the United States, Antigua misunderstands the US position on this failure of proof, calling it an "argument that the Panel cannot investigate in the aggregate the impact of a series of individual laws."\footnote{Comments On The United States’ Request For Preliminary Rulings By Antigua And Barbuda, submitted to the Panel on 22 October 2003, para 17.} In fact, panels have often examined claims based on the combined effect of two or more measures, but have correctly approached such claims by first examining each specific
measure that allegedly contributes to a combined effect.\textsuperscript{183} Indeed, it would be impossible to know what the combined effect of various measures is as a matter of municipal law without first examining how each measure works, and then analyzing how these measures interact. The panel in \textit{US – Export Restraints} confronted a similar claim regarding the combined effect of several US measures. In that dispute, the panel quoted the following argument by the United States:

"It is not clear why, under the reasoning of either Canada or the \textit{United States – Section 301 Trade Act} panel report, the documents in this dispute 'must' be analyzed together. Canada contends that one or more of the documents in question, alone or together, somehow require the DOC to treat export restraints as subsidies. However, the proper analysis of such a claim cannot be undertaken based upon abstract notions of whether documents cited by a complaining party 'must be analyzed together', but on the status of the cited documents, and how they relate to each other, under the responding Member's domestic law."\textsuperscript{184}

3.86 The Panel subsequently adopted this approach. Noting that Canada's argument related to measures "taken together," the panel concluded that it would 'first analyse them separately, both in respect of the status and the effect of each under US domestic law, and in respect of whatever each says concerning export restraints.'\textsuperscript{185}

3.87 Similarly, in order to examine the validity of Antigua's claim in this dispute, the Panel must first analyze each measure individually. Antigua thus bears the burden of detailing precisely how each individual measure at issue operates under US municipal law. Antigua then bears the further burden of detailing how, under US municipal law, these individual measures operate together to give rise to the cumulative effect that Antigua is alleging inconsistent with the GATS. The \textit{Japan – Film} panel described this further burden. It found that:

"[T]o the extent that the United States claims that various "measures" in the areas of distribution, promotion and large stores set in motion policies which are said to have a complementary and cumulative effect on imported film and paper, we consider that it is for the United States to provide this Panel with a detailed showing of how these alleged 'measures' interact with one another in their implementation so as to cause effects different from, and additional to, those effects which are alleged to be caused by each 'measure' acting individually."\textsuperscript{186}

3.88 Therefore, Antigua's staunch refusal in this dispute to provide evidence and argumentation relating to each relevant individual measure, as well as to the interaction between the measures under municipal law that supposedly results in Antigua's claimed collective effect, makes it impossible for Antigua to credibly assert that it has sustained its burden of proof in this dispute.

\textsuperscript{183} For instance, in \textit{US – FSC}, the panel examined the effect of a series of tax exemptions "taken together," but did so only after first examining each individual exemption under municipal law. See Panel Report on \textit{US – FSC}, paras. 7.94-7.97. The Appellate Body went on to rely on the panel's examination of individual measures for purposes of its own review, thus confirming the systemic importance of a full examination by panels of individual measures. See Appellate Body Report on \textit{US – FSC}, footnote 23 and paras. 16-18. Similarly, in \textit{Argentina – Hides and Leather}, a panel concluded that two tax resolutions "taken together" gave rise to an inconsistency with Article III:2 of the GATT, but not without first making an individualized evaluation of each resolution. See Panel Report on \textit{Argentina –Hides and Leather}, footnote 319 (stating that measures "taken together" gave rise to inconsistencies) and paras. 1.108-11.115 (evaluating each measure individually).

\textsuperscript{185} Ibid., para. 8.84.

\textsuperscript{186} Panel Report on \textit{Japan – Film}, para. 10.353.
3.89 The United States stresses that it is Antigua's burden to provide argumentation explaining what aspect of specific US measure(s) in Antigua's view renders the measure(s) inconsistent with specific US obligations or commitments under the GATS. Since Antigua has failed in all respects to sustain that burden, the United States cannot delve into any specific measure in detail. In the view of the United States, Antigua explicitly seeks to shift its burden of proof onto the United States. It offers no basis for doing so except the complexity of US law – an excuse that the Appellate Body has already rejected as a ground for allocating the burden of proof: "There is nothing in the WTO dispute settlement system to support the notion that the allocation of the burden of proof should be decided on the basis of a comparison between the respective difficulties that may possibly be encountered by the complainant and the respondent in collecting information to prove a case." Antigua admonished the Panel that the United States "should not be allowed to in essence 'hide behind' the complexity and opacity of its own legal structure." To the contrary, the United States submits that the burden has always been on Antigua to come out of hiding and say what specific measures it does or does not seek to challenge, and then to provide evidence and argumentation as to each measure. Antigua has not only failed to do so, it has repeatedly refused to do so.

3.90 Antigua submits that the biggest point of contention in respect of the measures is whether Antigua and Barbuda has submitted sufficient proof that the United States maintains "measures" that result in a complete prohibition – or a "total ban" – on the provision of gambling and betting services from Antigua and Barbuda into the United States. However, rather than asking the United States to assume any burden of proof, Antigua's very basic point is that the United States has conceded this point of US law. Given the clear and unambiguous concession of the United States on the complete prohibition – the total ban – Antigua and Barbuda believes that there is simply no sense in proving an already conceded point. In fact, under the laws of virtually every jurisdiction that Antigua is aware of (including the United States), a concession, such as that made in this case by the United States, would result in a stipulation of the conceded fact or issue – precluding further discussion on the topic. The same concept holds true in the WTO. As noted by the European Communities, previous panels accepted similar such concessions as being accurate. Moreover, the United States has conceded this point to Antigua in consultations meeting on this matter, as well as in open session before the dispute settlement body in the context of this dispute on two occasions. Despite its insistence that Antigua should prove the point, the United States refers to its prohibition. In multiple public statements and position papers, the United States Department of Justice has unambiguously made this concession. And the United States clearly acts as if there is a prohibition – hence some of the actions taken by the United States and referenced in Section III of the Annex to Antigua's request for consultations in this proceeding. Indeed, Antigua invites the United States to deny that concession before the Panel. Given the concession by the United States, Antigua and Barbuda strongly believes that a detailed discussion of all measures on a state and federal level is unnecessary and, more importantly, wasteful. Further, consultations between parties are intended not only to resolve disputes, but also to frame and refine the issues.

3.91 Antigua notes that the United States apparently takes the position that a "measure" for purposes of WTO dispute resolution must consist of a discrete "law on the books" and that "measures" can only be a number of such discrete laws. This is a clear misinterpretation of a well-settled area of WTO jurisprudence which has established that many things – government policies, procedures and actions included – may constitute "measures." Indeed, the GATS itself defines "measures" expansively in Article XXVIII(a). Of course, if a measure were required to be a specific, discrete statute or regulation, Members could easily evade the reach of the dispute settlement machinery of the WTO through the use of informal policies and unwritten practices without any legislation or formal rulemaking at all. The point of the United States in this regard seems to be that the admitted "total
"ban" cannot itself constitute a "measure" because it is not one discrete law. And so, the United States would submit, Antigua must lead this Panel through a muddle of discrete United States laws and piece together the puzzle of measures that then add up to the sum of the total ban. Antigua disagrees. First, WTO law must not be forced to be interpreted in the light of formal characteristics of the laws of an individual Member. Whether a "measure" that is challenged under the DSU is under domestic law, considered to be comprised of one or more laws, rules or actions cannot therefore be definitive in determining whether the sum of the laws constitute a "measure" under the DSU. Second, while the United States points to a number of panel reports and Appellate Body decisions in which the measure-by-measure "puzzle" was required to be assembled, it fails to note that in each of those proceedings there was genuine disagreement as to the collective impact of the various pieces of legislation. That, of course, is manifestly not the case in this proceeding where Antigua and Barbuda and the United States both agree upon the existence of the complete prohibition. Third, the United States tries to create the impression that the cumulative effect of the complete prohibition created by the mass of specific US laws flows from a complex interaction between these specific laws. In reality, this is not the case. Most of the measures cited in the Panel request are prohibition measures that could arguably be applied independently of each other against Antiguan gaming operators. There are differences, however, in the territorial scope of the laws, as state laws typically only apply or have reach within the territory of the state at issue. Furthermore there appear to exist small differences in substantive scope of some of the laws. The overall result, however, is that all cross-border supply of gambling and betting services from outside the United States is always caught by one (and normally several) of the United States' prohibition laws.

3.92 Antigua argues that although the number of prohibition laws differs from state to state, the state prohibition laws all broadly follow the same pattern – all gambling is prohibited unless a specific exemption has been granted. But while many domestic operators have, in one way or another, obtained an exemption and are therefore allowed to operate lawfully, such exemptions are not available to foreign operators who want to supply gambling and betting services on a cross-border basis. Hence, state laws prohibit all cross-border supply of so-called "unauthorized" gambling, via the Internet or otherwise. The report prepared by the GAO provides a more detailed explanation of how the laws of five states prohibit so-called "unauthorized" Internet gambling.

3.93 Overlaying the network of state laws are United States federal laws. The letter dated 11 June 2003, sent by the United States Department of Justice to the National Association of Broadcasters provides a good example of how the United States itself holds the opinion that several federal prohibition laws might apply to the same conduct. The letter refers to three federal statutes when explaining the illegality of cross-border, "remote access" gambling: (i) the Wire Act, which prohibits gambling businesses from knowingly receiving or sending certain types of bets or information that assist in placing bets over interstate and international wires; (ii) the Travel Act which imposes criminal penalties for those who utilize interstate or foreign commerce with the intent to distribute the proceeds of any unlawful activity, including gambling considered unlawful in the United States; (iii) the Illegal Gambling Business Act which makes it a federal crime to operate a gambling business that violates the law of the state where the gambling takes place (provided certain other criteria are fulfilled such as the involvement of at least five people and an operation during more than 30 days). Each of these three laws separately prohibits the cross-border supply of gambling and betting services from Antigua. However, there is some uncertainty about the exact scope of these laws. For instance, there is debate as to whether or not the Wire Act would also apply to the relatively recent wireless Internet technology or indeed whether it applies to casino-type gambling or only to sports betting. In order to avoid these types of loopholes, United States authorities prosecute on the basis of a combination of these laws.

3.94 Antigua submits that it is for the similar reason of trying to avoid loopholes that it has not challenged the Wire Act alone, although the Wire Act undoubtedly seems to be the most significant law in the United States' prohibition arsenal. Antigua and Barbuda needs to ensure that, at the stage when the United States needs to implement any recommendations and rulings resulting from this
proceeding, the United States cannot take the position that it needs to amend only the Wire Act and can continue to apply its other prohibition laws. This is particularly important because given the huge amount of American legislation on gambling and betting, it cannot be excluded that Antigua and Barbuda has been unable to identify all domestic laws that could possibly be applied against the cross-border supply of gambling services. In this context Antigua and Barbuda submits that it is not only legally possible but also logical for it to challenge the United States' total prohibition on the cross-border supply of gambling. Under domestic United States law this total prohibition is composed of many different prohibition laws which all have a similar effect but which may have a different or slightly different territorial or substantive scope. Taken together, however, they cover the entire United States and all possible supply variants of cross-border gambling services, whether wire-based, wireless or otherwise. It is important to note that, under the federal scheme of the United States and given the international, cross-border nature of the services that Antigua provides, the United States federal government possesses the power to legislate exclusively in a manner that would both be binding on its states and completely resolve this dispute. Accordingly, given that the United States federal government possesses the power under its Constitution to fashion a remedy at the federal level without requiring state-by-state corrective action, the exhausting exercise of plodding through hundreds of state and federal statutes becomes even more obviously wasteful and absurd.

3.95 Antigua reiterates that contrary to the United States' assertions, Antigua and Barbuda has never "refused" to cite or provide evidence of United States laws that together create the total ban. In fact, Antigua's effort at identifying in its panel and consultations requests a huge number of American laws is evidence of its good faith in this endeavour. Despite this, even though it is wasteful and unnecessary in the view of Antigua to do so, Antigua has submitted to the Panel on 8 December 2003 the texts of all the relevant laws listed in its Panel request, together with brief summaries of these laws. Antigua also submitted the texts of all the items listed in Section III of the Annex to its Panel request that had not been submitted previously. Finally, Antigua believes that not much remains to be said about the typographical errors that were discussed at paragraphs 3.78 and 3.80 above; the text of these laws were submitted to the Panel which can verify them.

3.96 The United States replies that Antigua has chosen to define the scope of measures at issue in this dispute in exceedingly broad terms, and to ignore the text and meaning of actual US laws. It has rejected the US suggestion that it relate its claims to particular measures – even to the point of accusing the United States of engaging in "litigation tactics." And Antigua alone decided to withhold until more than two months after the date of its first submission the text of the very measures at issue in this dispute. While the United States has some concerns about Antigua's strategy in this dispute, it is not its role to second-guess them. The United States can only point out that Antigua has thus far not provided sufficient evidence and argumentation to establish its prima facie case. The United States reiterates that Antigua is apparently still asserting a proposition about the collective effect of US domestic laws relating to the remote supply of gambling, without regard to individual measures and how they work. Antigua, without any basis, labels this effect a "total prohibition on the cross-border supply of gambling and betting services." It asserts that, whatever the effect of the measures at issue individually, in concert they necessarily give rise to an inconsistency with the GATS. While Antigua claims the United States has not conceded any ground in this dispute, Antigua rests its case in large part on a supposed US "concession." No such concession was in fact ever made.

3.97 With respect to its burden of proof, Antigua has previously taken the position that it only needs to assert the alleged overall effect of US domestic law, and that the particular causes of this alleged overall effect – the measures that supposedly result in this effect – are irrelevant. In essence, Antigua wants the Panel to assume the overall effect of US domestic law without first determining how the measures at issue operate and interact, and whether such interaction would in fact comprise the overall effect alleged by Antigua. Antigua's assertion that a mere allegation is all it needs to meet its burden of proof is wrong. The Appellate Body has stated in its Carbon Steel report that the burden of providing evidence and argumentation begins with providing the text of the measures at issue, and is then followed by the presentation of authorities and arguments as to the meaning of these measures.
The Appellate Body has also explained in *India - Patents (US)* that an examination of the meaning of relevant provisions of domestic legislation is not just helpful, it is essential to determining whether a Member has complied with its obligations. To borrow the Appellate Body's own phrase, a panel or the Appellate Body "must look at the specific provisions" of domestic law. The same is true in this dispute. As the United States has repeatedly emphasized, Antigua's notion of a total prohibition has no legal status under US law. Antigua's mere assertion that this is the effect of US law, without a demonstration of the alleged causes, cannot underpin a panel finding that this is in fact the effect. Assumptions and assertions are not sufficient. In order for the Panel to be able to discharge its duty to make an objective assessment of the collective effect of domestic law with all its significant nuances, Antigua must first provide sufficient evidence and argumentation to support its view of precisely how each individual measure at issue operates under US domestic law. As already noted by the United States, such an approach is consistent with that taken by the panel in *US – Export Restraints* and by other panels. After assessing how each individual measure operates under US law, Antigua must then – given its claim of a collective effect – bear the further burden of proving this collective effect. In *Japan – Film*, the panel found that, in order to establish a claim of collective effect, the United States was required to "provide this Panel with a detailed showing of how these alleged 'measures' interact with one another in their implementation so as to cause effects different from, and additional to, those effects which are alleged to be caused by each 'measure' acting individually." The same standard applies here. Assuming that Antigua proves the meaning of individual measures, it must show their collective effect through evidence and argumentation regarding how these alleged measures interact with one another in their implementation under US domestic law. To borrow a phrase used by Antigua, Antigua must piece together the "puzzle" of its *prima facie* case.

3.98 The United States submits that, on 8 December 2003, Antigua finally gave the Panel the text of the laws that it alleges may or may not comprise the US regulatory structure for remote supply of gambling services. Along with the text of these laws, Antigua provided incomplete, and in some cases misleading, thumbnail sketches of what some of the laws supposedly contain. There are also texts of non-measures and other documentation that the United States was not expecting in what essentially amounts to an additional submission by Antigua. Nonetheless, a cursory analysis of Antigua's documentation (which is all the United States was able to do so far given the timing of the submission) only further reinforces the US view that Antigua has yet to provide sufficient evidence and argumentation to support its view of the meaning of each measure at issue, how each measure is relevant to remote supply of gambling services, and finally how each measure interacts with other measures so as to establish Antigua's *prima facie* case in this dispute. Indeed, the sheer volume of Antigua's 8 December submission only further highlights the vastness of Antigua's unmet burden. Antigua has explicitly sought to shift its burden of proof onto the United States by claiming that the United States is in the best position to meet this burden and that the US legal system is complex. However, not only is Antigua's position contrary to the well-established view of burden of proof in WTO dispute settlement, it is also well-established in the WTO that complexity is not a viable excuse for re-allocating the burden of proof. The presumption remains that the laws of the United States are consistent with the GATS unless and until Antigua as the complainant proves otherwise.

3.99 Antigua replies that the United States has relied heavily throughout this proceeding on its assertion that Antigua has not met its burden of proof to establish the existence of any United States measures that are contrary to commitments of the United States under the GATS. Despite its unambiguous position that "cross-border gambling and betting services are prohibited under US law," the United States has insisted that Antigua bears the "burden of proof" of otherwise establishing in some form this "total prohibition" and that Antigua has not done so. Antigua, on the other hand, has consistently taken the position that not only should the express agreement of the United States as to the existence of the total prohibition obviate the need for the provision of any additional "proof" that the United States indeed totally prohibits the provision of cross-border gambling and betting services from Antigua, but that the conceded total prohibition in and of itself...
constitutes a "measure" within the meaning of the GATS. Antigua has never taken the position that the "burden of proof" to establish the existence of actionable measures should be "shifted" to the United States. Rather, Antigua believes that there is, in essence, no burden to be shifted – the parties are in agreement on the scope and extent of the total prohibition, and this agreement has definitive consequences in this proceeding under WTO jurisprudence.\textsuperscript{191}

3.100 Antigua submits that the United States' argument that its total prohibition is not a measure that can be challenged in WTO dispute settlement because it is not "something that has a 'functional life of its own' under municipal law"\textsuperscript{192} is apparently based on the panel report in \textit{US – Corrosion-Resistant Steel Sunset Review}. However, the Appellate Body has recently reversed the aspect of this panel report on which the United States relies, and found that a measure can be challenged even if it is not mandatory under municipal law:

"As long as a Member respects the principles set forth in Articles 3.7 and 3.10 of the DSU, namely to exercise their 'judgement as to whether action under these procedures would be fruitful and to engage in dispute settlement in good faith, then that Member is entitled to request a panel to examine measures that the Member considers nullify or impair its benefits. We do not think that panels are obliged, as a preliminary jurisdictional matter, to examine whether the challenged measure is mandatory. This issue is relevant, if at all, only as part of the panel's assessment of whether the measure is, as such, inconsistent with particular obligations."\textsuperscript{193}

3.101 The Appellate Body further stated that the reference to a Member's "laws, regulations and administrative procedures" in Article 18.4 of the Anti-Dumping Agreement "must be determined for purposes of WTO law and not simply by reference to the label given to various instruments under domestic law of each WTO Member. This determination must be based on the content and substance of the instrument, and not merely on its form or nomenclature."\textsuperscript{194} A similar interpretation should, \textit{a fortiori}, apply to the definition of measures in Article XXVIII(a) of the GATS which is formulated more broadly than the phrase used in Article 18.4 of the Anti-Dumping Agreement that was at issue in \textit{US – Corrosion-Resistant Steel Sunset Review}. Antigua already argued this precise point.\textsuperscript{195}

3.102 Antigua submits that, in view of the decision of the Appellate Body in \textit{US – Corrosion-Resistant Steel Sunset Review}, it is possible to challenge a total prohibition that is comprised of numerous (i) "specific legislative and regulatory provisions;" (ii) "application[s] of such provisions;" and (iii) "practice[s]."\textsuperscript{196} While the Panel needs to establish that this ban exists, it is not necessary for the Panel or Antigua to establish the definitive list of (and analyzed) every law, regulation, application and practice that is part of the total prohibition. The purpose of dispute settlement is to stop the impairment of benefits accruing under the covered agreements. In the context of this proceeding, this means obtaining access for Antigua's gambling and betting services to the US market. For the impairment of Antigua's GATS benefits, it does not matter how many laws make that market access impossible and how exactly they do it. What matters is that this market access is impossible, whilst it should be possible. In performing its analysis, a panel must verify whether benefits are impaired and must have sufficient information about he measures concerned to properly apply the specific provisions of the GATS.

\textsuperscript{191} Antigua's reply to Panel question No. 9.
\textsuperscript{192} Request For Preliminary Rulings By The United States Of America, submitted to the Panel on 17 October 2003.
\textsuperscript{193} Appellate Body Report on \textit{US – Corrosion-Resistant Steel Sunset Review}, para. 89.
\textsuperscript{194} Ibid., footnote 87.
\textsuperscript{195} See above para. 3.91.
\textsuperscript{196} See Panel question No. 10.
3.103 Antigua points out that it is noteworthy that the United States itself stated that putting together all the pieces of the United States legislative puzzle in this area is "an impossible task." That is certainly the case if the standard of evidence concerning municipal law is the one set out in the United States' request for preliminary rulings. In this request, the United States explained that, in its view, even the United States v. Cohen decision of the United States Court of Appeals for the Second Circuit\(^{197}\) is of limited value because it is the opinion of a court inferior to the United States Supreme Court. Consequently, according to the United States, under US law the Cohen decision only has value as precedent with respect to the same court and lower federal courts of the Second Circuit. Thus, under this reasoning, Antigua could only challenge before the Panel those individual federal and state laws which the United States Supreme Court has unambiguously confirmed prohibit the cross-border supply of gambling and betting services from Antigua. In this respect the Panel should note that the United States Supreme Court declined to review the conviction of Mr. Cohen. In effect, the approach of the United States would mean that WTO dispute resolution would only be possible in relation to a "measure" whose meaning had been definitively ascertained by the court of final instance of the relevant jurisdiction. This interpretation cannot be correct under WTO law because the formal characteristics of any domestic legal system could make WTO dispute resolution impossible, even in a situation where the meaning in practice of the measure was absolutely clear. Even more directly, the United States continuing insistence that "[a]ssuming that Antigua proves the meaning of individual measures, it must show their collective effect through evidence and argumentation regarding how these alleged measures interact with one another in their implementation under US domestic law" is simply incorrect, both under the definition of measure under the GATS as well as under WTO jurisprudence.

3.104 Despite Antigua's firm belief that this dispute is best and most efficiently resolved on the basis of the unequivocal agreement between Antigua and the United States on the "total prohibition" constituting a measure of itself, contrary to what the United States has repeatedly asserted, Antigua has provided considerable evidence of and discussion about the construction of the total prohibition under United States law. These efforts have included, among other things: (i) numerous references to and discussions of the principal federal statutes used by the United States to support its total prohibition; (ii) provision to the Panel of the actual text of the principal state and federal laws that underlie the total prohibition; (iii) discussions regarding the basic scheme of state and federal interaction in the area of gambling and betting and how the state and federal laws act to further the total prohibition.

3.105 Antigua submits that, under the complicated and extensive body of law framed by the US federal Constitution, federal legislation and rulemaking, as well as interpretive (and precedent-setting) court decisions, the federal government of the United States has left certain powers exclusively to the various states, while other powers are either solely in the hands of the federal government or, in many cases, shared on various bases between the states and the federal government. One of the primary sources of the power of the federal government to legislate in a manner binding on all of the states is what is known as the "commerce clause" to the United States Constitution.\(^{198}\) This allows the United States federal government to legislate on a vast number of topics that in many cases only have remote connections with interstate or international commerce.\(^{199}\)

\(^{197}\) 260 F.3d 68 (2nd Cir. 2001), cert. denied 122 S.Ct. 2587 (2002).

\(^{198}\) U.S. Const. art. I, § 8, cl. 3, which provides in its pertinent part that "[T]he Congress shall have Power . . . [t]o regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes."

3.106 According to Antigua, the United States' total prohibition comprises both state and federal laws, which, broadly speaking, fulfill two different roles: (i) state law generally prohibits all gambling within the territory of a state that has not been specifically authorized by that state; and (ii) federal law prohibits the use of cross-border means to avoid circumvention of the territory-based prohibitions of the individual states. In general, gambling is a matter of state law in the United States. Each state can determine for itself whether individuals can gamble within its borders and which gaming businesses can legally operate there. All states have adopted the same basic legal approach to gambling: it is illegal to offer gambling services in the state unless otherwise expressly authorized by statute. In general, gambling is prohibited by one or more constitutional or statutory provisions, while other constitutional or statutory provisions then "add back" the specific circumstances under which gambling can be offered in the state. Thus, even in Nevada "unauthorized" gambling is synonymous with "illegal gambling". Currently, 48 states and the District of Columbia have given authorizations to offer gambling and betting services within their territory to operators established on their territory.

3.107 Antiguan operators cannot, however, obtain an authorization to supply gambling services from Antigua to any state or territory of the United States. This is often related to specific authorization criteria in legislation but may also be a matter of practice. Antigua has not been able to investigate all the criteria that all states apply to authorize a domestic operator to offer gambling and betting services. In fact, it seems that in many cases states do not use predetermined, objective criteria when granting such an authorization. The Final Report of the United States National Gaming Impact Study Commission states the following about gambling regulation in the states:

"Governments determine which kinds of gambling will be permitted and which will not; the number, location, and size of establishments allowed; the conditions under which they operate; who may utilize them and under what conditions; who may work for them; even who may own them. And, because governments determine the level and type of competition to be permitted - they also are a key determinant of the various industries' potential profits and losses."[...

rivalry and competition for investment and revenues have been far more common factors in government decision-making regarding gambling than have any impulses toward joint planning. Those decisions generally have been reactive, driven more by pressures of the day than by an abstract debate about the public welfare. One of the most powerful motivations has been the pursuit of revenues.

3.108 Furthermore under the laws or the practice of every state that provides for state-sanctioned gambling in one form or another, the conditions attached to obtaining the right to supply gambling

---

200 Antigua notes that, in some instances, federal laws act exclusively in pursuit of a federal interest that preempts state law. See, e.g., Interstate Horseracing Act; 28 U.S.C. §§3701-3704 (the "Professional and Amateur Sports Protection Act").
201 GAO Report, p. 11.
204 Ibid., pp. 1-4
205 Ibid., pp. 1-5.
206 Ibid.
services in the state by definition preclude Antiguan operators from qualifying on a cross-border basis. In combination with the general prohibitions in each state, these exclusionary "authorization" state laws prohibit all cross-border supply of so-called "unauthorized" gambling from suppliers in Antigua, via the Internet or otherwise. Some states limit all forms of sanctioned gambling to specific locations within the state. For example: (i) in Colorado, casino gambling may only be conducted in three historic mining towns; 207 (ii) in Connecticut, slot machines and electronic gaming devices ("EGDs") can only operate from the state's Native American casinos 208 and bingo may only be offered at a location which can be physically inspected by state gaming officials; 209 (iii) in Indiana, casino gambling may only be conducted on riverboats on Indiana waterways. 210 This requirement is consistent with the legislative intent of the Indiana gaming statute "to benefit the people of Indiana by promoting tourism and assisting economic development"; 211 (iv) in South Dakota, casino gambling (blackjack, poker, slot machines) is permitted only in the city of Deadwood and nine Indian casinos located in the state; 212 (v) Mississippi will only license casino gambling on boats or in other limited defined areas within the state. 213

3.109 Antigua further submits that some states limit the number of gambling licenses available to service providers. For example: (i) Illinois limits the number of gaming licenses to ten for the entire state, 214 (ii) Louisiana limits the number of riverboat casino licenses to fifteen, with no more than six per designated waterway; 215 (iii) in Iowa, the state has set a maximum number of pari-mutuel operators and casino operators. 216 Antigua notes that some states require the providers of betting and gambling services to be physically present within the state as they provide their services. For example: (i) in Iowa, in order to offer gambling services such as blackjack, craps, roulette, poker, slot machines and video poker, the services must be offered on the licensed facility's grounds; 217 (ii) Nevada will not license any gambling provider whose premises are "difficult to police" or where the conduct of gaming would be inconsistent with the public policy of the state. 218 Moreover, some states require gamblers to be physically present when they are engaged in gambling activities. example: (i) in Connecticut, in order to gamble at bingo a player must be physically present on the premises where the game is offered; 219 (ii) in Indiana, to gamble on a riverboat casino a gambler must be physically present on the riverboat; 220 (iii) in Iowa, a racetrack can only make payment on winning pari-mutuel tickets upon presentation and surrender by the bettor where the wager was made. 221

3.110 Historically the main objective of federal law concerning gambling was to protect the territorial integrity of states' gambling legislation by prohibiting the use of interstate or international facilities (such as post and "wire communications") or interstate or international commerce to offer gambling services. 222 While some state laws might purport to extend beyond their borders, the questionable ability to acquire jurisdiction over persons in other states and countries as well as the inability to apply state laws in the generally federal area of interstate and international commerce in virtually every instance limits the effectiveness of state legislation to activities actually occurring and persons actually present within the territory of the state. The existence of federal legislation facilitates the prosecution of suppliers of "unauthorized" gambling to, for instance, New York from another state or another country because the supply of this "unauthorized" gambling then also becomes a federal crime and many of the jurisdictional difficulties of a state prosecution are no longer applicable. Thus the United States federal laws that prohibit interstate and cross-border supply (i.e. the ban on the use of interstate or international commerce or communication facilities) are a critical component of and add to the total prohibition that is in fact already established (albeit difficult to enforce) by the state laws alone. In this respect the Panel should also note that, contrary to what the United States suggests, the laws comprising the federal ban on interstate and cross-border supply of gambling and betting services were not put in place because interstate and cross-border supply of gambling and betting services was considered a greater health risk than the local supply of gambling services. The federal ban on interstate and cross-border supply is merely intended to safeguard the states' ability to regulate gambling as they see fit within their borders.

3.111 Antigua states that it is particularly important to realize what United States federal law does not do. For example: (i) federal law does not require states to regulate gambling within their borders; (ii) federal law does not require states to prohibit gambling within their borders; 224 (iii) federal law does not prohibit telephonic, electronic, Internet or any other forms of remote gambling from occurring within the borders of any state. Thus, ironically (and somewhat difficult to reconcile with the position of the United States that cross-border supply of gambling and betting services poses significant health, law enforcement and other social issues that justify the United States total prohibition), under current federal law every state in the United States, if it so chose, could offer

\[\text{223 Antigua is of the view that, throughout this proceeding there has been some uncertainty about, and mixed use of, the proper nomenclature for the gambling and betting services offered by Antigua. While the United States would generally like to call the Antiguan services "remote," Antigua believes that there are many state-sanctioned gambling services provided domestically in the United States that are also "remote" even if originating domestically and even if not involving some type of electronic transmission or communication (such as scratch card gambling offered by lotteries in the United States). Given the language of the GATS ("cross-border supply"), Antigua believes cross-border supply to be the more accurate term for the services being offered by Antigua and prohibited by the United States. See also Antigua's reply to Panel question No. 20. As explained in Antigua's reply to Panel question No. 20, Antigua uses the term "cross-border" as defined by the GATS, i.e. in relation to trade in services crossing borders of WTO Members. The trade in services between states of the United States is described as "interstate."}\]
\[\text{224 Antigua notes that there are limited exceptions where the United States has legislated under the power of the "commerce clause" that impact the ability of states to legislate or regulate in certain respects. See footnote 200 above.}\]
completely unregulated Internet gambling to every person located within the borders of the state. Yet Antigua would still be unable to provide any gambling and betting services – regulated or not – into the United States on a cross-border basis.

3.112 The United States reiterates that a complaining party must demonstrate, through evidence and argumentation, the existence and meaning of the measure(s) purportedly at issue. Antigua is the party making claims about US domestic law, and it therefore "bears the burden of introducing evidence as to the scope and meaning of such law to substantiate that assertion." An examination of relevant "specific provisions" of domestic law is essential to the assessment of such a claim, and Antigua has not provided the evidence and argumentation necessary in order for the Panel to make such an assessment. Antigua has given the Panel a "data dump" of nearly all the measures cited in its Panel request, along with cursory descriptions of those laws. These descriptions are patently insufficient as argumentation. Most obviously, they fail to tell the Panel or the United States precisely which measures Antigua regards as relevant – a failure that Antigua continues to dismiss with the baseless excuse that it is sufficient merely to cite a "range" of measures. Antigua's thumbnail descriptions also fail to allege the impact of each specific provision on remote supply of gambling. Finally – and most fundamentally – Antigua fails to explain how each specific measure relates to its argumentation regarding alleged violations of the GATS.

3.113 The United States maintains that, to the extent that Antigua means to assert a "collective effect" claim, it is well-established that the party asserting such a claim must provide evidence and argumentation to enable the Panel to first examine the independent meaning of each specific measure that allegedly contributes to a combined effect. Then that party bears the further burden of detailing how, under domestic law, the individual measures operate together to give rise to the cumulative effect that is alleged to be inconsistent with WTO obligations. Antigua has not done such an analysis, and has instead explicitly denied any obligation on its part to piece together the "puzzle" of its own claim. Antigua's claim is indeed a puzzle. It is neither the responsibility of the Panel nor that of the United States to guess which measures are relevant and which are not, nor to assemble Antigua's claim of collective effect. As the complainant, Antigua itself formulated its broad claims, thus it alone must undertake the "exhausting exercise of plodding through hundreds of state and federal statutes" to make its prima facie case, and the Panel cannot disregard Antigua's failure or explicit refusal to do so. Based on Antigua's inactions, the Panel can only conclude that it is unable to proceed with an examination of any "measure" because Antigua has neglected to articulate its claims with sufficient precision.

3.114 Antigua maintains that the most efficient way for the Panel to approach this dispute is on the basis of the unambiguous agreement of the parties that the cross-border provision of gambling and betting services from Antigua to consumers in the United States is always illegal under United States law. Antigua has demonstrated the wide scope of what constitutes a "measure" under the GATS and other WTO agreements, and that WTO jurisprudence supports this approach. Yet, the United States essentially submits that the Panel can only assess Antigua's claim if Antigua first provides a "precise

225 The United States indicates it has already pointed out that Antigua's mere assertion as to the collective effect of US gambling laws – that they represent a "total prohibition" on cross-border gambling – cannot amount to proof of a violation of WTO obligations. The notion of a total prohibition is not itself a measure, nor is it a notion with any legal status as such under US law. Antigua misstates the US position as saying that only statutes can be challenged in WTO dispute settlement. This is obviously not the US position.

228 For instance, Antigua's 19 December 2003 letter to the Panel.

229 Appellate Body Report on Japan – Agricultural Products II, paras. 125-131 (finding that a Panel cannot rule in favour of a complaining party which has not established a prima facie case of inconsistency based on specific legal claims asserted by it).

230 See above para. 3.94.
statutory analysis” of all federal and state laws and regulations applying to the cross-border supply of gambling and betting services from Antigua, and also, apparently, of all the laws and regulations authorising and regulating legal gambling in the United States. The United States also believes that it is incumbent upon the Panel to "examine the independent meaning of each specific measure (…).” This concerns thousands of pages of legislative and regulatory provisions and (as the United States itself has noted) would make this case simply impossible. No matter how confidently the United States may so assert, there is no support for this kind of formalistic approach, either in the GATS, any of the other WTO Agreements or under WTO jurisprudence. Such an approach would also make the resolution of many other trade disputes impossible, in particular claims brought by developing country Members against Members that maintain very complex domestic legislation with regard to a specific subject matter. Because of scarce resources, developing countries find it difficult to bring dispute settlement cases to the WTO even when the domestic legislation of the defendant is simple. An approach such as that insisted upon by the United States would serve only to deter developing Members from using the dispute settlement system, effectively limiting access to WTO dispute machinery to the richest Members. Furthermore there will likely be cases where the thousands of pages of domestic legislation are not available in English, French or Spanish. In such a situation a stringent requirement of "precise statutory analysis" of all these provisions would entail, to say the least, an insurmountable translation task. Finally, it would be totally impossible for panels to respect the nine months timeframe laid down in Article 20 of the DSU.

3.115 Antigua acknowledges that there may be circumstances in which a panel nevertheless has to undertake such a "precise statutory analysis," namely in situations where there is a genuine disagreement and a genuine lack of clarity about the effect of a Member's domestic law. But that is patently not the case here. The United States, referring to the Appellate Body Report in US – Carbon Steel, argued that Antigua had to submit evidence as to the scope and meaning of United States law. According to that Appellate Body report:

"Such evidence will typically be produced in the form of the text of the relevant legislation or legal instruments, which may be supported, as appropriate, by evidence of the consistent application of such laws, the pronouncements of domestic courts on the meaning of such laws, the opinions of legal experts and the writings of recognized scholars."

This is precisely what Antigua has done.

3.116 Contrary to what the United States continues to maintain, Antigua has not "failed or refused" to submit evidence of the United States measures. In fact, the evidence submitted by Antigua on this point is more than sufficient to satisfy Antigua's burden of proof and to establish the existence of one or more United States measures – particularly because the United States has either expressly agreed or at least not sought to deny that: (i) all cross-border supply of services from Antigua to the United States that involves placing a bet or wager is prohibited; (ii) it is impossible to obtain an authorization to supply gambling and betting services on a cross-border basis to the United States; (iii) its states maintain physical presence requirements; (iv) its states maintain numerical limits on the number of service suppliers; (v) its states have established monopolies and given exclusive rights to certain domestic operators. The purpose of WTO dispute settlement is to stop the impairment of treaty benefits. It is not to undertake academic analyses of Member's domestic laws. It is also not to identify and remove specific "measures" of the defendant. If that were the case a defendant who loses a case could replace its "measures" with new and different "measures" that have the same effect. As already demonstrated by Antigua, under US law, the federal government possesses the exclusive power to legislate in the area of international commerce. If the United States is concerned about how it might comply with an adverse ruling by the DSB against it in this proceeding, it need only look as

231 See below para. 3.139.
232 See above para. 3.87.
far as what its Congress has done in countless other situations – impose one federal law governing the relationship between the United States and Antigua that is binding upon all of the states, automatically rendering all contrary state legislation moot.

3.117 The **United States** maintains its views regarding the legal requirements for a *prima facie* case. Moreover, the United States notes that, in support of the view that it may challenge the alleged US "total prohibition", Antigua cites the Appellate Body's report in *US – Corrosion-Resistant Steel Sunset Review* for the propositions that it is "legally possible to challenge such a total ban" and that a panel "is not obliged ... to examine **all** domestic laws, regulations, applications and practices that may contribute" to the alleged total prohibition. Antigua's discussion of *US – Corrosion-Resistant Steel Sunset Review* misreads that report. That report was addressing the question of whether an actual document issued by the US Department of Commerce could be considered a "measure". Here, however, Antigua is seeking to challenge its own creation – its alleged "total prohibition". This alleged "total prohibition" is not a document issued by the US Government and it embodies no act or omission of the United States Government – it is nothing more than verbiage that Antigua attaches without basis to a large group of "specific legislative and regulatory provisions" of the United States.

3.118 On this point, *US – Corrosion-Resistant Steel Sunset Review* affirmatively contradicts Antigua's assertion that this Panel need not examine all the relevant specific provisions that make up the alleged "total prohibition." Indeed, the Appellate Body faulted the panel in that dispute because it "had not conducted any in-depth consideration of the impugned provisions of the" US Department of Commerce document at issue. Moreover, the Appellate Body referred at paragraph 168 to its statement in its recent report on *US – Carbon Steel* that a party asserting that another party's municipal law is inconsistent with a WTO obligation must introduce evidence as to the scope and meaning of that municipal law. Thus, *US - Corrosion-Resistant Steel Sunset Review* if anything confirms the US view that the assessment of claims regarding domestic law requires an examination of relevant "specific provisions" of domestic law. Consistent with this principle, Antigua has the burden of providing evidence and argumentation sufficient to enable the Panel to examine all of the "specific provisions" relevant to Antigua's claims individually and in terms of their interaction under domestic law. To the extent that Antigua fails to say precisely what provisions are or are not relevant, or offer argumentation on specific provisions, it does not even meet the most basic elements of a *prima facie* case. The United States further submits that Antigua still has not sustained its burden of proof regarding the existence and meaning of any state law individually, much less all of them collectively. Antigua asserts that "[S]tate law generally prohibits all gambling within the territory of a state that has not been specifically authorized by that state," yet the language of the statutes provided by Antigua varies widely, as do their meaning, operation, application and interpretation. And, as the United States has previously observed, many seem patently irrelevant. It is Antigua's burden to confront those issues – something it again still has not done.

3.119 The United States notes that, in its second submission, Antigua for the first time cited specific state measures that allegedly "prohibit all cross-border supply." In particular, Antigua cites alleged restrictions on the physical location of gambling in Colorado, Connecticut, Indiana, Mississippi, and South Dakota; alleged limits on the number of licenses for riverboat casinos in Illinois and Louisiana, alleged limits on the number of pari-mutuel operators and casino operators in Iowa; alleged physical presence requirements for gambling service providers in Iowa and Nevada; and alleged physical presence requirements for bettors in Connecticut, Indiana, and Iowa. The United States has examined

236 See above paras. 3.112; 3.84 (citing the Appellate Body Report on *India – Patent US*, paras. 66-69).
237 See above paras. 3.108 and 3.109.
the sources identified by Antigua for each of those alleged restrictions and is not able to locate any
of the cited sources among the items listed in the Annex to Antigua's Panel request. It therefore
appears that these alleged restrictions are outside this Panel's terms of reference. In any event,
Antigua does not explain how these alleged restrictions affect, much less "prohibit," cross-border
supply. Based on Antigua's descriptions, all of them appear to relate exclusively to supply of
gambling services by physical presence within a state.

3.120 The United States notes that Antigua also argues that the United States has somehow made a
"concession" in this dispute regarding the existence of a "total prohibition" on cross-border supply of
gambling services, and that this somehow relieves Antigua of its fundamental responsibility to make a
prima facie case regarding specific provisions of US law. The United States very forthrightly told
both the DSB and this Panel that it does not permit certain services, such as Internet betting, either
domestically or on a cross-border basis. The United States has also clarified that it does permit
certain other gambling services on a cross-border basis. And it has stated that there is no overarching
measure apart from US laws themselves that embodies these restrictions. The "total prohibition" is
simply a baseless label created by Antigua. It does not embody, or even accurately describe, the
actual provisions of US law, and it is nothing more than another attempt by Antigua to avoid its
burden of establishing its prima facie case regarding the actual text and meaning of US law.

3.121 The United States submits that nothing that it has said to the DSB or in the course of this
dispute relieves Antigua of its burden to show exactly what measures it is challenging, and how those
measures, individually or in combination, violate the GATS. The United States neither concedes nor
agrees with any of Antigua's propositions about the alleged "total prohibition". Antigua asserts that
the US – Section 301 Trade Act panel report somehow suggests that it need not examine the US laws
and regulations at issue in this dispute, but the Section 301 Trade Act panel could not be clearer in
opposing this position. In fact, the Section 301 Trade Act panel that it is an indispensable first step in
any dispute to determine the meaning of the domestic laws at issue in order to then analyze whether
those laws breach the Member's obligations. In this dispute, Antigua acknowledges that its alleged
total prohibition is "composed of specific legislative and regulatory provisions." Yet Antigua
refuses to examine those "specific" instruments, as called for in Section 301 Trade Act and numerous
other Panel and Appellate Body reports. Finally, Antigua's lengthy assertions about US law
governing stipulations, estoppel, and the like are all irrelevant, and need not be addressed at length.
Antigua has acknowledged that US law does not govern such issues in this forum, and the United
States agrees on that point, but disagrees with Antigua's hypothesis about how a US court would deal
with these issues given the particular facts of this dispute.

3.122 The United States further notes that it is Antigua itself – not the United States – that
established through its own Panel request the terms of reference in this dispute, and thus the extent of
its own burden of proof. If Antigua now finds it impossible to sustain this burden, it only has itself –
not the United States – to blame. On a related note, Antigua appears to assert that its status as a
developing country should exempt it from having to make a prima facie case. The United States has
high regard and great sympathy for the concerns of developing countries, and welcomes their use of
the dispute settlement mechanisms of the WTO. However, it questions whether Antigua's developing
country status has been responsible for its decision not to offer a prima facie case. Antigua has
obtained the assistance in this dispute of a team of US and European counsel who are experts on US
and WTO law, as well as a team of US and European academic advisers. Moreover, since Antigua is
an English-speaking country, the United States fails to see the relevance of Antigua's concerns about
language barriers for developing countries. And finally, and most fundamentally, the United States

---

238 See above footnotes 207 to 221.
240 Antigua's reply to Panel question No. 10.
241 Antigua's reply to Panel question No. 9.
questions whether basic notions of due process would ever permit a downward or upward adjustment in the burden of proof based on a Member's level of development.

3.123 The United States submits that Antigua has not met the standard for a prima facie case articulated in Carbon Steel by merely providing the text of domestic laws – to the tune of a thousand pages or more – and short summaries of some of those laws. The standard as articulated in Carbon Steel calls for information that is necessary to engage in an analysis of the meaning, application, interpretation, and interaction of specific provisions of domestic law. The Appellate Body has repeatedly confirmed – for example in India – Patents (US) and US – Corrosion-Resistant Steel Sunset Review – that this means an analysis of "specific provisions" of US law – not merely provisions and short summaries of the laws. The United States argues that a case built on generalizations about US law does not meet the burden of proof because the purpose of dispute settlement is not to analyze domestic law or "remove specific 'measures' of the defendant." The DSU clearly states in Article 3.7 that, in the absence of a mutually agreed solution, "the first objective of the dispute settlement mechanism is usually to secure the withdrawal of the measures concerned if these are found to be inconsistent with the provisions of any of the covered agreements." This just further confirms that Antigua's burden relates to specific measures of U.S. law, not generalizations about US law.

4. GATS Article XVI

3.124 Antigua argues that, in its Schedule, the United States has made a full commitment to the cross-border supply of gambling and betting services.Simultaneously, the United States totally impedes cross-border market access by prohibiting all cross-border supply of gambling and betting services. This constitutes a manifest violation of Article XVI:1 of the GATS.

3.125 Antigua further argues that the United States maintains an array of measures that constitute a total prohibition of the supply of gambling and betting services unless this has been authorized (generically or individually) by authorities of the United States (via legislation, regulation or individual licences). Thousands of service suppliers of United States origin have been given an authorization to supply gambling and betting services (often creating monopolies or exclusive service suppliers). It is impossible, however, for service suppliers from Antigua to obtain an authorization to supply services on a cross-border basis. This complete ban on cross-border supply maintained by the United States qualifies as a "limitation on the number of service suppliers" prohibited by Article XVI:2(a) of the GATS. The United States measures violate Article XVI:2(a) not only as establishing a numerical quota (of zero) but also as measures creating monopolies or exclusive service suppliers. The complete ban on cross-border supply also qualifies as a "limitation on the total number of service operations" prohibited by Article XVI:2(c) of the GATS.

3.126 The United States replies that Antigua fails to prove the inconsistency of any US measure(s) with Article XVI of the GATS. Article XVI prohibits Members that have inscribed commitments from maintaining or adopting six types of measures referred to in its paragraph 2, subparagraphs (a) to (f). Antigua asserts that the United States has made a full commitment applicable to gambling services, and that the United States "totally impedes cross border market access" and therefore violates Article XVI:1 of the GATS. This argument appears to rest on the mistaken assumption that the existence of a commitment in the market access column of a Member's schedule implies a generalized commitment not to impede "market access." In fact, Article XVI does not enshrine a general rule prohibiting measures that impede "market access" in whole or part. Instead, it prohibits

---

242 In addition to the arguments presented here, see also parties' replies to Panel questions Nos. 15 and 37-39 in Annex C of this Report.
243 Antigua suggests to compare, with regard to Article XI:1 of GATT 1994, the Panel Report on Canada – Periodicals, para. 5.5.
only those measures falling within the specific categories listed in Article XVI:2. While Article XVI:1 makes clear that the Article addresses market access, it is the closed list in Article XVI:2 that defines the substance of the obligation that Article XVI imposes. Therefore, the Panel should restrict its Article XVI inquiry in this dispute to an examination of whether Antigua has proven that any specific US measures fall within the particular types of measures listed in Article XVI:2.

3.127 The United States further submits that Antigua refers to an "array of measures that constitute a total prohibition" on the cross-border supply of gambling services. Once again, Antigua's failure to cite specific measures makes it impossible for the Panel to examine exactly what types of activity are or are not restricted under US law. Without some evidence – aside from the mere assertion of a "total prohibition" – as to the scope and meaning of US law, Antigua's argument fails. Antigua specifically argues that the alleged "complete ban" violates Article XVI:2(a), which prohibits the maintenance or adoption of "limitations on the number of service suppliers whether in the form of numerical quotas, monopolies, exclusive service suppliers or the requirements of an economic needs test," as well as the prohibition in Article XVI:2(c) on "limitations on the total number of service operations ... expressed in terms of designated numerical units in the form of quotas or the requirements of an economic needs test." The United States submits that these provisions require a panel to examine the "form" of the US measure(s) at issue and the way in which such measures are "expressed" – something it cannot do without evidence from Antigua as to the specific measures alleged to be inconsistent with Article XVI:2.

3.128 According to the United States, even if Antigua had attempted to make a prima facie case as to how any US measure is inconsistent with Article XVI, which it has not, it could not have done so. The United States can find no US measure listed in Antigua's Panel request that takes the form of "numerical quotas" or is expressed as "designated numerical units in the form of quotas." Nor is the United States aware of any measure within the scope Antigua's Panel request the form or manner of expression of which matches any of the other forms identified in Article XVI:2(a) and XVI:2(c). Indeed, Antigua has pointed to no such measures. As far as the United States is aware, the gambling-related US measures listed in the Panel request are framed entirely in terms of non-numerical criteria that restrict certain forms of activity, rather than numbers of providers, operations, or output. Thus, no relevant US measures would appear to fall within the ambit of Article XVI:2. Antigua's assertion that Antiguan suppliers cannot obtain authorization from regulators in the United States to supply gambling services on a cross-border basis has no relevance by itself, unless Antigua can point to some measure listed in its Panel request that contains some quantitative limitation specified in Article XVI:2, which it has not done.

3.129 Antigua further argues that Article XVI:1 of the GATS clearly provides that each Member shall accord services and service suppliers of any other Member treatment no less favourable that that provided for under the terms, limitations and conditions agreed and specified in its Schedule. This language is completely straightforward. The United States has made a full commitment to market access for gambling and betting services from other WTO Members supplied on a cross-border basis while simultaneously it completely prohibits all cross-border supply of gambling and betting services. This constitutes an obvious violation of Article XVI:1.

---

244 2001 Scheduling Guidelines, para. 8 ("A Member grants full market access in a given sector and mode of supply when it does not maintain in that sector and mode any of the types of measures listed in Article XVI.").

245 The United States notes in particular that qualitative tests are beyond the scope of Article XVI. The Scheduling Guidelines make explicit what is already clear from the text of the Article: The criteria in subparagraphs (a) to (d) of Article XVI "do not relate to the quality of the service supplied." Ibid.

246 Ibid., para. 10 (stating that "approval procedures or licensing and qualification requirements" need not be scheduled under Article XVI "as long as they do not contain any of the limitations specified in Article XVI").
3.130 According to Antigua, the United States appears to argue that Article XVI:1 does not have a legal significance separate from Article XVI:2. Antigua is of the view that the text of Article XVI:1 is clear, and unambiguously imposes a legal obligation on the United States. If the United States were to be correct that the first paragraph of Article XVI is merely an introductory clause to the second paragraph, by implication the wording of the first paragraph must somehow assist in or otherwise frame the interpretation of the second paragraph. Otherwise, Article XVI:1 would be pointless. Thus Article XVI:2 should be interpreted in a way that ensures that services and service suppliers of the exporting Member are given the treatment by the importing country described in Article XVI:1, which is market access "no less favourable than that provided for (...) in its Schedule." The United States, however, does precisely the opposite and suggests a very restrictive interpretation of the subparagraphs of Article XVI:2. In particular, the United States submits that limitations on the number of service suppliers and limitations on the number of service operations are only caught by Article XVI if they are expressed in the form of specific numerical restrictions. However, as Antigua and the European Communities have pointed out, a total prohibition is a numerical restriction – of zero. As explained by the European Communities, if this were not the case it would be easy for Members to escape the prohibitions of subparagraphs (a) and (c) by refusing to specify an actual number and just simply prohibit any number – exactly what the United States is attempting to do here. Such a restrictive interpretation would also conflict with the objective of Article XVI as defined in its first paragraph.

3.131 As to the United States' argument that qualitative tests are beyond the scope of Article XVI, Antigua submits that it is precisely the point that it is seeking to make. The reason why it is impossible for Antiguan operators to obtain an authorization to supply gambling and betting services into the United States, while so many domestic operators do have such an authorization, is not that the Antiguan operators fail to meet a qualitative test that United States operators do meet. The United States prohibition applies irrespective of the quality or specific characteristics of the service or the service supplier. Thus, the United States prohibition is a quantitative restriction and not a qualitative restriction. Antigua also points out that Article XVI does not have any "likeness" requirement as that found in Article XVII. Thus under Article XVI, the nature and extent of the domestic industry is in fact irrelevant in assessing a Member's obligations in a sector in which commitments have been made.

3.132 The United States replies that Antigua treats Article XVI as if it enshrines a general rule barring measures that impede "market access" in whole or in part. That is simply the wrong interpretation. A market access commitment in a particular sector does not imply that Members lose all rights to restrict particular types of activity in that sector. For example, a commitment for cross-border supply of medical services does not imply that Members must then permit doctors to diagnose patients over the telephone or over the Internet. The only question under Article XVI is whether the measure is in fact one of those listed in Article XVI:2. The list includes, in relevant part, measures identified by their particular "form" – such as "in the form of numerical quotas." The United States points out again that its restrictions on certain remote supply gambling activities are expressed as limitations on the character of the activity supplied, not as quantitative limits or other restrictions within the ambit of Article XVI:2.

3.133 It has been suggested that an across-the-board prohibition on cross-border services could amount to the same thing as a zero quantitative restriction, because under such a prohibition no foreign supplier can provide gambling services from outside the territory of the United States. The legal premises for this argument are obscure; the text of Article XVI:2, quite clearly refers to the numerical expression of such limitations. Moreover, the basic factual premise for this argument is completely absent. There is no across-the-board prohibition on the cross-border supply of gambling services in US law. US law certainly restricts the remote supply of gambling, but these restrictions are not so broad that they prohibit all cross-border supply of gambling services. An examination of specific provisions of US law, had Antigua undertaken one, would have borne this out.
3.134 **Antigua** reiterates that, by maintaining a total prohibition on the cross-border supply of gambling and betting services the United States completely denies market access and violates its obligations under Article XVI of the GATS. This total prohibition violates Article XVI:1 and XVI:2, regardless of whether the provisions are construed separately or jointly – that is even if Article XVI:1 cannot be applied independently of Article XVI:2, it must at the very least govern the interpretation of Article XVI:2. Stated differently, the sum of the rules in the subparagraphs of Article XVI:2 cannot be less than what is set out in Article XVI:1. The United States' total prohibition, as such, is caught by Article XVI:2(a) because it is the equivalent of a zero quota. The ability to apply Article XVI:2(a) to such a non-numerical zero quota is mandated by the principle of effective treaty interpretation and confirmed by the 1993 Scheduling Guidelines.

3.135 In Antigua's view, the individual legislative and regulatory provisions, applications thereof and related practices that make up the United States' total prohibition are also caught by both Article XVI:2(a) and XVI:2(c) as separate measures: (i) federal laws specifically prohibiting "cross-border" supply function, like an establishment requirement, and are therefore the equivalent of a zero quota for cross-border supply; (ii) state laws that prohibit all gambling, in combination with other state laws that exempt specifically authorized gambling without providing a possibility for Antiguan operators to obtain an authorization to supply gambling services on a cross-border basis, are the equivalent of a zero quota for cross-border supply; (iii) several state laws or regulations explicitly establish numerical quotas; (iv) several laws or regulations expressly grant exclusive or special rights to operators of domestic origin; (v) several state laws require the physical presence of the operator within the territory of the state and, in doing so, constitute a zero quota for cross-border supply.

3.136 During the first substantive meeting of the parties with the Panel the United States explained that it does not prohibit the cross-border supply of all "gambling and betting services" because it allows cross-border supply of services such as "odds-making" or broadcasting of horse races. Although Antigua does not understand what point the United States seeks to make when qualifying its prohibition in such a way, this may constitute an effort to save its total ban from being found to be the equivalent of a zero quota prohibited by Article XVI. Such an argument would be wrong. If a Member makes a market access commitment in a sector or sub-sector, that commitment covers all services that come within that sector or sub-sector. A Member cannot discharge its treaty obligations by allowing market access only for a fraction of the services covered by a sector or sub-sector while prohibiting all others. This would make market access commitments under GATS largely meaningless. More to the point, if a Member desires to restrict market access with respect to certain services within a sector or sub-sector, it should, as many Members (including the United States) indeed have done, set out the restrictions or limitations on access in the appropriate place on the Member's schedule of commitments under the GATS.

3.137 The **United States** maintains that Antigua fails to prove the inconsistency of any US measure(s) with GATS Article XVI. As the United States has previously explained, Article XVI prohibits Members that have inscribed commitments from maintaining or adopting six types of measures referred to in its paragraph 2, sub-paragraphs (a) to (f). A close comparison between Article XVI:2 of the GATS and its goods counterpart, Article XI of GATT 1994, demonstrates that

---

247 See above paras. 3.106-3.108.
248 See above para. 3.109.
249 Antigua notes that, for example, each of the 40 states that authorize a lottery allows only one operator, which then is permitted to operate a multitude of gambling games. Authorizations for horse race betting are only given to "associations that control pari-mutuel wagering services on horseracing in the United States" which the United States describes as a "special type of supplier" (see below para. 3.154).
250 See above para. 3.109.
251 The United States reiterates that, to the extent that Antigua's claims rest on Article XVI:1, Antigua misconstrues that provision as a general rule requiring market access. Article XVI prohibits only the specific types of limitations on establishment listed in Article XVI:2.
Antigua's claim that its alleged "total prohibition" is *ipso facto* impermissible under Article XVI is incorrect. While Article XI of GATT 1994 states a general rule banning any import or export "prohibition or restriction" except for a duty, tax, or charge, Article XVI:2 of the GATS establishes no such general rule. Instead, it defines, and carefully describes, precise types of limitations that Members shall not maintain or adopt in committed sectors. To prove its case as an initial matter, Antigua has the sole burden of proving that the United States maintains one of the precise types of limitations in Article XVI:2(a) to (f).

3.138 The United States submits that Antigua's claims appear to rely on sub-paragraph (a), which bars the maintenance or adoption of "limitations on the number of service suppliers whether in the form of numerical quotas, monopolies, exclusive service suppliers or the requirements of an economic needs test," and on sub-paragraph (c), which bars "limitations on the total number of service operations ... expressed in terms of designated numerical units in the form of quotas or the requirements of an economic needs test.” These provisions may be summarized as follows:

<table>
<thead>
<tr>
<th>Subject matter of limitation</th>
<th>Prohibited form/manner of expression</th>
</tr>
</thead>
<tbody>
<tr>
<td>number of service suppliers (sub-paragraph (a))</td>
<td>&quot;in the form of numerical quotas, monopolies, exclusive service suppliers or the requirements of an economic needs test&quot; (emphasis added)</td>
</tr>
<tr>
<td>total number of service operations</td>
<td>&quot;expressed in terms of designated numerical units in the form of quotas or the requirement of an economic needs test&quot; (emphasis added)</td>
</tr>
<tr>
<td>total quantity of service output (sub-paragraph (c))</td>
<td></td>
</tr>
</tbody>
</table>

3.139 As the table above clarifies, paragraphs (a) and (c) each involve two explicit criteria. First, the subject matter of the limitation must match the subject matter specified in the column on the left. Second, the "form" of the limitation or the manner in which it is "expressed" must correspond to the detailed specifications reproduced in the column on the right. (Also, with respect to sub-paragraph (c), the numerical units in question must be "designated." Antigua has completely failed to offer the Panel the kind of precise statutory analysis necessary to apply these requirements to US law.

3.140 In fact, the subject matter of the US restrictions on gambling mentioned by Antigua is the character of the activity involved, without regard to the "number of service suppliers" or the "total number of service operations of total quantity of service output." For example, 18 U.S.C. § 1084 applies to persons providing gambling services as a business: It says that such persons may not use certain facilities for certain types of transmissions.

---

252 The United States notes that the ordinary meaning of "form" in this context clearly refers to the particular way in which the limitation is manifested, rather than its alleged effect. See *The New Shorter Oxford English Dictionary*, p. 1006 (defining "form" *inter alia* as "shape, arrangement of parts," or "[t]he particular mode in which a thing exists or manifests itself," or, in linguistics, "the external characteristics of a word or other unit as distinct from its meaning.").

253 The ordinary meaning of the verb "express" in this context is "[r]epresent in language; put into words" or "manifest by external signs." See *ibid.*, p. 890.

254 The ordinary meaning of the verb "designate" in this context is "[p]oint out, indicate, specify." See *ibid.*, p. 645.

256 The United States notes specifically, that they may not "knowledgeably use[ ] a wire communication facility for the transmission in interstate or foreign commerce of bets or wagers or information assisting in the placing of bets or wagers on any sporting event or contest, or for the transmission of a wire communication which entitles the recipient to receive money or credit as a result of bets or wagers, or for information assisting in the placing of bets or wagers.” 18 U.S.C. § 1084(a).
providers, operations, or quantity of output of services, much less do so in a form or manner of expression, or with a numerical designation, of the kind indicated in Article XVI:2 (a) or (c). Significantly, 18 U.S.C. § 1084 does not prevent persons engaged in gambling businesses from using wire communications facilities for other purposes. This confirms that the US legislators drafting this provision accepted that a number of gambling service providers would continue to exist and operate without quantitative restraints. Congress only wished to require such providers to observe restrictions on the character of their activities involving wire communications facilities. The two other statutes, 18 U.S.C. §§ 1952 and 1955, also restrict the characteristics of gambling services without purporting to restrict the number of providers, operations, or quantity of output of gambling services. Both statutes make it a crime at the federal level for gambling service providers or other persons to engage in activities that violate certain state and/or federal laws. In each case the restrictions take the form of, and are expressed as, limitations on the characteristics of an activity; they do not mention, much less impose, a "numerical quota," a "designated numerical unit," or any other prohibited form or manner of expression mentioned in Article XVI:2(a) and (c).

3.141 The United States reiterates that Antigua's de facto "zero quota" claim lacks both a legal and a factual basis. Legally, this claim incorrectly assumes that Antigua's alleged "total prohibition" is automatically inconsistent with Article XVI:2. As discussed above, while such an assertion might be tenable under GATT Art. XI, there is no automatic "prohibition on prohibitions" under the GATS. Moreover, Antigua's argument is untenable under the actual language of Article XVI:2, which requires that determinations as to the existence of a GATS-inconsistent quantitative restriction be based on the form, manner of expression, and designation of numerical quotas. Factually, Antigua's "zero quota" claim relies entirely on its incorrect assertion of a "total prohibition" on cross-border supply of gambling services. In reality, US restrictions do not preclude cross-border supply of all gambling services, and thus are not a "total prohibition." For example: (i) persons not involved in the business of gambling may transmit casual or social bets by any means, provided that the transmission is permissible under state law; (ii) pari-mutuel betting services may exchange the accounting data and pictures necessary to permit a racetrack outside the United States to offer pari-mutuel betting on US races and vice-versa, provided that such gambling is legal in both the sending and the receiving jurisdictions; (iii) suppliers of odds making and handicapping services (e.g., handicappers of horse races) as well as other gambling informational services may supply such services, provided that the form of gambling that they facilitate is legal in both the sending and the receiving jurisdictions; (iv) gambling websites may (and many do) provide so-called "free play" games in which no real money is wagered; and (v) any other gambling service that does not consist of actual transmission of a bet or wager is legal to the extent stated in 18 U.S.C. § 1084(b), provided that it also does not violate

257 18 U.S.C. § 1084(b) ("Nothing in this section shall be construed to prevent the transmission in interstate or foreign commerce of information for use in news reporting of sporting events or contests, or for the transmission of information assisting in the placing of bets or wagers on a sporting event or contest from a State or foreign country where betting on that sporting event or contest is legal into a State or foreign country in which such betting is legal.").

258 The United States argues that Antigua incorrectly asserts that "the United States' prohibition applies irrespective of the quality or specific characteristics of the service or the service supplier" and concludes on that basis that "the United States prohibition is a quantitative restriction and not a qualitative restriction." In fact, the application of US restrictions clearly depends on non-quantitative characteristics of the service and/or supplier (e.g., whether the services are supplied by wire communications facilities, whether they comply with sub-federal laws, etc.).

259 18 U.S.C. § 1952 essentially makes it a crime at the federal level of government for violators of certain state or federal laws (including, but not limited to, laws pertaining to business enterprises involving gambling, untaxed liquor, narcotics, or prostitution) to extend their activities into interstate or foreign commerce. Section 1952 thus restricts the character of legally authorized gambling services to the same extent as the underlying laws that it enforces. It does not, however, limit the number of providers, number of operations, or quantity of output of such services. Similarly, 18 U.S.C. §1955 makes it a crime at the federal level of government to conduct a gambling business that meets specified size, duration and/or revenue requirements and is in violation of the law of the US state or other political subdivision in which it is conducted.
state law in the US consumer's jurisdiction. As these examples demonstrate, the United States does not “prohibit” cross-border supply of gambling services.

3.142 **Antigua** submits that the late effort of the United States to avoid the scope of Article XVI by stating that it indeed allowed certain cross-border "gambling and betting" services is baseless. The latest US arguments on the interpretation of Article XVI:2 are disingenuous on two accounts. First, the United States interprets Article XVI:2 in a literal, exclusively text-based way. However, it does not do the same with Article XVI:1. The text of the latter unambiguously imposes a legal obligation on a Member to accord services of other Members treatment no less favourable that that provided for in its Schedule. The United States previously argued that the Panel should set aside this clear text on the basis of a phrase from the 2001 Scheduling Guidelines. In Antigua's view, if Article XVI:2 is to be interpreted in a purely text-based way, that should also be the case for the Article XVI:1. Second, the United States' textual analysis of Article XVI:2(a) is disingenuous because it is not based on the actual text of Article XVI but on a table summarizing the text. The actual text of Article XVI:2(a) mentions "limitations on the number of service suppliers whether in the form of numerical quotas, monopolies, exclusive service suppliers or the requirements of an economic needs test" (emphasis added). The United States has removed the word "whether" and reads Article XVI:2 as if its says "limitations on the number of service suppliers in the form of numerical quotas, monopolies, exclusive service suppliers (...)". However, the fact that the actual text contains the word "whether" indicates that the enumeration following it is not meant to limit the application of Article XVI:2(a) but rather to make it clear that the four forms of limitations on the number of service suppliers explicitly mentioned are in any event caught by Article XVI:2(a).

3.143 As discussed in its response to question 9 from the Panel, Antigua's interpretation is confirmed by the 1993 and the 2001 Scheduling Guidelines which state unequivocally that a nationality requirement for service suppliers would be caught by Article XVI:2(a) as equivalent to a zero quota despite the fact that it does not have the form of a numerical quota. In fact, the United States' interpretation would for example allow a law that explicitly provides that "all foreign services are prohibited" to escape the application of Article XVI, because it is not expressed in numerical terms. This clearly cannot be the case.

3.144 The **United States** recalls that it would under no circumstances concede the existence of a commitment. Although the United States has raised Antigua's failure to provide evidence and argumentation as a threshold matter in this dispute, and also raises it in relation to each of Antigua's substantive claims. To the extent that Antigua makes claims of violation based on its alleged "total prohibition" and fails to relate those to particular US laws and regulations, it also fails to meet its burden for those claims. US previous arguments on these issues and the alleged effect of US statements apply equally to the complaining party's burden under Article XVI and the other substantive provisions at issue. The main issue under Article XVI appears to be the question of Antigua's "zero quota" argument. The United States has explained that such an argument cannot be reconciled with the text of Article XVI, which clearly refers to limitations in the "form" of quotas, and so on. A comparison between Article XVI of the GATS and Article XI of the GATT shows that the GATT provision contains a "prohibition on prohibitions," and the GATS provision does not. Antigua's arguments are therefore inconsistent with the text of Article XVI.

3.145 The United States argues that Antigua also has its facts wrong. In its answer to one of the Panel's questions, Antigua states that "during the final Panel meeting of the session the United States once more made clear its position that the cross-border provision of gambling and betting services from Antigua to the United States was illegal under United States law." In fact, the United States stated at that time, and maintains, that it in fact permits some cross-border supply of gambling services from Antigua. This is what the United States meant when saying that proving a "total prohibition" is an impossible task. Previously, Antigua appeared to argue, based on its "zero quota"

---

260 See above para. 3.126, and footnote 244.
theory, that it would take an across-the-board prohibition of all cross-border gambling services to violate Article XVI – hence its misguided effort to try to show a "total" US prohibition on cross-border gambling services. Since the United States in fact permits some cross-border gambling services, and since Antigua disregards the actual content of US law, Antigua lacks a factual basis for arguing a "blanket" prohibition.

3.146 The United States notes that Antigua now asserts that a prohibition on any fraction of the services covered by a sector or sub-sector would amount to a "zero quota" and would therefore be inconsistent with Article XVI:2(a) under Antigua's "zero quota" theory. In other words, Antigua's view is that a full market access commitment means that nothing whatsoever subject to that commitment may be prohibited. This is a significant step beyond the "blanket" prohibition theory previously discussed by Antigua and certain third parties. Antigua's new argument regarding fractional prohibitions fails on the same textual grounds as its blanket prohibition argument, that is, Article XVI only addresses limitations that take certain carefully-specified forms. Moreover, Antigua's fractional prohibition argument does not withstand scrutiny in light of the objects and purposes of the GATS. Members cannot effectively exercise the "right to regulate" services that are the subject of a commitment if they lack any power to prohibit services within a sector or sub-sector that do not conform to the Member's regulation. The right to regulate recognized in the GATS implies the power to set limitations on the scope of permissible activity, as the United States has done with gambling services.

3.147 Antigua rejects the US argument that a Member that makes a market access commitment with regard to a certain sector, escapes the application of Article XVI if it does not maintain Article XVI limitations with regard to some of the services within that sector. Antigua believes this is legally wrong: the Article XVI obligation obviously applies to all services within that sector.

5. GATS Article XVII

(a) "Likeness" of services and service suppliers

3.148 Antigua argues that services and service suppliers of Antigua are "like" those of the United States. The types of games offered from Antigua are the same as those offered in the United States and all involve the winning or losing of money. The only differences are the origin of the services and the suppliers and the mode of supply (cross-border as opposed to commercial presence). These differences, however, are not relevant in the context of a commitment to national treatment of cross-border supply under the GATS.

3.149 To date, panels and the Appellate Body have addressed the issue of "likeness" in the GATS in only two disputes (EC – Bananas III (US) and Canada – Autos). In both disputes the panels accepted that the services and the service suppliers were "like" without the extensive discussion that has taken place in the "blanket" debate in the context of the GATT. In the view of Antigua, this is not a coincidence because the concept of likeness will often be less important in disputes concerning trade in services than in disputes on trade in goods. In the case of trade in goods the characteristics of a

---

261 See above para. 3.136.
262 See below para. 4.35.
263 In addition the arguments presented here, see also parties' responses to Panel questions Nos. 16-26 and 40-43 in Annex C of this Report.
265 Antigua submits that the view that the likeness debate may be of lesser importance in services context than in goods context is also supported by the Appellate Body's statement in Japan – Alcoholic Beverages, according to which the "likeness" concept is a flexible one that may have different meanings in different WTO Agreements and in different circumstances: 'the concept of 'likeness' is a relative one that evokes the image of an accordion. The accordion of 'likeness' stretches and squeezes in different places as different
specific product are often inherently "locked in" to the good (for instance in a specific type of cement as in EC – Asbestos). In the case of trade in services, however, the characteristics of the "product" – the service – are intangible and often easily adaptable. Thus, even if services and service suppliers are "unlike" it will often be relatively simple to adapt the foreign service and service supplier in order to make these "like" their domestic counterparts. Of course, the regulatory system of the importing WTO Member must offer the foreign services and suppliers an opportunity to be or become "like." For example, a WTO Member cannot set up a regulatory system that is only open to domestic services and suppliers and then argue that all foreign services and suppliers are "unlike" because they are unregulated. Such an approach would sanctify a regulatory regime that is inherently discriminatory and cannot therefore be compliant with Article XVII of the GATS. In this respect, Antigua invites the Panel to exercise judicial economy in deciding whether an investigation of specific characteristics of various gaming services is necessary to dispose of this dispute. Antigua strongly believes this not to be the case because access to the US market for gambling and betting services is not determined by the application of objective criteria to the services and the service suppliers. Even an Antiguan service that is identical to a service of US origin (which many – perhaps all – are) would have no access to the United States market simply because it is provided from a foreign location. This factor, however, can play no role in the determination of "likeness" in Article XVII because it is the specific purpose of Article XVII to remove different treatment solely on the basis of origin.

3.150 The fact that services of Antiguan gaming operators are supplied via a different "mode of supply" than services of suppliers of United States origin (cross-border as opposed to commercial presence) does not make these "unlike." If the use of a different "mode of supply" were sufficient for a WTO Member to escape the obligations of national treatment on the basis of "unlikeness," this would seriously undermine the effectiveness of the GATS. In particular, a commitment to national treatment for cross-border supply would be meaningless because the simple fact that a service is supplied cross-border would make that service and its supplier "unlike" their domestic counterparts and remove the national treatment obligation. Such an interpretation is contrary to the principle of

provisions of the WTO Agreement are applied. The width of the accordion in any of those places must be determined by the particular provision in which the term 'like' is encountered as well as by the context and the circumstances that prevail in any given case to which that provision may apply." (Appellate Body Report on Japan – Alcoholic Beverages II, p. 21).

See, by analogy on Article III:4 of the GATT 1994 the Panel Report on US – FSC (Article 21.5 – EC) "[W]e view the principal purpose of the 'like product' inquiry under Article III:4 of the GATT 1994 as ascertaining whether any formal differentiation in treatment between an imported and a domestic product could be based upon the fact that the products are different – i.e. not like – rather than on the origin of the products involved" (para. 8.132) and "[W]e do not believe that the mere fact that a good has US origin renders it 'unlike' an imported good" (para. 8.133). See also (again with regard to Article III:4 of the GATT 1994), the Panel Report on Indonesia – Autos, paras. 7.173-7.176. With regard to Article III:2 of the GATT 1994, see the Panel Report on Indonesia – Autos, para. 14.113: "... an origin-based distinction in respect of internal taxes suffices in itself to violate Article III:2, without the need to demonstrate the existence of actually trade like products" and, also with regard to Article III:2 of the GATT 1994, the Panel Report on Argentina – Hides and Leather, paras.11.168-11.169. With regard to the possibility to make use of hypothetical examples in the "likeness" analysis (in the context of Article III:2 of the GATT 1994), see Appellate Body Report on Canada – Periodicals, pp. 20-21.

Note by the WTO Secretariat entitled The Work Programme on Electronic Commerce (S/C/W/68) which, in para. 33 (concerning Article XVII of the GATS) states that: "[A]s discussed in the context of Article II on MFN, likeness in the national treatment context also depends in principle on attributes of the product or supplier per se rather than on the means by which the product is delivered."
effective treaty interpretation because it renders redundant an important part of the GATS, i.e. all schedules with national treatment commitments for cross-border supply.\footnote{269 See also, with regard to the principle of effective treaty interpretation, the Appellate Body Report on US – Gasoline, p. 23 and Appellate Body Report on Korea – Dairy, para. 81.}

3.151 In the context of trade in goods the Appellate Body referred to four categories of characteristics that have been used to assess "likeness" in the context of the GATT: (i) physical properties; (ii) capability of serving the same or similar end-uses; (iii) consumer perception; and (iv) international tariff classification.\footnote{270 Appellate Body Report on EC – Asbestos, para. 101.} To the extent that a comparable analysis of characteristics would need to be made in the GATS context, Antigua submits that the gambling and betting services offered from Antigua and those offered in the United States are virtually the same. The types of games are the same and all involve the placing of wagers and the winning or losing sums of money. Consumers perceive Antiguan and US gambling services as interchangeable.\footnote{271 Antigua notes that various gambling operators of United States origin state that the cross-border supply of gambling and betting services is hurting their sales. See the statement by Mr. Steve Woodall, Fiscal Officer in Idaho (reported in The Spokesman Review (2 February 2001); the statement by Mr. Dennis Kennedy, Executive Director of the Ohio Lottery, reported in David Bennett, "Lottery's pot for schools ends up short", Crain's Cleveland Business (23 July 2001). See also the arguments put forward by the horse race betting industry in Florida (reported in Jim Saunders, "Video-gambling debate spins in soft economy", The Florida Times-Union (28 December 2002); and the statement of Mr. Joe Lupo, manager of a bookmaker in Las Vegas, reported in Michael Kaplan, "Gambling in America: A Special Report", Cigar Aficionado (September/October 2002), p. 66.} Both Antigua and US origin gambling and betting services are offered to the public via communication technology including telephone and electronic communication. Finally, the international classification of services used in the WTO context, the CPC Prov., provides only one category for gambling and betting services. The more recent versions of the CPC classification, CPC 1.0 and CPC 1.1 also provide for just one category for gambling and betting services.\footnote{272 Both CPC 1.0 (1998) and 1.1 (2002) classify "gambling and betting services" as a class (9692) and subclass (96920) under "Section 9 – Community, social and personal services"; "Division 96 – Recreational, cultural and sporting services"; and "Group 969 – Other amusement and recreational services". The different versions of the CPC can be consulted electronically on http://unstats.un.org/unsd/cr/registry/registry.asp?Lg=1.} To the extent that suppliers from Antigua and suppliers from the United States provide like services, they are also like service suppliers.\footnote{273 Panel Report on EC – Bananas III (US), para. 7.322; Panel Report on Canada – Autos, para. 10.289.}

3.152 The United States recalls that the panel in EC–Bananas III (US) stated that "[i]n order to establish a breach of the national treatment obligation of Article XVII, three elements need to be demonstrated: (i) the (Member) has undertaken a commitment in a relevant sector and mode of supply; (ii) the (Member) has adopted or applied a measure affecting the supply of services in that sector and/or mode of supply; and (iii) the measure accords to service suppliers of any other Member treatment less favourable than that it accords to (its) own like service suppliers."\footnote{274 Panel Report on EC – Bananas III (US), para. 7.314.} The United States has already demonstrated Antigua's failure to prove the first element – existence of a specific commitment in a relevant sector. Furthermore, Antigua has ignored the second element – adoption or application of a measure affecting the supply of services in the relevant sector and/or mode – by failing to argue the scope or meaning of specific measures. Even if these elements had been established, however, Antigua has also failed on the third element by proving neither how its services and service suppliers are "like" US services and service suppliers nor how specific US measures accord Antiguan services and service suppliers less favourable treatment.

3.153 The United States submits that the burden rests on Antigua to provide evidence demonstrating that Antiguan services and service suppliers are "like" particular US services and suppliers for purposes of GATS Article XVII.\footnote{275 Panel Report on Canada – Autos, para. 10.248.} Antigua states that it licenses only two types of gambling services...
"virtual casino" services and sports book services, with the former supplied by Internet and the latter by Internet and telephone. 276 Antigua approaches its burden by first dismissing the likeness inquiry as hardly important in the context of services. Antigua essentially urges the Panel to find that in the context of Article XVII it is sufficient to merely assume likeness. Contrary to Antigua's assertions, nothing about the "intangible" nature of services renders likeness a given, or an analysis of likeness unnecessary; services can be like or unlike one another (for example, in their manner of performance), and so can suppliers. Had the Uruguay Round negotiators not believed this, they would not have made likeness of services and suppliers an element of the Article XVII inquiry. According to the United States, Antigua itself identified, in its statement of facts, several different forms of gambling services with different characteristics. 277 Yet Antigua goes on to assert for purposes of Article XVII that gambling services offered from Antigua are "virtually the same" as those offered in the United States, because "the types of games are the same and all involve the placing of wagers and the winning or losing [of] sums of money" and because "consumers perceive Antiguan and United States gambling services as interchangeable." These cursory and baseless assertions ignore the important distinctions between different gambling and betting services. For example, as a general matter, the National Research Council has found that "[t]he characteristics of game technologies, such as the number of gambles offered per time period, the physical and informational environment of games, game rules, speed of play, probabilistic structure, cost per play, and jackpot size, appear to affect gambling preferences and habits." 278 Antigua has not addressed any of these factors. Nor has it addressed distinctions that may be relevant in decisions regarding how to regulate various types of gambling services.

3.154 According to the United States, Antigua also ignores potentially relevant differences in service suppliers. For example, Antigua states that US state lotteries are supplied exclusively through state monopolies, but nowhere does it attempt to say what, if anything, makes its (presumably private, non-state) service suppliers "like" state lottery monopolies in any sense. Nor does it try to explain how its suppliers are "like" the associations that control pari-mutuel wagering services on horseracing in the United States, or any other special type of supplier in the US market. Antigua further fails to address differences in the object of the bet or wager that distinguish different gambling services. For example, the distinctions between selecting random numbers, picking winners in a race or sport, playing a table game with gambling paraphernalia, and other forms of gambling shape consumer perceptions and influence the odds of winning, which determine the profitability of different forms of gambling. Antigua fails to take account of such distinctions between, e.g., its sports book services and gambling services provided in the United States. Indeed, Antigua actually provides evidence that sports betting is unlike pari-mutuel betting by observing that "[w]hen betting with a bookmaker a gambler bets against the bookmaker as opposed to betting against the other gamblers, as is the case with pari-mutuel betting." 279

3.155 Antigua's own evidence also demonstrates that Internet virtual casinos are unlike real casinos in that the true object of the bet or wager in a virtual casino is the generation by a software algorithm of some random number. 280 This result is often presented through a visual and audio simulation of gambling paraphernalia such as cards, dice, wheels, gaming boards, etc., that one would find in a casino. In contrast to a real casino, however, the online casino is an illusion -- a "virtual reality" environment in which outcomes are controlled by a computer rather than by the laws of the physical world. The odds in virtual gambling are thus set by manipulation of the software simulation, and bear no necessary relationship to the outcomes that would occur in a casino with the use of physical

276 See above para. 3.2.
277 See above para. 3.1.
279 Ibid., see above para. 3.12.
gambling paraphernalia.\textsuperscript{281} Antigua also concedes major differences in consumer perceptions between real and virtual casino services. For example, Antigua admits that the “noise and visual effects of the casino floor . . . heightens the thrill and pleasant tension” that consumers perceive in a real casino.\textsuperscript{282} Its own evidence indicates that consumer perceptions are influenced by the physical surroundings, layout, amenities, and real-world stimuli of a real casino.\textsuperscript{283} Moreover, Antigua concedes that US consumers who go to real casinos are "brought in" by "shows by major stars, Broadway-style musicals, revue spectacles, and a variety of lounge acts” as well as meals and other amenities. None of this exists in the virtual casino, in which a lone player sits in front of a terminal in a home, school, office, etc. Thus, far from proving that Internet virtual casinos are like real casinos, Antigua has actually shown the opposite to be true — in terms of consumer perceptions, a virtual casino is nothing like a real casino.

3.156 The United States submits that Antigua further disregards significant differences in scope of availability of different services, particularly availability to minors. To the extent that they can be legally offered, gambling services in the United States operate under intense regulatory controls that constrain the scope of their availability, often to a particular facility. Moreover, there is no means to prevent minors from gaining access to remotely supply gambling services comparable to the means available in connection with supply of gambling services in the United States. Likewise, Antigua fails to address the law enforcement, addiction, and other risks associated with remote supply of gambling. These risks make Internet and other remotely supplied gambling services quite “unlike” other forms of gambling. The Appellate Body has stated in the goods context that "[w]e are very much of the view that evidence relating to the health risks associated with a product may be pertinent in an examination of 'likeness' under Article III:4 of the GATT 1994."\textsuperscript{284} Similarly, in the context of Antigua’s claims of likeness under GATS Article XVII, the significant differential risks and concerns associated with gambling by remote supply, as compared to other gambling services, are pertinent. The burden rests on Antigua to show that its remotely supplied gambling services are “like” services in the United States in spite of such obvious differences, including, for instance, those relating to law enforcement and consumer protection, protection of youth, and health. Antigua has failed to meet this burden.

3.157 Antigua notes that third major prong of the United States' defence against the claims of Antigua and Barbuda is its attempt to categorise the gambling and betting services offered by Antiguan providers as not "like" the gambling and betting services provided by United States domestic suppliers. The US argument is constructed of three contentions. First, the United States attempts to differentiate between various kinds of gambling games and activities. Second, the United States contends that the ownership or structure of particular service suppliers renders them "unlike." Third, the United States attempts to saddle cross-border gambling with regulatory, health and law enforcement concerns that it apparently presumes are not applicable to gambling and betting services provided by domestic suppliers.

3.158 Before getting into detail on the US claims, Antigua wishes to point out some of the misstatements and errors contained in the United States’ discussion on this topic. First, Antigua does not license "only two types of gambling services (…)." In fact, Antigua provides for two types of gambling licenses, and a significant number of games and gambling opportunities are then furnished under the scope of those two kinds of licenses. Antigua notes that the United States labels as "cursory and baseless" Antigua and Barbuda's statements that gambling services offered from Antigua are

\textsuperscript{281} The United States submits that this situation is thus distinguishable from the situation in which electronic supply of a service merely represents another means of supplying the same underlying content or service.

