VIII. CHINA'S CLAIMS PERTAINING TO THE USDOC'S DETERMINATIONS THAT CERTAIN SOES AND SOCBs WERE PUBLIC BODIES

A. CLAIMS OF CHINA

B. MAIN ARGUMENTS OF THE PARTIES

1. China

2. United States

C. MAIN ARGUMENTS OF THE THIRD PARTIES

1. Argentina

2. Australia

3. Brazil

4. Canada

5. European Communities

6. Japan

7. India

8. Mexico

9. Norway

10. Saudi Arabia

11. Turkey

D. ASSESSMENT BY THE PANEL

1. Interpretation of the term "public body" in Article 1.1(a)(1) of the SCM Agreement

2. The USDOC's determinations that certain SOEs and SOCBs were "public bodies"

(a) Background

(b) USDOC public body determinations in respect of government-owned input suppliers (SOEs)

(i) CWP investigation

(ii) LWR investigation

(iii) LWS investigation

(iv) OTR investigation

(c) USDOC public body determination in respect of SOCBs

(d) Assessment by the Panel

(i) SOE input suppliers as public bodies

(ii) SOCBs as public bodies

(iii) Concluding remark

IX. CHINA'S CLAIMS PERTAINING TO SPECIFICITY

A. DE JURE SPECIFICITY OF SOCB LENDING TO THE TIRE INDUSTRY
1. Claims of China ............................................................64
2. Main arguments of the Parties ........................................64
   (a) China ........................................................................64
   (b) United States ..........................................................66
3. Main arguments of the Third Parties .............................67
   (a) Australia ......................................................................67
   (b) European Communities ...................................................68
   (c) Saudi Arabia ..............................................................68
4. Assessment by the Panel .................................................68
   (a) Interpretation of Article 2.1 of the SCM Agreement ..69
      (i) Limitation of access ..................................................69
      (ii) "Certain enterprises" ................................................73
   (b) USDOC de jure specificity determination ..................75
      (i) Central Government planning documents ..................78
      (1) The GOC 11th Five-Year Plan (2006-2010) ............78
      (2) The Implementing Regulation of the 11th Five-Year Plan ....79
      (3) The GOC Catalogue (11th Five-Year Plan) ...............81
      (4) The GOC 10th Five-Year Plan (2001 – 2005) and the SETC Circular 716 ....84
      (ii) Provincial and municipal governments planning documents ........86
         (1) General .............................................................86
         (2) GTC ........................................................................87
            (A) USDOC determination ........................................87
            (B) Guizhou and Guiyang planning documents ..............87
         (3) Starbright ..............................................................89
            (A) USDOC determination ........................................89
            (B) Hebei planning documents ...................................89
         (iii) Conclusion in respect of planning documents ............90
         (iv) USDOC determination that SOCBs acted pursuant to government industrial policies in making loans to the tire industry ....90
      (v) Conclusion by the Panel ............................................93
B. REGIONAL SPECIFICITY OF LAND-USE RIGHTS ..............93
1. Claims of China ............................................................93
2. Main arguments of the Parties ........................................93
   (a) China ........................................................................93
   (b) United States ..........................................................95
3. Main arguments of the Third Parties .............................96
4. Assessment by the Panel ........................................................................................................ 97
   (a) Interpretation of Article 2.2 of the SCM Agreement ....................................................... 97
       (i) "Certain enterprises" as referred to in Article 2.2 of the SCM Agreement .................. 98
       (ii) "Designated geographical region" in Article 2.2 of the SCM Agreement .................... 101
   (b) USDOC regional specificity determination ........................................................................ 102
       (i) USDOC determination .................................................................................................. 102
       (ii) Assessment by the Panel .......................................................................................... 103

X. CHINA’S CLAIMS PERTAINING TO BENCHMARKS ................................................. 107
   A. CLAIMS OF CHINA ........................................................................................................... 107
   B. APPLICABLE PROVISIONS OF THE COVERED AGREEMENTS .................................. 108
   C. ORDER OF ANALYSIS OF CLAIMS ............................................................................... 109
   D. REJECTION OF IN-COUNTRY BENCHMARKS AND RESORT TO ALTERNATIVES – THE SOFTWOOD LUMBER DISPUTES ........................................................................ 110

1. Claim of China ...................................................................................................................... 112

2. Main arguments of the Parties ............................................................................................ 112
   (a) China .............................................................................................................................. 112
   (b) United States .................................................................................................................. 113

3. Main arguments of the Third Parties .................................................................................. 115
   (a) Australia ......................................................................................................................... 115
   (b) Canada ........................................................................................................................... 115
   (c) European Communities ................................................................................................. 116
   (d) India ............................................................................................................................... 116
   (e) Japan ............................................................................................................................... 116
   (f) Mexico ............................................................................................................................. 117
   (g) Saudi Arabia ................................................................................................................... 117
   (h) Turkey ............................................................................................................................ 118