\textsuperscript{282} See above para. 3.9.

\textsuperscript{284} Appellate Body Report on EC - Asbestos, para. 113.
"virtually the same" as those offered by United States service providers and that "consumers perceive Antiguan and United States gambling services as interchangeable." Far from being "cursory and baseless," Antigua's statements are supported by a number of independent sources that were cited in footnote 271 above. Further, the United States asserts that Antigua "disregard[ed] significant differences" and "fail[ed] to address the law enforcement, addiction, and other risks associated with remote supply of gambling (…)." The reality is that Antigua has neither disregarded differences nor failed to address social issues – the United States has simply refused to give Antigua's extensive discussions on the gaming industry and problems associated with gambling any credence, or in fact any reference, whatsoever. More disingenuously, the United States assumes as a fact something which Antigua strongly disputes – that there are any different or more extreme "law enforcement and consumer protection, protection of youth and health" risks associated with cross-border (or what the United States prefers to call "remote" or "remote access") gambling and betting than with domestic gambling and betting in the United States. As will be discussed in detail further on, Antigua's fundamental position is that no meaningful basis exists for distinguishing the services provided by Antiguan operators from those provided by United States operators for the purposes of the GATS.

3.159 Antigua argues that the most serious defect in the United States' discussion on the concept of "likeness" in Article XVII of the GATS is perhaps its complete lack of context. Indeed, other than a reference to the Appellate Body Report in EC – Asbestos in an (overstated) effort to establish that health risks can be a factor in determining "likeness," the United States provides no framework for its discussion at all. Perhaps that failure is because in the two reported instances in which "likeness" appeared to have been remotely at issue, the panels have simply concluded without elaboration that the services were "like." The paucity of discussion on the "likeness" issue in these cases lends credence to the point already made by Antigua that, in the services context, "likeness" is much less of an issue given the ease at which services may be made "like."

3.160 According to Antigua, the failure of the United States to provide the Panel with a context for its discussion on "likeness" may be due to the fact that the US claim will not stand up in the face of a complete analysis of "likeness" on the basis of the seminal Appellate Body Report in EC – Asbestos. In EC – Asbestos, the Appellate Body reviewed a panel determination that two types of fibre and two types of cement incorporating two types of fibre were "like" for purposes of Article III:4 of the GATT 1994. In its report, the Appellate Body, having first thoroughly discussed some of the inherent difficulties in determining "likeness" and surveying the considerable body of GATT 1994 jurisprudence on the subject, proceeded to analyzed the issue under four criteria: (i) the physical properties of the products; (ii) the extent to which the products must share qualities or characteristics to be considered "like" and (iii) deciding from whose perspective "likeness" should be considered. Second, analyzing GATT 1994 language substantively similar to Article XVII:1 of the GATS, the Appellate Body concluded in paragraph 99 of its report that the determination of "likeness" was "fundamentally, a determination about the nature and extent of a competitive relationship between and among products."

3.161 Returning to the four criteria applied in EC – Asbestos, Antigua and Barbuda submits that a "physical properties" comparison is inherently more problematic when dealing with a service than with a discrete product, particularly given the various methods by which a service can be supplied. While the United States has not presented its "likeness" discussion in the context of EC – Asbestos, two of the United States' themes might be applicable to these criteria: (i) the ostensible differences
between Antiguan gambling and betting services and those of United States domestic providers that arise primarily because the Antiguan services are "remote" or furnished on a cross-border basis; and (ii) the ostensible differences between Antiguan gambling and betting services and those of United States domestic providers that arise because the outcome of certain games offered by Antiguan operators is determined by computer equipment and not "by the laws of the physical world". Framed mostly through discussion of the superficial differences between "bricks and mortar" gaming and "remote" gaming, the United States' first and most elaborate argument is that cross-border supply via remote communication, in and of itself, makes Antiguan services (and its service suppliers) "unlike" those of domestic providers. As explained above, this simply cannot normally be the case in a context where a Member has made a commitment to "national treatment" of cross-border supply of services. By definition, cross-border supply requires the use of remote communication – thus if the different mode of supply ipso facto results in a conclusion that services are "unlike" it would render Members' commitments in respect of cross border supply under the GATS meaningless. Indeed, the United States has itself stated in a submission to the WTO on electronic commerce that "there should be no question that where market access and national treatment commitments exist, they encompass the delivery of the service through electronic means, in keeping with the principle of technological neutrality.\textsuperscript{285}

3.162 Antigua and Barbuda submits therefore that, in the context of a commitment by a Member to national treatment of cross-border supply, there must at least be a presumption that the fact that the services are provided by cross-border supply cannot, standing alone, make a service "unlike" a domestically provided service. Antigua agrees that in certain specific circumstances a service could be considered "unlike" only because it is supplied on a cross-border basis. However, in line with Antigua's reasoning above, and the position expressed by Japan in its third party submission, Antigua and Barbuda believes that it is for the United States to rebut what should be an assumption of prima facie "likeness" of services supplied on a cross-border basis. Antigua does, however, disagree with Japan when it submits that cross-border supply can be considered "unlike" domestic supply simply because the regulatory circumstances are different. As the European Communities observes, this would make commitments on cross-border supply meaningless because regulatory circumstances will almost always be different for cross-border supply. Or, as in Antigua's case, a Member could simply refuse to accept another Member's regulatory scheme or refuse to allow the other Member's service suppliers to qualify under its own regulatory scheme. Furthermore, this approach would conflict with the approach adopted by the Appellate Body in cases such as \textit{US – Gasoline}. In a further attempt to brand the Antiguan gambling and betting services as "unlike" those of United States providers, the United States cites certain law enforcement and health concerns to assert that cross-border supply of gambling and betting services via remote communication is sufficiently "unlike" United States domestic gambling and betting to require radically different treatment under the GATS. As the Appellate Body in \textit{EC – Asbestos} considered "health risks" associated with a product as part of its "physical properties," Antigua will do so in this dispute as well.

3.163 Antigua notes that the primary "concerns" of the United States in this respect appear to be (i) the risk of under age gambling; (ii) the risk of increased pathological gambling; (iii) the risk of abuse of non-domestic service providers for money laundering purposes; and (iv) the heightened risk of crime, fraud and related consumer protection issues. Antigua notes initially that the United States fails to substantiate its statements about the "differences" in the nature of these risks in the context of "remote" gaming as opposed to domestic gaming. The scant traces of "evidence" submitted by the United States on this point should never be enough to justify a distinction between services for the purposes of Article XVII of the GATS. In paragraph 114 of its report in \textit{EC – Asbestos}, the Appellate Body noted that it was particularly important for panels to focus on physical properties of products that are likely to influence the competitive relationship between products in the marketplace. In that case, the Appellate Body determined that the very real health risks inherent in the physical properties

\textsuperscript{285} Work Programme on Electronic Commerce, Submission by the United States, WT/GC/16 (12 February 1999).
of asbestos fibres would clearly affect the competitive position of the product in the marketplace, as, given a choice between two otherwise similar products, it was logical to conclude that most consumers would prefer a non-carcinogenic product over a competing product that is a proven carcinogen. Under this analysis, Antigua and Barbuda believes that the supposed regulatory and health risks referred to by the United States in this proceeding have a materially different impact in this case than did the health risks at issue in EC – Asbestos. In particular, the factors raised by the United States cannot in any material respect influence the decision of a consumer to use the services of a licensed and regulated Antiguan provider over those of a licensed and regulated domestic United States provider – and indeed, the fact that so many United States consumers do use the services of Antiguan gaming companies confirms that these concerns are not relevant from the perspective of the consumer. The possible law enforcement and health concerns raised by the United States are the concerns of the authorities, not of the individual gambler, and consequently cannot influence the consumer’s decision. If these law enforcement or regulatory concerns were to have a place in this case, it would be in the context of Article XIV of the GATS. Indeed, in its report in EC – Asbestos the Appellate Body explicitly made this point when it stated in paragraph 115 that (original emphasis):

"Under Article III:4, evidence relating to health risks may be relevant in assessing the competitive relationship in the marketplace between allegedly "like" products. The same, or similar, evidence serves a different purpose under Article XX(b), namely that of assessing whether a Member has a sufficient basis for 'adopting or enforcing' a WTO-inconsistent measure on the grounds of human health."

3.164 Article XX(b) of the GATT 1994, of course, is fundamentally the same as Article XIV of the GATS. The United States, however, has not raised an Article XIV defence in this proceeding.

3.165 Antigua notes that the United States' second argument concerning physical properties seems to be that, in the random selection games offered by Antiguan operators, the random selection is performed by software and not by the laws of the physical world. This distinction only relates to random selection games and not to sports betting or card games, which presumably the United States is not attempting to distinguish on this basis. In its discussion, the United States fails to mention that in the case of almost all random selection games offered in the United States, the random selection is performed by a machine – not exactly the "laws of the physical world." This includes lotteries, gambling machines and table games such as roulette. Some gambling machines legally available in the United States are mechanical (for instance traditional slot machines, although an increasingly large number of "traditional" slot machines are in fact computers with a mechanical façade over them), others are electronic (for instance video lottery terminals and video poker and other card game terminals). In fact, gamblers in the United States will often not know whether the machine that performs the random selection is electronic or mechanical. Clearly, it is not possible to differentiate in any material, meaningful way between US and Antiguan gambling on this basis. More importantly, Antigua's evidence, and the popularity of remote gambling in the United States demonstrates that this alleged "physical difference" in the operation of the various games has no impact on consumer preferences and no impact on the competitive position of cross-border gambling service providers vis-à-vis domestic service providers, nor has the United States submitted any evidence to indicate that consumers care one bit whether a machine delivers its result electronically or mechanically. Thus Antigua concludes that the United States has not submitted arguments or evidence sufficient to support a conclusion that United States and Antiguan gambling and betting services are "unlike" due to differences in "physical properties."

3.166 Turning to the second and third criterion elaborated in EC – Asbestos, what the Appellate Body summarised in paragraph 117 of its report as "end-uses" and "consumers' tastes and habits," Antigua considers the two criteria together, which the Appellate Body in EC – Asbestos considered particularly important because they "involve certain of the key elements relating to the competitive relationship between products (…)." Evidence from independent sources already submitted by
Antigua (see footnote 271) shows that consumers in the United States do switch between gambling and betting services offered domestically and gambling and betting services offered on a cross-border basis via remote communication. This evidence clearly indicates that the two methods of service delivery do in fact compete with each other. The United States' admission that there is "explosive growth" and a "dramatic increase" in such gambling further confirms this. Antigua and Barbuda believes that no one would dispute that: (i) the selling of music over the Internet competes with the selling of music in "brick and mortar" stores; (ii) the delivery of specialized news services over the Internet competes with paper based delivery of such services; and (iii) the selling of books, wine, cars or other products via the Internet or mail-order catalogues competes with the selling of these products in "brick and mortar" establishments. In all these cases it is clear that the "brick and mortar" and the Internet based business model compete because they are capable of "serving the same or similar end-uses" and are perceived as interchangeable by consumers. There is no reason why this would be different for gambling services and suppliers of such services, nor has the United States offered any evidence of any such difference.

3.167 Antigua notes that the United States alleges that the two methods of delivering the gambling and betting services at issue here should be viewed differently than the examples just cited because "brick and mortar" casinos use marketing techniques such as shows by popular stars, free meals and audiovisual effects to attract customers which cross-border suppliers can not offer. This is irrelevant because it concerns marketing techniques and not the service or the service supplier. What is important here is, as the Appellate Body recalls in EC – Asbestos, that some characteristics may be meaningful and others not when determining whether things are "like." For instance, while there may be a number of superficial distinctions between the way a slot machine might look in a casino versus how a computer generated slot machine looks at a computer terminal, both involve an individual, frequently sitting alone, engaging in unsupervised gambling activity. The mere assertion by the United States that the Antiguan games and services are "different" from those of domestic providers is simply no evidence. Further, the United States offers no evidence that the supposed "differences" have any impact on the "end-use" of the services or "consumer tastes and habits." Antigua, on the other hand, has shown that the offerings do compete with each other for consumer attention.

3.168 Antigua notes that the United States cites various "differences" but then fails to indicate that the putative difference has any probative effect whatsoever. For example, the United States says (see above paragraph 3.154) "[I]n deed, Antigua actually provides evidence that sports betting is unlike pari-mutuel betting by observing that '[w]hen betting with a bookmaker a gambler bets against the bookmaker as opposed to betting against the other gamblers, as is the case with pari-mutuel betting.'" But after making this point, the United States fails to demonstrate or even allege that a gambler cares whether he or she is betting against a bookmaker or other gamblers. In light of the foregoing discussion, Antigua and Barbuda submits that on the basis of their capability of serving the same or similar end-uses and on the basis of consumer perception Antiguan and United States gambling and betting services must be considered "like" for purposes of GATS Article XVII.

3.169 The fourth and final criterion for "likeness" considered by the Appellate Body in EC – Asbestos is the tariff classification of the product. In the context of this dispute, this would equate to the classification of the offered services under W/120 and the CPC. As Antigua has already established, W/120 and the CPC both provide for just one category applicable to gambling and betting services. This is particularly important given the comprehensiveness of the CPC and the huge number of categories delineated under it. Having reviewed, at quite some length, the applicability of the EC – Asbestos methodology on "likeness" to the facts in this dispute with the United States, Antigua is brought to the inevitable conclusion that the Antiguan gambling and betting services are "like" those offered by United States suppliers for purposes of the GATS.

286 See above para. 3.15.
3.170 Concerning the issue of "like service suppliers", Antigua notes the US argument that Antiguan service suppliers are not "like" certain service suppliers of United States origin, namely state-owned lotteries, "associations controlling pari-mutuel wagering services" or "any other special type of supplier in the US market." With regard to this issue Antigua and Barbuda agrees with the European Communities that the ownership of a service supplier can play no role in determining the "likeness" of service suppliers. To hold otherwise would be contrary to the principle of effective treaty interpretation, as it would make it very easy for WTO Members to circumvent Article XVII of the GATS by only giving authorizations to so-called "special" domestic operators such as state owned companies. This would largely nullify the effect of the GATS in sectors such as telecommunications and postal services, where Members often maintain state monopolies. If such was the case, even Members with full commitments on market access and national treatment could simply and effectively prevent all forms of competition from other Members. In addition, Antigua cannot see how the United States can argue that it does not violate Article XVI and, in the context of Article XVII, justify its refusal to give Antiguan operators an authorization on the basis that it only gives authorizations to "special" operators of domestic origin. Surely a Member cannot simultaneously argue that, on the one hand, it does not maintain monopolies and exclusive rights and therefore does not violate Article XVI, and that, on the other hand, foreign operators cannot be given a licence because they are unlike the "special" operators of domestic origin that have been given a licence. On a more basic level, there is simply nothing in evidence to indicate that consumers care at all about the legal structure or identity of the providers of "like" gambling services, and it is quite possible that the "likeness" of service providers has little functional relevance in this case. In similar circumstances, the Appellate Body, in paragraph 7.322 of its report in EC – Bananas III simply concluded that "to the extent that entities provide these like services, they are like service providers."

3.171 While Antigua and Barbuda firmly believes that the issue of "likeness" is properly and conclusively resolved in its favour, it also thinks that the United States has raised some tangential issues that should be addressed. In particular the United States refers to differences in game characteristics such as the rules of the game. However, the United States makes no attempt to explain how, on that basis, it could possibly make a distinction between gambling services of Antiguan and United States origin. Not all differences – to the extent that they actually are differences – can justify different treatment under an international trade treaty (let alone radically different treatment). A red car is undoubtedly "unlike" a blue car in one respect, namely its colour. This does not allow however, different treatment under WTO law. Given the need for "remote" gambling and betting service providers to compete effectively against domestic operators, in most cases significant effort is made to create game play and "feel" as similar to domestic offerings as possible. In this respect, Antigua and Barbuda submits that it is unaware of any product offering by its gambling and betting service suppliers that has no clear counterpart in the games offered by domestic suppliers in the United States.

3.172 In this context it is also important for the Panel to keep in mind that the debate on likeness in this case does not take place in a context of an authorization system in the United States based on objective, qualitative criteria – a context one would perhaps normally expect in an Article XVII debate. Antiguan gambling services are not prohibited in the United States because of specific game rules or other specific characteristics, and they cannot become legal by adapting game characteristics to objective, qualitative criteria. They are prohibited because they are supplied from abroad. Consequently, specific game characteristics are irrelevant to this dispute because whatever they are, or could become, under the United States legal scheme cross-border Antiguan gambling services of any kind – even if completely identical in every way to United States domestic services – would still be prohibited.

3.173 Turning to law enforcement and health concerns, Antigua submits that, as is true with the "differences" in the various games or services provided by Antiguan gaming operators over those provided by United States operators, Antigua and Barbuda believes that its earlier discussion in the context of EC – Asbestos fully addresses the relevant impact of law enforcement and health concerns in making a "likeness" determination. However, the numerous unfounded allegations of the United
States with respect to law enforcement and health issues should be addressed specifically in more detail. As noted earlier, the United States' concerns seem to be in four distinct areas: (i) under age gambling; (ii) pathological gambling; (iii) money laundering; and (iv) organized and other crime, fraud and consumer protection concerns. From the outset, Antigua observes that the United States does not provide any evidence in its first submission that any of these concerns are particularly associated with the cross-border provision of gambling and betting services from Antigua and Barbuda. Nor does the United States counter the substantial evidence submitted by Antigua that is expressly to the contrary. Antigua will show not only that there is no evidence of any pathologies or other problems associated with cross-border gambling services different than those historically associated with gambling in general, but also that there is no evidence that cross-border gambling results in higher levels of pathologies or greater law enforcement risks than domestic gambling.

3.174 Antigua submits that, in analysing youth gambling issues, it is important to note that both Antigua and Barbuda and the United States set minimum legal ages for gambling. Unlike Antigua and Barbuda however, which strictly prohibits gambling by those younger than 18 years of age, the United States permits youths under the age of 18 to gamble on charitable games such as bingo or pull tabs in approximately 19 states, either alone or in the presence of their parents.288 The United States avers in paragraph 3.18 that "remote" access gaming poses an unacceptable and unmanageable risk of under age gambling, but not surprisingly it provides no evidence to support this statement. The only material concerning under age gambling it does refer to, does not relate to remote access gaming. In fact, numerous investigations have shown the existence of under age gambling in the United States but these all concern conventional gambling opportunities offered by operators inside the United States. The NGISC reports:

"Although illegal in every state, the sale of lottery tickets to minors nevertheless occurs with a disturbing frequency. For example, one survey in Minnesota of 15-to 18-year-olds found that 27 per cent had purchased lottery tickets. Even higher levels of 32 per cent, 34 per cent, and 35 per cent were recorded in Louisiana, Texas, and Connecticut, respectively. In Massachusetts, Connecticut, and other states, lottery tickets are available to the general public though self-service vending machines, often with no supervision regarding who purchases them. Thus, it is not surprising that a survey conducted by the Massachusetts Attorney General's office found that minors as young as 9 years old were able to purchase lottery tickets on 80 per cent of their attempts, and that 66 per cent of minors were able to place bets on keno games. Seventy-five per cent of Massachusetts high school seniors report having played the lottery."289

3.175 Antigua and Barbuda is not aware of any investigation that has found under age participation in remote access gambling to be a significant problem. The obvious reason for this is that remote access gambling requires the use of financial instruments such as credit cards which are not generally available to minors. Because of this significant practical hurdle, the legally sanctioned, cash intensive forms of gambling available in the United States are a much more attractive option for the under age gambler. The United States further argues that preventing under age use of remote access gambling is not feasible, and asserts, in paragraph 3.25, that "[C]hildren have ready access to payment instruments, and no technology has yet been developed to enable constraints on Internet gambling even approaching those that are possible in other settings where gambling can be confined and access to it strictly controlled." It is difficult to see, however, how any age restriction system could be less effective than the situation described in the paragraph from the NGISC on under age lottery playing. Particularly troublesome to Antigua and Barbuda in the face of the United States' allegations in respect of minors' access to payment instruments and lack of control technology is the fact that the

288 Table 1 from I. Nelson Rose, "The United States: Minimum Legal Age to Place a Bet," Futures at Stake: Youth, Gambling and Society, Howard J. Shaffer, ed., University of Nevada Press (2003).
United States has recently adopted legislation that aims to protect minors from harmful content on the Internet by expressly providing that on-line merchants can be protected against claims of violations of the legislation by using credit cards as an exclusive means of payment in order to prevent access by minors to harmful content such as pornography. The United Kingdom also makes use of the fact that payment systems such as credit cards are not available to minors to prevent under age use of remote access gambling facilities.

3.176 Regarding pathological gambling, Antigua notes that, in 2001, a group of seven eminent experts in the psychology of gambling, including Dr. Howard Shaffer of Harvard University (who is quoted by the United States) published a seminal editorial in the *Journal of Gambling Studies*. The editorial was an appeal to the scientific community researching gambling behaviour to adopt a more serious and "scientific" approach when making statements about the impact of gambling. In the Article they stated that "[I]mmature fields like gambling studies also provide the opportunities for quasi-scientists and even charlatans to influence the public, policy makers and perhaps themselves to thinking that their "evidence" supports a particular treatment, causal relationship or public policy." In this respect Antigua notes that the United States submits, in paragraph 3.18, that gambling websites have been designed to resemble video games and therefore are especially attractive to children. This conclusion is based on a statement of the executive vice president of the National Football League who, presumably, is a football expert, not a psychologist who studies gambling behaviour. In any event none of the games offered from Antigua and Barbuda are designed to resemble video games in order to attract children.

3.177 Antigua and Barbuda has extensively surveyed literature associated with problem gambling, and has been unable to find any discernable body of scientific evidence to support the assertion of the United States that remote access gambling is any more problematic than other forms of gambling when it comes to compulsive, problem or other forms of pathological gambling. However, to better substantiate its findings, Antigua and Barbuda engaged the services of internationally recognized experts in the field of pathological gambling to advise with respect to evidence of particular problems associated with remote (and in particular, Internet) gambling. These experts confirmed the results of Antigua's own research, and in fact each has pointed out some areas in which Internet gambling may present fewer risks associated with problem gambling than "brick and mortar" gambling.

3.178 Antigua submits that, concerning money laundering, the United States makes, in paragraph 3.16, the unsubstantiated statement that "[r]emote supply gambling businesses provide criminals with an easy vehicle for money laundering (...)." It further submits that "[t]he industry is far more cash-intensive than conventional forms of telephone or Internet commerce, yet it lies outside the special regulatory and monitoring structures developed for financial services." And it concludes, in paragraph 3.25, that "Antigua's attempts to regulate gambling and money laundering cannot address basic concerns relating to remote supply of gambling." The alleged insufficiency of Antigua and Barbuda's anti-money laundering measures is not explained further. The United States simply states it to be so, and in so doing ignores the fact that international bodies such as the Financial Action Task Force (or "FATF") and the Caribbean Financial Action Task Force have recognized the effectiveness of Antigua's anti-money laundering legislation. The United States even ignores the fact that it has itself lifted a so-called "Financial Advisory" in relation to money laundering that it had imposed on

---

293 Prof. Mark Griffiths & Dr. Richard Wood, *Is Internet Gambling More Addictive and/or Problematic Than Other Forms of Gambling?*, The International Gaming Research United, Division of Psychology, Nottingham (UK), October 2003 (document submitted by Antigua to the Panel).
Antigua and Barbuda in 1999. This Financial Advisory advised financial institutions to give "enhanced scrutiny to all financial transactions routed into or out of Antigua and Barbuda." In 2001, the United States considered this no longer necessary due to regulatory changes in Antigua and Barbuda and lifted the Financial Advisory. In doing so, it made no exemption for gambling and betting transactions. Furthermore, the United States' explanation as to why remote supply gambling businesses provide criminal enterprises with an easy vehicle for money laundering lacks credibility. The United States seems to argue that money can be laundered by placing it in a gambling account, losing a small amount of it and requesting repayment of the balance (which would apparently somehow make the original source untraceable). Not only do Antigua's Gaming Regulations require that winnings be paid back to the same bank account or credit card from which the stake was paid, they also prohibit funding accounts with cash. Further, the use of credit cards and other financial instruments leaves a large and traceable electronic footprint.

3.179 Antigua notes that, in footnote 72, the United States also refers to money laundering methods allegedly described in a report from the FATF. However, the examples in that FATF report do not describe how Internet gambling can be used as a money laundering vehicle. The FATF report submitted as evidence by the US does mention however, that "cash remains the major if not primary form in which illegal funds are generated." Furthermore, that report states that "traditional casino gambling has been confirmed as being a well used channel for money laundering in some FATF jurisdictions" and it mentions specific methods used in casinos in the United States involving safe deposit boxes. Should there remain any further doubt about the money laundering opportunities presented by the cash-heavy United States gambling business versus the non-cash gambling industry in Antigua and Barbuda, Antigua submits a copy of a recent press Article describing how a major Las Vegas casino that has a representative in Tokyo had been facilitating the money laundering efforts of a member of a Japanese organized crime syndicate. The presence of cash transactions in a gambling operation is key to its attractiveness for money laundering. And because remote access gambling in Antigua makes no use of cash at all, it is simply not attractive for money laundering. This is confirmed by the GAO which reported the following findings from its investigation on Internet gambling:

"Banking and gaming regulatory officials did not view Internet gambling as being particularly susceptible to money laundering, especially when credit cards, which create a transaction record and are subject to relatively low transaction limits, were used for payment. Likewise, credit card and gaming industry officials did not believe Internet gambling posed any particular risks in terms of money laundering. (…) In general, gaming industry officials did not believe that Internet gambling was any more or less susceptible to money laundering than other electronic commerce businesses and noted that the financial industry – which is responsible for the payments system – is better suited to monitoring for related suspicious activity in the area than the gaming industry itself."  

3.180 Antigua notes that the United Kingdom, which has spent considerable time and effort studying the feasibility of Internet gambling, also takes the view that "there appears to be a paucity of proof" that money laundering through Internet gambling sites is "a significant problem" and that "[i]t

---

296 Ibid., para. 37.
is safe to say that gambling transactions completed online can be more secure than cash business conducted in traditional gambling outlets.”

3.181 Concerning crime, fraud and consumer protection concerns, Antigua notes that, in paragraph 3.15, the United States levels the allegation that "[l]aw enforcement authorities in North America have seen evidence that organized crime plays a growing part in remote supply of gambling, including Internet gambling." In the same paragraph, the United States quotes a government official as saying that "[w]e have now seen evidence that organized crime is moving into Internet gambling." However, in neither case does the United States bother to share any of this "evidence" with the Panel, and characteristically its claims about organized crime involvement in Internet gambling are completely unsubstantiated. The United States continues, in paragraph 3.17, to make unsubstantiated, largely irrelevant statements about possible fraud risks that may be associated with the provision of cross border gambling services. However, Antigua and Barbuda fails to see the relevance of fraudulent lotteries in the context of this dispute, nor does it see any support for the United States' claims that the "potential for fraud is heightened when gambling opportunities are supplied from remote locations." Antigua notes in particular that, in the "Top 10 Consumer Fraud Complaints" submitted as evidence by the United States (which is not specific to electronic commerce), the category "Prizes, Sweepstakes & Lotteries" ranks seventh with four per cent of all complaints. This is behind: Internet auctions at 13 per cent; Internet services and computer complaints at six per cent; advance-fee loans and credit protection at five per cent; and shop-at-home and catalogue sales at four per cent. Although Antigua questions the relevance to this dispute of "prizes, sweepstakes and lotteries," in the "Top 10 List" such activities are ranked just before: business opportunity and work-at-home plans at three per cent; and telephone services and health care at two per cent each. While Antigua and Barbuda does not take law enforcement and health related issues lightly, the fact of the matter is that these concerns are applicable to gambling and betting in general and indeed to a large number of other economic activities, not simply to cross-border or "remote access" gambling and betting. And, just as the United States has chosen to do, Antigua and Barbuda has determined that these risks and concerns, to the extent present at all, can be acceptably minimised through effective regulation.

3.182 The United States reiterates that Antigua has failed to prove the fundamental premises that its services and service suppliers are "like" US services and service suppliers, and it has not shown how specific US measures accord Antiguan services and service suppliers less favourable treatment. The differences between the views of Antigua and the United States flow from a fundamental difference in their respective understandings of the principle of national treatment. Antigua appears to claim that a cross-border commitment for gambling services would mean that allowing any domestic gambling opens the door to all forms of cross-border gambling, regardless of likeness of services or service suppliers. If one applied this novel view of national treatment to the medical services example above, it would mean that so long as certain domestic doctors are allowed to diagnose certain patients under limited circumstances within a Member's territory, all cross-border doctors must be allowed to diagnose all patients by telephone or Internet throughout that Member's territory. The United States takes a very different view. A cross-border commitment for national treatment entitles the provider of another Member to offer services only to the extent that like domestic suppliers can offer the like services. That simply means that where domestic doctors cannot diagnose patients over the telephone or by other means of remote supply, neither can foreign doctors.

3.183 The United States submits that, after a cursory treatment of the issue of likeness of services and service suppliers in its first submission, Antigua has more recently adopted the strategy of trying to reverse its burden of proof by asserting that "the United States has not submitted arguments or evidence sufficient to support a conclusion that the United States and Antiguan gambling and betting

---

services are 'unlike.' Antigua is again trying to ignore the complaining party's burden of proof in WTO dispute settlement proceedings. Antigua is the party asserting a violation of Article XVII, therefore Antigua alone bears the burden of providing evidence and argumentation proving likeness. Past panel and Appellate Body reports provide little detailed discussion of the legal issues surrounding likeness of services and suppliers, but the basic framework for such an analysis is clear. A panel assessing likeness must make a case- and fact-specific analysis of the particular services and suppliers at issue. In doing so, the panel must examine the characteristics of the allegedly like services and suppliers. These characteristics are not defined in the text of the GATS, and vary on a case-by-case basis. To engage in this analysis, this Panel must first identify the services and suppliers it is comparing. Antigua has described the types of services and suppliers it licenses as Internet "virtual casinos" and Internet and telephone sports betting ("sports book") operators. The Panel's task therefore appears to be to determine whether Antigua has in the first instance established that its Internet "virtual casino" services and suppliers are "like" US non-remote gambling services and suppliers, and whether Antigua's Internet and telephone sports book services and suppliers are "like" sports book services and suppliers in the State of Nevada (the only part of the United States where such services are allowed).

3.184 The United States disagrees with Antigua's suggestions that the Panel must examine characteristics that relate to the "end use" of a service or "consumer tastes and preferences" regarding that service, including consumer preferences and the "physical" characteristics of the service. Contrary to Antigua's argument, these are by no means the only factors to consider in a GATS likeness analysis. As discussed below, likeness in the context of this particular dispute depends more heavily on the regulatory characteristics of services and suppliers. Assuming arguendo that consumer perceptions nonetheless play a role in a GATS likeness analysis, a full analysis of the characteristics relevant in shaping consumer perceptions weighs strongly against a finding of likeness between virtual and real gambling.

3.185 The United States submits that remote gambling has different consumers. Antigua's own evidence shows that Internet gambling services have different customer bases than other gambling services, as reflected by Bear Stearns' conclusion that "Internet gamers are generally not the same customer as land-based gamers." Indeed, Internet gambling sites tend to attract gamblers who do not consume other forms of gambling, partly by virtue of the ability to indulge in gambling in seclusion without the stigma or effort required to go to a public gambling facility. Most telling of all is the fact that Antigua's own consultants unequivocally state that Internet gamblers are different from other gamblers in terms of "financial stability, motivation, physiological effects, need for acknowledgement, and social facilitation." Besides, Antigua itself concedes that a virtual casino is

---

300 See above para. 3.165. Antigua's comments on the issue of likeness consisted of an attack on what it described as "claims" by the United States regarding the absence of likeness. See above paras. 3.158 and 3.160. Needless to say, the only "claims" at issue regarding likeness in this dispute are the unsubstantiated claims made by Antigua.

301 The United States notes that Antigua seems to take issue with this characterization, but has offered no alternative description of its services and suppliers for purposes of a "likeness" analysis. Antigua clearly stated that it offers an interactive gaming license, which is "for casino-type, random selection and card games" – also described by Antigua as "virtual casinos" – supplied by Internet; and an interactive wagering license, which is "for sports betting" supplied by Internet or telephone. See above para. 3.2. These services and their operators are the relevant Antiguan services and suppliers for purposes of a likeness analysis.

302 Bear Stearns, E-Gaming: A Giant Beyond Our Borders, p. 55 (September 2002). This assessment plainly contradicts the four anecdotal statements relied on by Antigua (see above footnote 271 and para. 3.166) for the proposition that its services are "virtually the same" as services offered in the United States.

304 Prof. Mark Griffiths & Dr. Richard Wood, Is Internet Gambling More Addictive and/or Problematic Than Other Forms of Gambling?, The International Gaming Research United, Division of Psychology, Nottingham (UK), October 2003 (document submitted by Antigua to the Panel), pp. 5-6.
a mere imitation of a real casino. The games operate differently; while designed to resemble real casino games, virtual games actually consist of betting on software algorithms. Antigua's own evidence shows that the environments virtual casino services operate are completely different from those of real casinos. As to other forms of remotely supplied gambling, Antigua still has not attempted to offer specific proof of likeness. The United States reiterates that particular forms of gambling have operational and supplier characteristics that sharply distinguish them from other forms of gambling. The two most clear-cut examples are lotteries and pari-mutuel wagering, which differ from other forms of gambling both in terms of their operation (for example, by a common pool in the case of pari-mutuel betting) and their suppliers.

3.186 The United States argues that in assessing "end use" or "consumer tastes and preferences," as Antigua urges, the Panel should begin from the premise repeatedly asserted by Antigua – that gambling is a recreational service. Assuming that to be the case for purposes of argument, the "end use" of a gambling service would be to provide recreation. The characteristics shaping consumer perceptions of gambling services would therefore be primarily those characteristics that influence the recreational value of gambling activity. Antigua's "end-use" and "consumer perception" arguments thus require the Panel to determine whether the recreational experience provided by a virtual casino is similar enough to that of a real casino to make them "like services." The United States submits that it is not. No one would dispute that, in terms of the consumer's experience, services providing graphical "virtual reality" simulations that mimic such recreational activities as horseback riding, participation in sports, etc., are unlike actual participation in those activities. In the context of recreational services, where the consumer's purpose is to purchase the recreational experience itself, the qualitative difference between the consumer's experience in a real setting as compared to a virtual setting assumes vastly greater importance than such a distinction might have in the context of other services.

3.187 The United States has already shown that real casinos offer a vastly different consumer experience than virtual casinos, and that the virtual games do not involve the use of traditional gaming paraphernalia. This evidence demonstrates that the sensations and environmental attributes likely to shape consumer perceptions of recreational value of an Internet virtual casino are no more "like" those of a real casino than the attributes of participation in a football video game are like those of participation in a real football game. And the factors that shape the recreational value of a virtual casino are worlds apart from the characteristics of a real casino. Antigua's own consultants, Prof. Griffiths and Dr. Wood, appear to agree. They cite a litany of differences that distinguish the

---

305 Antigua states that a virtual casino "is designed to mimic land-based casino settings" and provides "virtual imitations of video poker terminals, slot machines and other gambling machines."

306 Given the differences between goods and services, it may be more accurate to refer not only to "physical" characteristics, but also to "operational" or "functional" aspects of the service. Antigua dismisses the these issues as "superficial." Such characteristics cannot be dismissed as irrelevant, especially not in the gambling context, where they determine consumer's chances of win or loss (i.e., the "price" of the gambling service).

307 The United States notes that Antigua attempts to respond to this point by simply claiming that a person sitting at a real slot machine is having the same experience as a person playing a virtual slot machine from a home, school, etc. As discussed below, Antigua's own evidence confirms that the consumer perception of the virtual setting differs greatly from the real setting.

308 The United States reiterates that it is only assuming arguendo the existence of a commitment for such services for purposes of explaining the failure of Antigua's argument. As discussed above, gambling services are not "other recreational services (except sporting)" within the meaning of the US specific commitments.

309 See above para. 3.155. Antigua tries to dismiss some of these differences as mere "marketing techniques" that have no impact on consumer perceptions, but overlooks the fact that the entire point of a "marketing technique" is to influence consumer perceptions. Moreover, Antigua's assertion is further contradicted by its submission of a report stating that consumers in the U.S. perceive gambling as a diversion rather than a daily activity. See Bear Stearns, E-Gaming: A Giant Beyond Our Borders, (September 2002), p. 45. If true, that would suggest that the qualitative difference in consumer experience between virtual and real casinos is especially pertinent to US consumers.
allegedly recreational experience of Internet gambling from that of traditional gambling. For example, they observe that: (i) "the 'physical' transaction of collecting winnings ... can be highly rewarding" – and lack of this sensation creates a "barrier" between traditional gamblers and gambling on the Internet; 310 (ii) "Internet and traditional gamblers appeared to be different in terms of motivation to gamble. Traditional gamblers gambled for more expressive and affective reasons than Internet gamblers. Traditional gamblers enjoyed gambling as a means of escape. The 'real' gambling environment was more conducive to satisfying these needs than Internet gambling in the home". 311 'T]raditional gamblers reported greater physiological effects (e.g., increased heart rate) when gambling compared to Internet gamblers. For instance, traditional gamblers reported more feelings of nausea, dizziness and stomach contractions after experiencing a sizeable loss". 312 "Internet gambling sites may not satisfy a deeper psychological need – the need for self-esteem. Typically, gambling establishments have always operated in a social environment. An important aspect of such an environment has been the level of social reinforcement that exists. ... At first sight, it would appear that social reinforcement is unavailable in Internet gambling, i.e., if you win on an Internet gambling site, who is there to witness it?" 313 All of these observations go directly to the issue of consumer perception. They confirm that consumer perceptions of Internet gambling are nothing like perceptions of real gambling. Antigua's comparison between Internet gambling and Internet sale of music, or sale of goods (books, wine, etc.) reinforces the foregoing point. In Antigua's examples, the consumer's end objective in using a particular service is to transact for the attainment of something – be it a song, a bottle of wine, etc. – that is identical or nearly identical to the product or service one could get by going to a physical facility. In such a case, whether the shopping is done in a real or a virtual environment may be immaterial to the likeness of the service supplied. In a case where the consumer is buying the experience of engaging in recreation, however, one must recognize that consumers will inevitably perceive the simulation of a recreational activity in a virtual environment as vastly different from actually experiencing such activity in the real world.

3.188 The United States disagrees with Antigua’s assertion that the regulatory and law enforcement risks inherent in a service are relevant to "likeness" only insofar as they shape consumer perceptions and competitive relationships in the marketplace for services. 314 The United States also disagrees with Antigua’s denial that virtual casinos or other forms of gambling by remote supply involve different regulatory and law enforcement risks than real casinos. Regulatory distinctions are directly relevant under GATS Article XVII, and should be considered in their own right – not solely through the lens of consumer perceptions. The GATS explicitly recognizes in its preamble the "right of Members to regulate" services. The "like services and suppliers" language of Article XVII must therefore be interpreted in light of that object and purpose of the GATS. Thus one must consider not only the different competitive characteristics of a service or supplier as such, but also the existence of regulatory distinctions between services in interpreting and applying the likeness analysis under Article XVII. Such issues have sometimes been addressed in the goods context under the rubric of consumer perceptions and their impact on competitive relationships 315, but they merit independent consideration in the context of the GATS. They assume particular importance in this dispute because gambling is so heavily regulated. As previously discussed, the United States maintains and applies a

310 Prof. Mark Griffiths & Dr. Richard Wood, Is Internet Gambling More Addictive and/or Problematic Than Other Forms of Gambling?, The International Gaming Research United, Division of Psychology, Nottingham (UK), October 2003 (document submitted by Antigua to the Panel), p. 5.
311 Ibid.
312 Ibid.
313 Ibid., pp. 5-6.
314 See above para. 3.163, where Antigua also quotes the Appellate Body's statement in EC–Asbestos that "[U]nder Article III:4, evidence relating to health risks may be relevant in assessing the competitive relationship in the marketplace between allegedly 'like' products." In the services context, regulatory distinctions between services and suppliers have a significant impact on the "competitive relationship in the marketplace" between those services and suppliers, and could therefore be considered under that analysis.
315 For example, the Appellate Body in EC – Asbestos considered health dangers in the context of consumer perceptions. See Appellate Body Report on EC – Asbestos, para. 113.
regulatory distinction between remotely supplied gambling services and other gambling services, with the former subject to even tighter restrictions than the latter. This distinction arises from the numerous distinguishing law enforcement, consumer protection, and health concerns associated with the remote supply of gambling.

3.189 The United States has provided evidence showing that US law enforcement authorities have seen organized crime playing a growing role in Internet gambling. Antigua claims that any such concerns are indistinguishable from existing concerns about organized crime involvement in other forms of gambling. The comments of a Canadian law enforcement official show why Antigua is incorrect, and confirm the views of US law enforcement. According to a Detective Inspector of the Ontario Illegal Gaming Enforcement Unit:

"Internet Gambling provides organized criminals with everything they could ever want from a criminal enterprise: anonymity, large amounts of cash, the ability to control the odds, very little chance of getting caught, and power. Criminals gravitate towards money and the more fast-moving the money is, the more appealing it is."\(^{317}\)

3.190 The US Federal Bureau of Investigation ("FBI") Racketeering Records and Analysis Unit provided the following assessment to Congress in 1999:

"Organized crime [OC'] groups are heavily involved in offshore gambling. OC involvement is in four different areas. (1) Using offshore sports books as layoff sources for US based bookmaking operations, (2) Extending credit to finance offshore gambling operations, (3) Setting up offshore gambling operations temporarily for the purpose of ripping off customers, (4) Setting up offshore gambling operations as a permanent means of income for the organization."\(^{318}\)

3.191 Looking ahead, the FBI stated that "[O]ffshore gambling will become increasingly popular as it is legalized and accepted in more nations throughout the world. Despite it's appearance of legitimacy, organized crime has already infiltrated the industry."\(^{319}\) As the foregoing comments suggest, while the tentacles of organized crime clearly reach many forms of gambling, remotely supplied gambling, and Internet gambling in particular, raises uniquely grave concerns. These include, \textit{inter alia}, the enticing new opportunities for organized crime presented by the amount of money and manipulability inherent in Internet gambling; the opportunity to use gambling by remote means of supply as a clearinghouse through which organized crime bookmakers in the United States

\(^{316}\) The United States notes that by asserting that US claims about the involvement of organized crime in Internet gambling are "unsubstantiated," Antigua is apparently choosing simply to disbelieve the official statements of US and Canadian authorities on this issue cited in para. 3.15 above. Nonetheless, these statements are clear. Moreover, at a Congressional hearing on 3 October 2001, Dennis M. Lormel, who was then chief of the Financial Crimes Section at the Federal Bureau of Investigation, had the following discussion with a US legislator:

\begin{quote}
Rep. Oxley: I won't ask you to discuss specifics, but is the Bureau pursuing any cases that involve a linkage between Internet gambling and money laundering?

Mr. Lormel: Yes, sir. There are a minimum of two pending investigations, as we speak, that I'm aware of. It's more in keeping with our organized-crime site [sic] of the house, which is not my area of expertise. But I am -- from my prior assignment in Pittsburgh, I'm aware of a case that we actually worked in our shop out there.

Rep. Oxley: And are you pursuing any cases linking organized crime to Internet gambling?

Mr. Lormel: I believe so, sir, yes.
\end{quote}

\(^{319}\) Ibid., pp. 4-5.
can "lay off" their bets; and the opportunity for organized criminals to more easily hide their involvement in gambling and evade law enforcement by operating beyond the intense scrutiny of regulators and law enforcement officials in the gambler's jurisdiction.

3.192 The United States argues that Antigua asserts that it has enacted laws to deal with money laundering, but whatever the impact of Antigua's legislation, it is not relevant to the issue of the concerns regarding the susceptibility of remote supply of gambling to money laundering in the United States. Moreover, a September 2003 report by the US Drug Enforcement Administration ("DEA") disagrees with Antigua's assertions. The DEA report concludes that "Internet gambling in Antigua and Barbuda is sometimes used for money laundering." It also states that Internet gambling in three other Caribbean countries raises money laundering concerns. Similarly, a US State Department report, while praising changes in Antigua's statutes, nonetheless concluded that Antigua "remains susceptible to money laundering because of its loosely regulated offshore financial sectors and its Internet gaming industry." Antigua denies that the potential for fraud is heightened when gambling is supplied from remote locations, and again asserts that there are no special concerns regarding fraudulent Internet gambling. It is true that many forms of gambling involve a high potential vulnerability to fraud and other crimes; that is a major reason why gambling services require the utmost regulatory scrutiny. But here again Antigua disregards the even greater threat when fraudulent gambling services operate far away from their victims, through anonymous media, and in some cases subject to at best uncertain law enforcement scrutiny. It also disregards the inherent manipulability of Internet gambling. The NGISC found that "the global dispersion of Internet gambling operations makes the vigilant regulation of the algorithms of Internet games nearly impossible." Antigua goes to great lengths to try to show that Internet gambling is no more addictive than other forms of gambling. Yet ultimately it only proves the obvious proposition that the precise mechanics of gambling addiction is a novel issue on which not all authorities agree. The United States has already demonstrated that the respected American Psychiatric Association views Internet gambling as posing a special health threat, and other evidence corroborates that threat. Whether the health threat comes

---

321 The United States notes that the latter concern was a major factor in the adoption of restrictions on the remote supply of gambling in the early 1960s. At the time, long before the Internet exacerbated the problem, US Attorney General Robert F. Kennedy already testified that "our information reveals numerous instances where the prime mover in a gambling or other illegal enterprise operates by remote control from the safety of another State – sometimes half a continent away." Testimony of Attorney General Robert Kennedy, Hearings Before the Senate Judiciary Committee on the Attorney General's Program to Curb Organized Crime and Racketeering, 87th Cong., 1st Sess., (1961), p. 4.

322 Drug Enforcement Administration, The Drug Trade in the Caribbean: A Threat Assessment, (September 2003), DEA-03014, p. 3. See also See Bear Stearns, E-Gaming: A Giant Beyond Our Borders, (September 2002), p. 40, (discussing Antigua and five other jurisdictions, and concluding that "although these major markets provide for some of the most lucrative and popular gaming sites on the Internet, they also provide for the least amount of public information. . . . In our view, this lack of access to information increases the risk profile of the region tremendously.").

323 Ibid., pp. 12, 19, and 31.

325 NGISC Final Report, pp. 56. Putting the point more bluntly, the Senate Committee on the Judiciary stated that the Committee agreed with one of the NGISC commissioners, who stated that "anyone who gambles over the Internet is making a sucker bet" Unlawful Internet Gambling Funding Prohibition Act and the Internet Gambling Licensing and Regulation Commission Act, Hearing before the Subcommittee on Crime, Terrorism, and Homeland Security of the Committee on the Judiciary, 108th Congress 10 (2003) (statement of John G. Malcom), p. 6.

326 For example, the American Psychiatric Association states that "Internet gambling, unlike many other types of gambling activity, is a solitary activity, which makes it even more dangerous: people can gamble
from the nature of Internet play itself or simply from the added population of potential victims – including youth – reached by a medium as pervasive as the Internet is an interesting question for scientific debate, but it is not relevant to this dispute. Even if (quod non) Internet gambling is only equally addictive, or only half as addictive, opening the floodgates to legalized remote supply of gambling services into homes, schools, offices, etc., would clearly involve an enormous growth in the opportunity for gambling and, consequently, for gambling addiction. \(^{327}\)

3.193 According to the United States, Antigua admits that the United States imposes age restrictions on non-remote gambling, but argues that Internet gambling poses no greater risk of child and youth gambling. Antigua specifically denies that any of the remotely supplied gambling games offered from Antigua are designed to resemble video games or be attractive to children. The United States attached to its second submission images of a few of the numerous child-oriented games offered on gambling websites licensed by the Antiguan government. The video game presentation, cartoon-like design, and childish iconography of such games such as "Haunted House," "Rock'n Roller," "Dinosaur Slots," "Alien Alert," "Goblins Cave," and "Ocean Princess" speak for themselves. \(^{328}\) Antigua also argues that minors lack access to credit cards and other payment instruments. The testimony of a senior executive of Visa (which describes itself as the world's largest consumer payment system) \(^{329}\) before the US Commission on Online Protection refutes Antigua's assertion in the clearest possible terms. After observing that the Child Online Protection Act "basically assumes that only adults have access to a credit card or a debit card," the Visa executive testified:

"To the contrary, it is important for the Commission to understand that this assumption simply is not correct. Access to a credit card or a debit card is not a good proxy for age. The mere fact that a person uses a credit card or a debit card in connection with a transaction does not mean that this person is an adult.

Many individuals under the age of 17 have legitimate access to, and regular use of, credit cards and debit cards. For example, parents may designate their child as an 'authorized user' of the parent's credit card or debit card. This actually is quite common, particularly for credit cards. Whenever this occurs, the child will have access to the parent's credit card number or debit card number and can use that card number to access materials deemed 'harmful to minors' on the Internet.

In addition, many children under the age of 17 have their own deposit accounts and may have access to a debit card that accesses such account. [...]"

\(^{327}\) The United States notes that one of Antigua's own consultants has stated that "[r]esearch has consistently shown a positive relationship between the availability of gambling and both regular and problem gambling." See Mark Griffiths and Paul Delfabbro, The Biopsychosocial Approach to Gambling: Contextual Factors in Research and Clinical Interventions, eGambling: The Electronic Journal of Gambling Issues, issue 5 (2001), available at http://www.camh.net/egambling/archive/pdf/EJGI-issue5/EJGI-issue5-complete.pdf. See also NGISC Final Report, pp. 4-19 (stating that "[a]s the opportunities for gambling become more commonplace, it appears likely that the number of people who will develop gambling problems also will increase.").

\(^{328}\) In addition, the American Psychiatric Association states that "[o]ne significant hazard is that many online games sites – which target children and teens – have direct links to gambling sites. Many of these sites offer "freebies" and other supposed discounts to get young people started." American Psychiatric Association, APA Advisory on Internet Gambling (16 January 2001), p. 2.

\(^{329}\) Visa describes itself as "the world's leading payment brand and largest consumer payment system," with more than 396 million cards issued through U.S. financial institutions. See http://usa.visa.com/personal/newsroom/?it=ss_index.html.
Thus, although the [Child Online Protection] Act assumes that only adults have access to a credit card or a debit card, it is important for the Commission to understand that this assumption is simply not true. As a result, the Commission may want to focus its attention on more suitable methods of verifying age.\textsuperscript{330}

3.194 The same Visa executive also noted the danger of unauthorized use of credit cards by minors.\textsuperscript{331} In addition, a 1999 survey conducted in the United States found that 28 per cent of respondents between the ages of 16 and 22 had at least one major credit card, including seven per cent of the younger high school students (age 16 to 18).\textsuperscript{332} Since 1999, efforts to market credit cards to Americans under the age of 18 have only expanded.\textsuperscript{333} Thus Antigua's assertion that "payment systems such as credit cards are not available to minors" is wrong; minors do have ever-increasing access to such instruments, therefore the anonymity of Internet gambling does in fact create a significant opportunity for under age gambling as compared to other forms of gambling that can be controlled through in-person supervision.

3.195 Whether the foregoing law enforcement, health, and consumer protection concerns are viewed separately or together, it is clear that significantly different regulatory issues arise in connection with the remote supply of gambling by virtue of the fact that it is supplied remotely. The United States does not assert that such concerns would always establish a regulatory distinction between remotely supplied services and non-remote services. Likeness is a case-by-case analysis. Gambling is a special case because it is a service that is "the target of special scrutiny by governments in every jurisdiction where it exists."\textsuperscript{334} Remote supply of gambling poses a far greater danger of eluding that scrutiny, causing the various problems described above and therefore requiring a regulatory distinction between remote supply and other forms of supply.

3.196 The United States submits that to the extent that international classifications bear on the issue of likeness, the explanatory notes to recent services classifications support the finding of a "likeness" distinction between remote supply of gambling and other forms of gambling. For example, the most recent version of the CPC, version 1.1, identifies four distinct components of CPC subclass 96920, "Gambling and betting services." They are (1) "organisation and selling services of lotteries, lotto, off track betting," (2) "casino and gambling house services," (3) "gambling slot-machine services," and (4) "on-line gambling" (emphasis added).\textsuperscript{335} Antigua asserts that W/120 and the CPC both provide a single category for gambling services. Of course, this is incorrect with respect to the W/120 categories, which do not mention gambling services. With respect to the CPC, it is hardly surprising the provisional document referenced in the GATS negotiating history, unlike its more recent successor, did not address the new phenomenon of on-line gambling. These sources should not play a significant role in any likeness analysis that the Panel might undertake in this particular dispute.

3.197 Antigua submits that the United States uses much of its Article XVII discussion not only to develop its "remote" gambling theory but also to lay out its claims concerning "law enforcement and

\textsuperscript{330} Testimony of Mark MacCarthy, Senior Vice President for Public Policy, Visa U.S.A., Before the Commission on Online Protection (9 June 2000), pp. 3-4.

\textsuperscript{331} Ibid., p.3.

\textsuperscript{333} Amit Asaravala, Why Online Age Checks Don't Work, Wired News (10 October 2002). ("Since [1999], credit card companies have been making it even easier for minors to get cards in their names.").

\textsuperscript{334} NGISC Final Report, p. 3-1.

\textsuperscript{335} Central Product Classification Version 1.1, ST/ESA/STAT/SER.M/77/Ver.1.1, E.03.XVII.3, code 96920. See also International Standard Industrial Classification of all Economic Activities, ST/ESA/STAT/SER.M/4/Rev.3.1, E.03.XVII.4, code 9249, (with explanatory note breaking down "gambling and betting activities" into five distinct categories, consisting of (1) "sale of lottery tickets," (2) "operation (exploitation) of coin operated gambling machines," (3) "operation (exploitation) of coin operated games," (4) "operation of gambling cruises," and (5) "operation of virtual gambling websites" (emphasis added)).
health considerations.” The United States uses both of these concepts to allege that Antiguan gambling and betting services and service suppliers are not "like" gambling and betting services and service suppliers domiciled in the United States. Antigua stresses it does not believe there is any meaningful category of "remote" gambling for the purposes of this dispute. Antiguan services are necessarily "remote" because they are furnished cross-border, but this does not change their character as fundamentally gambling and betting services. The United States complaint that Antigua wishes to reverse the "burden of proof" on the issue of likeness is another misstatement. Antigua has demonstrated with considerable evidence and legal discussion that its gambling and betting services are "like" those in the United States for purposes of Article XVII – and that the United States has failed utterly to establish the contrary.

3.198 According to Antigua, the US argument that Antiguan so-called "remote" gambling services do not compete with the gambling services offered domestically by United States operators because "remote gambling has different consumers" is based on a statement in the Bear Stearns' report that "Internet gamers are generally not the same customer as land-based gamers." But this obviously does not mean that "Internet based" and "land-based" gambling and betting services do not compete. It simply means that, in Bear Stearn's view, gamblers choose their preferred distribution channel. For example, most consumers who buy music over the Internet will normally reduce or stop their visits to "brick and mortar" music shops. But, of course, there is competition between the two distribution channels because consumers switch from one to the other – just like a gambler can switch from one land based casino to another. The United States also refers to the statements in the expert report of Professor Griffiths and Dr. Wood that Internet gambling could involve a smaller risk of excessive gambling or "gambling addiction" than the more traditional forms of gambling available in the United States. To the extent that regulatory concerns can play a role in the context of Article XVII at all (which Antigua and the EC both discount), Antigua repeats that not every difference in public interest concerns raised by domestic and foreign services is capable of justifying radically different treatment. Certainly the prohibition of a less harmful foreign service cannot be justified by the argument that it is not "like" a more harmful domestic service that is allowed.

3.199 With regard to the claim that cross-border gambling offers a "mere imitation" of a casino, Antigua submits, first, that casino "imitations" form only part of the Antiguan product offerings. Second, and more importantly, Antigua strongly disagree that various product offerings can be meaningfully distinguished on what are really superficial comparisons between how they look, how they sound or whether their components clink about mechanically or connect electronically. The mistake the United States makes in trying to compare cross-border gambling and domestic gambling with physical activities such as "virtual reality" horse riding and actual horse riding is this – it is the recreational activity of gambling – the experience of winning or losing – that is fundamentally being engaged in, not the flipping of cards or the watching of a screen. The flipping of cards and the watching of a screen are merely the methods through which the same recreational experience is delivered. This is precisely why the United States' prohibition focuses on the wagering of money. A US exhibit to the Panel provides examples of statutory provisions articulating state gambling policies. The statute cited for Louisiana says "][G]ambling has long been recognized as a crime in the state of Louisiana and despite the enactment of many legalized gaming activities remains a crime. Gambling which occurs via the Internet embodies the very activity that the legislature seeks to prevent". In this connection, it is important to keep in mind that, as Dr. Howard J. Shaffer of Harvard University has stated in his expert's report that Antigua has submitted to the Panel, in essence, all gambling is experienced "locally" by the individual gambler himself irrespective of whether the source of the gambling is a slot machine in a casino, a scratch ticket that the gambler scratches at home or an Antiguan operator who communicates via the Internet.

---

336 See above para. 3.185.
337 See above paras. 3.185 and 3.187.
3.200 Antigua notes it is possible to engage in the dubious activity of comparing gambling offerings. For instance, Antigua provided the Panel with examples of scratch cards with a casino theme marketed by United States lotteries. These are also "mere imitations" of a casino and cannot be distinguished on that basis from Antiguan services. Casino games and their "imitators" all operate on the basis of the same simple premise – random selection. The fact that random selection is performed by a software algorithm does not make a random selection game "unlike" a random selection game using another selection method. Furthermore random selection by software algorithms is used on a grand scale in state-sanctioned gambling in the United States and consequently cannot be the basis of a distinction between random selection games of Antiguan and United States origin. Alleged "operating differences" are in any event irrelevant for the betting on sports and other future events and for card games where players play against each other via Internet connections rather than whilst all sitting together in the same room (both major components of the Antiguan gambling industry). Further, these alleged differences cannot distinguish Antiguan cross-border gambling services from non-casino gambling that is legally and prolifically offered in the United States such as lotteries, the electronic gambling devices (or "EGDs") that are available in thousands of American pubs, bars, truck stops and convenience stores, or the "remote access" gambling that is offered by United States operators.

3.201 Antigua maintains that the regulatory issues are not relevant for the assessment of likeness under Article XVII. Further, the United States is being disingenuous when it claims to "regulate" so-called "remote" gambling differently than "other gambling services." What the United States in fact does is prohibit cross-border gambling from other WTO Members, tolerate extensive domestic interstate gambling and regulate at state level the rest of the massive domestic gambling market (whether "remote" or "non-remote"). The United States also continues to make its vague and unsubstantiated allegations that "remote gambling" poses a greater organized crime threat. The United States says in its second submission that "Antigua is apparently choosing simply to disbelieve the official statements of U.S. and Canadian authorities on this issue (...)." That is absolutely correct, at least in so far as such statements are intended to apply to the cross-border gambling industry in Antigua. Further, the United States does not explain exactly what constitutes "organized crime" but in most of the materials submitted by the United States, the crime at issue appears to be the gambling itself – and, of course, this makes the United States' argument circular: the gambling is organized crime because the United States declares it illegal.

3.202 Antigua agrees with the United States that it is more difficult to police an activity that is partially taking place abroad. However, this applies to all cross-border economic activity and trade. Furthermore organized crime syndicates can and do abuse many areas of international trade to further their criminal objectives. The answer to this threat is not a blanket prohibition of international trade but international cooperation. Despite the cynical statement that "Internet gambling in Antigua and Barbuda is sometimes used for money laundering," the United States does not cite even one specific

341 See above para. 3.192.
example of money laundering via Antiguan gambling operators. Further, as of this day, the Antiguan authorities have received no communication whatsoever from the United States – much less any requests for judicial cooperation – concerning money laundering via Antigua’s gambling industry. Yet, Antigua has received numerous other requests or enquiries from the United States about other instances of financial crime under the Mutual Legal Assistance Treaty which exists between Antigua and the United States and which the United States acknowledges operates successfully. If the United States has any information about infiltration of organized crime syndicates in the Antiguan gaming industry or the use of our industry for money laundering purposes, the United States would have communicated this information to Antigua to ensure appropriate action by both our authorities and theirs. Antigua has since 1999 handled more than 30 formal requests for information from the United States under a Mutual Legal Assistance Treaty yet not one of these requests involved criminal conduct related to Antigua's gaming industry. Antigua is and has always been willing to cooperate with the United States to combat crime. For instance, the Office of National Drug and Money Laundering Control Policy (the "ONDCP") routinely cooperates with the United States Drug Enforcement Administration or ("DEA") and the Federal Bureau of Investigation ("FBI"). In fact, DEA and FBI agents often operate in unison with the ONDCP agents.

3.203 Antigua notes that the United States tries to substantiate its allegation concerning organized crime by referring to a statement from the investment bank Bear Stearns, which bases its view on the fact that little public information is available about Antiguan operators. However, if Antiguan operators were able to operate lawfully and if they were confident that the information would not be used by the United States to prejudice their position, more information would be made publicly available to the Americans. It was not so long ago that the Directorate of Offshore Gaming would routinely contact the United States government for background information on American citizens applying for gaming licenses in Antigua. Also, in 1997 the then-director of Offshore Gaming travelled to the United States expressly to meet with United States officials to discuss the Antiguan gambling and betting industry and any concerns that the United States might have with respect to the industry. A copy of her report to the Prime Minister on these meetings is submitted to the Panel as exhibits. On the topic of consumer fraud, the United States has not provided even one example involving Antigua but only makes general statements about Internet gambling, irrespective of source. The United States asserts the compelling need for regulation and appears to suggest that other countries, and in particular countries such as Antigua, can never be capable of regulating a service as well as a developed economy like the United States. Of course, it can never be sufficient for a WTO Member to make such a general, unsubstantiated statement – in its own terms a "mere assertion" – to escape its obligations under the GATS. Any other position would turn the GATS into an agreement that only works in one way: export from developed countries to developing countries.

3.204 Antigua considers that the real answer to any actual concerns the United States may have regarding the abuse of cross-border trade for money laundering, consumer deception, fraud or other criminal activities is international cooperation. The Panel should also note that there is clear evidence of involvement of organized crime, money laundering and consumer fraud in the United States' own gambling industry. Yet the United States does not prohibit this domestic gambling. Much effort has been expended by the United States to convince the Panel that cross-border gambling and betting presents unique health risks to American citizens, although the United States appears to come around to the point of view that "the precise mechanics of gambling addiction is a novel issue

342 See below para. 3.280.
343 A view shared by the United States' Federal Trade Commission, see "FTC Chairman Muris presents the FTC's New Five-Point Plan for attacking cross-border fraud and highlights links between competition and consumer protection", Federal Trade Commission (31 October 2002).
on which not all authorities agree.\textsuperscript{345} Antigua responds that a "novel issue on which not all authorities agree" \textit{per se} is an insufficient basis on which to distinguish between services under the GATS.

3.205 Antigua submits that on the substance of the United States claim, the very short opinion from the American Psychiatric Association\textsuperscript{346} cited by the United States is based on studies prepared by Professor Griffiths and Dr. Wood and by Dr. Shaffer – each of whom serves as an expert to Antigua in this proceeding. The opinion in fact says very little about risks specifically related to Internet gambling. First, it mentions that Internet gambling is often unregulated. Internet gambling in Antigua is regulated. As stated many times previously, Antigua is prepared to amend its regulatory scheme if the United States were to have any specific concerns or suggestions. Second, it mentions that Internet gambling is a solitary activity but that is also the case for most gambling in the United States. Third, it mentions that people who gamble on the Internet can gamble uninterrupted and undetected for unlimited periods of time. However, United States operators lawfully use numerous techniques to ensure that gamblers do just that in order to maximize the gambler's losses (and the operator's gains).\textsuperscript{347} The remainder of the document from the American Psychiatric Association simply discusses the risks of gambling in general.

3.206 In his Article prepared for this proceeding, Dr. Shaffer, Director of the Harvard Medical School Division of Addictions and one of the leading experts in the field, concludes that to the extent there is a demonstrable difference at all in the health risks associated with gambling, the primary distinction is not between Internet gambling and other forms of gambling, but between "rapid-cycle" games and other kinds of gambling that involve either more deliberation or participation by other persons. A thorough reading of Dr. Shaffer's paper reveals that only sports gambling and multi-player table games appear to clearly evade the "rapid-cycle" effect or the single player environment that may exacerbate health concerns. But it is clear from Dr. Shaffer that, as acknowledged by the United States in the quote above, this is not a field in which there is any scientific certainty. The United States pleads that allowing the use of the Internet or the telephone to offer gambling and betting services from Antigua would "open the floodgates" and would add to the "population of potential victims." This smacks of the unscientific hysteria that Dr. Shaffer and his colleagues warned against in their joint editorial in the \textit{Journal of Gambling Studies} and that he references in his paper submitted to you today.\textsuperscript{348} Such bare hyperbole simply cannot form a basis for distinguishing between services for purposes of the GATS.

3.207 According to Antigua, the reality is that numerous legal gambling opportunities are available in the United States to people who want to gamble, with or without Internet gambling. Certainly the expansion of gambling opportunities has not been a concern to the United States in the past. In 1999 the NGISC called for a pause in the expansion of gambling opportunities. Since then, however, gambling opportunities have expanded considerably in the United States\textsuperscript{349} and total gross gaming revenue increased almost 25 per cent from already very high levels.\textsuperscript{350} Furthermore lotteries promoted by American authorities themselves, and not by private companies, use aggressive and sophisticated marketing techniques to sell as many lottery products as possible. One of their most widespread selling techniques is to market scratch cards as impulse purchase products on the counters of thousands of shops throughout the country.\textsuperscript{351} In this respect it is worth referring back to the quote

\textsuperscript{345} See above para. 3.192.
\textsuperscript{347} See above para. 3.9.
\textsuperscript{348} See above para. 3.176.
\textsuperscript{349} Document entitled "Examples of recent expansion of gambling opportunities in the United States".
\textsuperscript{350} 1998 figures compared to 2002 figures.
from the Champion v. Ames decision of the United States Supreme Court in the United States first submission referring to the "widespread pestilence of lotteries" which "infests the whole community; it enters every dwelling; it reaches every class." Furthermore the Panel should note that the United States federal government has even subsidized Native American tribes to develop gambling enterprises. Against this background the United States cannot credibly contend that it seeks to limit gambling opportunities. What they describe as the "population of potential victims" already comprises the entire United States population. Allowing cross-border gambling simply provides another gambling option to choose from.

3.208 Antigua wish to draw the Panel's attention to the 1999 decision of the United States Supreme Court in the Greater New Orleans case. The Supreme Court found that federal rules that prohibited the broadcasting of advertisements for private casinos whilst allowing it for Native American casinos was unconstitutional. In that case the United States argued that the prohibition was necessary to protect the American public from gambling opportunities. However, the Supreme Court found that, whatever the character of the broadcasting ban was in 1934 when it was adopted, "the federal policy of discouraging gambling in general, and casino gambling in particular, is now decidedly equivocal." The Supreme Court also rejected the federal government's argument that Native American casinos were a lesser threat because they operated in isolated locations and found that: "[I]f distance were determinative, Las Vegas might have remained a relatively small community or simply disappeared like a desert mirage." This is an authoritative statement that is highly relevant for the current dispute. As a result of the Greater New Orleans ruling, United States gambling operators can now advertise in all states.

3.209 In Antigua's view, the United States has also made nothing but "mere assertions" regarding the supposed increased risk to children posed by Internet gambling. Antigua has shown not only that its regulatory scheme and the nature of the business in general works against the participation of children in cross-border gambling, but that there are other ways to avoid child gambling as well. While the United States quotes a credit card official to the effect that credit cards are available to children, this does not change the fact that the United States Congress has seen fit to legislate the use of credit cards as an effective way to keep children from engaging in potentially harmful behaviours on the Internet. Antigua has presented additional factual evidence regarding child gambling in the United States. This material also shows that United States government-run lotteries actively target the youth market, and even the under age market. Suffice it to say that American children have many opportunities to gamble (for instance on scratch cards with "cartoon-like design and childish iconography") and Antigua believes that Internet gambling is among the very least accessible ways for them to do so. The United States has presented no evidence to the contrary. The last "likeness" point raised by the United States is international classification in the most recent version of the CPC. But the most recent version of the CPC does not provide a different subclass for Internet gambling. Rather it explicitly includes "on-line gambling" in the same category as other "gambling and betting services" – thus supporting Antigua's position.

3.210 Recalling that it does not concede the threshold issue of a commitment, the United States notes that Antigua argues for a likeness analysis closely following the goods model, while at the same

358 See above para. 3.193.
359 See above para. 3.196.
time arguing that likeness is not important. The United States maintains that likeness is a crucial component of the Article XVII inquiry, and supports an analysis in this case that looks at regulatory concerns, such as those identified by the United States, which have a significant impact on likeness in the particular context of gambling services. A number of third parties also appear to support examination of regulatory concerns on a case-by-case basis. The United States disagrees with Antigua's disjunctive reading of "services and service suppliers." If the text were intended to mean that likeness could be proven with respect to one or the other, but not both, it would have said services "or" service suppliers. Instead, the drafters chose the word "and," reflecting an intent to require that likeness of both the services and their suppliers be shown. The parties to the GATS negotiations did not intend that likeness with respect to suppliers only, or with respect to services only, without regard to one another, would be sufficient – the two are intertwined. A contrary reading would lead to absurd results – such as finding likeness of suppliers even though they supply different services.

3.211 The United States maintains its arguments regarding the particular regulatory concerns surrounding remote supply of gambling services, and wishes to emphasize and elaborate on a few key points. Remote supply of gambling services presents additional regulatory risks that do not exist, or are not present to the same degree, in non-remote settings, such as casinos. In a casino, the gambler must be physically present. Therefore, he or she can be identified with a reasonable degree of certainty. Casinos are thus able to restrict access to minors, known criminals, persons who are known to be financially insolvent, and so on. However, due in large measure to the virtual anonymity of remote media such as the Internet, remote supply gambling operations cannot reliably identify their customers. The evidence on age verification submitted by the United States to this Panel illustrates this fact. Similarly, disreputable suppliers can exploit the anonymity of remote media in ways not possible with non-remote supply of gambling services. Remote gambling also presents special health and youth protection risks in part because it is available to anyone, anywhere – including compulsive gamblers and children – who can gamble 24 hours a day with a mere "click of the mouse." Isolation and anonymity compound the danger. In the words of a gambling addict interviewed on the videotape provided by the United States, "nobody has to see you do it" and "nobody has to know."

3.212 With respect to Antigua's continuous argument that the United States has not shown the link between Internet gambling and various forms of crime, the United States has already established that remote supply of gambling is particularly susceptible to organized crime, money laundering, and other forms of crime, and also raised law enforcement concerns when discussing Article XIV. The United States remains unable to discuss pending law enforcement matters out of concern for compromising criminal investigations, but has located publicly available evidence of one case study that illustrates the link between criminal activity and Internet gambling. Mr. William Scott describes himself as one of the persons responsible for bringing gambling to the island of Antigua. Antigua licensed Mr. Scott to operate an Internet gambling site in spite of the fact that records available publicly show that Mr. Scott had been convicted of racketeering in the United States. In an October 2001 Canadian television broadcast, Mr. Scott admitted that he was a felon and had spent three years in prison. In an interview with the same Canadian program, the Solicitor General of Antigua, Mr. Lebrecht Hesse, stated that the Government of Antigua was not aware that this individual was a felon and that it had no indication of such during the "due diligence" process that led to the granting of a license to operate a gambling web site to a convicted felon. The segment of the broadcast transcribed below follows a long discussion of Mr. Scott's background and a Canadian company with which he did business. It picks up with Mr. Scott's release from prison and his decision to relocate his operations.

[...]

361 Ibid.
362 Ibid.
Rep: Antigua has a law that you can't – a licensee can't – have a criminal record.

You were sentenced to eight years for illegal bookmaking and extortion.

Mr. Scott: Illegal bookmaking and extortion, that's correct. [...] 

Rep: So how did you get around the rule in Antigua?

Mr. Scott: Uh, I think it was grandfathered in. I just put down, and they licensed me. [...] 

Rep: So how did Bill Scott slip through the cracks?

Solicitor General Hesse: How did he ... I don't know what you mean by that. He has a criminal record? [...] 

Rep: I spoke to him yesterday and he admits it.

Solicitor General Hesse: A due diligence was conducted on him and this did not come out.

Rep: Not a very good due diligence. It is not difficult to find out. Forgive me sir.

Solicitor General Hesse: No. We have people who conduct it. We don't do this due diligence ourselves.

Rep: So what do you do now?

Solicitor General Hesse: You have raised a very important issue and I have to mount an investigation into it.  

3.213 The United States submits that the report on this videotape states that convicted felon William Scott transferred his license to a relative. Notwithstanding that transfer, the tape showed him to be actively involved in the supply of gambling services. Mr. Scott still owned an Internet gambling concern based in Antigua as recently as last year, and to the best of US knowledge, he continues to provide gambling services by remote supply from Antigua. Mr. Scott does in fact have a lengthy criminal history in the United States. Most notably, he received three concurrent eight year sentences entered in 1984 after his guilty plea to three counts of a six-count criminal indictment. The indictment included one count of violating the Racketeer Influenced and Corrupt Organizations Act based upon multiple predicate acts of bribery of police officials, the act of conducting an illegal bookmaking business, and multiple acts of extortion for the payment of gambling debts through the use of violence or other criminal means to cause harm to a person. The indictment also contained five counts of extortion for the payment of gambling debts through threats of the use of violence or other criminal means to cause harm to a person. In 1998, the United States issued an arrest warrant for Mr. Scott based on a criminal complaint for federal gambling violations. Mr. Scott is a fugitive from that complaint. The United States argues that William Scott is by no means the only supplier of remote gambling services. There are many others operating from Antigua and other locations. The United States has already discussed its views on organized crime involvement in remote supply of gambling, and provided the views of the US Federal Bureau of Investigation. In the view of the United States, Mr. Scott is the tip of the iceberg.

3.214 On the related issue of money laundering, the United States disagrees with Antigua's statement that there is essentially no difference in the relative threat between remote and land-based casino gambling. Unlike casino gambling in which the gambler is physically present, Internet gambling allows for virtually anonymous and instantaneous communications that are difficult to trace to a particular individual or account. While it is true that casino gambling can be used, among other things, to launder the cash proceeds of crime during the placement stage of money laundering, remote supply of gambling is a convenient vehicle for money launderers to conceal the ownership and nature of the proceeds through layering and integration, the second and third stages of money laundering. Due in part to the virtual anonymity available to Internet gamblers, remote supply gambling operations are not susceptible to effective anti-money laundering and "know your customer" requirements. The volume and speed of remote transactions, combined with the virtual anonymity of 

363 Ibid.
such transactions, makes remote supply of gambling a prime mechanism for the money launderer to conceal and disguise the proceeds of illicit activity by creating a deceptive “paper trail” that makes the money appear to be legitimate. In the layering stage, money launderers conceal transactions by burying them in huge volumes of transactions daily and by creating records and “audit trails” that conceal and disguise the true nature, source and ownership of the ill-gotten gains of crime. Remote supply of gambling is especially well-suited to facilitate money laundering in the layering stage.

3.215 The United States further submits that Antigua is unable to persuasively rebut its own evidence on the differences in customers and customer experiences that distinguish remote and non-remote gambling. Bear Stearns has observed that Internet and land-based customers were not the same, to which Antigua replies, implausibly and without any basis, that this really means that the two services are competing for the same customers. Moreover, Antigua’s argument that gambling is only about the “experience of winning or losing” without regard to the recreational impact of remote or non-remote settings contradicts the statements of its own consultants. The United States further notes that Antigua implies that the United States somehow endorses statements by Antigua’s consultants that the Internet poses a lesser health risk than other forms of gambling. That is incorrect. In line with the views of the respected American Psychiatric Association, the United States continues to view Internet gambling as posing a greater health risk. And a reasonable observer could hardly deny that the Internet and other remote media propagate this risk to large new populations of potential victims.

3.216 The United States argues that Antigua makes assertions about lotteries and other distinct US gambling services without having proven likeness between these particular services and suppliers and any Antiguan services and suppliers. For example, Antigua asserts that lotteries target under age players, citing the example of an Iowa lottery form. In fact, the Iowa lottery, like other US lotteries, is age-restricted (in Iowa players must be 21). Had Antigua examined Iowa law, it would have found that Iowa regulations require a seven-day suspension of the license of any retailer that sells a ticket to an under age player, followed by 30 days for the second offence within one year, followed by one year for the third offence within one year.\(^ {365}\) US state lotteries enforce age restrictions, and in many cases offer special programs to curb under age gambling.\(^ {366}\) Moreover, members of the National Association of State and Provincial Lotteries subscribe to advertising restrictions designed to ensure that lottery advertising does not appeal to persons under the legal purchase age,\(^ {367}\) all of which is far more than Antigua could possibly do to limit under age Internet gambling, given the lack of effective age verification technologies. Finally, the United States rejects Antigua's assertions that despite clear evidence of money laundering, organized criminal activity and fraud involved in domestic gambling, the United States does not prosecute domestic illegal gamblers. The United States describes below in paragraph 3.235 the hundreds of prosecutions involving illegal gambling. However, only a handful of illegal gamblers based outside the United States have been prosecuted, such as Jay Cohen who is currently in prison.

3.217 Referring to the television documentary\(^ {368}\) submitted by the United States, Antigua submits that this video is offensive and totally irrelevant to the legal questions that arise in this proceeding: the fact that the United States seeks to adduce it as evidence at all, let alone at this late stage, makes the ruse all the more obvious. This programme portrays Antigua as a backwater, the Antiguan Solicitor General, who is African and whose mother tongue is not English, finds himself depicted as incompetent. The approach adopted by the producers of this documentary is precisely what one would expect from sensational commercial television seeking to maximise its viewing figures and advertising revenues. If the United States is struggling so much in this case that it needs to resort to a

\(^ {367}\) See http://www.naspl.org/nasplad.html.

\(^ {368}\) Canadian Broadcasting Corporation, “The Big Gamble”, broadcast on The Fifth Estate (31 October 2001).
media hatchet-job of a small developing country that does not have the clout to get a retraction, then the United States is really clutching at straws. The most offensive fact of all, however, is that by submitting this video as evidence, the United States explicitly adopts the views expressed in it as its own formal view vis-à-vis Antigua. If put in the context of the rest of the US argument, the United States is essentially saying that Antigua is a backwater, irredeemably incapable of organising a respectable gaming, or any other industry. This is an astonishing statement, which sends a message to all developing countries that they can be condemned with the weakest reputational attacks. The United States does not have to assess the regulatory efforts of Antigua and consequent behaviour of its operators – it can simply refuse market access to all Antiguan companies on the basis of outright prejudice.

3.218 Antigua notes, however, that this position is in stark contrast with the latest Strategy Report of the United States State Department concerning money laundering and financial crimes, published in March 2003, which describes at some length the responsible steps taken by Antigua to regulate its financial services and gaming industries, based on the United States own analysis by its competent agencies and not by a producer or a television station. It is also in contrast to a letter sent to the Prime Minister of Antigua and Barbuda a few weeks ago by the US Secretary of State, Mr Collin Powell, thanking him for Antigua’s cooperation in the fight against money laundering and drug trafficking. No regulatory system is foolproof. That is the case for gaming regulation in Antigua, but also for gaming regulation in the United States. A number of exhibits submitted by Antigua in this dispute make that abundantly clear. As to Mr. Scott, on whose example the United States seeks predominantly to rely, the facts do not in any event demonstrate that the Antiguan regulatory system is fatally flawed. The gambling related offences in relation to which Mr. Scott pleaded guilty took place 20 years before the documentary was made. When Mr. Scott first came to Antigua there was no gambling regulation in force but since its introduction he has to the best of our knowledge been scrupulously compliant in relation to every aspect. Two years ago Mr. Scott's company was sold to a publicly held Australian company and he retired from the business: the United States' statement that he "continues to provide gambling services by remote supply from Antigua" is therefore wholly false. The United States said he was the tip of the iceberg: given the falsity of their remarks about him, that iceberg has melted in the stark sunlight of truth. Overall, therefore, it is not clear why anything in this television programme makes a case against Mr. Scott which Antigua should have pursued, let alone a case against the Antiguan gaming industry as a whole. In any event, Antigua and the United States have a Mutual Legal Assistance Treaty under which the United States has made numerous requests and inquiries of Antigua, and received swift responses. If the United States has any concerns about any operator in the gaming industry in Antigua, why have they not brought this to the attention of our authorities so that appropriate action could be taken?

3.219 The United States replies that Antigua protests too much with regard to the Canadian Broadcasting Corporation program that the United States provided on video tape. Antigua has submitted dozens of journalistic reports as evidence, and this one submitted by the United States is no different; it is entitled to the same evidentiary weight. If anything, it has greater probative value because in the video the actors speak for themselves. Moreover, the lack of due diligence displayed before granting William Scott a license indicates that Antigua does not screen persons before granting them a licence to operate an Internet gambling site. While the due diligence requirement may be the law in theory, Antigua’s practice has sometimes diverged from this theory. This is a similar type of problem that was observed in the 1990s, when some of Antigua's offshore banks were found to be engaged in money laundering and persons of questionable character – some of whom were later convicted of fraud and money laundering in US courts – had been granted licenses to operate Antiguan banks. There is a similar concern regarding Antigua’s money laundering laws, which appears to have resulted in no convictions since they were enacted and the advisory issued by the US Treasury was withdrawn.

3.220 Concerning the reference made by Antigua to the report issued by the US Department of State in March 2003 as evidence that the US government has no concerns with Antigua, the United States wishes to quote from the first sentence of that report on page 209 under the heading of Antigua and Barbuda: "Antigua and Barbuda has comprehensive legislation in place to regulate its financial sector, but it remains susceptible to money laundering because of its loosely regulated offshore financial sectors and its Internet gaming industry." As reflected in the State Department report, the issue is not whether Antigua has laws on the books, the question is whether those laws are adequately enforced. The United States is also encouraged by the statement of the delegate of Antigua that Mr. Scott may no longer be operating an Internet gambling site in Antigua, this understanding that he operated the business as late as 2003 was based upon a document submitted by the United States to the Panel. The United States would be interested in Antigua’s views on how he got licensed in the first place, and continues to be concerned about the operation of gambling businesses through third parties, as cases have been prosecuted in the United States where a person who cannot be licensed continues to run a gambling operation through third parties.

(b) Treatment no less favourable

3.221 Antigua argues that the US Schedule provides no limitations on national treatment for the cross-border supply of gambling and betting services. The fact that the United States' measures at issue in this case disfavour services and service suppliers of other WTO Members compared to services and service suppliers of United States origin needs no further explanation.

3.222 The United States submits that on the "less favourable treatment" prong of Article XVII, Antigua again offers no argumentation at all; it merely asserts that this issue "needs no further explanation." The United States has pointed out from the earliest stages of consultations that its restrictions applicable to Internet gambling (and other forms of gambling services that Antiguan firms seek to supply on a cross-border basis) apply equally within the United States. Antigua fails to provide evidence or argumentation pointing to any US law or regulation restricting supply of services or service suppliers from outside the United States that is not accompanied by an equal or greater restriction on services originating inside the United States. Its claim therefore must fail. Underlying this failure of proof is a failure on the part of Antigua to address the fact that relevant restrictions on remote supply of gambling under US law, whether by Internet or other means, are based on objective criteria that apply regardless of the national origin of the service or service supplier. As the Chairman of the Group of Negotiations on Services observed with respect to Article XVII during the final stages of the Uruguay Round negotiations, "distinctions without a link to national origin and based on objective criteria would not normally violate the national treatment provisions." Stripped down to its essence, Antigua’s Article XVII claim is plainly unsustainable. If accepted, Antigua's argument would let Antiguan companies offer gambling on a scale and in a manner that would be illegal for US suppliers. Such an outcome would afford Antiguan companies treatment vastly more favourable than domestic suppliers – something that Article XVII clearly does not require.

3.223 Antigua replies that literally thousands of gambling and betting services are offered in the United States by state-sanctioned providers. Antigua has shown the existence and extent of these operations. On the other hand, it is not possible for Antiguan suppliers to obtain an authorization to supply gambling services on a cross-border basis. The United States nevertheless submits that there is no violation of Article XVII of the GATS because the laws that prevent Antiguan service suppliers from supplying gambling services by "remote" means also prevent United States domestic service suppliers from doing the same. Antigua disagrees. Article XVII:3 explicitly provides that formally

---

370 Ibid., p. 209.
371 Ibid., para. 5.
identical treatment can be less favourable if it modifies conditions of competition. Prohibiting foreign cross-border service suppliers from using means of remote communication makes it impossible for them to supply their services. The impact of that prohibition on domestic operators is clearly much less far reaching, as they can still supply services via other means even if not considered "remote." Thus, the "formally identical treatment" advanced by the United States modifies conditions of competition very considerably. In fact, it makes competition from Antigua and Barbuda impossible.