4. Assessment by the Panel ..................................................................................................... 118
   (a) Can evidence of government predominance alone suffice to establish market distortion? .......................................................................................................................... 118
   (b) USDOC determination with respect to HRS inputs (CWP and LWR investigations) .......... 120
   (c) USDOC determination with respect to BOPP inputs (LWS investigation) ......................... 124
2. Main arguments of the Parties
   (a) China ...................................................................................................................................... 154
   (b) United States ......................................................................................................................... 155
3. Assessment by the Panel............................................................................................................ 155
1. CONSISTENCY WITH ARTICLE 14(D) OF THE SCM AGREEMENT OF THE BENCHMARKS ACTUALLY USED BY THE USDOC – LAND-USE RIGHTS ........................................................................................................... 157
   1. Claim of China ....................................................................................................................... 157
   2. Factual background .............................................................................................................. 157
   3. Main arguments of the Parties ............................................................................................... 159
   (a) China ...................................................................................................................................... 159
   (b) United States ......................................................................................................................... 160
4. Main arguments of the Third Parties .......................................................................................... 162
   (a) European Communities ......................................................................................................... 162
   (b) Saudi Arabia .......................................................................................................................... 162
5. Assessment by the Panel............................................................................................................ 162
J. CONSISTENCY WITH ARTICLE 14(B) OF THE SCM AGREEMENT OF THE LOAN BENCHMARKS ACTUALLY USED BY THE USDOC – RMB-DENOMINATED LOANS .................................................................................................................. 165
   1. Claim of China ....................................................................................................................... 165
   2. Factual background .............................................................................................................. 165
   3. Main arguments of the Parties ............................................................................................... 166
   (a) China ...................................................................................................................................... 166
   (b) United States ......................................................................................................................... 167
4. Main arguments of the Third Parties .......................................................................................... 168
   (a) Australia ................................................................................................................................. 168
   (b) Saudi Arabia .......................................................................................................................... 168
5. Assessment by the Panel............................................................................................................ 168
K. CONSISTENCY WITH ARTICLE 14(B) OF THE SCM AGREEMENT OF THE LOAN BENCHMARK ACTUALLY USED BY THE USDOC – U.S. DOLLAR-DENOMINATED LOANS .................................................................................................................. 170
   1. Claim of China ....................................................................................................................... 170
   2. Main arguments of the Parties ............................................................................................... 171
   (a) China ...................................................................................................................................... 171
   (b) United States ......................................................................................................................... 172
3. Assessment by the Panel............................................................................................................ 172
XI. CHINA’S CLAIM PERTAINING TO "CREDIT" OR "OFFSET" FOR UNSUBSIDIZED TRANSACTIONS .................................................................................................................. 173
   A. CLAIMS OF CHINA .................................................................................................................. 173
B. MAIN ARGUMENTS OF THE PARTIES ................................................................. 173
1. China .................................................................................................................. 173
2. United States ...................................................................................................... 177
C. MAIN ARGUMENTS OF THE THIRD PARTIES ................................................. 181
1. Canada ................................................................................................................. 181
2. European Communities .................................................................................... 181
3. India .................................................................................................................... 182
4. Japan .................................................................................................................. 182
5. Norway ............................................................................................................... 182
D. FACTUAL BACKGROUND .................................................................................. 183
E. ASSESSMENT BY THE PANEL .......................................................................... 185
1. Period of investigation ...................................................................................... 186
2. "Good" in the sense of Article 14(d) of the SCM Agreement ................................ 188
3. Degree of flexibility for investigating authorities under Article 14 of the SCM Agreement ........................................................................................................ 188
4. The USDOC benefit determination in respect of rubber inputs ...................... 190
5. Conclusions ........................................................................................................ 192
XII. CHINA'S CLAIMS PERTAINING TO THE PROVISION OF SOE-PRODUCED INPUTS BY PRIVATE TRADING COMPANIES ........................................ 192
A. CLAIMS BY CHINA .............................................................................................. 192
B. MAIN ARGUMENTS OF THE PARTIES ............................................................ 193
1. China .................................................................................................................. 193
2. United States ...................................................................................................... 194
C. MAIN ARGUMENTS OF THE THIRD PARTIES ................................................. 196
1. Australia .............................................................................................................. 196
2. Canada ................................................................................................................. 196
3. European Communities .................................................................................... 196
4. Mexico ................................................................................................................ 197
5. Saudi Arabia ...................................................................................................... 197
6. Turkey ................................................................................................................. 197
D. ASSESSMENT BY THE PANEL .......................................................................... 197
1. Financial contribution ........................................................................................ 200
2. Pass-through of benefits .................................................................................. 201
XIII. CHINA'S CONSEQUENTIAL CLAIMS ................................................................ 206
XIV. CHINA'S CLAIMS PERTAINING TO "DOUBLE REMEDIES" ........................ 206
A. INTRODUCTION ................................................................................................. 206
1. Background ..................................................................................................................... 207

2. Claims of China................................................................................................................ 209
   (a) China's "as applied" claims .......................................................................................... 209
   (b) China's "as such" claims ............................................................................................ 209

B. UNITED STATES REQUESTS FOR PRELIMINARY RULINGS ............................................. 210
   1. Main arguments of the Parties.......................................................................................... 210
      (a) United States .............................................................................................................. 210
         (i) U.S. request for ruling concerning China's failure to consult on the "omission" .......... 210
         (ii) U.S. request for ruling under Article 6.2 of the DSU ................................................. 211
      (b) China .......................................................................................................................... 212
         (i) U.S. request for ruling concerning China's failure to consult on the "omission" .......... 212
         (ii) U.S. request for ruling under Article 6.2 of the DSU ................................................. 212

2. Assessment by the Panel..................................................................................................... 213
   (a) U.S. request for a preliminary ruling with respect to the alleged failure to consult on the "omission" ................................................................. 213
   (b) United States request for a preliminary ruling under Article 6.2 of the DSU ................. 219

C. CHINA'S "AS APPLIED" CLAIMS .......................................................................................... 219
   1. Introduction.................................................................................................................. 219

2. General considerations with respect to the potential for "double remedies" to arise from the simultaneous imposition of countervailing duties and of anti-dumping duties calculated pursuant to the U.S. NME methodology ........................................... 220
   (a) Main arguments of the Parties ..................................................................................... 220
      (i) China .......................................................................................................................... 220
      (ii) United States .............................................................................................................. 223
   (b) Main arguments of the Third Parties ............................................................................ 224
      (i) Argentina ................................................................................................................... 224
      (ii) Australia .................................................................................................................. 225
      (iii) Brazil ....................................................................................................................... 225
      (iv) European Communities ........................................................................................... 225
      (v) Japan ........................................................................................................................ 225
      (vi) Mexico ..................................................................................................................... 225
      (vii) Norway .................................................................................................................. 226
   (c) Assessment by the Panel ............................................................................................. 226

3. Claims under Article VI of the GATT 1994 and Articles 10, 19.3, 19.4 and 32.1 of the SCM Agreement ......................................................................................................................... 230
   (a) Main arguments of the Parties ..................................................................................... 230
      (i) China .......................................................................................................................... 230
(ii) United States

(b) Main arguments of the Third Parties

(i) Argentina

(ii) Australia

(iii) Brazil

(iv) Canada

(v) European Communities

(vi) India

(vii) Japan

(viii) Mexico

(ix) Norway

(c) Assessment by the Panel

(i) Introduction

(ii) Claim under Article 19.4 of the SCM Agreement

(iii) China's claim under Article 19.3 of the SCM Agreement

(iv) China's claims under Article 10 of the SCM Agreement and Article VI:3 of the GATT 1994

(v) China's claim under Article 32.1 of the SCM Agreement

4. Claims under Articles 12.1 and 12.8 of the SCM Agreement

(a) Main arguments of the Parties

(i) China

(ii) United States

(b) Assessment by the Panel

5. Claims under Article I:1 of the GATT 1994

(a) Main arguments of the Parties

(i) China

(ii) United States

(b) Main arguments of the Third Parties

(i) Canada

(c) Assessment by the Panel

XV. CHINA'S CLAIM PERTAINING TO THE USDOC'S FAILURE TO PROVIDE AT LEAST 30 DAYS TO REPLY TO THE NEW ALLEGATIONS AND SUPPLEMENTAL QUESTIONNAIRES

A. CLAIM OF CHINA

B. MAIN ARGUMENTS OF THE PARTIES

1. China

2. United States

I. INTRODUCTION

A. COMPLAINT OF CHINA

1.2 On 9 December 2008, China requested the establishment of a panel pursuant to Articles 4.7 and 6 of the DSU, Article XXIII:2 of the GATT 1994, Article 30 of the SCM Agreement, and Article 17 of the AD Agreement.

B. ESTABLISHMENT AND COMPOSITION OF THE PANEL

1.3 At its meeting on 20 January 2009, the Dispute Settlement Body ("DSB") established the Panel pursuant to the request of China in document WT/DS379/2, in accordance with Article 6 of the DSU.

1.4 The Panel's terms of reference are the following:

"To examine, in the light of the relevant provisions of the covered agreements cited by China in document WT/DS379/2, the matter referred to the DSB by China in that document, and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements."

1.5 On 23 February 2009, China requested the Director-General to determine the composition of the Panel, pursuant to paragraph 7 of Article 8 of the DSU.

1.6 On 4 March 2009, the Director-General composed the Panel as follows:

   Chairperson: Mr. David Walker

   Members: Mr. Thinus Jacobsz
            Ms Andrea Marie Brown

1.7 Argentina, Australia, Bahrain, Brazil, Canada, the European Communities, India, Japan, Kuwait, Mexico, Norway, Saudi Arabia, Chinese Taipei and Turkey reserved their rights to participate in the Panel proceedings as third parties.

---

1 WT/DS379/1, ("China request for consultations").
2 WT/DS379/2, ("China request for establishment of the Panel").
3 On 1 December 2009, the Treaty of Lisbon amending the Treaty on European Union and the Treaty establishing the European Community ("Treaty of Lisbon") (done at Lisbon, 13 December 2007) entered into force. On 29 November 2009, the WTO received a Verbal Note (WT/L/779) from the Council of the European Union and the Commission of the European Communities stating that, by virtue of the Treaty of Lisbon, as of 1 December 2009, the European Union replaces and succeeds the European Community.
1.8  The Panel met with the parties to the dispute on 7-8 July 2009 and 11-12 November 2009, and with the third parties on 7 July 2009.

1.9  The Panel submitted its interim report to the parties on 11 June 2010 and submitted its final report to the parties on 23 July 2010.

C.  ADDITIONAL PROCEDURES FOR THE PROTECTION OF BUSINESS CONFIDENTIAL INFORMATION

1.10  On 26 March 2009, China requested the Panel to adopt additional working procedures concerning Business Confidential Information ("BCI"). To that effect, China submitted to the Panel a set of proposed BCI procedures. The parties had the opportunity to present written and oral comments regarding China's request. Following the exchange of views between the parties, on 7 April 2009 the Panel adopted additional procedures for the protection of BCI. These procedures are set forth in Annex E.

II.  FACTUAL ASPECTS

2.1  This dispute concerns the definitive anti-dumping and countervailing duties imposed by the United States as a result of four anti-dumping and four countervailing duty investigations conducted by the United States Department of Commerce ("USDOC"), covering four products from China: (i) Circular Welded Carbon Quality Steel Pipe ("CWP"); (ii) Certain New Pneumatic Off-the-Road Tires ("OTR"); (iii) Light–Walled Rectangular Pipe and Tube ("LWR"); and (iv) Laminated Woven Sacks ("LWS"). China claims that the final USDOC determinations that led to the imposition of the duties, the orders imposing the duties themselves, and certain aspects of the conduct of the underlying investigations are inconsistent with the United States' obligations under the covered Agreements. China also challenges an alleged imposition by the United States of "double remedies" resulting from the application, in the four sets of investigations at issue, of anti-dumping duties calculated under the US non-market economy ("NME") methodology simultaneously with countervailing duties on the same products. China also makes "as such" claims against the alleged U.S. failure to provide the USDOC with legal authority to avoid the imposition of double remedies in such circumstances.