3.224 In Antigua’s view, “remote access” gambling is rampant across the United States in a variety of different forms, from the off-track betting services and the Internet-based betting to the most obvious form of “remote” gambling – the lotteries – which market their products in almost 180,000 stores, petrol stations, pharmacies, news stands, bars and restaurants (not to mention stand-alone self-service lottery vending machines) that have nothing but at best an electronic connection to the source of the lottery. The federal laws that prohibit the use of remote communication to offer gambling services do not apply to these operations, either because the remote communication does not cross a state or international border (which is the case for the lotteries) or because the operations have obtained an exemption (which is the case for the horse race betting industry). The United States argues that lotteries "are not offered by remote supply." 374 In fact, virtually all lottery games in the United States are offered by remote supply. Starting in the early 1980s, providers of United States lotteries invested heavily in electronic communications networks linking their central computers with thousands of purpose-built computer terminals set up in the approximately 180,000 retail points mentioned above for the specific purpose of making lottery gambling as accessible as possible. These communication networks have also allowed the lotteries to compete with casino-style gaming by offering more and more frequent games. Long before the arrival of the Internet, the lotteries referred to these games as "on-line" games. 375 In essence, Antiguan suppliers of "on-line" gambling games do the same as the lotteries. But rather than using the very expensive purpose-built communication networks that the US lotteries use, Antiguan operators use the generic technology of the Internet.

3.225 Antigua does not agree with the US arguments that the amendment of the Interstate Horse Racing Act allowing betting by the Internet has no legal effect under United States law. 376 Antigua cannot see how a law adopted by the United States Congress can have no legal effect, particularly given that operators in the United States are offering betting services via the Internet. Most importantly, however, the United States undertakes no law enforcement actions against these large scale Internet betting operations. If the United States continues to argue that these operations are unlawful under United States law, Antigua and Barbuda will have to withdraw its suggestion to the Panel not to examine the actions listed in Section III of the Annex to its Panel request as separate measures. In a situation of selective enforcement of the law against foreign suppliers only, law enforcement measures obviously "do something" that is relevant for the purposes of WTO law – they result in less favourable treatment. Antigua submits that the United States' inference that it is in the process of investigating these operations lacks credibility. The United States has undertaken considerable law enforcement efforts against Antiguan operators. Yet, no enforcement action whatsoever has been taken against its domestic operators, who must present a much easier law enforcement target, given their presence within the territory. The Panel should further note that one of these Internet betting businesses, Capital OTB, is a public corporation owned by the State of New York. In addition, the United States' position on this issue is linked to its attempt to characterise gambling opportunities in the United States as "confined to particular locations." As demonstrated in the map showing the locations of casinos in the United States 377, the "particular locations" (which on the map do not include the thousands upon thousands of lottery sales outlets mentioned above) do not appear very limited or "confined."

---

374 See above para. 3.22.
375 NGISC Final Report, p. 2-1.
376 See above para. 3.22.
3.226 The United States reiterates that the burden also rests on Antigua to provide evidence and argumentation showing that its services and suppliers receive "less favourable treatment." The United States again points out that US restrictions applicable to Internet gambling and other forms of gambling services that Antiguan firms seek to supply on a cross-border basis apply equally to those remote supply activities within the United States. In this regard the United States would like to correct the misstatement by Antigua that Antiguan gambling services "are prohibited because they are supplied from abroad." This is incorrect. The laws governing remote supply of gambling apply equally within the United States.

3.227 Antigua emphasises that to the extent that Article XVII of the GATS can play a role in this dispute, Antigua believes that the United States' total prohibition and the legislative and regulatory provisions, applications thereof and related practices that make up the total prohibition violate Article XVII in a number of ways. First, the United States' total prohibition, as such, violates the United States' commitment to national treatment of cross-border supply. Domestically supplied gambling and betting services are permitted whilst cross-border supply of foreign services is completely prohibited. Second, the federal laws and other legislative and regulatory provisions, applications thereof and related practices specifically prohibiting or preventing cross-border supply from Antigua whilst allowing domestic supply, whether remote or in person, within states by authorized domestic suppliers, result in less favourable treatment of Antiguan services and service suppliers. Third, the United States' authorities allow in a number of instances, whether because it is lawful or as a matter of selective enforcement of state and federal laws, the "remote" supply of gambling and betting services between states in the United States. The United States' authorities do not, however, allow cross-border supply of gambling and betting services from Antigua. Fourth, even if it were to be correct that all "remote" supply of gambling and betting services was effectively prohibited in the United States, quod non, the United States would still be in violation of Article XVII of the GATS because such formally identical treatment of Antiguan and United States origin services results in less favourable conditions of competition for Antiguan services and service suppliers: domestic operators can still supply their services "in person" (i.e. non-remote). For service suppliers in Antigua, however, it is obviously impossible to supply services in person. This violates Article XVII in the context of a full national treatment commitment to cross-border supply. Fifth, the state laws that prohibit all gambling, while exempting gambling specifically authorized but without providing a possibility for Antiguan operators to obtain an authorization to supply the same services on a cross-border basis, result in less favourable treatment of Antiguan services and service suppliers. Sixth, the state laws or regulations that grant exclusive or special rights to operators of domestic origin result in more favourable treatment of those domestic operators and their services compared to Antiguan services and service suppliers. And, seventh, the state laws that require the physical presence of the operator within the territory of the state result in less favourable treatment of Antiguan service suppliers that seek to supply their services on a cross-border basis.

3.228 The United States submits that it is important to recall that even within a group of like services or like suppliers, nothing in the GATS prevents the maintenance of nationality-neutral regulatory distinctions. Thus, even if one assumes for the sake of argument that Antigua could

---

378 See Antigua's reply to Panel question No. 16.
379 Antigua notes that some of these violations comprise de jure less favourable treatment whilst others comprise de facto less favourable treatment. Yet other violations are difficult to qualify as de jure or de facto less favourable treatment. The application of Article XVII, however, does not require the qualification of a particular instance of less favourable treatment as de jure or de facto. It only requires the establishment of less favourable treatment of like services.
380 See above paras. 3.106 and 3.107.
381 See above footnote 249.
382 See above para. 3.109.
show likeness between some remotely supplied gambling service and supplier and a non-remote gambling service and supplier (which it cannot), the United States may nonetheless maintain a regulatory distinction between remote and non-remote supply of gambling services. The GATS only requires that such distinctions, whether de jure or de facto, must afford no "less favourable treatment" to foreign suppliers on the basis of national origin (Article XVII:1 and XVII:2). It also provides that treatment that "modifies the conditions of competition" in favour of domestic like services or suppliers "shall be considered to be less favourable" (Article XVII:3). US restrictions on remote supply of gambling services comply with these requirements. One pair of commentators has observed that "a foreign crook who is subject to a nation's criminal laws is still receiving 'national treatment.'" That observation applies equally in this dispute. As the United States has repeatedly pointed out, US restrictions on remote supply of gambling apply regardless of national origin. Nonetheless, Antigua appears to make a claim of de jure discrimination based on its assertion that US law authorizes two domestic gambling services – pari-mutuel betting on horseracing and state lottery services – to operate by remote supply. Once again, Antigua's assertions are factually incorrect. The United States has addressed the issue of remote supply of pari-mutuel wagering on horseracing in its responses to the Panel's questions. To briefly summarize, Antigua claims that US federal law in the form of the Interstate Horseracing Act creates an "exemption" that permits remote supply of pari-mutuel wagering on horseracing by domestic suppliers. This is incorrect. US federal criminal statutes continue to prohibit the transmission of bets or wagers on horse races to the same extent that they prohibit other forms of remote supply of gambling services. The 2000 amendment to the Interstate Horseracing Act did not alter pre-existing federal criminal law. In fact, contrary to Antigua's claims, the Interstate Horseracing Act actually provides more favourable treatment to foreign suppliers of gambling services. As noted in the US response to the Panel's question 22, US laws do not prohibit remote supply of information assisting in the placing of pari-mutuel wagers on horseracing (or any other form of gambling) as long as the information is being transmitted from a place where that betting is legal to a place where that betting is legal. In the pari-mutuel horseracing context, the Interstate Horseracing Act imposes special requirements on the supply of such gambling services domestically (e.g., requiring certain written consent agreements), but does not impose any p. 30-31 ("[A] government is permitted to distinguish between otherwise "like" service providers by imposing regulatory distinctions based on some other characteristic of the service provider or service transaction.")

The United States considers that this distinction is not, contrary to Antigua's assertion, an intermodal distinction between cross-border supply and supply by local presence. A US domestic remote supplier is no less subject to US restrictions on remote supply of gambling than a remote supplier operating on a cross-border basis.

The United States recalls that, as noted above, Antigua still has not shown, and cannot show, that it offers "like services" through "like suppliers" with respect to either of these services.

See the United States' replies to Panel question Nos. 21-22.

In above para. 3.225, Antigua suggested in connection with this issue that it might "withdraw its suggestion to the Panel not to examine the actions listed in Section III of the Annex to its Panel request as separate measures," apparently for the purpose of asserting a new claim of de facto less favourable treatment. Antigua cannot "withdraw" its clarification regarding the measures at issue here. The Panel's terms of reference are what they are; they are established by the complaining Member's Panel request, not by how a responding party defends itself. Antigua has already clarified, in the Panel's words, that "it does not intend to treat the items listed in Section III as distinct and autonomous 'measures' but, essentially, will seek to rely upon them as evidence to illustrate the existence of a general prohibition against cross-border supply of gambling and betting services in the United States." See Communication from the Panel, 29 October 2003, para. 31, in Annex B of this Report. The Panel has therefore already determined that it "will not consider and examine [the items in Section III of the Panel request] as separate, autonomous measures." Ibid. Any attempt by Antigua to retract its clarification of its Panel request would amount to an improper attempt to expand the Panel's terms of reference.
requirements on cross-border supply of the same services.\textsuperscript{389} Foreign services and suppliers thus get a better deal under the Interstate Horseracing Act than their domestic counterparts.

3.229 According to the United States, Antigua asserts that lottery games are offered by remote supply in the United States, apparently because, unsurprisingly, state lotteries use computers and other electronic devices to communicate with their various offices and distributors. Each of the distribution mechanisms that Antigua identifies (stores, gas stations, pharmacies, newsstands, bars and restaurants, and vending machines) requires the service consumer to present himself or herself in person at an authorized lottery distribution location. Thus the supply of the service by these means is non-remote. In other words, Antigua simply confuses the fact that lotteries often have many retail points of presence with the entirely different concept of remote supply.

3.230 The United States argues that overshadowing Antigua’s \textit{de jure} national treatment claims regarding lotteries and pari-mutuel betting on horseracing is a much more ambitious claim about \textit{de facto} national treatment. Antigua argues that although US law provides "formally identical" treatment to foreign and domestic services and suppliers, the fact that it restricts remote supply of gambling more severely than non-remote supply alters the "conditions of competition" in the market for gambling services in a way that disfavours Antiguan suppliers. The basis for Antigua’s argument is difficult to discern. As a factual matter, one can only assume that the abolition of US restrictions on the remote supply of gambling would pose an enormous new competitive threat to Antiguan services and suppliers, as major US-based gambling service providers would begin offering their services in competition with those of Antiguan websites. Nonetheless, Antigua complains that it is disadvantaged because US domestic suppliers can still supply their services by means that are not remote. This argument fails because Antigua has not offered evidence of any restriction that would stop its suppliers from supplying their services by the same non-remote means available to domestic suppliers. Hence there is no national treatment violation. If what Antigua really means to argue is that it is inherently harder for foreign suppliers to supply non-remote services in the United States, then its argument is precluded by Article XVII, footnote 10, which states that:

"Specific commitments assumed under this Article shall not be construed to require any Member to compensate for any inherent competitive disadvantages which result from the foreign character of the relevant services or service suppliers."

3.231 Consistent with footnote 10, even if one assumes, contrary to fact, that the United States made a national treatment commitment for gambling services, the United States would be under no obligation to make up for the fact that Antiguan services and their suppliers are from somewhere other than Nevada, New Jersey, etc., and by reason of that fact may find it inherently more difficult to offer non-remote gambling services in the United States than would be the case for some domestic suppliers. Through footnote 10, the negotiators of the GATS anticipated and rejected precisely this kind of argument.

3.232 Antigua submits that the United States clearly has and enforces laws that specifically outlaw gambling services that cross international borders. This is \textit{de jure} discrimination in the context of a national treatment commitment for cross-border supply, irrespective of whether these laws also prohibit inter-state gambling. To the extent that these laws would indeed prohibit inter-state gambling, Antigua has shown that they are not enforced against domestic operators which also constitutes a discrimination. The US argument on less favourable treatment is entirely based on the notion of "remote supply," an unspecified distribution method which is allegedly not used by United States gambling operators. The United States argues, for instance, that lottery gambling is not "remote" because lotteries use computers and vending machines that are placed in the 180,000

\textsuperscript{389} 15 U.S.C. § 3002(3) (defining an "interstate off-track wager" to include only domestic wagers between US states); § 3004(a) (requiring a consent agreement as a condition precedent to acceptance of an interstate off-track wager).
"authorized lottery distribution locations" in the United States. But this obviously is "remote" gambling because the gambler does not need to physically go to the lottery to play. Rather, he can play in the local grocer, pharmacy, petrol station or other location where he must go to buy other products in any event. Furthermore lotteries do allow players to play at home. United States lotteries allow players to purchase tickets to participate in numerous drawings spread out over several months or even a year.\footnote{Information on how to play New York's Mega Millions lottery game, found at www.nylottery.org.} Players can verify winning numbers on the television or the Internet. Many United States lotteries allow players to purchase lottery tickets by post, pay by cheque or even credit card, and then claim any winnings by post – all without ever leaving the home.\footnote{See, for instance, the Virginia Lottery (which offers "subscriptions for season tickets" that can be ordered from home by regular post [www.valottery.com/megamillions/subcription.asp] and allows winnings to be collected by sending a signed lottery ticket, regular post, with a return address on it www.valottery.com/faq/kb_detail.asp?id=7]). The Illinois lottery's Internet web site offers players a downloadable form to purchase up to a year's worth of lottery tickets by mail, with payment to be made by credit card. (www.illinoislottery.com/subsections/Subscrip.htm). See also www.nylottery.org regarding "Lotto from Home" in New York.} Several United States lotteries also have games that allow players to participate from home in a televised lottery game.\footnote{For instance, the material on the Ohio lottery's "The Cash Explosion – Play-At-Home Bonus Box".} Some United States lotteries can even be played from home by minors under the age of 18, as illustrated by the form used by the Iowa lottery which allows under age gamblers to claim their winnings by post.\footnote{Iowa Lottery Winner Claim Form (the claim form specifies how minors under the age of 18 can claim their winnings [www.ialottery.com/LegalRequirements/claimform.pdf]).} Sports betting operators in Las Vegas also allow punters to place bets on events occurring in the near- or the far-distant future, return to their homes and claim their winnings by post days, weeks or months later.\footnote{Extract from the 2002 NAICS Definition, Exhibit AB-208 [sic]. The Panel notes that, when commenting on the draft descriptive part, Antigua indicated that the correct reference was to Exhibit AB-198, containing material from the "Venetian" casino in Las Vegas.}

3.233 Antigua submits that, given the absence of a clear definition of the term "remote",\footnote{In its reply to Panel question No. 20, Antigua has explained how it intended to use the term "remote gambling." The United States obviously uses this term in a different way.} a discussion concentrating on whether or not something is "remote" is unlikely to be fruitful. Rather the discussion should be conducted on the basis of the terms of Article XVII which requires "conditions of competition" that are "not less favourable" for "like services." In paragraph 3.230, the United States stated that Antigua "has not offered evidence of any restriction that would stop its suppliers from supplying their services by the same non-remote means available to domestic suppliers." This begs the question whether it would be legal for Antiguan operators to place computers in bars, shops or other outlets through which consumers could then gamble with Antiguan operators (similar to, for instance, the New York state lottery).\footnote{Information on how to play Quick Draw, found at www.nylottery.org.} Such an operation would violate state law because it is not specifically authorized and it would of course also violate the Wire Act and the other federal anti-gambling laws because the gambling service crosses an international border.

3.234 In Antigua's view, this gives rise to two further issues in the debate about the application of Article XVII to the inability of Antiguan services suppliers to use specific distribution methods. The first issue is "less favourable treatment within specific distribution methods." The United States allows its gambling operators to use distribution methods (whether intra-state or inter-state) that could be used by Antiguan operators to supply gambling and betting services on a cross-border basis: the Internet, telephone, post, television, vending machines, electronic links with computers and the like. The United States prohibits, however, the use of these distribution methods for Antiguan services. This inevitably results in a finding of "less favourable treatment." The second issue is "less favourable treatment across specific distribution methods." In Antigua's view, the United States also violates Article XVII by allowing domestic suppliers to use distribution methods that require physical
commercial presence (such as brick and mortar casinos) whilst prohibiting the use of a distribution method that can be used for cross-border supply (such as the Internet). Because of its commitment to national treatment of cross-border supply, the United States must allow Antiguan operators to compete with United States' brick and mortar casinos under equal conditions of competition. This does not mean that they should receive formally identical treatment (which is indeed unlikely in view of the different distribution method). It does, however, mean that the United States must allow fair competition.

3.235 The United States notes that Antigua has asserted a lack of prosecution of violators of US laws restricting remote supply of gambling, and horseracing in particular. The United States has already provided the Panel with statistics and individual cases attesting to the robust enforcement of such laws. To add to that information, the Organized Crime and Racketeering Section of the Department of Justice has compiled statistics concerning the number of racketeering prosecutions approved by the RICO Review Unit from 1992 to 2002 alleging predicate violations of federal gambling statutes 18 U.S.C. §1084, 18 U.S.C. §1955, or both. In other words, these are federal racketeering cases that were premised on two federal gambling laws. Over that period, the Department of Justice approved 90 of those cases. The United States does not keep statistics on the number of cases in which the fact pattern alleged involved international as opposed to purely domestic gambling activity. However, the Deputy Chief of the Organized Crime and Racketeering Section, has confirmed based on his many years of personal experience that the vast majority of these 90 cases involved purely domestic betting activity, not cross-border gambling. In fact, that is only a fraction of all the gambling cases pursued by the federal government. In all, US statistics show 125 cases filed under Section 1084 and 951 cases filed under Section 1955 between 1992 and September 2003. Many of those cases involve multiple defendants, so the number of individuals involved would be substantially higher. The majority of these cases involve the activities of organized crime syndicates. In addition there were cases filed under Section 1952 involving illegal gambling, but those statistics would include other kinds of cases as well, since Section 1952 is not limited to gambling. As these numbers reflect, illegal gambling continues to be a primary enforcement program in the 24 Organized Crime Strike Force Units in U.S. Attorneys' offices around the United States. All but a very few of these cases involve purely domestic illegal gambling activity. There have only been a handful of cases (some of them with multiple defendants) that involved supply of gambling from outside the United States.

3.236 The United States notes that, regarding horseracing in particular, Antigua asserts in its response to the Panel's question 19 that the United States fails to prosecute providers of remote gambling on horseracing. In fact there have been many reported court cases (representing just a small fraction of all prosecutions) in which the Department of Justice used federal gambling laws challenged by Antigua to prosecute illegal wagering on horseracing. Regarding the activities of entities such as Youbet.com, this issue came to prominence well after 1998, when the United States took action against Mr. Jay Cohen, Mr. Scott, and other Antigua-based remote suppliers. It was not until December 2000 that amendments to the Interstate Horseracing Act created what some now cite, incorrectly, as the statutory basis for Internet gambling on horseracing. The United States is aware of these activities and US law enforcement officials do not agree with assertions made by the service providers who rely on this alleged justification. While the United States is not at liberty to discuss pending investigations or prosecutions, it can point to the fact that Youbet.com itself disclosed in its

397 Antigua's reply to Panel question No. 19.
2002 annual report that "the United States Justice Department is in the process of taking action against selected companies that it deems to be operating without proper licensing and regulatory approval."400 The company added that, while it "believes that its activities conform" to applicable laws, "this conclusion is not free from doubt."401 The annual report went on to acknowledge that Youbet.com "faces the risk" of criminal proceedings and penalties brought by the government, and the United States agrees with that risk assessment.402 Finally, Antigua has raised the issue of restrictions on advertising for gambling services. Antigua, however, has again failed to identify what laws or regulations on this subject, if any, within the scope of the Panel’s terms of reference allegedly embody this restriction. The same is true of Antigua’s new assertions about the Indian Gaming Regulatory Act (“IGRA”). The IGRA is outside the Panel’s terms of reference.

3.237 Antigua rejects the US statement with regard to the activities of entities such as Youbet.com that "this issue came to prominence well after 1998.” Page 5-4 of the NGISC Final Report discusses the activities of Youbet.com and footnote 14 mentions that the website was visited on 17 March 1999. The activities of TVG are discussed at page 2-13 of the same report.

3.238 The United States notes that Antigua insists that it does not ask that its services and suppliers be treated more favourably than US services and suppliers. Yet at the same time, Antigua asks that the United States allow remote services and suppliers to operate cross-border from Antigua when they are not allowed to do so domestically. It also asks that the United States engage in the development of international standards to permit remote supply403 when no such standard permits such activity domestically. In short, these requests by Antigua make clear that it is in fact asking that its services and suppliers be allowed to do things that domestic services and suppliers cannot do.

6. GATS Article VI 404

3.239 Antigua argues that the United States maintains numerous laws and regulations prohibiting the supply of gambling and betting services unless a specific authorization has been granted. These are "measures of general application affecting trade in services" caught by Article VI:1 of the GATS. Many service suppliers of United States origin have been given an authorization to supply gambling and betting services. It is impossible, however, for foreign service suppliers to obtain an authorization to supply services on a cross-border basis or to even apply for such an authorization. Antigua submits that this constitutes a violation of Article VI:1 of the GATS.

3.240 Antigua further argues that Article VI:3 of the GATS implies that a WTO Member is obliged to make authorization procedures that are open to domestic service suppliers available to suppliers from other WTO Members that want to supply services on which a commitment has been made. By prohibiting all cross-border supply of gambling and betting services, the United States obviously does not fulfil that obligation with respect to those services.

3.241 The United States argues that Antigua’s claim fails both because of Antigua’s failure to prove the existence of relevant US commitments and because Antigua fails to meet its burden of proof, with respect to any particular measure(s), that such measure(s) are not "administered in a reasonable, objective, and impartial manner." Antigua has provided no evidence at all about the administration of any of the measures identified in its Panel request. In fact, such measures apply equally to all services

402 Ibid.

403 See below Antigua's arguments regarding GATS Article XIV.

404 In addition to the arguments presented here, see also parties' replies to Panel question No. 27 in Annex C of this Report.
and service providers, regardless of origin, and are routinely applied against domestic as well as foreign lawbreakers.\footnote{The United States notes that, since Antigua does not even purport to challenge specific US state or local laws authorizing (as opposed to restricting) various forms of gambling, any assertions relating to measures affirmatively authorizing gambling are beyond the scope of this dispute.}

3.242 The United States further submits that Article VI:3 contains certain transparency requirements relating to the processing of applications to supply a service in a committed sector. Antigua has not shown that the United States has undertaken any commitments regarding gambling services in general or cross-border gambling services in particular. Thus, Antigua cannot demonstrate that Article VI:3 is relevant in this dispute. Moreover, Antigua has pointed to no occasions on which US authorities have failed to inform Antiguan suppliers regarding decisions on their applications. Indeed, Antigua has not demonstrated that its gambling service suppliers have ever filed any relevant applications. Rather, Antigua asserts that Article VI:3 "implies" something that it does not say – that "a WTO Member is obliged to make authorization procedures that are open to domestic suppliers available to suppliers from WTO Members that want to supply services on which a commitment has been made." In fact, what Antigua is seeking is something that Article VI:3 on its face does not provide – namely, a requirement that the United States give foreign suppliers the right to provide services that even its domestic suppliers do not have a right to provide.

3.243 Antigua replies that given what has been demonstrated above, it is clear that the United States' conduct also violates Article VI:1 and Article VI:3 of the GATS. The United States has made a full commitment to the cross-border supply of gambling and betting services, yet while it prohibits all cross-border supply of these services from Antigua, numerous operators of domestic origin are allowed to supply gambling and betting services in the United States. This constitutes an obvious violation of Article VI:1. The United States submits that there is no such violation because the laws that are used against Antiguan service suppliers "are routinely applied against domestic as well as foreign lawbreakers." However, the numerous exemptions from these laws that have been granted to gambling operators of United States origin are not equally available for domestic as well as foreign operators.

3.244 Antigua reiterates that Article VI:3 provision implies that all authorization procedures that are open to domestic service suppliers should be equally open to suppliers from other WTO Members that wish to supply services for which a commitment has been made. United States domestic service providers can and do qualify for authorization to offer gambling and betting services. Yet Antiguan service providers cannot. The United States asserts that "Antigua has not demonstrated that its gambling service suppliers have ever filed any relevant applications," yet, on the other hand, it has made it very clear that all cross-border supply of gambling and betting services is prohibited. Given this, Antigua fail to see why Antiguan operators would have filed any applications for authorization, much less under what authority such a filing could have been made.

3.245 The United States submits that Antigua's claim does not correspond to the text of Article VI. Antigua cites portions of this provision relating to the administration of US measures, but it identifies no flaws in the administration of US gambling laws. Instead, its arguments seek to convert Article VI into an implicit obligation of better-than-national-treatment. Under Antigua's view, Article VI effectively means that Members must let cross-border suppliers supply services that are beyond the scope of activities permissible for suppliers with a local presence. The text of Article VI simply does not bear that interpretation. Antigua appears to believe, mistakenly, that by alleging an inconsistency with Article XVI or XVII, it has automatically proven, without evidence or argumentation, an inconsistency with Article VI. Antigua has failed to offer anything approaching a \textit{prima facie} case of violation of Article VI.
3.246 Furthermore, Antigua appears to be unable to cite any instance in which "authorization to supply" a gambling service in the United States was refused.\textsuperscript{406} Moreover, Antigua states that it "has not been able to investigate all the criteria that all states apply to authorize a domestic operator to offer gambling and betting services," making it difficult for the United States to understand how Antigua can credibly assert that such procedures "by their very terms exclude Antiguan suppliers." In any event, an examination of such procedures would seem to lie outside the Panel's terms of reference, since they were not identified in Antigua's Panel request.

7. GATS Article XI\textsuperscript{407}

3.247 Antigua argues that the United States also maintains measures that restrict international money transfers and payments relating to the cross-border supply of gambling and betting services. United States authorities particularly seek to restrict payments and transfers relating to "unauthorized" gambling and betting services with businesses that "usually operate offshore in foreign locations."\textsuperscript{408} "Legally authorized gaming transactions" are exempt from these measures.\textsuperscript{409} The purpose of these measures is to prevent foreign suppliers of gambling and betting services from offering their services on a cross-border basis. To the extent that these measures reinforce the prohibition measures discussed in paragraph 3.75 above, they violate Articles XVI:1, XVII and VI:1 of the GATS. These measures also violate Article XI:1 of the GATS.

3.248 The United States submits that Antigua asserts, again without any argument, that US measures to prohibit money transfers relating to gambling violate Article XI:1 of GATS. Antigua's claim fails first of all because of Antigua's failure to prove the existence of a relevant specific commitment. Moreover, even if such a commitment had been proven, Antigua has made no attempt to explain how or why any specific measure violates Article XI:1, and thus fails to make a \textit{prima facie} case. In asserting its claim, Antigua refers to "measures discussed in paragraph 3.75[.]". This paragraph makes reference to an agreement between the New York Attorney General and PayPal, Inc, which is found among the items in section III of the Annex to Antigua's Panel request. First of all, the United States notes the Panel's preliminary ruling that it will not consider and examine these items as "separate, autonomous measures."\textsuperscript{410} In any event, the text of the PayPal agreement provides that PayPal agrees to "cease processing any payments for online gambling merchants" involving New York members of PayPal and gaming not expressly authorized under US law.\textsuperscript{411} It further provides that PayPal agrees to "block automatically (...) any credit card or debit card funded payments by PayPals New York members" that should bear certain coding indicating an Internet gambling transaction.\textsuperscript{412} Antigua has provided no evidence that these provisions represent the application of restrictions on movements of funds across borders. On the contrary, by their own terms they apply

\textsuperscript{406} Antigua reply to Panel question No. 11.  
\textsuperscript{407} In addition to the arguments presented here, see also parties' replies to Panel question No. 29 in Annex C of this Report.  
\textsuperscript{408} "Financial giant joins fight against online gambling," Press Release from the Office of the New York State Attorney General (14 June 2002).  
\textsuperscript{409} "Agreement reached with Paypal to bar New Yorkers from online gambling," Press Release from the Office of the New York State Attorney General (21 August 2002). On 10 June 2003, the United States House of Representatives adopted legislation known as H.R.2143, the "Unlawful Internet Gambling Funding Prohibition Act". This is designed to unambiguously prohibit banks and other financial service providers from engaging in financial transactions involving gambling and betting services from non-United States based gambling operators (Section 4(2)(E)(ix) excludes "any lawful transaction with a business licensed or authorized by a State" thus exempting United States gambling operators from the prohibition to facilitate payment of Internet gambling services). The second component of the United States Congress, the Senate, has yet to adopt this legislation.

\textsuperscript{411} "Assurance of Discontinuance" signed between the New York Attorney General and Paypal Inc. (16 August 2002), para. 20.  
\textsuperscript{412} Ibid., para. 21.
without regard to whether the payments in question are destined for further transfer to a domestic or international destination.

3.249 Antigua replies that the United States attempts to deflect the issue of a violation of Article XI:1 by making use of its procedural tactics aimed at excluding the non-legislative items from the scope of this dispute. The United States stated above that actions by Attorneys General (and the actions of the New York Attorney General in the context of PayPal, Inc. in particular) are not relevant here as they do not constitute measures under the GATS because they are not binding; they are merely applications of United States domestic law. In the interest of procedural efficiency, Antigua suggested that the Panel not address the issue because it does not really matter for the adjudication of this dispute whether these actions constitute separate measures or whether they are examples clarifying the meaning of the law.

3.250 Antigua submits that in the case of the PayPal matter, paragraphs 14 through 16 of the agreement referenced in its Panel request identify the legal provisions that form the basis of the Attorney General's action in the case. The action by the New York Attorney General against PayPal confirms that these legal provisions can be used to stop money transfers to Antiguan gaming operators. If the United States would somehow dispute that this action by the New York Attorney General is correctly based on United States law, this would be another reason for Antigua and Barbuda to withdraw its suggestion to the Panel not to examine the measures listed in Section III of the Annex to its Panel request as separate measures. If, contrary to what the United States argued in its request for preliminary rulings, such an action is not based on legislation it becomes a separate "measure" in its own right, even within the restrictive interpretation of this term advanced by the United States. With regard to the substance of this matter, the United States argues that the Attorney General's action applies to any Internet gambling transaction and is not specifically aimed at the cross-border supply of such services. Not only is that irrelevant, but it is also inaccurate. Paragraph 20 of the PayPal agreement provides that PayPal shall cease processing payments "other than gaming transactions that are expressly authorized under New York law." Furthermore, the New York Attorney General has openly stated that the real objective of his actions against financial intermediaries is to stop gambling businesses that "usually operate offshore in foreign locations, beyond the enforcement power of local authorities." Indeed, there are no measures in New York or elsewhere in the United States that seek to stop financial transfers in relation to gambling transactions that are considered lawful in the United States.

3.251 The United States reiterates that Antigua's assertion that some US measure or measures violate Article XI, which deals with "restrictions on international transfers and payments," is completely unsubstantiated. Antigua offered no theory as to how or why a particular measure might violate Article XI, and it has conceded that the only example it cited in this regard — an agreement between the New York Attorney General and PayPal, Inc. — is not being challenged as such. This empty assertion is emblematic of Antigua's complete failure to offer evidence and argumentation in support of its substantive claims. To the extent that Antigua means to rely on items cited in the PayPal agreement, it bears the burden of providing evidence and argumentation concerning such items.

3.252 Moreover, insofar as Antigua is citing this agreement as evidence of the application of other measures, its arguments are misplaced. The PayPal agreement discusses New York gambling laws, but it does not say that such laws bar international payments and transfers for gambling services. The

---

415 Antigua's response to Panel's question 29.
agreement itself is not an application of those laws as such; rather, it is a mutual settlement of a disputed matter entered into in the exercise of the settlement authority possessed by both parties.\textsuperscript{416} Such settlements reflect only the parties' anticipation that one or more criminal penalties might be applied, and the crafting of an alternative solution agreed to by them – a solution that often does not resemble the actual application of the criminal penalties. The United States therefore submits that the voluntary remedies settled upon in the Paypal agreement are not probative of the meaning or application of the laws that gave rise to that dispute. Moreover, both the Paypal agreement and the underlying laws are neutral regarding the destination of payments. The fact that Paypal is permitted under the agreement to make transfers for forms of gambling that are lawful in New York does not indicate otherwise. Such transfers can be to domestic or international destinations, as can transfers for unlawful gambling.

8. **GATS Article XIV\textsuperscript{417}**

3.253 **Antigua** observes that it is possible that the United States may try to invoke one or more of the general exceptions of Article XIV of the GATS. It would of course be inconsistent for the United States to seek to do so given its principal position during consultations that it has made no commitment in relation to gambling and betting services. At the DSB meeting of 24 June 2003 the United States nevertheless stated that cross-border gambling and betting services are prohibited because of "the social, psychological dangers and law enforcement problems that they created, particularly with respect to Internet gambling and betting.\textsuperscript{418} The United States also expressed "grave concerns over the financial and social risks posed by such activities to its citizens, particularly but not exclusively children."\textsuperscript{419} Antigua also points out that in a Note, the WTO Secretariat states, with regard to the protection of public morals and the maintenance of public order under Article XIV, that "[M]easures to curb obscenity or to prohibit Internet gambling might well be justified on these grounds."\textsuperscript{420} Article XIV of the GATS is an "affirmative defence" and, if the United States were to invoke it, the burden of proof would be on the United States.\textsuperscript{421} Therefore, it is for the United States to make its case under Article XIV and for Antigua to respond. In the interest of procedural efficiency, Antigua nevertheless submits a number of general considerations on the interpretation of Article XIV of the GATS. Of course, Antigua will only be able to respond in full to a possible Article XIV defence when (and if) the United States presents one.

3.254 Antigua notes that Article XIV of the GATS has not yet been interpreted by panels or the Appellate Body. However, the interpretation and application of Article XX of the GATT 1994 (the corresponding GATT provision) by the Appellate Body, WTO panels and GATT panels provides useful and relevant guidance, particularly so because the text of Article XIV of the GATS and Article XX of the GATT 1994 is largely identical. The "chapeau" of both provisions is identical but for the reference to "trade in services" in Article XIV of the GATS (as opposed to the reference to "international trade" in Article XX of the GATT 1994). The subparagraphs of Article XIV of the GATS that the United States may try to invoke in this case use the pivotal term "necessary" to establish a connection between the subparagraph and the chapeau. The term "necessary" is used in a similar way in some of the subparagraphs of Article XX of the GATT 1994. In view of the similarity between Article XIV of the GATS and Article XX of the GATT 1994, Antigua submits that, just like Article XX of the GATT 1994, Article XIV of the GATS requires a two-tiered analysis: first,

---

\textsuperscript{416} "Assurance of Discontinuance" signed between the New York Attorney General and Paypal Inc. dated 16 August 2002., para. 10.  
\textsuperscript{417} In addition to the arguments presented here, see also parties' responses to panel's questions 44 and 45 in Annex C of this Report.  
\textsuperscript{418} WT/DSB/M/151, para. 47.  
\textsuperscript{419} Ibid.  
\textsuperscript{421} Appellate Body Report on US – Wool Shirts and Blouses, p. 16 (with regard to GATT Article XX).
provisional justification of a measure as "necessary" under one of the subparagraphs and, second, further assessment of the measure under the "chapeau."[422]

3.255 In Korea – Various Measures on Beef, the Appellate Body confirmed the "necessary" test adopted by the Panel in US – Section 337[423], i.e. that a measure is not "necessary" when "a WTO-consistent alternative measure which the Member concerned could 'reasonably be expected to employ' is available, or whether a less WTO-inconsistent measure is 'reasonably available'."[424] In Korea – Various Measures on Beef, the Appellate Body has also "outlined" a weighing and balancing process that is comprehended in the "reasonable alternative" test of the GATT Panel report US – Section 337:

"It seems to us that a treaty interpreter assessing a measure claimed to be necessary to secure compliance of a WTO-consistent law or regulation may, in appropriate cases, take into account the relative importance of the common interests or values that the law or regulation to be enforced is intended to protect. The more vital or important those common interests or values are, the easier it would be to accept as 'necessary' a measure designed as an enforcement instrument.

There are other aspects of the enforcement measure to be considered in evaluating that measure as 'necessary'. One is the extent to which the measure contributes to the realization of the end pursued, the securing of compliance with the law or regulation at issue. The greater the contribution, the more easily a measure might be considered to be 'necessary'. Another aspect is the extent to which the compliance measure produces restrictive effects on international commerce[425], that is, in respect of a measure inconsistent with Article III:4, restrictive effects on imported goods. A measure with a relatively slight impact upon imported products might more easily be considered as 'necessary' than a measure with intense or broader restrictive effects.

In sum, determination of whether a measure, which is not 'indispensable', may nevertheless be 'necessary' within the contemplation of Article XX(d), involves in every case a process of weighing and balancing a series of factors which prominently include the contribution made by the compliance measure to the enforcement of the law or regulation at issue, the importance of the common interests or values protected by that law or regulation, and the accompanying impact of the law or regulation on imports or exports."[426]

3.256 Antigua notes that the dispute on Korea – Various Measures on Beef concerned the application of Article XX(d) of the GATT 1994. When the Appellate Body interpreted Article XX(b) in EC – Asbestos, it referred back to its analysis of "necessary" in Korea – Various Measures on Beef.[427] This shows that the Appellate Body's analysis in Korea – Various Measures on Beef does not exclusively apply to Article XX(d) of the GATT 1994 but is likely to apply by analogy to all similar necessity tests, including those of Article XIV of the GATS.

3.257 In its report on US – Shrimp, the Appellate Body described Article XX of the GATT 1994 as requiring the following:

---

425 (original footnote) We recall that the last paragraph of the Preamble of the GATT of 1994 reads as follows: 'Being desirous of contributing to these objectives by entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international commerce.' (emphasis added)
"[A] balance must be struck between the right of a Member to invoke an exception under Article XX and the duty of that same Member to respect the treaty rights of the other Members. To permit one Member to abuse or misuse its right to invoke an exception would be effectively to allow that Member to degrade its own treaty obligations as well as to devalue the treaty rights of other Members. If the abuse or misuse is sufficiently grave or extensive, the Member, in effect, reduces its treaty obligation to a merely facultative one and dissolves its juridical character, and, in so doing, negates altogether the treaty rights of other Members. The chapeau was installed at the head of the list of "General Exceptions" in Article XX to prevent such far-reaching consequences."

3.258 In US – Shrimp, the Appellate Body found that the United States regulation at issue did not meet the chapeau's test because: (i) it imposed a "rigid and unbending" standard that left no scope for taking into account other specific policies and measures that an exporting country may have adopted to protect the general interest objective at issue; (ii) it imposed a "rigid and unbending" standard on other countries that did not take into account the conditions prevailing in the 'exporting countries;' and (iii) it had made no effort to pursue international cooperation with relevant countries in order to deal with the policy concerns at issue before imposing an import ban.

3.259 In US – Gasoline, the Appellate Body found that the words "discrimination between countries," in the chapeau of Article XX of the GATT 1994 covers discrimination between the exporting and importing country (national treatment) as well as discrimination between exporting countries (most favoured nation treatment).

3.260 The United States argues that Antigua has failed to make out its case. Indeed, it is unable to make out a case for the simple reason that there is no breach of any US GATS obligation. It is therefore unnecessary for the Panel to examine Antigua’s claims in light of Article XIV of GATS. Nonetheless, the United States believes that, in order to develop the fullest possible appreciation of the scope and gravity of the issues at stake in this dispute, it is important to understand the vital policy objectives served by US measures restricting gambling. In so doing, these US measures would easily meet the requirements of Article XIV. The fact that these measures so clearly fall within Article XIV also serves to confirm that it would have been incomprehensible for the United States to make them the subject of a specific commitment.

3.261 The United States notes that Antigua mentioned three statutes: 18 U.S.C. § 1084, 18 U.S.C. § 1952; and 18 U.S.C. § 1955. Since the "total prohibition" asserted by Antigua is not a notion capable of any independent existence under US law, an examination of Article XIV can only take place in the context of these specific measures. The United States therefore addresses the following discussion to the origins, operation, and purpose of the three statutes that Antigua has deigned to mention in the course of its arguments.

3.262 Following the inauguration of President John F. Kennedy, the US Department of Justice launched an all-out assault on organized crime in the United States. As part of that effort, Attorney General Robert F. Kennedy proposed the Attorney Generals Program to Curb Organized Crime and Racketeering. Sections 1084 and 1952 of Title Eighteen, United States Code, formed part of that program. Congress enacted them in 1961. Explaining the overall effect of his program, including the portions that would become §§ 1084 and 1952, Attorney General Kennedy observed that organized crime

429 Ibid., para. 163.
430 Ibid., para. 177.
431 Ibid., para. 171.
crime posed an "acute" danger to the United States, and that "the need for action is clear." The question, in his words, was "what can be done effectively to curtail these hoodlums and racketeers who have become so rich and so powerful." His answer:

"These people use interstate commerce and interstate communications with impunity in the conduct of their unlawful activities. If we could curtail their use of interstate communications and facilities, we could inflict a telling blow to their operations. We could cut them down to size.

Mr. Chairman, our legislation is mainly concerned with effectively curtailing gambling operations. And we do this, Mr. Chairman, because profits from illegal gambling are huge and they are the primary source of the funds which finance organized crime, all throughout the country."  

3.263 The United States argues that Attorney General Kennedy emphasized that the goal of his package would not be to displace state laws restricting gambling, but to aid in their enforcement. Noting that federal law enforcement work in other areas had been "effective" and "helpful to local law enforcement," he urged that similar enforcement cooperation between federal and state authorities was "essential in getting action against organized crime, which is so well organized and so well entrenched on a multistate basis that local law enforcement often is virtually powerless to act without aid and assistance of the federal government."  

3.264 The United States reiterates that Section 1084 prohibits a person in the business of betting or wagering from knowingly using a wire communication facility to transmit in interstate or foreign commerce bets or wagers or information assisting in the placing of bets or wagers. As previously noted, this statute does not prevent the cross-border supply of gambling information so long as the information assisting in the placing of certain types of bets or wagers is being transmitted from a state or foreign country where such wagering is legal to a state or foreign country where wagering on the same event is legal, or if the information is being transmitted for news reporting. The main purposes of § 1084, as articulated at the time of its consideration by Congress, are to aid in the enforcement of state and local laws and, in so doing, to suppress organized gambling. The legislative history describes them in the following terms:

"The purpose of the bill is to assist the various States and the District of Columbia in the enforcement of their laws pertaining to gambling, bookmaking, and like offences and to aid in the suppression of organized gambling by prohibiting the use of wire communication facilities which are or will be used for the transmission of bets or wagers and gambling information in interstate and foreign commerce."  

433 Kennedy testimony, p. 11.
434 Ibid., p. 2 ("Organized crime is nourished by a number of activities, but the primary source of its growth is illicit gambling. From huge gambling profits flow the funds to bankroll the other illegal activities I have mentioned including the bribery of local officials.").
435 Ibid.
436 Ibid.
438 House of Representatives Report No. 87-967, pp. 1-2 (1961). See also Kennedy testimony, p. 6 ("It cannot be overemphasized that this bill is designed, first to assist the States and territories in enforcement of their laws pertaining to gambling and like offenses. Second, the bill would in that regard help suppress organized gambling ....") (original emphasis omitted). Attorney General Kennedy emphasized that the legislation was not aimed at "a social wager between friends." Ibid., US court decisions have confirmed these purposes. For example, a 1983 decision of a federal appellate court found that § 1084 was enacted to assist the states in enforcing their own laws against gambling. See United States v. Southard, 700 F.2d 1 (1st Cir. 1983), cert. denied, 464 U.S. 823 (1983).
According to Attorney General Kennedy, the restrictions on remote supply of gambling reflected in § 1084 were needed as an additional enforcement tool because the use of wire communications technologies for the dissemination of gambling information frustrated local law-enforcement efforts.\textsuperscript{439}

3.265 The United States reiterates that Section 1952 of Title 18, United States Code, prohibits travelling in interstate or foreign commerce, or using the mails or any facility in interstate or foreign commerce, with intent to, \textit{inter alia}, "distribute the proceeds of any unlawful activity" or "otherwise promote, manage, establish, carry on, or facilitate the promotion, management, establishment, or carrying on, of any unlawful activity, and thereafter perform[] or attempting to perform" such act. The term "unlawful activity" is defined to include "any business enterprise involving gambling ... in violation of the laws of the State in which they are committed or of the United States." The primary purpose of § 1952, as articulated by Attorney General Kennedy, is to enable the Federal Government to "take effective action against the racketeer who conducts an unlawful business but lives far from the scene in comfort and safety."\textsuperscript{440} In his words, "[t]he target clearly is organized crime."\textsuperscript{441} Government investigations made it clear that "only the Federal Government can shut off the funds which permit the top men of organized crime to live far from the scene and, therefore, remain immune from the local officials."\textsuperscript{442}

3.266 Section 1955 of Title 18, United States Code, was enacted by Congress as part of Title VIII of the Organized Crime Control Act of 1970. In the Statement of Findings prefatory to that Act, Congress described the threat posed by organized crime in grave terms:

"(1) organized crime in the United States is a highly sophisticated, diversified, and widespread activity that annually drains billions of dollars from America's economy by unlawful conduct and the illegal use of force, fraud, and corruption; (2) organized crime derives a major portion of its power through money obtained from such illegal endeavours as syndicated gambling, loan sharking, the theft and fencing of property, the importation and distribution of narcotics and other dangerous drugs, and other forms of social exploitation; (3) this money and power are increasingly used to infiltrate and corrupt legitimate business and labour unions and to subvert and corrupt our democratic processes; (4) organized crime activities in the United States weaken the stability of the Nation's economic system, harm innocent investors and competing organizations, interfere with free competition, seriously burden interstate and foreign commerce, threaten the domestic security, and undermine the general welfare of the Nation and its citizens."\textsuperscript{443}

3.267 The United States notes that Section 1955 prohibits conducting, financing, managing, supervising, directing, or owning all or part of an illegal gambling business. Section 1955(b) defines the term "illegal gambling business" as "a gambling business which – (i) is a violation of the law of a State or political subdivision in which it is conducted; (ii) involves five or more persons who conduct, finance, manage, supervise, direct, or own all or part of such business; and (iii) has been or remains in substantially continuous operation for a period in excess of thirty days or has a gross revenue of $2000 in any single day." Congress articulated three broad reasons for including § 1955 in the Organized Crime Control Act. First, the Congress and the President viewed gambling income as the "lifeline of organized crime" and the means by which it financed other activities.\textsuperscript{444} Second, Congress

\textsuperscript{439} Kennedy testimony, p. 5.
\textsuperscript{440} Kennedy testimony, p. 15.
\textsuperscript{441} Ibid., p. 16.
\textsuperscript{442} Ibid.
\textsuperscript{444} 116 Congressional Record H9711 (daily ed. 7 October 1970) (Statement by Rep. Poff).
and the President expressed concern that gambling "preys upon society," especially the poor.\footnote{Ibid. See also House of Representatives Rep. No. 91-1549, p. 53 (1970), reprinted in 1970 U.S.C.C.A.N. 4007, 4029, ("The provisions of this title [referring to 18 U.S.C.§ 1955] do not apply to gambling that is sporadic or of insignificant monetary proportions. It is intended to reach only those persons who prey systematically upon our citizens and whose syndicated operations are so continuous and so substantial as to be of national concern, and those corrupt State and local officials who make it possible for them to function.").}

Third, from a law enforcement standpoint, gambling is more susceptible than most organized crime activities to detection and prosecution.\footnote{Ibid., at H9712.} Commenting on the law enforcement purpose in particular, a legislator observed that:

"[T]itle VIII's expansion of the Federal jurisdiction over large scale gambling cases will improve local efforts [to enforce antigambling laws], not merely by providing an impetus for effective and honest local law enforcement, but also by making available to assist local efforts the expertise, manpower, and resources of the Federal agencies which under existing Federal antigambling statutes have developed high levels of special competence for dealing with gambling and corruption cases."\footnote{116 Congressional Record H9711 (Statement by Rep. Poff).}

Several US courts have confirmed and elaborated on these purposes.\footnote{See, e.g., United States v. Scavo, 593 F.2d 837, 841 (8th Cir. 1979) (In enacting § 1955, Congress did not intend to make all gambling businesses subject to federal prosecution; rather the statute was "intended to reach only those persons who prey systematically upon our citizens and whose syndicated operations are so continuous and so substantial as to be of national concern..." (quoting House of Representatives Rep. No. 1549, 91st Cong. 2d Sess. (1970)); United States v. Hawes, 529 F.2d 472, 478 (5th Cir. 1976) (It is not the purpose of § 1955 to prohibit gambling, but only to prohibit "illegal" gambling of such a size as would affect interstate commerce. Organizers of illegal gambling activities are among the organized criminal elements targeted by Congress.).}

For example, the courts have confirmed that § 1955 is a measure against organized crime\footnote{United States v. Box, 530 F.2d 1258, 1264-65 (5th Cir. 1976) (Clearly, the dominant concern motivating Congress to enact § 1955 was that large-scale gambling operations in this country have been closely intertwined with large-scale organized crime, and indeed may have provided the bulk of the capital needed to finance the operations of organized crime. The target of the statute was large-scale gambling operations – local "mom and pop" bookmaking operations were to be left to state law.).} and that it provides an enforcement tool in cases where local officials fail to prosecute illegal gambling.\footnote{United States v. Nugent, 389 F. Supp. 817, 819 (W.D. La. 1975) The legislative history of 18 U.S.C. § 1955 indicates Congress' intention to place in the hands of the prosecutor a weapon with which to attack the corruption of local law enforcement personnel and public officials by persons involved in illegal gambling operations.).

3.268 Because all of the foregoing measures operate in part as measures to enforce state restrictions on gambling, it may be useful for the United States to elaborate on the policy concerns that underlie state-level restrictions. Generally speaking, state laws prohibiting or restricting various forms of gambling rest on state policies relating to public health, safety, welfare, and the preservation of good order. The examples of state gambling policies submitted by the United States provide further elaboration on these state policies.

3.269 The United States submits that Article XIV of the GATS is clear that "nothing" in the GATS "shall be construed to prevent the adoption or enforcement by any Member of measures" falling within the terms of that article. Accordingly, there can be no doubt that the United States may maintain sections 1084, 1052, and 1955 since they meet the requirements of Article XIV, over and above the fact that they are also consistent with the remainder of the GATS. In order to meet the requirements of Article XIV, a measure must fall within the scope of paragraphs (a) to (e) of Article XIV, and it must meet the requirements of the introductory provisions in the \textit{chapeau} of
Article XIV. Article XIV has not been interpreted through dispute settlement. Some of its provisions are similar to provisions of Article XX of the GATT, while others differ in certain respects.

3.270 The operative language in the opening phrases of Article XIV(c) of the GATS is virtually identical to Article XX(d) of the GATT 1994. Article XIV(c) protects measures that are "necessary to secure compliance with laws or regulations which are not inconsistent with the provisions of [the GATS]." The text states that these measures include, *inter alia*, laws or regulations relating to "the prevention of deceptive and fraudulent practices" and laws or regulations relating to "safety." The text indicates that this GATS provision applies to laws that are (i) designed to "secure compliance" with laws or regulations not themselves inconsistent with some provision of the GATS, and (ii) "necessary" to that end.

3.271 The United States argues that, first, a panel must determine whether the measure in question is designed to ensure compliance with other WTO-consistent measures. Article XIV(c)(i)-(iii) provides examples of these types of measures – examples that are intended to be illustrative rather than exhaustive, as indicated by the use of the word "including." Second, a panel must examine whether a measure is "necessary." In doing so it should apply the ordinary meaning of the term, which has been described in the following manner by the Appellate Body:

"The word 'necessary' normally denotes something 'that cannot be dispensed with or done without, requisite, essential, needful. We note, however, that a standard law dictionary cautions that:

[This word must be considered in the connection in which it is used, as it is a word susceptible of various meanings. It may import absolute physical necessity or inevitability, or it may import that which is only convenient, useful, appropriate, suitable, proper, or conducive to the end sought. It is an adjective expressing degrees, and may express mere convenience or that which is indispensable or an absolute physical necessity."

The United States notes that this ordinary meaning indicates that "the word 'necessary' is not limited to that which is 'indispensable' or 'of absolute necessity' or 'inevitable.'" Moreover, the concept of necessity is a continuum that may extend, depending on the nature of the interest served, all the way to measures that "make a contribution" to compliance. In the services context, a panel should also bear in mind the particular objects and purposes of the GATS, including recognition of the

452 GATS Article XIV(c)(i).
453 GATS Article XIV(c)(iii).
454 Appellate Body Report on *Korea – Various Measures on Beef*, para. 157 ("For a measure, otherwise inconsistent with GATT 1994, to be justified provisionally under paragraph (d) of Article XX, two elements must be shown. First, the measure must be one designed to 'secure compliance' with laws or regulations that are not themselves inconsistent with some provision of the GATT 1994. Second, the measure must be "necessary" to secure such compliance.")
455 Panel Report on *Canada–Periodicals*, para. 5.9 (interpreting Article XX of the GATT).
456 The United States notes that the views expressed here regarding the term "necessary" under Article XIV of the GATS are restricted to that context, and do not necessarily apply to the same term in other provisions of the GATS, or in other WTO agreements.
459 Ibid. (interpreting Article XX of the GATT).
"right of Members to regulate." This includes the right of a Member to heavily restrict a highly risky service (in this case, gambling by remote supply) while allowing the use of a less risky service.  

3.273 The United States argues that Congress designed §§ 1084, 1952, and 1955 in large part to serve as law enforcement tools to secure compliance with other WTO-consistent US laws. Most obviously, these statutes "secure compliance" with state laws restricting gambling and other like offences by enhancing the enforcement of such measures. Sections 1084, 1952, and 1955 make an essential contribution to the enforcement of state law. Before these federal laws existed, violators of state gambling laws often avoided prosecution by supplying their services remotely, from locations out of reach of state and local law enforcement authorities. Sections 1084 and 1952 address that problem by enabling federal law enforcement authorities to pursue remote suppliers of illegal gambling who violate state law, even if those violators are beyond the reach of state or local authorities. Section 1955 similarly furthers enforcement of state laws by enabling federal authorities to pursue large gambling businesses that violate state law, especially in cases where state authorities are unable or unwilling to address the problem. The design of §§ 1952 and 1955 confirms their role as enforcement measures, inasmuch as a violation of state law is an express element of the offence described in each of those statutes. In the case of § 1084, the same characteristic is reflected in the fact that the statute includes an exception in § 1084(b) the scope of which depends on the extent to which gambling activity is lawful under state law. Moreover, as described above, the legislative history of these measures is painstakingly explicit in recording the fact that they were designed in large part as measures to aid in the enforcement of state restrictions on gambling in situations where such compliance was doubtful.

3.274 The United States argues that as to the substance and WTO-consistency of the state laws with which these measures are designed to secure compliance, it suffices to note that most of them are among the many measures included in the CD-ROM containing copies of State and Territorial Legislation that Antigua provided to the Panel; yet Antigua has failed to make out a prima facie case with respect to any of these measures. Therefore their WTO consistency can be presumed. Section 1952 also secures compliance with other state laws not challenged by Antigua, including laws relating to liquor, narcotics, and prostitution. The state gambling laws, which §§ 1084, 1952, and 1955 help to enforce, protect fundamentally important state policies relating to public health, safety, welfare, and the preservation of good order. Prominent among these is society's interest in remaining free from crime, and organized crime in particular. More generally, these policies protect the public from the law enforcement, consumer protection, health, and other concerns associated with gambling and more fully described elsewhere by the United States.  

3.275 As measures against organized crime, §§ 1084, 1952, and 1955 are necessary to secure compliance with all the various WTO-consistent US criminal laws violated by organized crime activities. As discussed above, §§ 1084, 1952, and 1955 are clearly measures against organized crime, and legislative history and subsequent interpretations confirm that purpose. Inherent in the concept of "organized crime" are certain types of criminal activity in which organized crime groups typically engage. The specific crimes most closely associated with organized crime include, in

---

460 Appellate Body Report on EC–Asbestos, para. 168 (interpreting Article XX of the GATT) ("Accordingly, it seems to us perfectly legitimate for a Member to seek to halt the spread of a highly risky product while allowing the use of a less risky product in its place.")

461 One relevant group of statutes not included in that selection is are the statutory age limits on participation in gambling activities established by every US state. Antigua has acknowledged the existence of these restrictions. As with other state-level restrictions, §§ 1084, 1952, and 1955 are necessary to secure compliance with these laws.

463 See above paras. 3.189-3.195.

464 The United States notes that, in the words of one commentator, every organized crime activity is made up of "more specific crimes, which constitute what we know as organized crime." See Jay S. Albanese,
addition to gambling offences, such crimes as loan sharking (i.e., illegal lending), prostitution, the sale and distribution of drugs and/or pornography, the fencing (i.e., illegal purchase) and distribution of stolen property, money laundering, and labour racketeering (i.e., the use of force or threats to obtain money for ensuring jobs or labour peace).\(^{465}\) In addition, the pursuit of these organized crime activities often entails acts or threats of murder, kidnapping, arson, robbery, bribery, and extortion, not to mention lesser crimes such as assault, fraud, and larceny.\(^{466}\) The Panel will not be surprised to learn that all of the foregoing offences are crimes under the federal and/or state laws of the United States. The WTO consistency of these US criminal laws is not in question, nor could Antigua seriously dispute the importance of the interests that they serve. Nor can it seriously question the importance of combating organized crime.

3.276 The United States notes that to effectively enforce these underlying criminal laws against organized criminals, law enforcement authorities require special statutory tools that are adapted to the challenges posed by sophisticated, well-financed criminal groups. Sections 1084, 1952, and 1955 are three such tools.\(^{467}\) As with terrorist groups and other criminal groups, one essential enforcement strategy for pursuing organized crime is to place restrictions on its major sources of funds.\(^{468}\) Gambling has long been recognized as a major source of funds for organized crime, and clearly a major purpose behind the enactment of §§ 1084, 1952, and 1955 was to restrict that source of funds and ensure that it would not escape the scrutiny of law enforcement officials.\(^{469}\) Congress further confirmed the association between these specific measures and enforcement in the field of organized crime when it enacted Title IX of the Organized Crime Control Act of 1970, known as the Racketeer Influenced and Corrupt Organizations Statute, or, more commonly the "RICO" statute.\(^{470}\) In the RICO statute, Congress defined "racketeering activity" as including, inter alia, acts indictable under §§ 1084, 1952, and 1955.\(^{471}\)

3.277 In addition, §§ 1084, 1952, and 1955 were all enacted out of the firmest possible conviction that they were indispensable to defeating organized crime.\(^{472}\) The Senate Report for the Organized Crime Control Act of 1970 thus stressed that:

"What is needed here ... are new approaches that will deal not only with individuals, but also with the economic base through which those individuals constitute such a serious threat to the economic well-being of the Nation. In short, an attack must be

\(^{465}\) Ibid., pp. 19-20.  
\(^{466}\) 18 U.S.C. §1961(1)(A) (defining "racketeering activity" in part to include "any act or threat involving murder, kidnapping, gambling, arson, robbery, bribery, extortion, dealing in obscene matter, or dealing in a controlled substance or listed chemical .. which is chargeable under State law and punishable by imprisonment for more than one year.").  
\(^{467}\) See above paras. 3.261-3.267.  
\(^{468}\) United States Attorney' Bulletin, June 1999, p. 27, available at http://www.usdoj.gov/usao/eousa/foia_reading_room/usab4703.pdf ("Most crimes have some type of financial gain as the primary motive. Curtailing or eliminating the proceeds of criminal activity can have a substantial impact on reducing crime overall. ... Taking the profit out of crime is also an important step in eliminating the operating capital needed to fund ongoing criminal activity.").  
\(^{469}\) See above paras. 3.262-3.267.  
\(^{472}\) For example, Attorney General Kennedy testified before the U. Senate that there was an "acute need" for §§ 1084 and 1952. Kennedy testimony, p. 17. See also ibid., p. 5 (§ 1952: ["T]his bill is vital. We need it. Local law enforcement officials need it. The country needs it.").
made on their source of economic power itself, and the attack must take place on all available fronts."\(^{473}\)

As this quotation suggests, a major goal of US law enforcement efforts against organized crime is to attack its sources of money and power.

3.278 The United States notes that Article XIV(a) provides a general exception for measures that are "necessary to protect public morals or to maintain public order." The text does not elaborate on these provisions except to note, with respect to public order, that "[t]he public order exception may be invoked only where a genuine and sufficiently serious threat is posed to one of the fundamental interests of society."\(^{474}\) Article XIV(a) provides an exception for measures "necessary to protect public morals or to maintain public order." The term "public order" refers to the familiar civil-law concept denoted in French by the expression "ordre public" and its functional counterpart in common-law systems, the concept of "public policy" (although the latter term is also used in other contexts with a broader meaning).

In the words of Judge Lauterpacht, the concept of "public order" refers to the "fundamental national conceptions of law, decency and morality."\(^{475}\) "Public morals" in turn refers to standards of right and wrong that can be described as "belonging to, affecting, or concerning the community or nation."\(^{476}\) The concepts of public order and public morals are closely associated with restrictions on gambling. For example, the original use of "public morals" in the GATT followed prior multilateral trade negotiations in which it was well-understood that restrictions on the importation of lottery tickets—the forerunner of modern restrictions on cross-border gambling—would fall within the public morals exception.\(^{477}\) Indeed, Members continue to maintain similar restrictions for similar reasons.\(^{478}\) As to Internet gambling in particular, Antigua has correctly noted

\(^{473}\) Senate Rep. No. 91-617, 91st Cong., 1st Sess., p. 79 (1969). President Nixon similarly noted in his Message on Organized Crime that organized crime's "economic base is principally derived from its virtual monopoly of illegal gambling, the numbers racket, ... the importation of narcotics," and certain other crimes. Ibid., p. 35. The Senate Report also incorporated the American Bar Association's conclusion that "[t]he magnitude of the [organized crime] problem makes it clear that all legitimate methods of combating organized crime must be utilized." Ibid., p. 76.

\(^{474}\) Article XIV, footnote 5.

\(^{476}\) "Public" means "of or pertaining to the people as a whole; belonging to, affecting, or concerning the community or nation," and "moral" means "Of or pertaining to human character or behavior considered as good or bad; of or pertaining to the distinction between right and wrong....". See New Shorter Oxford English Dictionary, pp. 1827, 2204.

\(^{477}\) The United States notes that the Economic Committee of the League of Nations put forward a draft convention that included an exception for "[p]rohibitions or restrictions imposed for moral or humanitarian reasons or for the suppression of improper traffic, provided that the manufacture of and trade in the goods to which the prohibitions relate are also prohibited or restricted in the interior of the country." See Abolition of Import and Export Prohibitions and Restriction, Commentary and Preliminary Draft International Agreement drawn up by the Economic Committee of the League of Nations to serve as a Basis for an International Diplomatic Conference, League of Nations Doc. C.E.1.22. 1927 II.13. pp. 10, 15 (1927). Commenting on this draft, the US State Department observed that the moral exception was "necessary" because of "American prohibitions or restrictions imposed for moral or humanitarian reasons or to suppress improper traffic relate inter alia to intoxicating liquors, smoking opium and narcotic drugs, lottery tickets, obscene and immoral articles, ... [etc.]." Department of State, The Secretary of State to the Minister in Switzerland (Wilson), in Papers Relating to the Foreign Relations of the United States, 1927, p. 257 (1942) (emphasis added). In the debate over the proposed exception, the representative of Egypt asked whether a prohibition on the importation of foreign lottery tickets would be covered by the moral exception. The president of the conference stated that such prohibitions would be covered by the exception for measures adopted for "moral or humanitarian reasons." International Conference for the Abolition of Import and Export Prohibitions and Restrictions, Proceedings of the Conference, p. 110, League of Nations Doc. C.21.M.12. 1928 II.7, p. 110 (1928).

\(^{478}\) The United States argues that, for example, the 1999 Trade Policy Review of Israel observed that Israel maintained an import prohibition on "[t]ickets or publicity items for lottery or gambling" and identified the reason for this prohibition as "[p]ublic morals." Trade Policy Review - Israel - Report by the Secretariat,
that the WTO Secretariat in 1998 observed, with regard to the protection of public morals and the
maintenance of public order under Article XIV, that "[m]easures to curb obscenity or to prohibit
Internet gambling might well be justified on these grounds."\textsuperscript{479} In the GATS, invocation of the
"public order" portion of this exception is limited to measures necessary to respond to "genuine and
sufficiently serious" threats to a fundamental interest of society.

3.279 Remote supply of gambling raises significant concerns relating to the maintenance of public
order and the protection of public morals. The United States has shown that gambling by remote
supply is particularly vulnerable to various forms of criminal activity, especially organized crime.\textsuperscript{480}
Maintaining a society in which persons and their property exist free of the destructive influence of
organized crime is both a matter of "public morals" and one of "public order." As Congress found
when it enacted the Organized Crime Control Act, the specific threats posed by organized crime
include, among others, social exploitation; corruption and subversion of the democratic processes;
economic losses and instability; and diminution of the domestic security and general welfare of the
United States and its people.\textsuperscript{481} These grave concerns meet the high standard for "genuine and
sufficiently serious" threats to a fundamental interest of society, as required in the case of "public
order" by footnote 5 of the GATS.

3.280 According to the United States, Antigua’s own evidence dispels any possible doubt about the
gravity of such concerns in the specific context of remote supply of gambling. The first paragraph of
the Bear Stearns report submitted by Antigua states that:

"Many offshore jurisdictions, particularly those in the Caribbean, exert little or no
regulatory control over gambling site operators, who are for the most part unknown.
More importantly, they are beyond the control of the US Justice Department. Still,
these sites generate up to 60% of their revenues from the vast American market.
They are a direct pipeline of dollars out of the US into virtually unknown hands. In
addition, such sites fall under loose offshore reporting requirements, so it is unclear
how these funds are spent. \textit{In our view, this uncertainty could pose a risk to national
security from terror and/or criminal organizations.}\textsuperscript{482}"

\textsuperscript{479} The Work Programme on Electronic Commerce, Note by the Secretariat, 16 November 1998,
S/C/W/68, para. 26. While not legally binding, this observation by the Secretariat further confirms the
association between restrictions on gambling and the protection of public morals and maintenance of public
order.

\textsuperscript{480} See above paras. 3.189-3.192.

\textsuperscript{481} See above para. 3.266 (quoting Statement of Findings accompanying the Organized Crime Control

\textsuperscript{482} See Bear Stearns, \textit{E-Gaming: A Giant Beyond Our Borders}, (September 2002), p. 1 (emphasis
added). See also ibid., p. 40, (discussing Antigua and five other jurisdictions, and concluding that "although
these major markets provide for some of the most lucrative and popular gaming sites on the Internet, they also
provide for the least amount of public information. In our view, this lack of access to information increases the
risk profile of the region tremendously. As we stated earlier in this report, we believe that the Caribbean
3.281 The United States argues that Antigua's own evidence thus confirms that the United States is not alone in viewing remote supply of gambling as a potential vehicle for organized crime and other forms of lawlessness that threaten public order and public morals. In addition, the United States has shown that remote supply greatly expands gambling opportunities into settings – such as homes and schools – where it has not traditionally been present and is not subject to the controls present in other settings. By thus expanding gambling from controlled settings into uncontrolled settings, remote supply expands the audience of potential gamblers – most notably by making it easy for children to gamble. While adults can be expected to exercise their own moral judgment, society recognizes that children have a less well-developed sense of right and wrong. Thus the availability of gambling in uncontrolled settings naturally provokes concerns about public morals that are present to a far lesser degree when gambling is conducted away from homes and schools and subject to verifiable age controls.

3.282 The United States has already shown that §§ 1084, 1952, and 1955 are indispensable tools in the fight against organized crime and other forms of criminality. At the same time, these statutes serve to suppress betting by remote supply, and are in that respect necessary to prevent the intrusion of gambling into uncontrolled settings. Taken together, these public order and public morals concerns should lead a panel to conclude that remote supply of gambling poses a grave threat to the maintenance of public order and the protection of public morals in the United States – certainly enough so to justify the maintenance and enforcement of origin-neutral restrictions on gambling such as those found in §§ 1084, 1952, and 1955.

3.283 The United States submits that the chapeau of Article XIV imposes an additional requirement that any measure provisionally justifiable under (a) through (e) not be "applied in a manner which would constitute a means of arbitrary and unjustifiable discrimination between countries where like conditions prevail, or a disguised restriction on trade in services." The purpose of the chapeau of Article XIV is to avoid abuse or misuse of the particular exceptions set forth in Article XIV(a) through (e). The restrictions in §§ 1084, 1952, and 1955 meet the requirements of the chapeau. None of these measures introduces any discrimination on the basis of nationality. On the contrary, as the United States has repeatedly observed, they apply equally regardless of national origin. Therefore the only question with respect to the chapeau is whether these laws constitute "a disguised restriction on trade in services." Antigua has asserted that the real purpose of US restrictions on remote supply of gambling is protectionism. As the foregoing discussion of the legislative history of §§ 1084, 1952, and 1955 amply illustrates, Antigua is mistaken. These measures were enacted long before Internet gambling was even thought possible, and for reasons having nothing to do with protection of domestic industry. There is simply no basis on which to assert that they constitute "a disguised restriction on trade in services." On the contrary, their application is a legitimate and non-discriminatory response to the continuing threats posed by remote supply of gambling – including those newer threats posed by Internet gambling.

3.284 Antigua's comments suggest a belief on its part that the United States should be required to address its concerns about remote supply of gambling by negotiating international regulatory standards. This suggestion suffers from at least two basic flaws. First, as a legal matter, nothing in the text of the GATS requires such action. Second, as a factual matter, the absence of any US market, in which we believe a large number of operators are domiciled, could present a threat to national security given the lack of available information.

483 NGISC Final Report, pp. 5-1 ("[O]n-line wagering promises to revolutionize the way Americans gamble because it opens up the possibility of immediate, individual, 24-hour access to the full range of gambling in every home."). See also US arguments above, para. 3.18 (discussing classification of gambling as vice activity and concerns about its spread into homes, schools, etc.).
484 See above paras. 3.193 and 1.18.
485 See above paras. 3.261-3.267.
487 See for instance above para. 3.14.
domestic regulatory regime that permits the remote supply of gambling services makes it unreasonable for Antigua to expect the United States to seek negotiations to permit such a regime for its cross-border suppliers. The United States recognizes that certain other countries – including, most obviously, Antigua itself – have determined that they can regulate the remote supply of gambling services in a manner that those countries consider to be sufficient. Indeed, each Member has the right to determine for itself the level of law enforcement to provide through its domestic laws and regulations.  

3.285 The United States reiterates that the Panel has before it extensive evidence of the study and debate that has taken place in the United States concerning the possible regulation of remotely supplied gambling services. In spite of all of this study and debate, the United States has not found it possible to develop regulations for the remote supply of gambling on a domestic basis that would provide sufficient levels of law enforcement to satisfy the priorities of US regulators. Given this context, it is unreasonable to expect the United States to negotiate an "agreed regulatory context" for cross-border supply of such services. In closing, the United States wishes to reiterate that there is no need for the panel to reach Article XIV issues in order to resolve this dispute. While the maintenance and enforcement of US restrictions on gambling clearly serves the interests identified by the GATS negotiators in Article XIV as being of overriding importance, it does so in a non-discriminatory manner that is in all respects fully consistent with the GATS.

3.286 Antigua notes that, after having never mentioned Article XIV of the GATS, the United States for the first time raised this provision on 9 January 2003. Even so, it is not entirely clear that the United States is actually asserting Article XIV as a defence. The United States says it is "unnecessary for the Panel to examine Antigua's claims in the light of Article XIV" but that its measures "would easily meet the requirements of Article XIV." Article XIV provides an affirmative defence and if the United States does not invoke it, then the Panel should not address it. Antigua does certainly not request the Panel to apply Article XIV and refers to the language already quoted and contained in paragraph 3.285 above "the United States wishes simply to reiterate that there is no need for the panel to reach Article XIV issues in order to resolve this dispute." To the extent that the United States seeks to somehow raise an "informal" Article XIV type defence, it does so only with regard to three federal statutes and not with regard to other federal or state statutes. The three federal statutes at issue are the Wire Act, the Travel Act and the Illegal Gambling Business Act. With regard to these three federal statutes the United States essentially raises three Article XIV type defences.

3.287 Antigua states that, first, the United States submits that the three statutes are "necessary" for the enforcement of state laws on gambling and are therefore covered by Article XIV(c). Article XIV(c) exempts measures necessary to secure compliance with laws or regulations which are not inconsistent with the provisions of this Agreement." The United States says that its state laws are consistent with the GATS and that therefore the federal laws enhancing those laws are exempted under Article XIV(c). This reasoning is obviously circular and merits only a brief response. An Article XIV issue can only arise when a WTO Member violates its GATS obligations. Antigua
challenges the lack of market access and the absence of equal conditions of competition. To the extent that United States laws contribute to this violation they cannot be invoked as a justification for this infringement under Article XIV(c).

3.288 The second Article XIV type defence seems to be that these statutes are "necessary" for the enforcement of the criminal laws violated by organized crime and are therefore covered by Article XIV(c). The crimes mentioned by the United States include loan sharking, prostitution, sale and distribution of drugs, distribution of stolen property, murder, kidnapping, arson and robbery. Apparently the United States believes that the prohibition of all cross-border gambling and betting services from Antigua is "necessary" to enable the United States to combat organized crime and prevent the commission of these crimes – a baffling proposition which lacks all credibility. In any event, in evaluating the United States’ claim, the Panel must take into account, on the one hand, the extent to which the prohibition contributes to that end and, on the other, the extent to which the prohibition produces restrictive effects on international commerce. In Antigua's view, this evaluation is very simple: (i) the United States has submitted no evidence of organized crime involvement in Antigua's gambling industry nor has it submitted any evidence that Antigua would not cooperate with criminal investigations and prosecutions by the United States; (ii) the effect of the United States' measures is the most restrictive possible: total prohibition. Consequently, this aspect of the defense fails. Antigua points out a 1989 decision of the United States Supreme Court, where the Supreme Court had to balance the desire of the State of California to prohibit certain forms of gambling on Native American reservations against the Native American and federal interest of promoting tribal economic development. As the United States does here, in that case California submitted that its gambling restrictions were necessary to prevent the infiltration of Native American tribes by organized crime. The Supreme Court rejected this argument because the fears expressed by California were, as is true here, but a vague allegation.

3.289 Antigua notes that the United States’ third Article XIV defence is that the three federal statutes are "necessary to protect public morals or to maintain public order" as provided in Article XIV(a). The footnote to Article XIV(a) clarifies that this exception needs to be interpreted narrowly: "[T]he public order exception may be invoked only where a genuine and sufficiently serious threat is posed to one of the fundamental interests of society. In Korea – Various Measures on Beef the Appellate body also found that when evaluating whether a measure is "necessary":

"[A] treaty interpreter (...) may (...) take into account the relative importance of the common interests or values that the law or regulation to be enforced is intended to protect. The more vital those common interests or values are, the easier it would be to accept as 'necessary' a measure designed as an enforcement instrument."

3.290 Antigua notes that the United States wisely does not argue that gambling and betting is, as such, contrary to public morals and public order. In view of the wide availability of gambling in the United States and the active involvement in the promotion of gambling of both the state and the federal governments, such a claim would have no credibility at all. The United States does, however, argue that public order and public morals are endangered because of the alleged organized crime threat (which Antigua has already dealt with) and because "[..] remote supply greatly expands gambling opportunities into settings – such as homes and schools – where it has not traditionally been present and is not subject to the controls present in other settings." However, this would only be problematic for children because the United States concedes that "adults can be expected to exercise their own moral judgment." Antigua has already explained to the Panel that age verification and other technologies exist (and many are being used) to reduce the chances of minors gambling on the

---

492 Appellate Body on Korea – Various Measures on Beef, para. 162.
Internet with Antiguan operators. While the United States has made plenty of "mere assertions," it has not provided any evidence to the contrary with respect to Antigua's industry.

3.291 Antigua submits that, even if the United States could establish that current age verification systems are not effective, other methods of preventing under age gambling are conceivable that would be less restrictive on international trade than a total prohibition. For instance, the United States could cooperate with Antiguan operators in verification of social security numbers or other government means of identification. Or, gambling and betting accounts with Antiguan operators could be opened in person at news agents or other specifically designated shops. In such circumstances the age verification system would be exactly the same as that used by lotteries in the United States. Consequently, the United States' total ban on cross-border supply from Antigua cannot possibly be said to be "necessary" because its "remote" character would not allow age verification. Antigua recalls it has shown that the United States tolerates a substantial amount of under age gambling and that state lotteries aggressively target the youth market. One must therefore conclude that youth gambling and the strict enforcement of its laws on under age gambling is of only limited importance to the United States.

3.292 Antigua submits that, even were the United States to make out a provisional defence under Article XIV, it is required to demonstrate that the three federal statutes in question meet the additional requirements of the "chapeau" of Article XIV. This is clearly not the case. First, the United States discriminates against Antiguan services because they cannot be supplied through distribution methods that are available for the distribution of domestic services. This is an obvious "unjustifiable discrimination". Second, even when comparing the treatment of purely Internet and telephone based Antiguan services with that of services that the United States describes as "non-remote," the United States' total prohibition does not meet the requirements of the chapeau. As effected by the three federal statutes explored by the United States, the total prohibition is a "rigid and unbending" measure. While the United States refuses to consider cooperation with Antigua regarding its alleged objectives of age verification and fighting organized crime, such international cooperation would not only be a less "rigid and unbending" and trade restrictive policy, but it would also be a much more effective tool for the United States to achieve its stated objectives. The United States dismisses, out of hand, the suggestion of cooperation with Antigua, despite the fact that it follows from the Appellate Body report in US – Shrimp that under the chapeau, a total prohibition cannot be justified by a Member that refuses to pursue international cooperation. In this context, the Panel should refer to an interview, where the president of the International Association of Gaming Attorneys explains how the expansion of United States gaming companies into the United Kingdom benefits from cooperation between the regulators of the two countries. Thus, international regulatory cooperation in the gaming sector is possible and is already taking place – albeit to the exclusive advantage of companies from the United States.

3.293 As a final point on the chapeau, Antigua refers the Panel to two letters of the president of an association of the state lotteries in the United States (the "NASPL"), one of which specifically concerns this dispute. In both letters it is repeated verbatim that the NASPL "does not take a position on Internet gambling, per se" but that it is the position of the NASPL "that each individual state should be permitted to legislate and regulate the forms of gaming conducted within its borders, as well as the methods by which gaming is offered to the citizens of the state." This means in practice that state governments determine "the various industries' potential profits and losses" and in that process "rivalry and competition for investment and revenues" is the main motivation. The two letters from the NASPL clearly indicate what the states' real concern is with Internet gambling – not

496 See above para. 3.107.
that it is inherently more dangerous than other forms of gambling but simply that it will undermine the states' ability to determine the conditions of competition in the gambling sector in view of the economic benefits accruing to the state and its local operators. Thus, this is further evidence that the United States' total ban on Internet gambling services from Antigua is "a disguised restriction on trade in services."

3.294 The United States maintains its view that the Panel need not reach the issue. The United States would also like to invite the Panel to reflect on the Article XIV implications of some of its earlier discussion – including the discussion of Mr. Scott, money laundering and other dangers, and the statistics on federal prosecutions in gambling cases. These observations further support the law enforcement arguments and the public order and public morals arguments discussed above by the United States. Moreover, the Canadian television program provided on videotape to the Panel also includes, among other things, an on-camera interview with a Canadian police official commenting – before September 11, 2001 – on the concern that money from Internet gambling could flow to "organized terrorist groups." He calls it a "very real scenario that could be occurring now and that could certainly develop in the future." Clearly these are matters to be taken seriously.

3.295 In response to Antigua's statements about international cooperation, the United States would welcome Antigua's continued assistance in the investigation and prosecution of money launderers and others who violate US law. In particular, the United States would note the assistance provided by Antiguan law enforcement in turning over records of EuroFed Bank, which Pavel Ivanovich Lazarenko and others used to launder funds. While it is not true that the United States has "refused" to pursue international requests for assistance as suggested by Antigua, there is a basis for a reluctance to do so if the case involves Internet gamblers. For example, Antigua publicly took a position contrary to the United States in the prosecution of Jay Cohen by filing an amicus brief in support of Mr. Cohen in the US Supreme Court. In addition, in its licensing of William Scott, a convicted felon, the fact that procedures apparently were not followed is troubling. These matters suggest that requests for assistance would not be fruitful if the investigation involves or is related to an Internet gambler. Finally, the Cabazon case cited by Antigua affords no support for Antigua's attempts to downplay the threat of organized crime. That case rests on the principle that "Indian tribes retain attributes of sovereignty over both their members and their territory and that tribal authority is dependent on, and subordinate to only the Federal Government, not the States." It was in that narrow context of limited state power that the Court held that the State of California's interest in keeping charitable bingo games from being infiltrated by organized crime was not sufficient to override the Federal and tribal interests in promoting self-sufficiency by the tribe. The court did not in any way conclude that organized crime is not a serious problem in relation to gambling – and certainly not in relation to forms of gambling more serious than charitable bingo. On the contrary, the United States already cited Supreme Court precedent confirming the dangers of organized crime in relation to gambling.

IV. ARGUMENTS OF THE THIRD PARTIES

A. CANADA

4.1 Canada submits its views on the interpretation of a Member's Schedule under the GATS – in this case the United States – but does not reach any conclusions on whether or not the United States is in breach of one of its obligations under the GATS. Canada submits that the W/120 Classification List and the corresponding CPC numbers are, pursuant to Articles 31 and 32 of the Vienna Convention, relevant sources for the purpose of interpreting the specific commitments in the US
Schedule. When the specific commitments of the United States at issue in this case are interpreted in the light of the W/120 Classification List and the CPC numbers referred to in it, the only reasonable conclusion is that the United States has taken "full" modes 1 and 2 market access and national treatment commitments with respect to gambling and betting services.

4.2 Pursuant to Article XX:3 of the GATS, the Schedule of a Member forms an integral part of the GATS. The rules of interpretation that apply with respect to a GATS Schedule thus are the same as those applicable with respect to the rest of the Agreement. This means that the Schedule of a Member, and the specific commitments contained therein, must be interpreted in accordance with Articles 31 and 32 of the Vienna Convention. Although this position has not been specifically stated in the context of the GATS, it is supported by findings of the Appellate Body in the context of the GATT 1994. In EC – Computer Equipment, the Appellate Body stated that:

"A Schedule is [...] an integral part of the GATT 1994 [...]. Therefore, the concessions provided for in that Schedule are part of the terms of the treaty. As such, the only rules which may be applied in interpreting the meaning of a concession are the general rules of treaty interpretation set out in the Vienna Convention."\(^{500}\)

4.3 This position was later affirmed by the Appellate Body in EC – Poultry, Canada – Dairy and Korea – Various Measures on Beef.\(^{501}\) While there are differences between tariffs and specific commitments, the Appellate Body's reasoning is equally applicable with respect to the interpretation of a GATS Schedule. This also accords with Article 3:2 of the DSU and the Appellate Body's view that "the rules of treaty interpretation in Articles 31 and 32 of the Vienna Convention apply to any treaty, in any field of public international law."\(^{502}\) The specific commitments of a Member – in this case the United States – must therefore be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the Schedule in their context and in the light of the object and purpose of the GATS (and the WTO Agreement more generally).\(^{503}\) To the extent appropriate, recourse may also be had to supplementary means of interpretation.\(^{504}\)

4.4 The United States clearly used and followed the structure of the W/120 Classification List to schedule its specific commitments. However, its Schedule does not include explicit references to the CPC numbers that, in the W/120 Classification List, are associated with a particular services sector or sub-sector. This does not mean, as the United States suggests, that the CPC numbers associated with a particular services sector or sub-sector in the W/120 Classification List are irrelevant, inapplicable or to be ignored when interpreting the United States' specific commitments. Rather, they form part of the context that, pursuant to Article 31 of the Vienna Convention, must be taken into account by the interpreter of these specific commitments.

4.5 In US – Section 110(5) Copyright Act, the following remarks were made concerning the requirements for an "agreement" or "instrument" to exist within the meaning of Article 31:2 of the Vienna Convention:

"The International Law Commission explains in its commentary on the final set of draft articles on the law of treaties that this provision is based on the principle that a unilateral document cannot be regarded as forming part of the context unless not only was it made in connection with the conclusion of the treaty, but its relation to the

\(^{500}\) Appellate Body Report on EC – Computer Equipment, para. 84.
\(^{503}\) Vienna Convention, Article 31.
\(^{504}\) Ibid., Article 32.
treaty was accepted by the other parties. 'On the other hand, the fact that these two classes of documents are recognized in paragraph 2 as forming part of the 'context' does not mean that they are necessarily to be considered as an integral part of the treaty. Whether they are an actual part of the treaty depends on the intention of the parties in each case.’ It is essential that the agreement or instrument should be related to the treaty. It must be concerned with the substance of the treaty and clarify certain concepts in the treaty or limit its field of application. It must equally be drawn up on the occasion of the conclusion of the treaty. Any agreement or instrument fulfilling these criteria will form part of the "context" of the treaty and will thus not be treated as part of the preparatory works but rather as an element in the general rule of interpretation."

4.6 The W/120 Classification List (and by implication the CPC numbers referred to in it) meets these criteria and at least qualifies as an "instrument" within the meaning of Article 31:2 of the Vienna Convention. The W/120 Classification List was prepared by the then GATT Secretariat at the request of Uruguay Round participants. In particular, the Montreal Ministerial Declaration called for the preparation of such a list by the Secretariat. The revised version of the W/120 Classification List, dated 10 July 1991, which is the version that was (and still is) used by Members, was based on comments from Uruguay Round participants. The 1993 Scheduling Guidelines, also prepared by the then GATT Secretariat at the request of Uruguay Round participants, called for the general use of the W/120 Classification List in order to achieve the greatest possible degree of clarity in the description of each sector or sub-sector scheduled.

4.7 While there is no question that the 1993 Scheduling Guidelines are not an authoritative legal interpretation of the GATS – they specifically state that they are not – there is also no question that, in

505 Panel Report on US – Section 110(5) Copyright Act, para. 6.45 (quotation marks in text; emphasis added; notes omitted).
506 MTN.TCN/7 (MIN), 9 December 1988, Part II, para. 10. See also Note by the Secretariat, Reference List of Sectors, MTN.GNS/W/50, 13 April 1989. According to Canada, the fact that the Uruguay Round participants acted through the GATT Secretariat for the preparation of the W/120 Classification List – this was arguably the practical and effective way to work in a concerted manner on such a matter – obviously does not mean that the W/120 Classification List should not be considered to have been "made by the parties" within the meaning of Article 31:2 of the Vienna Convention.
507 See cover-note by the Secretariat on the W/120 Classification List.
508 1993 Scheduling Guidelines, para. 16 in particular;

The legal nature of a schedule as well as the need to evaluate commitments, require the greatest possible degree of clarity in the description of each sector or sub-sector scheduled. In general the classification of sectors and sub-sectors should be based on the Secretariat’s revised Services Sectoral Classification List. Each sector contained in the Secretariat list is identified by the corresponding Central Product Classification (CPC) number. Where it is necessary to refine further a sectoral classification, this should be done on the basis of the CPC or other internationally recognised classification (e.g. Financial Services Annex). The most recent breakdown of the CPC, including explanatory notes for each sub-sector, is contained in the UN Provisional Central Product Classification.

Example: A Member wishes to indicate an offer or commitment in the sub-sector of map-making services. In the Secretariat list, this service would fall under the general heading “Other Business Services” under “Related scientific and technical consulting services” (see item 1.F.m). By consulting the CPC, map-making can be found under the corresponding CPC classification number 86754. In its offer/schedule, the Member would then enter the sub-sector under the "Other Business Services" section of its schedule as follows:

Map-making services (86754)

If a Member wishes to use its own sub-sectoral classification or definitions it should provide concordance with the CPC in the manner indicated in the above example. If this is not possible, it should give a sufficiently detailed definition to avoid any ambiguity as to the scope of the commitment.
accordance with their stated purpose, they assisted all Members in the preparation of their Schedules and the listing of their specific commitments. 509 For instance, the GATS did not prescribe any particular format for the Schedules of Members, apart from what is specified in Article XX. The 1993 Scheduling Guidelines provided a standard format for the Schedules of Members, which was used and followed by Members in implementing their Article XX obligations. Following numerous consultations, a revised version of the 1993 Scheduling Guidelines was adopted by the Council for Trade in Services on 23 March 2001, for the purpose of the current round of negotiations. The revised 2001 Scheduling Guidelines have retained, unchanged, the statement quoted above contained in the 1993 Scheduling Guidelines 510. The foregoing suggests that there is agreement among Members that, in general, the classification of sectors and sub-sectors in a Schedule should be based on the W/120 Classification List and the corresponding CPC numbers referred to in it. A Member can, of course, depart from the W/120 Classification List and the corresponding CPC numbers. In such a case, however, it should provide concordance with the CPC or, if this is not possible, it should give a sufficiently detailed definition to avoid any ambiguity as to the scope of a specific commitment. According to Canada, the DSU 511 offers further evidence of the acceptance by Members of the W/120 Classification List (and by implication the CPC numbers referred to in it) for the purpose of scheduling their specific commitments. In elaborating upon how Members may suspend concessions with respect to services sectors, Article 22 relies on the W/120 Classification List to define these sectors. 512

4.8 Canada does not challenge the fact that a Member may, in certain cases, have departed from the W/120 Classification List and the corresponding CPC numbers associated with it. This possibility is specifically provided for in the 1993 Scheduling Guidelines (and the revised 2001 Scheduling Guidelines). No Member was forced or obliged to schedule specific commitments in accordance with the W/120 Classification List and the corresponding CPC numbers. As previously emphasized, however, a Member that intended to depart from the W/120 Classification List and the corresponding CPC numbers was asked to provide concordance with the CPC or, in cases where this was not considered possible, to give a sufficiently detailed definition to avoid any ambiguity as to the scope of a specific commitment. In a number of instances, the United States did depart from the W/120 Classification List and the corresponding CPC numbers in a clear and unambiguous manner, that is, in the manner suggested in the 1993 Scheduling Guidelines. In two cases where the United States did not wish to include certain elements otherwise covered by the W/120 Classification List and, by implication, the corresponding CPC numbers, it specifically said so. 513 Similarly, in scheduling its specific commitments on environmental services, the United States, while using the W/120 Classification List, expressly defined the activities covered by its specific commitments. 514 In scheduling specific commitments on hospital and other health care facilities, the

509 Ibid., para. 1. See also Panel Report on EC – Banana III (US), para. 7.289, where it is stated that "[i]n the Uruguay Round negotiations participants agreed to follow a set of guidelines for the scheduling of specific commitments under the GATS.”
510 See above footnote 508.
511 The DSU is one of the Multilateral Trade Agreements binding on all Members: WTO Agreement, Article II:2.
512 DSU, Article 22:3(f)(ii). This invalidates the United States' assertion that the W/120 Classification List is only part of the negotiating history of the GATS and therefore cannot constitute anything more than a supplementary means of interpretation under Article 32 of the Vienna Convention. It supports the argument that the W/120 Classification List qualifies as an "agreement" within the meaning of Article 31:2(a) of the Vienna Convention.
513 With respect to Computer and Related Services, the following entry is made in the US Schedule: "(MTN.GNS/W/120 a) – e), except airline computer reservation systems)." With respect to Publishing, the following entry is made: "(Only part of MTN.GNS/W/120 category: 'r) Printing, Publishing'." GATS/SC/90, pp. 61 and 73.
514 See US Schedule, p. 87. The entry "Environmental Services" is followed by note 19, which provides that "[i]n each of the following sub-sectors, United States' commitments are limited to the following activities: […]"
United States expressly defined the scope of that sub-sector in its Schedule.\textsuperscript{515} A contrario, where the United States has simply followed the W/120 Classification List, without any clear and explicit departure from it and the corresponding CPC numbers, it should be inferred that the specific commitments at issue are to be interpreted in the light of the W/120 Classification List and the CPC numbers associated with it.

4.9 The specific commitments provided for in a Member's GATS Schedule are reciprocal and result from a mutually-advantageous negotiation between importing and exporting Members.\textsuperscript{516} In EC – Computer Equipment, the Appellate Body stated, in the context of Schedules of tariff concessions under the GATT, that tariff negotiations are a process of reciprocal demands and concessions and that, while each Schedule represents the tariff commitments made by one Member, they represent a common agreement among all Members.\textsuperscript{517} Thus, the meaning of a tariff concession must be determined based on the common intention of the Members.\textsuperscript{518} By analogy, when interpreting a specific commitment under the GATS, one must ascertain the common intention of the Members. The common intention of the Members in regard to the Schedule of the United States is that where it simply follows the W/120 Classification List, without clearly and explicitly departing from it and the corresponding CPC numbers, it must be inferred that the United States' specific commitments are to be interpreted in the light of the W/120 Classification List and the CPC numbers associated with it. The alternative would be that where the United States failed to include in its Schedule an explicit reference to the CPC number for a services sector or sub-sector listed in accordance with the W/120 Classification List, then the CPC number should be ignored for the purpose of interpreting the corresponding commitment. The effect of this would be to make those specific commitments largely dependant on the subjective and unilateral interpretation of the United States. This cannot be the common intention of the Members.

4.10 Canada submits that in EC – Computer Equipment the Panel, when interpreting the European Communities' Schedule under the GATT, did not consider the Harmonized System and its Explanatory Notes. The Appellate Body reacted as follows:

"We are puzzled by the fact that the Panel, in its effort to interpret the terms of Schedule LXXX, did not consider the Harmonized System and its Explanatory Notes. We note that during the Uruguay Round negotiations, both the European Communities and the United States were parties to the Harmonized System. Furthermore, it appears to be undisputed that the Uruguay Round tariff negotiations were held on the basis of the Harmonized System's nomenclature and that requests for, and offers of, concessions were normally made in terms of this nomenclature. [...] We believe, however, that a proper interpretation of Schedule LXXX should have included an examination of the Harmonized System and its Explanatory Notes.\textsuperscript{519}

4.11 By analogy, one would be puzzled if, as suggested by the United States recourse were not had to the W/120 Classification List and the corresponding CPC numbers intrinsically linked with it where the Schedule of a Member follows the W/120 Classification List. This would be all the more surprising considering that the USITC has itself recognized the close correspondence between the United States' specific commitments, the W/120 Classification List and the CPC numbers referred to

\textsuperscript{515} US Schedule, p. 117. The entry "Hospital and Other Health Care Facilities" is followed by the following definition: "Direct ownership and management and operation by contract of such facilities on a 'for fee' basis”.

\textsuperscript{516} See Preamble of the GATS, third paragraph. See also GATS Article XIX:1.

\textsuperscript{518} Ibid., paras. 84 and 109.

\textsuperscript{519} Appellate Body Report on EC – Computer Equipment, para. 89.
in it, stating that while "[t]he US Schedule makes no explicit references to CPC numbers, [...] it corresponds closely with the GATT Secretariat's list [the W/120 Classification List]."

4.12 Canada is therefore of the view that the W/120 Classification List and the corresponding CPC numbers qualify as "context" for the purpose of interpreting the specific commitments in the US Schedule. Accordingly, in the present case, Canada agrees with Antigua and Barbuda that the United States has taken "full" modes 1 and 2 market access and national treatment commitments with respect to gambling and betting services. This is based on the United States' modes 1 and 2 commitments for "Other Recreational Services (except sporting)," which, according to the W/120 Classification List, refer to CPC number 964. CPC number 964 includes CPC number 96492 – gambling and betting services.

4.13 Canada argues, alternatively, that in the event that the W/120 Classification List and the corresponding CPC numbers do not qualify as "context" within the meaning of Article 31:2 of the Vienna Convention, the W/120 Classification List and the corresponding CPC numbers can be referred to as supplementary means of interpretation of the US Schedule under Article 32 of the Vienna Convention. The W/120 Classification List and the corresponding CPC numbers referred to in it are part of the historical background against which the GATS and the Schedules were negotiated. Recourse to them may thus be had in appropriate cases, that is, in those instances where the US Schedule simply follows the W/120 Classification List, without clearly and explicitly departing from it and the corresponding CPC numbers. Without such recourse to the W/120 Classification List and

520 See USITC Document, p. viii. Canada notes the US argument that this document has no legal significance since the explicit purpose of the concordance in the document is only to "facilitate comparison of the US Schedule with foreign schedules". In Canada's view, this statement is factually incomplete and legally incorrect. The relevant part of the document reads, at p. viii:

To facilitate comparison of the US Schedule with foreign schedules, the USITC has developed a concordance that demonstrates the relationships between sectors found in the US Schedule, sectors identified in the GATT Secretariat's Services Sectoral Classification List, and sectors defined and numbered in the United Nations' Provisional Central Product Classification (CPC) System. In preparing national schedules, countries were requested to identify and define sectors and sub-sectors in accordance with the GATT Secretariat's list [the W/120 Classification List], which lists sectors and their respective CPC numbers. Accordingly, foreign schedules frequently make explicit references to the CPC numbers. The US Schedule makes no explicit references to CPC numbers, but it corresponds closely with the GATT Secretariat's list.

The concordance developed by the USITC clarifies how the service sectors referenced in the GATT Secretariat's list, the CPC system, and the US Schedule correspond.[…] Canada submits that such a statement by the organization (a federal agency) that, "[a]t the request of the Office of the United States Trade Representative […] assumed responsibility for maintaining and updating, as necessary, the [US Schedule]" has probative value and is a factor confirming other evidence that there is a close correspondence between the United States' specific commitments, the W/120 Classification List and the CPC numbers referred to in it (ibid, p. vii). In Chile – Alcoholic Beverages, para. 7.119, the Panel noted that statements by a government against WTO interests are most probative.

521 See US Schedule, p. 123. According to Canada, it is clear that in the case of this specific commitment the United States was following the classification of the W/120 Classification List. Sub-sector 10.D in the W/120 Classification List is entitled "Sporting and other recreational services." The United States' entry for sub-sector 10.D reads "Other Recreational Services (except sporting)." The logical conclusion is that recreational services, except sporting, within the meaning of sub-sector 10.D of the W/120 Classification List has been included in the US Schedule. The United States' almost exclusive reliance on definitions of dictionaries to interpret this specific commitment, in particular the terms "except sporting", is in effect an attempt to have the Panel read the specific commitment out of its context, contrary to what is mandated by Article 3:2 of the DSU and the rules of interpretation of the Vienna Convention. In this regard, it is worth recalling the Appellate Body's observation that dictionaries are not dispositive statements of definitions of words appearing in agreements and legal documents. Appellate Body Report on United States – Offset Act (Byrd Amendment), para. 248.
the corresponding CPC numbers, the meaning of the United States' specific commitments would remain ambiguous and obscure. This is demonstrated by the inability of the United States to clearly identify, absent recourse to the W/120 Classification List, where in its Schedule gambling and betting services have been included or excluded.

4.14 Canada asks the Panel to find that the W/120 Classification List, including the CPC numbers referred therein, is a relevant source for the purpose of interpreting the specific commitments in the US Schedule. This conclusion is legally justified under Article 31 or, alternatively, Article 32 of the Vienna Convention. It is also supported by the findings of the Appellate Body in EC – Computer Equipment.

B. EUROPEAN COMMUNITIES

4.15 The European Communities notes that a statement such as the one made by a US representative and reported in the minutes of the Dispute Settlement Body in connection with this dispute, while not relieving Antigua and Barbuda of its burden of proof, is pertinent to this question. Statements of Members' representatives interpreting their own domestic law have been accepted as having probative value in previous panel proceedings. However, the European Communities indicates that its comments are based on the assumption arguendo that a prohibition on the "supply of gambling and betting services from outside the United States to consumers in the United States" exists in the US legal system.

4.16 The European Communities argues that such a prohibition is within the scope of GATS. Article I:1 of the GATS defines the scope of the agreement as covering "measures by Members affecting trade in services". A prohibition of cross-border supply of gambling and betting services contained in legislative or administrative measures is no doubt a "measure by a Member" because it results from an action of public authorities of a Member. The term "affecting" is not defined in the GATS. Previous reports have made clear that the term "affecting", in its ordinary meaning, context and in the light of the object and purpose of the GATS, suggests a broad meaning, notably of "having an effect on". A prohibition of cross-border supply of gambling and betting services affects trade in services under Article I:1, the GATS because it impacts on the conditions of competition between the suppliers established in the Member maintaining it and those providing such services cross-border. All other conditions being equal, such prohibition provides an incentive to consumers to turn to service suppliers within the US territory over like services supplied from the territory of other Members, thereby modifying the conditions of competition. The incentive is obviously a particularly powerful one, since consumers who continue to gamble through websites operated e.g. from Antigua and Barbuda are doing so in breach of the law. The services at issue – namely gambling and betting services – are not excluded from the GATS by Article I:1 (or I:3) and their trade is thus covered by the Agreement. Similarly, the term "supply of a service" has also broad coverage. According to GATS Article XXVIII(b) it includes "the production, distribution, marketing, sale and delivery of a service."

522 See WT/DSB/M/151, page 11.
524 WT/DS285/2, para. 2.
525 Pursuant to Article I:3(a) of the GATS, "in fulfilling its obligations and commitments under the Agreement, each Member shall take such reasonable measures as may be available to it to ensure their observance by regional and local governments and authorities and non-governmental bodies within its territory".
527 See also Panel Report on EC – Bananas III (US), para. 7.281, where the Panel recognized that the "the drafters consciously adopted the terms 'affecting' and 'supply of a service' to ensure that the disciplines of the GATS would cover any measure bearing upon conditions of competition in supply of a service, regardless of whether the measure directly governs or indirectly affects the supply of the service."
4.17 In the view of the European Communities, the US Schedule, interpreted in accordance with customary rules of interpretation of public international law codified in the Vienna Convention, includes commitments on gambling and betting services. Although GATS Schedules of specific commitments have been reviewed in previous reports, panels and the Appellate Body have not as yet specifically addressed the criteria for their interpretation. Nonetheless, the interpretation of Schedules annexed to the GATT 1994 and the GPA by the Appellate Body and WTO panels undoubtedly provides relevant guidance, particularly so because the text of Article II:7 of the GATT 1994 and Article XX:3 of the GATS set out the legal status of Members' Schedules of tariff concessions/ specific commitments in largely identical terms. The EC – Computer Equipment Appellate Body report provides the general standard for interpretation of WTO Schedules. In that report the Appellate Body examined the legal nature of a Member's tariff Schedule in order to address the question as to whether and how the general rules of treaty interpretation as set out Articles 31 and 32 of the Vienna Convention are applicable in the interpretation of the former. In that respect it held:

"A Schedule is made an integral part of the GATT 1994 by Article II:7 of the GATT 1994. Therefore, the concessions provided for in that Schedule are part of the terms of the treaty. As such, the only rules which may be applied in interpreting the meaning of a concession are the general rules of treaty interpretation set out in the Vienna Convention."

4.18 Like Article II:7 of the GATT 1994, which refers to the Schedules of concessions as an "integral part of the Agreement", Article XX:3 of the GATS provides that "Schedules of specific commitments shall be annexed to this Agreement and shall form an integral part thereof". This confirms that GATS Schedules must also be treated as treaty language and accordingly be interpreted pursuant to the customary rules of treaty interpretation. This applies to all commitments contained in all Members' Schedules, and the distinction drawn by the United States, i.e. between "CPC commitments," which include textual references to numerical CPC codes, and "non-CPC commitments," the text of which make no reference to the CPC, is unsupported inasmuch as it suggests different interpretative approaches for commitments which are all integral part of an international agreement.

4.19 The European Communities argues that in the Uruguay Round negotiations, participants agreed on the 1993 Scheduling Guidelines for the scheduling of specific commitments under the GATS according to which the classification of sectors should be based on the W/120, also developed during the Uruguay Round. In turn, each sector listed in the 1991 Sectoral classification is identified by the corresponding CPC number. According to the 1993 Scheduling Guidelines, Members should schedule their commitments on the basis of the CPC or otherwise in such a way as to ensure precision and clarity.

4.20 In its GATS Schedule, the United States has closely followed the structure of the W/120. It has in particular made a commitment for the cross-border supply of services classified under sub-sector 10.D "Other recreational services (except sporting).” Sub-sector 10.D of the 1991 Sectoral classification is headed "Sporting and other recreational services" and it is identified therein by the corresponding CPC "964" code. The CPC 964 category, equally headed "Sporting and other

---

4.31 The European Communities notes that this report has been cited and the findings stated therein in relation to schedules' interpretation have been reaffirmed in all subsequent reports dealing with the issue.
4.32 Appellate Body Report on EC – Computer Equipment, para. 84.
4.34 MTN.GNS/W/164, paras. 1 and 16.
recreational services”, is further broken down into two sub-sectors, namely 9641: “Sporting services” and 9649: “Other recreational services”. Finally, the latter encompasses CPC category 96492: “Gambling and betting services”. The United States has also followed the structure of W/120 in drafting its commitments under sector 10 of its Schedule, including sub-sector 10.D. It has only modified the title of sub-sector 10.D, which reads “Other recreational services (excluding sporting)” instead of “Sporting and other recreational services” (and has made a commitment for the cross-border supply of services falling within such sub-sector). Admittedly, the United States has not inscribed in connection with sub-sector 10.D the equivalent CPC number. However, had it wanted to depart from the CPC classification, it should have done so explicitly. Therefore, by excluding “sporting” under sub-sector 10.D of its Schedule, the United States has only excluded services comprised in CPC category 9641, that is sporting services. To the contrary, by not listing any limitations on cross-border supply of services with respect to “other recreational services”, the United States has included in its commitment the entire CPC category 9649, which further encompasses CPC category 96492: “Gambling and betting services”. In the view of the European Communities, interpretation of a treaty provision under the rules codified in the Vienna Convention starts by examining the ordinary meaning of a treaty provision, in its context and in the light of its object and purpose.

4.21 The European Communities argues that the ordinary meaning of the US specific commitments relating to Sector 10 (“Recreational, cultural and sporting services”) does not warrant the conclusion that gambling and betting services are excluded from such commitments. The US interpretation of the ordinary meaning of the definitions for sub-sectors 10.D and 10.A is contradicted by the very dictionary definitions of some key terms employed in Sector 10 of its schedule quoted by the United States. First, the United States makes much of a reference to gambling and betting in connection with the term “sporting” in the New Shorter Oxford English Dictionary. The European Communities notes that the one quoted by the United States is certainly not a commonly used meaning of the term. What is more, under the definition that the United States quotes, a sporting man may be a person interested in betting or gambling (he can also be merely interested in sport, under definition 2.a). This, however, does not prove that sporting services pertain to or include gambling. Likewise, a sporting woman may be a prostitute, but this presumably does not mean that sporting services pertain to or include prostitution. An adjective, such as "sporting” qualifies another term (typically a noun) and its meaning in a given case depends on the term it is meant to qualify.

Sporting, adj.

1 a Sportive; playful. rare.
   b Engaged in sport or play.
   c Of a plant etc.: tending to produce abnormal varieties or sports
2 a Interested in or concerned in sport
   b Designating an inferior sportsman or a person interested in sport from purely mercenary motives. Now esp. pertaining to or interested in betting or gambling. Chiefly in sporting man.
   c sporting girl, woman, a prostitute, a promiscuous woman.536

Thus, under the definition that the United States quotes, a sporting man may be a person interested in betting or gambling (he can also be merely interested in sport, under definition 2.a). This, however, does not prove that sporting services pertain to or include gambling. Likewise, a sporting woman may be a prostitute, but this presumably does not mean that sporting services pertain to or include prostitution. An adjective, such as "sporting” qualifies another term (typically a noun) and its meaning in a given case depends on the term it is meant to qualify.

4.22 The European Communities further submits that the United States also refers to another dictionary definition under which the adjective "sporting” is somehow related to gambling. The

---

535 Vienna Convention, Article 31:1.
European Communities is not in a position to verify the source quoted by the United States.\(^{537}\) It notes nonetheless that another US dictionary, the *Webster’s New World Dictionary of American English*, reads:

Sporting, *adj.*

- 1 of, having to do with, or for sports, or athletic games, etc.
- 2 interested in or taking part in sports, or athletic games, etc.
- 3 sportsmanlike; fair
- 4 interested in or having to do with games, races, etc. characterized by gambling or betting
- 5 *Biol.* inclined to mutate –
  = Americanism\(^{538}\)

4.23 The meaning relating to gambling, besides definitely not being a common one, is qualified by the dictionary itself as an “Americanism”. The European Communities therefore doubts that the meaning to which the United States points can be really considered the “ordinary meaning” within the meaning of the Vienna Convention on the Law of Treaties.\(^{539}\) Also, if applied to services, the above definition would mean “having to do with games, races, etc. characterized by gambling or betting”. This does not entail that “sporting services” include gambling and betting services. Accordingly, the ordinary meaning of the heading for sub-sector 10.D – “Other recreational services (except sporting)” in the US Schedule does not exclude that gambling and betting services fall under that sub-sector.

4.24 The European Communities notes that the United States further refers to dictionary definitions of the terms “entertainment” and “recreational” and, after allegedly establishing the ordinary meaning of the term “sporting”, the United States hastens to infer that “[b]ased on the ordinary meaning of the words “recreational”, “entertainment” and “sporting” it is impossible to conclude that gambling and betting service must be considered to fall within sub-sector 10.A.”

4.25 The European Communities submits that, even taking the definition of the term “entertainment” provided by the United States, it is hard to deny that gambling and betting is e.g. “[a] thing which entertains or amuses someone.” Likewise, taking the definition of the term “recreational” referred to by the United States, it is hard to deny that gambling and betting is “used for or as a form of recreation”. The United States, has certainly not demonstrated the contrary by merely quoting these definitions and making the conclusory assertion that a different interpretation is “impossible”. Furthermore, sub-sector 10.A in the US Schedule clearly designs a rather broad category - the reference to theatre, live bands and circus services is merely illustrative of what is encompassed by the term “entertainment services”. Accordingly, the term “entertainment”, used to define sub-sector 10.A of the US schedule, may well also cover gambling and betting services, just as the term “recreational”, used to define sub-sector 10.D, may also cover such services.\(^{541}\) This further confirms that, based on the ordinary meaning of the definitions used in sector 10, gambling and betting services are not excluded from the US schedule.

---

\(^{537}\) That is, the *Merriam-Webster’s Collegiate Dictionary*, 10th ed., 2001.  
\(^{539}\) The European Communities notes that, to the extent that the meaning referred to by the United States could be considered as a “special meaning”, then, pursuant to Article 31:4 of the Vienna Convention, it shall be given to the term “sporting” only “if it is established that the parties so intended” (the burden of proof being on the party asserting that special meaning).  
\(^{540}\) See above para. 3.45.  
\(^{541}\) According to the European Communities, one reason why sub-sector 10.D is the proper classification for gambling and betting is that the United States itself has indicated that it considers CPC code 964 to fall under sub-sector 10.D instead (see USCIT document).
4.26 The European Communities further argues that each of the specific commitments of a Member must be placed in its own - different - context, which is first of all the Schedule to which it belongs. For the purposes of interpretation of the US specific commitments, the US Schedule and its structure, not the commitments taken by other Members, are the most relevant context. The United States tries to support its conclusion that it has taken no commitments for gambling and betting services by referring to Schedules of other Members as "context". It is somehow surprising that the United States, having tried to distance itself from the classification and scheduling approach of most other Members, particularly of those which expressly followed the CPC classification, is placing so much emphasis on this different scheduling practice. In any event, the references to other Members' Schedules, while not supporting the US position, often prove the contrary.

4.27 Having argued, on the basis of its own reading of the ordinary meaning, that it has excluded gambling and betting services by the way it has written the heading of its sub-sector 10.D, the United States seems to further argue that in fact, sub-sector 10.D is not really the appropriate heading for those services – witness the fact that other Members have referred to them under sub-sectors 10.A or 10.E of their respective Schedules. One common feature of the schedules of other WTO Members referred to by the United States in connection with this point is that, unlike the US one, all expressly refer to gambling and betting services (and, for those schedules referring to the CPC codes, any departure from such codes appears to be expressly provided for). This in turn means that one cannot, in the absence of such express references in the US Schedule, automatically infer that gambling and betting services also do not fall under sub-sector 10.D of such Schedule. Moreover, each of the commitments in other Members' Schedules has to be placed in its own – different – immediate context, which is the Schedule to which each belongs.

4.28 Thus, it is true, for example, that one WTO Member, Senegal, has inscribed gambling services under a residual sub-sector 10.E headed "other", instead of 10.D, and this notwithstanding a reference to CPC in that Schedule. However, looking at Senegal's Schedule, it is clear that Senegal has used sub-sector 10.D not to cover the entire CPC category 964 (which also encompasses gambling and betting). To the contrary, Senegal only classified under 10.D a very limited selection of CPC 964, that is "Recreational fishing". By contrast, a similar clear limitation of the scope of sub-sector 10.D is lacking in the US Schedule. Having limited sub-sector 10.D to a very specific part of CPC 964, Senegal logically had to classify gambling services elsewhere in its Schedule - which it did in sub-sector 10.E. It is to be noted that in Senegal's Schedule there is no reference to any CPC code in connection with sub-sector 10.E. This brings to what appears to be the second contextual argument of the United States, which is based on the fact that two WTO Members included in their Schedules an additional residual category 10.E. The United States points out that, unlike those two Schedules, its own does not include such a residual category. It is not clear to the European Communities how this confirms that the claim of Antigua and Barbuda is unfounded. If the United States means to say that, in order to include gambling and betting services, it would have needed this extra category in its Schedule, this is wrong for a number of reasons. First, the United States is in numerous company, given that only two Members have added a residual sub-sector 10.E in their schedule. Nonetheless, other WTO Members arguably do not contest to have undertaken commitments in relation to gambling and betting services even without such residual sub-sector. As for Iceland, it is true that a sub-sector 10.E has been added to a schedule that otherwise corresponds in full to the CPC. However, this is done in accordance with the 1991 Sectoral classification (W/120), which relates CPC 964 code (also encompassing gambling and betting) to sub-sector 10.D. Furthermore, this does not mean that gambling and betting services fall under sub-sector 10.E in Iceland's Schedule. Quite to the contrary, having equated sub-sector 10.D to CPC 964, Iceland correctly included gambling under that sub-sector in its Schedule. Therefore, Iceland's Schedule does not prove that an extra sub-sector is needed in order to have commitments on gambling and betting services. The very fact that only two other Members needed an extra category (10.E), and only one of them to classify gambling, does not take away that many other Members did not need it and yet committed or limited their commitments on gambling. Thus, the presence of a category 10.E is not indispensable to take full or limited commitments on gambling and betting, contrary to what the US seem to suggest. In addition, the US
schedule already contains a residual category for "other recreational services" – 10.D precisely. There is therefore no need for another "Other" category in that Schedule.

4.29 It is also curious that the United States, having asserted that a limitation on gambling and betting have been inscribed in its Schedule by writing a limitation on sporting services in sub-sector 10.D, at the same time maintains that commitments for the same service category should have been written under a different (and residual) sub-sector of Sector 10 (that is under sub-sector 10.E: "Other"). Furthermore, the US Schedule already includes a residual sub-sector – 10.D precisely. It is thus not clear why an additional residual category would be needed. Also, the fact that another WTO Member – Lithuania – mentions gambling and betting services under both sub-sector 10.A and 10.D does not mean that such services are irrelevant under (or excluded from) the latter. In addition, if it were necessary to also inscribe limitations under 10.A, the United States should have done it too, but it did not do so. Furthermore, the fact that some WTO Members – Egypt, Indonesia, Jordan and Peru – have mentioned gambling under the "Tourism" Sector of their Schedules also does not prove that the United States has no commitments for gambling and betting under Sector 10.D. Those mentions do not concern gambling and betting services per se, but only specific instances of provision of such services which are directly connected with tourism services. To the extent that commitments in the "Tourism" Sector also cover certain gambling and betting services, the United States should have also inscribed limitations for those services in Sector 9 of its Schedule, but it did not.

4.30 The European Communities further argues that the 1993 Scheduling Guidelines and the W/120 are also pertinent to the interpretation of the WTO Schedules of specific commitments in accordance with customary rules. This also applies to the US Schedules. Those two documents have been developed and used as reference during the Uruguay Round negotiations, and thus constitute preparatory works and circumstances of the conclusion of the GATS and the WTO Agreement, within the meaning of Article 32 of the Vienna Convention. These documents confirm that the US Schedule does not depart from the CPC system definition as regards sub-sector 10.D ("Other Recreational Services"). Accordingly, by excluding sporting services from its sub-sector 10.D, the United States has excluded what is considered to be sporting services under the CPC system, but not also gambling and betting services.

4.31 The W/120, irrespective of whether it is a legally binding instrument of its own, is part of the preparatory works of the GATS and the WTO. The fact that the United States, which closely followed its structure, was not bound either by it or by the CPC system, does not mean that such Member did not follow the CPC system, directly or through the W/120, in a particular case. As for the 1993 Scheduling Guidelines, irrespective of the legal status, their overall objective must have been shared by the negotiators. The guidelines were circulated by the GATT Secretariat in response to requests by participants, who agreed on them. Moreover, their objective was to "achieve precision and clarity", and to this effect Members not following the CPC classification should have provided unambiguous commitments otherwise. Clarity of commitments in turn guarantees the security and predictability of "the reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade" [which] is an object and purpose of the WTO Agreement, generally, as well as of the GATT 1994. Thus, security and predictability, besides being an objective of the WTO Agreement generally, has been specifically recognized to be relevant in connection with GATT tariffs schedules. But it is at least as important for the scheduling of commitments on services.

544 MTN.GNS/W/164, p. 1, footnote 1.
545 Appellate Body Report on EC – Computer Equipment, para. 82.
546 The European Communities notes that, similarly to the GATT 1994, the GATS is also aimed at "promoting the interests of all participants on a mutually advantageous basis" and at "progressive liberalization" (Preamble, paras. 2 and 3).
the 1991 Sectoral classification, mirroring what virtually all other WTO Members have done. The references to the CPC codes in the 1993 Scheduling Guidelines are aimed at providing such predictability because the CPC offers a relatively sophisticated tool for defining the sectors/sub-sectors for which Members undertake commitments. This is made clear in paragraph 16 of the Scheduling Guidelines.

4.32 Referring to CPC codes was not the only possible way contemplated by the 1993 Scheduling Guidelines to achieve clarity. However, where Members intended not to follow the CPC system, they were requested by the Scheduling Guidelines to provide such predictability otherwise—that is by clarifying and defining otherwise the content of their commitments: “If a Member wishes to use its own sub-sectoral classification or definitions it should provide concordance with the CPC in the manner indicated in the above example. If this is not possible, it should give a sufficiently detailed definition to avoid any ambiguity as to the scope of the commitment.” In other words, while use of the CPC definitions was not mandatory, departure from those definitions was not free and unconditional. Rather, departure was to be done so as to ensure predictability through some alternative means. Departure from the CPC system was not meant to allow convenient ambiguity in a Member’s Schedule. If the United States did not provide concordance at the time it put forward its Schedule, or other sufficiently detailed definition to avoid any ambiguity, it means that it did not intend to depart from the CPC.

4.33 Moreover, the United States itself recognized, in the last draft Schedule it tabled at the end of the Uruguay Round negotiations in December 1993, that the scope of its sectoral commitments corresponds to the 1991 Sectoral classification. Paragraph 5 of the introductory language to the US Draft Final Schedule mentions, in pertinent part, that “[E]xcept where specifically noted, the scope of the sectoral commitments of the United States corresponds to the sectoral coverage in the Secretariat’s Services Sectoral Classification List (MTN.GNS/W/120, dated 10 July 1991).” The US Draft Final Schedule includes, inter alia, sector 10, which is defined in identical terms to the sector 10 appearing today in document GATS/SC/90. So is in particular sub-sector 10.D, equally labelled “OTHER RECREATIONAL SERVICES (except sporting)”. Thus, paragraph 5 of the introductory language to the US final offer contains an express admission that the US Draft Final Schedule was in principle based on the 1991 Sectoral classification—and therefore also on the CPC, to which the latter makes reference. The same paragraph also states that only when expressly mentioned does the US Draft Final Schedule depart from the 1991 Sectoral classification. Clearly, however, sub-sector 10.D does not contain any such express mention. It is also worth mentioning that identical language to that of paragraph 5 just quoted also appears in the introduction to the second Revised Conditional Offer tabled by the United States earlier during the Uruguay Round. To the best of the knowledge of the European Communities, the US second Revised Conditional Offer is also the one where a specific commitment on “Other recreational services” first appears, and again, it is defined in terms of “OTHER RECREATIONAL SERVICES (except sporting)”. This means that the US specific commitment on “other recreational services” was always accompanied by an indication that it was based on the 1991 Sectoral classification. It also means that sub-sector 10.D was drafted on the basis of the 1991 Sectoral classification—whether or not it was so because the United States was bound to it. And, as noted by Canada, there are only two instances where the United States made explicit exceptions to the 1991 Sectoral classification. The United States seems to argue that other WTO Members should have sought clarification from the United States of the scope of its commitments. In fact, the language quoted from the US Draft Final Schedule and second Revised Conditional Offer shows that it was the United States itself that provided such clarification, including in the last offer it

---

547 MTN.GNS/W/164, page 7, para. 16, in fine.
550 See above para. 4.8.
tabled at the end of the negotiations in December 1993. It also shows that there is no attempt to impose a link with the CPC definitions *ex post facto*, contrary to the US contention.

4.34 The European Communities further argues that the need for clear and predictable commitments also underlies the explanatory document of the US Schedule prepared by the USITC at the request of the USTR. For sub-sector 10.D, that document expressly recognizes the correspondence between the US Schedule, the 1991 Sectoral classification and the relevant CPC codes, which include gambling and betting. Having expressly recognized in that document what can already be inferred from its own Schedule and from paragraph 16 of the 1993 Scheduling Guidelines (that is, that the US Schedule does not depart from the CPC description for sub-sector 10.D), the United States cannot in good faith attempt to unilaterally restrict the scope of its commitments in dispute settlement. The "security and predictability" of "the reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade" pursued by the WTO Agreement would otherwise be compromised.

4.35 As for GATS Article XVI, the European Communities argues that two elements must be reviewed under Article XVI:1, i.e. whether the US Schedule of specific commitments includes market access commitments on gambling and betting services and whether maintaining such a measure amounts to less favourable treatment than committed. Moreover, under Article XVI:2, the measure in question must not be of any of the six types of prohibited measures listed therein. Concerning the first point, the European Communities submits that the US specific commitments, specifically in sub-sector 10.D of the US Schedule, correctly interpreted, also cover gambling services. Second, given that the United States has inscribed no limitation in its Schedule of specific commitments for gambling and betting services provided under mode 1, a prohibition on the "supply of gambling and betting services from outside the United States to consumers in the United States", which is a complete limitation on provision under that mode, would clearly entail less favourable treatment than provided in such Schedule. Thirdly, a "blanket" prohibition of cross-border gambling services means that no foreign gambling service can enter ("access") the US gambling market under the so-called "mode 1" of service provision and that no foreign supplier can operate from outside the US territory on the US market. This is tantamount to saying that there is a quantitative restriction ("numerical quota") within the meaning of Article XVI:2(a) of the GATS, which quota equals zero. The United States, while contesting that the measures referred to by Antigua and Barbuda in its request for panel establishment contain numerical quotas, does not appear to contest Antigua and Barbuda's statement that a complete ban would constitute a numerical quota. On the other hand, the fact that Article XVI:2(a) refers to "limitations on the number of service suppliers … in the form of numerical quotas" does not in itself indicate that a particular number or ceiling of providers operations or output must be expressly indicated in a measure in order for it to be caught by such provision. Otherwise, it would indeed not be difficult for Members to fashion their measures in such a way as to escape the prohibition in Article XVI:2(a).

4.36 As to GATS Article XVII, the European Communities argues that, to establish a violation of this provision, one must assess: (i) whether the US schedule of specific commitments includes market access commitments on gambling and betting services; (ii) whether there are like services/suppliers; and (iii) whether maintaining such measure amounts to less favourable treatment than granted to domestic services and suppliers, that is (a) whether the measure modifies the conditions of competition and (b) this is in favour of domestic services and suppliers.

4.37 As regards the identification of like domestic service or suppliers, the European Communities shares the Appellate Body's view on the need for a case-by-case approach to the issue of "likeness" in WTO provisions. Furthermore, some special caution needs to be exercised to avoid mechanical transposition to services of criteria developed in connection with trade in goods. Services are, generally, a different "case". In the two cases in which the term as it appears in the GATS has been interpreted so far, the services and suppliers at issue were found to be "like" by focusing on the
similarity of the activity performed and of the result of such activity (that is the service itself).\textsuperscript{551} The intangibility of services may make certain other similarities extremely subjective and too uncertain properly to appreciate. It is thus important to focus on the characteristics of the services at issue themselves and other objective elements. The classification of services in Members’ Schedules will also be a useful indicator because classification generally reflects a certain level of differentiation between the various activities listed. Indeed, it is most likely that services will not be "like" one another if classified in different parts of a Schedule.

4.38 Activities which are essentially the same (e.g. the provision of wholesale trade services) will most likely lead to a finding of "likeness". On the other hand, focusing on the service activity \textit{per se} also allows to make distinctions, where appropriate. Thus, for example, in the case of "specialized medical services” covered by the CPC number 93122, one will need to further distinguish between different kinds of specialization. A cardiologist's activity will be distinguishable from an ophthalmologist's – and the difference in activity will also tell something about whether these two specialized services can compete. Or, to take one example from environmental services, "nature and landscape protection services" covered by CPC number 9406 include service activities as diverse as ecosystem protection services, disaster assessment and abatement services, climate change studies. The capability of serving the same or partially common end uses will normally also confirm the similarities or differences of two services resulting from an analysis of the "attributes" or "features" of a service \textit{per se}. Thus, to return to the example of specialized medical services, a service by a cardiologist will also serve a different purpose than a service by an ophthalmologist. Reliance on more subjective elements – such as consumer perception – may greatly reduce predictability of GATS commitments and obligations, contrary to the objectives of the WTO Agreement. This is especially so when consumer perception may have been affected by past or current regulatory or other restrictions.

4.39 Differences in elements extrinsic to the services themselves – such as in terms of law enforcement and consumer protection, protection of youth – are not as such relevant to decide whether two services are "like" (even if they may respond to differences in the characteristics of two services). Otherwise, given that services provided cross-border are often regulated differently from services provided domestically, there could hardly ever be likeness between the former and the latter. Thus, for example, US international telecommunication service providers would not be like the domestic Mexican provider because the Mexican regulator cannot impose fine on them. Likewise, the nature or identity of the shareholders of two service suppliers may not as such make services "unlike".

4.40 The European Communities further submits that paragraph 3 of Article XVII expressly refers to a modification of the conditions of competition (to the detriment of foreign services and suppliers) as an indication of "less favourable treatment". This provision suggests that the purpose of the GATS national treatment obligation is to protect the expectations of equal competitive conditions between foreign and domestic services and suppliers.\textsuperscript{552} A notion of "likeness" that were so narrow such that it would not be permissible to take account of the competitive relationship between foreign and domestic services would not seem to be in line with the full text and objective of Article XVII.

4.41 For the European Communities, the fact that a prohibition on the "supply of gambling and betting services from outside the United States to consumers in the United States" would violate GATS provisions does not rule out that the violations may be justified under GATS Article XIV thereof. In view of the close correspondence in wording and function between Article XIV of the GATS, and Article XX of the GATT 1994, the European Communities concurs with Antigua and Barbuda that the former provision is an affirmative defence. As such, it would be up to the United

States to show that a prohibition on cross-border supply of services is justified on grounds foreseen in Article XIV (which it has not done in its first written submission). For the same reasons of close similarity to Article XX of the GATT 1994 both in drafting and in function, Article XIV should be interpreted in the light of the pertinent GATT acquis.

C. JAPAN

4.42 On the issue of whether the United States undertook commitments on gambling and betting services (CPC 96492), Japan submits that the relations between the headings in the US Schedule and CPC classification is not clear, as there is no explicit reference to CPC number in the US Schedule. This is an issue of vital importance for the legal stability of the commitments undertaken by Members during the Uruguay Round and the continuing services negotiations. The 1993 Scheduling Guidelines state in paragraph 15 that "the legal nature of a schedule as well as the need to evaluate commitments, require the greatest possible degree of clarity in the description of each sector and sub-sector scheduled", and make reference to the W/120 and CPC numbers. It might be argued that the same paragraph states that only "(i)n general," "the classification of sectors and sub-sectors should be based on the Secretariat's revised Services Sectoral Classification List." Moreover it might be argued that the 1993 Scheduling Guidelines is not a legally binding document. However, given the practice of Members to frequently refer to this document, to W/120 and the CPC in the course of negotiations and after, it could at least be said that there existed an implicit confidence among Members that each would respect those documents and classification. The question seems to be whether offers are sufficiently defined when not referencing or relying on the CPC, without any positive indication of the items which are included. Should this be the case, then Members would be forced, in the context of current services negotiations, to bring with them the Merriam-Webster's Collegiate Dictionary on every bilateral exchange with the United States. Or they would be forced to request the United States to provide a set of US definitions for the respective sectors and sub-sectors where commitments are proposed in the US initial offer (TN/S/O/USA), possibly together with corresponding US domestic industrial classification.

4.43 In this dispute, if the United States is to refuse to accept that it has undertaken commitment on gambling and betting services (CPC 96492), it is not sufficient to merely prove that the said services are not included in sub-sector 10.D of its Schedule. The United States should also elaborate on what specific service sub-sectors are actually included under the same heading. The United States also fails to prove that it made it sufficiently clear at the time of Uruguay Round negotiations on which specific sub-sectors that it intended to undertake commitments under the heading "10.D. OTHER RECREATIONAL SERVICES (except sporting)." Had there not been, at the time of the negotiations, an explicit and comprehensive statement by the United States regarding the specific content of that heading in its Schedule, the general expectation that the United States respected the structure of W/120 and the CPC needs and deserves a full protection; when specific commitments are undertaken on a CPC four digit-number service item, it indicates that those specific commitments cover all CPC five digit-number service items. Japan notes that its arguments above are without prejudice to a possibility that some sub-classification of a service sector specifically committed under a heading in the sector/sub-sector column of a Member's schedule or some measures thereupon could be affected by some provisions of the GATS and its Annexes, such as Article I:3(b).

4.44 Concerning the issue of interpretation of "like services" as provided in Article XVII of the GATS, Japan notes Antigua's arguments that the issue of "likeness" plays a less significant role in the context of trade in services than in the context of trade in goods, and that the characteristics of a specific service or service supplier are often not inherently "locked in" to the product and are often easily adaptable. This issue of "likeness", however, requires a cautious consideration of all conditions surrounding services, including appropriate policy considerations. Moreover, in Japan's view, it should be confirmed that identification of "likeness" of trade in services should be made, as that of trade in goods, on a case-by-case basis, on certain criteria and without over-simplification or excessive generalization of the characteristics of services or service suppliers; mere similarity in the
appearance of types of games or in the essential nature or functions of winning and losing money should not suffice to identify the "likeness" of services. Japan could support the US argument that "likeness" of services should be identified, as appropriate, taking into account such elements as consumer perception, scope of availability, law enforcement environment and possible risk involved in some particular services. In fact, such scope for argument is, Japan believes, a necessary component of the very structure of the GATS. It could be argued that the US restrictions on Internet gambling which are equally applicable within the United States might have some implication on the US consistency with Article XVI of the GATS.

4.45 In some service sectors, it could be argued, in identifying "likeness", differences in regulatory circumstances need to be, as appropriate, taken account of. When services are supplied cross-border, regulatory circumstances are completely different from those supplied through commercial presence; service suppliers are outside the country and therefore are not administratively and judicially accountable to the government or to the consumers in the same manner as domestic suppliers. In gambling and betting services, for example, in which policy considerations such as prevention of international organized crimes are particularly essential, such a difference in regulatory circumstances might justify, to a certain extent, different regulatory framework to be applied to different modes. In other words, certain services, when supplied cross-border, are recognized to be under less sound regulatory circumstances than when supplied domestically; it therefore could be argued from the viewpoint of the consuming Member, these two cases are not like services to be accorded the same treatment. Under a full national treatment commitment in cross-border mode, it is considered that there is still room, at least in some services, for treating as not like services, cross-border services and commercial-presence services of similar appearance and functions, if the necessity of differentiated treatment in light of high regulatory requirement and difference in regulatory circumstances, etc. is sufficiently proven by the consuming Member.

4.46 Without prejudice to the arguments above, and taking carefully into account the reference to the same question in the Panel Report on Canada – Autos 553, Japan also would like to invite attention of the Panel to the issue of a possible function of modes of supplying services in identifying "likeness" of services. When this issue was taken up by the Council for Trade in Services in its Regular Session meeting on 19 March 2002 under an agenda item of "proposal for a technical review of GATS provisions", the views of Members were not uniform. 554 In these discussions, Members' attention was drawn to the commonality of the usage of "like services and service suppliers" in GATS Articles II:1 and XVII:1-3. In the absence in Article II of the phrase "in the sectors inscribed in its Schedule", the obligation apparently covers all services sectors and sub-sectors whether commitments are undertaken or not. This, if "likeness" of services is to be established across modes, in turn could effectively expand the obligation of a Member beyond what it has inscribed in its Schedule. When Member A, for example, has inscribed "None" in the mode 3 national treatment column in a particular service sector, Member A is obliged through Article XVII of the GATS to extend to like services and service suppliers of Member B treatment ("treatment b") in the same mode no less favourable than that it accords to its own service and service suppliers. Then, through Article II of the GATS, in turn, Member A is obliged to extend treatment no less favourable than "treatment b", to like services and service suppliers of Member C, for example, in cross-border mode of supplying services, whatever inscriptions Member A has made in the mode 1 national treatment column in the same particular service sector. Therefore, there was a suggestion that modes of supplying services might have a certain function in identifying "likeness" of services. This consideration is not explicit in the Panel Report on Canada – Autos. Japan, therefore, considers that a possible function of the mode of supplying services, together with the findings of the Canada – Autos Panel Report needs to be considered, if at all the Panel needs to make findings upon the issue of "likeness" of services.

554 S/C/M/59, paras. 20-39
D. MEXICO

4.47 Mexico submits that its government has decided to participate as a third party in this dispute because of its systemic interest in the proper interpretation and application of the GATS disciplines and of the specific commitments of WTO Members on national treatment and market access. Of particular interest to Mexico is the relationship between the specific commitments of WTO Members, the W/120, and the CPC. Mexico disagrees with the US contention that the CPC numeric codes are not relevant in interpreting the United States' specific commitments under the GATS. In Mexico's view, the CPC is a means of interpreting and giving meaning to the United States' specific commitments.

4.48 Firstly, Mexico shares the view expressed by Canada that "[t]he common intention of Members in regard to the Schedule of the United States is that where it simply follows the W/120 Classification List, without clearly and explicitly departing from it and the corresponding CPC numbers, it must be inferred that the United States' specific commitments are to be interpreted in the light of the W/120 Classification List and the CPC numbers associated with it". Secondly, Mexico considers that the W/120 and the corresponding CPC numeric codes unquestionably qualify as "supplementary means of interpretation" under Article 32 of the Vienna Convention. As such, they can always be used to confirm the meaning of the United States' specific commitments resulting from the application of the general rule of interpretation in Article 31 of the Vienna Convention, or to determine the meaning when the interpretation according to Article 31 leaves the meaning ambiguous or obscure. Consequently, it is wrong to refer, as the United States has done, to "non-CPC commitments". Under Article 32, the CPC numeric codes and definitions can be relevant in interpreting the Schedule of Specific Commitments of all WTO Members.

E. CHINESE TAIPEI

4.49 Chinese Taipei did not submit its views to the Panel.

V. INTERIM SECTION

5.1 On 7 April 2004, pursuant to Article 15.2 of the DSU, Article 16 of the Panel's Working Procedures and the revised Timetable for Panel Proceedings, the parties provided their comments on the Interim Report. None of the parties requested a further meeting to review part(s) of the Panel's Report. On 16 April 2004, pursuant to the revised Timetable for Panel Proceedings, the parties submitted further written comments on the comments that had already been provided on the Panel's Interim Report on 7 April 2004.

5.2 Pursuant to Article 15.3 of the DSU, this section of the Panel Report contains the Panel's response to the main comments made by the parties in relation to the Interim Report and forms part of the Findings of the Panel's Report.

A. PUBLIC RELEASE OF THE CONFIDENTIAL INTERIM REPORT

5.3 When, on 24 March 2004, the Panel transmitted its Interim Report to the parties, we clearly indicated that such Interim Report was strictly confidential. Indeed, pursuant to the DSU, all panel proceedings remain confidential until the Panel Report is circulated to the WTO Members. We had also explicitly emphasized at all our meetings with the parties that the Panel's proceedings were confidential. This was accepted by the parties and reflected in the Panel's Working Procedures and in all our relevant correspondence with the parties.

555 See above para. 4.9.
556 Chinese Taipei replied, however, to various questions from the Panel (see Annex C).
5.4 Therefore, we note with concern that the confidentiality of the Panel proceedings has been breached on various occasions.

5.5 For instance, it has come to our attention that the representative of Antigua and Barbuda has been quoted in press releases as commenting on confidential aspects of the Panel proceedings.\textsuperscript{557} Within hours of its transmission to the parties, the Interim Report was referred to in the press and commented upon by both parties to the dispute.\textsuperscript{558} On 26 March 2004, an international law firm published a commentary on the Interim Report, from which it appears that the authors, not being a representative of either of the parties in this case, had access to the text of the Interim Report.\textsuperscript{559}

5.6 In its comments to the Panel, dated 16 April 2004, Antigua stated that its delegation:

"... was contacted by a member of the international press corps who was already aware of both the release and the ultimate conclusions of the Interim Report. The press representative in question informed the delegation that information on the contents of the report was provided to him by sources independent of the parties."\textsuperscript{560}

5.7 In a letter to the Panel dated 27 April 2004, the United States requested that the Panel:

"... investigate whether 'sources independent of the parties' breached the confidentiality of the interim report, and that it inform the parties of the results of this investigation and any actions taken in response."

5.8 The Panel notes first that the statement made by Antigua and referred to in paragraph 5.6 is very serious in that it may imply that a member of the Panel or the WTO Secretariat breached the confidentiality requirement of the DSU. The Panel wishes to assert forcefully that neither the Panel nor the Secretariat has done so. Third parties cannot be blamed since they do not receive a copy of the Interim Report.

5.9 On 28 April 2004, the Panel asked Antigua to clarify this statement and, in particular, the assertion that information was provided by a source independent of the parties.

5.10 By letter dated 29 April 2004, Antigua stated as follows:

\textsuperscript{557} See, for instance, \textit{Antigua and U.S. Disagree on Dispute Panel}, Online Casino News – August 2003, at http://www.casinomeister.com/news/sept2003.html ("When this route was foiled by an inability to agree on the composition of the panel, Antigua lead negotiator Sir Ronald Sanders accused the Americans for being responsible for the lack of progress, saying 'We were provided with two lists of people by the WTO secretariat, most of whom were rejected by the U.S. on the basis that they didn't like what someone said about them or wrote about them or whatever."); \textit{U.S. Loses Preliminary Ruling in Review By WTO Internet Gambling Restrictions}, WTO Reporter, 12 November 2003 ("Antigua's ambassador in London Sir Ronald Sanders, who represents the country at the WTO, welcomed the preliminary decision Nov. 10 as a 'positive development' and said the panel was already moving ahead with its work."); \textit{WTO Panel Concludes First Hearing of Antigua-United States Dispute}, found on the website of the Government of Antigua and Barbuda, at http://www.antigua-barbuda.com/busnss_politics/body_wto_firsthearing.html ("The Caribbean state's Chief Foreign Affairs Representative, Sir Ronald Sanders, said Friday This has been a long up hill battle but we have overcome every obstacle so far. These included the US attempt to stop the establishment of the Panel, then its failure to agree with us on the composition of the Panel, and finally its filing of a 'no-case' submission which was overturned by the Panel.").

\textsuperscript{559} See \textit{WTO Panel Rules Against United States in Internet Gambling: What Does it Mean?} By Kay Georgi and Philippe Vlaeminck, Coudert Brothers.

\textsuperscript{560} Comments by Antigua and Barbuda on the Request by the United States for Review of Precise Aspects of the Interim Report, 16 April 2004.
"On 24 March 2004 the Antiguan delegation was approached by a member of the international press corps who was clearly aware of both the release of the Interim Report and its overall conclusion. The journalist did not disclose the source of the information to the Antiguan delegation, nor does the delegation have any idea to date what the source was.

Please note that Antigua did not make any allegation with respect to the source of the information; rather in the Comments Antigua simply reported what was told to the Antiguan delegation by the journalist. Antigua offers its apologies for any misunderstanding."

5.11 Assuming that Antigua's assertions are true, in the Panel's view, even if the journalist had claimed to have received information about the Interim Report from a source independent of the parties, it was inappropriate, in light of the confidentiality requirement contained in the DSU, for Antigua, as a party, to have commented to the journalist on the contents of the Report.

5.12 In light of the circumstances, the United States felt obliged to comment on the Interim Report, and, thereby, also violated its obligation to ensure confidentiality of the Interim Report.

5.13 To conclude, the Panel wishes to emphasize that disregard for the confidentiality requirement contained in the DSU affects the credibility and integrity of the WTO dispute settlement process, of the WTO and of WTO Members and is, therefore, unacceptable.

B. EDITORIAL/TYPOGRAPHICAL CHANGES

5.14 The parties have suggested a number of editorial changes to the Panel's Interim Report and corrections of typographical errors. The Panel has largely accepted these suggestions. As requested by the United States, the Panel has clarified and/or elaborated upon certain factual descriptions contained in the Interim Report, including those relating to the Travel Act, the Illegal Gambling Business Act, statistics on US enforcement and the websites of TVG, Capital OTB and Xpressbet.com. The United States has also asked the Panel to reconsider the use of certain terms such as "expectations", "errors", "late submissions" and more or less "trade restrictive" and the Panel has done so.

5.15 Antigua requested the Panel to add references to support a conclusion that Antigua has made a prima facie demonstration that the federal measures at issue prohibit the cross-border supply of gambling and betting services. The Panel believes that Antigua is not entitled at this late stage of the proceedings to attempt to make or add to its demonstration of its claims that the GATS has been violated.

C. MEMBERS’ RIGHT TO REGULATE AND TO PROHIBIT GAMBLING AND BETTING SERVICES

5.16 The United States has suggested that the approach taken by the Panel in the Interim Report may be read as "supporting the criticisms levelled by numerous groups against the GATS as being overreaching and an unjustified intrusion into the sovereign ability of Members to regulate in the area of services".

5.17 In our view, it is clear that WTO Members do have the right to regulate and to prohibit gambling and betting services, if they so wish. In the present case, we reached the conclusion that the United States had undertaken a specific commitment for cross-border supply of gambling and betting services. In this context, the Panel would like to reiterate here its Concluding Remarks contained in paragraphs 7.3 and 7.4 of the Interim Panel Report:
"The Panel wishes to note that it is well aware of the sensitivities associated with the subject-matter of this dispute, namely gambling and betting services. Our conclusions are directly linked to the particular circumstances of this dispute. We note in this regard that the United States may well have inadvertently undertaken specific commitments on gambling and betting services. However, it is not for the Panel to second-guess the intentions of the United States at the time the commitment was scheduled. Rather, our role is to interpret and apply the GATS in light of the facts and evidence before us.

We also wish to emphasize what we have not decided in this case. We have not decided that WTO Members do not have a right to regulate, including a right to prohibit, gambling and betting activities. In this case, we came to the conclusion that the US measures at issue prohibit the cross-border supply of gambling and betting services in the United States in a manner inconsistent with the GATS. We so decided, not because the GATS denies Members such a right but, rather, because we found, inter alia, that, in the particular circumstances of this case, the measures at issue were inconsistent with the United States' scheduled commitments and the relevant provisions of the GATS."

D. THE US SCHEDULE

5.18 The United States has suggested that the Panel, in its interpretation of the US Schedule, had set aside the ordinary meaning of "sporting", which it had excluded from its specific commitment under sub-sector 10.D ("Other recreational services (except sporting)"). The United States has also argued that the Panel has accorded undue importance to the context (i.e. the 1993 Scheduling Guidelines and W/120) and, by so doing, it has ignored the difference between Members' schedules that include explicit references to the CPC and those that do not.

5.19 Although the terms "gambling and betting services" do not appear in its Schedule, the United States has undertaken specific commitments under sub-sector 10.D, entitled "Other recreational services (except sporting)". The Schedule does not provide a definition of those terms and during the Panel proceedings, the United States did not provide any definitional framework of its schedule in general and this entry in particular, even in response to a specific question by the Panel on the issue. The Panel was, thus, obliged to interpret the US specific commitments under sub-sector 10.D in order to give meaning to the terms contained therein. The Panel did so by examining, first, the ordinary meaning of such terms. Since the dictionary definitions of the term "Other recreational services (except sporting)" did not allow a definitive conclusion to be reached, the Panel continued its analysis to consider the context of that term, in accordance with the Vienna Convention on the Law of Treaties.

5.20 When the Panel made reference to the 1993 Scheduling Guidelines and to W/120 as "context" of the GATS, it did not suggest that such "context" was part of the GATS. The relevant "context" was never considered with a view to identifying any obligations that could have been imposed on the United States. Rather, when interpreting the specific commitment undertaken by the United States, the Panel read the US Schedule in light of the 1993 Scheduling Guidelines and W/120. The Panel, therefore, did not reach the conclusion that schedules that contain references to the CPC are necessarily like schedules that do not contain such references. The Panel reached the conclusion that the effective interpretation of the terms "Other recreational services (except sporting)" in the circumstances of this case included gambling and betting services.

561 Panel question No 5.
E. MEASURES AFFECTING THE CROSS-BORDER SUPPLY OF TRADE IN SERVICES

5.21 The United States has argued that the Interim Report does not address the issue of the legal consequences flowing from the fact that, under US law, state laws cannot be and are not used to prosecute conduct by an actor located wholly outside the state and having no presence there. The United States has also submitted that it is not aware of any argumentation by Antigua on this issue that would allow the Panel to resolve the issue of applicability of these state laws to the cross-border supply of gambling and betting services.

5.22 In our view, the state laws at issue are within the scope of the GATS since these measures "affect trade in services" within the meaning of Article I:1 of the GATS. The Panel has found that the measures at issue entail prohibitions on the supply of gambling and betting services. In our view, prohibitions on certain types of activities necessarily affect trade in services with respect to that activity. We agree with the Appellate Body's statement in EC – Bananas III that "the scope of the GATS encompasses any measure of a Member to the extent it affects the supply of a service regardless of whether such measure directly governs the supply of a service or whether it regulates other matters but nevertheless affects trade in services". There is no reason why measures adopted by regional and local governments and authorities cannot a priori "affect the supply of a service" within the meaning of Article I:1 of the GATS, even if such measures cannot be enforced extraterritorially.

5.23 This being said, we would like to emphasize that whether a measure "affecting trade in services" within the scope of the GATS in accordance with Article I:1 is inconsistent with one or more provisions of the GATS is a distinct matter which calls for a separate determination under the relevant GATS provisions.

5.24 We have revised the section of the Interim Report entitled "Measures at issue" so as to more clearly reflect our understanding of the meaning of Article I:1 of the GATS and its application in this case.

F. ARTICLE XIV

5.25 The United States objected to the interpretation and application of Article XIV of the GATS made by the Panel. In particular, the United States objected to the Panel's conclusion that it had a "burden" to prove that it could not guard against those risks specific to remote gambling by means having a less restrictive trade impact than a prohibition on the remote supply of gambling and betting services. According to the United States, there is no such "burden" under Article XIV. The United States also opposed the Panel's conclusion that, in the context of the necessity test under Articles XIV(a) and (c), the United States was obliged to consider invitations by Antigua and cooperation with other Members to address concerns expressed by the United States to justify its prohibition on gambling and betting services by remote means and to explore whether there were WTO-consistent alternatives.

5.26 It is well established under WTO law that it is for the Member invoking the application of a justification provision (such as Article XIV of the GATS) to demonstrate that it has complied with the requirements of such a provision. It was, therefore, for the United States to demonstrate that the measures at issue were "necessary" to "protect public morals" or to "maintain public order". The Panel reached the conclusion that the measures at issue were indeed designed so as to protect public morals or to maintain public order; but the United States had failed to demonstrate that they were "necessary" since it had not shown that there was no WTO-consistent alternative measure reasonably available that would provide the United States with the same level of protection against the risks it had identified. It was in this context that we considered it relevant that the United States had not accepted Antigua's invitation to discuss and consider WTO-consistent alternatives that might or could address the United States' concerns.
5.27 Even if the United States had considered that no such alternative currently exists, it could not properly have prejudged the situation that may arise in the future. It is because the United States had made a specific market access commitment with respect to cross-border trade of gambling and betting services that it was obliged to consider WTO-consistent alternatives, including those that may be suggested by Antigua and other Members before and while maintaining its prohibition on the cross-border supply of gambling and betting services.

5.28 Finally, we would like to reiterate that in concluding that the United States had not fulfilled the conditions in order to benefit from the protection of Article XIV of GATS in the circumstances of the present case, we have neither found nor maintain that WTO Members, including the United States, have forfeited their sovereign right and ability to regulate the cross-border supply of services, consistently with the GATS, particularly for the protection of public morals or for the maintenance of public order.

VI. FINDINGS

A. INTRODUCTION

1. Terms of reference of this Panel

6.1 The terms of reference of this Panel are determined by the Request for the Establishment of a Panel circulated by Antigua and Barbuda to the DSB on 13 June 2003. The Panel request refers to the specific GATS provisions that, according to Antigua, have been violated by the United States as well as the US measures that Antigua wishes to challenge.

6.2 Antigua has claimed that the GATS Schedule of the United States includes specific commitments on gambling and betting services. Antigua has further claimed violations of, and has developed argumentation in its submissions with respect to, Articles VI:1, VI:3, XVI:1, XVI:2, XVII:1, XVII:2, XVII:3 and XI:1 of the GATS.

6.3 The United States denies these claims. It argues that its Schedule makes no such commitment on gambling and betting services and that, in any case, the measures at issue are not inconsistent with its GATS obligations. It also invokes Article XIV(a) and Article XIV(c) of the GATS in its defence.

2. Structure of this Panel Report

6.4 Since all the provisions in respect of which Antigua has developed violation claims are applicable only in sectors and sub-sectors in which specific commitments exist, the Panel will need to examine whether the United States has undertaken a specific commitment with respect to gambling and betting services. The Panel will examine this issue first because the absence of any relevant commitment by the United States would suffice to dismiss this case.

6.5 Secondly, the Panel will address the issue of, and the difficulties associated with, the identification, interpretation and effect of the measure(s) being challenged by Antigua. The Panel will have to determine whether Antigua has identified with sufficient clarity the measures it seeks to challenge. In particular, the Panel will have to determine, inter alia, whether, under the GATS and the DSU, Antigua can challenge in dispute settlement proceedings what Antigua refers to as a "total prohibition" on the cross-border supply of gambling and betting services, as a measure in and of itself.

---

562 WT/DS285/2, 13 June 2003 (hereinafter referred to as the “Panel request”). See the Request for Preliminary Rulings in Annex B.

563 The Panel notes that, in the Panel request, Antigua claimed violation of Article VIII of the GATS, paras. 1 and 5. However, Antigua did not pursue this claim during the Panel proceedings.
6.6 Thirdly, the Panel will examine whether Antigua has demonstrated that the measures at issue violate the relevant GATS provisions identified in the Panel request. The Panel will proceed in the following order: Article XVI, paragraphs 1 and 2; Article XVII, paragraphs 1 to 3; Article VI, paragraphs 1 and 3; and Article XI, paragraph 1.

6.7 If necessary, that is, if a violation of any of the GATS provisions invoked by Antigua is established, the Panel will examine whether the United States has demonstrated that the challenged measures are justified under Article XIV (a) and/or (c) of the GATS.

3. **Interpretation of WTO provisions**

6.8 The Panel recalls Article 3.2 of the DSU which states that:

"The dispute settlement system of the WTO is a central element in providing security and predictability to the multilateral trading system. The Members recognize that it serves to preserve the rights and obligations of Members under the covered agreements, and to clarify the existing provisions of those agreements in accordance with customary rules of interpretation of public international law. Recommendations and rulings of the DSB cannot add to or diminish the rights and obligations provided in the covered agreements."

6.9 It is now established\(^{564}\) that the "customary rules of interpretation of public international law" include at least Articles 31, 32 and 33 of the Vienna Convention on the Law of Treaties (hereinafter referred to as the "Vienna Convention"). Accordingly, in this dispute, we will make reference to Articles 31, 32 and 33, which are cited below.

6.10 Articles 31, 32 and 33 of the Vienna Convention read as follows:

"Article 31

(General rule of interpretation)

1. A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose.

2. The context for the purpose of the interpretation of a treaty shall comprise, in addition to the text, including its preamble and annexes:

   (a) any agreement relating to the treaty which was made between all the parties in connexion with the conclusion of the treaty;

   (b) any instrument which was made by one or more parties in connexion with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty.

3. There shall be taken into account, together with the context:

   (a) any subsequent agreement between the parties regarding the interpretation of the treaty or the application of its provisions;

(b) any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation;

(c) any relevant rules of international law applicable in the relations between the parties.

4. A special meaning shall be given to a term if it is established that the parties so intended.

Article 32

(Supplementary means of interpretation)

Recourse may be had to supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion, in order to confirm the meaning resulting from the application of Article 31, or to determine the meaning when the interpretation according to Article 31:

(a) leaves the meaning ambiguous or obscure; or

(b) leads to a result which is manifestly absurd or unreasonable."

Article 33

(Interpretation of treaties authenticated in two or more languages)

1. When a treaty has been authenticated in two or more languages, the text is equally authoritative in each language, unless the treaty provides or the parties agree that, in case of divergence, a particular text shall prevail.

2. A version of the treaty in a language other than one of those in which the text was authenticated shall be considered an authentic text only if the treaty so provides or the parties so agree.

3. The terms of the treaty are presumed to have the same meaning in each authentic text.

4. Except where a particular text prevails in accordance with paragraph 1, when a comparison of the authentic texts discloses a difference of meaning which the application of Articles 31 and 32 does not remove, the meaning which best reconciles the texts, having regard to the object and purpose of the treaty, shall be adopted."

4. Burden of proof

6.11 The Panel recalls the rules on burden of proof in WTO dispute settlement proceedings, which, in essence, require that a party asserting an allegation must prove it.

6.12 In US – Wool Shirts and Blouses, the Appellate Body made the following statement on the issue of burden of proof:

"[W]e find it difficult, indeed, to see how any system of judicial settlement could work if it incorporated the proposition that the mere assertion of a claim might amount to proof. It is, thus, hardly surprising that various international tribunals, including the International Court of Justice, have generally and consistently accepted
and applied the rule that the party who asserts a fact, whether the claimant or the respondent, is responsible for providing proof thereof. Also, it is a generally-accepted canon of evidence in civil law, common law and, in fact, most jurisdictions, that the burden of proof rests upon the party, whether complaining or defending, who asserts the affirmative of a particular claim or defence. If that party adduces evidence sufficient to raise a presumption that what is claimed is true, the burden then shifts to the other party, who will fail unless it adduces sufficient evidence to rebut the presumption.

In the context of the GATT 1994 and the WTO Agreement, precisely how much and precisely what kind of evidence will be required to establish such a presumption will necessarily vary from measure to measure, provision to provision, and case to case.  

6.13 The Panel in Turkey – Textiles, in a finding not addressed by the Appellate Body, summed up the rules on burden of proof under WTO jurisprudence as follows:

"(a) it is for the complaining party to establish the violation it alleges;
(b) it is for the party invoking an exception or an affirmative defence to prove that the conditions contained therein are met; and
(c) it is for the party asserting a fact to prove it."

6.14 Therefore, in the present dispute, it is for Antigua to establish that the measures at issue violate Articles XVI, XVII, VI and XI of the GATS, while it is for the United States to establish, if need be, that the challenged measures benefit from the justification provisions of Article XIV of the GATS.

5. **Judicial economy**

6.15 In deciding whether to exercise judicial economy over any of Antigua's claims, the Panel recalls that the principle of judicial economy is recognized in WTO law. In US – Wool Shirts and Blouses, the Appellate Body made clear that panels are not required to address all the claims made by a complaining party. The Appellate Body relied on the explicit aim of the dispute settlement mechanism, which is to secure a positive solution to a dispute (Article 3.7) or a satisfactory settlement of the matter (Article 3.4). Thus, the basic aim of dispute settlement in the WTO is to settle disputes and not to develop jurisprudence. The Appellate Body stated:

"[G]iven the explicit aim of dispute settlement that permeates the DSU, we do not consider that Article 3.2 of the DSU is meant to encourage either panels or the Appellate Body to 'make law' by clarifying existing provisions of the WTO Agreement outside the context of resolving a particular dispute. A panel need only address those claims which must be addressed in order to resolve the matter in issue in the dispute."

6.16 In its supporting reasoning, the Appellate Body also explored Article 11 of the DSU, the provision setting out the mandate of panels, and found nothing in this provision that would require...
panels to examine all legal claims made by a complaining party. The Appellate Body relied on previous dispute settlement practice, *inter alia*, under the GATT 1947. Specifically, it stated: "if a panel found that a measure was inconsistent with a particular provision of the GATT 1947, it generally did not go on to examine whether the measure was also inconsistent with other GATT provisions that a complaining party may have argued were violated."  \(^{569}\)

6.17 Yet, the Panel is aware of the limits to its discretionary right to exercise judicial economy. As the Appellate Body stated in *Australia – Salmon*, the right to exercise judicial economy cannot be exercised where only a partial resolution of a dispute will result:

"The principle of judicial economy has to be applied keeping in mind the aim of the dispute settlement system. This aim is to resolve the matter at issue and 'to secure a positive solution to a dispute'. To provide only a partial resolution of the matter at issue would be false judicial economy. A panel has to address those claims on which a finding is necessary in order to enable the DSB to make sufficiently precise recommendations and rulings so as to allow for prompt compliance by a Member with those recommendations and rulings 'in order to ensure effective resolution of disputes to the benefit of all Members.'"  \(^{570}\)

6.18 In the present dispute, the Panel will need to address the issue of judicial economy and it will do so according to these guiding principles.

6. **Definitional issues**

6.19 A number of definitional issues have arisen in this dispute that need clarification before the Panel can proceed further with its examination of Antigua's claims.

(a) **Definition of "gambling and betting services"**

6.20 This dispute is about "gambling and betting services". The *Shorter Oxford English Dictionary* defines "to gamble" as:

"[P]lay games of chance for (a lot of) money; indulge in betting, esp. habitually; risk money, fortune, success, etc., on the outcome of an event [...]"  \(^{571}\)

6.21 Pursuant to the *Shorter Oxford English Dictionary*, "to bet" is defined as:

"[S]take (an amount of money, etc.) against another's in support of an affirmation or on the outcome of a doubtful event; risk an amount of money etc. against (a person) by agreeing to forfeit it if the truth or outcome is not as specified. [...]"  \(^{572}\)

6.22 The Panel also notes that, according to the *Internet Gambling Report*:

"Gambling involves any activity in which a person places a bet or wager. Generally, a bet or wager occurs when a person risks something of value on the outcome of an uncertain event: (1) in which the bettor does not exercise any control; or (2) which is determined predominantly by chance."  \(^{573}\)

\(^{569}\) Appellate Body Report on *US – Wool Shirts and Blouses*, p. 18 (footnote omitted).

\(^{570}\) Appellate Body Report on *Australia – Salmon*, para. 223.

6.23 The Internet Gambling Report distinguishes three broad categories of gambling and betting:
(i) casino-type games, including games such as roulette, blackjack, slot-machines, poker, craps, and
baccarat; (ii) lotteries, including games such as lotto, keno, bingo, video lottery terminals (VLTs) and
scratch cards; and (iii) sports betting, including betting on the outcome of different sporting events
(soccer, American football, cricket, etc.). This last category would also include betting on horseracing
and greyhound racing.  

6.24 During these proceedings, the parties gave indications as to what activities should be
considered as "gambling and betting" services for the purposes of this dispute. Antigua indicated that:

"[A] vast array of gambling and betting games and services are offered on a
commercial basis in the United States and elsewhere. These games can typically be
categorized into one of the following three broad categories: (i) betting on the
outcome of events in which the gamblers do not participate, such as sports contests
(for example, horse races, soccer, American football, basketball, and cricket); (ii)
card games involving monetary stakes (such as poker, black jack and baccarat); and
(iii) random selection games which are games of chance based on the random
selection of numbers or other signs and where the random selection is performed by
a machine or the casting of dice. This type of gambling takes various forms, including
lotto, keno and bingo; instant lotteries or 'scratch card games'; gambling machines;
and 'table games' such as roulette or 'craps'. Antigua notes that 'gambling', 'gaming',
'wagering' and 'betting' are different terms for the same basic activity. [...]"

Antiguan regulation provides for two kinds of gambling and betting licences –
interactive gaming and interactive wagering. The gaming licence is for casino-type,
random selection and card games and the wagering licence is for sports betting.
Some operators possess both licences and players can access either type of service
from one internet site, while other operators offer only one service. Casino game
operators create "virtual casinos" on their web sites with detailed graphics and
enhancements designed to mimic land-based casino settings. These sites offer a
variety of card and dice games such as poker, black jack, craps and keno, as well as
arcade-type games that provide virtual imitations of video poker terminals, slot
machines and other gambling machines. Because of the highly visual aspect of the
casino-type games, these services are operated exclusively through internet
connection. The sports betting operators offer the chance to wager on the outcome of
sporting contests in a number of different ways, such as straight wagers on match
results, transacting in futures markets in player performances, team performances and
outcomes of political campaigns and other uncertain future events, and other forms of
traditional as well as inventive methods of wagering. All Antiguan sports book
operators maintain an internet web site on which players may place wagers, but many
operators also make extensive use of telephone betting, as betting on contests or
performances to occur in the future does not need to be visual and the events are
independent of the operator's web site.

6.25 In response to a question posed by the Panel, Antigua further indicated that:

574 A. Cabot, Traditional Versus Internet Gambling, in Internet Gambling Report, 6th edition, ed. by
M. Balestra, River City Group, United States, 2003, p. 39.
575 Antigua notes that, in the context of a casino, card games will often be referred to as part of a wider
group of "table games" including random selection games such as roulette or craps.
576 (original footnote) See, e.g., www.intertops.com www.wsx.com
578 Antigua's first written submission, paras. 25, 39-40.
"Antigua seeks to supply all types of services that involve the making of a bet or wager to consumers in the United States, subject to services that are prohibited by Antiguan law, such as those involving the use of pornographic, indecent or offensive material. It is difficult to cover every possible permutation in a list, but the product offerings encompassed by the gambling and betting services that Antigua seeks to offer include: (i) Random selection games (in whatever form and including games that are traditionally described as ‘lotteries’ or ‘casino-type games’ in their probably endless permutations). (ii) Event-based gambling. (iii) Card games and other games of skill involving monetary stakes. (iv) Person-to-person gambling (so-called ‘betting exchanges’). \(^{579}\)

6.26 The United States indicated that it allows the cross-border supply of certain gambling services, such as:

"[...] (i) persons not involved in the business of gambling may transmit casual or social bets by any means, provided that the transmission is permissible under state law; (ii) pari-mutuel betting services may exchange the accounting data and pictures necessary to permit a racetrack outside the United States to offer pari-mutuel betting on U.S. races (and vice-versa), provided that such gambling is legal in both the sending and the receiving jurisdictions; (iii) suppliers of odds making and handicapping services (e.g., handicappers of horse races) as well as other gambling informational services may supply such services, provided that the form of gambling that they facilitate is legal in both the sending and the receiving jurisdictions; (iv) gambling websites may (and many do) provide so-called 'free play' games in which no real money is wagered. \(^{580}\)

6.27 Moreover, when asked the supply of which services is prohibited both domestically and on a cross-border basis, the United States stated that the prohibition concerned:

"[T]he transmission of a bet or wager by a wire communication facility across state or U.S. borders, such as Internet and telephone betting. Other gambling services that are similarly restricted both domestically and cross-border include the mailing of lottery tickets between states, the interstate transportation of wagering paraphernalia, and wagering on sporting events." \(^{581}\)

6.28 The Panel does not believe that it is necessary in the circumstances of this case to define exhaustively the service activities falling under "gambling and betting services", as these are not treaty terms in this dispute. Therefore, the Panel does not need to "interpret" these terms as such. In light of the ordinary meaning of the words, the submissions of the parties and the specialized literature to which we have made reference, the Panel considers that "gambling and betting services" include any activity involving the placing of a bet or wager, that is, instances where a person risks something of value (generally money) on the outcome of an uncertain event. A bet or a wager can be made with respect to casino-type games, lotteries and sporting events, irrespective of how these services are supplied. The Panel notes that the definition of "gambling and betting services" for the purposes of this dispute includes, at a minimum, the services that Antigua seeks to supply cross-border to the United States as well as the other services the supply of which the United States allows cross-border. \(^{582}\)

\(^{579}\) Antigua's reply to Panel question No. 33.  
\(^{580}\) United States' second written submission, paras. 26-27.  
\(^{581}\) United States' reply to Panel question No. 35.  
\(^{582}\) For instance the United States refers to "Persons not involved in the business of gambling may transmit casual or social bets by any means, provided that the transmission is permissible under state law;
(b) "Cross-border" and "remote" supply

6.29 This dispute concerns one of the four modes of supply under the GATS, that is, the so-called "cross-border supply" of gambling and betting services (hereinafter also referred to as supply by "mode 1"), which is defined in Article I:2 (a) of the GATS as follows:

"For the purpose of this Agreement, trade in services is defined as the supply of a service:

(a) from the territory of one Member into the territory of any other Member;

[...]

6.30 The Explanatory Note on Scheduling of Initial Commitments in Trade in Services\textsuperscript{583} (hereafter called "The 1993 Scheduling Guidelines") further explains that cross-border supply concerns a service "delivered within the territory of the Member, from the territory of another Member". The Guidelines also provide the following example of cross-border supply:

"International transport, the supply of a service through telecommunications or mail, and services embodied in exported goods (e.g. a computer diskette, or drawings) are all examples of cross-border supply, since the services supplier is not present within the territory of the Member where the service is delivered."\textsuperscript{584}

6.31 In this dispute, the Panel will use the term "cross-border supply" exclusively in the sense of Article I:2(a) of the GATS.

6.32 "Cross-border" must be distinguished from "remote" supply, which is a term that has been used by the parties in this dispute. The Panel will use the latter term to refer to "any situation where the supplier, whether domestic or foreign, and the consumer of gambling and betting services are not physically together". In other words, in situations of remote supply, the consumer of a service does not have to go to any type of outlet where the supply is supervised, be it a retail facility, a casino, a vending machine, etc. Instead, the remote supplier offers the service directly to the consumer through some means of distance communication.\textsuperscript{585} Hence, cross-border supply is necessarily remote, but remote supply amounts to "cross-border" supply only when the service supplier and the consumer are located in territories of different Members. The Panel understands "non-remote" supply to refer to situations where the consumer presents himself or herself at a supplier's point of presence.

6.33 The expression "means of delivery" will be used in this Report to refer to the various technological means (mail, telephone, Internet, etc.) by which a service can be supplied cross-border
or remotely. Unless otherwise indicated, "cross-border" and "remote" supply cover all the various technological means of supplying services.

B. HAS THE UNITED STATES UNDERTAKEN SPECIFIC COMMITMENTS ON GAMBLING AND BETTING SERVICES?

1. Claims and main arguments of the parties

6.34 Antigua claims that by virtue of entry 10.D in its GATS Schedule of Specific Commitments under subheading "Other Recreational Services (except sporting)", the United States has made a full market access and a full national treatment commitment for the cross-border supply (mode 1) of "gambling and betting" services.

6.35 The United States denies this claim altogether, contending that its Schedule makes no such commitment.

6.36 In support of its claim, Antigua argues that the US Schedule is based on the Services Sectoral Classification List and that sub-sector 10.D of the US Schedule includes CPC category "9649 Other recreational services" which encompasses CPC category "96492 Gambling and betting services".

6.37 Antigua points out that, since under Article XX:3 of the GATS, Members' schedules are an integral part of the GATS, they must be interpreted on the basis of the Vienna Convention's rules of interpretation. On that basis, Antigua argues that an interpretation based on the ordinary meaning of the words "Other recreational services" in the US Schedule leads to the conclusion that gambling and betting services fall within this broadly worded category. Alternatively, they could fall under sub-sector 10.A, "Entertainment services". With respect to the context of the US Schedule, the two most important agreements and instruments connected to the conclusion of the GATS that are relevant for the interpretation of GATS Schedule are W/120 and the 1993 Scheduling Guidelines. As to the practice in the application of the GATS, Antigua submits that WTO Members have consistently referred to W/120 and its references to the CPC as the classification used for GATS purposes and as the main point of reference for any discussion on such a classification. Even the United States International Trade Commission uses W/120 and its references to CPC as a tool to interpret the US Schedule. Moreover, the US Draft Final Schedule during the Uruguay Round confirmed that the United States had scheduled specific commitments according to the 1993 Scheduling Guidelines and W/120.

6.38 The United States replies that Antigua has incorrectly interpreted the US Schedule to the GATS. Even assuming arguendo the possible relevance of sector 10, Antigua's claims to find there a US commitment for cross-border supply of gambling services rely on W/120 and its references to the CPC Prov. Document W/120 is part of the negotiating history of the GATS, which is at best a supplementary means of interpretation. The United States argues that the context for the US Schedule

---

586 The United States of America – Schedule of Specific Commitments, GATS/SC/90, 15 April 1994 (hereinafter the "US Schedule").
587 Antigua's first written submission, paras. 160-162.
588 United States' first written submission, paras. 59-62.
589 Services Sectoral Classification List, Note by the Secretariat, MTN.GNS/W/120, 10 July 1991 (hereinafter the "W/120").
590 Antigua's first written submission, paras. 160-162.
592 Antigua's first written submission, paras. 164-178; Antigua's first oral statement, paras. 27-32.
includes other Members' schedules. Accordingly, the proper context for the US Schedule includes the fact that some Members based their schedules, or parts of them, on the CPC, while others did not.593

6.39 The United States submits that a proper interpretation of the US Schedule, without recourse to the CPC, would show that the United States made no commitment for measures affecting gambling services. Because of the absence of a textual basis for referring to the CPC, the legal definition of the scope of a non-CPC commitment must be deduced through application of customary rules of treaty interpretation. Antigua's allegations regarding a possible US commitment for gambling services rely on sub-sectors 10.A and 10.D of the US Schedule to the GATS, which do not contain an explicit reference to gambling services. The ordinary meaning of "sporting" in sub-sector 10.D confirms that the United States has made no commitments for gambling and betting under that sub-sector. Gambling is a suí generis activity that, if it belongs anywhere in sector 10, it can only be in sub-sector 10.E, where the United States made no commitment.594

6.40 The United States further submits that the USITC Document595 is merely an "explanatory" text prepared by an independent agency and does not purport to interpret the US Schedule.596 Finally, the cover-note to the US Draft Final Schedule only confirms that the United States followed the structure of W/120, without adopting the CPC nomenclature.597 The United States concludes that it should come as no surprise that it did not schedule commitments for gambling and betting services, given the overriding policy concerns surrounding those services, which are reflected in the extremely strict limitations and regulations of these services in the United States.598

2. Assessment by the Panel

(a) Method of interpretation to be adopted by the Panel

6.41 As a preliminary issue in this dispute, the Panel will have to decide whether the US Schedule includes specific commitments on gambling and betting services notwithstanding the fact that the words "gambling and betting services" do not appear in the US Schedule.