A.  INVESTIGATIONS COVERED BY THIS DISPUTE

1.  Circular Welded Carbon Quality Steel Pipe

(a)  Countervailing duty investigation

2.2  On 5 July 2007, the USDOC initiated a countervailing duty investigation on imports of CWP from China. The products covered by the investigation were certain circular welded carbon quality steel pipes as classified in tariff sub-headings 7306.30.10.00, 7306.30.50.25, 7306.30.50.32, 7306.30.50.40, 7306.30.50.55, 7306.30.50.85, 7306.30.50.90, 7306.50.10.00, 7306.50.50.50, 7306.50.50.70, 7306.19.10.10, 7306.19.10.50, 7306.19.51.10, and 7306.19.51.50 of the Harmonized Tariff Schedule of the United States ("HTSUS"), and as described more specifically in the USDOC's

4 WT/DS379/3.
5 Hereinafter referred to as "the four sets of investigations at issue" or "the four sets of anti-dumping and countervailing duty investigations".
6 Under Section 773(c) of the US Tariff Act of 1930 (19 U.S.C. 1677b(c)), normal value in anti-dumping investigations involving products from NME countries is determined on the basis of values of factors of production in countries that the USDOC has designated as market economies.
countervailing duty order. The exporters/producers concerned were Tianjin Shuangjie Steel Pipe Group Co., Ltd. ("Shuangjie"), Weifang East Steel Pipe Co., Ltd. ("East Pipe"), and Zhejiang Kingland Pipeline and Technologies Co., Ltd. ("Kingland"). The period of investigation for the purpose of the subsidy determination was 1 January to 31 December 2006.

2.3 During the course of the investigation, there were communications and exchanges between the USDOC and the parties to the investigation, inter alia, questionnaires and responses including supplemental requests for information pertaining to new subsidy allegations, arguments, and comments. On 13 November 2007, the USDOC published in the Federal Register a notice of preliminary affirmative countervailing duty determination, preliminary affirmative critical circumstances determination, and alignment of final countervailing duty determination with final antidumping duty determination. On 5 June 2008, the USDOC published a final countervailing duty determination. On 22 July 2008, the USDOC published an amended final determination and notice of countervailing duty order, finding "net subsidy rates" ranging from 29.62 per cent to 616.83 per cent, and indicating that it would direct U.S. Customs and Border Protection to require importers to post cash deposits equal to these net subsidy rates.

2.4 The USDOC determined, inter alia, that the government provision of hot-rolled steel ("HRS") to certain producers through state-owned enterprises ("SOEs") constituted subsidies that were de facto specific. In addition, the USDOC found that the provision of HRS through private trading companies that had purchased HRS from state-owned producers and/or suppliers also constituted countervailable subsidies. The USDOC resorted to adverse facts available to determine the amount of SOE-produced HRS that investigated pipe producers had purchased from trading company suppliers. The USDOC determined that private prices in China could not be used as benchmarks to determine the existence and amount of benefit conferred by such subsidies and as a result resorted to alternative benchmarks in conducting its benefit determination.

2.5 Based on adverse facts available, the USDOC also determined that China provided subsidies in the form of preferential lending by state-owned commercial banks ("SOCBs") to one investigated producer, East Pipe, and that these subsidies were de jure specific. In determining the existence and amount of the benefit from the loans, the USDOC considered that it would not be appropriate to use the interest rate applicable to loans issued by Chinese banks as a benchmark and instead constructed a proxy interest rate to determine the existence and amount of benefit conferred by the loans.

13 Exhibit CHI-7, p. 31969.
14 Exhibit CHI-8, p. 42547.
(b) Anti-dumping investigation

2.6 In parallel to the countervailing duty investigation on CWP from China, the USDOC initiated an anti-dumping investigation with respect to the same product. The period of investigation for the dumping determination was 1 October 2006 to 31 March 2007. The USDOC treated China as an NME country for purposes of determining normal value and calculating the margins of dumping. On 5 June 2008, the USDOC published a final anti-dumping duty determination, finding dumping margins ranging from 69.20 per cent to 85.55 per cent. On 22 July 2008, the USDOC published an anti-dumping duty order, indicating that it would direct U.S. Customs and Border Protection to require importers to post cash deposits equal to these dumping margins.

2. Light–Walled Rectangular Pipe and Tube

(a) Countervailing duty investigation

2.7 On 24 July 2007, the USDOC initiated a countervailing duty investigation on imports of LWR from China. The products covered by the investigation were certain welded carbon-quality light-walled steel pipe and tube, of rectangular (including square) cross section, having a wall thickness of less than 4mm as classified in tariff sub-headings 7306.61.50.00 and 7306.61.70.60 of the HTSUS, and as described more specifically in the USDOC's countervailing duty order. The exporters/producers concerned were Qingdao Xiangxing Steel Pipe Co., Ltd. ("Qingdao"); Zhangjiagang Zhongyuan Pipe–Making Co., Ltd. ("ZZPC"); and Lets Win. The period of investigation for purposes of the subsidy determination was 1 January to 31 December 2006.

2.8 During the course of the investigation, there were communications and exchanges between the USDOC and the parties to the investigation, inter alia, questionnaires and responses including supplemental requests for information pertaining to new subsidy allegations, arguments, and comments. On 30 November 2007, the USDOC published in the Federal Register a notice of preliminary affirmative countervailing duty determination and alignment of final countervailing duty determination with final anti-dumping duty determination. On 24 June 2008, the USDOC published a final countervailing duty determination, finding "net subsidy rates" ranging from 2.17 per cent to 200.58 per cent. On 5 August 2008, the USDOC published a countervailing duty order, indicating...