6.42 Article XX of the GATS provides, in paragraph 1, that each Member "shall set out in a schedule the specific commitments it undertakes under Part III of this Agreement." Paragraph 3 of Article XX stipulates that "[s]chedules of specific commitments shall be annexed to this Agreement and shall form an integral part thereof." In this dispute, there is no controversy about the application of Article XX as such, but rather over the interpretation of a Member's schedule of specific commitments which, pursuant to Article XX, is an integral part of the GATS.

6.43 The section of the US Schedule in respect of which the parties have diverging views reads as follows:599

593 United States' first written submission, paras. 63-67.
594 United States' first written submission, paras. 68-76; first oral statement, paras. 23-41.
596 United States' first written submission, para. 66 and footnote 90; United States' reply to Panel question No. 2; United States' second oral statement, paras. 7-9.
597 United States' second oral statement, paras. 10-11.
598 United States' second written submission, para. 15.

6.44 Considering that, pursuant to Article XX:3 of the GATS, schedules of specific commitments form an integral part of the GATS, the rules of interpretation that apply with respect to GATS schedules are the same as those applicable to the GATS itself. In this dispute, all parties and third parties agree that customary rules of treaty interpretation are applicable to the interpretation of the US Schedule. Moreover, in EC – Computer Equipment, the Appellate Body set out the interpretative rules regarding tariff concessions under the GATT 1994:

"Tariff concessions provided for in a Member's Schedule – the interpretation of which is at issue here – are reciprocal and result from a mutually-advantageous negotiation between importing and exporting Members. A Schedule is made an integral part of the GATT 1994 by Article II:7 of the GATT 1994. Therefore, the concessions provided for in that Schedule are part of the terms of the treaty. As such, the only rules which may be applied in interpreting the meaning of a concession are the general rules of treaty interpretation set out in the Vienna Convention.” (emphasis added)

601 This jurisprudence is relevant, mutatis mutandis, in respect of the GATS Schedules. Therefore, the content of the US Schedule should be considered as treaty language and, pursuant to

---

600 Appellate Body Report on EC – Computer Equipment, para. 84. The Appellate Body confirmed this finding in EC – Poultry, para. 81 and Canada – Dairy, para. 131. The Panel notes that the Vienna Convention was also used to interpret government procurement schedules. In Korea – Procurement (para. 7.9), the panel, noting relevant Appellate Body jurisprudence and the fact that, according to Article XXIV:12 of the GPA, "Notes, Appendices and Annexes to [the GPA] form an integral part thereof" referred to "customary rules of interpretation of public international law as summarized in the Vienna Convention in order to interpret" the GPA schedules of the party complained against.

601 In this respect, we recall that in its Report on EC – Bananas III, the Appellate Body stated that, in agricultural schedules, a Member “may yield rights and grant benefits, but it cannot diminish obligations”, thus confirming the findings contained in the Panel Report on US – Sugar Waiver with respect to GATT tariff
Article 3.2 of the DSU, should be interpreted in light of the general rules of treaty interpretation set out in the Vienna Convention, in particular Articles 31, 32 and 33.\textsuperscript{602}

6.46 Pursuant to Article 31 of the Vienna Convention, the US Schedule must be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the Schedule when read in their context and in light of the object and purpose of the GATS and the WTO Agreement.\textsuperscript{603} Of particular relevance in the present dispute is the principle of "effective treaty interpretation"\textsuperscript{604}, which derives from the requirement that treaties be interpreted in good faith, and whereby all terms of a treaty (including in the present dispute the terms of the US Schedule) should be given a meaning (see paragraph 6.49 below).

6.47 The Panel will thus start by examining the ordinary meaning of various key terms used in the US Schedule. However, dictionary definitions are generally not conclusive and the Panel will have to examine the context of the US Schedule. In this regard, the Panel will examine whether document W/120 and the 1993 Scheduling Guidelines: (i) are part of the context within the meaning of Article 31:2 of the Vienna Convention, and, as such, should be used to assess the legal context within which the ordinary meaning of the terms of the US Schedule must be determined; or (ii) whether, rather, they are part of the preparatory work of the GATS or the circumstances of its conclusion, in which case they can only be used as supplementary means of interpretation under Article 32 of the Vienna Convention. The Panel will address the relevance of other Members' practice with regard to their GATS schedules, in the interpretation of the US Schedule. For the same purpose, it will also examine the practice of the United States as reflected in its Schedule. Finally, the Panel will consider the object and purpose of the GATS.

6.48 In the second instance, pursuant to Article 32 of the Vienna Convention, the Panel will resort to supplementary means of interpretation, including the history of negotiations, to confirm the meaning resulting from the application of Article 31. Under Article 32, the Panel will look at various instruments comprising the preparatory work of the GATS and the US Schedule.

(b) Application of the general rules of treaty interpretation to this case

(i) Effective interpretation

6.49 The requirement that a treaty be interpreted in "good faith" can be correlated with the principle of "effective treaty interpretation", according to which all terms of a treaty must be given a

---

\textsuperscript{602} The text of Articles 31 and 32 of the Vienna Convention is reproduced in para. 6.10 of this Report.

\textsuperscript{603} The Panel notes that the Appellate Body has established a sequence concerning the consideration of elements contained in Article 31 of the Vienna Convention. The Appellate Body stated: "[a] treaty interpreter must begin with, and focus upon, the text of the particular provision to be interpreted. It is in the words constituting that provision, read in their context, that the object and purpose of the states parties to the treaty must first be sought. Where the meaning imparted by the text itself is equivocal or inconclusive, or where confirmation of the correctness of the reading of the text itself is desired, light from the object and purpose of the treaty as a whole may usefully be sought". See Appellate Body Report on \textit{US – Shrimp}, para. 114. See also Panel Reports on \textit{US – Section 301 Trade Act}, para. 7.22; \textit{India – Patents (US)}, para. 7.18; \textit{US – Underwear}, para. 7.18; Appellate Body Report on \textit{Argentina – Footwear (EC)}, para. 91.

meaning. We also note that "the principle of good faith in the process of interpretation underlies the concept that interpretation should not lead to a result which is manifestly absurd or unreasonable".605

6.50 Good faith is a core principle of interpretation of the WTO Agreement. On several occasions, the Appellate Body has emphasized the importance of the principle of effectiveness whereby "an interpreter is not free to adopt a reading that would result in reducing whole clauses or paragraphs of the treaty to redundancy or inutility."606 The Appellate Body has also stressed the importance of this principle in the interpretation of agriculture schedules.607

6.51 Since, as indicated above, the United States undertook a full commitment with respect to market access and national treatment under sub-sector 10.D, the terms Other Recreational Services (except sporting), and the commitment thereof, must have a meaning. We need, therefore, to determine the meaning of these terms and, thereby, the scope of the US commitments in question.

6.52 In EC – Computer Equipment, the Appellate Body stated that:

"The fact that Member's Schedules are an integral part of the GATT 1994 indicates that, while each Schedule represents the tariff commitments made by one Member, they represent a common agreement among all Members."608

6.53 The Panel is of the view that this finding is equally relevant for GATS schedules. The primary purpose of treaty interpretation is to identify the common intention of the parties. The Vienna Convention rules have been developed to help in assessing in objective terms what was or what could have been the common intention of the parties to a treaty. The Panel will thus proceed to determine the common intention of the parties concerning the US Schedule, and, more particularly, with respect to sector 10 (Recreational, Cultural & Sporting Services) of that Schedule.

(ii) Ordinary meaning of the term

6.54 According to the United States, the ordinary meaning of "sporting" includes "gambling" and, thus, confirms that the United States has made no commitments for gambling and betting services in sub-sector 10.D.609 Antigua, Canada and the European Communities disagree with this interpretation.610

6.55 The full definition of "sporting" (adj.) contained in the Shorter Oxford English Dictionary (1993 edition), reads as follows:

---

605 Sinclair, The Vienna Convention on the Law of Treaties, Manchester University Press, 2nd edition, 1984, p. 120. Under Article 31.3(c) of the Vienna Convention, the Panel could also examine whether "any other relevant rules of international law" could be applicable in the interpretation of the terms used in the US Schedule. This could, for instance, lead the panel to examine the US Schedule in light of the effective treaty interpretation principle. The Panel will, however, refer to the effective treaty interpretation principle pursuant to the first sentence of Article 31. The Panel will also examine other principles of interpretation, as supplementary means of interpretation, pursuant to Article 32 of the Vienna Convention.

609 United States' first written submission, para. 71.

610 Antigua's first oral statement, para. 30; Canada's written submission, para. 23 and footnote 30; European Communities' written submission, paras. 26-33.
"1a Sportive; playful. rare. b Engaged in sport or play. c Of a plant etc.: tending to produce abnormal varieties or sports. 2a Interested in or concerned in sport. b Designating an inferior sportsman or a person interested in sport from purely mercenary motives. Now esp. pertaining to or interested in betting or gambling. Chiefly in sporting man. c sporting girl, woman, a prostitute, a promiscuous woman N. Amer. 3 Orig., providing good sport or entertainment. Later, characterized by sportsmanlike conduct; fair-minded, generous." 611

6.56 Other dictionary definitions of "sporting" read:

"1 of, relating to, used, or suitable for sport b: marked by or calling for sportsmanship c: involving such risk as sports contender may expect to take or encounter (a sporting chance) 2: of or relating to dissipation and especially gambling" 3: tending to mutate freely." 612

"1 Engaged in sport of play. b Sportive; playful. c Of plants, etc. 2. a Interested in, accustomed to take part in, field sports or similar amusements. b. Esp. sporting man: now used to denote a sportsman of an inferior type or one who is interested in sport for purely mercenary motives." 613

"1. of, relating to, suitable for, in, or engaged in sports: a sporting event, sporting goods, sporting dogs. 2 characteristics of a sportsman; fair or obliging: That was very sporting of him. 3. of or relating to gambling, esp. on sports." 614

"sporting adj 1 belonging, referring or relating to sport • Gun dogs are classed as sporting dogs. 2 said of someone, their behaviour, attitude, nature, etc: characterized by fairness, generosity, etc • It was sporting of him to lend me the car. 3 keen or willing to gamble or take a risk • I'm not a sporting man, but I like a bet on the Grand National. sportingly adverb." 615

"1. Used in or appropriate for sports: sporting goods. 2. Characterized by sportsmanship. 3. Of or associated with gambling." 616

6.57 The Penguin Pocket English Dictionary (1988) and the New Oxford Thesaurus of English do not refer to "gambling" as a possible meaning of "sporting". Similarly, the New Roget's Thesaurus (1978) does not refer to gambling/wagering as possible synonyms for "sporting" (and vice-versa).

6.58 The Panel notes that the United States quoted the following definitions: 617

1 b: suitable for or characteristic of a sportsman: marked by or calling for sportsmanship (a ~ solution of the problem) c: involving such risk as a sports contender may reasonably take or expect to encounter (a ~ chance of success) 2 a: of,
relating to, or preoccupied with dissipation and esp. gambling; often; FAST FLASHY (~ gents and their ladies) b: engaged or used in prostitution 3: lending to produce sports usu, with exceptional frequency (a ~ strain of evening primrose).  

1. engaging in, disposed to, or interested in open-air or athletic sports; a rugged, sporting man. 2. concerned with or suitable for such sports; sporting equipment. 3. sportsmanlike. 4. interested in or connected with sports or pursuits involving betting or gambling the sporting life of Las Vegas. 5. involving or inducing the taking of risk, as in a sport (1580-1600); SPORT + -ING').

1. Appropriate for or used in sports. 2. Marked by sportsmanship. 3. Of or having to do with gambling.

1. used in sports: relating to or used in sports activities • sporting dogs 2. fair: in keeping with the principles of fair competition, respect for other competitors, and personal integrity 3. GAMBLING of gambling: relating to gambling, or taking an interest in gambling 4. risking: willing to take a risk.

6.59 The word "sporting" encompasses various definitions, relating to different activities or characteristics (sports, gambling, prostitution, plant biology). Some dictionary definitions of "sporting", when referring to gambling and betting activities, appear to convey a pejorative connotation ("of or relating to dissipation and especially gambling"). Moreover, the word "sporting", when defined to encompass gambling, is used mainly to qualify a person ("Chiefly in sporting man", see above Shorter Oxford English Dictionary) interested in betting, and thus, may not be the most appropriate word for describing services activities. Antigua and the European Communities note that, considering that the same dictionary defines a "sporting woman" as a prostitute, this raises the question of whether the word "sporting", under the approach suggested by the United States, would also encompass prostitution. Several dictionary definitions quoted above suggest that gambling activities encompassed under "sporting" are essentially those relating to sporting events; hence, it remains unclear whether, by excluding "sporting", the United States excluded all activities involving the placing of bets and wagers like, among other things, casino-related activities and lotteries.

6.60 Moreover, the words "sportifs" and "deportivos" respectively French and Spanish translations of "sporting", do not cover gambling-related activities.

6.61 On the basis of the various dictionary definitions quoted above, including in French and Spanish, we find that the ordinary meaning of "sporting" does not include gambling.

---

623 Antigua's second oral statement, para. 27; European Communities' written submission, para. 30.  
625 "Deportivo" is defined as follows: "adj. Perteneciente o relativo al deporte. 2. Que sirve o se utiliza para practicar un deporte. 3. Ajustado a normas de corrección semejantes a las que deben observarse en deporte. 4. Dicho de la ropa y de la forma de vestir: Cómoda e informal. [...] 5. m. automóvil deportivo. [...]" Diccionario de la Lengua Española, Real Academia Española, 22nd ed, 2001.
6.62 The Panel turns now to Antigua’s argument that the ordinary meaning of the words "other recreational services" (sub-sector 10.D of the US Schedule) or "entertainment services" (sub-sector 10.A of the US Schedule) encompass "gambling and betting services". According to the United States, the ordinary meaning of these words does not encompass gambling activities. The Shorter Oxford English Dictionary defines "entertainment" and "recreational", respectively, as:

"The action of occupying a person’s attention agreeably; amusement. b A thing which entertains or amuses someone, esp. a public performance or exhibition designated to entertain people."

"Of or pertaining to recreation; used for or as a form of recreation; concerned with recreation". The word "recreation" is defined as: "[T]he action of recreating (oneself or another), or fact of being recreated, by some pleasant occupation, pastime or amusement".

6.63 The Panel considers that an interpretation of the US Schedule relying mainly on the ordinary meaning of the words as defined in dictionaries does not provide sufficient clarity as to the scope of the sector/sub-sector concerned and leaves many interpretive questions open. This problem is particularly acute in respect of sector 10, where words such as "recreational" and "entertainment" could cover virtually the same types of services activities. In other words, the ordinary meaning of "entertainment" and "recreational" does not ensure the mutual exclusiveness of the sub-sectoral headings, which is a prerequisite for a classification system.

6.64 This latter problem is exemplified by the response given by the United States to a question posed by the Panel. The United States indicated, with respect to the scope of its commitment under sub-sector 10.D, that an interpreter could find, consistently with customary rules of treaty interpretation, that:

"Other recreational services (except sporting)’ (10.D) includes services that fall squarely within the plain meaning of 'recreation' and are distinguishable from either 'sporting' or 'entertainment.' Such activities could include, inter alia, the operation of such recreational facilities as marinas, beaches, and parks, as well as the organization and/or facilitation of non-sporting recreational activities.”

'Entertainment services' (10.A) includes services that fall squarely within the plain meaning of ‘entertainment’ and are distinguishable from either 'sporting' or 'recreation'. Such activities could include, inter alia, services consisting of the operation of entertainment facilities, such as theaters, dance halls, music halls, and

---

626 The Shorter Oxford English Dictionary, 2002 (5th ed.).
627 Ibid.
628 The Panel notes that the introduction to the CPC Prov., for instance, states that "[T]he CPC is a system of categories covering both goods and services that is both exhaustive and mutually exclusive.” See Provisional Central Product Classification, Statistical Papers, Series M No. 77, United Nations (1991), p. 7 (emphasis added).
629 An interpretation based mainly on the ordinary meaning, without recourse to the CPC or any sui generis definition, would raise various questions, such as: what would be covered by "entertainment services" (10.A), in addition to theatre, live bands and circuses? What would be precisely the “other cultural services” in 10.C? How and where to draw the "border" between 10.A and 10.C? What is the difference between "entertainment" (10.A) and "recreational" (10.D) as these words are largely synonymous? For instance, where would discotheques, amusement parks, services provided by composers and sculptors, zoos be categorised under the five items of sector 10? How would a clear separation be ensured between sector 10 and other sectors/sub-sectors of W/120, such as audiovisual services?
630 Panel question No. 7.
other performing arts venues; and the organization and/or facilitation of such entertainment activities.”

6.65 In view of the ordinary meaning of the words "recreational", "entertainment" and "sporting", the Panel fails to understand the United States' claim that the operation of facilities such as marinas, beaches and parks "fall squarely within the plain meaning" of "recreation" and are "distinguishable" from "entertainment". Similarly, it is not clear why theatres, dance halls, music halls, etc. "fall squarely within the plain meaning of 'entertainment'" and are "distinguishable" from "recreation". In fact, it seems that the words "entertainment" and "recreation" are largely synonymous and could be used interchangeably.

6.66 Moreover, in the Panel's view, gambling and betting have, a priori, the characteristics of being entertaining or amusing, or of being used as a form of recreation. The National Gambling Impact Study Commission (NGISC) states that "[t]oday the vast majority of Americans [...] gamble recreationally";⁶³² the US National Research Council states that "[p]athological gambling differs from the recreational or social gambling of most adults, who view it as a form of entertainment and wager only small amounts".⁶³³ Therefore, the Panel finds it difficult to assert, as the United States does, that "[T]o the extent that other services fall within sector 10 but do not fall within sub-sector 10.A to 10.D, those services reside by default in sector 10.E, 'other'."⁶³⁴

6.67 On the basis of these considerations, the Panel concludes that the ordinary meaning of the words "Other recreational services (except sporting)" and "entertainment services" leaves a number of questions open and does not allow it to reach a definitive conclusion on whether or not the US Schedule includes specific commitments on "gambling and betting services" in sector 10 (Recreational, cultural and sporting services). The Panel also notes the Appellate Body's view that dictionary definitions do not necessarily provide a final answer and "leave many interpretive questions open."⁶³⁵ In another dispute, the Appellate Body recalled that "dictionaries are important guides to, not dispositive statements of, definitions of words appearing in agreements and legal documents".⁶³⁶

6.68 The Panel needs, therefore, to continue its analysis pursuant to Article 31 of the Vienna Convention which stipulates, inter alia, that the ordinary meaning of the terms of the treaty must be examined in their context and in the light of the object and purpose of the treaty.

(iii) ... ordinary meaning ... in light of the context ...

6.69 According to Article 31:2 of the Vienna Convention, the "context" comprises:

"[I]n addition to the text, including its preamble and annexes:

(a) any agreement relating to the treaty which was made between all the parties in connexion with the conclusion of the treaty;

---

⁶³¹ United States' reply to Panel question No. 7.
⁶³⁴ United States' reply to Panel question No. 7.
⁶³⁵ Appellate Body Reports on Canada – Aircraft, para. 153 and in EC – Asbestos, para. 92.
(b) any instrument which was made by one or more parties in connexion with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty."

6.70 Furthermore, Article 31:3 stipulates that "[t]here shall be taken into account, together with the context [...] any subsequent agreement between the parties [...] or [...] any subsequent practice in the application of the treaty [...]".

6.71 Parties and third parties refer to W/120 and the 1993 Scheduling Guidelines as being relevant for the interpretation of the US Schedule. However, they disagree as to whether these two documents: (i) belong to the "context", within the meaning of Article 31:2(a) of the Vienna Convention; (ii) are to be examined as a subsequent agreement or are evidence of the subsequent practice of Members, pursuant to Article 31:3(a) or (b); or (iii) are "supplementary means of interpretation" within the meaning of Article 32. The United States also argues that the proper context for interpreting the US Schedule includes schedules of other Members. Finally, the context for the interpretation of US specific commitments includes the US Schedule and its structure. The Panel will examine these various elements in turn.

1993 Scheduling Guidelines and W/120 as part of the context

6.72 The Panel will start by examining whether W/120 and the 1993 Scheduling Guidelines belong to the context of the US Schedule within the meaning of Article 31:2(a) of the Vienna Convention.

6.73 The Appellate Body found that, when interpreting GATT tariff schedules, the *Harmonized System* ("HS") and its *Explanatory Notes* should be taken into account:

"[W]e are puzzled by the fact that the Panel, in its effort to interpret the terms of Schedule LXXX, did not consider the *Harmonized System* and its *Explanatory Notes*. We note that during the Uruguay Round negotiations, both the European Communities and the United States were parties to the *Harmonized System*. Furthermore, it appears undisputed that the Uruguay Round tariff negotiations were held on the basis of the *Harmonized System's* nomenclature and that requests for, and offers of, concessions were normally made in terms of this nomenclature."  

6.74 The Panel also notes the US argument that "Harmonized System numbers were an explicit and integral part of the schedule at issue in *EC – Computer Equipment*, while it is undisputed that the US Schedule makes no reference to the CPC".  

In *EC – Computer Equipment* both the European Communities and the United States were parties to the HS, i.e. there was no controversy as to the relevance of the HS, whereas, in this dispute, there is some controversy as to the relevance – or at least part of it – of W/120, in particular with respect to CPC references.

6.75 So, while there are undoubtedly differences between tariffs and services schedules, it is our view that the Appellate Body's reasoning can be transposed in the context of GATS Schedules. Beyond the particular circumstances of the *EC – Computer Equipment* dispute, there is a more general principle which we can discern in the Appellate Body's findings which is that documents used as a "basis" for conducting requests – offers during a market access negotiations – should be taken into account for interpreting schedules. This is the case of both W/120 and the 1993 Scheduling Guidelines.

6.76 In *EC – Computer Equipment*, the Appellate Body did not indicate whether the HS and its Explanatory Notes belonged to the "context", within the meaning of Article 31 of the Vienna  

---

637 Appellate Body Report on *EC – Computer Equipment*, para. 89.
638 United States' first oral statement, para. 31.
Convention, or were, rather, supplementary means of interpretation according to Article 32. In *US – Section 110(5) Copyright Act*, the panel made the following statements concerning the requirements for an instrument to be part of the "context" within the meaning of Article 31:2 of the Vienna Convention:

"The International Law Commission explains in its commentary on the final set of draft Articles on the law of treaties that this provision is based on the principle that a unilateral document cannot be regarded as forming part of the context unless not only was it made in connection with the conclusion of the treaty, but its relation to the treaty was accepted by the other parties. [...] It is essential that the agreement or instrument should be related to the treaty. It must be concerned with the substance of the treaty and clarify certain concepts in the treaty or limit its field of application. It must equally be drawn up on the occasion of the conclusion of the treaty. Any agreement or instrument fulfilling these criteria will form part of the 'context' of the treaty and will thus not be treated as part of the preparatory works but rather as an element in the general rule of interpretation."

6.77 For W/120 and the 1993 Scheduling Guidelines to be part of the context within the meaning of Article 31:2(a), three conditions should be fulfilled. They must: (i) "relate" to the treaty, i.e. the GATS; (ii) constitute an agreement made between all the parties or an instruments made between some parties and accepted by the others as such; and (iii) be "in connexion" with the conclusion of the GATS.

6.78 With respect to the first condition, the stated objective of the 1993 Scheduling Guidelines is to "explain ... how commitments should be set out in schedules in order to achieve precision and clarity. ... a common format for schedules as well as standardization of the terms used in schedules are necessary to ensure comparable and unambiguous commitments." Members felt the need to complement the GATS (Article XX) to ensure that GATS schedules would "speak" a common language. Clearly, GATS schedules cannot be understood without reference to the 1993 Scheduling Guidelines. For instance, basic terms such as "None", Unbound", and "Unbound*", which are used in all schedules, do not appear in the GATS itself; thus, they make sense only with reference to the 1993 Scheduling Guidelines. Also, the very format of GATS schedules was established in the Guidelines. Both the 1993 Scheduling Guidelines and W/120 are "concerned with the substance of the treaty and clarify certain concepts in the treaty or limit its field of application."

---

642 *(original footnote)* "Il y a ici une certaine notion de contemporanéité, l’un ou l’autre peut être concomitant à cette conclusion, mais il peut la précéder ou la suivre sans s’en éloigner trop. Cette condition est justifiée par l’idée même du contexte." See: Yasseen, op.cit., para. 16, p. 38.
643 *(original footnote)* Sinclair, op. cit. 129. Sinclair mentions the example of the Council of Europe, where governmental experts charged with the task of negotiating and formulating an international convention of a particular topic, draw up, in parallel with the text of the convention, an explanatory report which sets out the framework within which and the background against which the convention has been drawn up, and which then goes on to furnish an Article by Article commentary on the text. The explanatory report is agreed upon unanimously by the governmental experts responsible for drawing up the text of the convention and it is adopted simultaneously with the text of the convention.
644 1993 Scheduling Guidelines, para. 1.
6.79 All this suggests that, although they are not an authoritative interpretation of the GATS, the 1993 Scheduling Guidelines are, nevertheless, inextricably linked to the GATS itself. As suggested by the European Communities, it is indubitable that the 1993 Scheduling Guidelines and W/120 assisted Members in the preparation of their schedules. The 1993 Scheduling Guidelines provide indications as to how Members collectively understand their GATS obligations in relation to their specific commitments. In that sense, we agree that their overall objective must have been shared by negotiators.

6.80 Although both W/120 and the 1993 Scheduling Guidelines were "technically" drafted by the Secretariat – this was arguably the most practical and efficient way to work on such a matter – they can be considered "agreement[s] ... made between all [Members]" or an "instrument[s] ... made by one or more [Members]" but accepted by all of them as such within the meaning of Article 31:2(a) and (b) of the Vienna Convention. In this regard, it may be recalled that the two documents were prepared by the – then – GATT Secretariat, at the behest of the Uruguay Round participants. The participants can thus be considered to be the "intellectual" authors of the documents. Besides, both documents were the object of a series of formal and informal consultations during which Members had the opportunity to amend them and to include changes. Both were circulated as formal "green band" documents with the agreement of the participants.

6.81 Finally, both W/120 and the 1993 Scheduling Guidelines are "in connexion" with the GATS. Both documents were drafted in parallel with the GATS itself, with the stated purpose of being used as "guides" for scheduling specific commitments under the GATS and for the subsequent interpretation of Members' schedules. In that sense, they can be considered to have been "drawn up on the occasion of the conclusion of the treaty." As to W/120, it was used by most WTO Members during the Uruguay Round to establish their schedules of specific commitments.

---

646 Paragraph 1 of the 1993 Scheduling Guidelines states that "the answers [to questions that might occur to persons responsible for scheduling commitments] should not be considered as an authoritative legal interpretation of the GATS".

647 European Communities' written submission, para. 68.

648 At the 1988 Montreal Ministerial Conference, Ministers agreed that future work in the services negotiations should provide for the "compilation by the secretariat of a reference list of sectors by February 1989. This process could be assisted by submissions by participants" (MTN.TNC/7(MIN), Part II). The 1993 Scheduling Guidelines have been prepared by the Secretariat "in response to requests by participants" (MTN.GNS/W/164, footnote 1).

649 In various instances, the 1993 Scheduling Guidelines are referred to as the "agreed" Guidelines. See, for instance, informal Paper for the Group of Negotiations on Services, Verification of Schedules of Commitments and MFN Exemptions – Opening Statement, 10 February 1994, para. 2 (emphasis added) and EC – Banana III, para. 7.289. By contrast, the Explanatory Note on Listing of MFN Exemptions, which was drafted and discussed at the same time, has remained an informal document because Members' agreement on it has never been secured (see Listing of Article II Exemptions – Explanatory Note by the Secretariat, Job No. 2061, 15 September 1993).

651 The Panel notes that the huge majority of GATS schedules are based on W/120, although they do not explicitly state so: they follow its structure, headings and codes, with only minor derogations for a few of them. Only three schedules do not follow the general structure of W/120; however, even in these cases, one can identify some "traces" of W/120, for instance at sub-sectoral level. Only six schedules contain an explicit reference to W/120. The Panel also notes that most Members chose to refer to CPC numbers to define the scope of their commitments: (i) only 17 schedules adopted a non-CPC approach; (ii) a few schedules have a "mixed" approach, i.e. they include CPC numbers for some sectors only. The systematic use of W/120 and CPC references is even more striking with the 20 Members that have acceded since the end of the Uruguay Round. A survey of these schedules shows that they are all based on W/120 and all but one used CPC references.

652 The relevant provision reads: "for the purpose of this paragraph [i.e. paragraph 3, referring to the suspension of concessions], "sector" means: [...] (ii) with respect to services, a principal sector as identified in..."
what a services "sector" is in case of suspension of concessions. At the time of the conclusion of the WTO Agreement, Members made reference to W/120 in connexion with the DSU; this lends support to the view that W/120 can be considered as belonging to the context within the meaning of Article 31:2 of the Vienna Convention.

6.82 On this basis, both W/120 and the 1993 Scheduling Guidelines were agreed upon by Members with a view to using such documents, not only in the negotiation of their specific commitments, but as interpretative tools in the interpretation and application of Members' scheduled commitments. As such, these documents comprise the "context" of GATS Schedules, within the meaning of Article 31 of the Vienna Convention and the Panel will use them for the purpose of interpreting the GATS, GATS schedules and thus the US Schedule. In so doing, the Panel is aware that: (i) the 1993 Scheduling Guidelines do not represent an authoritative interpretation of the GATS; and (ii) there was no obligation imposed on WTO Members to use the W/120 and its references to the CPC. Yet, these instruments must be examined, as context, to determine the ordinary meaning of the terms used in a Member's GATS Schedule and these terms must have a meaning. The Panel will now proceed to interpret the US Schedule, in particular sector 10, in the context of document W/120 and the 1993 Scheduling Guidelines.

Interpreting the US Schedule in the context of document W/120 and the 1993 Scheduling Guidelines

6.83 The US Schedule does not contain any explicit reference to the CPC. We recall also that the United States has included under sector 10 a sub-sector, namely, sub-sector 10.D, entitled Other Recreational Services (except sporting). In light of the public international law principle of effective interpretation, such terms in the US Schedule must be given a meaning. The Panel needs, thus, to proceed to interpret the US Schedule, in particular sub-sector 10.D, in light of the ordinary meaning of the terms used in the context of document W/120 and the 1993 Scheduling Guidelines.

6.84 Paragraph 15 of the 1993 Scheduling Guidelines states that:

"[S]chedules record, for each sector, the legally enforceable commitments of each Member. It is therefore vital that schedules be clear, precise and based on a common format and terminology." 653

6.85 Paragraph 16 of the 1993 Scheduling Guidelines states:

"[T]he legal nature of a schedule as well as the need to evaluate commitments, require the greatest possible degree of clarity in the description of each sector and sub-sector scheduled. In general the classification of sectors and sub-sectors should be based on the Secretariat's revised Services Sectoral Classification List [MTN.GNS/W/120]. Each sector contained in the Secretariat list is identified by the corresponding Central Product Classification (CPC) number. Where it is necessary to refine further a sectoral classification, this should be done on the basis of the CPC or other internationally recognised classification (e.g. Financial Services Annex). The most recent breakdown of the CPC, including explanatory notes for each sub-sector, is contained in the UN Provisional Central Product Classification. […] If a Member

the current "Services Sectoral Classification List" which identifies such sectors". A footnote to subparagraph (ii) indicates that "[T]he list in document MTN.GNS/W/120 identifies eleven sectors" and lists them. 653 Scheduling of Initial Commitments in Trade in Services: Explanatory Note, MTN.GNS/W/164 (3 September 1993) (hereinafter the "1993 Scheduling Guidelines"), para. 15. The same requirement appears in the Guidelines for the Scheduling of Specific Commitments under the General Agreement on Trade in Services (GATS), adopted by the Council for Trade in Services on 23 March 2001, S/L/92 (28 March 2001) (hereinafter the "2001 Scheduling Guidelines"), para. 22.
wishes to use its own sub-sectoral classification or definitions it should provide concordance with the CPC in the manner indicated in the above example. If this is not possible, it should give a sufficiently detailed definition to avoid any ambiguity as to the scope of the commitment.”

6.86 The 1993 Scheduling Guidelines are not an authoritative legal interpretation of the GATS for various reasons. First, they explicitly state as much. Second, according to Article IX:2 of the WTO Agreement, the Ministerial Conference and the General Council have the exclusive authority to adopt interpretations of WTO agreements. However, as part of the context for the interpretation of the US Schedule, the 1993 Scheduling Guidelines explain the intention of Members with regard to the nature and scope of the Members’ GATS scheduled commitments and how Members should and can read each other’s Schedules.

6.87 Paragraph 16 of the 1993 Scheduling Guidelines suggests that there was an understanding among Members that, in order to secure clarity and predictability, the classification of sectors and sub-sectors should be based on W/120 and the corresponding CPC numbers. The Panel agrees with the United States that no Member was forced or obliged to schedule specific commitments in accordance with W/120 and the CPC numbers and that the CPC was not binding on Members. However, as argued by the European Communities, “departure from W/120 and CPC definitions was not free and unconditional and was not meant to allow convenient ambiguity in Members’ schedules.”

Pursuant to paragraph 16 of the 1993 Scheduling Guidelines, a Member intending not to use W/120 and/or the corresponding CPC numbers had two options: (i) to use its own sub-sectoral classification or definition and give concordance with the CPC; or (ii) if this was not possible, to give a “sufficiently detailed definition to avoid any ambiguity as to the scope of the commitment”. In fact, paragraph 16 of the 1993 Scheduling Guidelines is nothing other than the expression of a general requirement of transparency to ensure clarity and predictability of the specific commitments, expressed in the GATS preamble.

6.88 The relevant section of W/120 is as follows:

<table>
<thead>
<tr>
<th>SECTORS AND SUB-SECTORS</th>
<th>CORRESPONDING CPC</th>
</tr>
</thead>
<tbody>
<tr>
<td>I. Recreational, cultural and sporting services (other than audiovisual services)</td>
<td></td>
</tr>

</tr>
</tbody>
</table>

654 Para. 16 of W/164.
655 Para. 1 of W/164.
656 See para. 4.32 above.
6.89 CPC number 964, corresponding to sub-sector 10.D (Sporting and other recreational services), is broken down as follows:

"964 Sporting and other recreational services

9641 Sporting services
  96411 Sports event promotion services
  96412 Sports event organization services
  96413 Sports facility operation services
  96419 Other sporting services

9649 Other recreational services
  96491 Recreation park and beach services
  96492 Gambling and betting services
  96499 Other recreational services n.e.c."

6.90 The United States argues that "because [the United States] did not bind itself to, or reference or rely on, the CPC in the text of its Schedule, the CPC definitions cannot control the interpretation of the US Schedule. The question whether to tie commitments of the United States or any other Member to CPC definitions was a matter for negotiations, the answer to which should not be imposed post hoc through dispute settlement [...]." The Panel would like to make two remarks with respect to this statement. First, the fact that the United States did not bind itself to the CPC does not mean that the CPC is not relevant for the purpose of determining the ordinary meaning of the US Schedule, in its context, and in light of the object and purpose of the GATS. The Panel is of the view that, even if it is not binding, the CPC, through the context of W/120 and the Scheduling Guidelines, remains relevant for the interpretation of the US Schedule.

6.91 Secondly, in this dispute, there is no question of seeking to "impose" the CPC on the United States, but simply to give a meaning to a US commitment according to the customary rules of treaty interpretation. If the United States had made clear references to the CPC, the interpretation of the US Schedule would be controlled by the CPC definitions that would compose the ordinary meaning of the terms of the treaty. This is not the case here. The United States had the possibility to provide its own definitions for sub-sector 10.D. It did not. In the absence of any clear terms or any other clear indication of the meaning and scope of the US entries in sub-sector 10.D of its Schedule, the Vienna Convention points to a series of instruments that should be used to assist in the interpretation of the US Schedule. Such instruments include W/120, which refers to CPC definitions, and the 1993 Scheduling Guidelines which explains the relationship between Members' schedules, W/120 and the CPC. In these findings, we do not mean to suggest that "CPC schedules" are like "non-CPC schedules". Clearly, where "non-CPC" schedules provide a sufficiently detailed definition, the scope of the commitment should not be ambiguous, as in the present case. The Panel is obliged to give meaning to a specific entry in the US Schedule, in light of the particular circumstances of this case. Moreover, the US documents that the Panel will examine pursuant to Article 32 of the Vienna Convention (see below) tend to confirm – rather than contradict – this approach.

6.92 In its decision in EC – Computer Equipment, the Appellate Body stated that:

"[w]hile each Schedule represents the tariff commitments made by one Member, they represent a common agreement among all Members."  

657 United States' first written submission, paras. 64-65.
658 Appellate Body Report on EC – Computer Equipment, para. 109. See also the similar reasoning of the Appellate Body in Canada – Dairy, para. 139 when dealing with the unilateral commitments made by Canada in its Agriculture Schedules.
6.93 The Panel is of the view that W/120 and the 1993 Scheduling Guidelines assist in establishing the common agreement among WTO Members with respect to the content of the US Schedule. Where the US Schedule follows W/120 without any clear departure and in the absence of any specific definition, the United States has created an expectation that its commitments must be interpreted in the light of W/120 and the corresponding CPC numbers. Sub-sector 10.D of the US Schedule is entitled *Other Recreational Services (except sporting)*; we understand that this sub-sector corresponds to CPC 964 (Sporting and other recreational services). By explicitly excluding *Sporting services*, the United States has excluded the category of services corresponding to CPC 9641 (Sporting services). Hence, what remains under sub-sector 10.D of the US Schedule is the CPC category 9649 (Other recreational services), which includes, *inter alia*, gambling and betting services (CPC 96492). Therefore, the US Schedule, read in the light of paragraph 16 of the 1993 Scheduling Guidelines, is to be understood to include a specific commitment on gambling and betting services under sub-sector 10.D (Recreational services (except sporting)).

6.94 The Panel wishes to underline that there is no suggestion that the "context" (i.e. the 1993 Scheduling Guidelines and W/120) is a part of the text of the GATS and would, therefore, "bind" Members. Thus, while the 1993 Scheduling Guidelines and W/120 do not impose any "obligations" on Members, nevertheless, an interpreter trying to interpret and appreciate relevant GATS obligations must read them, where appropriate, in light of the 1993 Scheduling Guidelines and W/120. This is the reason why these two documents are relevant when trying to give meaning to the terms used in the US Schedule. In this dispute, an interpretation based mainly – if not exclusively – on the ordinary meaning of the words does not ensure the clarity and predictability of the US specific commitments at stake.\(^{659}\)

6.95 Finally, even if the 1993 Scheduling Guidelines and W/120 were "only" preparatory work, the Panel's conclusions would be the same: Article 32 of the Vienna Convention allows a Panel to resort to preparatory work as supplementary means of interpretation when the interpretation according to Article 31 "leaves the meaning ambiguous or obscure".

6.96 The Panel will further discuss below other elements of evidence confirming that the United States led other Members to believe in good faith that, unless otherwise provided for, the ordinary meaning of the terms of the US Schedule should be read in light of W/120, including the CPC references.

Other Members' GATS Schedules as part of the context for the interpretation of the US Schedule

6.97 The United States refers to other Members' schedules as being part of the context in which the US Schedule must be interpreted. The Panel concurs with the United States that other Members' schedules comprise the "context" within the meaning of Article 31:2 of the Vienna Convention. All Members' schedules are annexed to the GATS and, according to Article XX:3, are "an integral part thereof".

6.98 The United States does not need to invoke the fact that other Members did not use the CPC to justify its own choice not to refer to the CPC because it was entitled to do so anyway. In that sense, the practice of other Members is relevant only to confirm that, as stipulated in the 1993 Scheduling Guidelines, Members were free to use or not to use the CPC. If the United States wanted to rely on the other Members' schedules, as evidence of a "practice of Members" relevant in the interpretation of its own Schedules, it should have demonstrated that such Members' practice was coherent and consistent. We believe that the few examples pointed to by the United States do not evidence any such practice by Members. The Panel agrees with the European Communities that each of the commitments in other Members' schedules has to be placed in its own – different – immediate context.

\(^{659}\) See above at para. 6.87.
context, which is the schedule to which it belongs. Each schedule has its own intrinsic logic, which is different from the US Schedule. Moreover, no Member could invoke the fact that other "non-CPC" Members did not provide "sufficiently detailed definitions" to justify ambiguities in its own schedule.

6.99 Moreover, the Panel fails to see the direct relevance of other Members' schedules to support the US argument that the United States has not undertaken specific commitments on gambling and betting services.

6.100 In particular, the Panel does not accept the US argument that "the United States could only have a commitment for gambling services if it had scheduled the 10.E residual category". The mere fact that two Members scheduled gambling and betting services under 10.E is not sufficient to allow the United States to argue that, should it have undertaken specific commitments, it would have done so under 10.E as well. More than two Members seemed to be of the view that gambling and betting services belong to sub-sector 10.D, and made commitments, or introduced limitations with respect to those services. Moreover, the reason why two Members scheduled gambling under sub-sector 10.E can be determined only on the basis of an examination of the Schedules concerned; this is outside the terms of reference of this Panel.

6.101 The United States further argues that should it have undertaken a commitment on gambling and betting, it would have done so under 10.E ("Other"). This appears to be at odds with the other US argument that the exclusion of "sporting" under sub-sector 10.D had the consequence of excluding gambling and betting services. The Panel takes note of the US response to a question posed by the Panel, but is nevertheless of the view that the two US arguments contradict the principle that entries in a classification system – and in a Schedule – should be mutually exclusive. Further, these arguments are in contradiction with the USITC Document, which indicates that sub-sector 10.D corresponds to CPC 964 (which includes gambling) and that there is "no corresponding CPC" for sub-sector 10.E (see below paragraphs 6.122 et seq.). Moreover, this argument is also difficult to reconcile with the cover-notes to the US draft Schedules during the Uruguay Round (see below paragraphs 6.115 et seq.).

6.102 On the basis of these considerations, the Panel is of the view that an examination of the schedules of other Members does not allow it to conclude that, should the United States have undertaken specific commitments on gambling and betting services, it would have done so under sub-sector 10.E. The US Schedule, interpreted in the context of the schedules of other Members, does not contradict our previous conclusion that the US Schedule, includes a specific commitment on gambling and betting services under sub-sector 10.D (Recreational services (except sporting)).

The US Schedule as context for the interpretation of sub-sector 10.D

6.103 The Panel agrees with the United States that, under the GATS, Members can "define their offers (and their ensuing obligations) in terms which suits their needs" (the 1993 Scheduling Guidelines do not say otherwise). The Panel notes that the US Schedule follows closely the structure of W/120, in particular as far as sector 10 is concerned. The numbering used by the United States in its Schedule for all sectors and sub-sectors corresponds to that of W/120. But for a few minor drafting changes (omission of the word "services", for instance), the sectoral and sub-sectoral headings are similar to those contained in W/120. The section on Recreational Services in the US Schedule is placed under number 10, as in W/120. The first three sub-sectors (A to C) on which the United States has undertaken commitments have the same denominations as in W/120 and are placed in the same

660 European Communities' written submission, paras. 44-60.
661 United States' first written submission, paras. 75 and 71.
662 In particular, the United States' reply to Panel question No. 8.
order. The United States entitled sub-sector 10.D *Other recreational services (except sporting)*, as compared to *Sporting and other recreational services* in W/120. Finally, the Panel also notes that the USITC itself states that "[t]he U.S. Schedule makes no explicit references to CPC numbers, but it corresponds closely with the GATT Secretariat's list".  

6.104 In a number of instances, the United States departed from W/120 and, as recommended in the 1993 Scheduling Guidelines, clearly indicated that it was doing so. For instance, in two cases, the United States did not wish to include certain elements otherwise covered by W/120 and it specifically said so. Similarly, in scheduling its specific commitments on environmental services, the United States, while using W/120, expressly defined the activities covered by its specific commitments. With respect to "Financial Services - Insurance", the US Schedule indicates, as stipulated in paragraph 16 of the 1993 Scheduling Guidelines, that "commitments in this sub-sector are undertaken pursuant to the alternative approach to scheduling commitments set forth in the Understanding on Commitments on Financial Services". In scheduling specific commitments on hospital and other health care facilities, the United States expressly defined the scope of that sub-sector in its Schedule.  

6.105 When asked by the Panel which classification system, if any, the United States had followed in establishing its Schedule, the United States replied that "subject to some changes (e.g. "except sporting"), the United States generally followed the W/120 structure", adding that its Schedule should be interpreted according to Articles 31 and 32 of the Vienna Convention. The United States did not indicate a relevant US industry classification system for interpreting its Schedule. In its Schedule, the United States has not provided any kind of definition for the sub-sectors listed under sector 10, contrary to what is recommended in the 1993 Scheduling Guidelines. Finally, we recall that dictionary definitions leave a number of questions open.  

(iv) ... ordinary meaning in light of the object and purpose of the treaty  

6.106 The object and purpose of the GATS lends support to the conclusion that the ordinary meaning of the terms used in the US Schedule, when read in their context, is that the United States has undertaken specific commitments on gambling and betting services in sub-sector 10.D of its Schedule. Our conclusion derives from the need to provide clarity and precision in respect of the US entry under sub-sector 10.D (*Other recreational services, except sporting*) and the fact that, unless otherwise indicated in the schedule, Members were assumed to have relied on W/120 and the corresponding CPC references.  

6.107 The need for clarity and precision in Members' schedules referred to in the 1993 Scheduling Guidelines is consistent with the preamble to the GATS which stipulates, *inter alia*, that, in establishing the GATS, Members sought the expansion of trade in services "under conditions of transparency". This requirement of transparency is undoubtedly an object and purpose of the GATS – and the WTO in general – and applies equally to GATS schedules of specific commitments. Indeed, schedules of specific commitments determine, *inter alia*, the scope of market access and national

---

664 See the section below dealing with *US practice – USITC Document*, and in particular para. 6.132.  
665 With respect to "Computer and Related Services", the US Schedule contains the following entry: "(MTN.GNS/W/120 a) – e), except airline computer reservation systems)." With respect to "Publishing", the following entry is made: "(Only part of MTN.GNS/W/120 category: 'r) Printing, Publishing'."  
666 The entry "Environmental Services" is followed by note 19, which provides that "[i]n each of the following sub-sectors, United States' commitments are limited to the following activities: […]."  
667 US Schedule, p. 54.  
668 US Schedule, p. 117. The entry "Hospital and Other Health Care Facilities" is followed by the following definition: "Direct ownership and management and operation by contract of such facilities on a 'for fee' basis".  
669 United States' reply to Panel question No. 5 (emphasis in the original).  
670 United States' reply to Panel question No. 6.
treatment obligations that Members undertake under the GATS. It is, therefore, important that schedules be readily understandable by all other WTO Members, as well as by services suppliers and consumers.

6.108 The Appellate Body found that "the security and predictability of 'the reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade' is an object and purpose of the WTO Agreement, generally, as well as of GATT 1994."671 This confirms the importance of the security and predictability of Members' specific commitments, which is equally an object and purpose of the GATS.

6.109 Finally, our conclusion is compatible with the principle of progressive liberalization as embodied in Article XIX of the GATS and the preamble of the GATS.

(v) Conclusions under Article 31 of the Vienna Convention

6.110 In its interpretation of the US Schedule in light of Article 31 of the Vienna Convention, the Panel noted that dictionary definitions of key terms in that Schedule ("entertainment", "recreational", and "sporting") do not exclude that gambling and betting services could be covered under sub-sector 10.D of the US Schedule. We also found that these definitions are less than conclusive. The Panel then examined the terms of the US Schedule in the context of W/120 and the 1993 Scheduling Guidelines and found that, where the US Schedule follows W/120 without any clear departure and in the absence of any specific definition, there would be reason enough for Members to believe that the scope of sub-sector 10.D in the US Schedule corresponds to that of W/120 and the corresponding CPC numbers. Thus, the Panel believes that the US Schedule, read in the light of paragraph 16 of the Scheduling Guidelines, can be understood to include a specific commitment on gambling and betting services under sub-sector 10.D (Recreational services (except sporting)).

6.111 CPC 96492 does not offer an explanatory note for "gambling and betting services". However, for the purpose of this dispute, the Panel will proceed on the basis of the parameters proposed in the Introduction to the Report (see above Section VI.A.6).

6.112 The Panel will now resort to Article 32 of the Vienna Convention (supplementary means of interpretation), to confirm the meaning imparted to sub-sector 10.D of the US Schedule on the basis of its examination under Article 31.

(vi) Supplementary means of interpretation

6.113 In EC – Computer Equipment, the Appellate Body found it appropriate to resort to "supplementary means of interpretation", pursuant to Article 32 of the Vienna Convention:

"The application of [the] rules in Article 31 of the Vienna Convention will usually allow a treaty interpreter to establish the meaning of a term [footnote omitted]. However, if after applying Article 31 the meaning of the term remains ambiguous or obscure, or leads to a result which is manifestly absurd or unreasonable, Article 32 allows a treaty interpreter to have recourse to: '... supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion'. With regard to 'the circumstances of [the] conclusion of a treaty, this permits, in appropriate cases, the examination of the historical background against which the treaty was negotiated.'672

---

671 Appellate Body Report on EC – Computer Equipment, para. 82.
Under Article 32, the Panel will take into account preparatory work. However, Article 32 is not limited to preparatory work, but allows a treaty interpreter to take into consideration other supplementary means of interpretation. The Panel will thus consider other relevant material.

**Preparatory work**

Cover-notes to US draft Schedules during the Uruguay Round

Antigua and the European Communities referred to US Draft Final Schedules towards the end of the Uruguay Round. The relevant paragraph of the cover-note to the US Draft Final Schedule, dated 7 December 1993, reads as follows:

"[E]xcept where specifically noted, the scope of the sectoral commitments of the United States corresponds to the sectoral coverage in the Secretariat's Services Sectoral Classification List (MTN.GNS/W/120, dated 10 July 1991)".

This text also appeared in the Revised Conditional Offer tabled by the United States on 1 October 1993. The European Communities indicated that the same paragraph was included in the cover-note of the Schedule of the United States, tabled on 15 December 1993. The entire cover-note was deleted from the US Schedule that was circulated on 15 April 1994 as GATS/SC/90.

This cover-note qualifies as preparatory work, as well as circumstances of the conclusion of the treaty, and is undoubtedly relevant as a supplementary means of interpretation within the meaning of Article 32 of the Vienna Convention.

In the Panel's view, the fact that this reference to W/120 was made at a crucial stage during the services market access negotiations and was contained in three successive drafts cannot be ignored as it would have led participants to believe in good faith that the "scope" of the US commitments "corresponded" to the "sectoral coverage" of W/120. The date of 15 December 1993 marked the end of the Uruguay Round negotiations, including the services negotiations. The only activity in the area of services thereafter, during the early months of 1994, was a process of verification of schedules.

---

676 Communication from the United States – Schedule of the United States Concerning Initial Commitments on Trade in Services, MTN.GNS/W/112/Rev.4, 15 December 1993. This document was circulated in paper copy only.

677 The Panel notes that a number of draft final schedules presented between October and December 1993 started with a cover-note where Members were giving some indications on the content of their schedule and/or the conditions attached to its circulation. The decision to suppress these cover-notes seems to have been taken during the process of verification of schedules, which took place between January and March 1994, but, since this process was largely informal, it has not been possible to identify a written source confirming this point.
which was not meant to modify the substantive results of the negotiations. Thus, contrary to what is suggested by the United States, the scope of the results of the negotiations could not be altered unilaterally after 15 December 1993.

6.119 The scope of the "sectoral coverage" in W/120, referred to in the cover-notes, can only be determined when reading W/120 in its entirety, i.e. by reading the left-hand column (Sectors and Sub-sectors) jointly with the right-hand column (Corresponding CPC). Indeed, the left-hand column, which enumerates the sectoral and sub-sectoral headings, is not sufficiently informative by itself. In many, if not most cases, the ordinary meaning alone of the eleven sectors and some 160 sub-sectors listed in that column cannot determine with sufficient clarity the scope of the sector or sub-sector concerned. Also, the ordinary meaning is not sufficient to ensure the mutual exclusiveness of the headings, which is a prerequisite for any classification system. In W/120, the sectoral and sub-sectoral headings must be read in conjunction with the CPC references indicated in the right-hand column; these CPC references ensure that the headings are mutually exclusive.

6.120 The cover-notes indicate that the United States used W/120 not only for the "ordering" of its Schedule or for establishing its "structure", but also to determine the scope of its commitments, except where specifically noted otherwise, even though it chose not to refer to the CPC, as it was indeed entitled to do under the 1993 Scheduling Guidelines. Nevertheless, it is clear that, as the negotiations progressed and were finalized, the understanding of Uruguay Round participants with respect to the commitments offered by the United States was that the United States had followed W/120. Document W/120 in its entirety was the benchmark instrument that Uruguay Round participants could rely on in good faith to assess the content of the US offer until the very end of the negotiations. In EC – Computer Equipment, the Appellate Body noted, in particular that:

"It appears to be undisputed that the Uruguay Round tariff negotiations were held on the basis of the Harmonized System's nomenclature and that requests for, and offers of, concessions were normally made in terms of this nomenclature. [...] We believe [...] that a proper interpretation of [the] Schedule [...] should have included an examination of the Harmonized System and its Explanatory Notes."

6.121 In this dispute, the cover-notes indisputably testify that services market access negotiations were held on the basis of W/120 and contribute to determining the common intention of the participants to the Uruguay Round negotiations with regard to the content of the US Schedule, and, thus, the obligations that the United States was willing to undertake. It can, therefore, be concluded

---

678 This process was announced in the Airgram GATT/AIR/3544, dated 14 January 1994. (Uruguay Round: Group of Negotiations on Services — General Agreement on Trade in Services: Verification of Schedules of Commitments and MFN Exemptions): "[a]s announced by the Chairman of the GNS in the Group's meeting of 11 December 1993, and as agreed by the Group, a process of verification of schedules of commitments in services and of lists of MFN exemptions will be established as set out below. It is emphasised that, negotiations on services having been concluded, the purpose of this process is to confirm the technical accuracy of schedules and exemption lists and not to amend their substantive content." Moreover, during an informal meeting on 11 December 1993, the Chairman of the GNS had stated that after 15 December 1993, the "schedules and MFN lists cannot be modified or withdrawn in any way that would alter the results of the negotiations. Only additional commitments could be incorporated or MFN exemptions withdrawn". See Processing and Verification of Final Schedules and Exemption Lists, Statement by the Chair of the GNS on 11 December 1993, informal document dated 12 December 1993. There is no record of this meeting.

679 United States' reply to Panel question No. 30.

680 This opinion appears to be shared by the European Communities in its reply to Panel question No. 3.

681 The Panel notes that the introduction to the CPC Prov., for instance, states that "the CPC is a system of categories covering both goods and services that is both exhaustive and mutually exclusive." See Provisional Central Product Classification, Statistical Papers, Series M No. 77, United Nations (1991), p. 7 (emphasis added).

682 United States' second oral statement, para. 11 and reply to Panel question No. 3.

that the common intention of the Members, at the time the US specific commitments were negotiated, was that where the US Schedule visibly followed W/120 without any clear and explicit departure, the specific commitments at issue were to be interpreted in the light of W/120 and the CPC numbers associated with it. The fact that the cover-note does not explicitly refer to the CPC does not change our conclusion. In fact, the indication, contained in three successive US draft schedules, that the "scope of the sectoral commitments of the United States corresponds to the sectoral coverage" in W/120 was sufficiently clear in itself.

Other supplementary means of interpretation

US practice – USITC Document

6.122 As indicated in paragraph 6.114, the Panel is of the view that Article 32 of the Vienna Convention is not necessarily limited to preparatory material, but may allow treaty interpreters to take into consideration other relevant material. A commentator indicates that the principle of acquiescence is one of these possible aids to interpretation: "[i]f a party has made plain its understanding of the meaning of a provision, and it later applies it in that sense without objection, other parties may not be able to insist on a different interpretation. Article 31:3(b) might also apply." 684

6.123 Antigua argues that the United States International Trade Commission ("USITC") itself indicates that sub-sector 10.D of the US Schedule corresponds to sub-sector 10.D of W/120 and CPC code 964.685 In their responses to the Panel, Antigua, Canada, the European Communities and, to some extent, Mexico, argue, in essence, that the USITC Document can be used as an interpretative aid, which has probative value and confirms other evidence (such as the 1993 Scheduling Guidelines or the cover-note to the US Draft Final Schedule) concerning the interpretation of the US Schedule. These Members also argue that the acts of the USITC can be attributed to, and bind, the US government (in particular given the fact that the USITC was formally mandated by the USTR to maintain the US Schedule). 686

6.124 In its reply to a question posed by the Panel, the United States argues that the USITC Document is "merely an 'explanatory' text" by an "independent agency" which is meant to facilitate comparison with other documents. Contrary to the Statement of Administrative Action ("SAA"), the USITC Document does not provide authoritative interpretative guidance of US law. According to the United States, the USITC Document does not bind the United States with respect to the US Schedule because the United States, like all Members, cannot unilaterally adopt multilaterally binding interpretations of a term of the GATS. 687

6.125 As a starting point, the Panel agrees with the United States that the USITC Document is not a binding interpretation of the US Schedule because no Member can unilaterally adopt binding interpretations of any WTO agreement, nor of any international treaty. However, this does not mean that the USITC Document must be disregarded altogether. While the USITC Document cannot, on its own, determine the scope of the US Schedule, it is undoubtedly one element in the body of evidence that the Panel can and must consider when assessing the common intentions of the Members for the purpose of interpreting the scope and the meaning of the US Schedule. Therefore, the Panel must determine the interpretative value of the USITC Document with respect to the US Schedule.

685 US Schedule of Commitments under the General Agreement on Trade in Services, United States International Trade Commission, May 1997 (hereinafter "the USITC document").
686 Replies to Panel question No. 2 by Antigua, Canada, the European Communities and Mexico.
687 United States' reply to Panel question No. 2.
6.126 The USITC is an agency of the US federal government, created by an Act of Congress.\textsuperscript{688} It was given a number of powers and responsibilities under a number of federal statutes \textsuperscript{689}, including the power to make rules and regulations.\textsuperscript{690} The USITC Document consists of "explanatory materials" produced by the USITC in connection with the US Schedule. As to the role of the USITC in relation to the US Schedule, the Panel notes that "[a]t the request of the Office of the United States Trade Representative, the United States International Trade Commission (USITC) assumed responsibility for maintaining and updating, as necessary, the United States' Schedule of Commitments [...] and List of MFN Exemptions."\textsuperscript{691} The USTR is also an agency of the US federal government, created by Act of Congress.\textsuperscript{692} It is given a variety of powers and responsibilities under a number of federal statutes \textsuperscript{693}, including the power to make rules and regulations \textsuperscript{694}, the power and responsibility for the conduct of all international trade negotiations, including "any matter considered under the auspices of the World Trade Organization"\textsuperscript{695} and, in particular, to "develop (and coordinate the implementation of) United States policies concerning trade in services."\textsuperscript{696}

6.127 We believe that, as an agency of the United States government with specific responsibilities and powers, actions taken by the USITC pursuant to those responsibilities and powers are attributable to the United States.

6.128 This conclusion is supported by the International Law Commission ("ILC") \textit{Articles on the Responsibility for States of Internationally Wrongful Acts}.\textsuperscript{697} Article 4, which is based on the principle of the unity of the State, defines generally the circumstances in which certain conduct is attributable to a State.\textsuperscript{698} This provision is not binding as such, but does reflect customary principles of international law concerning attribution. As the International Law Commission points out in its commentary on the Articles on State Responsibility, the rule that "the State is responsible for the conduct of its own organs, acting in that capacity, has long been recognised in international judicial decisions."\textsuperscript{699} As explained by the ILC, the term "state organ" is to be understood in the most general

\textsuperscript{688} 19 U.S.C. §1330.
\textsuperscript{690} 19 U.S.C. §1335.
\textsuperscript{691} USITC Document, p. vii.
\textsuperscript{692} 19 U.S.C. §2171(a).
\textsuperscript{693} See, e.g., 19 U.S.C. §§ 2171(c)-(f).
\textsuperscript{694} 19 U.S.C. §2171(e)(3).
\textsuperscript{695} 19 U.S.C. §2171(c)(1)(C).
\textsuperscript{696} 19 U.S.C. §2114e(1)(A).
\textsuperscript{697} On 12 November 2001 the Resolution on the Responsibility of States for internationally wrongful acts was adopted by the general Assembly of the United Nations. The third paragraph of this resolution states that the General Assembly "takes note of the articles on responsibility of States for internationally wrongful acts, presented by the International Law Commission, the text of which is annexed to the present resolution, and commends them to the attention of Governments without prejudice to the question of their future adoption or other appropriate action."
\textsuperscript{698} Article 4 states that: "The conduct of any State organ shall be considered an act of that State under international law, whether the organ exercises legislative, executive, judicial or any other functions, whatever position it holds in the organization of the State, and whatever its character as an organ of the central government or of a territorial unit of the State. An organ includes any person or entity which has the status in accordance with the internal law of the State." \textit{Articles on the Responsibility for States of Internationally Wrongful Acts}, as annexed to the UN General Assembly Resolution of 12 December 2001, A/RES/56/83.
It extends to organs from any branch of the State, exercising legislative, executive, judicial or any other functions.

6.129 The fact that certain institutions performing public functions and exercising public powers are regarded in internal law as autonomous and independent of the executive government does not affect their qualification as a state organ. Thus, the fact that the USITC is qualified as an "independent agency" does not affect the attributability of its actions to the United States, because what matters is the activity at issue in a particular case, not the formal qualification of the body concerned.

6.130 Consequently, official pronouncements by the USITC in an area where it has delegated powers are to be attributed to the United States. In this dispute, the USITC Document can legitimately be considered to be probative of the United States' interpretation of its own GATS Schedule. The Panel will now turn to the content of the USITC Document.

6.131 The relevant section of the USITC Document reads as follows (bold added):

<table>

6.132 According to the USITC, the purpose of the document is:

700 The International Law Commission's Articles on State Responsibility, p. 95, para. 6.
701 The International Law Commission's Articles on State Responsibility, p. 92, para. 6 and p. 98, para. 11.
702 USITC Document, p. 25.
"[T]o facilitate comparison of the U.S. Schedule with foreign schedules, the USITC has developed a concordance that demonstrates the relationships between sectors found in the U.S. Schedule, sectors identified in the GATT Secretariat's Services Sectoral Classification List, and sectors defined and numbered in the United Nations' Provisional Central Product Classification (CPC) System. In preparing national schedules, countries were requested to identify and define sectors and sub-sectors in accordance with the GATT Secretariat's list, which lists sectors and their respective CPC numbers. Accordingly, foreign schedules frequently make explicit references to the CPC numbers. The U.S. Schedule makes no explicit references to CPC numbers, but it corresponds closely with the GATT Secretariat's list. The concordance developed by the USITC clarifies how the service sectors referenced in the GATT Secretariat's list, the CPC System, and the U.S. Schedule correspond." \(^\text{703}\) (emphasis added)

6.133 The content of the USITC Document is not a binding interpretation on the United States. However, it has probative value as to how the US government views the structure and the scope of the US Schedule, and, hence, its GATS obligations. This document confirms other evidence already discussed by the Panel regarding the scope of the United States' specific commitments: W/120, the 1993 Scheduling Guidelines and the cover-notes to the US Uruguay Round Draft Schedules. The USITC Document clearly states that sub-sector 10.D of the US Schedule "corresponds" to CPC 964. Under this sub-sector, the United States' Schedule explicitly excluded "sporting services" (CPC 9641), but not "gambling and betting services" (CPC 96492). This confirms the Panel's conclusion following its analysis pursuant to Article 31 of the Vienna Convention, that the US Schedule includes specific commitments on gambling and betting services.

(c) Conclusion

6.134 Therefore, the Panel finds that the US Schedule includes, under sub-sector 10.D, entitled "Other recreational services (except sporting)", specific commitments on gambling and betting services.

(d) Final comments

6.135 Lastly, and before the Panel takes leave of this issue, it would like to note the United States' position that it did not and indeed could not have scheduled a commitment for gambling and betting services given the long legislative history of tight regulation of these services. As stated by the United States:

"The fact that these measures so clearly fall within Article XIV also serves to confirm that it would have been incomprehensible for the United States to make them subject of a specific commitment."\(^\text{704}\)

Again:

"[I]t should come as no surprise that the United States did not schedule commitments for gambling services, given the overriding policy concerns surrounding those services, which are reflected in the extremely strict limitations and regulations of these services. [...] In fact, in view of those concerns, and the numerous bans or

\(^{703}\) USITC document, p. viii.

\(^{704}\) United States' second written submission, para. 73.
restrictions and strict controls on gambling, it would be surprising to find that the United States did schedule such a commitment.”

6.136 The United States has repeated several times in these proceedings that it did not intend to schedule a commitment for gambling and betting services. This may well be true, given that the legislation at issue in this dispute predates by decades, not only the GATS itself, but even the notion of "trade in services" as embodied therein. We have, therefore, some sympathy with the United States' point in this regard. However, the scope of a specific commitment cannot depend upon what a Member intended or did not intend to do at the time of the negotiations. In this context, the Panel recalls that:

"[T]he purpose of treaty interpretation under Article 31 of the Vienna Convention is to ascertain the common intention of the parties. These common intentions cannot be ascertained on the basis of the subjective and unilaterally determined 'expectation' of one of the parties to a treaty. Tariff concessions provided for in a Member's Schedule – the interpretation of which is at issue here – are reciprocal and result from mutually advantageous negotiations between importing and exporting Members."

6.137 While Members are expected to negotiate, apply and interpret their treaty obligations in good faith, there are no provisions in the WTO Agreement that would allow a Member's intentions to be probed and determined, except as reflected in the treaty language.

6.138 Pursuant to Article XVI:4 of the WTO Agreement, "Each Member shall ensure the conformity of its laws, regulations and administrative procedures with its obligations as provided in the annexed Agreements". Thus, independent of any expectation or any unintentional mistake, the United States' obligations pursuant to Article XVI:4 are to ensure that its relevant laws are in conformity with its WTO obligations, including any commitments undertaken in its GATS Schedule.

C. THE MEASURE(S) AT ISSUE

1. Claims and main arguments of the parties

6.139 Antigua's request for the establishment of this Panel lists as the challenged "measures" federal and state laws as well as court decisions, state Attorneys' General statements, websites and agreements between US enforcement agencies and credit card companies. In its submissions, Antigua argues that all of these "measures" constitute a "total prohibition" on the cross-border supply of gambling and betting services that is inconsistent with the United States' obligations under the GATS. In support of its claims that the GATS has been violated, Antigua relies upon what Antigua refers to as an "admission" by the United States before the DSB and before the Panel in these proceedings that the United States maintains a prohibition on the cross-border supply of some gambling and betting services.

---

705 United States' second written submission, para. 15
706 See also first oral statement, para. 26 ("The United States submits that if the United States and its Uruguay Round negotiating partners had intended such a commitment [on gambling and betting services] on the part of the United States, especially on this very sensitive issue, the US Schedule would have said so explicitly. Needless to say, it does not.")
707 Appellate Body Report on EC – Computer Equipment, para. 84.
708 Request for the Establishment of a Panel by Antigua and Barbuda, WT/DS285/2.
709 Antigua's first written submission, para. 1; Antigua's first oral statement, para. 23; Antigua's second written submission, paras. 5, 13, 19 and 21; Antigua's reply to Panel question No. 32.
710 Antigua's first written submission, paras. 1, 133 and 136; Antigua's first oral statement, para. 13; Antigua's reply to Panel question No. 9; Antigua's second written submission, paras. 8 and 136.
6.140 The United States claims that Antigua's identification of challenged measures is not consistent with the DSU and the GATS. According to the United States, a "total prohibition" is not a "measure" within the meaning of the DSU and the GATS. Moreover, Antigua's argumentation on the instruments that are said to result in this "total prohibition" is insufficient to satisfy Antigua's burden to provide a prima facie demonstration that these instruments affect the cross-border supply of gambling and betting services in a manner inconsistent with the United States' obligations under the GATS. The United States also submits that nothing that United States has said to the DSB or to the Panel in the course of these proceedings relieves Antigua of its burden to say exactly what measures it is challenging and how it alleges that those measures, individually or in combination, violate the GATS.

2. Relevant WTO provisions

6.141 Article I:3 of the GATS reads as follows:

"[M]easures by Members' means measures taken by:

(i) central, regional or local governments and authorities; and

(ii) non-governmental bodies in the exercise of powers delegated by central, regional or local governments or authorities.

In fulfilling its obligations and commitments under the Agreement, each Member shall take such reasonable measures as may be available to it to ensure their observance by regional and local governments and authorities and non-governmental bodies within its territory."

6.142 Article XXVIII(a) of the GATS provides that "measure" means:

"[A]ny measure by a Member, whether in the form of a law, regulation, rule, procedure, decision, administrative action, or any other form."

6.143 In addition, Article XXVIII(c) provides that "measures by Members affecting trade in services" include measures in respect of:

"(i) the purchase, payment or use of a service;

(ii) the access to and use of, in connection with the supply of a service, services which are required by those Members to be offered to the public generally;

(iii) the presence, including commercial presence, of persons of a Member for the supply of a service in the territory of another Member."

6.144 Article XXIII of the GATS provides that:

"If any Member should consider that any other Member fails to carry out its obligations or specific commitments under this Agreement, it may with a view to reaching a mutually satisfactory resolution of the matter have recourse to the DSU."

---

711 United States first written submission, para. 2; United States' first oral statement, para. 17; United States' reply to Panel question No. 9; United States' second oral statement, paras. 10-11.
712 United States' first written submission, paras. 3 and 44; United States' second written submission, para. 7; United States' second oral statement, para. 2.
713 United States' second oral statement, para. 19.
6.145 Article 3.3 of the DSU provides that:

"The prompt settlement of situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member is essential to the effective functioning of the WTO and the maintenance of a proper balance between the rights and obligations of Members."

6.146 Article 6.2 of the DSU provides that the request for the establishment of a panel:

"[S]hall … identify the specific measures at issue and provide a brief summary of the legal basis of the complaint sufficient to present the problem clearly."

6.147 It is also important to bear in mind that the measures(s) that have been challenged in a panel request may, at the end of the dispute settlement process, be the subject of DSB recommendations under Article 19.1 of the DSU, which provides that:

"Where a panel or the Appellate Body concludes that a measure is inconsistent with a covered agreement, it shall recommend that the Member concerned bring the measure into conformity with that agreement. In addition to its recommendations, the panel and the Appellate Body may suggest ways in which the Member concerned could implement the recommendations."

3. Assessment by the Panel

(a) "Measures" being challenged

(i) Legal standard relating to the identification of the measures being challenged

6.148 The Panel commences by noting that the purpose of the exercise that we will undertake in this section of our Report is to identify the measures that the Panel will consider in determining whether the specific provisions of the GATS that Antigua has invoked have been violated. Under WTO law, the measures that a panel is obliged to consider are those contained in the relevant panel request. However, for reasons that are explained in greater detail below, the issue of which measures we are obliged to consider in this case is not a straightforward one. We set out below the framework within which we will determine which measures should be considered by us in assessing Antigua's claims of violation of the GATS.

6.149 First, we note that the provisions of the GATS and the DSU that have been referred to above clearly require that a Member must specifically identify the "measures" that are the basis for a claim that another Member has failed to fulfil its obligations or specific commitments under the GATS. In particular, Article XXIII of the GATS effectively provides that Members may have recourse to the DSU in cases where one Member considers that another Member has not abided by its obligations and/or specific commitments under the GATS. In turn, Article 6.2 of the DSU requires that "specific measures" be identified in a panel request.

6.150 In our response to the US request for preliminary rulings, we concluded that, since Article 6.2 of the DSU is a general provision governing the content of panel requests, it must be read together with relevant provisions contained in the concerned WTO agreements. In this case, the

714 (original footnote) The "Member concerned" is the party to the dispute to which the panel or Appellate Body recommendations are directed.

716 The Panel's response to the US request for preliminary rulings, para. 34.
relevant provisions are contained in the GATS. Articles I:3 and XXVIII(a) and (c) of the GATS
together broadly define the "measures" to which the provisions of the GATS apply. To the extent that
the definition of a "measure" in Articles I:3 and XXVIII(a) and (c) of the GATS is broader than the
meaning attributed to that term under Article 6.2 of the DSU, the definition contained in the former
supplements the meaning of "measures" under the latter.\footnote{717}

6.151 Amongst other things, the identification of the measures challenged in a dispute is important
to determine the terms of reference of a panel and to ensure that the defending party is well informed
about the basis of the complaint against that party. In \textit{EC – Bananas III}, the Appellate Body made
clear that:

"It is important that a Panel request be sufficiently precise for two reasons: first, it
often forms the basis for the terms of reference of the Panel pursuant to Article 7 of
the DSU; and, second, it informs the defending party and the third parties of the legal
basis of the complaint."\footnote{718}

\textit{(ii) Identification of "measures" by Antigua in this dispute}

6.152 The identification and definition of what "measures" are being challenged by Antigua in this
dispute have been difficult issues with which the Panel has had to grapple since the very inception of
these Panel proceedings. The Panel sets out below in some detail the evolution of the way in which
Antigua has argued its case to illuminate these issues and to provide some context for the Panel's
determination as to which measures it should consider in determining whether the specific provisions
of the GATS that Antigua has invoked have been violated by the United States.

6.153 In its Panel request, Antigua states in relevant part that:

"The Government of Antigua and Barbuda considers that certain measures of central,
regional or local governments and authorities of the United States are inconsistent
with the United States' commitments and obligations under the General Agreement on
Trade in Services (GATS) with respect to the cross-border supply of gambling and
betting services."

The rules applying to the cross-border supply of gambling and betting services in the
United States are complex and comprise a mixture of state and federal law. The
relevant laws are listed in Sections I and II of the Annex attached to this request.
Although this is not always clear on the face of the text of these laws, relevant United
States authorities take the view that these laws (separately or in combination) have
the effect of prohibiting all supply of gambling and betting services from outside the
United States to consumers in the United States. Section III of the Annex lists
examples of measures by non-legislative authorities of the United States applying
these laws to the cross-border supply of gambling and betting services. The measures
listed in the annex only come within the scope of this dispute to the extent that these
measures prevent or can prevent operators from Antigua and Barbuda from lawfully
offering gambling and betting services in the United States under conditions of
competition compatible with the United States' obligations.

The total prohibition of gambling and betting services offered from outside the
United States appears to conflict with the United States' obligations under GATS and

\footnote{717} The Appellate Body has already so determined in \textit{Guatemala – Cement I}: Appellate Body Report, para.75. See also the Appellate Body Report on \textit{US – Hot-Rolled Steel}, para. 62.
\footnote{718} Appellate Body Report on \textit{EC – Bananas III}, para. 142.
its Schedule of Specific Commitments annexed to the GATS (and in particular Sector 10.D thereof) for the following reasons:

(a) The central, regional or local authorities of the United States allow numerous operators of United States origin to offer all types of gambling and betting services in the United States (sometimes via exclusive rights or monopolistic structures). There appears to be no possibility for foreign operators, however, to obtain an authorization to supply gambling and betting services from outside the United States. This appears to conflict with the United States' commitments and obligations under GATS, including Articles VI:1, VI:3, VIII:1, VIII:5, XVI:1, XVI:2, XVII:1, XVII:2 and XVII:3 and its Schedule of Specific Commitments.

(b) The United States authorities also restrict international transfers and payments relating to gambling and betting services offered from outside the United States. Some of the non-legislative measures listed in Section III of the Annex are examples thereof: the measures described in the documents released by the Florida Attorney General and the New York Attorney General. These restrictions appear to violate Articles VI:1, XI:1, XVI:1, XVII:1, XVII:2 and XVII:3 of GATS and the United States' Schedule of Specific Commitments."719

6.154 In its first written submission, Antigua framed its argumentation on the basis of what it considered to be an admission by the United States that there is a "total prohibition" on the cross-border supply of gambling and betting services in the United States. On the basis of this admission, in its first written submission, Antigua did not discuss in any detail the specific provisions of US laws in support of its allegation that the United States maintains measures inconsistent with its obligations under Articles XVI, XVII, VI and XI of the GATS.720

6.155 Following Antigua's first written submission, the United States made a request for preliminary rulings.721 In its request for preliminary rulings, the United States asked the Panel to declare that Antigua's challenge of a network of federal and state laws, which, according to Antigua, together constitute a "total prohibition" on the cross-border supply of gambling and betting services, is not compatible with the GATS, the DSU and the WTO Agreement.722

6.156 In its response to the United States' request for preliminary rulings, the Panel noted that, in its Panel request, in its first written submission, and in its comments on the US request for preliminary rulings, Antigua had indicated that it is effectively challenging the overall and cumulative effect of various federal and state laws which, together with various policy statements and other governmental actions, constitute a total prohibition on the cross-border supply of gambling and betting services which is, in Antigua's view, inconsistent with the US GATS obligations.723 Indeed, at that stage of the proceedings, we considered that this was the basis upon which Antigua was framing its challenge.

719 Request for the Establishment of a Panel by Antigua and Barbuda, WT/DS285/2.
720 See, for example, Antigua's first written submission, paras. 133 and 136.
721 The United States made a request for preliminary rulings on 17 October 2003, details of which are set out in Annex B.
722 United States' request for preliminary rulings, paras. 16-21.
723 United States' request for preliminary rulings, paras. 16-21.
6.157 However, in its second written submission, Antigua stated that it is challenging a "total prohibition" on the cross-border supply of gambling and betting services. According to Antigua, this total prohibition "in and of itself constitutes a measure within the meaning of the GATS". When we asked Antigua whether it was challenging specific legislative and regulatory provisions, the specific application of those provisions, and/or US practices vis-à-vis (foreign) cross-border supply of gambling and betting services, Antigua confirmed that it was challenging all three aspects with the objective of bringing the "total prohibition itself before the Panel". Antigua submitted at that stage of the Panel proceedings that it considered it "logical and efficient to challenge the United States' total prohibition as a measure in and of itself composed of specific legislative and regulatory provisions, applications and practices that separately and jointly impair Antigua's GATS benefits".

6.158 The United States argues that the concept of a "total prohibition" is devoid of any legal meaning or consequences under either US law or the GATS. In fact, throughout these proceedings, the United States has maintained the position that Antigua cannot challenge a "total prohibition" on the cross-border supply of gambling and betting services as a single measure. The United States considers that the only claims within the scope of Antigua's Panel request and, therefore, within the Panel's terms of reference, are "as such" claims in respect of specific legislative provisions and/or the collective effect of two or more such provisions. According to the United States, Antigua is essentially making assertions about the collective effect of US domestic laws relating to the remote supply of gambling and betting services, without regard to individual measures and how they work. The United States submits that panels have often examined claims based on the combined effect of two or more measures but have correctly approached such claims by first examining each specific measure that allegedly contributes to a combined effect. According to the United States, it is not possible to know what the combined effect of various measures is as a matter of municipal law, without first examining how each measure works and then analysing how these measures interact.

The United States adds that the Appellate Body in its recent report on US – Carbon Steel made clear that a party asserting that another party's municipal law is inconsistent with a WTO obligation must introduce evidence as to the scope and meaning of that municipal law. In the United States' view, in order to succeed with its claims, Antigua must identify which specific provisions of the US laws are inconsistent with which specific provisions of the GATS, and it must demonstrate prima facie how and why such inconsistencies arise.

6.159 Antigua has consistently stated that it is wasteful and unnecessary to identify the various domestic legislative provisions that will need to be brought into conformity with the GATS. It argues that there is no need to conduct a debate on the precise scope of specific US laws because the United States has admitted a total prohibition on the cross-border supply of gambling and betting services under US law. It further argues that the fact that a "measure" that is challenged in the

734 Antigua's first written submission, para. 136; Antigua's first oral statement, para. 13; Antigua's reply to Panel question No. 9; Antigua's second written submission, paras. 8 and 136. Antigua further argues that
WTO may comprise one or more laws, rules or actions under domestic law cannot be definitive in determining whether the sum of the laws constitutes a "measure" within the meaning of the DSU.\footnote{735}

6.160 The United States does not appear to admit the existence of a "total prohibition" on the cross-border supply of gambling and betting services although it does admit a prohibition on the remote supply of most gambling and betting services.

6.161 During two successive DSB meetings, the United States stated that a prohibition on the "cross-border supply of gambling and betting services under US laws" exists in the United States.\footnote{736} The panel's decision in \textit{US – Section 301 Trade Act} appears to support the view that the United States should be bound by these statements.\footnote{737} The statements were made by representatives of the United States to express their understanding of US law. They were made in the context of a formal WTO meeting for the record. The United States has not argued that the representatives were acting outside the authority bestowed upon them in making these statements.

6.162 Further, in response to a question posed by the Panel as to which gambling and betting services are prohibited in the United States, the United States responded:

"The United States is referring principally to services involving the transmission of a bet or wager by a wire communication facility across state or U.S. borders, such as Internet and telephone betting. Other gambling services that are similarly restricted both domestically and cross-border include the mailing of lottery tickets between states, the interstate transportation of wagering paraphernalia, and wagering on sporting events."\footnote{738}

6.163 The United States separately identified aspects of the cross-border supply of gambling and betting services that it says are not prohibited in the United States:

'US restrictions do not preclude cross-border supply of all gambling services, and thus are not a 'total prohibition'. For example:

- Persons not involved in the business of gambling may transmit casual or social bets by any means, provided that the transmission is permissible under state law.

- Parimutuel betting services may exchange the accounting data and pictures necessary to permit a racetrack outside the United States to offer parimutuel betting on U.S. races (and vice-versa), provided that such gambling is legal in both the sending and the receiving jurisdictions.

- Suppliers of oddsmaking and handicapping services (\textit{e.g.}, handicappers of horse races) as well as other gambling informational services may supply such services, provided that the form of gambling that they facilitate is legal in both the sending and the receiving jurisdictions.

\footnotetext{735}{Antigua's first oral statement, para. 18; Antigua's second oral statement, para. 15.}
\footnotetext{736}{Antigua's first oral statement, para. 17.}
\footnotetext{737}{WT/DSB/M/151, para. 47 (24 June 2003); WT/DSB/M/153, para. 47 (21-23 July 2003).}
\footnotetext{738}{Panel Report on \textit{US – Section 301 Trade Act}, paras. 7.118–7.125.}
• Gambling websites may (and many do) provide so-called "free play" games in which no real money is wagered.

• Any other gambling service that does not consist of actual transmission of a bet or wager is legal to the extent stated in 18 U.S.C. § 1084(b), provided that it also does not violate state law in the U.S. consumer's jurisdiction.739

6.164 On the basis of the foregoing, we understand that the United States admits that federal and state laws are applied and enforced so as to prohibit what it describes as the "remote supply" of most gambling and betting services.740 The United States defines "remote supply" as:

"[S]ituations in which the gambling service supplier (whether foreign or domestic) and the service consumer are not physically together. In other words, the consumer of a remotely supplied service does not have to go to any type of outlet, be it a retail facility, a casino, a vending machine, etc. Instead, the remote supplier has no point of presence but offers the service directly to the consumer through some means of distance communication. Non-remote supply means that the consumer presents himself or herself at a supplier's point of presence, thus facilitating identification of the individual, age verification, etc."741

6.165 Despite the fact that the United States has admitted that federal and state laws are applied and enforced so as to prohibit what it describes as the "remote supply" of most gambling and betting services, what remains unclear is: what are the specific provisions of those laws that prohibit the remote supply of gambling and betting services in the United States and with which specific provisions and why are they inconsistent with the GATS?

6.166 As is evident from the foregoing, the Panel has encountered significant difficulty in pinpointing the specific measures at issue in this dispute. Given that Antigua appears to have argued in its most recent submissions that it seeks to bring the "total prohibition" on the cross-border supply of gambling and betting services before the Panel, we consider that there are two critical issues that we need to decide before we can proceed to examine and assess Antigua's claims of violation with the GATS. First, can Antigua challenge a "total prohibition" on the cross-border supply of gambling and betting services under US law as a measure in and of itself in the context of this dispute? Secondly, if Antigua is not entitled to challenge such a "total prohibition" as a measure in this dispute, which measures must the Panel consider in determining whether Antigua has demonstrated its claims that the GATS has been violated? We consider these issues in turn below.

(b) Can Antigua challenge a "total prohibition" on the cross-border supply of gambling and betting services under US law as a measure in and of itself in the present dispute?

6.167 Pursuant to Article 7 of the DSU and the Appellate Body's findings in EC – Bananas III742, the Panel must refer to Antigua's Panel request in determining whether or not Antigua can challenge a "total prohibition" as a measure in this dispute given that it is the Panel request that defines our terms of reference.

739 United States' second written submission, paras. 26-27.
740 We note that in its reply to Panel question No. 35, the United States submitted that the transmission of a bet or wager by a wire communication facility across state or U.S. borders, such as Internet and telephone betting, the mailing of lottery tickets between states, the interstate transportation of wagering paraphernalia, and wagering on sporting events are restricted both domestically and cross-border. We understand from this statement that federal and state laws prohibit the remote supply of gambling and betting services.
741 United States' reply to Panel question No. 42.
6.168 We recall that, in its Panel request\textsuperscript{743}, Antigua argues that "certain measures of central, regional or local governments and authorities of the United States" are inconsistent with the United States' commitments and obligations under the GATS with respect to the cross-border supply of gambling and betting services. The Panel request goes on to state that "the relevant laws are listed in Sections I and II of the Annex attached to this request" and that "Section III of the Annex lists examples of measures by non-legislative authorities of the United States applying these laws to the cross-border supply of gambling and betting services". Also of relevance is the fact that the Panel request states that "the measures listed in the Annex only come within the scope of this dispute to the extent that these measures prevent or can prevent operators from Antigua and Barbuda from lawfully offering gambling and betting services in the United States under conditions of competition compatible with the United States' obligations."\textsuperscript{744}

6.169 Nowhere in its Panel request does Antigua list a "total prohibition" as a measure that is sought to be challenged. Rather, in its Panel request, Antigua describes the effect of the laws referred to in Sections I and II of the Annex as "prohibiting all supply of gambling and betting services from outside the United States to consumers in the United States". The Panel request then goes on to state that this effect, which is subsequently labelled in the Panel request as "the total prohibition" of the supply of gambling and betting services offered from outside the United States, conflicts with the United States' obligations under the GATS.

6.170 It is apparent to us from the Panel request that Antigua identified the measures contained in its Annex as those that were the subject of its challenge under the GATS. It is also apparent to us that Antigua refers to the "total prohibition" in its Panel request to describe the alleged effect of the measures listed in Sections I and II of the request.

6.171 We consider that Antigua is bound to rely upon the measures identified in its Panel request. Since it did not identify the "total prohibition" as a measure in and of itself, it is not entitled to rely upon it as a "measure" in this dispute. Moreover, we consider that, in the present dispute, even if the "total prohibition" were to have been identified as a "measure" in its Panel request, Antigua is not entitled to rely upon the "total prohibition" as such for the reasons set out below.

6.172 Article XXVIII(a) of the GATS provides that a "measure" under the GATS is "any measure by a Member, whether in the form of a law, regulation, rule, procedure, decision, administrative action, or any other form" (emphasis added). The reference to "any other form" in this definition indicates a broad interpretation of the term "measures" in the context of the GATS.

6.173 In US – Corrosion-Resistant Steel Sunset Review, the Appellate Body, in discussing the meaning of the term "measure" under WTO law, made reference to Article 3.3 of the DSU. In particular, it stated that:

"Article 3.3 of the DSU refers to 'situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by \textit{measures taken by another Member}'. (emphasis added) This phrase identifies the relevant nexus, for purposes of dispute settlement proceedings, between the 'measure' and a 'Member'. In principle, \textit{any act or omission attributable to a WTO Member can be a measure of that Member for purposes of dispute settlement proceedings}. The acts or omissions that are so attributable are, in the usual case, the acts or omissions of the organs of the state, including those of the executive branch."

In addition, in GATT and WTO dispute settlement practice, panels have frequently examined measures consisting not only of particular acts applied only to a specific

\textsuperscript{743} The relevant aspects of Antigua's Panel request are set out in para. 6.153 above.

\textsuperscript{744} Antigua's reiterates this in para. 141 of its first written submission.
situation, but also of acts setting forth rules or norms that are intended to have general and prospective application. In other words, *instruments of a Member containing rules or norms could constitute a 'measure', irrespective of how or whether those rules or norms are applied in a particular instance.*

...

This analysis leads us to conclude that there is *no basis*, either in the practice of the GATT and the WTO generally or in the provisions of the Anti-Dumping Agreement, *for finding that only certain types of measure can, as such, be challenged in dispute settlement proceedings under the Anti-Dumping Agreement.*

6.174 In summary, the definition of "measures" under the GATS as well as jurisprudence regarding the interpretation of this term in the context of the DSU indicates a broad reading of the term under the GATS. It includes any "act or omission attributable to a WTO Member" and "instruments of a Member containing rules or norms ... irrespective of how or whether those rules or norms are applied in a particular manner".

6.175 Notwithstanding the broad concept of "measures" under the GATS and the DSU, the Panel believes that, in the circumstances of this case, the alleged "total prohibition" on the cross-border supply of gambling and betting services describes the alleged effect of an imprecisely defined list of legislative provisions and other instruments and cannot constitute a single and autonomous "measure" that can be challenged in and of itself, even if it is claimed that, together, these legislative provisions and other instruments result in a total prohibition. Our reasons for forming this conclusion are as follows.

6.176 First, as we understand it, Antigua's use of the term "total prohibition" in this case is by way of description of an alleged effect to which it takes objection, namely the fact that Antigua's suppliers are prohibited from providing gambling and betting services in the United States on a cross-border basis. As noted above, the Appellate Body in *US – Corrosion-Resistant Steel Sunset Review* made it clear that "instruments of a Member containing rules or norms could constitute a 'measure'" that may be the subject of challenge under the DSU. We do not consider that a "total prohibition" as explained by Antigua can be construed, in this dispute, as an "instrument" within the meaning ascribed to that term by the Appellate Body because it is a description of an effect rather than an instrument containing rules or norms.

6.177 Secondly, Article 6.2 of the DSU requires that measures be "specifically" identified in a panel request. In our view, the "total prohibition" has not been "specifically" identified. In particular, the details of how it is constituted are far from clear. We recall in this regard that Antigua has listed 93 laws in its Panel request. However, during the course of these proceedings, Antigua itself raised the question as to which of these laws and which provisions of these laws, if any, should be examined as part of the alleged "total prohibition". In particular, in response to a question posed by the Panel requesting clarification as to what Antigua is specifically challenging, Antigua referred to the laws in its Panel request and replied as follows:

"It is important to note ... that Antigua has cited all these laws in its Panel request in order to be as comprehensive as possible, *not* because it believes that each law is an essential part of a "puzzle" without which there would be no total prohibition. ... *most of the laws cited in the Panel request are prohibition laws that could be applied..."

745 Appellate Body Report on *US – Corrosion-Resistant Steel Sunset Review*, paras. 81-82 and 88.
independently of each other to prohibit cross-border supply from Antigua.\textsuperscript{746}

(emphasis added)

6.178 The Panel attempted on several other occasions to seek clarification from Antigua as to what exactly it is challenging. When asked by the Panel which specific provisions of which specific legislative measures it is actually challenging, Antigua replied:

"Antigua is in essence challenging every legislative provision that could be construed to form a piece of the United States' total prohibition on the cross-border supply of gambling and betting services. The statutory provisions that the United States appears to rely on most heavily in its law enforcement actions, or are most likely to form part of the total ban, were listed in the Annex to Antigua's Panel request and also have been submitted to the Panel, together with summaries.\textsuperscript{747} (emphasis added)

6.179 In its first oral statement, Antigua underlined "[its] effort at identifying, in [its] Panel and consultations requests, a huge number of American laws", which, in its view, demonstrates "good faith". However, at the same time, it states that the complexity and ambiguity as well as the overlap between federal and state laws made it "very difficult to identify with complete precision all laws and regulations of the United States that could be applied in the prohibition of the cross-border supply of gambling and betting services."\textsuperscript{748} Antigua also states that it finds it "wasteful and unnecessary" to engage in such an identification exercise.\textsuperscript{749}

6.180 In our view, in the light of the relevant provisions of the DSU, in particular Article 7 concerning the "terms of reference" and the prima facie requirements of Antigua's burden of proof, we believe that it is crucial and not "wasteful and unnecessary", to be precise and consistent in the identification of the measures at issue.

6.181 Thirdly, the Panel recalls that the identification of the challenged measures is critical not only in terms of defining the Panel's terms of reference and informing the defending party of the legal basis of the complaint so that it can defend itself but also because the challenged measure, if found to be in violation of a WTO agreement, must be brought into conformity with that agreement pursuant to Article 19.1 of the DSU. In our view, the ability of an instrument to be brought into conformity with a WTO Agreement is an important consideration in determining whether or not a measure has been sufficiently identified for the purposes of the DSU and the GATS.

6.182 The Panel fails to see how the United States could be requested to implement a DSB recommendation to bring a "prohibition" into compliance with the GATS pursuant to Article 19.1 of the DSU when an imprecisely defined "puzzle" of laws forms the basis of the "total prohibition" that has been identified by Antigua as the challenged measure.\textsuperscript{750} The Panel also fails to see how the DSB could monitor the implementation process pursuant to Article 21.6 of the DSU and how an implementation panel established under Article 21.5 of the DSU could assess the WTO compatibility of any implementing measure, if there is no certainty as to which laws should ultimately be changed.

\textsuperscript{746} Antigua's reply to Panel question No. 32.
\textsuperscript{747} Antigua's reply to Panel question No. 10.
\textsuperscript{748} Antigua's first written submission, para. 135.
\textsuperscript{749} Antigua's first oral statement, para. 25.
\textsuperscript{750} Indeed, it could be said that Antigua itself has acknowledged this. Antigua submits that "Antigua and Barbuda needs to ensure that, at the stage when the United States needs to implement any recommendations and rulings resulting from this proceeding, the United States cannot take the position that it needs to amend only the Wire Act and can continue to apply its other prohibition laws. This is particularly important because, given the huge amount of American legislation on gambling and betting, it cannot be excluded that Antigua and Barbuda has been unable to identify all domestic laws that could possibly be applied against the cross-border supply of gambling services." : Antigua's first oral statement, para. 22.
to address a "total prohibition" in the event that such a prohibition were to be found to be in violation of the GATS.

6.183 Antigua has argued that the fact that the "total prohibition" is comprised of a large number of different statutory provisions does not mean that the United States would have to abolish or amend all the individual legislative provisions to bring it into conformity with the GATS since the US federal government possesses power to legislate in the area of international commerce in a manner that would "pre-empt" all contradictory state laws and regulations. With respect to this argument, we note that our role here is to identify which measures are inconsistent with the GATS. Under Article 19.1 of the DSU, if we conclude that a measure is inconsistent with the GATS in this dispute, we can only make a recommendation to the DSB that the United States "bring [its] measure into conformity with [the GATS]". It is clear from the terms of Article 19.1 that our role does not extend to dictating how the United States should implement such a recommendation. At best, pursuant to the second sentence of Article 19.1, we could make suggestions as to how the United States could implement our recommendation once adopted by the DSB. However, these suggestions would not be binding on the United States. Accordingly, we consider that the fact that the United States may possess a power to legislate to override contradictory state laws and regulations with respect to the supply of gambling and betting services is not a matter for our consideration in these proceedings but may be of relevance in the context of the assessment, if any, of the implementation of our recommendations under Article 21.5 of the DSU.

6.184 Finally, Members' national laws are always presumed to be compatible with the WTO Agreement. Antigua, as the complaining party in this dispute, bears the burden of properly identifying measures with some detail and explanation so as to allow the United States to defend itself adequately. The fact that the United States has admitted a total or partial prohibition on the remote supply of certain gambling and betting services under US law does not relieve Antigua of its obligation to specifically identify and demonstrate WTO inconsistencies that result from such a prohibition. Moreover, the fact that a prohibition on the remote supply of gambling and betting services may exist under US law does not, in our view, necessarily mean that such laws are contrary to the GATS or to the WTO Agreement. Antigua must still prove that the US prohibition constitutes a WTO-inconsistent restriction in respect of which the United States may also be able to invoke general or specific exceptions to justify such a prohibition. Accordingly, we fail to see how a simple allegation of a total prohibition can enable Antigua to meet its burden of proof.

6.185 On the basis of the foregoing, we conclude that Antigua is not entitled to rely upon a "total prohibition" on the cross-border supply of gambling and betting services as a "measure" in and of itself in this dispute.

(c) Measures that the Panel should consider in determining whether the GATS has been violated

6.186 The question remains as to which measures the Panel should consider in determining whether or not the United States has violated its obligations under the GATS Agreement.

6.187 As we stated above, we consider that we are bound to examine the measures that Antigua has identified in its Panel request. The Panel request refers to measures listed in Sections I and II of the Annex to Antigua's Panel request, which, according to the request, are laws applying to the cross-border supply of gambling and betting services in the United States. The Panel request also refers to measures listed in Section III of the Annex, which, in Antigua's words are "examples of measures by non-legislative authorities of the United States applying [the laws contained in Sections I and II] to

751 Antigua's first oral statement, para. 24; Antigua's reply to Panel question No. 10; Antigua's second oral statement, para. 18.
752 Appellate Body Report on US – Carbon Steel, para. 115
the extent that these measures prevent or can prevent operators from Antigua and Barbuda from lawfully offering gambling and betting services.”

6.188 The total number of measures contained in Sections I, II and III of the Annex to Antigua’s Panel request is 105. The measures listed in the Panel request are a mix of federal and state laws, court decisions, state Attorneys’ General statements, websites and agreements between US enforcement agencies and credit card companies.

6.189 We asked Antigua to clarify whether the Panel was expected to consider all of the items listed in the Panel request in our determination of whether or not the United States has violated the GATS. Antigua responded:

"Antigua is challenging all three aspects which are intrinsically linked and are all elements of the total ban that Antigua seeks to challenge in this case. Legislative and regulatory provisions are given a practical effect by their application to specific cases. If, for example, the United States maintained its prohibition but did not enforce it, then the impairment of Antigua’s GATS benefits would be much less substantial and Antigua would probably not have started this proceeding. The United States practice vis-à-vis the foreign cross-border supply of gambling and betting services is also based on or at least purported to be based on legislative and regulatory provisions.” In Antigua’s view it would not be logical or effective to challenge some of these elements and not others. 

6.190 Antigua stated very clearly in the above response that it is challenging laws, applications and practices relating to the legality of the United States’ prohibition on the remote supply of gambling and betting services. We refer below to Antigua’s submissions and evidence, which, in our view, are relevant in deciding which laws, applications and practices the Panel may consider in determining whether the United States has violated the Articles of the GATS that Antigua has invoked. We first examine "specific applications", followed by "practice” and, finally, we will consider the "laws” at issue.

(i) Specific applications

6.191 With respect to the specific applications Antigua seeks to challenge, when questioned by the Panel for further information as to when and how efforts by Antigua's operators to provide cross-border supply of gambling and betting services had been the object of refusal by the US enforcement authorities, Antigua stated that it was not able to point to any specific rejection of its request for a licence to provide cross-border supply of gambling and betting services, despite having effectively

753 Panel question No. 10 reads as follows: ‘Is Antigua and Barbuda challenging: (i) specific legislative and regulatory provisions that are claimed to amount to a prohibition on the cross-border supply of gambling and betting services as such; and/or (ii) the specific application of such provisions; and/or (iii) the US practice vis-a-vis the foreign cross-border supply of gambling and betting services?’

754 (original footnote) See, e.g., the “Assurance of Discontinuance” entered into in August 2002 between the Attorney General of the State of New York and Paypal, Inc. (a copy of which is found at Exhibit AB 56) and the discussion of that document in Antigua’s response to Question 29. See also Exhibits AB 73, 92, 94, 96 and 98.

755 Antigua's reply to Panel question No. 10. In addition, Antigua submits that it is possible to challenge in dispute settlement proceedings a total prohibition that is comprised of numerous specific legislative and regulatory provisions, application[s] of such provisions and practices: Antigua’s second written submission, para. 13.
asserted as much in its first written submission and first oral statement.\textsuperscript{756} For the purposes of clarifying its allegations, in response to a question posed by the Panel, Antigua submitted:

"What was meant here was not that Antiguan operators had applied to supply gambling and betting services into the United States and were refused—the point was that under United States law, it is impossible for Antiguan suppliers to meet any authorization criteria. There are two reasons for this. First is the obvious, that the United States government considers the provision of cross-border gambling and betting services illegal, and thus it would be illegal under United States law as it currently exists for Antiguan suppliers to gain authorization. At the first Panel meeting Antigua asked the United States to explain how Antiguan service providers could lawfully provide gambling and betting services into the United States. In response, the United States confirmed that this was not possible.

Second, \textit{under the laws or practice} of every state that provides for state-sanctioned gambling in one form or another, the conditions attached to obtaining the right to supply gambling services in the state by definition preclude Antiguan operators from qualifying on a cross-border basis. Thus, even if the United States did not maintain its total prohibition, Antiguan operators could still not lawfully offer their services under the authorization schemes of the various states."\textsuperscript{757} (emphasis added)

6.192 This response appears to us to indicate that Antigua is challenging laws together with related practices rather than specific applications of the relevant laws. However, also in response to a question posed by the Panel soliciting support for an allegation made by Antigua that it is illegal for Antigua and Barbuda operators to provide gambling and betting services in the United States, Antigua referred to three court cases in which the relevant provisions of the Wire Act, the Travel Act and the Illegal Gambling Business Act were applied.\textsuperscript{758} It also referred to examples of law enforcement action against financial intermediaries.\textsuperscript{759} Finally, it referred to various statements by government officials advising national advertisers not to allow advertising for off-shore Internet gambling services.\textsuperscript{760} Although not all of these items would necessarily be "applications" within the meaning of WTO jurisprudence, they could, nevertheless, be used as evidence of how the challenged measures are effectively interpreted and applied by the United States that is, evidence of the United States' practice.

6.193 Some of these items are referred to in Section III of the Annex to Antigua's Panel request.\textsuperscript{761} Section III lists documents that are categorized by Antigua in the request as "Other United States and State actions or measures". We note that in our response to the United States' request for preliminary rulings, we concluded that:

\begin{itemize}
\item \textsuperscript{756} See, for example, Antigua's first written submission, paras. 183 and 197 and Antigua's first oral statement, para. 88.
\item \textsuperscript{757} Antigua's reply to Panel question No. 11.
\item \textsuperscript{758} In its reply to Panel question No. 12, Antigua refers to the following court cases: \textit{United States v Jay Cohen} (Exhibit AB-83), \textit{Vacco ex rel. People v World Interactive Gaming Corp} (Exhibit AB-97) and \textit{United States v Truesdale} (Exhibit AB-115).
\item \textsuperscript{759} In its reply to Panel question No. 12, Antigua also refers to Exhibits AB-56, 57, 58, 73, 92 and 98, which it says contain examples of law enforcement action against financial intermediaries and media companies carrying advertising for foreign gambling and betting services.
\item \textsuperscript{760} In its reply to Panel question No. 12, Antigua refers to Exhibits AB-73, 86, 92 and 116 as examples of state action taken regarding the advertisement of offshore Internet gambling and betting services.
\item \textsuperscript{761} In particular, Section III of the Annex to Antigua's Panel request lists two of the court cases referred to by Antigua, namely, \textit{United States v Jay Cohen} (Exhibit AB-83) and \textit{Vacco ex rel. People v World Interactive Gaming Corp} (Exhibit AB-97). Section III also lists four of the examples of law enforcement action against financial intermediaries and media companies referred to by Antigua, namely those contained in Exhibits AB-56, 57, 58 and 98.
\end{itemize}
"Given that Antigua & Barbuda has indicated that it does not intend to treat the items listed in Section III as distinct and autonomous 'measures' but, essentially, will seek to rely upon them as evidence to illustrate the existence of a general prohibition against cross-border supply of gambling and betting services in the United States, we decline to rule out the relevance of such items. However, as suggested by Antigua & Barbuda, during our substantive consideration of this dispute, we will not consider and examine them as separate, autonomous measures." (emphasis added)762

6.194 In other words, in accordance with what had been suggested by Antigua, we decided during preliminary ruling proceedings in this case that we would not consider and examine the items contained in Section III of the Annex to Antigua's Panel request as separate, autonomous measures but that they could be relevant in Antigua's demonstration that the legislative measures referred to in Sections I and II of the Annex to its Panel request result in a total prohibition on the cross-border supply of gambling and betting services.

6.195 Therefore, we conclude that Antigua is not challenging specific "applications" in the present dispute as separate, autonomous measures. We will, nonetheless, make reference if and where necessary to the court cases in which the relevant provisions of the Wire Act, Travel Act and Illegal Gambling Business Act were applied, the law enforcement actions against financial intermediaries and media companies and the statements by government officials advising national advertisers not to allow advertising for off-shore Internet gambling services as illustrative of the "practice" of US authorities regarding their interpretation and application of the relevant laws, which we discuss in greater detail below.

(ii) Practice

6.196 The panel in US – Corrosion-Resistant Steel Sunset Review stated that "practice" under WTO law is "a repeated pattern of similar responses to a set of circumstances".763 The Appellate Body in the same case indicated that "practice" in the form, for example, of a policy bulletin, may be challenged "as such".764 In US – Countervailing Measures on Certain EC Products, the Appellate Body issued a recommendation that the US bring its "practice" into conformity with the SCM Agreement. The Appellate Body in US – Carbon Steel indicated that "practice" may also be used to provide evidence of how laws are being interpreted and applied.765

6.197 On the basis of the foregoing, we consider that "practice" can be considered as an autonomous measure that can be challenged in and of itself or it can be used to support an interpretation of a specific law that is challenged "as such".

6.198 We consider that the three court cases in which the relevant provisions of the Wire Act, Travel Act and Illegal Gambling Business Act were applied, the examples of law enforcement action against financial intermediaries and media companies and the various statements by government officials advising national advertisers not to allow advertising for off-shore Internet gambling services could be considered to be "practices". However, Antigua is not challenging these practices "as such". Rather, in accordance with our reply to the United States' request for preliminary rulings766, the Panel considers that Antigua is entitled to and has referred to these practices in its submissions to support its allegations and argumentation that certain laws are inconsistent with the United States' obligations under the GATS.

762 See the Response of the Panel to the US request for preliminary ruling contained in Annex B of this Panel report.
766 See para. 6.193 above.
(iii) Laws

6.199 Turning finally to the laws which Antigua claims result in a "total prohibition" that is contrary to the GATS, Antigua has listed 93 laws in its Panel request. At the Panel's first substantive meeting with the parties, Antigua submitted the texts of these laws together with general summaries of most of the measures cited in its Panel request.  

6.200 However, during the course of these proceedings, Antigua cast doubt on the extent to which the Panel should consider each of these laws in its determination of whether or not the United States is in violation of the GATS. Indeed, Antigua stated:

"The measures listed in the Annex only come within the scope of this dispute to the extent that these measures prevent or can prevent operators from Antigua and Barbuda from lawfully offering gambling and betting services in the United States under conditions of competition compatible with the United States' obligations." (emphasis added)

6.201 In addition, as we noted above, Antigua stated that "Most of the measures cited in the Panel request are prohibition measures that could arguably be applied independently of each other against Antiguan gaming operators." (emphasis added)

6.202 We recall again that when asked by the Panel which specific provisions of which specific legislative measures it is actually challenging, Antigua replied:

"Antigua is in essence challenging every legislative provision that could be construed to form a piece of the United States' total prohibition on the cross-border supply of gambling and betting services. The statutory provisions that the United States appears to rely on most heavily in its law enforcement actions, or are most likely to form part of the total ban, were listed in the Annex to Antigua's Panel request and also have been submitted to the Panel, together with summaries." (emphasis added)

6.203 The United States submits that, to the extent that Antigua fails to say precisely what provisions are or are not relevant, or to offer argumentation on specific provisions, it does not meet the basic elements of a prima facie case. According to the United States, Antigua cannot sustain its burden by merely identifying laws that "could be construed" as relevant, or are "most likely" relevant. In order for the Panel to consider whether hundreds of US laws interact together so as to be inconsistent with the GATS and for the United States to defend its laws, it is both reasonable and necessary for Antigua to be very precise about the specific US measures it is challenging and their relevance, meaning, interaction, and interpretation under US domestic law. The United States submits that Antigua has not done any of this.

6.204 It is evident from the foregoing that Antigua is effectively asking the Panel to identify for itself which of the listed measures and which provisions of those measures could be construed as imposing a prohibition on the cross-border supply of gambling and betting services. Even among the measures that could be described as imposing such a prohibition, Antigua states that most of them could arguably be applied independently to impose a prohibition on the cross-border supply of gambling and betting services. However, the Panel is left to determine for itself which measures

---

767 Exhibits AB-82, 89, 90, 91 and 99.
768 Antigua's first written submission, para. 141.
769 Antigua's first oral statement, para. 19.
770 Antigua's reply to Panel question No. 10.
771 United States' second oral statement, para. 12.
772 United States' second oral statement, para. 2.
could be applied independently to impose such a prohibition. Antigua further indicates that the measures listed in the Annex only come within the scope of this dispute “to the extent that these measures prevent or can prevent operators from Antigua and Barbuda from lawfully offering gambling and betting services in the United States.” Here again, the Panel is required to determine which measures actually prevent or can, in theory, prevent Antigua's operators from lawfully offering gambling and betting services in the United States.

6.205 Confronted with this ambiguity, we must decide which of the 93 laws listed in Sections I and II of the Annex to its Panel request we should consider. By way of context for this determination, we recall the following statement of the Appellate Body in Canada – Autos where, after reversing the panel, it wrote:

"We are mindful of the importance of the GATS as a new multilateral trade agreement covered by the WTO Agreement. This appeal is only the second case in which we have been asked to review a panel's findings on provisions of the GATS. Given the complexity of the subject-matter of trade in services, as well as the newness of the obligations under the GATS, we believe that claims made under the GATS deserve close attention and serious analysis."  

6.206 This dispute is the fourth WTO case where the GATS has been at issue. In line with the above comments of the Appellate Body, we have done our utmost to examine the claims made by Antigua under the GATS despite the practical difficulties we encountered.

6.207 Antigua stated that it had "provided considerable evidence of ... the construction of the total prohibition [including] numerous references to and discussions of the principal federal statutes used by the United States to support its total prohibition; provision to the Panel of the actual text of the principal state and federal laws that underlie the total prohibition; discussions regarding the basic scheme of state and federal interaction in the area of gambling and betting and how the state and federal laws act to further the total prohibition." However, in our view, Antigua has effectively left the Panel to search through the material that Antigua has submitted to identify which among the 93 measures identified in Antigua's Panel request result in violations of the GATS. We do not consider that it is permissible for us to search through the items listed in Antigua's Panel request for the purpose of identifying the laws upon which Antigua might have relied in order to support a case that Antigua has itself not articulated precisely.

6.208 Indeed, we note that there are limits to our ability to rely for our findings on the results of our own investigation and we are well aware of those limitations. In Japan – Agricultural Products, the Appellate Body reversed the panel for effectively having made the complainant's case for it and stated that:

"Article 13 of the DSU and Article 11.2 of the SPS Agreement suggest that panels have a significant investigative authority. However, this authority cannot be used by a panel to rule in favour of a complaining party which has not established a prima facie case of inconsistency based on specific legal claims asserted by it. A panel [is not entitled] to make the case for a complaining party."
6.209 Nevertheless, in light of the encouragement by the Appellate Body in Canada – Autos to pay close attention to and to undertake a serious analysis of Antigua’s claims, we perused all of Antigua’s submissions, including footnotes to those submissions and exhibits submitted by Antigua, with a view to identifying which of the 93 laws listed in its Panel request we should consider in determining whether or not the United States is in violation of its obligations under the GATS. We note that Annex E of this Panel Report contains a summary of what we found. In particular, the table lists the laws that Antigua apparently relies upon in claiming that the cross-border supply of gambling and betting services is prohibited and contrary to the United States' obligations under the GATS. The table indicates whether or not those laws are contained in Antigua’s Panel request and where, if at all, in Antigua’s submissions and exhibits Antigua refers to and/or discusses these laws. Set out below is a summary of the conclusions that we drew on the basis of our examination of Antigua’s submissions.

6.210 As a starting point, we note that the factual premise for Antigua’s claims of violation of Articles XVI, XVII and VI is the existence of a prohibition on the cross-border supply of gambling and betting services. In particular, Antigua argues that federal and state laws prohibit or prevent the cross-border supply of gambling and betting services by Antigua in violation of Articles XVI, XVII and VI of the GATS. We recall that the United States has admitted the existence of a prohibition of the remote supply of certain gambling and betting services. However, the United States has not indicated pursuant to which laws and according to which provisions of those laws the prohibition is imposed.

6.211 Antigua’s discussion of the various laws upon which it seeks to rely in this dispute may be grouped into three categories that are set out below:

(a) Laws that are referred to and/or discussed in Antigua’s submissions but which are not contained in Antigua’s Panel request;

(b) Laws that are contained in the Panel request but which are not discussed to an extent that could enable the Panel to identify according to which particular provisions and how the laws result in a prohibition on the cross-border supply of gambling and betting services which would be inconsistent with the United States' obligations under the GATS; and

(c) Laws that are contained in the Panel request, which are discussed in Antigua’s submissions and which indicate according to which particular provisions and how the laws result in a prohibition on the cross-border supply of gambling and betting services.

6.212 We deal with each of these three categories in turn.

---

777 With respect to its Article XVI claim, Antigua relies upon the existence of a "total prohibition" on the cross-border supply of gambling and betting services in its first written submission, paras. 183–184 and in its second written submission, paras. 35–36. In relation to its Article XVII claim, Antigua also relies upon the existence of a "total prohibition" on the cross-border supply of gambling and betting services in para. 39 of its second written submission. With respect to its Article VI claim, Antigua also relies upon the existence of "laws and regulations prohibiting the supply of gambling and betting services" in its first written submission, paras. 197 and 199 and in its first oral statement, para. 104.
Laws referred to and/or discussed in Antigua's submissions but not contained in Antigua's Panel request

6.213 Below is a list of laws and regulations that were discussed in Antigua's submissions in the context of its allegation that federal and state laws prohibit or prevent the cross-border supply of gambling and betting services but which are not contained in Antigua's Panel request:

(b) Connecticut: Connecticut Division of Special Revenue, Administrative Regulations: Operation of Bingo Games, Rules 7-169-8a and 7-169-13a;
(c) Illinois: Illinois Riverboat Gaming Act § 230; Illinois Compiled Statutes § 10/7 (e);
(d) Indiana: Indiana Code §§ 433-1-2, 4-33-9-1, 4-33-9-10; Indiana Administrative Code § 2 1-4 (c) (1);
(e) Iowa: Iowa Racing and Gaming Commission Administrative Rules, Rules 491 – 1, 491 – 8.2 (4) (g) and 491 – 11.5 (4) (a) (4);
(f) Kansas: Kansas Consumer Protection Act; Kansas Crim. Code Ann. § 21-4302(e);
(g) Louisiana: Louisiana Gaming Control Law RS § 27 : 65;
(i) Mississippi: Mississippi Gaming Commission Regulations, Section II (B) (2);
(j) Nevada: Nev. Rev. Stat. §§ 463.0129, 463.750, 465.091- 465.094; Regulations of the Nevada Gaming Commission and State Gaming Control Board, Regulations 3.010 (5) and (7);
(l) New York: NY Penal Code §§ 120.00-.15 and 155.05 (2) (e); Gen. Mun. Law § 185 et seq; Rac., Pari-Mut Wag. & Breed Law §§ 101 and 1012;
(m) Oregon: Oregon Administrative Rules, Rules 462-220-0060;

6.214 The Panel request defines our terms of reference. Therefore, we have no jurisdiction to examine any laws or regulations that were discussed by Antigua in support of its allegation that US law prohibits the cross-border supply of gambling and betting services but which are not contained in Antigua's Panel request. Consequently, we will not consider any of the laws listed in paragraph 6.213 above in examining Antigua's claims.

778 We note that Antigua referred to other federal and state laws that are also not contained in Antigua's Panel request but which are not listed here because they were not referred to by Antigua in the context of its allegation that US law prohibits the cross-border supply of gambling and betting services and/or because they have not yet been enacted.
Laws contained in the Panel request but not discussed to an extent that could enable Antigua to provide a prima facie demonstration

6.215 Below is a list of laws and regulations that were not discussed by Antigua to an extent that would enable the Panel to identify according to which particular provisions and how the laws result in a prohibition on the cross-border supply of gambling and betting services:

(a) Federal laws:

(i) The Federal Aiding and Abetting Statute (18 USC § 2);

(ii) Interstate Horseracing Act (15 USC §§ 3001 – 3007);

(iii) Federal Lottery Statute (18 USC §§ 1301 – 1307);

(iv) Interstate Transportation of Wagering Paraphernalia (18 USC § 1953);

(v) The Professional and Amateur Sports Protection Act (28 USC §§ 3701 – 3704);

(b) State laws:

(viii) South Dakota: S.D. Codified Laws §§ 22-25-1 - 22-25-15; and

6.216 In its examination of Antigua's submissions, the Panel found that, in the context of a very general discussion regarding the existence of an alleged prohibition on the cross-border supply of gambling and betting services\footnote{See Antigua's first oral statement, para. 25.}, Antigua included a footnote reference to exhibits containing what it itself described as a "huge number of American laws".\footnote{Exhibits AB-81, 82, 88 and 89.} The exhibits cited in the footnote contain the texts\footnote{Exhibits AB-82 and 99.} and very brief summaries of the laws that are referred to in paragraph 6.215 above.\footnote{Exhibits AB-81 and 88.}

6.217 The summaries contained in these exhibits do not enable us to identify according to which particular provisions and how the laws result in a prohibition on the cross-border supply of gambling and betting services that would be inconsistent with the United States' obligations under the GATS. Accordingly, we will not consider any of the above laws in examining Antigua's claims under Articles XVI, XVII and VI, which are premised upon the existence of a prohibition on the cross-border supply of gambling and betting services, because Antigua could not and did not make any prima facie demonstration that they are inconsistent with the GATS.

6.218 Additionally, in the case of one of the laws listed above, namely, the Interstate Horseracing Act ("IHA")\footnote{Interstate Horseracing Act, 15 USC §§ 3001 – 3007.}, it is listed in Antigua's Panel request and is, thereby, identified as resulting in a prohibition on the cross-border supply of gambling and betting services. However, when referring to the IHA in its submissions, Antigua submits very clearly that the IHA allows gambling by the Internet.\footnote{See, for example, Antigua's first written submission, para. 116.} Indeed, Antigua refers to the IHA to show that the United States does not prohibit the remote supply of gambling and betting services in the United States as it has suggested. Therefore, in relation to the IHA, we are still unclear as to how this Act results in a prohibition on the cross-border supply of gambling and betting services. Since Antigua's claims are premised upon the existence of a prohibition on the cross-border supply of gambling and betting services, we will not consider the IHA insofar as Antigua seeks to rely upon it as resulting in such a prohibition because Antigua could not and did not make any prima facie demonstration that it is inconsistent with the GATS.

Laws contained in the Panel request and discussed in Antigua's submissions

6.219 Below, we point to US laws contained in Antigua's panel request and for which Antigua has been able to identify one or several provisions and offer some discussion as to whether and how such provisions could be inconsistent with the GATS. We recall that we are not at this early stage assessing the legal validity of Antigua's arguments but we are only trying to identify which provisions of which US laws can be considered to have been sufficiently identified so as to warrant a substantive examination by the Panel.

Federal laws

6.220 In its first oral statement, Antigua refers to three US federal laws, which it says indicate that the cross-border supply of gambling and betting services is prohibited in the United States. More particularly, Antigua refers to:

(a) the Wire Act (18 USC § 1084);

(b) the Travel Act (18 USC § 1952); and

(c) the Illegal Gambling Business Act (18 USC § 1955).

6.221 Antigua provides the following discussion of each of these Acts:

\footnote{See Antigua's first oral statement, para. 25.} \footnote{Exhibits AB-81, 82, 88 and 89.} \footnote{Exhibits AB-82 and 99.} \footnote{Exhibits AB-81 and 88.} \footnote{Interstate Horseracing Act, 15 USC §§ 3001 – 3007.}
"The 'Wire Act' (18 U.S.C § 1084), which prohibits gambling businesses from knowingly receiving or sending certain types of bets or information that assist in placing bets over interstate and international wires;

The 'Travel Act' (18 U.S.C. § 1952), which imposes criminal penalties for those who utilize interstate or foreign commerce with the intent to distribute the proceeds of any unlawful activity, including gambling considered unlawful in the United States;

The 'Illegal Gambling Business Act' (18 U.S.C. § 1955), which makes it a federal crime to operate a gambling business that violates the law of the state where the gambling takes place (provided certain other criteria are fulfilled such as the involvement of at least five people and an operation during more than 30 days).

Each of these three laws separately prohibits the cross-border supply of gambling and betting services from Antigua."

6.222 The three federal Acts referred to above are listed in Antigua's Panel request. Antigua provided the full texts of the three Acts to the Panel in Exhibit AB-82. In the context of a broader discussion about the impact of US laws on the cross-border supply of gambling and betting services, Antigua refers to Exhibit AB-81, which contains, inter alia, an explanation of how these laws prohibit the cross-border supply of gambling and betting services.

6.223 With respect to Antigua's discussion of the Wire Act, the Travel Act and the Illegal Gambling Business Act, we consider that they have been discussed in Antigua's submissions, oral statements and replies to Panel questions and those discussions indicate according to which particular provisions and how the laws allegedly result in a prohibition on the cross-border supply of gambling and betting services.

State laws

Colorado

6.224 In its discussion of the legal position regarding the supply of gambling and betting services in the state of Colorado, Antigua states that "casino gambling may only be conducted in historic mining towns". In a footnote to that statement, Antigua points to an excerpt from a website contained in Exhibit AB-131 entitled "Colorado Gaming Questions and Answers". At page 5 of that excerpt, the website states that:

"There is no Colorado state law which expressly addresses Internet gambling. The violation under Colorado law is simply the crime of 'gambling', no different than any unlawful form of gambling in Colorado, prohibited by 18-10-103, Colorado Revised Statutes. A few states other than Colorado have recently passed specific state laws expressly prohibiting Internet gambling."

6.225 Section 18-10-103 of the Colorado Revised Statutes is referred to in the Panel request and the text of that section is contained in Exhibit AB-99. The text of § 18-10-103 of the Colorado Revised Statutes can be found in Annex F.

6.226 We consider that § 18-10-103 of the Colorado Revised Statutes has been discussed in Antigua's submissions and those submissions indicate according to which particular provision and how the law of Colorado allegedly results in a prohibition on the cross-border supply of gambling and betting services.

---

785 Antigua's first oral statement, para. 21.
786 Antigua's second written submission, para. 26.
Louisiana

6.227 In its discussion of the federal and state laws applying to the cross-border supply of gambling and betting services\textsuperscript{787}, Antigua refers through a footnote to Exhibit AB-119.\textsuperscript{788} Exhibit AB-119 contains an article which discusses, \textit{inter alia}, "The Intersection of States' Rights and Federal Interest". In the context of that discussion, reference is made to US laws concerning Internet gambling. In particular, the article states:

"In Louisiana, gambling by computer is illegal for operators, designers, and producers of related computer services unless the wagering takes place on the premises of a licensed river-boat, state lottery outlet or pari-mutuel facility. Therefore, the same Louisiana provision that generally prohibits Internet gambling does allow a very limited use of computer networks for gambling restricted to the premises of designated wagering facilities."\textsuperscript{789}

6.229 We consider that § 14:90.3 of the La. Rev. Stat. Ann. has been discussed in Antigua's submissions and those submissions indicate according to which particular provision and how the law of Louisiana allegedly results in a prohibition on the cross-border supply of gambling and betting services.

Massachusetts

6.230 Antigua states in its submissions that the laws of five states prohibit "unauthorized" gambling.\textsuperscript{791} In making this statement, Antigua points to Exhibit AB-84, which contains summaries of five state laws, including those of Massachusetts. In that Exhibit, as concerns Massachusetts, the only statement made that could be construed as relevant to Antigua's allegation that the cross-border supply of gambling and betting services is prohibited in Massachusetts is: "Massachusetts law makes it illegal to transmit any bet or wager over the telephone."\textsuperscript{792} In making this statement, Antigua includes a footnote reference to Mass. Ann. Laws: chapter 271 § 17A.\textsuperscript{793}

6.232 We consider that § 17A of chapter 271 of Mass. Ann. Laws has been discussed in Antigua's submissions and those discussions indicate according to which particular provision and how the law of Massachusetts allegedly results in a prohibition on the cross-border supply of gambling and betting services.

Minnesota

6.233 Antigua notes in its submissions that it included in its Panel request a "huge number of American laws" that together "create the total ban" of the cross-border supply of gambling and betting

\textsuperscript{787} See Antigua's second oral statement paras. 11–18.
\textsuperscript{788} Footnote 4 of Antigua's second oral statement.
\textsuperscript{789} Exhibit AB-119, p. 4.
\textsuperscript{790} We note that the Panel request refers to "La. Rev. Stat. Ann. § 14:90.4". We understand this reference to include §§ 14:90.0-14:90.4 and, therefore, encompasses § 14:90.3.
\textsuperscript{791} Antigua's first oral statement, para. 20.
\textsuperscript{792} Exhibit AB-84, p. 18.
\textsuperscript{793} Exhibit AB-84, footnote 15.
In making this submission, Antigua refers through a footnote to a number of exhibits, which it says contain "the text of all relevant laws listed in our Panel request, together with brief summaries of these laws." Antigua refers, inter alia, to Exhibit AB-88, which contains Antigua's summary of the state laws listed in its Panel request including those pertaining to Minnesota. Antigua also refers to Exhibit AB-99, which contains the text of those laws. These exhibits do not, in our view, indicate according to which particular provision and how the law of Minnesota results in a prohibition on the cross-border supply of gambling and betting services. However, in its reply to a question posed by the Panel, Antigua refers to legislative provisions, their application and relevant practice that Antigua submits are "all elements of the total ban". In making this statement, Antigua includes a footnote reference to Exhibit AB-96. Exhibit AB-96 contains a statement by the Minnesota Attorney General on Internet jurisdiction, which states in relevant part that:

"Minnesota residents should be aware that it is unlawful to make a bet through Internet gambling organizations. Minnesota law makes it a misdemeanor to place a bet unless done pursuant to an exempted, state-regulated activity, such as licensed charitable gambling or the state lottery. Minnesota Statute Sections 609.75, Subdivisions 2 – 3; 609.755(1) (1994). The Internet gambling organizations are not exempted. Therefore, any person in Minnesota who places a bet through one of these organizations is committing a crime."

6.235 We consider that §§ 609.75, Subdivisions 2-3 and 609.755(1) of Minn. Stat. Ann. have been discussed in Antigua's submissions and those discussions indicate according to which particular provisions and how the law of Minnesota allegedly results in a prohibition on the cross-border supply of gambling and betting services.

**New Jersey**

6.236 Antigua states in its submissions that the laws of five states prohibit "unauthorized" gambling. In making this statement, Antigua points to Exhibit AB-84, which contains summaries of five state laws, including those of New Jersey. In that Exhibit, as concerns New Jersey, the only statements that can be construed as relevant to Antigua's allegation that the cross-border supply of gambling and betting services is prohibited are as follows:

"In New Jersey, only gambling that has been authorized by public referendum is legal, and Internet gambling has not been authorized by public referendum. The New Jersey constitution prohibits the legislature from authorizing gambling unless the specific type of gambling, any restrictions on it, and control of it have been approved by public referendum. In addition, New Jersey's civil code bans any form of unauthorized gambling as well. As an unauthorized form of gambling, Internet gambling is prohibited under New Jersey law."

6.237 In making these statements, Antigua includes a footnote reference to N.J. Const. Art. 4, Sec. VII, paragraph 2 and to N.J. Code § 2A:40-1.

---

794 Antigua's first oral statement, para. 25.
795 Panel question No. 10.
796 Antigua's first oral statement, para. 20.
797 Exhibit AB-84, pp. 19-20.
798 Exhibit AB-84, Footnote 37.
799 Exhibit AB-84, Footnote 39.

6.239 We consider that paragraph 2 of N.J. Const. Art. 4, Sec. VII and § 2A:40-1 of the N.J. Code have been discussed in Antigua’s submissions and those discussions indicate according to which particular provisions and how the law of New Jersey allegedly results in a prohibition on the cross-border supply of gambling and betting services.

New York

6.240 Antigua states in its submissions that the laws of five states prohibit “unauthorized” gambling. In making this statement, Antigua points to Exhibit AB-84, which contains summaries of five state laws, including those of New York. In that Exhibit, as concerns New York, the only statements that can be construed as relevant to Antigua’s allegation that the cross-border supply of gambling and betting services is prohibited are as follows:

“Unauthorized betting and gambling are illegal in New York. With certain exceptions, New York has expressly prohibited betting in both its constitution and its General Obligations Law.”

6.241 In making these statements, Antigua includes a footnote reference to N.Y. Const. Art. I § 9 and N.Y. Gen. Oblig. L. § 5-401. Both of these sections are listed in the Panel request and the text of both sections is contained in Exhibit AB-99. The text of § 9 of Art. I of N.Y. Const. and § 5-401 of the N.Y. Gen. Oblig. L. can be found in Annex F.

6.242 We consider that § 9 of Art. I of N.Y. Const. and § 5-401 of the N.Y. Gen. Oblig. L. have been discussed in Antigua's submissions and those discussions indicate according to which particular provisions and how the law of New York allegedly results in a prohibition on the cross-border supply of gambling and betting services.

---

800 We understand that the N.J. Code is equivalent to "N.J. Stat. Ann.", which is the way in which the Code is referred to by Antigua in its Panel request.

801 Antigua's first oral statement, para. 20.

802 Exhibit AB-84, p. 21.

803 We note that N.Y. Const. Art. I § 9 is listed in Antigua’s Panel request but the revised request for consultations refers to N.Y. Const. Art. II § 9. We stated in our response to the US request for preliminary rulings that we would definitively determine whether or not the difference between the reference in the Panel request and the revised request for consultations is due to a typographical error after Antigua had completed making its prima facie case. Antigua has only provided us with the text of Art. I § 9 of N.Y. Const. and not Art. II § 9. On the basis of the text that is available to us, it appears that Antigua intended to refer to N.Y. Const. Art. I § 9 rather than Art. II § 9 in its revised request for consultations since the former clearly relates to gambling. We understand from Antigua that the latter concerns suffrage (see Antigua's first written submission, para. 150). The United States has not disputed this. Accordingly, we conclude that the discrepancy between the references in the Panel request and the revised request for consultations to the N.Y. Const. is merely typographical in nature. There are also differences between the references in the Panel request and the revised request for consultations to the N.Y. Const. is merely typographical in nature. There are also differences between the references in the Panel request and the revised request for consultations in respect of the laws for Colorado and Rhode Island. However, the differences apply to provisions of the laws of these states that are not being considered further by the Panel because, as we concluded in paragraph 6.215(b) above, Antigua could not and did not make any prima facie demonstration that they are inconsistent with the GATS. Therefore, we do not need to decide whether or not the discrepancies between the references in the Panel request and the revised request for consultations to provisions of the laws of these states are merely typographical in nature. In any case, it is the Panel request and not the request for consultations that determines our jurisdiction.
South Dakota

6.243 In its discussion of the federal and state laws applying to the cross-border supply of gambling and betting services, Antigua refers through a footnote to Exhibit AB-119. Exhibit AB-119 contains an article which discusses, *inter alia*, "The Intersection of States' Rights and Federal Interest". In the context of that discussion, reference is made to US laws concerning Internet gambling. In particular, the article states:

"Laws concerning Internet gambling are as varied as the diverse gaming schemes in each state jurisdiction, and even states that prohibit Internet gambling may provide for exceptions for Internet gambling conducted by a state regulated and licensed gaming operators. In Nevada, Illinois and South Dakota, it may be fairly stated that these states have enacted provisions that criminalize unregulated Internet gambling but leave a door open for regulated Internet gambling conducted by a gaming operator licensed by the respective state."

6.245 We consider that §§ 22-25A-1 - 22-25A-15 of the S.D. Codified Laws have been discussed in Antigua's submissions and those submissions indicate according to which particular provisions and how the law of South Dakota allegedly results in a prohibition on the cross-border supply of gambling and betting services.

Utah

6.246 Antigua states in its submissions that the laws of five states prohibit "unauthorized" gambling. In making this statement, Antigua points to Exhibit AB-84, which contains summaries of five state laws, including those of Utah. In that Exhibit, as concerns Utah, the only statement that can be construed as relevant to Antigua's allegation that the cross-border supply of gambling and betting services is prohibited is: "Internet gambling is prohibited in Utah, along with all other forms of gambling". In making this statement, Antigua includes a footnote reference to Utah Code Ann. § 76-10-1102.

6.247 Section 76-10-1102 of the Utah Code Ann. is referred to in the Panel request and the text of that section is contained in Exhibit AB-99. The text of § 76-10-1102 of the Utah Code Ann. can be found in Annex F.

6.248 We consider that § 76-10-1102 of the Utah Code Ann. has been discussed in Antigua's submissions and those discussions indicate according to which particular provision and how the law of Utah allegedly results in a prohibition on the cross-border supply of gambling and betting services.

(iv) Summary

6.249 After making our utmost efforts to accord Antigua's claims "close attention and serious analysis", in light of our discussion above, we have concluded that, among the laws listed in Antigua's
Panel request, the following have been discussed in Antigua's submissions and those discussions indicate according to which particular provisions and how the laws result in a prohibition on the cross-border supply of gambling and betting services:

(a) Federal laws:

(i) Wire Act (18 USC § 1084);

(ii) Travel Act (18 USC § 1952); and

(b) State laws:

(i) Colorado: § 18-10-103 of the Colorado Revised Statutes;

(vii) South Dakota: §§ 22-25A-1 - 22-25A-15 of the S.D. Codified Laws; and

(viii) Utah: § 76-10-1102 of the Utah Code Ann.

(d) "Measures ... affecting trade in services"

6.250 The threshold question that must be addressed in determining whether or not the GATS is applicable to the measures identified above in paragraph 6.249 is whether those measures "affect trade in services" within the meaning of Article I:1 of the GATS. This threshold question must be addressed regardless of the specific Article of the GATS that is being invoked in support of a claim that the GATS has been violated.

6.251 The Appellate Body in EC – Bananas III indicated that the expression 'measures ...affecting trade in services' in Article I:1 is to be interpreted broadly.810 Further, the Appellate Body in that case upheld the Panel's interpretation of that expression as meaning:

"... no measures are excluded a priori from the scope of the GATS as defined by its provisions. The scope of the GATS encompasses any measure of a Member to the extent it affects the supply of a service regardless of whether such measure directly governs the supply of a service or whether it regulates other matters but nevertheless affects trade in services."811

---

6.252 There is no reason why measures adopted by regional and local governments and authorities cannot \textit{a priori} "affect the supply of a service" within the meaning of Article I:1 of the GATS, even if such measures cannot be enforced extraterritorially.

6.253 This being said, whether a measure "affecting trade in services" within the scope of the GATS in accordance with Article I:1 is inconsistent with one or more provisions of the GATS is a distinct matter which calls for a separate determination under the relevant GATS provisions.

6.254 In our view, the measures identified above in paragraph 6.249 necessarily affect trade in services within the meaning of Article I:1 of the GATS because, as we find below in paragraphs 6.360 - 6.418, they entail prohibitions on the supply of gambling and betting services.

6.255 We will consider in the following sections of our Report whether Antigua has met its prima facie burden in proving that each of the measures identified above in paragraph 6.249 are inconsistent with the various Articles of the GATS that Antigua has invoked. Where relevant and necessary, we will also make reference to the court cases in which the relevant provisions of the Wire Act, Travel Act and Illegal Gambling Business Act were applied, the law enforcement actions against financial intermediaries and media companies and the statements by government officials advising national advertisers not to allow advertising for off-shore Internet gambling services as illustrative of the "practice" of US authorities regarding their interpretation and application of the above laws.

D. Claims of Violation of the United States' Market Access Commitment Under Article XVI of the GATS

1. Claims and main arguments of the parties

6.256 Antigua argues that since the United States has scheduled a full market access commitment for the cross-border supply of gambling and betting services but maintains and enforces measures prohibiting the cross-border supply of gambling and betting services, and that those measure(s) are inconsistent with Article XVI:1 of the GATS.\footnote{Antigua’s first written submission, para. 181.} Antigua submits that the United States’ "total prohibition" on the cross-border supply of gambling and betting services also violates Article XVI:2(a) and 2(c)\footnote{Antigua’s first written submission, para. 184.} because the "total prohibition" amounts to a zero quota. Antigua adds finally that the application of Article XVI:2(a) and (c) to a non-numerical quota, such as the alleged "total prohibition", is mandated by the principle of effective treaty interpretation and by the 1993 Scheduling Guidelines.\footnote{See Antigua’s second written submission, paras. 36-38 and Antigua’s reply to Panel question No. 15.}

6.257 According to the United States, contrary to the situation under Article XI of the GATT 1994, under the GATS, a "prohibition" is not \textit{ipso facto} inconsistent with Article XVI.\footnote{United States’ reply to Panel question No. 15.} The United States submits that the substance of Article XVI is contained in Article XVI:2, which deals with the subject-matter of restrictions and their precise form and/or manner of expression, and that it is a closed list.\footnote{United States first written submission, para. 81.} The United States argues that the restrictions it maintains on the remote supply of some gambling and betting services are not restrictions of the type covered by Article XVI:2 of the GATS because the subject-matter of the US restrictions refers to the character of the activity involved rather than the "number of service suppliers" or the "total number of service operations or total quantity of service output", being the criteria listed under subparagraphs (a) and (c) of Article XVI:2 respectively.\footnote{United States first written submission, paras. 21-25.}

\footnotesize\textsuperscript{812} Antigua’s first written submission, para. 181.
\footnotesize\textsuperscript{813} Antigua’s first written submission, para. 184.
\footnotesize\textsuperscript{814} See Antigua’s second written submission, paras. 36-38 and Antigua’s reply to Panel question No. 15.
\footnotesize\textsuperscript{815} United States’ reply to Panel question No. 15.
\footnotesize\textsuperscript{816} United States first written submission, para. 81.
\footnotesize\textsuperscript{817} United States first written submission, paras. 21-25.
Finally, the United States submits that, in the United States, there is no "total prohibition" or any "zero quota" since the cross-border supply of some gambling and betting services is permitted.  

2. **Relevant GATS provisions**

6.258 Article XVI of the GATS provides as follows:

"1. With respect to market access through the modes of supply identified in Article I, each Member shall accord services and service suppliers of any other Member treatment no less favourable than that provided for under the terms, limitations and conditions agreed and specified in its Schedule.  

2. In sectors where market-access commitments are undertaken, the measures which a Member shall not maintain or adopt either on the basis of a regional subdivision or on the basis of its entire territory, unless otherwise specified in its Schedule, are defined as:

(a) limitations on the number of service suppliers whether in the form of numerical quotas, monopolies, exclusive service suppliers or the requirements of an economic needs test;  
(b) limitations on the total value of service transactions or assets in the form of numerical quotas or the requirement of an economic needs test;  
(c) limitations on the total number of service operations or on the total quantity of service output expressed in terms of designated numerical units in the form of quotas or the requirement of an economic needs test;  
(d) limitations on the total number of natural persons that may be employed in a particular service sector or that a service supplier may employ and who are necessary for, and directly related to, the supply of a specific service in the form of numerical quotas or the requirement of an economic needs test;  
(e) measures which restrict or require specific types of legal entity or joint venture through which a service supplier may supply a service; and  
(f) limitations on the participation of foreign capital in terms of maximum percentage limit on foreign shareholding or the total value of individual or aggregate foreign investment."

---

818 United States' second written submission, para. 26.  
819 (*original footnote*) If a Member undertakes a market-access commitment in relation to the supply of a service through the mode of supply referred to in subparagraph 2(a) of Article I and if the cross-border movement of capital is an essential part of the service itself, that Member is thereby committed to allow such movement of capital. If a Member undertakes a market-access commitment in relation to the supply of a service through the mode of supply referred to in subparagraph 2(c) of Article I, it is thereby committed to allow related transfers of capital into its territory.  
820 (*original footnote*) Subparagraph 2(c) does not cover measures of a Member which limit inputs for the supply of services.
3. Assessment by the Panel

(a) Introduction

6.259 In light of the claims and arguments of the parties, it is necessary to determine the nature and scope of the obligations contained in Article XVI of the GATS. In order to do so, the Panel will need to examine whether Article XVI:1 contains obligations that are different from those contained in Article XVI:2 and whether Article XVI:2 exhaustively defines the types of restrictions that are prohibited by Article XVI. In the specific circumstances of the present dispute, the Panel will also need to ascertain the legal implications of the inscription by a Member of the word "None" in the market access column of its schedule for mode 1 for a specific sector or sub-sector.

6.260 In particular, the Panel will need to determine whether such a Member is entitled to maintain a measure which prohibits one, several or all means of delivery included in mode 1; whether such a measure is inconsistent with the first and the second paragraphs of Article XVI of the GATS; and whether a restriction on some services covered in a scheduled sector or sub-sector amounts to a violation of Article XVI.

6.261 In this dispute, Antigua claims that its market access rights under Article XVI for gambling and betting services in the United States are impaired by the US measures at issue. We examine the United States' obligations under Article XVI hereafter. To do so, the Panel will, in the light of Article 3.2 of the DSU and the Vienna Convention, interpret the text of Article XVI of the GATS in good faith, in accordance with the ordinary meaning to be given to the terms of this provision when read in their context and in the light of the object and purpose of the GATS and those of the WTO Agreement.

(b) Interpretation and scope of Article XVI

(i) The first paragraph of Article XVI

6.262 In the present dispute, Antigua claims that a blanket prohibition on the remote supply of gambling and betting services is contrary to the US Schedule, which contains the inscription "None" in the market access column for mode 1 in respect of the specific sub-sector 10.D. Therefore, according to Antigua, the measures at issue provide less favourable treatment than that provided for in the US Schedule in a manner inconsistent with the first paragraph of Article XVI. The United States responds that the second paragraph of Article XVI exhaustively defines the types of restrictions that are prohibited by Article XVI. We understand the United States' argument to imply that when a Member has inscribed the word "None" in its market access column for mode 1, it signifies that the Member has specified in its schedule none of the limitations or measures listed in subparagraphs (a) to (f) of Article XVI:2 and is, accordingly, prohibited from adopting or maintaining any such limitations or measures.

6.263 In the Panel's view, the ordinary meaning of the terms contained in the first paragraph of Article XVI imposes an obligation on Members to provide, with respect to market access, no less favourable treatment than that provided for in the Members' respective schedules. The standard of "no less favourable" treatment in Article XVI is established by reference to the specific commitments inscribed in the market access column of a Member's schedule. In particular, the first paragraph of Article XVI makes clear that Members are bound by the "terms, limitations and conditions" contained in the market access column of their respective schedules. A Member must abide by the "terms, conditions and limitations" contained in its schedule and cannot provide, in respect of services and services suppliers of other Members, treatment less favourable than the minimum treatment it is committed to in its schedule for market access.
6.264 The ordinary meaning of the terms used in the first paragraph of Article XVI also indicates that nothing would prevent a Member from providing to services and service suppliers of all Members treatment more favourable than that provided for in its schedule or that it provides to its own services and service suppliers.

6.265 The first paragraph of Article XVI also extends to Members the obligation to provide no less favourable treatment than that provided for in their respective schedules, to any other Members, i.e. to all WTO Members. In other words, the commitments undertaken pursuant to Article XVI are to be applied on a non-discriminatory basis. Therefore, the first paragraph of Article XVI contains a specific expression of the MFN principle of Article II of the GATS.

6.266 When faced with an allegation of violation of Article XVI, a panel must first examine the schedule of the challenged Member. There are three possible inscriptions that can be made in the market access column of a Member’s schedule: "Unbound", "None" or limitations may be inscribed.

6.267 In the present dispute, the United States inscribed "None" in the market access column of its Schedule for mode 1 in respect of gambling and betting services. Since the first step in an analysis under the first paragraph of Article XVI is to have regard to the challenged Member’s schedule, we believe that, with respect to the US Schedule, we must determine the legal significance under Article XVI of the inscription of the word "None" in the market access column for "mode 1".

"None" inscribed under "Market Access Limitations"

6.268 The terms of a schedule are to be interpreted as treaty terms. All Members' schedules include three columns in their respective schedules: one entitled "sector or sub-sector", another "Limitations on market access" and the third "Limitations on national treatment".

---

821 We note in passing that paragraph 5 of the "Listing of Article II exemptions – Explanatory Note by the Secretariat" (the so-called Scheduling Guidelines on MFN Exemptions) states that: "Therefore if a Member takes an MFN exemption in a sector where specific commitments are undertaken, the exemption would allow that Member to deviate from its obligations under paragraph 1 of Article II but not from its commitments under Articles XVI or XVII. Accordingly, a Member undertaking a market access or a national treatment commitment in a sector must accord the stated minimum standard of treatment specified in its schedule to all other Members.": Job No. 2061 dated 15 September 1993.

822 S/L/92, para. 47, states that: "In some situations, a particular mode of supply may not be technically feasible. An example might be the cross-border supply of hair-dressing services. In these cases the term UNBOUND* should be used. The asterisk should refer to a footnote which states 'Unbound due to lack of technical feasibility'. The term may not be used as an entry in the national treatment column for modes 1 and 2 when, for the same service, there is a market access commitment. Where the mode of supply thought to be inapplicable is in fact applicable, or becomes so in the future, the entry means 'unbound'.”

824 The fourth column (Additional commitments) has not been reproduced here.
6.269 As is evident from the above excerpt of the US Schedule, the word "None" is a treaty term since it is in its Schedule. Further, "None" is inscribed under "Limitations on market access". However, "None" is not defined in the GATS nor in any Members' schedules.

6.270 In the absence of any treaty definition of the word "None" when inscribed in a Member's schedule under "Limitations on market access", and pursuant to Articles 31.1 and 31.2 of the Vienna Convention, the Panel will, as a starting point, resort, to the dictionary definitions of these terms. In so doing, the Panel is well aware of the limitations of dictionary definitions to identify the ordinary meaning of the terms of a treaty.\[825\]

6.271 The term "none" is defined in the *New Shorter Oxford Dictionary* as "no one not any one of a number of persons or things".\[826\] The *Webster New Encyclopedic Dictionary* defines it as "not any such thing or person".\[827\] The *New Little Oxford Dictionary* defines it as "not any of ...".\[828\] These definitions indicate that the Panel has to identify what an inscription of the word "None" in a Member's schedule relates or refers to.

6.272 In the context of the present dispute, the inscription of the word "None" refers to "Limitations on market access". Therefore, the inscription of the word "None" in the market access column of the US Schedule would appear to mean "none of the limitations on market access".

6.273 The ordinary meaning of "limitations", as defined in the *New Shorter Oxford Dictionary*, is "a point or a respect, in which a thing, and especially a person's ability, is limited".\[829\] The *Webster New Encyclopedic Dictionary* defines it as "something that limits"\[830\] and the *New Little Oxford Dictionary* as "limiting or being limited; lack of ability ...".\[831\]

6.274 The concept of "market access" was fundamental to GATT law and practice; it is still so under the WTO Agreement.\[832\] In the Dictionary of Trade Policy Terms, "market access" is defined as:

"[O]ne of the most basic concepts in international trade. It describes the extent to which a good or a service can compete with locally-made products in another market. In the WTO framework it as [sic] a legalistic terms outlining the government-imposed conditions under which a product may enter a country under non-discrimination conditions."\[833\]

6.275 On the basis of the above dictionary definitions, "Limitations on market access" would appear to include provisions or conditions limiting the ability of services and service suppliers to gain access to the market of that Member. However, in light of the specific and specialized context where these

---

825 Appellate Body Reports on *EC – Asbestos*, para. 92; and *Canada – Aircraft*, para. 153.
832 Article XVI:1 of the WTO Agreement provides that: "Except as otherwise provided under this Agreement or the Multilateral Trade Agreements, the WTO shall be guided by the decisions, procedures and customary practices followed by the CONTRACTING PARTIES to GATT 1947 and the bodies established in the framework of GATT 1947."
terms are used, the Panel believes that the dictionary definitions are not particularly enlightening or informative.\textsuperscript{834}

6.276 Pursuant to Articles 31.1 and 31.2 of the Vienna Convention, we turn to the legal \textit{context} of Article XVI in our effort to interpret the first paragraph of Article XVI and relevant inscriptions in a Member's schedule.

6.277 The 1993 Scheduling Guidelines, which are part of the context for the GATS Agreement\textsuperscript{835}, are also part of the context of Article XVI and shed light on the meaning of "None". Paragraphs 23 and 24 of the 1993 Scheduling Guidelines contain the following pertinent comments on the inscription of the term "None" in the market access column of a Member's schedule:

"23. Since the terms used in a Member's schedule create legally binding commitments, it is important that those expressing presence or absence of limitations to market access and national treatment be uniform and precise. Depending on the extent to which a Member has limited market access and national treatment, for each commitment with respect to each mode of supply, four cases can be foreseen:

(a) Full commitment

24. In this case the Member does not seek in any way to limit market access or national treatment in a given sector and mode of supply through measures inconsistent with Articles XVI and XVII. The Member in this situation should mark in the appropriate column: NONE. However, any relevant limitations listed in the horizontal section of the schedule will still apply."

6.278 According to paragraph 24 of the 1993 Scheduling Guidelines, by inscription of the word "None" in the market access column of a Member's schedule, a Member cannot adopt or maintain any measure inconsistent with Article XVI. The word "None" in the market access column means that the Member has undertaken a \textit{full market access commitment}. "Full market access" is defined in paragraph 4 of the 1993 Scheduling Guidelines as follows:

"A Member grants full market access in a given sector and mode of supply when it does not maintain in that sector and mode any of the types of measures listed in Article XVI. The measures listed comprise four types of quantitative restrictions (subparagraphs a-d), as well as limitations on forms of legal entity (subparagraph e) and on foreign equity participation (subparagraph f). The list is exhaustive and includes measures which may also be discriminatory according to the national treatment standard (Article XVII). The quantitative restrictions can be expressed numerically, or through the criteria specified in subparagraphs (a) to (d); these criteria do not relate to the quality of the service supplied, or to the ability of the supplier to supply the service (i.e. technical standards or qualification of the supplier)."

6.279 Thus, when a Member has the inscription "None" in the market access column of its schedule, it must maintain "full market access" within the meaning of the GATS, i.e. it must not maintain any of the six limitations and measures listed in the second paragraph of Article XVI.

\textsuperscript{834}Appellate Body Reports on \textit{EC – Asbestos}, para. 92; and \textit{Canada – Aircraft}, para. 153.

\textsuperscript{835}We recall our conclusion in para. 6.82 above.
"Mode 1" and its inherent "means of delivery"

6.280 In the present dispute, the Panel has to interpret the meaning of the word "None" when it has been inscribed under "Limitations on market access" for mode 1. The Panel is of the view that it must, therefore, consider the nature of a market access commitment for mode 1, since Antigua claims that the challenged US measures are contrary to the US market access commitment for mode 1 in respect of sub-sector 10.D.

6.281 Article I:2(a) of the GATS defines "mode 1", otherwise referred to as "cross-border", as the supply of a service "from the territory of one Member into the territory of any other Member". The definition does not contain any indication as to the means that can be used to supply services cross-border. This indicates, in our view, that the GATS does not limit the various technologically possible means of delivery under mode 1.

6.282 As for relevant context for identifying the means of delivery included under Article I:2(a), paragraph 18 of the Scheduling Guidelines states that:

"The four modes of supply listed in the schedules correspond to the scope of the GATS as set out in Article I:2. The modes are essentially defined on the basis of the origin of the service supplier and consumer, and the degree and type of territorial presence which they have at the moment the service is delivered."

6.283 In respect of supply by mode 1, or "cross-border" supply, the chart entitled "Modes of Supply" contained in the 1993 Scheduling Guidelines states:

"Service supplier not present within the territory of the Member
Service delivered within the territory of the Member, from the territory of another Member"

6.284 Paragraph 19 of the Scheduling Guidelines defines "cross-border supply" as:

"International transport, the supply of a service through telecommunications or mail, and services embodied in exported goods (e.g. a computer diskette, or drawings) are all examples of cross-border supply, since the service supplier is not present within the territory of the Member where the service is delivered."

6.285 The Panel concludes that mode 1 under the GATS encompasses all possible means of supplying services from the territory of one WTO Member into the territory of another WTO Member. Therefore, a market access commitment for mode 1 implies the right for other Members' suppliers to supply a service through all means of delivery, whether by mail, telephone, Internet etc., unless otherwise specified in a Member's Schedule. We note that this is in line with the principle of "technological neutrality", which seems to be largely shared among WTO Members. Accordingly, where a full market access commitment has been made for mode 1, a prohibition on one, several or all means of delivery included in this mode 1 would be a limitation on market access for the mode.

836 Work Programme on Electronic Commerce – Progress Report to the General Council, adopted by the Council for Trade in Services on 19 July 1999, S/L/74, 27 July 1999. para. 4: "It was also the general view that the GATS is technologically neutral in the sense that it does not contain any provisions that distinguish between the different technological means through which a services may be supplied." The United States seems to agree as is evident from the following comments made by it in a submission contained in WT/GC/16, p. 3: "there should be no question that where market access and national treatment commitments exist, they encompass the delivery of the service through electronic means, in keeping with the principle of technological neutrality."
6.286 In our view, if one, several or all means of delivery cross-border are prohibited, the opportunities for foreign suppliers using those means of delivery to supply services cross-border to gain access to foreign markets are clearly reduced, if not nullified. If a Member desires to exclude market access with respect to the supply of a service through one, several or all means of delivery included in mode 1, it should do so explicitly in its schedule. The Panel considers that any other interpretation would result in the nullification of benefits of a commitment made for mode 1, as Members could, through regulations, impose restrictions or prohibitions essentially on one, several or all means of delivery.

6.287 To sum up, we conclude that mode 1 includes all means of delivery. We are of the view that when a Member inscribes the word "None" in the market access column of its schedule for mode 1, it commits itself not to maintain measures which prohibit the use of one, several or all means of delivery under mode 1 in a committed sector or sub-sector. This is especially so in sectors and sub-sectors where cross-border supply is effected essentially if not exclusively through the Internet.

Restrictions with respect to certain services covered in a sector or sub-sector

6.288 In this dispute, the United States argues that it does not prohibit the cross-border supply of all "gambling and betting services" because it allows the cross-border supply of services such as "odds-making" or broadcasting of horse races. Antigua is of the view that a commitment in a given sector or sub-sector covers all services that come within that sector or sub-sector.

6.289 Article XXVIII(e) of the GATS defines "sector" to mean:

"(i) with reference to a specific commitment, one or more, or all, subsectors of that service, as specified in a Member's Schedule,

(ii) otherwise, the whole of that service sector, including all of its subsectors."

6.290 In our view, if a Member makes a market access commitment in a sector or sub-sector, that commitment covers all services that fall within the scope of that sector or sub-sector. A Member does not fulfill its GATS obligations if it allows market access for only some of the services covered by a committed sector or sub-sector while prohibiting all others. If a Member wishes to restrict market access with respect to certain services falling within the scope of a sector or sub-sector, it should set out the restrictions or limitations on access in the appropriate place in the Member's schedule. Indeed, a specific commitment in a given sector or sub-sector is a guarantee that the whole of that sector, i.e. all services included in that sector or sub-sector are covered by the commitment. Any other interpretation would make market access commitments under the GATS largely meaningless.

6.291 The context of the first paragraph of Article XVI includes the second paragraph of Article XVI. We proceed, therefore, to examine the second paragraph of Article XVI.

(ii) The second paragraph of Article XVI

6.292 Article XVI:2 provides in relevant part that:

"In sectors where market-access commitments are undertaken, the measures which a Member shall not maintain or adopt either on the basis of a regional subdivision or on the basis of its entire territory, unless otherwise specified in its Schedule, are defined as:

(a) limitations on the number of service suppliers ....

(b) limitations on the total value of service transactions ...."
6.293 On the basis of the *ordinary meaning* of the terms contained in Article XVI:2, the purpose of the second paragraph of Article XVI is to define the types of limitations and measures which shall not be maintained or adopted in scheduled sectors or sub-sectors, unless otherwise indicated in the relevant Member's schedule. Paragraph 2 also informs Members of the manner in which they should schedule such limitations and measures.

6.294 We now turn to the *context for the interpretation of Article XVI:2*. First, confirmation of our interpretation is to be found in Article XX:1 of the GATS, which requires Members to set out in their schedules "terms, limitations and conditions on market access". This language, particularly the use of the word "limitations", denotes the limitations identified in Article XVI:2(a),(b),(c),(d) and (f). The words "terms" and "conditions" refer to the "measures" contemplated by Article XVI:2(e) and the chapeau of Article XVI:2 (i.e. the possibility to make a commitment on the basis of a regional subdivision of the territory).

6.295 Secondly, footnote 2 of the 1993 Scheduling Guidelines states that:

"The term 'limitations' will be used throughout this Note to refer to the 'terms', 'conditions', 'limitations' and 'qualifications' used in Article XVI and XVII of the GATS."

6.296 Therefore, the 1993 Scheduling Guidelines would seem to indicate that no difference exists between the "terms, conditions and limitations" contained in a Member's schedule and the "limitations" and "measures" that it is entitled to maintain if scheduled, pursuant to the second paragraph of Article XVI.  

6.297 Thirdly, paragraph 4 of the 1993 Scheduling Guidelines provides in relevant part that:

"A Member grants full market access in a given sector and mode of supply when it does not maintain in that sector and mode any of the types of measures listed in Article XVI. The measures listed comprise four types of quantitative restrictions (subparagraphs a-d), as well as limitations on forms of legal entity (subparagraph e) and on foreign equity participation (subparagraph f). The *list is exhaustive* and includes measures which may also be discriminatory according to the national treatment standard (Article XVII)." (emphasis added)

6.298 It seems clear from the 1993 Scheduling Guidelines that the list of limitations in paragraph 2 of Article XVI is an exhaustive list. Thus, the types of measures listed in the second paragraph exhaust the types of market access restrictions prohibited by Article XVI, in particular by the first paragraph of Article XVI. Paragraph 4 of the 1993 Scheduling Guidelines therefore confirms that paragraph 2 of Article XVI exhaustively defines the limitations and measures that are prohibited by

---

837 The footnote suggests that this understanding is a reading convention for the purpose of the Scheduling Guidelines. However, since the 1993 Scheduling Guidelines are context for the GATS, we believe that this understanding informs the interpretation of the term "limitation" in the GATS itself. In this regard, we note that this understanding also applies to GATS schedules which follow the format established in the 1993 Scheduling Guidelines and which refers to "limitations on market access".
Article XVI, unless scheduled. In that sense, paragraph 2 of Article XVI complements the first paragraph of that Article.

(iii) **The scope of the first and second paragraphs of Article XVI**

**Ordinary meaning**

6.299 As discussed previously, the ordinary meaning of the terms contained in the first and second paragraphs of Article XVI means that the only limitations and measures falling within the scope of Article XVI are those listed in the second paragraph of Article XVI.

6.300 We must, as required by Articles 31.1 and 31.2 of the Vienna Convention, continue our investigation for the interpretation of Article XVI by looking at the *context* of the first and second paragraphs of Article XVI, namely other provisions of the GATS. In particular, we will look at the relationship between Articles XVI, XVII, XVIII and paragraphs 4 and 5 of Article VI of the GATS, as this may assist the Panel in determining the nature and the scope of the obligations contained in Article XVI. We believe that these other provisions may give us indications as to the outer limits of Article XVI.

**The context: the relationship between Articles XVI, XVII, XVIII, VI:4 and 5**

6.301 Articles VI:4 and VI:5 provide that:

"4. With a view to ensuring that measures relating to qualification requirements and procedures, technical standards and licensing requirements do not constitute unnecessary barriers to trade in services, the Council for Trade in Services shall, through appropriate bodies it may establish, develop any necessary disciplines. Such disciplines shall aim to ensure that such requirements are, *inter alia*:

(a) based on objective and transparent criteria, such as competence and the ability to supply the service;

(b) not more burdensome than necessary to ensure the quality of the service;

(c) in the case of licensing procedures, not in themselves a restriction on the supply of the service.

5. (a) In sectors in which a Member has undertaken specific commitments, pending the entry into force of disciplines developed in these sectors pursuant to paragraph 4, the Member shall not apply licensing and qualification requirements and technical standards that nullify or impair such specific commitments in a manner which:

(i) does not comply with the criteria outlined in subparagraphs 4(a), (b) or (c); and

(ii) could not reasonably have been expected of that Member at the time the specific commitments in those sectors were made."
(b) In determining whether a Member is in conformity with the obligation under paragraph 5(a), account shall be taken of international standards of relevant international organizations 838 applied by that Member."

6.302 The object of Article VI is to provide disciplines on domestic regulations or measures that regulate qualification requirements and procedures, technical standards and licensing requirements while the object of Article XVI is to prohibit market access limitations, as defined in Article XVI:2, unless scheduled.

6.303 Measures that constitute market access limitations within the meaning of Article XVI and which, unless scheduled must be eliminated, are to be distinguished from measures that impose qualification requirements and procedures, technical standards and licensing requirements, which can be maintained so long as they do not constitute "unnecessary barriers to trade in services", pursuant to the criteria contained in Article VI:5 or pursuant to the criteria to be developed by the Council for Trade in Services pursuant to Article VI:4.

6.304 Domestic regulations falling within the scope of Articles VI:4 or VI:5 of the GATS are, nonetheless, likely to have an effect on market access to the extent that services and service suppliers from other WTO Members which do not, or cannot, comply with such regulations will not have access to the relevant Member's market. Yet, non-discriminatory measures relating to, for instance, the quality of the service supplied or the ability of the supplier to supply the service (i.e. technical standards or qualification of the supplier) can be maintained provided that they conform to criteria to be developed by the Council for Trade in Services pursuant to Article VI:4 and, in the meantime, to the criteria contained in Article VI:5.

6.305 Under Article VI and Article XVI, measures are either of the type covered by the disciplines of Article XVI or are domestic regulations relating to qualification requirements and procedures, technical standards and licensing requirements subject to the specific provisions of Article VI. Thus, Articles VI:4 and VI:5 on the one hand and XVI on the other hand are mutually exclusive.

6.306 Therefore, qualification requirements and procedures, technical standards and licensing requirements covered by the disciplines of Article VI:4 and VI:5 could not be evidence that a Member is providing less favourable treatment than that provided in its schedule contrary to Article XVI, even when "None" has been inscribed in the market access column of a Member's schedule.

6.307 While the GATS does not explicitly address the relationship between Article XVI and VI, the 1993 Scheduling Guidelines, as part of the context for interpreting the GATS, contain some discussion on this issue:

"4. [...] The quantitative restrictions can be expressed numerically, or through the criteria specified in subparagraphs (a) to (d); these criteria do not relate to the quality of the service supplied, or to the ability of the supplier to supply the service (i.e. technical standards or qualification of the supplier).

5. It should be noted that the quantitative restrictions specified in subparagraphs (a) to (d) refer to maximum limitations. Minimum requirements such as those common to licensing criteria (e.g. minimum capital requirements for the establishment of a corporate entity) do not fall within the scope of Article XVI. If such a measure is discriminatory within the meaning of Article XVII and, if it cannot be justified as an exception, it should be scheduled as a limitation on national treatment. If such a measure is non-discriminatory, it is subject to the disciplines of Article VI:5. Where

838 (original footnote) The term "relevant international organizations" refers to international bodies whose membership is open to the relevant bodies of at least all Members of the WTO.
such a measure does not conform to these disciplines, and if it cannot be justified as an exception, it must be brought into conformity with Article VI:5 and cannot be scheduled.” 839

6.308 The Revised Scheduling Guidelines of 2001 840 contain an Annex (4) entitled "Discussion of Matters Relating to Articles XVI and XVII of the GATS in Connection with the Disciplines on Domestic Regulation in the Accountancy Sector – Informal Note by the Chairman". Paragraphs 2 and 3 of this Annex shed light on the relationship between Articles XVI and VI of the GATS and seem to confirm our interpretation that, based on the ordinary meaning of their respective terms, Articles VI and XVI are mutually exclusive.

"In the course of work to develop multilateral disciplines on domestic regulation in the accountancy sector, pursuant to paragraph 4 of Article VI of the GATS, the WPPS addressed a wide range of regulatory measures which have an impact on trade in accountancy services. In discussing the structure and content of the new disciplines, it became clear that some of these measures were subject to other legal provisions in the GATS, most notably Articles XVI and XVII. It was observed that the new disciplines developed under Article VI:4 must not overlap with other provisions already existing in the GATS, including Articles XVI and XVII, as this would create legal uncertainty. For this reason, a number of the suggestions for disciplines were excluded from the text. [emphasis added]

(...) A Member scheduling commitments under Articles XVI and XVII has the right to maintain limitations on market access and national treatment and inscribe them in its schedule. On the other hand, the disciplines to be developed under Article VI:4 cover domestic regulatory measures which are not regarded as market access limitations as such, and which do not in principle discriminate against foreign suppliers. They are therefore not subject to scheduling under Articles XVI and XVII.” (emphasis added)

6.309 The organization of the GATS and, in particular, the disciplines provided for in Part III of the GATS entitled "Specific commitments" cast light on the inter-relationship between Articles XVI, XVII and XVIII, the last of which can include measures falling within the scope of Articles VI:4 and VI:5.

6.310 In pursuing the progressive liberalization of trade in services, the GATS defines measures that constitute restrictions on such trade. In designing the structure of the GATS, it appears that the drafters aimed at liberalizing such restrictions through the provisions of Part III of the Agreement, which is comprised of Article XVI ("Market Access"), Article XVII ("National Treatment") and Article XVIII ("Additional Commitments"). In our view, these provisions aim at establishing legal obligations in relation to the use of (or rather the need to refrain from using) trade-restrictive measures.

6.311 In drafting Part III of the GATS, the aim seems to have been to capture all types of trade restrictions and to establish a mechanism for scheduling specific commitments in relation to them. In Articles XVI and XVII, specific commitments are defined in a way that allows the identification of trade restrictions (in other words, limitations). Therefore, if a Member undertakes a full market access or a full national treatment commitment, it must not apply any measure that would be inconsistent with the provisions of those articles. Nonetheless, the drafters seem to have realized that there may be other types of restrictions that would not be covered by the disciplines of Articles XVI and XVII. In other words, there could be restrictions that would not be discriminatory and, therefore,

839 1993 Scheduling Guidelines, paras. 4-5.
840 2001 Scheduling Guidelines, S/L/92.
would escape the provisions of Article XVII; nor would they be one of the six types of measures referred to in subparagraphs 2(a) to (f) of Article XVI. Apparently, it was considered that such measures would mainly, but not exclusively, relate to qualifications, standards and licensing matters. At the same time, it appears that it may not have been possible to arrive at a clear definition of the restrictive nature of such measures so that disciplines similar to those of Articles XVI and XVII could be established. It seems, therefore, that it was considered best to simply provide a legal framework for Members to negotiate and schedule specific commitments that they would define, on a case-by-case basis, in relation to any measures that do not fall within the scope of Article XVI or XVII. That framework appears to have been provided in Article XVIII.841

6.312 It also appears that the conception of Article XVIII was linked to that of paragraph 4 of Article VI which establishes a work programme for the development of disciplines to ensure that measures relating to qualification requirements and procedures, technical standards and licensing requirements and procedures do not constitute unnecessary barriers to trade in services.842

6.313 Apparently, these provisions are at the heart of the notion of progressive liberalization, which finds expression in the preamble of the GATS and in Article XIX, paragraphs 1 and 3. Progressive liberalization entails including more sectors in Members' schedules and reduction or elimination of limitations, terms, conditions and qualifications on market access and national treatment through successive rounds of negotiations.

Object and purpose of the GATS

6.314 Our interpretation of the scope of the first and second paragraphs of Article XVI based on the ordinary meaning of the words and the context of Article XVI is confirmed by the object and purpose of the GATS. The second, third and fourth paragraphs of the preamble to the GATS state that:

"Wishing to establish a multilateral framework of principles and rules for trade in services with a view to the expansion of such trade under conditions of transparency and progressive liberalization and as a means of promoting the economic growth of all trading partners and the development of developing countries;

Desiring the early achievement of progressively higher levels of liberalization of trade in services through successive rounds of multilateral negotiations aimed at promoting the interests of all participants on a mutually advantageous basis and at securing an overall balance of rights and obligations, while giving due respect to national policy objectives;

Recognizing the right of Members to regulate, and to introduce new regulations, on the supply of services within their territories in order to meet national policy objectives and, given asymmetries existing with respect to the degree of development of services regulations in different countries, the particular need of developing countries to exercise this right ..." (emphasis added)

6.315 These paragraphs confirm that Members intended to liberalize trade in services progressively. This implies that a progressive elimination of various restrictions would occur, including those restrictions covered by Article XVI:2. However, in the meantime, if they have made a market access

841 Article XVIII reads: " Members may negotiate commitments with respect to measures affecting trade in services not subject to scheduling under Articles XVI or XVII, including those regarding qualifications, standards or licensing matters. Such commitments shall be inscribed in a Member's Schedule."

842 It should be noted, however, that the scope of Article XVIII goes beyond that of Article VI:4. The former provides the possibility for negotiating commitments on matters other than qualifications, standards or licensing.
commitment in a particular sector or sub-sector, Members are entitled to maintain such restrictions, provided that they have been explicitly and transparently scheduled.

6.316 Articles XVI and XVII are obligations that apply only to scheduled sectors. Hence, Members can, but are not obliged to, undertake market access and/or national treatment commitments. In scheduled sectors, Members have the freedom to maintain limitations, terms, conditions and qualifications to these specific commitments. Moreover, Members maintain the sovereign right to regulate within the parameters of Article VI of the GATS. Members' regulatory sovereignty is an essential pillar of the progressive liberalization of trade in services, but this sovereignty ends whenever rights of other Members under the GATS are impaired.

6.317 The preamble of the GATS, which sets out its object and purpose, confirms that the purpose of Article XVI is not to abolish all measures, whether numerical or non-numerical, that are liable to restrict freedom to provide services, but to take an early and significant step towards the progressive liberalisation of trade in services, acknowledging that this is to be achieved through successive rounds of negotiations designed to secure an overall balance of rights and obligations.