---

21 Id., p. 67706.
that it would direct U.S. Customs and Border Protection to require importers to post cash deposits equal to these net subsidy rates.25

2.9 The USDOC determined, inter alia, that the government provision of HRS through SOEs constituted financial contributions that conferred benefits, and that such subsidies were de facto specific. The USDOC also determined that the provision of SOE-produced HRS through private trading companies constituted countervailable subsidies. The USDOC resorted to facts available to determine the amount of SOE-produced HRS that investigated producers purchased from trading companies. The USDOC considered that private prices for HRS in China could not be used as benchmarks to determine the existence and amount of benefit conferred and, as a result, resorted to out-of-country benchmarks for the purposes of benefit determinations.26

(b) Anti-dumping investigation

2.10 In parallel to the countervailing duty investigation on LWR from China, the USDOC initiated an anti-dumping investigation with respect to the same product. The period of investigation for the dumping determination was 1 October 2006 to 31 March 2007. The USDOC treated China as an NME country for purposes of calculating the normal value and margins of dumping. On 24 June 2008, the USDOC published a final anti-dumping duty determination, finding dumping margins ranging from 249.12 per cent to 264.64 per cent.27 On 5 August 2008, the USDOC published an anti-dumping duty order, indicating that it would direct U.S. Customs and Border Protection to require importers to post cash deposits equal to these dumping margins.28

3. Laminated Woven Sacks

(a) Countervailing duty investigation

2.11 On 25 July 2007, the USDOC initiated a countervailing duty investigation on imports of LWS from China29, as classified in tariff sub-headings 6305.33.0050, 6305.33.0080, 3923.21.0080, 3923.21.0095, 3923.29.0000, 3917.39.0050, 3921.90.1100, 3921.90.1500, 5903.90.2500, 4601.99.0500, 4601.99.9000, and 4602.90.000 of the HTSUS, and as described more specifically in the USDOC's countervailing duty order.30 The exporters/producers concerned were Han Shing Chemical Co., Ltd. ("Han Shing Chemical"); Ningbo Yong Feng Packaging Co., Ltd. ("Ningbo"); Shangdong Qilu Plastic Fabric Group, Ltd. ("Qilu"); Shangdong Shouguang Jianyuan Chun Co., Ltd.

25 Exhibit CHI-21, p. 45406.
26 Issues and Decision Memorandum for the Final Determination in the Countervailing Duty Investigation of Light–Walled Rectangular Pipe and Tube from the People's Republic of China ("LWR Countervailing Duty I&D Memo"), Exhibit CHI-2, pp. 8-10 and 25-37; and Exhibit CHI-19, pp. 67707-67708.
2.12 During the course of the investigation, there were communications and exchanges between the USDOC and the parties to the investigation, *inter alia*, questionnaires and responses including supplemental requests for information pertaining to new subsidy allegations, arguments, and comments. On 3 December 2007, the USDOC published in the Federal Register a notice of preliminary affirmative countervailing duty determination, preliminary affirmative critical circumstances determination, and alignment of final countervailing duty determination with final anti-dumping duty determination. On 24 June 2008, the USDOC published a final countervailing duty determination, finding "net subsidy rates" ranging from 29.54 per cent to 352.82 per cent. On 7 August 2008, the USDOC published a countervailing duty order, indicating that it would direct U.S. Customs and Border Protection to require importers to post cash deposits equal to these net subsidy rates.

2.13 The USDOC determined, *inter alia*, that the provision of biaxial-oriented polypropylene ("BOPP") by SOEs constituted a financial contribution which conferred a benefit and that this subsidy was specific. The USDOC used an out-of-country benchmark to determine the existence and amount of the subsidy benefits and relied on adverse facts available to determine the extent of government ownership of BOPP producers in China. Also based on adverse facts available, the USDOC found that the provision of preferential loans by government policy banks and SOCBs constituted subsidies which were *de jure* specific. In determining the existence and amount of the benefit from the loans, the USDOC considered that it would not be appropriate to use the interest rate applicable to loans issued by Chinese banks as a benchmark and instead constructed a proxy interest rate to determine the existence and amount of benefit conferred by the loans. Finally, the USDOC also found that the government provision of land-use rights was a countervailable subsidy, and used out-of-country benchmarks to determine the existence and amount of the subsidy benefits.

(b) Anti-dumping investigation

2.14 In parallel to the countervailing duty investigation on LWS from China, the USDOC initiated an anti-dumping investigation with respect to the same product. The period of investigation for the dumping determination was 1 October 2006 to 31 March 2007. The USDOC treated China as an NME country for purposes of determining normal value and calculating the margins of dumping. On 24 June 2008, the USDOC published a final anti-dumping duty determination, finding dumping.

margins ranging from 64.28 per cent to 91.73 per cent.\textsuperscript{38} On 7 August 2008, the USDOC published an anti-dumping duty order indicating that it would direct U.S. Customs and Border Protection to require importers to post cash deposits equal to these anti-dumping margins.\textsuperscript{39}

4. Certain New Pneumatic Off-the-Road Tires

(a) Countervailing duty investigation

2.15 On 7 August 2007, the USDOC initiated a countervailing duty investigation on imports of OTR from China.\textsuperscript{40} The products covered were certain new pneumatic off-the-road tires as classified in tariff sub-headings 4011.20.10.25, 4011.20.10.35, 4011.20.50.30, 4011.20.50.50, 4011.61.00.00, 4011.62.00.00, 4011.63.00.00, 4011.69.00.00, 4011.92.00.00, 4011.93.40.00, 4011.93.80.00, 4011.94.40.00, and 4011.94.80.00 of the HTSUS, and as described more specifically in the USDOC's countervailing duty order.\textsuperscript{41} The exporters/producers concerned were Guizhou Tire Co., Ltd. ("GTC"); Hebei Starbright Tire Co., Ltd. ("Starbright"); and Tianjin United Tire & Rubber International Co., Ltd. ("TUTRIC").\textsuperscript{42} The period of investigation for purposes of the subsidy determination covered 1 January to 31 December 2006.\textsuperscript{43}

2.16 During the course of the investigation, there were communications and exchanges between the USDOC and the parties to the investigation, \textit{inter alia}, questionnaires and responses, including supplemental requests for information pertaining to new subsidy allegations, arguments, and comments.\textsuperscript{44} On 17 December 2007, the USDOC published in the Federal Register its preliminary affirmative countervailing duty determination.\textsuperscript{45} On 15 July 2008, the USDOC published a final countervailing duty determination, finding "net subsidy rates" ranging from 2.45 per cent to 14.00 per cent.\textsuperscript{46} On 4 September 2008, the USDOC published a countervailing duty order indicating that it would direct U.S. Customs and Border Protection to require importers to post cash deposits equal to these net subsidy rates.\textsuperscript{47}

2.17 The USDOC determined, \textit{inter alia}, that the government provision of preferential loans, through government policy banks and SOCBs, constituted a subsidy which was \textit{de jure} specific. With respect to one investigated producer, the USDOC also found that the government provision of land-use rights constituted a countervailable subsidy. With respect to both types of subsidies, the USDOC used out-of-country benchmarks to determine the existence and amount of benefit conferred. The USDOC further found that the government provision of natural and synthetic rubber through SOEs

\textsuperscript{46} Exhibits CHI-51, pp. 40480 and 40483.

\textsuperscript{47} Exhibit CHI-52, p. 51629.
constituted a countervailable subsidy. The USDOC also found that the provision of rubber through private trading companies that had purchased rubber from state-owned producers constituted a countervailable subsidy. To determine whether the government provision of rubber, either through SOEs or private trading companies, had conferred a benefit on investigated producers, the USDOC used import prices of rubber paid by investigated producers and, where available, private prices in China as a benchmark.48

(b) Anti-dumping investigation

2.18 In parallel to the countervailing duty investigation on OTR from China, the USDOC initiated an anti-dumping investigation on the same product. The period of investigation for the dumping determination was 1 October 2006 to 31 March 2007. The USDOC treated China as an NME country for purposes of determining normal value and calculating the margins of dumping. On 15 July 2008, the USDOC published a final anti-dumping duty determination.49 On 4 September 2008, the USDOC published an amended final determination and anti-dumping duty order, finding dumping margins ranging from 5.25 per cent to 210.48 per cent, indicating that it would direct U.S. Customs and Border Protection to require importers to post cash deposits equal to these dumping margins.50

III. PARTIES' REQUESTS FOR FINDINGS AND RECOMMENDATIONS

A. CHINA

3.1 China requests that the Panel make the following findings:51

(i) The USDOC's findings that the government of China provided a financial contribution in the form of goods in the four countervailing duty determinations were inconsistent with Article 1.1 of the SCM Agreement and, as a consequence, with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994;

(ii) The USDOC's findings that private trading companies provided a financial contribution in the form of goods in the LWR, CWP, and OTR countervailing duty determinations were inconsistent with Article 1.1 of the SCM Agreement and, as a consequence, with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994;

(iii) The USDOC's findings of benefit in the four countervailing duty determinations in respect of the goods allegedly provided by the government of China and private trading companies were inconsistent with Article 14 of the SCM Agreement and, as a consequence, with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994;

---

51 China first written submission, para. 468; second written submission, para. 315.
(iv) The USDOC's inclusion of only positive benefits in its calculations of whether producers in the OTR countervailing duty investigation obtained benefits from the alleged provision of goods, while excluding negative benefits in those calculations, was inconsistent with Articles 10, 14, 19.1, 19.4, and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994;

(v) The USDOC's findings of financial contribution and specificity in the OTR countervailing duty determination in respect of the alleged "policy lending" subsidy were inconsistent, respectively, with Article 1.1 and Article 2 of the SCM Agreement and, as a consequence, with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994;

(vi) The USDOC's findings of benefit in the LWS, CWP, and OTR countervailing duty determinations in respect of the alleged "policy lending" subsidy were inconsistent with Article 14 of the SCM Agreement and, as a consequence, with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994;

(vii) The USDOC's findings of specificity and benefit in the LWS countervailing duty determination in respect of the provision of land-use rights were inconsistent, respectively, with Article 2 and Article 14 of the SCM Agreement and, as a consequence, with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994;

(viii) The USDOC's finding of benefit in the OTR countervailing duty determination in respect of the provision of land-use rights was inconsistent with Article 14 of the SCM Agreement and, as a consequence, with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994;

(ix) In connection with the four sets of anti-dumping and countervailing duty determinations at issue, the USDOC's use of its NME methodology to determine normal value in the anti-dumping determinations, concurrently with a determination of subsidization and the imposition of countervailing duties on the same products, was inconsistent with Articles 10, 19.3, 19.4, and 32.1 of the SCM Agreement and with Article VI of the GATT 1994;

(x) The United States' failure to provide sufficient legal authority for the USDOC to avoid the imposition of double remedies for the same alleged acts of subsidization when it imposes anti-dumping duties determined pursuant to its NME methodology simultaneously with the imposition of countervailing duties on the same product means that US law is, in all such instances, inconsistent "as such" with Articles 10, 19.3, 19.4, and 32.1 of the SCM Agreement and with Article VI of the GATT 1994;

(xi) In each of the four sets of anti-dumping and countervailing duty determinations at issue, the USDOC's failure to extend to imports from China the same unconditional entitlement to the avoidance of a double remedy for the same alleged acts of subsidization that it extends to like products originating in the territory of other Members was inconsistent with Article I:1 of the GATT 1994;
(xii) The United States' failure to provide sufficient legal authority for the USDOC to avoid the imposition of double remedies for the same alleged acts of subsidization when it imposes anti-dumping duties determined pursuant to its NME methodology simultaneously with the imposition of countervailing duties on the same product means that, in all such instances, the United States will fail to extend to imports from China the same unconditional entitlement to the avoidance of a double remedy that it extends to like products originating in the territory of other Members, in violation of Article I:1 of the GATT 1994;

(xiii) The USDOC's failure in the four countervailing duty investigations to give the Government of China and interested parties 30 days to respond to all questionnaires used in the investigations was inconsistent with Article 12.1.1 of the SCM Agreement;

(xiv) The USDOC's failure in the LWR and CWP countervailing duty investigations to notify respondent producers of the information it required and to provide them with an ample opportunity to present relevant evidence prior to resorting to facts available was inconsistent with Article 12.1 and Article 12.7 of the SCM Agreement.52

3.2 In addition, China requests that the Panel reject the United States' requests for preliminary rulings, referred to in the next paragraph.53

B. UNITED STATES

3.3 The United States requests that the Panel reject China's claims in their entirety.54 In addition, the United States requests that the Panel make certain preliminary rulings: the United States requests that the Panel find that the measure identified in China's Request for the Establishment of a Panel as part of China's "as such" claims with respect to "double remedies" (i.e., "the failure of the United States to provide legal authority for the US Department of Commerce to avoid the imposition of a double remedy when it imposes anti-dumping duties determined pursuant to the US NME methodology simultaneously with the imposition of countervailing duties on the same product") as well as China's "as such" claims on double remedies themselves fall outside the Panel's terms of reference.55

IV. ARGUMENTS OF THE PARTIES

4.1 The arguments of the parties, as set forth in the executive summaries of their submissions provided to the Panel, are attached to this Report in Annexes A, C and D (see List of Annexes, pages xi and xii).