(iv) Conclusion

6.318 The ordinary meaning of the words, the context of Article XVI, as well as the object and purpose of the GATS confirm that the restrictions on market access that are covered by Article XVI are only those listed in paragraph 2 of this Article. We proceed now to consider the interpretation of the particular subparagraphs of Article XVI:2 that have been invoked by Antigua, namely Articles XVI:2(a) and XVI:2(c).

(c) Interpretation of Article XVI:2(a) and Article XVI:2(c)

(i) Article XVI:2, subparagraph (a)

6.319 Sub-paragraph (a) of Article XVI:2 provides that:

"[L]imitations on the number of service suppliers whether in the form of numerical quotas, monopolies, exclusive service suppliers or the requirements of an economic needs test"

6.320 There are four elements of Article XVI:2(a) that must be interpreted in order for us to determine whether the challenged measures violate Article XVI. First, the Panel must determine whether the challenged measures contain limitations on "service suppliers"; secondly, whether the list of limitations in Article XVI:2(a) is an illustrative or an exhaustive list; thirdly, whether a measure which prohibits one, several or all means of supply is to be considered as a limitation "in the form of [a] numerical quota"; and finally, in this case, we must also determine whether a limitation on some of the services covered by a committed sector or sub-sector, is to be considered as a limitation "in the form of [a] numerical quota".

Service suppliers

6.321 The term "service suppliers" is defined in Article XXVIII:(g) to mean "any person that supplies a service". On the basis of Article XXVIII:(g), we consider that subparagraph (a) of

843 The footnote to Article XXVIII:(g) states that: "Where the service is not supplied directly by a juridical person but through other forms of commercial presence such as a branch or a representative office, the service supplier (i.e. the juridical person) shall, nonetheless, through such presence be accorded the treatment provided for service suppliers under the Agreement. Such treatment shall be extended to the presence through which the service is supplied and need not be extended to any other parts of the supplier located outside the territory where the service is supplied."
Article XVI:2 covers measures that are addressed to and drafted so as to impose limitations on "any person that supplies a service".

Illustrative or exhaustive list of limitations?

6.322 Antigua argues that the word "whether" in Article XVI:2(a) indicates that the list that follows is illustrative rather than exhaustive. More particularly, in Antigua's view, the enumeration in Article XVI:2(a) of four forms of limitation is not meant to limit the application of Article XVI:2(a) to those four identified forms. Rather, in Antigua's view, the word "whether" makes it clear that the four forms of limitations explicitly mentioned are clearly caught by Article XVI:2(a). According to Antigua, in addition, there may be other forms of limitation that are also caught by Article XVI:2(a) but which are not explicitly listed. We disagree.

6.323 Rather, we share the view expressed by the United States that the word "whether" does not automatically imply an illustrative list. Article XXVIII(a) of the GATS states that "measure' means any measure by a Member, whether in the form of a law, regulation, rule, procedure, decision, administrative action, or any other form" (emphasis added). It is those three final words rather than the use of the word "whether" that establish the illustrative character of the list of instruments and actions in Article XXVIII(a) of the GATS.

6.324 Article XI of the GATT 1994 describes an illustrative list of "prohibitions or restriction ... whether made effective through quotas, import or export licenses or other measures" (emphasis added). It is not the word "whether" that qualifies Article XI as an illustrative list. Rather, the words "other measures" at the conclusion of the excerpted text have this effect. Had "other measures" been omitted from this text, the list of prohibitions and restrictions covered by Article XI would have been confined to the types of prohibitions and restrictions listed in the Article following the word "whether".

6.325 With respect to Article XVI:2(a), we note that there is no word or term at the conclusion of that subparagraph that could be construed as creating an illustrative list, such as "any other form" or "any other measure". In these circumstances, we consider that the word "whether" identifies an exhaustive list of limitations that are covered by Article XVI:2(a), namely, "limitations in the form of numerical quotas, monopolies, exclusive service suppliers or requirements of an economic needs test".

"Limitations on the number of service suppliers in the form of numerical quotas"

6.326 We note that Article XVI:2(a) applies, inter alia, to "limitations on the number of service suppliers in the form of numerical quotas". The parties disagree as to whether this language captures any measure not explicitly framed in quantitative or numerical terms.

6.327 The issue is not whether qualitative (as opposed to quantitative) restrictions should be caught under Article XVI; the parties agree that they should not and this is confirmed by the 1993 Scheduling Guidelines. The issue is, rather, whether a measure prohibiting the supply of a service by remote means is caught by Article XVI:2(a).

---

844 Article XVI:2(a) refers to: limitations on the number of service suppliers "whether" (a) in the form of numerical quotas; (b) monopolies; (c) exclusive service suppliers; or (d) the requirements of an economic needs test.
845 See Antigua's second oral statement, para. 31.
846 "... these criteria [specified in subparagraphs (a) to (d)] do not relate to the quality of the service supplied, or to the ability of the supplier to supply the service (i.e. technical standard or qualification of the supplier)". 1993 Scheduling Guidelines, para. 4 (id. in 2001 Scheduling Guidelines, para. 8).
6.328 The United States submits that in maintaining and enforcing laws that prohibit the supply by remote means of the service of receiving bets and wagers, it does not contravene Article XVI:2 of the GATS since those laws prescribe a prohibition on the character of certain services and not on the number of service suppliers or the number of service operations. This submission cannot be accepted.

6.329 On the premise that the United States wished to maintain and enforce those laws, the proper course for it was to make an entry in its schedule of commitments against sub-sector 10.D, "Other Recreational Services (except sporting)" expressing a limitation on market access in respect of the supply by remote means of the service of gambling and betting services. Such an entry would have limited to zero the number of service suppliers and service operations in the sector to which the relevant market access commitment was made.

6.330 Having made no such entry, the United States, nevertheless, maintains and enforces laws that prohibit the supply by remote means of gambling and betting services. By so doing, it limits to zero the number of service suppliers in the sector to which the relevant market access commitment had been made. In the words of Article XVI:2(a) of the GATS, it imposes a "limitation on the number of service suppliers in the form of [a] numerical quota". Any other reading of that subparagraph would be inconsistent with the commitment made by the United States when inscribing the word "None" in the market access column of its schedule of commitments for sub-sector 10.D.

6.331 It is true that the wording of Article XVI:2(a) covers numerical quotas other than zero. That is because the subparagraph is designed, in part, to indicate the limitations, short of total prohibition, that Members may specify in their schedules, on the number of service suppliers. The fact that the terminology embraces lesser limitations, in the form of quotas greater than zero, cannot warrant the conclusion that it does not embrace a greater limitation amounting to zero. Paragraph (a) does not foresee a "zero quota" because paragraph (a) was not drafted to cover situations where a Member wants to maintain full limitations. If a Member wants to maintain a full prohibition, it is assumed that such a Member would not have scheduled such a sector or sub-sector and, therefore, would not need to schedule any limitation or measures pursuant to Article XVI:2.

6.332 Moreover, the 1993 Scheduling Guidelines provide the following example of a limitation under subparagraph (a): "nationality requirements for suppliers of services (equivalent to zero quota)". This suggests that a measure that is not expressed in the form of a numerical quota or economic needs test may still fall within the scope of Article XVI:2(a). To hold that only restrictions explicitly couched in numerical terms fall within Article XVI:2(a) would produce absurd results. It would, for example, allow a law that explicitly provides that "all foreign services are prohibited" to escape the application of Article XVI, because it is not expressed in numerical terms.

Limitation on all or part of a scheduled commitment

6.333 The United States argues that since it does not maintain a prohibition on the cross-border supply of all gambling and betting services, it does not maintain a zero quota and, therefore, does not contravene Article XVI:2(a).

6.334 We consider that, for the purposes of this dispute, we need to determine whether a prohibition on the supply of a number of services that fall within the scope of the US commitment on gambling and betting services can constitute a "limitation in the form of numerical quotas" within the meaning of Article XVI:2(a).

---

847 See paras. 6.161 - 6.164 above.
848 See 1993 Scheduling Guidelines, para. 6. The same example is contained in the 2001 Scheduling Guidelines, para. 12.
6.335 We recall that if a Member makes a market access commitment in a sector or sub-sector, that commitment covers all services that come within that sector or sub-sector. Therefore, we are of the view that a Member does not respect its GATS market access obligations under Article XVI:2(a) if it does not allow market access to the whole or part of a scheduled sector or sub-sector.

Limitation on one, several or all means of delivery under mode 1

6.336 Antigua argues that limitations on one or more means of delivery under mode 1 with respect to a committed sector fall within the scope of Article XVI:2(a). The United States argues that restrictions relating to the means of supply are concerned with the character of the activity involved and, therefore, fall outside the scope of Article XVI:2(a).

6.337 The Panel needs, therefore, to determine whether a prohibition on one, several or all means of delivery included in mode 1 that effectively limits the means of delivery that service suppliers can use in supplying a service is a limitation in the form of numerical quotas within the meaning of Article XVI:2(a).

6.338 We recall that the effect of a scheduled commitment for mode 1 is to allow services suppliers in other WTO Members for a committed sector to supply services cross-border via any means of delivery. As we stated above, if one, several or all means of delivery cross-border are prohibited, the opportunities for foreign suppliers using those means of delivery to supply services cross-border to gain access to foreign markets are clearly reduced. The Panel is of the view that such a prohibition is a "limitation on the number of service suppliers in the form of numerical quotas" within the meaning of Article XVI:2(a).

(ii) Article XVI:2, subparagraph (c)

6.339 Subparagraph (c) of Article XVI:2 provides that:

"[L]imitations on the total number of service operations or on the total quantity of service output expressed in terms of designated numerical units in the form of quotas or the requirement of an economic needs test"

Limitations "expressed ... in the form of a quota"

6.340 Subparagraph (c) differs in its wording from subparagraph (a) in several respects.

6.341 Firstly, in subparagraph (a), the word "whether" precedes the expression "in the form of quotas". In subparagraph (c) that word is omitted. We do not consider this to be of present significance. For the reasons referred to above in paragraphs 6.322-6.325, we consider that the presence of the word "whether" in subparagraph (a) does not imply an illustrative list. Therefore, its omission from subparagraph (c) is without present significance.

6.342 Secondly, in subparagraph (c), as indeed in subparagraph (d), the word "number" is qualified by the adjective "total". This may be explained by the fact that subparagraph (c) relates to limitations on the aggregate of the service operations or output whereas subparagraph (a) contemplates that limits may be imposed on the number of suppliers by reference to a criterion other than the national or regional aggregate. However, when a Member's laws prohibit the supply of a certain service by a certain mode, the word "total" is without significance, since the number will always be zero.

849 (original footnote) Subparagraph 2(c) does not cover measures of a Member which limit inputs for the supply of services.
6.343 Thirdly, subparagraph (c), in its English version, speaks of "limitations ... in terms of designated numerical units in the form of quotas". This might perhaps be taken to imply that any quota has to be expressed in terms of designated numerical units. The element of ambiguity on this point is resolved by comparison of the English version with the French and the Spanish ones, which are equally authentic. These read as follows:

"c) limitations concernant le nombre total d'opérations de services ou la quantité totale de services produits, exprimées en unités numériques déterminées, sous forme de contingents ou de l'exigence d'un examen des besoins économiques;" 

"c) limitaciones al número total de operaciones de servicios o a la cuantía total de la producción de servicios, expresadas en unidades numéricas designadas, en forma de contingentes o mediante la exigencia de una prueba de necesidades económicas;"

As can be seen, in these versions, a comma appears after the equivalent in the English version of the words designated "numerical units". According to the French versions, there are three possible types of limitations that fall within the scope of subparagraph (c), namely: (i) limitations exprimées en unités numériques déterminées; (ii) limitations exprimées sous forme de contingents; and (iii) limitations exprimées sous forme de l'exigence d'un examen des besoins économiques. These three possibilities also exist under the Spanish version.

6.344 The comparison of these equally authentic texts thus discloses a difference of meaning. According to Article 33 of the Vienna Convention, a treaty interpreter must attempt to remove such differences through the application of Articles 31 and 32 thereof. In this regard, a reference to progressive liberalization as an object and purpose of the GATS appears to be useful. Interpreting Article XVI:2(c) premised on numerical expression of restrictions alone would open the possibility for Members to avoid their obligations and thereby deny and diminish the rights of other Members in cases where a sector or sub-sector has been committed, particularly in cases of a full market access commitment, as in this case. This would defeat the object and purpose of the GATS. Thus, the correct reading of Article XVI:2(c) is that the limitation may be either in the form of designated numerical units, in the form of quotas or the requirement of an economic needs test.

6.345 Unlike subparagraph (a), subparagraph (c) of Article XVI:2 contains a reference to "total" number of service operations and "total" quantity of service output. The 1993 Scheduling Guidelines state that: "It should be noted that the quantitative restrictions specified in subparagraphs (a) to (d) refer to maximum limitations." This suggests that the word "total" in Article XVI:2(c) serves the purpose of indicating that limitations covered by Article XVI:2(c) must impose maximum limits on services operation and/or service output.

6.346 Accordingly, such differences as there are between the wording of subparagraphs (a) and (c) of Article XVI:2 do not warrant a different conclusion as to the impact of the two subparagraphs in the present case.

6.347 The maintenance and enforcement of laws that prohibit the supply by remote means of a committed sector or sub-sector limits to zero the number of service operations in the sector or sub-sector for which the Member has made a commitment. It imposes a "limitation on the total number of service operations ... expressed ... in the form of quotas" contrary to Article XVI:2(c) of the GATS.

850 (original footnote) L'alinea 2 c) ne couvre pas les mesures d'un Membre qui limitent les intrants servant à la fourniture de services.
851 (original footnote) El apartado c) del párrafo 2 no abarca las medidas de un Miembro que limitan los insumos destinados al suministro de servicios.
Service operations or service output

6.348 Subparagraph (c) of Article XVI:2 concerns limitations on "service operations or service output." As for how "service operations" and "service output" should be interpreted, we note that the GATS does not contain definitions of these terms.

6.349 However, relevant context for their meaning can be found in the 1993 Scheduling Guidelines, which provide the following example of a limitation on "service operations or quantity of service output" under Article XVI:2(c), namely restrictions on broadcasting time available for foreign films. On the basis of this example, we understand "service operations" to mean activities comprised in the production of a service. We understand "service output" to mean the result of the production of the service.

Limitation on all or part of a scheduled commitment

6.350 The United States argues that since it does not maintain a prohibition on the cross-border supply of all gambling and betting services, it does not maintain a zero quota and, therefore, does not contravene Article XVI:2(c).

6.351 Therefore, we need to determine whether a prohibition on the supply of a number of services that fall within the scope of the US commitment on gambling and betting services can constitute a "limitation expressed in the form of a quota" within the meaning of Article XVI:2(c).

6.352 We recall that if a Member makes a market access commitment in a sector or sub-sector, that commitment covers all services that come within that sector or sub-sector. Therefore, we are of the view that a Member does not respect its GATS market access obligations under Article XVI:2(c) if it does not allow market access to the whole or part of a scheduled sector or sub-sector.

Limitation on one, several or all means of delivery under mode 1

6.353 Antigua argues that limitations on one, several or all means of delivery under mode 1 with respect to a committed sector fall within the scope of Article XVI:2(c). The United States argues that restrictions relating to the means of supply are concerned with the character of the activity involved and, therefore, fall outside the scope of Article XVI:2(c).

6.354 Thus, the Panel needs to determine whether a prohibition on one, several or all means of delivery included in mode 1 that effectively limits these means of delivery for service operations or service output is a limitation in the form of a quota within the meaning of Article XVI:2(c).

6.355 We examined above in the context of Article XVI:2(a), the means of delivery that are included in mode 1. We recall our conclusion in that context, which is equally applicable here, that the effect of a scheduled commitment for mode 1 is to allow service suppliers in other WTO Members for the relevant sector to supply services cross-border via any means of delivery. In our view, if one or several mean(s) of delivery cross-border are prohibited, services operated through one or more of these means of delivery or services that are outputted using one or more of these means of delivery will be limited. We consider that a prohibition on one, several or all of the means of delivery included in mode 1 constitutes a limitation on mode 1. The Panel is of the view that such a limitation is a limitation "on the total number of service operations or on the total quantity of service output ... in the form of quotas" within the meaning of Article XVI:2(c) because it totally prevents the services operations and/or service output through one or more or all means of delivery that are included in mode 1. In other words, such a ban results in a "zero quota" on one or more or all means of delivery include in mode 1.
(d) Application of the legal standard to the facts of this case

(i) US commitment on market access

6.356 The Panel recalls its finding above that the United States has made a specific commitment with respect to gambling and betting services in sub-sector 10.D of the US Schedule. In relation to sub-sector 10.D, the United States has inscribed the word "None" for mode 1 in the column entitled "Limitations on market access ".

(ii) Measures at issue

6.358 Our task in examining these laws is to determine whether, in light of the fact that the United States has inscribed "None" in its market access column for mode 1 for gambling and betting services, these laws impose "limitations on the number of service suppliers in the form of numerical quotas" within the meaning of Article XVI:2(a) and/or "limitations on the total number of service operations or on the total quantity of service output ... in the form of quotas" within the meaning of Article XVI:2(c).

6.359 By way of context for this examination, we recall that the United States admits that federal and state laws are applied so as to prohibit what it describes as the "remote supply" of most gambling and betting services and, as further discussed below, there is relevant evidence confirming the US practice in this regard.

Federal laws

The Wire Act

6.360 The Wire Act provides in relevant part that:

"Whoever being engaged in the business of betting or wagering knowingly uses a wire communication facility for the transmission in interstate or foreign commerce of bets or wagers or information assisting in the placing of bets or wagers on any sporting event or contest, or for the transmission of a wire communication which entitles the recipient to receive money or credit as a result of bets or wagers, or for information assisting in the placing of bets or wagers shall be fined under this title or imprisoned not more than two years, or both."

6.361 The opening text of the Wire Act refers to "whoever being engaged in the business of ...". This language makes it clear to us that the Wire Act concerns suppliers of "betting and wagering" services. Therefore, we consider that this Act concerns "service suppliers" within the meaning of Article XVI:2(a). The Wire Act can also be read to concern the treatment of services operations or service output since the Act effectively prohibits the supply of betting or wagering services through

---

852 See paras. 6.161-6.164.
the use of a wire communication facility. Therefore, we consider that this Act concerns "service operations" and "service output" within the meaning of Article XVI:2(c).

6.362 As is evident from the excerpted text of the Wire Act, the Act prohibits the use of a wire communication facility for, *inter alia*, the transmission in interstate or foreign commerce of bets or wagers. Therefore, in our view, the Wire Act prohibits the use of telephone given the explicit reference to wire communication. In addition, some US courts have interpreted the Wire Act to include communication by the Internet.\(^{853}\) Further, the United States has acknowledged that the Wire Act covers the remote transmission in interstate or foreign commerce of bets or wagers.\(^{854}\) Therefore, we consider that the Wire Act prohibits the use of at least one or potentially several means of delivery included in mode 1.

6.363 We recall that a ban on the use of one, several or all means of delivery included in mode 1 constitutes a "zero quota" for, respectively, one, several or all of those means of delivery. Under the Wire Act, *service suppliers* seeking to supply gambling and betting services through the telephone, Internet and other means of delivery using wire communication are prohibited from doing so. Further, *services operations* and *service output* through the telephone, Internet and other means of delivery using wire communication are prohibited under the Wire Act. Accordingly, the Panel considers that the Wire Act contains a limitation "in the form of numerical quotas" within the meaning of Article XVI:2(a) and a limitation "in the form of a quota" within the meaning of Article XVI:2(c).

6.364 We also recall that a Member does not respect its GATS market access obligations under Article XVI:2(a) and Article XVI:2(c) if it does not allow market access to the whole or part of a scheduled sector. The Wire Act concerns "betting or wagering", which is part of the services covered by the US commitment under sub-sector 10.D. Therefore, through the Wire Act, the United States restricts market access to part of a scheduled sector, namely, "betting or wagering".

6.365 Since the United States has inscribed "None" in the market access column under sub-sector 10.D, it cannot maintain limitations referred to in Article XVI:2. As the Wire Act contains limitations that fall within the scope of Article XVI:2(a) and Article XVI:2(c), the United States is according less favourable treatment than that provided for in its Schedule contrary to Article XVI:1 and Article XVI:2. Therefore, we conclude that the Wire Act is inconsistent with Article XVI:1 and Article XVI:2.

### The Travel Act

6.366 The Travel Act provides in relevant part that:

"(a) Whoever travels in interstate or foreign commerce or uses the mail or any facility in interstate or foreign commerce, with intent to –

1. distribute the proceeds of any unlawful activity; or

2. commit any crime of violence to further any unlawful activity; or

3. otherwise promote, manage, establish, carry on, or facilitate the promotion, management, establishment, or carrying on, of any unlawful activity,

\(^{853}\) See *United States v Jay Cohen* (Exhibit AB-83) and *Vacco ex rel. People v World Interactive Gaming Corp.* (Exhibit AB-97). Exhibits AB-56, AB-73 and AB-98 also contain evidence indicating that the Wire Act covers communication by the Internet.

\(^{854}\) United States' second written submission, paras. 22 and 78.
and thereafter performs or attempts to perform --

(A) an act described in paragraph (1) or (3) shall be fined under this title, imprisoned not more than 5 years, or both; or

(B) an act described in paragraph (2) shall be fined under this title, imprisoned for not more than 20 years, or both, and if death results shall be imprisoned for any term of years or for life.

(b) As used in this section (i) "unlawful activity" means (1) any business enterprise involving gambling ... in violation of the laws of the State in which they are committed or of the United States."

6.367 The text of the Travel Act makes it clear that it prohibits travel in interstate or foreign commerce or the use of mail or any facility in interstate or foreign commerce, with the intent to: distribute the proceeds of any "unlawful activity"; commit any crime of violence to further any "unlawful activity"; or otherwise promote, manage, establish, carry on, or facilitate the promotion, management, establishment, or carrying on, of any "unlawful activity". "Unlawful activity" is defined, inter alia, as any business enterprise involving gambling in violation of the laws of the state in which they are committed or of the United States. It may be the case that some state laws prohibit a "business enterprise involving gambling". In such cases, a "business enterprise involving gambling" in contravention of the relevant state laws would also be contrary to the Travel Act if such a business enterprise entails the supply of gambling and betting services by "mail or any facility" provided that the other requirements in subparagraph (a) of the Travel Act have been met.

6.368 The Travel Act refers to service suppliers, in particular, those who travel in interstate or foreign commerce or those who use the mail or any facility in interstate or foreign commerce with intent to distribute the proceeds of any unlawful activity, commit any crime of violence to further any unlawful activity or otherwise promote, manage, establish, carry on, or facilitate the promotion, management, establishment, or carrying on, of any unlawful activity. The interpretation that the Act is targeted at suppliers is confirmed by the fact that "unlawful activity" is defined by reference to activities engaged in by a "business enterprise". Therefore, we consider that this Act concerns "service suppliers" within the meaning of Article XVI:2(a).

6.369 The Travel Act can also be read to concern the treatment of services operations or service output because it effectively prohibits the supply of gambling services through mail or "any facility". Facility may be interpreted to include the telephone and Internet. Therefore, we consider that the Travel Act also concerns "service operations" or "service output" within the meaning of Article XVI:2(c).

6.370 We recall that a ban on the use of one, several or all means of delivery included in mode 1 constitutes a "zero quota" for, respectively, one, several or all of those means of delivery. As we stated above in paragraph 6.367, the Travel Act prohibits gambling activity that entails the supply of gambling and betting services by "mail or any facility" to the extent that such supply is undertaken by a "business enterprise involving gambling" that is prohibited under state law and provided that the other requirements in subparagraph (a) of the Travel Act have been met.

---

855 There is evidence to indicate that the Travel Act covers supply of gambling services through the telephone and the Internet. See Vacco ex rel. People v World Interactive Gaming Corp (Exhibit AB-97). See also Exhibit AB-73.
6.371 Therefore, under the Travel Act (when read together with the relevant state laws), service suppliers seeking to supply gambling and betting services through the mail and potentially all other means of delivery included in mode 1 are prohibited from doing so. Further, services operations and service output through the mail and perhaps all other means of delivery included in mode 1 are also prohibited under the Travel Act (when read together with the relevant state laws). Accordingly, the Panel considers that the Travel Act contains a limitation "in the form of numerical quotas" within the meaning of Article XVI:2(a) and a limitation "in the form of a quota" within the meaning of Article XVI:2(c).

6.372 We also recall that a Member does not respect its GATS market access obligations under Article XVI:2(a) and Article XVI:2(c) if it does not allow market access to the whole or part of a scheduled sector. The Travel Act concerns, inter alia, "gambling", which is part of the services covered by the US commitment under sub-sector 10.D. Therefore, through the Travel Act, the United States restricts market access to part of a scheduled sector, namely, "gambling".

6.373 Since the United States has inscribed "None" in the market access column under sub-sector 10.D, it cannot maintain limitations referred to in Article XVI:2. As the Travel Act contains limitations that fall within the scope of Article XVI:2(a) and Article XVI:2(c), the United States is according less favourable treatment than that provided for in its Schedule contrary to Article XVI:1 and Article XVI:2. Therefore, we conclude that the Travel Act is inconsistent with Article XVI:1 and Article XVI:2.

The Illegal Gambling Business Act

6.374 The Illegal Gambling Business Act provides in relevant part that:

"(a) Whoever conducts, finances, manages, supervises, directs or owns all or part of an illegal gambling business shall be fined under this title or imprisoned not more than five years, or both.

(b) As used in this section –

(1) 'illegal gambling business' means a gambling business which –

(i) is a violation of the law of a State or political subdivision in which it is conducted;

(ii) involves five or more persons who conduct, finance, manage, supervise, direct, or own all or part of such business; and

(iii) has been or remains in substantially continuous operation for a period in excess of thirty days or has a gross revenue of $2,000 in any single day.

(2) 'gambling' includes but is not limited to pool-selling, bookmaking, maintaining slot machines, roulette wheels or dice tables, and conducting lotteries, policy, bolita or numbers games, or selling chances therein.

856 That is, state laws that prohibit a "business enterprise involving gambling". Such state laws would include but are not limited to § 14:90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and § 76-10-1102(b) of the Utah Code, which we find below in paragraphs 6.381-6.418 together prohibit the supply of gambling and betting services by all means included in mode 1.
(3) 'State' means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and any territory or possession of the United States."

6.375 In our view, the text of the Illegal Gambling Business Act makes it clear that the Act prohibits the conduct of businesses that fall within the definition of an "illegal gambling business". A gambling business is defined as "illegal" under the Act if it violates the law of a state (or political subdivision) of the United States. It may be the case that some state laws prohibit gambling businesses. In such cases, a "gambling business" that violates state law and that entails the conduct, finance, management, supervision, direction or ownership of all or part of such a business would also be contrary to the Illegal Gambling Business Act provided that the other requirements in subparagraph (b)(1) of the Illegal Gambling Business Act have been met. We consider that because the Illegal Gambling Business Act prohibits the conduct, finance, management, supervision, direction or ownership of all or part of a "gambling business" that violates state law, it effectively prohibits the supply of gambling and betting services through at least one and potentially all means of delivery included in mode 1 by such businesses.

6.376 The Illegal Gambling Business Act refers to service suppliers, in particular, those who conduct, finance, manage, supervise, direct or own all or part of an illegal gambling business. Therefore, we consider that this Act concerns "service suppliers" within the meaning of Article XVI:2(a). The Illegal Gambling Business Act can also be read to concern the treatment of services operations or service output because it effectively prohibits businesses that fall within the definition of an "illegal gambling business". Therefore, we consider that the Illegal Gambling Business Act also concerns "service operations" or "service output" within the meaning of Article XVI:2(c).

6.377 We recall that a ban on the use of one, several or all means of delivery included in mode 1 constitutes a "zero quota" for, respectively, one, several or all of those means of delivery. As we stated above in paragraph 6.375, the Illegal Gambling Business Act prohibits gambling activity that entails the conduct, finance, management, supervision, direction or ownership of all or part of such a business to the extent that such supply is undertaken by a "gambling business" that is prohibited under state law and provided that the other requirements in sub-paragraph (b)(1) of the Illegal Gambling Business Act have been met.

6.378 Therefore, under the Illegal Gambling Business Act (when read together with the relevant state laws), service suppliers seeking to supply gambling and betting services through at least one and potentially all means of delivery included in mode 1 are prohibited from doing so. Further, services operations and service output through all means of delivery included in mode 1 are also prohibited under the Illegal Gambling Business Act (when read together with the relevant state laws). Accordingly, the Panel considers that the Illegal Gambling Business Act contains a limitation "in the form of numerical quotas" within the meaning of Article XVI:2(a) and a limitation "in the form of a quota" within the meaning of Article XVI:2(c).

6.379 We also recall that a Member does not respect its GATS market access obligations under Article XVI:2(a) and Article XVI:2(c) if it does not allow market access to the whole or part of a scheduled sector. The Illegal Gambling Business Act concerns, "gambling", which is part of the services covered by the US commitment under sub-sector 10.D. Therefore, through the Illegal Gambling Business Act, the United States restricts market access to part of a scheduled sector, namely, "gambling".

That is, state laws that prohibit a "gambling business". Such state laws would include but are not limited to § 14:90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and § 76-10-1102(b) of the Utah Code, which we find below in paragraphs 6.381-6.418 together prohibit the supply of gambling and betting services by all means included in mode 1.
Since the United States has inscribed "None" in the market access column under sub-sector 10.D, it cannot maintain limitations referred to in Article XVI:2. As the Illegal Gambling Business Act contains limitations that fall within the scope of Article XVI:2(a) and Article XVI:2(c), the United States is accorded less favorable treatment than that provided for in its Schedule contrary to Article XVI:1 and Article XVI:2. Therefore, we conclude that the Illegal Gambling Business Act is inconsistent with Article XVI:1 and Article XVI:2.

State laws

Colorado

The text of § 18-10-103 of the Colorado Revised Statutes provides as follows:

"(1) A person who engages in gambling commits a class 1 petty offense.

(2) A person who engages in professional gambling commits a class 1 misdemeanor. If he is a repeating gambling offender, it is a class 5 felony."}

In our view, the text of § 18-10-103 of the Colorado Revised Statutes indicates that it is not directed at "service suppliers" for the purposes of Article XVI:2(a) nor to "service operations" and "service output" for the purposes of Article XVI:2(c). Rather, we consider that § 18-10-103 of the Colorado Revised Statutes is directed at persons who engage in gambling, that is, those who actually gamble. This appears to be confirmed by evidence before us regarding the interpretation of § 18-10-103 of the Colorado Revised Statutes, which indicates that § 18-10-103 is interpreted and applied to prohibit gambling by the Internet.\(^{858}\) Antigua has not adduced any evidence to indicate that the supply of gambling services by the Internet or by any other means included in mode 1 is prohibited.

Therefore, we conclude that Antigua has not provided a prima facie demonstration that § 18-10-103 of the Colorado Revised Statutes contains a limitation that falls within the scope of Article XVI:2(a) and/or Article XVI:2(c). In particular, we are not convinced that that section is directed at "service suppliers" for the purposes of Article XVI:2(a) and/or to "service operations" and "service output" for the purposes of Article XVI:2(c). Accordingly, we find that Antigua has not provided a prima facie demonstration that § 18-10-103 of the Colorado Revised Statutes is inconsistent with Article XVI:1 and Article XVI:2.

Louisiana

Section 14:90.3 of the La. Rev. Stat. Ann. provides in relevant part that:

"E. Whoever designs, develops, manages, supervises, maintains, provides, or produces any computer services, computer system, computer network, computer software, or any server providing a Home Page, Web Site, or any other product accessing the Internet, World Wide Web,\(^{859}\) or any part thereof offering to any client for the primary purpose of the conducting as a business of any game, contest, lottery, or contrivance whereby a person risks the loss of anything of value in order to realize a profit shall be fined not more than twenty thousand dollars, or imprisoned with or without hard labor, for not more than five years, or both.

...
I. ... The provisions of this Subsection shall not exempt from criminal prosecution any telephone company, Internet Service Provider, software developer, licensor, or other such party if its primary purpose in providing such service is to conduct gambling as a business."

6.386 Section 14:90.3 of the La. Rev. Stat. Ann. can also be read to concern the treatment of services operations or service output because it effectively prohibits the conducting as a business of any game, contest, lottery, or contrivance whereby a person risks the loss of anything of value in order to realize a profit. Therefore, we consider that § 14:90.3 of the La. Rev. Stat. Ann. also concerns "service operations" or "service output" within the meaning of Article XVI:2(c).

6.387 We recall that a ban on the use of one, several or all means of delivery included in mode 1 constitutes a "zero quota" for, respectively, one, several or all of those means of delivery. Under § 14:90.3 of the La. Rev. Stat. Ann., service suppliers seeking to conduct a business of any game, contest, lottery, or contrivance whereby a person risks the loss of anything of value in order to realize a profit through the Internet are prohibited from doing so. Further, services operations and service output involving a business of any game, contest, lottery, or contrivance whereby a person risks the loss of anything of value in order to realize a profit through the Internet are also prohibited under § 14:90.3 of the La. Rev. Stat. Ann. Accordingly, the Panel considers that § 14:90.3 of the La. Rev. Stat. Ann. contains a limitation "in the form of numerical quotas" within the meaning of Article XVI:2(a) and a limitation "in the form of a quota" within the meaning of Article XVI:2(c).

6.388 We also recall that a Member does not respect its GATS market access obligations under Article XVI:2(a) and Article XVI:2(c) if it does not allow market access to the whole or part of a scheduled sector. Section 14:90.3 of the La. Rev. Stat. Ann. concerns the conduct "as a business of any game, contest, lottery, or contrivance whereby a person risks the loss of anything of value in order to realize a profit", which is part of the services covered by the US commitment under sub-sector 10.D. Therefore, through § 14:90.3 of the La. Rev. Stat. Ann., the United States restricts market access to part of a scheduled sector, namely, the "business of any game, contest, lottery, or contrivance whereby a person risks the loss of anything of value in order to realize a profit".

6.389 Since the United States has inscribed "None" in the market access column under sub-sector 10.D, it cannot maintain limitations referred to in Article XVI:2. As § 14:90.3 of the La. Rev. Stat. Ann. contains limitations that fall within the scope of Article XVI:2(a) and Article XVI:2(c), the United States is according less favourable treatment than that provided for in its Schedule contrary to Article XVI:1 and Article XVI:2. Therefore, we conclude that § 14:90.3 of the La. Rev. Stat. Ann. is inconsistent with Article XVI:1 and Article XVI:2.

Massachusetts

6.390 Section 17A of chapter 271 of Mass. Ann. Laws provides that:

"Whoever uses a telephone or, being the occupant in control of premises where a telephone is located or a subscriber for a telephone, knowingly permits another to use
a telephone so located or for which he subscribes, as the case may be, for the purpose
of accepting wagers or bets, or buying or selling of pools, or for placing all or any
portion of a wager with another, upon the result of a trial or contest of skill, speed, or
endurance of man, beast, bird, or machine, or upon the result of an athletic game or
contest, or upon the lottery called the numbers game, or for the purpose of reporting
the same to a headquarters or booking office, or who under a name other than his own
or otherwise falsely or fictitiously procures telephone service for himself or another
for such purposes, shall be punished by a fine of not more than two thousand dollars
or by imprisonment for not more than one year; provided, however, that this section
shall not apply to use of telephones or other devices or means to place wagers
authorized pursuant to the provisions of section 5C of chapter 128A."

6.391 Section 17A of chapter 271 of Mass. Ann. Laws concerns service suppliers, in particular,
those who use a telephone or, being the occupant in control of premises where a telephone is located
or a subscriber for a telephone, knowingly permit another to use a telephone for the purpose of,
inter alia, accepting wagers or bets. Therefore, we consider that § 17A of chapter 271 of Mass. Ann.
Laws concerns "service suppliers" within the meaning of Article XVI:2(a).

6.392 Section 17A of chapter 271 of Mass. Ann. Laws can also be read to concern the treatment of
services operations or service output because it effectively prohibits the supply of services including
the acceptance of wagers or bets through use of the telephone. Therefore, we consider that § 17A of
chapter 271 of Mass. Ann. Laws also concerns "service operations" or "service output" within the
meaning of Article XVI:2(c).

6.393 We recall that a ban on the use of one, several or all means of delivery included in mode 1
constitutes a "zero quota" for, respectively, one, several or all of those means of delivery. Under §
17A of chapter 271 of Mass. Ann. Laws, service suppliers seeking to conduct a business involving,
inter alia, the acceptance of wagers or bets using the telephone are prohibited from doing so. Further,
Services operations and service output involving, inter alia, the acceptance of wagers or bets using
the telephone are also prohibited under § 17A of chapter 271 of Mass. Ann. Laws. Accordingly, the
Panel considers that § 17A of chapter 271 of Mass. Ann. Laws contains a limitation "in the form of
numerical quotas" within the meaning of Article XVI:2(a) and a limitation "in the form of a quota"
within the meaning of Article XVI:2(c).

6.394 We also recall that a Member does not respect its GATS market access obligations under
Article XVI:2(a) and Article XVI:2(c) if it does not allow market access to the whole or part of a
scheduled sector. Section 17A of chapter 271 of Mass. Ann. Laws concerns, inter alia, the
acceptance of wagers or bets which are part of the services covered by the US commitment under
sub-sector 10.D. Therefore, through § 17A of chapter 271 of Mass. Ann. Laws, the United States
restricts market access to part of a scheduled sector, namely, the acceptance of wagers or bets.

6.395 Since the United States has inscribed "None" in the market access column under sub-sector
Ann. Laws contains limitations that fall within the scope of Article XVI:2(a) and Article XVI:2(c), the
United States is according less favourable treatment than that provided for in its Schedule contrary to
Article XVI:1 and Article XVI:2. Therefore, we conclude that § 17A of chapter 271 of Mass. Ann.
Laws is inconsistent with Article XVI:1 and Article XVI:2.

Minnesota

6.396 Section 609.755(1) of Minn. Stat. Ann. provides that:

"Whoever does any of the following is guilty of a misdemeanor:
(1) makes a bet;

(2) sells or transfers a chance to participate in a lottery;

(3) disseminates information about a lottery, except a lottery conducted by an adjoining state, with intent to encourage participation therein;

(4) permits a structure or location owned or occupied by the actor or under the actor's control to be used as a gambling place; or

(5) except where authorized by statute, possesses a gambling device.

Clause (5) does not prohibit possession of a gambling device in a person's dwelling for amusement purposes in a manner that does not afford players an opportunity to obtain anything of value."

6.397 In our view, the text of the subparagraph of § 609.755(1) of Minn. Stat. Ann. that is relevant for this dispute, namely subparagraph (a), indicates that it is not directed at "service suppliers" for the purposes of Article XVI:2(a) nor to "service operations" and "service output" for the purposes of Article XVI:2(c). Rather, we consider that § 609.755(1) of Minn. Stat. Ann. is directed at persons who make a bet. This appears to be confirmed by evidence before us regarding the interpretation of §§ 609.75, Subdivisions 2 – 3 and 609.755(1) of Minn. Stat. Ann. which indicates that, under these sections, a "person in Minnesota who places a bet through [an Internet gambling organization] is committing a crime". Antigua has not adduced any evidence to indicate that the supply of betting services by the Internet or by any other means included in mode 1 is prohibited under §§ 609.75, Subdivisions 2 – 3 and 609.755(1) of Minn. Stat. Ann.

6.398 Therefore, we conclude that Antigua has not provided a prima facie demonstration that § 609.755(1) of Minn. Stat. Ann. contains a limitation that falls within the scope of Article XVI:2(a) and/or Article XVI:2(c). In particular, we are not convinced that that section is directed at "service suppliers" for the purposes of Article XVI:2(a) or to "service operations" and "service output" for the purposes of Article XVI:2(c). Accordingly, we find that Antigua has not provided a prima facie demonstration that § 609.755(1) of Minn. Stat. Ann. is inconsistent with Article XVI:1 and Article XVI:2.

New Jersey

6.399 Paragraph 2 of N.J. Const. Art. 4, Sec. VII provides in relevant part that:

"No gambling of any kind shall be authorized by the Legislature unless the specific kind, restrictions and control thereof have been heretofore submitted to, and authorized by a majority of the votes cast by, the people at a special election or shall hereafter be submitted to, and authorized by a majority of the votes cast thereon by, the legally qualified voters of the State voting at a general election, except that, without any such submission or authorization: [a list of lawful activities when authorized is provided]."

860 See a statement by the Minnesota Attorney General contained in Exhibit AB-96.
861 For the full text see Annex F of our Report.
6.400 Section 2A:40-1 of N.J. Code further provides that:

"All wagers, bets or stakes made to depend upon any race or game, or upon any gaming by lot or chance, or upon any lot, chance, casualty or unknown or contingent event, shall be unlawful."

6.401 In our view, the text of paragraph 2 of N.J. Const. Art. 4, Sec. VII and the text of § 2A:40-1 of N.J. Code, which appears to be the implementation of the relevant paragraph of the N.J. Const., indicate that those provisions are not directed at "service suppliers" for the purposes of Article XVI:2(a) nor to "service operations" and "service output" for the purposes of Article XVI:2(c). Rather, we consider that paragraph 2 of N.J. Const. Art. 4, Sec. VII and § 2A:40-1 of N.J. Code are directed at persons who engage in gambling. Antigua has not adduced any evidence to indicate that the supply of wagering and betting services by the Internet or by any other means included in mode 1 is prohibited under paragraph 2 of N.J. Const. Art. 4, Sec. VII and § 2A:40-1 of N.J. Code.  

6.402 Therefore, we conclude that Antigua has not provided a prima facie demonstration that paragraph 2 of N.J. Const. Art. 4, Sec. VII and § 2A:40-1 of N.J. Code contain limitations that fall within the scope of Article XVI:2(a) and/or Article XVI:2(c). In particular, we are not convinced that those sections are directed at "service suppliers" for the purposes of Article XVI:2(a) or to "service operations" and "service output" for the purposes of Article XVI:2(c). Accordingly, we find that Antigua has not provided a prima facie demonstration that paragraph 2 of N.J. Const. Art. 4, Sec. VII and § 2A:40-1 of N.J. Code are inconsistent with Article XVI:1 and Article XVI:2.

New York

6.403 The text of § 9 of Art. I of N.Y. Const. provides as follows:

"1. No law shall be passed abridging the rights of the people peaceably to assemble and to petition the government, or any department thereof; nor shall any divorce be granted otherwise than by due judicial proceedings; except as hereinafter provided, no lottery or the sale of lottery tickets, pool-selling, bookmaking, or any other kind of gambling, except lotteries operated by the state and the sale of lottery tickets in connection therewith as may be authorized and prescribed by the legislature, the net proceeds of which shall be applied exclusively to or in aid or support of education in this state as the legislature may prescribe, and except pari-mutuel betting on horse races as may be prescribed by the legislature and from which the state shall derive a reasonable revenue for the support of government, shall hereafter be authorized or allowed within this state; and the legislature shall pass appropriate laws to prevent offenses against any of the provisions of this section. [.... a list of lawful activities when authorized is listed]."

6.404 The text of § 5-401 of the N.Y. Gen. Oblig. L. provides as follows:

"All wagers, bets or stakes, made to depend upon any race, or upon any gaming by lot or chance, or upon any lot, chance, casualty, or unknown or contingent event whatever, shall be unlawful."

6.405 In our view, the text of § 9 of Art. I of N.Y. Const. and the text of § 5-401 of the N.Y. Gen. Oblig. L., which appears to be the implementation of the relevant paragraph of the N.Y. Const., suggest that at least the latter provision is not directed at "service suppliers" for the purposes of

---

862 We have seen the discussion of paragraph 2 of N.J. Const. Art. 4, Sec. VII in Exhibit AB-119 but we note that, in its submissions, Antigua did not refer to or elaborate on that discussion.

863 For the full text see Annex F of our Report.
Article XVI:2(a) nor to "service operations" and "service output" for the purposes of Article XVI:2(c). Rather, we consider that § 9 of Art. I of N.Y. Const. when read together with § 5-401 of the N.Y. Gen. Oblig. L. is directed at persons who engage in gambling. Antigua has not adduced any evidence to indicate that the supply of wagering and betting services by the Internet or by any other means included in mode 1 is prohibited under § 9 of Art. I of N.Y. Const. and § 5-401 of the N.Y. Gen. Oblig. L. 864

6.406 Therefore, we conclude that Antigua has not provided a prima facie demonstration that § 9 of Art. I of N.Y. Const. and § 5-401 of the N.Y. Gen. Oblig. L. contain limitations that fall within the scope of Article XVI:2(a) and/or Article XVI:2(c). In particular, we are not convinced that those sections are directed at "service suppliers" for the purposes of Article XVI:2(a) or to "service operations" and "service output" for the purposes of Article XVI:2(c). Accordingly, we find that Antigua has not provided a prima facie demonstration that § 9 of Art. I of N.Y. Const. and § 5-401 of the N.Y. Gen. Oblig. L. are inconsistent with Article XVI:1 and Article XVI:2.

South Dakota

6.407 The aspects of §§ 22-25A-1 - 22-25A-15 of the S.D. Codified Laws that we consider to be relevant to Antigua's claim of violation under Article XVI are set out below:

"22-25A-8 Establishment of internet gambling business prohibited.

Except as provided in § 22-25A-15, no person may establish a location or site in this state from which to conduct a gambling business on or over the Internet or an interactive computer service.

22-25A-9 Violation if gambling originates or terminates in state -- Each bet a separate violation.

A violation of § 22-25A-7 or § 22-25A-8 occurs if the violation originates or terminates, or both, in this state. Each individual bet or wager offered in violation of § 22-25A-7 or from a location or site that violates § 22-25A-8 constitutes a separate violation."

6.408 Section 22-25A-8 of the S.D. Codified Laws concerns service suppliers, in particular, those who establish a location or site in the state of South Dakota from which to conduct a gambling business on or over the Internet or an interactive computer service, including suppliers whose services terminate in the state of South Dakota as provided for in § 22-25A-9. Therefore, we consider that § 22-25A-8 of the S.D. Codified Laws concerns "service suppliers" within the meaning of Article XVI:2(a).

6.409 Section 22-25A-8 of the S.D. Codified Laws can also be read to concern the treatment of services operations or service output because it effectively prohibits the supply of gambling services through the use, inter alia, of the Internet. Therefore, we consider that § 22-25A-8 of the S.D. Codified Laws also concerns "service operations" or "service output" within the meaning of Article XVI:2(c).

6.410 We recall that a ban on the use of one, several or all means of delivery included in mode 1 constitutes a "zero quota" for, respectively, one, several or all of those means of delivery. Under § 22-25A-8 of the S.D. Codified Laws, service suppliers seeking to conduct a gambling business through

864 We have seen the discussion of § 9 of Art. I of N.Y. Const. and § 5-401 of the N.Y. Gen. Oblig. L. in Exhibits AB-56, AB-57, AB-58, AB-83, AB-97 and AB-98 but we note that, in its submissions, Antigua did not refer to or elaborate on that discussion.
the Internet are prohibited from doing so. Further, services operations and service output involving a gambling business that uses the Internet are also prohibited under § 22-25A-8 of the S.D. Codified Laws. Accordingly, the Panel considers that § 22-25A-8 of the S.D. Codified Laws contains a limitation "in the form of numerical quotas" within the meaning of Article XVI:2(a) and a limitation "in the form of a quota" within the meaning of Article XVI:2(c).

6.411 We also recall that a Member does not respect its GATS market access obligations under Article XVI:2(a) and Article XVI:2(c) if it does not allow market access to the whole or part of a scheduled sector. Section 22-25A-8 of the S.D. Codified Laws concerns "gambling", which is part of the services covered by the US commitment under sub-sector 10.D. Therefore, through § 22-25A-8 of the S.D. Codified Laws, the United States restricts market access to part of a scheduled sector, namely, "gambling".

6.412 Since the United States has inscribed "None" in the market access column under sub-sector 10.D, it cannot maintain limitations referred to in Article XVI:2. As § 22-25A-8 of the S.D. Codified Laws contains limitations that fall within the scope of Article XVI:2(a) and Article XVI:2(c), the United States is according less favourable treatment than that provided for in its Schedule contrary to Article XVI:1 and Article XVI:2. Therefore, we conclude that § 22-25A-8 of the S.D. Codified Laws is inconsistent with Article XVI:1 and Article XVI:2.

Utah

6.413 Section 76-10-1102 of the Utah Code Ann. provides as follows:

"(1) A person is guilty of gambling if he:

(a) participates in gambling;

(b) knowingly permits any gambling to be played, conducted, or dealt upon or in any real or personal property owned, rented, or under the control of the actor, whether in whole or in part; or

(c) knowingly allows the use of any video gaming device that is:

(i) in any business establishment or public place; and

(ii) accessible for use by any person within the establishment or public place.

(2) Gambling is a class B misdemeanor, provided, however, that any person who is twice convicted under this section shall be guilty of a class A misdemeanor."

6.414 Section 76-10-1102(b) of the Utah Code Ann. concerns service suppliers, in particular, those who knowingly permit any gambling to be played, conducted, or dealt upon or in any real or personal property owned, rented, or under the control of that person, whether in whole or in part. Therefore, we consider that § 76-10-1102(b) of the Utah Code Ann. concerns "service suppliers" within the meaning of Article XVI:2(a).

6.415 Section 76-10-1102(b) of the Utah Code Ann. can also be read to concern the treatment of services operations or service output because it effectively prohibits the supply of gambling services. Therefore, we consider that §76-10-1102(b) of the Utah Code Ann. also concerns "service operations" or "service output" within the meaning of Article XVI:2(c).

6.416 We recall that a ban on the use of one, several or all means of delivery included in mode 1 constitutes a "zero quota" for, respectively, one, several or all of those means of delivery. Under § 76-
10-1102(b) of the Utah Code, *service suppliers* seeking to conduct a gambling business through all means included in mode 1 are prohibited from doing so. Further, *services operations* and *service output* involving a gambling business that uses any of the means included in mode 1 are also prohibited under § 10-1102(b) of the Utah Code. Accordingly, the Panel considers that § 76-10-1102(b) of the Utah Code contains a limitation "in the form of numerical quotas" within the meaning of Article XVI:2(a) and a limitation "in the form of a quota" within the meaning of Article XVI:2(c).

6.417 We also recall that a Member does not respect its GATS market access obligations under Article XVI:2(a) and Article XVI:2(c) if it does not allow market access to the whole or part of a scheduled sector. Section § 76-10-1102(b) of the Utah Code concerns "gambling", which is part of the services covered by the US commitment under sub-sector 10.D. Therefore, through § 76-10-1102(b) of the Utah Code, the United States restricts market access to part of a scheduled sector, namely, "gambling".

6.418 Since the United States has inscribed "None" in the market access column under sub-sector 10.D, it cannot maintain limitations referred to in Article XVI:2. As § 76-10-1102(b) of the Utah Code contains limitations that fall within the scope of Article XVI:2(a) and Article XVI:2(c), the United States is according less favourable treatment than that provided for in its Schedule contrary to Article XVI:1 and Article XVI:2. Therefore, we conclude that § 76-10-1102(b) of the Utah Code is inconsistent with Article XVI:1 and Article XVI:2.

**Cumulative Effect of the Wire Act, the Travel Act (when read together with relevant state laws) and the Illegal Gambling Business Act (when read together with the state laws of Louisiana, Massachusetts, South Dakota and Utah)**

6.419 As noted above, the Wire Act, the Travel Act (when read together with the relevant state laws), the Illegal Gambling Business Act (when read together with the relevant state laws), § 14:90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and 76-10-1102(b) of the Utah Code concern "service suppliers" within the meaning of Article XVI:2(a) and "services operations" and "service output" within the meaning of Article XVI:2(c).

6.420 We recall that a ban on the use of one, several or all means of delivery included in mode 1 constitutes a "zero quota" for, respectively, one, several or all of those means of delivery. The Panel is of the view that § 14:90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and 76-10-1102(b) of the Utah Code together prohibit the supply of gambling and betting services by all means of delivery included in mode 1. Moreover, the cumulative effect of the Wire Act, the Travel Act (when read together with the relevant state laws), the Illegal Gambling Business Act (when read together with the relevant state laws), is to prohibit all means of delivery included in mode 1 for all gambling and betting services that are sought to be supplied by Antigua.

(iii) Conclusion

6.421 In the Panel's view, the following laws are in violation of Article XVI:1 and Article XVI:2, subparagraphs (a) and (c) of the GATS:

(a) Federal laws

(i) the Wire Act;

(ii) the Travel Act (when read together with the relevant state laws); and
(iii) the Illegal Gambling Business Act (when read together with the relevant state laws).

(b) State laws:

(iii) South Dakota: § 22-25A-8 of the S.D. Codified Laws; and

(iv) Utah: § 76-10-1102(b) of the Utah Code.

E. CLAIMS OF VIOLATION OF THE UNITED STATES’ NATIONAL TREATMENT COMMITMENT UNDER ARTICLE XVII OF THE GATS

1. Claims and main arguments of the parties

6.422 Antigua submits that federal and state laws, applications thereof and related practices specifically prohibit or prevent the cross-border supply of gambling and betting services by Antigua to the United States whereas the domestic supply of such services, whether by remote means or otherwise, within US states by authorized domestic suppliers is permitted. Antigua submits that this results in less favourable treatment of Antiguan gambling and betting services and suppliers of such services in the United States in violation of Article XVII of the GATS.  

6.423 The United States argues that Antigua has failed to demonstrate that any US measure is inconsistent with Article XVII of the GATS. According to the United States, Antigua has failed to prove that remote gambling and betting services are "like" non-remote gambling services and suppliers. The United States further argues that Antigua has failed to demonstrate that its services and service suppliers receive less favourable treatment. According to the United States, even if it were to be assumed that likeness could be established between some remotely supplied gambling and betting services and service suppliers and non-remote gambling and betting service and service suppliers, the United States may, nonetheless, maintain a regulatory distinction between remote and non-remote supply of such services given that such a distinction does not afford less favourable treatment to foreign suppliers on the basis of national origin.

2. Assessment by the Panel

6.424 As a preliminary matter, the Panel is of the view that it needs to address the question of whether it should consider Antigua's Article XVII claim. This issue has arisen because, in its Panel request, Antigua claimed a violation, inter alia, of Article XVII of the GATS, noting that "the central, regional or local authorities of the United States allow numerous operators of United States origin to offer all types of gambling and betting services in the United States. ... There appears to be no possibility for foreign operators, however, to obtain an authorization to supply gambling and betting services from outside the United States." In its submissions, however, Antigua has since questioned the need for the Panel to consider its Article XVII claim. Antigua submits that the relationship between Articles XVI and XVII of the GATS is one of "practical hierarchy" in which Article XVI concerns regulation that affects market access whereas Article XVII concerns regulation that distorts competition in favour of domestic suppliers in cases where market access has been

---

865 Antigua's first written submission, para. 3; Antigua's second written submission, para. 39.
866 United States' second written submission, paras. 28 et seq.
867 United States' second written submission, paras. 59 et seq.
granted. Antigua submits that, in this case, a finding by the Panel of violation of Article XVI obviates the need to assess whether Article XVII has also been violated.  

6.425 In deciding whether to exercise judicial economy over Antigua’s Article XVII claim, the Panel recalls that the principle of judicial economy is recognized in WTO law.  

6.426 The Panel recalls that it has found that a number of the challenged US measures are in violation of Article XVI. We are of the view that the Panel does not need to examine whether the challenged measures are also inconsistent with the United States’ national treatment obligations under Article XVII of the GATS in order to assist the parties in resolving the dispute at issue. We believe that the essence of Antigua’s claims will be addressed by a finding on Article XVI alone. Therefore, the Panel exercises judicial economy with regard to Antigua’s claim under Article XVII.

F. CLAIMS OF VIOLATION UNDER ARTICLE VI OF THE GATS

1. Claims and main arguments of the parties

6.427 Antigua argues that the United States has violated Article VI:1 of the GATS by failing to ensure that “all measures of general application affecting trade in services are administered in a reasonable, objective and impartial manner.” The United States maintains numerous laws and regulations prohibiting the supply of gambling and betting services unless specific authorization has been granted. Antigua submits that it is impossible for foreign service suppliers to obtain authorization to supply services on a cross-border basis or even to apply for such an authorization. However, exemptions from these laws have been granted to gambling operators of US origin, but not to foreign operators. Antigua argues that this constitutes a violation of Article VI:1 of the GATS. Antigua further argues that Article VI:3 implies that a WTO Member is obliged to make authorization procedures that are open to domestic service suppliers also available to suppliers from other WTO Members that may want to supply services for which a commitment has been made. US domestic service providers can and do qualify for authorization to offer gambling and betting services, but Antiguan providers cannot. Antigua submits that given that the cross-border supply of gambling and betting services is prohibited, Antigua fails to see why Antiguan operators would have filed any applications for authorization, much less under what authority such a filing could have been made.

6.428 The United States replies that Antigua’s claim under Article VI of the GATS does not correspond to the text of this provision. In particular, Antigua has failed to meet its burden of proof under Article VI:1 to show that particular measures are not “administered in a reasonable, objective, and impartial manner”. According to the United States, Antigua has provided no evidence about the alleged flaws in the administration of any of the measures identified in its Panel request. In fact, such measures apply equally to all services and service providers, regardless of origin, and are routinely applied against domestic as well as foreign law-breakers. The United States further argues that, as Antigua did not show that the United States has undertaken any commitments in gambling services in general and cross-border gambling services in particular, Antigua cannot demonstrate that Article VI:3 is relevant in this dispute. Moreover, Antigua has pointed to no occasions on which US authorities have failed to inform Antiguan suppliers regarding decisions on their applications for authorization. Indeed, Antigua has not demonstrated that its gambling and betting service suppliers have ever filed any relevant applications. According to the United States, Antigua appears to be seeking something that Article VI:3 on its face does not provide – namely, a requirement that the

---

869 Antigua’s reply to Panel question No. 6.
870 See paras. 6.15 - 6.18 above.
871 Antigua’s first written submission, paras. 196-199; Antigua’s first oral statement, paras. 104-106.
United States give foreign suppliers the right to provide services that even its domestic suppliers do not have a right to provide.  

2. **Relevant GATS provisions**

6.429 Article VI (Domestic Regulation) provides in relevant part as follows:

"1. In sectors where specific commitments are undertaken, each Member shall ensure that all measures of general application affecting trade in services are administered in a reasonable, objective and impartial manner.

[...]

3. Where authorization is required for the supply of a service on which a specific commitment has been made, the competent authorities of a Member shall, within a reasonable period of time after the submission of an application considered complete under domestic laws and regulations, inform the applicant of the decision concerning the application. At the request of the applicant, the competent authorities of the Member shall provide, without undue delay, information concerning the status of the application.

[...]

3. **Assessment by the Panel**

6.431 We will now turn to whether Antigua has met its prima facie burden that these laws are inconsistent with Article VI, paragraphs 1 and 3, of the GATS.

6.432 The Panel is of the view that Article VI:1 does not apply to measures of general application themselves but, rather, to the administration of these measures. Article VI:3 imposes transparency and due process obligations with respect to the processing of applications for authorization to supply in a sector where specific commitments have been undertaken. Therefore, Articles VI:1 and VI:3 contain disciplines of a procedural nature.

6.433 The Panel also notes the very vague and general nature of the arguments advanced by Antigua in regard to the alleged violation under Article VI. For instance, Antigua refers to the "numerous laws and regulations" maintained by the United States. Antigua also asserts that the "United States domestic service providers can and do qualify for authorization to offer gambling and betting services.

---

872 United States' first submission, paras. 104-107. See also United States' first oral statement, para. 53 and United States' second written submission, para. 70.

873 Antigua's first written submission, para. 197.
Yet, Antiguan service providers cannot. The Panel also notes that Antigua did not refer to any violation of Article VI in its second written submission, nor in its second oral statement.

6.434 In relation to its claim under Article VI:1, the Panel asked Antigua to specify "what 'measures of general application' are not begin 'administered in a reasonable, objective and impartial manner' and why". Antigua responded

"The general approach to gambling law in the United States is that all gambling and betting is prohibited unless a specific authorization has been given. Thus, the United States first maintains its "measures of general application"—the state and federal measures that act to prohibit the provision of gambling and betting services in the United States. Overlaying the general prohibitions are the state and federal measures that authorize certain persons to provide certain gambling and betting services under a wide and disparate variety of situations. [footnote omitted] By not providing a method by which Antiguan suppliers can obtain authorization to offer their services into the United States, the United States is in violation of Article VI:1."  

6.435 When asked by the Panel to identify and provide details of instances when "authorization to supply" in the United States was refused, Antigua replied that:

"[...] What was meant here was not that Antiguan operators had applied to supply gambling and betting services into the United States and were refused — the point was that under United States law, it is impossible for Antiguan suppliers to meet any authorization criteria. [...]"

6.436 The Panel also asked Antigua to specify what "authorization procedures" it was referring to in support of its claim of violation of Articles VI:1 and VI:3, Antigua replied:

"The answer to this question is the same as [in paragraph 6.435 above]. It is not possible for Antiguan service suppliers to obtain authorization to provide gambling and betting services into the United States. This violates Article VI:1 of the GATS because the 'authorization procedures' by their very terms exclude Antiguan suppliers and thus cannot be considered 'administered in a reasonable, objective and impartial manner'. This violates Article VI:3 because the inability to apply for authorization makes it impossible for the United States to comply with the requirements of Article VI:3."

6.437 Antigua's claims under Article VI:1 and under Article VI:3 are based on the premise that suppliers wishing to supply gambling and betting services in the United States require authorization to supply and that Antiguan suppliers are unable to obtain such authorization. The Panel notes, however, that Antigua has not specifically identified which "state and federal measures" and which provisions of those measures impose such authorization requirements. Nor has it demonstrated that its gambling and betting service suppliers have ever filed any applications to obtain such authorization. In fact, paragraph 6.435 indicates that Antiguan suppliers have never made such applications. Therefore, the Panel is of the view that Antigua has not made a prima facie demonstration that the measures at issue are inconsistent with Articles VI:1 and VI:3.

874 Antigua's first oral statement, para. 106.
875 Antigua's reply to Panel question No. 28.
876 Antigua's reply to Panel question No. 11.
877 Antigua's reply to Panel question No. 27.
G. CLAIM UNDER ARTICLE XI OF THE GATS

1. Claims and main arguments of the parties

6.438 Antigua submits that the United States maintains measures that restrict international money transfers and payments relating to the cross-border supply of gambling and betting services. In particular, Antigua points to the laws of the state of New York that render contracts that are based on wagers or bets void as well as an example of an “enforcement measure” taken by the New York Attorney General against a financial intermediary that provides Internet payment services. In Antigua’s view, the purpose of these measures is to prevent foreign suppliers of gambling and betting services from offering their services on a cross-border basis. Antigua argues that, therefore, these measures violate Article XI:1 of the GATS.

6.439 The United States submits that both the laws and the enforcement measure in the form of an agreement between a state Attorney General and a financial intermediary upon which Antigua relies are neutral regarding the destination of payments. With respect to Antigua's reliance upon an agreement between a state Attorney General and a financial intermediary, this "measure" is contained in Section III of Antigua's Panel request and, therefore, following the Panel's preliminary ruling, cannot be examined as a separate, autonomous measure. Further, according to the United States, Antigua has provided no evidence that the provisions of the agreement in question result in restrictions on the movements of funds across borders. The United States submits that, on the contrary, by the terms of the agreement, it applies without regard to whether the payments in question are destined for further transfer to a domestic or international destination. The United States further submits that, insofar as Antigua relies upon the agreement in question as evidence of the application of the laws of the state of New York, the agreement is not an application of those laws. Rather, it is a mutual settlement between the relevant contracting parties.

2. Relevant GATS provisions

6.440 Article XI of the GATS (Payments and Transfers) provides that:

"1. Except under the circumstances envisaged in Article XII [Restrictions to Safeguard the Balance of Payments], a Member shall not apply restrictions on international transfers and payments for current transactions relating to its specific commitments.

2. Nothing in this Agreement shall affect the rights and obligations of the members of the International Monetary Fund under the Articles of Agreement of the Fund, including the use of exchange actions which are in conformity with the Articles of Agreement, provided that a Member shall not impose restrictions on any capital transactions inconsistently with its specific commitments regarding such transactions, except under Article XII or at the request of the Fund."

---

878 Antigua's first written submission, para. 200.
879 Antigua's reply to Panel question No. 29.
880 Antigua's first oral statement, para. 108; Antigua's reply to Panel question No. 29.
881 Antigua's first oral statement, paras. 107–110.
882 United States' second oral statement, para. 71.
883 United States' second oral statement, para. 70.
884 United States' first written submission, para. 110.
885 United States' second oral statement, para. 71.
3. Assessment by the Panel

6.441 Article XI has not, as yet, been the subject of interpretation or application by either panels or the Appellate Body. In light of this and taking into account the limited facts and arguments submitted by the parties with respect to Antigua's claim under Article XI, we believe that there is not sufficient material on record to enable us to undertake a meaningful analysis of this provision and its specific application to the facts of this case. Moreover, in our view, the findings of violation under Article XVI in Section VI.D above of our Report should allow the parties to settle this dispute, even in the absence of a ruling on Antigua's Article XI claim. We will, therefore, exercise judicial economy and not rule on Antigua's claim under Article XI.  

6.442 However, the Panel wants to emphasize that Article XI plays a crucial role in securing the value of specific commitments undertaken by Members under the GATS. Indeed, the value of specific commitments on market access and national treatment would be seriously impaired if Members could restrict international transfers and payment for service transactions in scheduled sectors. In ensuring, inter alia, that services suppliers can receive payments due under services contracts covered by a Member's specific commitment, Article XI is an indispensable complement to GATS disciplines on market access and national treatment. At the same time, the Panel is of the view that Article XI does not deprive Members from regulating the use of financial instruments, such as credit cards, provided that these regulations are consistent with other relevant GATS provisions, in particular Article VI.

H. DEFENCE UNDER ARTICLE XIV OF THE GATS

1. Claims and main arguments of the parties

6.443 The United States submits that, because the measures that have been challenged by Antigua in this dispute serve important policy objectives that fall within Article XIV of the GATS, they benefit from the exceptions of Article XIV(a) and Article XIV(c). Moreover, they are applied in a way that complies with the requirements of the chapeau of Article XIV of the GATS.  

6.444 In relation to its defence under Article XIV(a), the United States argues that the Wire Act, the Travel Act and the Illegal Gambling Business Act are necessary to protect "public morals" and "public order" within the meaning of Article XIV(a) because, inter alia, remote gambling is particularly vulnerable to use by minors who are prohibited from gambling or can be used for laundering the proceeds of organized crime. Antigua questions the United States' argument that the US measures prohibiting the remote supply of gambling and betting services are necessary to protect public morals and public order on the basis, inter alia, that the United States is a significant consumer of gambling and betting services and that state-sanctioned gambling opportunities are available in 48 states.  

6.445 With respect to its defence under Article XIV(c), the United States argues that the Wire Act, the Travel Act and the Illegal Gambling Business Act serve as law enforcement tools to secure compliance with other WTO-consistent US laws, in particular, state gambling laws and criminal laws relating to organized crime. Antigua argues that the United States' defence under Article XIV(c) should fail because it has not submitted sufficient information on the laws upon which it seeks to rely for its defence under Article XIV(c). Antigua submits that the burden on a defending party to identify

such laws is, at the least, similar to that of a complaining party who seeks to challenge a measure in dispute settlement proceedings; both must establish that "measures" with the alleged effect exist.\footnote{Antigua's comments on the United States' reply to Panel question No. 45.}

The United States responds that Members' legislation is presumed to be WTO-consistent, including all legislation invoked by the United States in support of its Article XIV defence.\footnote{United States' reply to Panel question No. 44.}

2. Relevant GATS provisions

6.446 Article XIV of the GATS provides in relevant part that:

"Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where like conditions prevail, or a disguised restriction on trade in services, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any Member of measures:

(a) necessary to protect public morals or to maintain public order;\footnote{The public order exception may be invoked only where a genuine and sufficiently serious threat is posed to one of the fundamental interests of society.}

(b) necessary to secure compliance with laws or regulations which are not inconsistent with the provisions of this Agreement including those relating to:

(i) the prevention of deceptive and fraudulent practices or to deal with the effects of a default on services contracts;

(ii) the protection of the privacy of individuals in relation to the processing and dissemination of personal data and the protection of confidentiality of individual records and accounts;

(iii) safety;

[...]

3. Assessment by the Panel

(a) Introduction

6.447 Since this is the first occasion on which Article XIV of the GATS has been invoked by a Member in a WTO dispute, the Panel is unable to avail itself of prior jurisprudence under the GATS for possible guidance.

6.448 However, in EC – Bananas III, the Appellate Body confirmed that jurisprudence under the GATT 1994 could be relevant for the interpretation of analogous provisions contained in the GATS.\footnote{Appellate Body Report on EC – Bananas III, para. 231.} Given the textual similarity between Article XX of the GATT 1994 and Article XIV of the GATS, and the similar purposes that both Articles are designed to serve, we consider that
GATT/WTO jurisprudence in relation to the former may be relevant and useful in the interpretation of the latter.

6.449 In accordance with the Appellate Body's guidance in *US – Gasoline*, *US - Shrimp* and *Korea – Various Measures on Beef* in respect of Article XX of the GATT 1994, we believe that a measure found to be inconsistent with one or several of the substantive obligations of the GATS must be subjected to a two-tiered analysis in order for it to be justified under Article XIV. Specifically, that a measure must:

(a) fall within the scope of one of the recognized exceptions set out in paragraphs (a) to (e) of Article XIV in order to enjoy provisional justification; and

(b) meet the requirements of the introductory provisions of Article XIV, the so-called "chapeau".

6.450 In *US – Wool Shirts and Blouses*, the Appellate Body stated that the burden of proof rests upon the party, whether complaining or defending, who asserts the affirmative of a particular claim or defence. Accordingly, a party seeking to invoke Article XIV of the GATS bears the burden of proof to demonstrate that the various elements comprising a defence under this Article have been fulfilled.

6.451 We also note that the Appellate Body in *EC – Hormones* stated that:

"It is also well to remember that a prima facie case is one which, in the absence of effective refutation by the defending party, requires a panel, as a matter of law, to rule in favour of the complaining party presenting the prima facie case."

We consider that this statement is equally applicable in respect of a defence invoked by a Member under Article XIV of the GATS. More particularly, the Panel is of the view that, if a defending party in a case has made a prima facie demonstration that a measure fulfils the requirements of Article XIV, in the absence of "effective refutation" by the complaining party, a panel must rule in favour of the defending party.

6.452 Finally, we recall that the Appellate Body has indicated that, when applying Article XX of the GATT 1994 in a given case, a balance needs to be struck between the market access right of a Member to invoke an exception under Article XX and the duty of that same Member to respect the treaty rights of other Members. In our view, this statement is equally applicable to the application of Article XIV of the GATS.

(b) Measures at issue

6.453 The United States seeks to defend, under Article XIV of the GATS, three of the federal statutes that have been challenged by Antigua in this dispute, namely, the Wire Act, the Travel Act and the Illegal Gambling Business Act. The United States has not sought to defend the state laws challenged by Antigua independently of the Illegal Gambling Business Act. However, throughout the present proceedings the United States has argued that the prohibition in the United States against the remote supply of gambling and betting services, regardless of whether enforced through state or federal laws, is based on the same policy concerns discussed hereafter. We recall that, in this dispute,
we are examining the Travel Act (when read together with the relevant state laws) and the Illegal Business Gambling Act (when read together with the relevant state laws).

6.454 We have found above that the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) are inconsistent with US obligations under Article XVI of the GATS by virtue of specific commitments the United States has undertaken in its GATS Schedule. Accordingly, we will now examine whether these laws can be justified under Article XIV. More specifically, we will examine first whether these laws can be provisionally justified under Article XIV(a) and Article XIV(c), the two provisions specifically invoked by the United States. If provisionally justified, we will then consider whether the United States has successfully met the requirements of the chapeau of Article XIV with respect to these measures. In our view, if we find the Travel Act and the Illegal Gambling Business Act are justified under Article XIV, the relevant state laws that are otherwise inconsistent with US obligations under Article XVI shall also be deemed to be justified under Article XIV, to the extent that they are enforced by and through the Travel Act and/or the Illegal Gambling Business Act and for, inter alia the same policy concerns.

(c) Provisional justification under Article XIV(a)

(i) The legal standard under Article XIV(a)

6.455 Pursuant to the text of Article XIV(a), in determining whether a challenged measure is provisionally justified under that Article, the Member invoking that provision must demonstrate two elements, namely:

(a) the measure must be one designed to "protect public morals" or to "maintain public order"; and

(b) the measure for which justification is claimed must be "necessary" to protect public morals or to maintain public order.

6.456 The Panel will now proceed to examine these two elements in turn.

Measures ... to "protect public morals" or to "maintain public order"

6.457 The United States argues that the challenged measures are necessary to protect public morals and to maintain public order under Article XIV(a). The United States submits that the remote supply of gambling and betting services raises significant concerns relating to the maintenance of public order and the protection of public morals. According to the United States, remote supply of gambling and betting services is, generally speaking, particularly vulnerable to various forms of criminal activity, especially organized crime. Maintaining a society in which persons and their property exist free of the destructive influence of organized crime is both a matter of "public morals" and one of "public order". Protecting children from uncontrolled gambling settings is certainly a matter of "public morals".

6.458 The United States argues that the term "public order" refers to the familiar civil law concept denoted in French by the expression "ordre public" and its functional counterpart in common law systems, the concept of "public policy". The United States further submits that the term "public

---

900 United States' second written submission, paras. 111 et seq.
901 United States' second written submission, paras. 108-110.
902 United States' second written submission, para. 114.
“morals” refers to standards of right and wrong that can be described as "belonging to, affecting, or concerning the community or nation."  

6.459 The Panel will first examine the meaning of the terms "protect public morals" and "maintain public order" in an effort to understand their scope. The Panel will interpret Article XIV(a) of the GATS in accordance with the ordinary meaning of the words when read in their context and in light of the object and purpose of the GATS and the WTO Agreement.

6.460 The term "public morals" is used in Article XX(a) of the GATT 1994 but not defined and it has not been interpreted by any panel or the Appellate Body. The term "public order" is likewise not specifically defined in the GATS, although the footnote to Article XIV(a) indicates that the “public order” exception may be invoked only where a genuine and sufficiently serious threat is posed to one of the fundamental interests of society.

6.461 We are well aware that there may be sensitivities associated with the interpretation of the terms "public morals" and "public order" in the context of Article XIV. In the Panel's view, the content of these concepts for Members can vary in time and space, depending upon a range of factors, including prevailing social, cultural, ethical and religious values. Further, the Appellate Body has stated on several occasions that Members, in applying similar societal concepts, have the right to determine the level of protection that they consider appropriate. Although these Appellate Body statements were made in the context of Article XX of the GATT 1994, it is our view that such statements are also valid with respect to the protection of public morals and public order under Article XVI of the GATS. More particularly, Members should be given some scope to define and apply for themselves the concepts of "public morals" and "public order" in their respective territories, according to their own systems and scales of values.

6.462 This being said, the Panel considers that, despite the inherent difficulties and sensitivities associated with interpretation of the terms "public morals" and "public order" in the context of Article XIV(a), we must nonetheless give meaning to these terms in order to apply them to the facts of this case. Indeed, the principle of effective treaty interpretation requires us to do so.

6.463 In determining the ordinary meaning of the terms "public morals" and "public order", we turn to the Shorter Oxford English Dictionary. "Public" is defined therein as:

"Of or pertaining to the people as a whole; belonging to, affecting, or concerning the community or nation." 

The Panel believes that a measure that is sought to be justified under Article XIV(a) must be aimed at protecting the interests of the people within a community or a nation as a whole. This is the case whether the measure is asserted to be necessary to "protect public morals" or to "maintain public order" since both terms contain the word "public".

6.464 The word "morals" (noun, pl.) is defined therein as:

"[...] habits of life with regard to right and wrong conduct." 

903 United States' second written submission, para. 108.
904 See Appellate Body Reports on Korea – Various Measures on Beef, para. 176 and EC – Asbestos, para. 168.
905 We recall the Appellate Body's instructions in the context of the interpretation of Article XX of the GATT 1994 in US – Shrimp, para. 155.
6.465 The Panel considers the term "public morals" denotes standards of right and wrong conduct maintained by or on behalf of a community or nation.

6.466 The dictionary definition of the word "order" that appears to be relevant in the context of Article XIV(a) reads as follows:

"A condition in which the laws regulating the public conduct of members of a community are maintained and observed; the rule of law or constituted authority; absence of violence or violent crimes."  

6.467 We recall that drafters of the GATS clarified in footnote 5 that "[t]he public order exception may be invoked only where a genuine and sufficiently serious threat is posed to one of the fundamental interests of society". Hence, in our view, the dictionary definition of the word "order", read together with footnote 5, suggests that "public order" refers to the preservation of the fundamental interests of a society, as reflected in public policy and law. These fundamental interests can relate, \textit{inter alia}, to standards of law, security and morality.

6.468 Based on the dictionary definitions referred to above and taking into account the clarification added by the drafters of the GATS in footnote 5, we believe that "public morals" and "public order" are two distinct concepts under Article XIV(a) of the GATS. Nevertheless, to the extent that both concepts seek to protect largely similar values, some overlap may exist.

6.469 For example, in this case, it could be argued that the prevention of underage gambling and the protection of pathological gamblers relates to public morals, while the fight against organized crime is rather a matter of public order. The prevention of money laundering and of fraud schemes could arguably relate to both public morals and public order. However, we are of the view that, in this dispute, it is not necessary to qualify various policy considerations relied upon by the United States as relating either to "public morals" or to "public order".

6.470 The following supplementary means of interpretation may also be instructive. Judge Lauterpacht, the elder, referred to "public order" as the "fundamental national conceptions of law, decency and morality." He further stated that "the protection of the interest of minors ... falls naturally within the notion of ordre public."  

6.471 Examples of WTO Members that have relied on "public moral" grounds to justify certain restrictions include Israel and the Philippines. In this regard, the 1999 Trade Policy Review of Israel observed that Israel maintained an import prohibition on "[t]ickets or publicity items for lottery or gambling" and identified the reason for this prohibition as "[p]ublic morals." Similarly, the 1999 Trade Policy Review of the Philippines listed limitations on foreign ownership of gambling operations (e.g., racetracks) under a heading that referred, \textit{inter alia}, to limitations "for reasons of ... risk to health and morals."  

6.472 A historic example of the use of "moral" grounds to restrict certain activities was raised in the context of the Economic Committee of the League of Nations, where a draft convention had been put forward that included an exception for "[p]rohibitions or restrictions imposed for moral or humanitarian reasons or for the suppression of improper traffic, provided that the manufacture of and

---

911 Trade Policy Review - The Philippines - Report by the Secretariat, WT/TPR/S/59, table III.11 (1999). The document does not specify precisely which reason is associated with the gambling ownership restriction, but from the context of the document it is reasonable to infer that the restriction is based on "morals" or "health and morals."
trade in the goods to which the prohibitions relate are also prohibited or restricted in the interior of the country."  It is reported that in the debate over the proposed exception, the representative of Egypt asked whether a prohibition on the importation of foreign lottery tickets would be covered by the moral exception. The president of the conference stated that such prohibitions would be covered by the exception for measures adopted for "moral or humanitarian reasons."

6.473 Other jurisdictions have accepted that gambling activities could be limited or prohibited for public policy considerations, in derogation of general treaty or legislative rules.  

6.474 In light of the above, the Panel concludes that measures prohibiting gambling and betting services, including the supply of those services by the Internet, could fall within the scope of Article XIV(a) if they are enforced in pursuance of policies, the object and purpose of which is to "protect public morals" or "to maintain public order".

Measures "necessary" to protect public morals or to maintain public order

6.475 With respect to the requirement, under Article XIV(a) of the GATS, that a measure be "necessary", the Panel notes that the Appellate Body in Korea – Various Measures on Beef established various parameters within which a determination of whether a measure is "necessary"...
within the meaning of Article XX(d) of the GATT 1994 must be made. Specifically, the Appellate Body noted that:

"[T]he reach of the word 'necessary' is not limited to that which is 'indispensable' or 'of absolute necessity' or 'inevitable'. Measures which are indispensable or of absolute necessity or inevitable to secure compliance certainly fulfil the requirements of Article XX(d). But other measures, too, may fall within the ambit of this exception. As used in Article XX(d), the term 'necessary' refers, in our view, to a range of degrees of necessity. At one end of this continuum lies 'necessary' understood as 'indispensable'; at the other end, is 'necessary' taken to mean as 'making a contribution to'. We consider that a 'necessary' measure is, in this continuum, located significantly closer to the pole of 'indispensable' than to the opposite pole of simply 'making a contribution to'."

The Panel is of the view that these statements are equally applicable in the context of Article XIV of the GATS, including Article XIV(a).

6.476 The Appellate Body in the same case articulated a "weighing and balancing" test as the basis for making a determination as to whether a measure is "necessary" within the meaning of Article XX(d) of the GATT 1994. In particular, the Appellate Body stated that a determination of whether a measure is necessary within the meaning of Article XX(d) of the GATT 1994:

"[I]nvolves in every case a process of weighing and balancing a series of factors which prominently include the contribution made by the compliance measure to the enforcement of the law or regulation at issue, the importance of the common interests or values protected by that law or regulation, and the accompanying impact of the law or regulation on imports or exports."

6.477 On the basis of the articulation of the guiding principles for the "weighing and balancing" test by the Appellate Body in Korea – Various Measures on Beef and, subsequently, in EC – Asbestos, we believe that, in the context of Article XIV(a), we must assess the following in determining whether a measure is "necessary" to protect public morals or to maintain public order:

(a) the importance of interests or values that the challenged measure is intended to protect. (With respect to this requirement, the Appellate Body has suggested that, if the value or interest pursued is considered important, it is more likely that the measure is "necessary".)

(b) the extent to which the challenged measure contributes to the realization of the end pursued by that measure. (In relation to this requirement, the Appellate Body has suggested that the greater the extent to which the measure contributes to the end pursued, the more likely that the measure is "necessary".)

(c) the trade impact of the challenged measure. (With regard to this requirement, the Appellate Body has said that, if the measure has a relatively slight trade impact, the more likely that the measure is "necessary". The Appellate Body has also indicated

---

915 Article XX(d) of the GATT 1994 is textually analogous to Article XIV(c) of the GATS, which we consider below.

917 Appellate Body Report on Korea – Various Measures on Beef, paras. 164-166.

920 Appellate Body Report on Korea – Various Measures on Beef, para. 163.
that whether a reasonably available WTO-consistent alternative measure exists must be taken into consideration in applying this requirement.\textsuperscript{921}

\textit{(ii) Applying the legal standard under Article XIV(a) to the facts of this case}

6.478 The Panel will consider in this section whether the prohibition of the remote supply of gambling and betting services imposed by the three relevant US federal laws – namely, the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) – are "necessary" to "protect public morals" and/or to "maintain public order."

\begin{quote}
Are the challenged measures so as to "protect public morals" or to "maintain public order" within the meaning of Article XIV(a)?
\end{quote}

6.479 The United States argues that the remote supply of gambling and betting services raises significant concerns relating to the maintenance of public order and the protection of public morals.\textsuperscript{922} According to the United States, the remote supply of gambling poses threats related to organized crime, money laundering, fraud and other criminal activities; risks to children given the availability of remotely supplied gambling and betting services to children; and particular health risks. The United States submits that it is for these reasons that it places stringent restrictions on the ability of any operator to offer gambling and betting services by remote supply, regardless of whether such services are supplied from the territory of another Member or from within the territory of the United States.\textsuperscript{923}

6.480 Antigua points to a 2001 report prepared by the United States Department of Defense evaluating the social impact of readily available gambling machines, which concluded that the presence of military casinos did not have a negative effect on the morale or financial stability of the United States forces, their family members and other persons – including foreign nationals – who gambled at the government-owned facilities.\textsuperscript{924} Antigua also submits that countries such as the United Kingdom have seen no insuperable public interest issues flowing from the move towards the online supply of gambling and betting services but, rather, have embraced it in a regulated context.\textsuperscript{925}

6.481 In the Panel's view, the evidence adduced establishes that the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) are measures to protect "public morals or public order", for the following reasons.

6.482 A 1961 report by the House of Representative on the Wire Act issued shortly before its entry into force states that:

\begin{quote}
"The purpose of the bill is to assist the various States and the District of Columbia in the enforcement of their laws pertaining to gambling, bookmaking, and like offenses and to aid in the suppression of organized gambling by prohibiting the use of wire communication facilities which are or will be used for the transmission of bets or wagers and gambling information in interstate and foreign commerce."
\end{quote}

6.483 With respect to the Travel Act, during hearings before the Judiciary Committee regarding the Attorney General's Programme to Curb Organized Crime and Racketeering, the then Attorney

\begin{footnotesize}
\textsuperscript{921} Appellate Body Report on Korea – Various Measures on Beef, paras. 163 and 166.
\textsuperscript{922} United States' second written submission, para. 111.
\textsuperscript{923} United States' first oral statement, para. 10.
\textsuperscript{924} Antigua's first written submission, para. 86.
\textsuperscript{925} Antigua's first written submission, para. 19.
\end{footnotesize}
General, Robert F. Kennedy, stated that his program, which included the Travel Act as well as the Wire Act, enabled the federal government to "take effective action against the racketeer who conducts an unlawful business but lives far from the scene in comfort and safety." 927

6.484 We also note that during 2003 hearings before the Subcommittee on Crime, Terrorism and Homeland Security regarding the yet to be enacted Unlawful Internet Gambling Funding Prohibition Act, which, if passed, will prohibit Internet gambling in a similar way to the Wire Act and the Travel Act, reference was made to the threat of money laundering, organized crime, fraud and risks to children (i.e. underage gambling) and health (i.e. pathological gambling) that are associated with Internet gambling. 928

6.485 With respect to the Illegal Gambling Business Act, in the statement of findings made in advance of enactment of that Act, Congress articulated a number of reasons justifying its enactment. In particular, reference was made to the fact that gambling income is the "lifeline of organized crime" and the means by which other illegal activities are financed. Further, Congress stated that gambling "preys upon society", especially the poor. Finally, Congress stated that, from a law enforcement standpoint, "gambling is more susceptible than most organized crime activities to detection and prosecution." 929 The United States has also indicated that US courts have confirmed that the Illegal Gambling Business Act is a measure against organized crime. 930

6.486 In our view, these Congressional statements regarding the respective purposes underlying the Wire Act, the Travel Act and the Illegal Gambling Business Act indicate that various arms of the government of the United States consider these Acts were adopted to address concerns such as those pertaining to money laundering, organized crime, fraud, underage gambling and pathological gambling. We consider that, insofar as the state gambling laws are enforced through the Illegal Gambling Business Act, those state laws may be considered to be enforced for, inter alia, the same purpose as the Illegal Gambling Business Act.