---

52 In its second written submission, China withdrew the request for findings and recommendations it made in its first written submission with respect to its claim against the USDOC’s failure to invite China for consultations prior to its initiation of investigations into new subsidy allegations, which China had alleged was inconsistent with Article 13.1 of the SCM Agreement. China indicated that it withdrew its request in this respect "[i]n light of the United States' confirmation that it considers Article 13.2 of the SCM Agreement to impose an obligation to provide China with the opportunity to consult throughout a CVD investigation, including with respect to new subsidy allegations." (China second written submission, footnote 260).

53 China response to the United States' request for preliminary rulings, para. 40.

54 United States first written submission, para. 495.

55 Id., para. 86.
V. ARGUMENTS OF THE THIRD PARTIES

5.1 The arguments of the third parties, as set forth in the executive summaries of their submissions provided to the Panel, are attached to this Report in Annex B (see List of Annexes, pages xi and xii). 56

VI. INTERIM REVIEW

6.1 On 11 June 2010, the Panel issued its Interim Report to the parties. On 25 June 2010, both parties submitted requests for the review of precise aspects of the Interim Report. On 2 July, the parties submitted comments on one another's requests for review.

6.2 This Interim Review section summarizes the parties' requests for review and comments thereon, as well as our responses. Because the footnote numbering (but not the paragraph numbering) of our Report has changed due to changes made at the interim review stage, for the sake of clarity the footnote references in this section reflect the numbering in the Final Report.

A. REQUEST FOR REVIEW SUBMITTED BY CHINA

6.3 China requests that we refer in footnote 52 to paragraph 3.1 to the reason given by China for withdrawing its request for findings and recommendations with respect to its claim under Article 13.1 of the SCM Agreement. The United States does not object to this request. We have modified footnote 52 as requested by China.

6.4 China proposes that we either entirely delete, or modify, paragraph 8.3, arguing that this paragraph does not accurately summarize its argument, which according to China is accurately summarized in paragraphs 8.4-8.6. In particular, China submits that (as the Panel correctly notes elsewhere) it did not argue that SOEs and SOCBs in general, or the particular ones involved in these investigations, as a matter of law could never be considered public bodies, and must in all cases be treated as private bodies under Article 1.1; but that instead it argued that the actions of state-owned corporate entities are *prima facie* private, and thus *presumptively* not attributable to a Member under Article 1.1 of the SCM Agreement absent either a finding of entrustment or direction, or a finding that such entities were public bodies, as China believes that term should be interpreted in accordance with the Vienna Convention on the Law of Treaties. China similarly suggests that we change the drafting of the first sentence of paragraph 8.55 to indicate that a public body, although not identical to a government, must nonetheless possess characteristics similar to those of a "government" as identified by the Appellate Body in *Canada – Dairy*, i.e., should be defined as "an entity which exercise powers [or authority] vested in it by a 'government' for the purpose of performing functions of a 'governmental' character". Finally, China suggests that we make similar modifications to the last sentence of paragraph 8.64. The United States objects to China's request to delete paragraph 8.3, and suggests instead that we delete its third, fourth and fifth sentences, as China does not appear to object to the first two sentences. The United States does not object to China's proposed modifications of paragraphs 8.55 and 8.64. We have introduced drafting changes to paragraph 8.3 to more accurately reflect China's argument as summarized in paragraphs 8.4-8.6, and have added citations in new footnote 67. We also have modified paragraphs 8.55 and 8.64 to reflect China's suggestions and have added citations in new footnote 149. Furthermore, for the sake of internal consistency and to more accurately reflect China's position, we have introduced corresponding changes to paragraphs 8.63, 8.66, 8.69, 8.70, 8.73, and 8.82.

56 Argentina, Australia, Brazil, Canada, the European Communities, Japan, Mexico, Norway, Saudi Arabia and Turkey provided written submissions and/or made oral statements at the Panel's meeting with the third parties. Bahrain, Kuwait and Chinese Taipei did not provide written submissions or make oral presentations.
6.5 China submits that paragraph 8.18 does not accurately describe its position with respect to the so-called "five-factor" test applied by the USDOC in certain prior countervailing duty investigations, arguing that before the Panel it never endorsed the five-factor test as a proper basis for determining the existence of a public body under the SCM Agreement or criticized the USDOC for failing to employ that test. China submits that it made clear in its submissions to the Panel that the five-factor test was "exclusively a creature of U.S. law," whose "consistency vel non with Article 1.1 of the SCM Agreement, as interpreted in accordance with Article 31 of the Vienna Convention, is not before the Panel in this case." China recalls its statements to the Panel that while two of the five factors were "highly germane" to the public body inquiry, the remainder of the factors were of "little relevance," and adds that in this same paragraph the Panel correctly notes China's view that the five-factor test is relevant for this proceeding only to establish that prior to the four countervailing duty investigations at issue, the USDOC itself had recognized that determining whether a state-owned entity qualified as a public entity was a multi-factor, fact-intensive inquiry under U.S. law. We note that China requests no specific modifications to this paragraph, however. Related to the issue it raises in regard to paragraph 8.18, China also objects to paragraph 8.125. China argues that this paragraph incorrectly suggests that China made "arguments" regarding the meaning of "public body" based on the five-factor test, and incorrectly characterizes China's statement, that it took "no solace" from the USDOC's statement that it would reconsider application of the five-factor test in an eventual future administrative review, as indicating that China considers application of that test to be mandatory. Rather, China indicates, it made this statement in connection with its argument that the USDOC not only had applied the wrong substantive rule with respect to the term "public body", but also had improperly shifted the burden to China to disprove the USDOC's presumption based on a per se majority ownership rule that all SOEs are public bodies. China considers that paragraph 8.125 not only is an incorrect summary of China's position but also is wholly unnecessary to the Panel's analysis, and should be deleted.