6.487 In light of the above, we conclude that the concerns which the Wire Act, the Travel Act and the Illegal Gambling Business Act seek to address fall within the scope of "public morals" and/or "public order" under Article XIV(a). In other words, we find that the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) are measures that are designed to "protect public morals" and/or "to maintain public order" in the United States within the meaning of Article XIV(a).

Are the challenged measures "necessary" to protect public morals or to maintain public order?

6.488 We now consider whether the Wire Act, the Travel Act and the Illegal Business Act (when read together with the relevant state laws) are "necessary" to protect public morals and/or to maintain public order. In this regard, we recall that we must assess taking into account the relevant jurisprudence of the Appellate Body referred to in paragraph 6.477 above:

(a) the importance of the interests or values that these Acts are intended to protect;

(b) the extent to which these Acts contribute to the realization of the ends respectively pursued by these Acts; and

(c) the respective trade impact of these Acts.

928 Exhibit US-5. See, for example, pp. 1, 6, 10-11, 13.

929 Congressional Record H9711 contained in Exhibit US-32.

Importance of interests or values protected

6.489 The Congressional statements identified above in paragraphs 6.482-6.485 indicate that these Acts are intended to protect society against the threat of money laundering, organized crime, fraud and risks to children (i.e. underage gambling) and to health (i.e. pathological gambling).

6.490 We again note comments made in 1961 by the then Attorney General Robert F. Kennedy to describe the overall intended effect of the Attorney General’s Program to Curb Organized Crime and Racketeering, of which the Wire Act and the Travel Act were part:

"These [hoodlums and racketeers who have become so rich and so powerful] use interstate commerce and interstate communications with impunity in the conduct of their unlawful activities. If we could curtail their use of interstate communications and facilities, we could inflict a telling blow to their operations. We could cut them down to size.

Mr. Chairman, our legislation is mainly concerned with effectively curtailing gambling operations. And we do this, Mr. Chairman, because profits from illegal gambling are huge and they are the primary source of the funds which finance organized crime, all throughout the country."

6.491 In the Congressional statement of findings prefatory to the Illegal Gambling Business Act, Congress described the threat posed by organized crime which was the impetus for the enactment of that Act, in the following terms:

"(1) organized crime in the United States is a highly sophisticated, diversified, and widespread activity that annually drains billions of dollars from America's economy by unlawful conduct and the illegal use of force, fraud, and corruption; (2) organized crime derives a major portion of its power through money obtained from such illegal endeavors as syndicated gambling, loan sharking, the theft and fencing of property, the importation and distribution of narcotics and other dangerous drugs, and other forms of social exploitation; (3) this money and power are increasingly used to infiltrate and corrupt legitimate business and labor unions and to subvert and corrupt our democratic processes; (4) organized crime activities in the United States weaken the stability of the Nation's economic system, harm innocent investors and competing organizations, interfere with free competition, seriously burden interstate and foreign commerce, threaten the domestic security, and undermine the general welfare of the Nation and its citizens."

6.492 On the basis of the foregoing, it is clear to us that the interests and values protected by the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) serve very important societal interests that can be characterized as "vital and important in the highest degree" in a similar way to the characterization of the protection of human life and health against a life-threatening health risk by the Appellate Body in EC – Asbestos.

---

6.493 We accept that a Member may judge that strict controls may be needed to protect the above-mentioned societal interests. However, in the process of "weighing and balancing" this factor against the others to which we must have regard, we consider that it is important to bear in mind that these interests - to protect society against the threat of money laundering, organized crime, fraud and risks to children (i.e. underage gambling) and health (i.e. pathological gambling) - also exist in the context of the non-remote supply of gambling and betting services. Neither party has disputed this.

Yet, in contrast to its treatment of the remote supply of gambling and betting services, the United States does not prohibit outright the non-remote supply of gambling and betting services. We acknowledge that there may be particular aspects associated with remote supply of gambling and betting services that may justify a difference in treatment as compared to the non-remote supply of such services. However, reference must be made to the evidence at hand to determine whether particular aspects associated with the remote supply of gambling and betting services will justify a prohibition, particularly in light of the tolerant attitude displayed in some parts of the United States to the non-remote supply of such services. We consider this issue in further detail below in our discussion of whether or not a WTO-consistent alternative is reasonably available to the United States.

Contribution to ends pursued

6.494 As for the extent to which the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) contribute to the realization of the ends pursued by those laws, we recall our finding above that these laws seek to address concerns pertaining to money laundering, organized crime, fraud, underage gambling and pathological gambling.

Given that the Wire Act and the Travel Act prohibit the remote supply of gambling and betting services, which has been associated with each of these concerns, these Acts must contribute, at least to some extent, to addressing these concerns. Further, the Illegal Gambling Business Act prohibits conducting, financing, managing, supervising, directing or owning all or part of an "illegal gambling business" which is defined as a gambling business which violates the law of a state (or political subdivision) of the United States.

We consider that the Illegal Gambling Business Act must contribute, at least to some extent, to addressing these concerns.

Trade impact

6.495 With respect to the trade impact of the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws), Antigua argues that the effect of these laws is total prohibition, which is the most trade-restrictive approach possible. We have no doubt that these Acts have a significant restrictive trade impact. Indeed, the United States has admitted as much when arguing that a Member has "the right to

---

934 The United States submits that it "maintains and applies a regulatory distinction between remotely supplied gambling services and other gambling services, with the former subject to even tighter restrictions than the latter. This distinction arises from numerous distinguishing law enforcement, consumer protection, and health concerns associated with the remote supply of gambling": United States' second written submission, para. 45. The United States implicitly acknowledges in this statement that law enforcement, consumer protection, and health concerns also exist in the context of the non-remote supply of gambling and betting services. Antigua also submits that underage gambling, pathological gambling, money laundering, crime, fraud and consumer protection concerns exist in the context of the non-remote supply of gambling and betting services: Antigua's first oral statement, paras. 70-87.

935 See paras. 6.499-6.521 below.

936 See para. 6.486 above.

937 See paras. 6.499-6.521 below.

938 Antigua's second oral statement, para. 71.
heavily restrict a highly risky service (in this case, gambling by remote supply) while allowing the use of a less risky service [in this case, gambling by non-remote means]." \(^{939}\)

6.496 In the assessment of the trade impact, the Appellate Body in Korea – Various Measures on Beef referred to the GATT panel on US – Section 337 where the panel made clear that a Member must first explore and exhaust all GATT/WTO compatible alternatives before resorting to WTO-inconsistent alternatives.\(^{940}\) In examining whether a reasonably available WTO-consistent alternative measure existed, the Appellate Body in Korea – Various Measures Affecting Beef examined the means that had been used by Korea to address the prevention of fraudulent conduct in relation to the sale of other food products.

6.497 Recalling the Appellate Body's reasoning in Korea – Various Measures Affecting Beef, we need to consider whether the United States has, in other contexts, used measures other than a prohibition to address similar concerns to those that are alleged to be the basis for its justification in this case of the prohibition on the remote supply of gambling and betting services. The only other relevant context to which reference has been made in this dispute is gambling and betting services supplied by non-remote means.

6.498 In this dispute, and for the reasons discussed hereafter, the Panel considers that some of the concerns the United States has identified are specific only to the remote supply of gambling and betting services. Therefore, it would be inappropriate to attempt to compare that treatment of these specific concerns with the treatment of whatever concerns the United States has with the non-remote supply of these services. We examine below each concern invoked by the United States.

6.499 With respect to \textit{money laundering}, the United States argues that the volume, speed and international reach of remote gambling transactions combined with the offshore locations of most remote suppliers and the virtual anonymity of such transactions mean that the "layering and integration" stages of money laundering are effectively facilitated. More particularly, the United States submits that the remote supply of gambling and betting services is particularly well-suited to concealing and disguising the true nature, source and ownership of the ill-gotten gains of crime.\(^{941}\)

6.500 The United States General Accounting Office Report to Congressional Requestors entitled "Internet Gambling: An Overview of the Issues" refers to these concerns.\(^{942}\)

6.501 In addition, we have before us a 2001 Report on Money Laundering Typologies prepared by the Financial Action Task Force on Money Laundering. That report tends to confirm the existence of the concerns identified by the United States in the context of the remote supply of gambling and betting services that relate to the audit trail of remote transactions. In particular, the report states:

"Despite attempts to deal with the potential problems of Internet gambling by regulating it, requiring licences in order to operate, or banning such services outright, a number of concerns remain in addition to the inability to track ... Internet links ..."

\(^{939}\) United States' second written submission, para. 93.

\(^{940}\) The Appellate Body in Korea – Various Measures on Beef at para. 165 referred to the GATT panel US – Section 337 which stated: "It was clear to the Panel that a contracting party cannot justify a measure inconsistent with another GATT provision as "necessary" in terms of Article XX(d) if an alternative measure which it could reasonably be expected to employ and which is not inconsistent with other GATT provisions is available to it. By the same token, in cases where a measure consistent with other GATT provisions is not reasonably available, a contracting party is bound to use, among the measures reasonably available to it, that which entails the least degree of inconsistency with other GATT provision": Panel Report on US – Section 337, para. 5.26.

\(^{941}\) United States' first written submission, paras. 12 \textit{et seq}; United States' second oral statement, paras. 59-60.

\(^{942}\) Exhibit AB-17, p. 35.
For example, transactions are primarily performed through credit cards, and the offshore placement of many Internet gambling sites makes locating and prosecuting the relevant parties more difficult if not impossible. Furthermore, gambling transactions, the records of which might be needed as evidence, are conducted at the gambling site and are software-based; this may add to the difficulty of collecting and presenting such evidence.  

6.502 Along similar lines, in 2002, the Deputy Assistant Attorney General made the following statement in a special briefing on "Money Laundering and Payment Systems in Online Gambling":

"The anonymous nature of the Internet and the use of encryption makes it difficult to trace the transactions. The gambling business may also not maintain the transaction records, in which case tracing may be impossible. While regulators in the United States can visit physical casinos, observe their operations, and examine their books and records to ensure compliance with regulations, this is far more difficult, if not impossible, with virtual casinos."

6.503 Similar statements have been made during a 2003 Hearing before the Subcommittee on Crime, Terrorism, and Homeland Security of the Committee on the Judiciary on the Unlawful Internet Gambling Funding Prohibition Act and the Internet Gambling Licensing and Regulation Commission Act. The concern expressed by the United States regarding the anonymity of transactions is also reflected in several of the recommendations made in the 2001 Report on Money Laundering Typologies that are aimed at addressing the specific difficulties associated with remote gambling transactions. In particular, the report recommends that Internet Service Providers be required to maintain reliable subscriber registers with appropriate identification information.

6.504 The concern expressed by the United States regarding the international reach of remote supply gambling and betting transactions appears to be confirmed in an example referred to in the 2001 Report on Money Laundering Typologies where money flows were detected in many parts of the world.

6.505 Antigua has not pointed to any evidence that calls into question the specific concerns referred to above. Rather, Antigua points to evidence indicating that money laundering is at least as grave a concern in relation to the supply of non-remote gambling and betting services as in the case of the remote supply of such services. The United States does not dispute that casino gambling can be used, among other things, to launder the cash proceeds of crime during the placement stage of money laundering. In any event, it is our view that, the fact that money laundering may exist in the context of the non-remote supply of gambling and betting services does not mean that the United States is not entitled to address differently the aspects of this concern that are specific to the remote supply of gambling and betting services, namely, the volume, speed and international reach of remote gambling transactions combined with the offshore locations of most remote suppliers and the virtual anonymity of such transactions.

944 Exhibit AB-86, p. 4. A similar statement was made by the same Deputy Assistant Attorney General before the Subcommittee on Crime, Terrorism, and Homeland Security: Exhibit AB-85, p. 3.
945 See Exhibit US-5.
947 Exhibit US-7, Example 1, pp. 6-7.
948 See, for example, Exhibit AB-79; Exhibit AB-147; Exhibit AB-149; Exhibit AB-150; Exhibit AB-154.
949 United States’ first written submission, paras. 12 et seq; United States’ second oral statement, paras. 59-60.
6.506 With respect to fraud, the United States submits that the risk of fraud is heightened in the case of the remote supply as compared to the non-remote supply of gambling and betting services because the barriers to establishing an online gambling operation are low so that unscrupulous operators can appear and disappear within minutes.\footnote{United States' second written submission, para. 51.}

6.507 We have seen evidence that tends to support the United States' concern that low barriers to entry in the context of the remote supply of gambling and betting services heightens the risk of fraud. Indeed, in 2002, the Deputy Assistant Attorney General made the following statement in a special briefing on "Money Laundering and Payment Systems in Online Gambling":

"Although there are certainly legitimate companies who are either operating or who want to operate on-line casinos in an honest manner, the potential for fraud connected with casinos and bookmaking operations in the virtual world is far greater than in the physical realm. Start-up costs are relatively low and cheap servers and unsophisticated software are readily-available. On-line casinos and bookmaking establishments operate in many countries where effective regulation and law enforcement is minimal or non-existent. Like scam telemarketing operations, on-line gambling establishments appear and disappear with regularity, collecting from losers and not paying winners, and with little fear of being apprehended and prosecuted."\footnote{Exhibit AB-86, p. 2.}

6.508 Similar statements are contained in the National Gambling Impact Study Commission Final Report.\footnote{Exhibit AB-10, p. 5-11. See also Exhibit AB-159, p. 2.}

6.509 Antigua has pointed to evidence indicating that the non-remote supply of gambling and betting services may be as susceptible to fraud as is the remote supply of these services.\footnote{See Exhibit AB-156, which is a document prepared by Antigua entitled "Fraud within the United States gambling industry".} However, we do not consider that this evidence refutes the existence of the specific fraud concerns that the United States maintains exist in the context of the remote supply of gambling and betting services, namely that because the barriers to establishing an online gambling operation are low, unscrupulous operators can appear and disappear within minutes.

6.510 The essence of the United States' health concerns in relation to the remote supply of gambling and betting services relate to the isolated environment in which gamblers may operate, which protects them from social stigma and enables them to gamble without interruption for extended periods of time.\footnote{United States' second oral statement, para. 30.}

6.511 The evidence tends to support the existence of the United States' concerns regarding the isolated environment of consumers of remotely supplied gambling and betting services. In particular, in 2003, the Deputy Assistant Attorney General stated before the Subcommittee on Crime, Terrorism, and Homeland Security that:

"Unlike on-site gambling, on-line gambling is readily available to anyone with an Internet connection at all hours of the day or night. This present a particular danger for compulsive gamblers. As was recently pointed out by the American Psychiatric Society: "Internet gambling, unlike many other forms of gambling activity, is a solitary activity, which makes it even more dangerous; people can gamble uninterrupted and undetected for unlimited periods of time." Indeed, the problems associated with pathological and problem gamblers, a frighteningly-large percentage
of which are young people, are well-established and can be measured in the ruined lives of both the gamblers themselves and their families.\(^5\)

6.512 Similar statements are contained in the National Gambling Impact Study Commission Final Report.\(^6\)

6.513 The concern regarding the relative anonymity associated with remote gambling, which protects consumers from social stigma, is acknowledged in a statement made by two professors from the International Gaming Research Unit, Division of Psychology, in Nottingham Trent University, United Kingdom entitled "Is Internet gambling more addictive and/or problematic than other forms of gambling?", which is relied upon by Antigua. In particular, it states that "Another concern that has been noted concerns the relative anonymity of Internet gambling, which may lead to disinhibition and increased levels of gambling."\(^7\) The authors of the statement conclude, \textit{inter alia}, that:

"There are a number of factors that make online activities like Internet gambling potentially seductive and/or addictive. Such factors include anonymity, convenience, escape, dissociation/immersion, accessibility, event frequency, interactivity, disinhibition, simulation, and associability."\(^8\)

6.514 Antigua has argued that there is no evidence that cross-border gambling results in higher levels of pathologies than non-remote gambling.\(^9\) However, in our view, the United States is not submitting that remote gambling may result in a higher incidence of pathological gambling. Rather, the United States argues that remote gambling presents "special health risks" associated with the isolated and anonymous environment in which such gambling takes place. We do not consider that Antigua's evidence disproves the existence of this specific concern.

6.515 With respect to \textit{underage gambling}, the United States argues that there is no means to prevent minors from gaining access to remotely supplied gambling and betting services comparable to the means available in connection with the non-remote supply of gambling services in the United States.\(^10\)

6.516 The evidence tends to support the United States' assertion that age verification is a specific concern with respect to the remote supply of gambling and betting services. In particular, in 2003, the

---

\(^{5}\) Exhibit AB-85, p. 2.

\(^{6}\) Exhibit AB-10, p. 5-5. See also Exhibit AB-159, p. 2.

\(^{7}\) Exhibit AB-80, p. 8. The statement refers to a 2003 paper written by one of the co-authors of the statement that suggests that remote gamblers are, perhaps, not as anonymous as they would think because of, \textit{inter alia}, the existence of the ability of Internet gambling operators to collect data about gamblers. However, nowhere does the statement point to evidence to suggest that gamblers are aware that their anonymity is being compromised by this facility.

\(^{8}\) Exhibit AB-80, p. 12.

\(^{9}\) In this regard, Antigua refers to a statement prepared by two of its consultants for this dispute, namely Professor Mark Griffiths and Dr Richard Wood, entitled "Is Internet gambling more addictive and/or problematic than other forms of gambling?" contained in Exhibit AB-80. The statement concludes that "there is no greater risk of a pathological response as a result of exposure to Internet-based gambling opportunities, than as a result of exposure to other forms of gambling opportunity."

\(^{10}\) Exhibit AB-80, p. 2. Antigua also relies upon a statement by another of its consultants in this dispute, namely, Dr Howard Shaffer, who concludes that "health risks associated with Internet based gambling are not meaningfully different from other electronic gambling": Exhibit AB-185, p. 8.

\(^{30}\) In para. 30 of its first oral statement, the United States submits that: 'Remote gambling also presents special health and youth protection risks in part because it is available to anyone, anywhere – including compulsive gamblers and children – who can gamble 24 hours a day with a mere 'click of the mouse'. Isolation and anonymity compound the danger. In the words of a gambling addict interviewed on the videotape we have provided, 'nobody has to see you do it' and 'nobody has to know.'"
Deputy Assistant Attorney General stated before the Subcommittee on Crime, Terrorism, and Homeland Security that:

"On-line gambling also makes it far more difficult to prevent minors from gambling. Unlike traditional physical casinos and Off-Track-Betting parlors, the operators of gambling websites cannot look at their customers to assess their age and request photo identification. Currently, Internet gambling businesses have no reliable way of confirming that gamblers on their website are not minors who have gained access to a credit card. Although some companies are developing software to try to detect whether a player is old enough to gamble or whether that player is from a legal jurisdiction, such software has not been perfected and would, of course, be subject to the same types of flaws and vulnerabilities that could be exploited by hackers."  

6.517 Similar statements were made during a 2003 Hearing before the Subcommittee on Crime, Terrorism, and Homeland Security of the Judiciary Committee on the Unlawful Internet Gambling Funding Prohibition Act and the Internet Gambling Licensing and Regulation Commission Act and are contained in the National Gambling Impact Study Commission Final Report.

6.518 The evidence indicates that credit card gateways are the primary means of verifying age online. However, despite suggestions to the contrary by Antigua, the evidence suggests that credit cards have proved to be an inadequate means to restrict children's access to Internet gambling and betting web sites. In particular, in his testimony before the Commission on Online Protection in 2000, the Senior Vice President for Public Policy of Visa USA stated:

"The Child Online Protection Act ... is designed to prevent a person who is a minor from accessing materials that are 'harmful to minors' over the Internet. Under the Act, a defendant can assert an affirmative defense to prosecution under the Act by showing that the defendant has made a good faith effort to restrict access by persons under the age of 17 to obscene materials on the defendant's Internet site. One way for the defendant to assert this affirmative defense is to show that the defendant required use of a credit card or a debit card to access the Internet site. In providing so, the Act basically assumes that only adults have access to a credit card or debit card.

To the contrary, it is important for the Commission to understand that this assumption simply is not correct. Access to a credit card or a debit card is not a good proxy for

---

962 Exhibit AB-85, p. 2. See also Exhibit AB-17, pp. 17 et seq, Exhibit AB-164 and Exhibit US-18.
964 Exhibit AB-10, p. 5-4.
965 See, for example, the Article entitled "Why Online Age Checks Don't Work" contained in Exhibit US-28. The Article states that "The credit card gateway as age verification standard has been in place ever since the late 1990's." Antigua submits as much when it states that the US Congress has legislated to provide that the use of credit cards is an effective way to keep children from engaging in potentially harmful behaviour on the Internet: Antigua's second oral statement, para. 59.
966 See Exhibit AB-158, which is a document prepared by Antigua entitled "Youth Gambling". This document states, inter alia, that "United States legislation recognizes that the use of credit cards is an effective means to prevent underage access". We also note that Antigua has submitted evidence in Exhibits AB-163, AB-165 and AB-166 to suggest that underage gambling and betting occurs when the relevant services are supplied through non-remote means in the United States. However, in our view, this does not indicate that the United States' concerns with respect to the remote supply of gambling and betting services do not exist. Antigua has also submitted evidence in Exhibits AB-167, AB-168, AB-169, AB-170 and AB-171 that "younger people" are the target of marketing strategies of non-remote suppliers of gambling and betting services. However, there is no indication that the reference to "younger people" in the exhibited documents means "minors" or "underage gamblers". Therefore, we will disregard this evidence.
age. The mere fact that a person uses a credit card or a debit card in connection with a transaction does not mean that this person is an adult.

Many individuals under the age of 17 have legitimate access to, and regular use of, credit cards and debit cards. For example, parents may designate their child as an 'authorized user' of the parent's credit card or debit card. This actually is quite common, particularly for credit cards. Whenever this occurs, the child will have access to the parent's credit card number or debit card number and can use that card number to access materials deemed "harmful to minors" on the Internet.

In addition, many children under the age of 17 have their own deposit accounts and may have access to a debit card that accesses such account.

... 

Thus, although the [Child Online Protection] Act assumes that only adults have access to a credit card or a debit card, it is important for the Commission to understand that this assumption is simply not true. As a result, the Commission may want to focus its attention on more suitable methods of verifying age.

In relation to organized crime, in essence, the United States argues that the remote supply of gambling and betting services is cause for graver concern than is the case for the non-remote supply of such services because of the amount of money and manipulability inherent in Internet gambling; the opportunity to use gambling by remote means of supply as a clearinghouse through which organized crime bookmakers in the United States can "lay off" their bets; and the opportunity for organized criminals to more easily hide their involvement in gambling and evade law enforcement by operating beyond the intense scrutiny of regulators and law enforcement officials in the gambler's jurisdiction.

The evidence we would have expected to see in proving the existence of the particular organized crime concerns referred to by the United States would have been evidence demonstrating, inter alia, that the "inherent manipulability" of the Internet makes it more attractive to participants in organized crime and that organized criminals find it easier to hide their bets, thereby evading the scrutiny of law-enforcement officers. We have not seen any concrete evidence of this nature. Rather, the United States has pointed us to instances of organized crime involvement and prosecution in connection with the remote supply of gambling and betting services. The non-remote supply of gambling and betting services is permitted in much of the United States, although it also gives rise to concerns in respect of organized crime. In the absence of evidence demonstrating the nature and extent of the risks of organized crime presented by remote gambling and betting, we are not fully satisfied that the United States has demonstrated that it could not guard against those risks through means that are WTO-consistent.

To sum up, the United States has certain concerns with respect to money laundering, fraud, health and underage gambling that, in our view, are specific to the remote supply of gambling and betting services. Therefore, the measures used by the United States to address its concerns with

---

967 Exhibit US-27, pp. 2-4. In addition, the United States General Accounting Office Report to Congressional Requestors entitled "Internet Gambling: An Overview of the Issues" indicates that efforts aimed at restricting the use of credit cards for Internet gambling have been hampered, inter alia, by Internet gambling sites that attempt to disguise their transactions to avoid them being blocked by banks: Exhibit AB-17, p. 4. See also Exhibit AB-159, p. 2.

968 United States' second written submission, paras. 46 et seq.

969 See, for example, Exhibit US-3; Exhibit US-4; Exhibit US-5; Exhibit US-6; Exhibit US-14; Exhibit US-22; Exhibit US-23.

970 See, for example, Exhibit AB-145.
respect to money laundering, fraud, health and underage gambling in the context of the non-remote supply of gambling and betting services cannot be compared and examined as WTO-consistent alternatives that the United States could have used to address the specific concerns it has with regard to the remote supply of gambling and betting services.

6.522 In our consideration of whether the United States has explored and exhausted reasonably available WTO-consistent alternatives, we note, importantly, that Antigua has asserted that it has in place a regulatory regime that is sufficient to address the specific concerns identified by the United States with respect to the remote supply of gambling and betting services. These include measures aimed at countering money laundering that meet international standards, requirements for identity verification, fraud prevention and gambling addiction, and that under-age gambling is expressly prohibited by Antiguan law.

6.523 Antigua further submits that it has offered to consult with the United States with a view to meeting any specific concerns that may remain, notwithstanding the Antiguan regulatory regime. Antigua claims that the United States has refused to engage in such consultations. Antigua also points to lack of collaboration and consultation efforts by the United States through a Mutual Legal Assistance Treaty that exists between the two countries to address concerns of the type raised by the United States. Antigua submits that during consultations with the United States in the context of this dispute, Antigua again expressed its willingness to cooperate with the United States to find a mutually agreeable regulatory scheme. However, according to Antigua, the United States has on all occasions refused to engage in consultation or cooperation. Antigua claims that the United States' refusal to engage in consultations with Antigua is contrary to Article XIV of the GATS.

971 Antigua's first written submission, paras. 34, 35, 43 and 45 et seq. See also Exhibit AB-5.
972 Antigua's first written submission, para. 43. In particular Antigua refers to a CFATF Report (contained in Exhibit AB-8) which states that "the government of Antigua and Barbuda has shown a clear commitment to a regulatory anti-money laundering regime that meets international standards" and that "Antigua and Barbuda's new institutional anti-money laundering framework is adequate and compliant with international standards and is being enforced." Antigua adds that in practice as well as by requirement of Antiguan law, winnings and the balance of deposits are transmitted back to the account from which the initial deposit came or, if the deposit was by credit card, sometimes by credit back to the same credit card. In some cases, amounts are paid to players by cheque. In addition to satisfying Antigua's regulatory requirements for identity verification, anti-fraud prevention motivates operators to ensure identification, a number of operators use commercially available databases where large amounts of information on persons can be found, including dates of birth and employment, criminal records, credit history and residential addresses. Antigua submits that each Antiguan operator maintains an "anti-fraud" department with the objective of preventing abuses of the gaming systems, collusion among players, financial fraud and credit card abuse, under-age playing and other occurrences which can result in financial losses to the operator. See also Exhibit AB-6.
973 Antigua's first written submission, paras. 45 et seq. In particular Antigua submits that under-age gambling is expressly prohibited by Antiguan law. According to Antigua, experience has shown that under-age gambling with Antiguan operators is relatively rare for several reasons. The first obstacle to gambling and betting by minors is the age verification that forms a part of the identification process. A second material obstacle is the need to fund an account before any wagering can commence, which requires access to financial instruments such as cheques and a funded bank account, the ability to send funds by wire transfer from a funded bank account or access to a valid credit card. Also, in practice, many Antiguan operators provide direct links from their web sites to parental control providers such as "Cybersitter". Antigua submits that it is a requirement of Antiguan law that operators display on their sites a warning of the addiction possibilities of gambling and information to assist compulsive gamblers. Moreover, most operators appear to be able to detect patterns of problem gamblers either at the sign-up stage (where the operators refuse to authorize funding of or playing on an account) or later on during the course of the relationship with the player, in which event the person's account will often be closed and the balance returned to the player. See also Exhibit AB-6.
974 Antigua's first oral statement, para. 4; Antigua's second oral statement, para. 81; Antigua's comments on the United States' reply to Panel question No. 43.
6.524 The United States submits that it has had significant interactions with Antigua on law enforcement issues. The United States also submits that it has made clear that it would welcome Antigua's continued assistance in the investigation and prosecution of money launderers and others who violate US law. The United States asserts that it was not aware of any effort by the government of Antigua to pursue such cooperation but, in any event, Antigua's position in this dispute has made it clear that Antigua is unwilling to recognize the existence of specific US regulatory concerns surrounding remote supply of gambling. The United States adds that, while it is not true that the United States has "refused" to pursue international requests for assistance as suggested by Antigua, there is a basis for its reluctance to do so since this case involves Internet gamblers. For example, the United States points to the fact that Antigua publicly took a position contrary to the United States in the prosecution of an Antigua-based remote supplier of gambling and betting services, Jay Cohen, by filing an amicus brief in support of Mr. Cohen in the US Supreme Court. In addition, the United States is troubled by the fact that a convicted felon, William Scott, was licensed as an Internet supplier of gambling and betting services in Antigua. According to the United States, these matters suggest that requests for assistance would not be fruitful.

6.525 Antigua also claims that the United States' failure to respond to Antigua's invitation to engage in international cooperation as to how to deal with the specific concerns the United States has with the remote supply of gambling and betting services is inconsistent with the United States' WTO obligations. Antigua submits that international regulatory cooperation in the gambling sector is possible and is already taking place. The United States responds that, as a legal matter, nothing in the text of the GATS requires such action. Further, as a factual matter, the absence of any US domestic regulatory regime that permits the remote supply of gambling services makes it unreasonable for Antigua to expect the United States to seek negotiations to permit such a regime for its cross-border suppliers.

6.526 We recall that Members are obliged to consider all reasonably available WTO-consistent alternatives before imposing a WTO-inconsistent measure (which may be justified by the relevant WTO exceptions provisions). In this regard, the Panel notes the following statements made by the panel in US – Tuna (Mexico) in its un-adopted report: "The United States had not demonstrated to the Panel – as required of the party invoking an Article XX exception – that it had exhausted all options reasonably available to it to pursue its dolphin protection objectives through measures consistent with the General Agreement, in particular through the negotiation of international cooperative arrangements, which would seem to be desirable in view of the fact that dolphins roam the waters of many states and the high seas." We understand that the Appellate Body has recognized that there may be situations where unilateral measures are justified under Article XX of the GATT. On the other hand, we note that the Appellate Body has also insisted that "as far as possible', a multilateral approach is strongly preferred."

975 United States' reply to Panel question No. 43.
976 United States' reply to Panel question No. 43; United States' closing statement at the Panel's second substantive meeting with the parties, para. 9.
977 Antigua's second oral statement, paras. 81-82.
978 Antigua's second oral statement, para. 82.
979 United States' second written submission, para. 120.
980 Panel Report on US – Tuna (Mexico), para. 5.28. With regard to the legal value of an unadopted GATT panel report, we recall that the Appellate Body in Japan – Taxes on Alcoholic Beverages stated at page 15: "[W]e agree that a panel could nevertheless find useful guidance in the reasoning of an unadopted panel report that it considered to be relevant".
982 The Appellate Body in US – Shrimp (Article 21.5 – Malaysia), at para. 124 of its Report added that: "[I]t is one thing to prefer a multilateral approach in the application of a measure that is provisionally justified under one of the subparagraphs of Article XX of the GATT 1994; it is another to require the conclusion of a
6.527 During the course of these Panel proceedings, we have concluded that the United States has made a full market access commitment in its Schedule for gambling and betting services for mode 1. The principle of effective treaty interpretation requires that meaning and effect be given to this commitment, regardless of the motivation behind that commitment (even if the commitment may have been undertaken inadvertently). In our view, a full commitment in respect of market access in a Member’s schedule for a particular mode of supply creates legitimate trade expectations and, thus, obligations with respect to the committed sector.

6.528 Article XIV allows Members to derogate from their obligations under GATS (including any specific commitments they may have undertaken) subject to the conditions stipulated in that Article. Under Article XIV(a), the challenged measures must be "necessary" to protect public morals and/or public order. Based on Appellate Body decisions, we believe that a key element of the application of the "necessity" test of Article XIV in this dispute is whether the United States has explored and exhausted reasonably available WTO-consistent alternatives to the US prohibition on the remote supply of gambling and betting services that would ensure the same level of protection.

6.529 In our view, it is in the context of assessing whether or not reasonably available WTO-consistent alternatives exist and have been explored by the United States that Antigua's invitation to the United States to engage in consultations and/or negotiations on the particular concerns associated with the remote supply of gambling and betting services identified by the United States is relevant. Through bilateral and multilateral consultations and negotiations, Members may be able to determine whether their concerns can be adequately addressed in a WTO-consistent manner. In this case, we note that a Mutual Legal Assistance Treaty exists between Antigua and the United States, that could be the framework within which such consultations could take place.

6.530 We do not overlook the possibility that, given the circumstances surrounding this case, the United States may have been convinced that its specific concerns could not have been adequately addressed through such consultations and/or negotiations. Indeed, with respect to the possibility of participating in international consultations and negotiations in this case, the United States suggested that consultations would not have been "fruitful".

6.531 Even if the United States is of the view that no such alternative currently exists, the United States cannot prejudice that the situation will remain unchanged in the future. The United States' obligation to consult with Antigua before and while imposing its prohibition on the cross-border multilateral agreement as a condition of avoiding 'arbitrary or unjustifiable discrimination' under the chapeau of Article XX. We see, in this case, no such requirement."

983 We recall that Article XVI:4 of the WTO Agreement provides that "Each Member shall ensure the conformity of its laws, regulations and administrative procedures with its obligations as provided in the annexed Agreement."

984 In this regard, we note that a number of jurisdictions in the world have legalized Internet gambling. See, for example, Exhibit AB-2, p. 3; Exhibit AB-10, p. 5-10; Exhibit AB-17, p. 3 and 18 et seq, Exhibit AB-36, pp. 13 et seq and 42 et seq. We also note that suggestions have been made in US literature as to how the concerns that have been raised in the United States regarding the remote supply of gambling and betting services may be addressed: Exhibit AB-159, pp. 6–7 and Exhibit AB-160, p. 9.
supply of gambling and betting services derives from the fact that it has undertaken a specific market access commitment for mode 1. More specifically, it is because of the existence of this specific market access commitment with respect to cross-border trade of gambling and betting services that the United States remains obliged to consider WTO-consistent alternatives, including those that may be suggested by Antigua and other Members, before and while maintaining its prohibition on the cross-border supply of gambling and betting services. In rejecting Antigua’s invitation to engage in bilateral or multilateral consultations and/or negotiations, the United States failed to pursue in good faith a course of action that could have been used by it to explore the possibility of finding a reasonably available WTO-consistent alternative.  

"Weighing and Balancing"

6.532 Having identified and evaluated each of the elements that we must assess in determining whether the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) are “necessary” to protect public morals and/or to maintain public order, we must now "weigh and balance" those elements.

6.533 As stated above, we conclude that the interests protected by the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) protect very important societal interests in the United States. We also conclude that the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) contribute to the realization of the ends pursued by those laws in the United States. On the other hand, as stated above in paragraph 6.495, we also find that the measures in question have a significant impact on trade. In this regard, we find that, while the United States has legitimate specific concerns with respect to money laundering, fraud, health and underage gambling that are specific to the remote supply of gambling and betting services, which suggests that the measures in question are "necessary" within the meaning of Article XIV(a), the United States has declined Antigua’s invitation to engage in bilateral and/or multilateral consultations and/or negotiations to determine whether there is a way of addressing its concerns in a WTO-consistent manner.

6.534 We consider that, given the circumstance of this case and for the reasons explained above in paragraphs 6.526-6.530, the United States, before imposing a WTO inconsistent measure, was obliged to explore these options in a good faith manner with a view to exhausting WTO-consistent alternatives, even if it considered that the measures in question were "indispensable".

Overall conclusion on whether the Wire Act, the Travel Act and the Illegal Gambling Business Act are provisionally justified under Article XIV(a)

6.535 In sum, we conclude that, for the reasons explained above, the United States has not been able to provisionally justify, under Article XIV(a) of the GATS, that the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read...
together with the relevant state laws \( ^{989} \) are necessary to protect public morals and/or public order within the meaning of Article XIV(a). We, nonetheless, acknowledge that such laws are designed so as to protect public morals or maintain public order.

(d) Provisional justification under Article XIV(c)

(i) The legal standard under Article XIV(c)

6.536 Pursuant to the text of Article XIV(c), in determining whether a challenged measure is provisionally justified under that Article, three elements must be demonstrated by the Member who invokes Article XIV(c), namely:

(a) the measure for which justification is claimed must "secure compliance" with other laws or regulations;

(b) those other "laws or regulations" must not be inconsistent with the WTO Agreement; and

(c) the measure for which justification is claimed must be "necessary" to secure compliance with those other laws or regulations. \( ^{990} \)

6.537 We note that, textually, Article XIV(c) is very similar to Article XX(d) of the GATT 1994. Accordingly, on the basis of the comments made by the Appellate Body to which we have referred above regarding the applicability of jurisprudence under the GATT 1994 to the GATS \( ^{991} \), we will refer to and rely upon such jurisprudence to the extent to which it is applicable and relevant in our interpretation of Article XIV(c).

Measures to "secure compliance" with laws or regulations

6.538 With respect to the first element, the Panel notes that, in determining whether a measure "secures compliance" with laws and regulations, the GATT panel in \textit{EEC – Parts and Components} found that such phrase in Article XX(d) of the GATT 1994 is meant "to enforce obligations under laws and regulations" rather than "to ensure the attainment of the objectives of the laws and regulations". \( ^{992} \) We consider such a finding useful in the context of Article XIV(c) of the GATS in two respects. First, it indicates that the reference to "secure compliance" in Article XIV means that the measures for which justification is sought must "enforce" the relevant laws and regulations. Second, it indicates that the measures for which justification is sought must enforce 'obligations'...
contained in the laws and regulations rather than merely ensure attainment of the objectives of those laws and regulations.

6.539 As for the degree to which a measure must "secure compliance" with obligations under other laws and regulations, we note that the panel in *Korea – Various Measures on Beef* recognized that a measure need not be designed exclusively to "secure compliance" with the justifying law. Rather, the panel in that case accepted that it was sufficient if a measure was put in place, at least in part, in order to secure compliance with the justifying legislation.993

"Laws or regulations which are not inconsistent with the provisions of this Agreement"

6.540 As for the second element, we note that Article XIV(c) provides a non-exhaustive list of laws or regulations "which are not inconsistent with the provisions of this Agreement". The list refers to laws and regulations for the prevention of deceptive and fraudulent practices or to deal with the effects of a default on services contracts; the protection of the privacy of individuals in relation to the processing and dissemination of personal data; and the protection of confidentiality of individual records and accounts; and safety. Accordingly, laws and regulations other than those that fall within the list may be relied upon in justifying a GATS-inconsistent measure under Article XIV(c) provided that those other laws and regulations are WTO-consistent.

Measure "necessary" to secure compliance with laws or regulations

6.541 With respect to the third element, the Panel recalls the "weighing and balancing" test articulated by the Appellate Body in *Korea – Various Measures on Beef* as the basis for making a determination as to whether a measure is "necessary" within the meaning of Article XX(d) of the GATT 1994.

6.542 On the basis of the articulation of the "weighing and balancing" test by the Appellate Body in *Korea – Various Measures on Beef* and, subsequently, in *EC – Asbestos*,994 we believe that, in the context of Article XIV(c), we must assess:

(a) the importance of interests or values that the laws or regulations to be enforced are intended to protect.

(b) the extent to which the enforcement measure contributes to the realization of the end pursued, that is, to the securing of compliance with the laws or regulations to be enforced.

(c) the trade impact of the enforcement measure.

(ii) Applying the legal standard under Article XIV(c) to the facts of this case

What are the "laws and regulations" relied upon by the United States?

6.543 As noted above, the measure for which justification is claimed must secure compliance with "other laws or regulations". The United States submits that the US Congress designed the Wire Act, the Travel Act and the Illegal Gambling Business Act in large part to serve as law enforcement tools to secure compliance with other WTO-consistent US laws, namely, state gambling laws and criminal laws related to organized crime.995

---

995 United States' second written submission, paras. 95-106.
6.544 With respect to the *state gambling laws*, the United States argues that the Wire Act, the Travel Act and the Illegal Gambling Business Act secure compliance with state laws that prohibit or restrict gambling. The United States notes that the substance of most of the relevant state laws are included in one of Antigua’s exhibits.

6.545 The United States argues that a Member's laws and regulations are presumed to be consistent with WTO rules unless proven to be otherwise. According to the United States, although Antigua challenges some of the state laws upon which the United States seeks to rely in its defence under Article XIV(c), Antigua has not shown that any are inconsistent with the GATS. Antigua submits that, to the extent that US state gambling laws are inconsistent with the GATS, they cannot be invoked as the basis for a defence under Article XIV(c).

6.546 The Panel recalls that the United States must demonstrate that the Wire Act, the Travel Act and the Illegal Gambling Business Act are necessary to secure compliance with the state gambling laws.

6.547 The United States has noted that most of the state gambling laws upon which it relies in justifying the Wire Act, the Travel Act and the Illegal Gambling Business Act under Article XIV(c) are those challenged by the Antigua in its Panel request. However, the United States has provided us with no specific discussion of why and how the various state laws are WTO-consistent other than to say that Antigua has failed to make out a prima facie case with respect to those laws and that, therefore, their WTO-consistency can be presumed. In the Panel's view, this assertion is not enough to discharge the United States' obligation to demonstrate that it complied with the requirements of Article XIV(c). This failure is particularly significant in light of the fact that we have concluded above that, of the state laws upon which the United States seeks to rely, the state laws of Louisiana, Massachusetts, South Dakota and Utah are inconsistent with US commitments in its Schedule under Article XVI of the GATS. Accordingly, we conclude that the United States is not entitled to rely upon state gambling laws in its defence under Article XIV(c).

6.548 In relation to the *criminal laws related to organized crime*, the United States submits that the Wire Act, the Travel Act and the Illegal Gambling Business Act are measures "against organized crime". The United States argues that, as measures against organized crime, the Wire Act, the Travel Act and the Illegal Gambling Business Act secure compliance with US laws and regulations that define and/or prohibit organized crime, as well as laws and regulations that prohibit the criminal activity that, when committed in certain ways, constitutes organized crime. In this regard, the United States specifically refers to the Racketeer Influenced and Corrupt Organizations statute ("RICO

---

996 United States' reply to Panel question No. 45.
997 Namely, in Exhibit AB-99.
998 United States' reply to Panel question No. 45.
999 Antigua's second oral statement, para. 70.
1000 See our discussion in paras. 6.448-6.451 above.
1001 United States' second written submission, para. 98.
1002 Despite a question from the Panel requesting the United States to "clearly and specifically identify the provisions of laws and regulations with which it says the challenged measures secure compliance under Article XIV(c)", the United States merely referred in a footnote to the provisions of two state laws by way of example. The footnote did not contain the text of those provisions: United States' reply to Panel question No. 45. Specifically, the United States referred to Utah Code Ann. § 76-10-1102; Hawaii Rev. Statutes §§ 712-1221 through 712-1223. The text that accompanied this footnote was: "State laws restricting gambling include the laws by which a number of states prohibit some or all gambling." We note that, when discussing the relevant state gambling in its second written submission, the United States did refer the Panel through a footnote to Exhibit US-34. However, that Exhibit does not specifically identify obligations in the relevant state laws. Rather, it merely contains examples of state gambling policies for six US states.
statute”), the Organized Crime Control Act of 1970 findings that contain a definition of "organized crime", and Attorney General Order 1386-89, which also contains a definition of organized crime.\footnote{1003}

6.549 With respect to the criminal laws relating to organized crime upon which the United States also seeks to rely in making its defence under Article XIV(c), Antigua has not questioned their WTO-consistency. Therefore, since Members' laws are presumed to be WTO-consistent\footnote{1004}, the Panel considers that we are entitled to assume that these laws are WTO-consistent.

6.550 Antigua has argued with respect to these laws, however, that the United States has not submitted sufficient information on them and that it merely cites a number of specific laws by way of example but does not try to give a comprehensive overview of the main state and federal laws at issue.\footnote{1005} We note that the United States has made specific reference to the RICO statute, the Organized Crime Control Act of 1970 "findings", and Attorney General Order 1386-89 in arguing that criminal laws relating to organized crime justify the Wire Act, the Travel Act and the Illegal Gambling Business Act. We consider that the United States has submitted sufficient information in relation to the RICO statute. In particular, it has named it, explained it and provided the text containing the relevant provisions.\footnote{1006} Accordingly, we will confine our attention to the RICO statute in considering the United States' defence under Article XIV(c) but will make reference to the Organized Crime Control Act of 1970 "findings" and Attorney General Order 1386-89 for the definition of organized crime to the extent that such reference is necessary.

6.551 In summary, the Panel finds that the United States may not rely upon state gambling laws in making its defence under Article XIV(c) because the laws of four US states upon which the United States seeks to rely have been found to be inconsistent with US obligations under the GATS in these proceedings. With respect to the other state laws, the Panel finds that the United States has not discharged its obligation to specifically identify the state gambling laws upon which it seeks to rely and the obligations contained therein. In relation to criminal laws relating to organized crime, we find that the United States may rely upon the RICO statute in asserting a defence under Article XIV(c).

Do the challenged measures secure compliance with the RICO statute?

Existence of a measure that "secures compliance" with the RICO statute

6.552 According to the United States, the Wire Act aids in the enforcement of the RICO statute. The Wire Act is part of an essential enforcement strategy insofar as it places restrictions on major sources of funds for organized crime.\footnote{1007} The United States submits that local law officials seeking to enforce such laws are often powerless to act without the aid and assistance of the federal government.\footnote{1008} The United States submits that the Travel Act, similarly, aids in the enforcement of the RICO statute. The United States argues more particularly that the Travel Act enables the federal government to "take effective action against the racketeer who conducts an unlawful business but lives far from the scene in comfort and safety."\footnote{1009} The United States also submits that US courts have confirmed that the Illegal Gambling Business Act provides an enforcement tool in cases where local officials fail to prosecute illegal gambling.\footnote{1010}
The Panel notes that the United States has provided it with the text of the RICO statute, which defines "racketeering activity" to include "any act or threat involving ... gambling ... which is chargeable under State law". The statute further provides in relevant part that:

"It shall be unlawful for any person who has received any income derived, directly or indirectly, from a pattern of racketeering activity or through collection of an unlawful debt in which such person has participated as a principal ... to use or invest, directly or indirectly, any part of such income, or the proceeds of such income, in acquisition of any interest in, or the establishment or operation of, any enterprise which is engaged in, or the activities of which affect interstate or foreign commerce ..."

Given that the Wire Act prohibits suppliers of betting and wagering services from using a wire communication facility for, inter alia, the transmission in interstate or foreign commerce of bets or wagers, we consider that it assists in enforcing, at least in part, the RICO statute. In particular, it helps to curb organized crime operations that might rely upon the use of wire communication technologies for the supply of gambling and betting services across state and international borders. Therefore, we find that the Wire Act "secures compliance" with the RICO statute.

The Travel Act prohibits the supply of gambling services through mail or "any facility" in interstate or foreign commerce. We consider that this Act assists in enforcing, at least in part, the RICO statute. In particular, it helps to curb organized crime operations that might rely upon the use of mail or other "facilities" for gambling across state and international borders. Thus, we find that the Travel Act "secures compliance" with the RICO statute.

Finally, we find that the Illegal Gambling Business Act assists in enforcing the RICO statute because it prohibits conducting, financing, managing, supervising, directing or owning all or part of an "illegal gambling business", which may have links to organized crime.

"Necessity" of the measure taken to secure compliance

Having found that the Wire Act, the Travel Act and the Illegal Gambling Business Act are all used to secure compliance with the RICO statute, we now turn to whether these measures are "necessary" to secure compliance with the RICO statute. In this regard, based on Appellate Body decisions, we must assess:

(a) the importance of the interests or values that the RICO statute is intended to protect;

(b) the extent to which the Wire Act, the Travel Act and the Illegal Gambling Business Act contribute to the realization of the end pursued, that is, to secure compliance with the RICO statute; and

(c) the trade impact of the Wire Act, the Travel Act and the Illegal Gambling Business Act.

With respect to the importance of the interests or values protected by the RICO statute, the United States argues that organized crime poses an "acute" danger to the United States and that the RICO statute seeks to address that danger. The Panel notes that the Congressional Statement of Findings and Purpose for the RICO statute refers to organized crime as a significant drain on the US economy, a source of interference with free competition and a threat to democratic processes, domestic security and the general welfare of the nation. The Congressional Statement also refers to links between organized crime and the illegal use of force, fraud, corruption and syndicated...
It is clear to us from this statement that the interests protected by the RICO statute are very important societal interests that can be characterized as "vital and important in the highest degree" in a similar way to the characterization of the protection of human life and health against a life-threatening health risk by the Appellate Body in EC – Asbestos.1014

As for the extent to which the Wire Act, the Travel Act and the Illegal Gambling Business Act contribute to the realization of the end pursued, namely to secure of compliance with the RICO statute, the United States argues that these Acts make an essential contribution to the enforcement of this law. The United States submits that the Wire Act aids in suppressing organized gambling in pursuance of the organized crime laws because, in its absence, the use of wire communications technologies for the dissemination of gambling information frustrate local law-enforcement efforts aimed at combating organized crime.1015 The United States submits that, similarly, the Travel Act aids in suppressing organized gambling in pursuance of the organized crime laws because, in its absence, local law-enforcement efforts aimed at combating organized crime are frustrated.1016 With respect to the Illegal Gambling Business Act, the United States refers to a statement by one legislator who observed that the Illegal Gambling Business Act provides "an impetus for effective and honest local law enforcement, but also by making available to assist local efforts the expertise, manpower, and resources of the Federal agencies which under existing Federal antigambling statutes have developed high levels of special competence for dealing with gambling and corruption cases."1017

The Panel does not consider that the issue of the possible of involvement of Antigua's gambling industry in organized crime is relevant in deciding whether or not the Wire Act, the Travel Act and the Illegal Gambling Business Act contribute to securing compliance with criminal laws dealing with organized crime, such as the RICO statute. Rather, it is our view that our examination should entail an objective assessment of whether and, if so, the extent to which, these Acts play a role in enforcing the laws and regulations in question. We find that, in fact, the Wire Act does make a significant contribution to ensuring that local law enforcement efforts to enforce criminal laws against organized crime, including the RICO statute, are not undermined, given that the Act applies to the supply of betting and wagering services by wire communication across interstate and international borders. The Panel also finds that the Travel Act makes a significant contribution to ensuring that local law enforcement efforts to enforce criminal laws against organized crime, including the RICO statute, are not undermined, given that it applies to the supply of betting and wagering services by mail and other "facilities" across interstate and international borders. Finally, the Panel finds that the Travel Act and the Illegal Gambling Business Act make a significant contribution in ensuring that local law enforcement efforts to enforce criminal laws against organized crime, including the RICO statute, are not undermined. In making certain gambling activity illegal under federal law by reference to what is illegal under state law, they allow federal resources to be used to combat organized crime.

With respect to the trade impact of the Wire Act, the Travel Act and the Illegal Gambling Business Act, Antigua argues that the effect of, inter alia, the Wire Act, the Travel Act and the Illegal Gambling Business Act is total prohibition, which is the most trade-restrictive approach possible.1018 Indeed, the United States has admitted as much when arguing that a Member has "the right to heavily restrict a highly risky service (in this case, gambling by remote supply) while allowing the use of a less risky service [in this case, gambling by non-remote means])."1019

1015 United States' second written submission, paras. 78 et seq.
1016 United States' second written submission, paras. 78 et seq.
1017 Congressional Record H9712 contained in Exhibit US-32.
1018 Antigua's second oral statement, para. 71.
1019 United States' second written submission, para. 93.
6.562 As to whether there are any WTO-consistent alternatives to the prohibition imposed by the Wire Act, the Travel Act and the Illegal Gambling Business Act that are reasonably available to the United States, we note the submission by the United States that the Wire Act, the Travel Act and the Illegal Gambling Business Act are "indispensable" to defeating organized crime. However, it cannot be enough that the United States believes and maintains that a measure is "indispensable". The onus lies on the United States to show that it has explored WTO-consistent alternatives. As we stated above in paragraphs 6.522-6.531, we believe that the United States should have engaged in good faith bilateral or multilateral consultations and/or negotiations with Antigua when invited to do so, with a view to exploring whether there were any ways of meeting its concerns with regard to organized crime in a WTO-consistent manner.

6.563 Having identified and evaluated each of the elements that we must assess in determining whether the Wire Act, the Travel Act and the Illegal Gambling Business Act are "necessary" to secure compliance with the RICO statute, we will now "weigh and balance" our assessment of those elements.

6.564 In the Panel's view, the interests protected by the RICO statute are important. Further, in our view, the Wire Act, the Travel Act and the Illegal Gambling Business Act make a significant contribution to ensuring that local law enforcement efforts to enforce criminal laws relating to organized crime, including the RICO statute are not undermined. On the other hand, the measures in question have a significant impact on trade and the United States has not explored and exhausted WTO-consistent alternatives in the form of consultations and/or negotiations to determine whether there is a way of ensuring that its organized crime concerns can be addressed in a WTO-consistent manner. In our view, the United States is required to do so in order to demonstrate that the challenged measures are "necessary" within the meaning Article XIV(c).

Overall conclusion on whether the Wire Act, the Travel Act and the Illegal Gambling Business Act are provisionally justified under Article XIV(c)

6.565 In sum, we conclude that, for the reasons explained above, the United States has not been able to provisionally justify that the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) are necessary within the meaning of Article XIV(c) of GATS to secure compliance with the RICO statute, but which we, nonetheless, acknowledge are important to enforce US criminal laws relating to organized crime.

(e) The chapeau of Article XIV

6.566 Given that the Panel has reached the conclusion that the United States has not been able to provisionally justify the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws) under Article XIV(a) nor under Article XIV(c) of the GATS, logically, it is not necessary for us to proceed to consider whether the requirements of the chapeau of Article XIV have been met. However, since important arguments have been made by the parties on key issues discussed below, we have decided to address them so as to assist the parties in resolving the underlying dispute in this case.

1020 United States' second written submission, para. 105.

1021 We recall that the "relevant state laws" for the purposes of the Travel Act are state laws that prohibit a "business enterprise involving gambling". Such state laws would include but are not limited to § 14:90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and § 76-10-1102(b) of the Utah Code.

1022 We recall that the "relevant state laws" for the purposes of the Illegal Gambling Business Act are state laws that prohibit a "gambling business". Such state laws would include but are not limited to § 14-90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and § 76-10-1102(b) of the Utah Code.
6.567 The United States claims that the Wire Act, the Travel Act and the Illegal Gambling Business Act meet the requirements of the chapeau of Article XIV, as none of these measures discriminate on the basis of nationality. The United States submits that these measures reflect authentic societal concerns and were enacted long before the existence of the Internet and before the GATS came into force. The United States further submits that this is evidence that protectionist motivations are absent.

6.568 Antigua argues that the manner in which the US measures are applied constitutes both "arbitrary and unjustifiable discrimination" and a "disguised restriction on trade in services" within the meaning of the chapeau of Article XIV.

(i) The legal standard under the chapeau of Article XIV

6.569 The chapeau of Article XIV reads as follows:

"Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where like conditions prevail, or a disguised restriction on trade in services, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any Member of measures ..."

6.570 The chapeau requires that the measures in question are not applied in a manner that would constitute a means of arbitrary or unjustifiable discrimination between countries where like conditions prevail, or a disguised restriction on trade in services.

6.571 The Panel notes that the chapeau of Article XIV is textually similar to the chapeau of Article XX of the GATT 1994. On the basis of the comments made by the Appellate Body referred to above regarding the applicability of jurisprudence under the GATT 1994 to the GATS, we will refer to such jurisprudence to the extent to which it is applicable and relevant in interpreting and applying the chapeau to Article XIV in this case.

6.572 We begin by recalling several principles relevant to the interpretation and application of the chapeau of Article XIV of the GATS on the basis of jurisprudence in respect of Article XX of the GATT 1994.

6.573 First, we recall jurisprudence in which the Appellate Body identified some broad parameters within which exceptions under the GATT 1994 may be relied upon. In the specific context of Article XX of the GATT 1994, the Appellate Body in *US – Gasoline* stated that:

"The burden of demonstrating that a measure provisionally justified as being within one of the exceptions set out in the individual paragraphs of Article XX does not, in its application, constitute abuse of such exception under the chapeau, rests on the party invoking the exception. That is, of necessity, a heavier task than that involved in showing that an exception, such as Article XX(g), encompasses the measure at issue."

6.574 The Appellate Body in *US – Gasoline* also stated that the chapeau to Article XX of the GATT 1994 has been worded to prevent the abuse of exceptions under that Article:

---

1023 United States second written submission, para. 119.
1024 Antigua's second oral statement, paras. 80-83.
1025 See para. 6.448 above.
"The chapeau of Article XX is, in fact, but one expression of the principle of good faith. This principle, at once a general principle of law and a general principle of international law, controls the exercise of rights by states. One application of this general principle, the application widely known as the doctrine of abus de droit, prohibits the abusive exercise of a state's rights and enjoins that whenever the assertion of a right 'impinges on the field covered by [a] treaty obligation, it must be exercised bona fide, that is to say, reasonably'. An abusive exercise by a Member of its own treaty right thus results in a breach of the treaty rights of the other Members and, as well, a violation of the treaty obligation of the Member so acting. Having said this, our task here is to interpret the language of the chapeau, seeking additional interpretative guidance, as appropriate, from the general principles of international law."1031

6.576 It is on the basis of this obligation of good faith and because it had negotiated with some Members but not with others, that the Appellate Body concluded that the United States was acting inconsistently with the chapeau of XX of the GATT in that dispute.1032

---

1027 (original footnote) This was noted in the Panel Report on United States – Imports of Certain Automotive Spring Assemblies, BISD 30S/107, para. 56; adopted on 26 May 1983.
1031 Appellate Body Report on US – Shrimp (Article 21.5 – Malaysia), para. 158. In the following paragraph 159, the Appellate Body added: "The task of interpreting and applying the chapeau is, hence, essentially the delicate one of locating and marking out a line of equilibrium between the right of a Member to invoke an exception under Article XX and the rights of the other Members under varying substantive provisions (e.g., Article XI) of the GATT 1994, so that neither of the competing rights will cancel out the other and thereby distort and nullify or impair the balance of rights and obligations constructed by the Members themselves in that Agreement. The location of the line of equilibrium, as expressed in the chapeau, is not fixed and unchanging; the line moves as the kind and the shape of the measures at stake vary and as the facts making up specific cases differ."
6.577 The Appellate Body has also provided certain guidance on the meaning of the terms "arbitrary or unjustifiable discrimination between countries where like conditions prevail" and "disguised restriction", which are used in the chapeau to both Article XX of the GATT 1994 and Article XIV of the GATS.

6.578 With respect to the meaning of "arbitrary or unjustifiable discrimination between countries where like conditions prevail", the Appellate Body in US – Shrimp stated that:

"In order for a measure to be applied in a manner which would constitute "arbitrary or unjustifiable discrimination between countries where the same conditions prevail", three elements must exist. First, the application of the measure must result in discrimination. As we stated in United States – Gasoline, the nature and quality of this discrimination is different from the discrimination in the treatment of products which was already found to be inconsistent with one of the substantive obligations of the GATT 1994, such as Articles I, III or XI. 1033 Second, the discrimination must be arbitrary or unjustifiable in character. We will examine this element of arbitrariness or unjustifiability in detail below. Third, this discrimination must occur between countries where the same conditions prevail. In United States – Gasoline, we accepted the assumption of the participants in that appeal that such discrimination could occur not only between different exporting Members, but also between exporting Members and the importing Member concerned. Thus, the standards embodied in the language of the chapeau are not only different from the requirements of Article XX(g); they are also different from the standard used in determining that Section 609 is violative of the substantive rules of Article XI:1 of the GATT 1994." 1034

6.579 The Appellate Body in US – Gasoline provided certain guidance on the term "disguised restriction" on international trade:

"Arbitrary discrimination', 'unjustifiable discrimination' and 'disguised restriction' on international trade may, accordingly, be read side-by-side; they impart meaning to one another. It is clear to us that 'disguised restriction' includes disguised discrimination in international trade. It is equally clear that concealed or unannounced restriction or discrimination in international trade does not exhaust the meaning of 'disguised restriction'. We consider that 'disguised restriction', whatever else it covers, may properly be read as embracing restrictions amounting to arbitrary or unjustifiable discrimination in international trade taken under the guise of a measure formally within the terms of an exception listed in Article XX. Put in a somewhat different manner, the kinds of considerations pertinent in deciding whether the application of a particular measure amounts to 'arbitrary or unjustifiable discrimination', may also be taken into account in determining the presence of a 'disguised restriction' on international trade. The fundamental theme is to be found in the purpose and object of avoiding abuse or illegitimate use of the exceptions to substantive rules available in Article XX." 1035

6.580 We understand from the Appellate Body’s comments in US – Gasoline that there is a certain degree of overlap between, on the one hand, what may be considered as “arbitrary or unjustifiable discrimination” in the context of the chapeau and, on the other, what may be considered as a

\[1033\] (original footnote) In US – Gasoline, adopted 20 May 1996, WT/DS2/AB/R, p. 23, we stated: "The provisions of the chapeau cannot logically refer to the same standard(s) by which a violation of a substantive rule has been determined to have occurred."

"disguised restriction on trade". This is so because a "disguised restriction" includes disguised discrimination in international trade and a "disguised restriction" may be read as embracing restrictions amounting to arbitrary or unjustifiable discrimination in international trade. Accordingly, we consider that the manner in which a measure is applied may simultaneously lead to the conclusion that such an application constitutes arbitrary or unjustifiable discrimination and a disguised restriction on trade within the meaning of the chapeau of Article XIV.

6.581 To sum up these interpretive principles, the chapeau of Article XX of the GATT 1994 addresses not so much a challenged measure or its specific content, but rather the manner in which that measure is applied, with a view to ensuring that the exceptions of Article XX are not abused. In order to do so, the chapeau of Article XX identifies three standards which may be invoked in relation to the same facts: arbitrary discrimination, unjustifiable discrimination and disguised restriction on trade. In our view, these principles would also be applicable in relation to Article XIV of the GATS.

6.582 With these general interpretative principles in mind, the Panel now proceeds to consider the parties' arguments as to whether the US measures in question are consistent with the requirements of the chapeau of Article XIV. More particularly, in light of Antigua's challenge, we will consider whether there is evidence that the manner in which the United States applies the Wire Act, the Travel (when read together with the relevant state laws) Act and the Illegal Gambling Business Act (when read together with the relevant state laws) constitutes "arbitrary and unjustifiable discrimination between countries where like conditions prevail" and/or a "disguised restriction on trade".

(ii) Application of the legal standard under the chapeau of Article XIV to the facts of this case

6.583 The Panel notes that the United States did not argue and develop its defence under Article XIV until it made its second written submission. It only affirmatively invoked Article XIV during the Panel's second substantive meeting with the parties in response to a question posed by the Panel.

6.584 Antigua did not advance much argumentation in response to the submissions made and evidence adduced by the United States in support of its defence under Article XIV. However, we consider that a number of the factual arguments made by Antigua in the context of Article XVII are relevant in deciding whether or not the measures in question are applied in a manner that constitutes "arbitrary and unjustifiable discrimination between countries where like conditions prevail" and/or a "disguised restriction on trade". More particularly, we consider that they are relevant in determining whether or not the United States is consistent in prohibiting the remote supply of gambling and betting services. In our view, the absence of consistency in this regard may lead to a conclusion that the measures in question are applied in a manner that constitutes "arbitrary and unjustifiable discrimination between countries where like conditions prevail" and/or a "disguised restriction on trade". Below, we evaluate all the evidence presented to the Panel that we consider relevant in determining whether the United States has been applying and enforcing domestically its prohibition on the remote supply of gambling and betting services in a consistent manner.

Enforcement against local suppliers

6.585 Antigua submits that, although large-scale Internet operators in the United States are offering betting services via the Internet, the United States does not take enforcement action against them.\textsuperscript{1036} Antigua submits that several US-based companies, namely, Youbet.com, TVG, Capital OTB and Xpressbet.com, have been providing telephone or online gambling and betting services for some time.\textsuperscript{1037} Antigua argues that, in contrast, in the case of United States v. Jay Cohen, an operator of an Internet sportsbook service based in Antigua was prosecuted and ultimately convicted under the Wire

\textsuperscript{1036} Antigua's first oral statement, para. 94.
\textsuperscript{1037} Antigua's first written submission, para. 118; Antigua's reply to Panel question No. 19.
Act even though that operator had modelled his business on that of Capital OTB, a US company that has been offering interstate betting by telephone for more than 20 years as well as more recently by the Internet without prosecution under the Wire Act.  

6.586 The United States submits that it applies its prohibition on the remote supply of gambling and betting services equally as regards domestic companies and those supplying such services from abroad. In support, the United States refers to statistics from the Organized Crime and Racketeering Section of the Department of Justice that show that it approved 90 racketeering prosecutions from 1992 to 2002 alleging violations of the Wire Act, the Illegal Gambling Business Act or both. The United States submits that the vast majority of these 90 cases involved purely domestic betting activity, not cross-border gambling. The United States also refers to statistics from the Department of Justice that show that 125 cases were filed under the Wire Act and 951 cases were filed under the Illegal Gambling Business Act between 1992 and September 2003. The Department of Justice confirmed that only a handful of these cases involved supply of gambling from outside the United States.

6.587 According to the United States, while Youbet.com states on its website that it is in "full compliance with all applicable state and federal law," Youbet.com disclosed in its 2002 annual report that "the United States Justice Department is in the process of taking action against selected companies that it deems to be operating without proper licensing and regulatory approval" and that Youbet.com "faces the risk" of criminal proceedings and penalties brought by the government, and the United States agrees with that risk assessment. The United States further submits that there have been many reported court cases representing just a small fraction of all prosecutions in which the Department of Justice used the federal gambling laws that are challenged by Antigua to prosecute illegal wagering on horseracing. The United States points to arrest figures for illegal gambling in support of its argument that the Department of Justice considers illegal gambling a serious crime meriting active investigation and prosecution.

6.588 In relation to the enforcement of the US prohibition on the remote supply of gambling and betting services against domestic suppliers of such services, the Panel notes indications by the United States that prosecution proceedings against Youbet.com are currently pending and, more generally,

---

1038 Antigua's reply to Panel question No. 12. In addition, we note that, while Antigua has submitted evidence in Exhibits AB-163, AB-165 and AB-166 to suggest that underage gambling and betting occurs when the relevant services are supplied through non-remote means in the United States, Antigua has not suggested that the United States does not enforce its laws to prohibit such underage gambling and betting in the United States. Therefore, we do not deal with this argument here.

1039 United States' first written submission, para. 101.

1041 United States' reply to Panel question No. 21.

1044 United States' first written submission, paras. 23 et seq; United States' closing remarks, second oral statement, para. 9.

1045 Exhibit AB-42 indicates that Youbet.com supplies services by remote means relating to wagering on horse racing only.
that it applies and vigorously enforces its prohibition on the cross-border supply of gambling and betting services against domestic and foreign suppliers alike.\textsuperscript{1046} We have no evidence as to the enforcement action, if any, that the United States is taking against other remote suppliers of gambling and betting services, including TVG, Capital OTB and Xpressbet.com.\textsuperscript{1047} With respect to enforcement of the US prohibition on the remote supply of gambling and betting services against suppliers of such services from \textit{other Members}, we have evidence of the prosecution of one Antiguan operator for having failed to abide by the prohibition against the remote supply of gambling and betting services under the Wire Act.\textsuperscript{1048}

6.589 In our view, the foregoing evidence is inconclusive. We, therefore, find that the United States has failed to demonstrate that the manner in which it enforced its prohibition on the remote supply of gambling and betting services against TVG, Capital OTB and Xpressbet.com is consistent with the requirements of the chapeau.

\textbf{Video lottery terminals}

6.590 Antigua refers to a number of US states where video lottery terminals are legal\textsuperscript{1049} and notes that state lotteries market and sell their products through computers and electronic connections to the source of the lotteries.\textsuperscript{1050} Antigua submits these operations involve "remote" gambling because the gambler does not need to physically go to the lottery to play.\textsuperscript{1051} The United States argues that, with respect to the video lottery terminals, the service consumer must present himself or herself in person at an authorized lottery distribution location. Thus, the supply of the service by these means is non-remote.\textsuperscript{1052}

6.591 The Panel recalls that the United States has defined the "remote" supply of gambling and betting services as follows:

"By remote supply, the United States means situations in which the gambling service supplier (whether foreign or domestic) and the service consumer are not physically together. In other words, the consumer of a remotely supplied service does not have to go to any type of outlet, be it a retail facility, a casino, a vending machine, etc. Instead, the remote supplier has no point of presence but offers the service directly to the consumer through some means of distance communication. Non-remote supply means that the consumer presents himself or herself at a supplier's point of presence, thus facilitating identification of the individual, age verification, etc."\textsuperscript{1053}

6.592 According to this definition, the United States defines non-remote supply as instances where the consumer presents himself or herself at a supplier's point of presence to facilitate, amongst other things, identification of the individual and age verification.

\textsuperscript{1046} In addition to the evidence pointed to by the United States in paragraph 6.586 above, we note that the National Gambling Impact Study Commission Final Report states that "The federal government has been active in the area of Internet gambling. Thus far, DOJ has investigated and brought charges of violating the Wire Communications Act. All the defendants operated their businesses offshore and maintained that they were licensed by foreign governments": Exhibit AB-10, p. 5-9.

\textsuperscript{1047} The Panel has evidence that indicates that at least TVG and Capital OTB are supplying services by remote means relating to wagering on horse racing only: Exhibits AB-43, AB-44 and AB-123. We note that Exhibit AB-44 indicates that Capital OTB supplies services relating to lotteries as well as wagering on horse racing but there is no suggestion in the evidence that these services are supplied remotely.

\textsuperscript{1048} Exhibit AB-83.

\textsuperscript{1049} Antigua's first written submission, para. 123.

\textsuperscript{1050} Antigua's first oral statement, paras. 92-93.

\textsuperscript{1051} Antigua's second oral statement, paras. 62-63.

\textsuperscript{1052} United States' second written submission, para. 65.

\textsuperscript{1053} United States' reply to Panel question No. 42.
6.593 In our view, Antigua has not effectively refuted the United States' submission that identification and age verification do not occur when lottery tickets are purchased through video lottery terminals. We note that the evidence suggests that the video lottery terminals are located on shop counters, suggesting that they are, in fact, manned. Consequently, the Panel is not convinced that the sale of lottery tickets through video lottery terminals can be categorized as "remote" supply.

6.594 Therefore, the Panel concludes that, based on the evidence presented to the Panel regarding video lottery terminals, the United States has demonstrated that the manner in which it applies the US federal prohibition on the remote supply of gambling and betting services domestically is not inconsistent with the requirements of the chapeau of Article XIV of GATS as regards video lottery terminals.

Interstate Horseracing Act

6.595 Antigua submits that the Interstate Horseracing Act ("IHA") permits the remote supply of gambling and betting services for horse races. Antigua argues that the federal laws that prohibit the use of remote communication to supply gambling and betting services do not apply to horse race betting because the IHA effectively "exempts" such betting from the application of the relevant federal laws. According to the United States, the IHA does not provide legal authority for any form of Internet gambling. The United States submits that the IHA did not repeal the pre-existing federal laws making such activity illegal.

6.596 The Panel recalls that the United States must submit evidence sufficient to substantiate its assertion that the provisions of the IHA do not authorize interstate pari-mutuel wagering over the telephone or other modes of electronic communication, including the Internet.

6.597 The United States has submitted that the IHA is a civil statute for which the federal government has no enforcement role. The United States also submits that, in December 2000, when the definition of the term "interstate off-track wager" in the IHA was amended, Congress, did not also amend pre-existing criminal statutes, which prohibit cross border gambling. Further, the United States refers us to a statement made by the then President William J. Clinton after the bill containing the amendment to the IHA was passed by Congress, which suggests that the amendment to the IHA was not intended to legalize common pool and interstate wagering, including "via telephone or other electronic media". The statement indicates that the IHA was not intended to repeal the Wire Act, the Travel Act and the Illegal Gambling Business Act, which are specifically referred to in the statement.

6.598 In its submissions, Antigua refers us to the definition of "interstate off-track wager" in the IHA, which was amended in December 2000 to provide as follows:

"[T]he term ... 'interstate off-track wager' means a legal wager placed or accepted in one State with respect to the outcome of a horserace taking place in another State and

1054 See Exhibits AB-190 and AB-191. We note that Antigua has also made reference in its reply to Panel question No. 19 to interstate lottery games for which lottery tickets are purchased through retail terminals. However, in our view, in its reply, Antigua does not demonstrate that the terminals in question are not manned so as to facilitate identification and age verification.
1055 Antigua's first written submission, para. 116.
1056 Antigua's first oral statement, para. 92.
1057 United States' first written submission, paras. 33-35; United States' second written submission, para. 63.
1058 United States' reply to Panel question No. 21.
1059 United States' reply to Panel question No. 21.
1060 Statement on Signing the Departments of Commerce, Justice, State, the Judiciary, and Related Agencies Appropriation Act (21 December 2000) contained in Exhibit US-17, pp. 3155-3156.
includes pari-mutuel wagers, where lawful in each State involved, placed or transmitted by an individual in one State via telephone or other electronic media and accepted by an off-track betting system in the same or another State, as well as the combination of any pari-mutuel wagering pools."

6.599 We agree with Antigua that the text of the revised statute does appear, on its face, to permit interstate pari-mutuel wagering over the telephone or other modes of electronic communication, which presumably would include the Internet, as long as such wagering is legal in both states. Antigua also refers us to a statement made by a Member of the US Congress during the parliamentary debates regarding the amendment, which suggests that the amendment to the IHA has the effect of legalizing interstate horse race gambling over the Internet.\footnote{Congressional Record H11230-03 contained in Exhibit AB-124, p. 5.} In our view, even if the IHA did not repeal the Wire Act, the Travel Act and the Illegal Gambling Business Act as has been submitted by the United States, there is ambiguity as to the relationship between, on the one hand, the amendment to the IHA and, on the other, the Wire Act, the Travel Act and the Illegal Gambling Business Act. We consider this relationship to be critical in determining whether, in fact, the amendment to the IHA permits wagering on horse racing by means of electronic communication.

6.600 Given the conflicting interpretations put forward by Antigua and the United States regarding the interpretation of the IHA and since it is for the United States to demonstrate that it has complied with the requirements of the chapeau of Article XIV, we find that the evidence presented to the Panel is inconclusive and that the United States has not demonstrated that the IHA, as amended, does not permit interstate pari-mutuel wagering for horse racing over the telephone or using other modes of electronic communication, including the Internet.\footnote{In forming this conclusion, we have also had regard to Exhibit AB-17, Appendix II, Exhibit AB-39, p. 5, Exhibit AB-54, pp. 7 and 29, Exhibit AB-70, p. 7, Exhibit AB-124 and Exhibit AB-125, page 3.}

Nevada

6.601 Antigua argues that Nevada bookmakers offer their services to home-users via the Internet and the telephone.\footnote{Antigua's first written submission, para. 122.} The United States submits that the services provided by Nevada bookmakers that are referred to by Antigua are not offered on the publicly accessible Internet, but on a local private network.\footnote{United States' first written submission, paras. 36-37.} In response, Antigua submits that the so-called private network is a security technology used over the internet, not a separate local network.\footnote{Antigua's first oral statement, para. 7.} Further, in response to a question posed by the Panel relating to a reference in the Bear Stearns Report to proposals for Internet gambling in the state of Nevada, the United States submits that Nevada's plans for Internet gambling are on hold and that Nevada has been informed by the Department of Justice that US federal law does not permit Internet transmission of a bet or wager. According to the United States, Nevada officials have assured federal officials that no operation licensed in Nevada has been approved or authorized to use any wagering system that operates over the Internet.\footnote{United States' reply to Panel question No. 23.}

6.602 The only evidence that we have before us with regard to Antigua's allegation that Nevada bookmakers currently offer their services to home-users via the Internet and the telephone is an advertisement for the supply of services by a Nevada bookmaker.\footnote{Exhibit AB-47. We note that we have also had regard to evidence that suggests that Internet gambling is currently legal or may be legalized in Nevada in the future: See, for example, Exhibit AB-10, p. 5-7, Exhibit AB-36, pp. 34-35, Exhibit AB-73 and Exhibit AB-199, p. 4. However, as noted previously, in response to question No. 23 posed by the panel, the United States indicated that Nevada's plans for Internet gambling are on hold and that Nevada officials have assured federal officials that no operation licensed in Nevada has been approved or authorized to use any wagering system that operates over the Internet.}

On the basis of this evidence,
the Panel is not convinced that Nevada bookmakers supply services to home-users via the Internet and the telephone.

6.603 Therefore, the Panel believes that, based on the evidence presented to the Panel regarding the situation in Nevada, the United States has demonstrated that the manner in which it applies the prohibition on the remote supply of gambling and betting services as regards Nevada is not inconsistent with the requirements of the chapeau of Article XIV of GATS.

**Letters from the President of the North American Association of State and Provincial Lotteries**

6.604 Antigua refers to two letters of the president of an association of state lotteries in the United States (the "NASPL"), noting that both letters state that the NASPL "does not take a position on Internet gambling, per se" but that it is the position of the NASPL "that each individual state should be permitted to legislate and regulate the forms of gaming conducted within its borders, as well as the methods by which gaming is offered to the citizens of the state." Antigua submits that these letters clearly indicate that US states fear that Internet gambling will undermine their ability to determine the conditions of competition in the gambling sector in view of the economic benefits accruing to the state and its local operators. Antigua submits that this demonstrates that the United States' "total ban" on the remote supply of gambling and betting services from Antigua is "a disguised restriction on trade in services."

6.605 The Panel has reviewed the letters in question. We note that both letters explicitly state that the NASPL "does not take a position on Internet gambling per se". Both letters go on to state that each individual US state should be permitted to legislate and regulate the forms of gaming conducted within its borders, as well as the methods by which gaming is offered to citizens of the state. We consider that these letters pertain primarily to the states' concerns regarding their ability to autonomously regulate Internet gambling within their borders and do not demonstrate the existence of an intent to restrict the remote supply of gambling and betting services from abroad.

6.606 Therefore, the Panel believes that the evidence adduced from these letters from the President of the North American Association of State and Provincial Lotteries does not indicate that the manner in which the United States applies its prohibition on the remote supply of gambling and betting services is inconsistent with the requirements of the chapeau of Article XIV of GATS.

**Conclusion**

6.607 In summary, on the basis of evidence provided to the Panel relating to the domestic enforcement of the US prohibition on the remote supply of wagering services for horse racing against TVG, Capital OTB and Xpressbet.com and in light of the ambiguity relating to the Interstate Horseracing Act, which pertains to wagering services for horse racing, we believe that the United States has not demonstrated that it applies its prohibition on the remote supply of these services in a consistent manner as between those supplied domestically and those that are supplied from other Members. Accordingly, we believe that the United States has not demonstrated that it does not apply its prohibition on the remote supply of wagering services for horse racing in a manner that does not constitute "arbitrary and unjustifiable discrimination between countries where like conditions prevail" and/or a "disguised restriction on trade" in accordance with the requirements of the chapeau of Article XIV.

---

1068 Antigua's second oral statement, para. 83
1069 The letters are contained in Exhibit AB-207.
(f) Overall conclusion on Article XIV

6.608 In sum, in light of the particular circumstances of this case and for the reasons explained above, we find that the United States has not been able to provisionally justify the Wire Act, the Travel Act (when read together with the relevant state laws)\textsuperscript{1070} and the Illegal Gambling Business Act (when read together with the relevant state laws)\textsuperscript{1071} under the provisions of Article XIV(a) and Article XIV(c) of the GATS. While this conclusion did not require us to proceed further to an examination of the consistency of these measures with the requirements of the chapeau of Article XIV, we nonetheless did so to assist the parties in resolving the underlying dispute in this case. We conclude that the United States has not demonstrated that it does not apply its prohibition on the remote supply of wagering services for horse racing in a manner that does not constitute "arbitrary and unjustifiable discrimination between countries where like conditions prevail" and/or a "disguised restriction on trade" in accordance with the requirements of the chapeau of Article XIV.

VII. CONCLUSIONS, CONCLUDING REMARKS AND RECOMMENDATIONS

A. CONCLUSIONS

7.1 The Panel recalls that the following US laws were determined to be the measures at issue in this dispute:

(a) Federal laws:

(i) the Wire Act (18 USC § 1084);

(ii) the Travel Act (18 USC § 1952); and

(ii) the Illegal Gambling Business Act (18 USC § 1955).

(b) State laws:

(i) Colorado: § 18-10-103 of the Colorado Revised Statutes;

(vii) South Dakota: §§ 22-25A-1 - 22-25A-15 of the S.D. Codified Laws; and

(viii) Utah: § 76-10-1102 of the Utah Code Ann.

\textsuperscript{1070} That is, state laws that prohibit a "business enterprise involving gambling". Such state laws would include but are not limited to § 14:90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and § 76-10-1102(b) of the Utah Code.

\textsuperscript{1071} That is, state laws that prohibit a "gambling business". Such state laws would include but are not limited to § 14:90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and § 76-10-1102(b) of the Utah Code.
7.2 For the reasons set out in this Report, the Panel concludes as follows:

(a) the United States' Schedule under the GATS includes specific commitments on gambling and betting services under sub-sector 10.D;

(b) by maintaining the following measures, which, on their face, prohibit one, several or all means of delivery included in mode 1, contrary to its specific market access commitments for gambling and betting services for mode 1, the United States fails to accord services and service suppliers of Antigua treatment no less favourable than that provided for under the terms, limitations and conditions agreed and specified in its Schedule, contrary to Article XVI:1 and Article XVI:2 of the GATS:

(i) Federal laws

(1) the Wire Act;

(2) the Travel Act (when read together with the relevant state laws);\footnote{That is, state laws that prohibit a "business enterprise involving gambling". Such state laws would include but are not limited to § 14:90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and § 76-10-1102(b) of the Utah Code.}

and

(3) the Illegal Gambling Business Act (when read together with the relevant state laws).\footnote{That is, state laws that prohibit a "gambling business". Such state laws would include but are not limited to § 14:90.3 of the Louisiana Rev. Stat. Ann., § 17A of chapter 271 of Massachusetts Ann. Laws, § 22-25A-8 of the South Dakota Codified Laws, and § 76-10-1102(b) of the Utah Code.}

(ii) State laws:

(2) \textbf{Massachusetts}: § 17A of chapter 271 of Mass. Ann. Laws;

(3) \textbf{South Dakota}: § 22-25A-8 of the S.D. Codified Laws; and

(4) \textbf{Utah}: § 76-10-1102(b) of the Utah Code.

(c) Antigua has failed to demonstrate that the measures at issue are inconsistent with Articles VI:1 and VI:3 of the GATS;

(d) The United States has not been able to demonstrate that the Wire Act, the Travel Act (when read together with the relevant state laws) and the Illegal Gambling Business Act (when read together with the relevant state laws):

(i) are provisionally justified under Articles XIV(a) and XIV(c) of the GATS; and

(ii) are consistent with the requirements of the chapeau of Article XIV of the GATS;

(e) The Panel decided to exercise judicial economy with respect to Antigua's claims under Articles XI and XVII of the GATS.
B. CONCLUDING REMARKS BY THE PANEL

7.3 The Panel wishes to note that it is well aware of the sensitivities associated with the subject-matter of this dispute, namely gambling and betting services. Our conclusions are directly linked to the particular circumstances of this dispute. We note in this regard that the United States may well have inadvertently undertaken specific commitments on gambling and betting services. However, it is not for the Panel to second-guess the intentions of the United States at the time the commitment was scheduled. Rather, our role is to interpret and apply the GATS in light of the facts and evidence before us.

7.4 We also wish to emphasize what we have not decided in this case. We have not decided that WTO Members do not have a right to regulate, including a right to prohibit, gambling and betting activities. In this case, we came to the conclusion that the US measures at issue prohibit the cross-border supply of gambling and betting services in the United States in a manner inconsistent with the GATS. We so decided, not because the GATS denies Members such a right but, rather, because we found, inter alia, that, in the particular circumstances of this case, the measures at issue were inconsistent with the United States’ scheduled commitments and the relevant provisions of the GATS.

C. RECOMMENDATIONS

7.5 The Panel recommends that the Dispute Settlement Body requests the United States to bring the measures identified in paragraph 7.2(b) above into conformity with its obligations under the GATS.