6.6 The United States disagrees with China's comments on paragraphs 8.18 and 8.125. Regarding paragraph 8.18, the United States notes China's statements before the Panel that the USDOC "abandoned" the five-factor test in favour of a "per se" rule, and concerning the USDOC's commitment to "reconsider the feasibility of applying the five-factor test during an administrative review," that "[a] Member may not avoid responsibility for failing to honour its WTO obligations by promising to consider complying with them in the future." The United States asserts that despite China's effort to "emphasize" that it was not asking the Panel to determine the consistency of the five-factor test with Article 1.1 of the SCM Agreement, it was nevertheless critical of the USDOC's determination not to employ the test in the investigations at issue in this dispute. The United States similarly considers that paragraph 8.125 accurately describes China's argument before the Panel concerning the five-factor test, this paragraph noting both China's affirmative "disclaimer" that it is not arguing about the consistency of the five-factor test with Article 1.1 of the SCM Agreement and the implication in China's argument that the "USDOC was obligated to have applied that test. . . ." The United States recalls that China raised the five-factor test and appeared to consider that the test addresses what China identified the "key question regarding whether an entity is a public body" (i.e., whether it exercises governmental authority). The United States therefore considers that it was prudent of the Panel to address in this paragraph the legal question whether under the SCM Agreement it is necessary to examine the five factors to establish that an entity is government-controlled.

6.7 We have made certain modifications to the paragraphs identified by China in response to these comments. First, to more comprehensively reflect China's arguments regarding the five-factor test, we have introduced new footnote 94 to paragraph 8.18. In paragraph 8.125, we have modified the drafting and have added a cross-reference in footnote 248 to more clearly distinguish between China's arguments and the Panel's appreciation of those arguments. We also have clarified that we examine the potential relevance of the five-factor test under Article 1.1 of the SCM Agreement for the sake of the completeness of our analysis, notwithstanding China's disclaimer.
6.8 China objects to the wording in footnote 186, which it requests that we modify to reflect language in the Panel Report in US – Countervailing Duty Investigation on DRAMS that the USDOC might have been able to treat wholly-government-owned entities as 'public bodies' rather than 'private' bodies, depending on the circumstances. The United States does not share China's concern, but considers that if we amend the drafting of this footnote in response to China's request, we should more closely track the language used by the Appellate Body in that dispute. We have modified footnote 186 to reflect the language used by the Appellate Body.

6.9 China requests that we add a statement to footnote 274 to indicate that China had referred to evidence that borrowers in the OTR tire industry obtained loans from SOCBs at interest rates that were not materially different from interest rates on loans made by SOCBs to borrowers in other industries. The United States does not object to this request. We have amended this footnote as requested by China.

6.10 China requests that we modify paragraph 9.25 to clarify that China's position is that the term "subsidy" in Article 2.1(a) of the SCM Agreement means a "subsidy" as defined in Article 1 of that Agreement. The United States does not object to this request. We have modified the drafting of this paragraph to reflect China's comment.

6.11 China notes that, unlike in footnote 693, the Panel makes no reference in paragraphs 10.26 and 10.70 of the Report either to the United States' clarification that the United States was not relying on the Protocol of Accession in its arguments against China's claims under Article 14, or to the Panel's reliance on that clarification to conclude that its analysis of those claims would not take the arguments of the United States referring to the Protocol into account. The United States does not believe that any modification to the Report as requested by China's comments is necessary, and in particular considers it unnecessary to duplicate, in the paragraphs identified by China, the Panel's summary in paragraph 10.11 and in footnote 693 of the U.S. position with respect to China's Protocol of Accession. In response to China's request we have added new footnote 464 to paragraph 10.12 indicating that while we include the United States' arguments referencing China's Protocol of Accession in our summary of arguments with respect to the interpretation of Article 14(d), we do not take those arguments into account in our analysis of China's claims on benchmarks.

6.12 China requests that, for the sake of completeness, we add a statement to footnote 582 to paragraph 10.88 of the Report noting China's reference before us to a statement concerning government intervention in credit markets, contained in an expert report that had been submitted during the countervailing duty investigation. The United States does not consider that an additional specific reference to the Report would enhance the clarity or completeness of the citation in the footnote, but provides no further basis for its objection. We have inserted into footnote 582 a reference to the expert report.

6.13 China requests that the Panel delete the phrase "(a term for which China offers no explanation)" in the second sentence of paragraph 10.121. China submits that it provided, in paragraph 235 of its first written submission and Exhibit CHI-107, a definition of the term "commercial" from the New Shorter Oxford English Dictionary, and cited two other panel reports that have considered the meaning of the term "commercial". China submits that its reference to the "ordinary course of commerce" is consistent with these definitions. The United States objects to China's request because in its view the explanation that China provides in support of its request serves only to highlight that China failed to provide any explanation for the term "ordinary course of commerce," a term that China invented in an effort to persuade the Panel to give a particular meaning to the term "commercial" in Article 14(b) of the SCM Agreement. We have not accepted China's request to delete the phrase in question, and have added new footnote 620 regarding the sources cited by China for the meaning of the term "commercial".
6.14 **China** requests that in paragraph 11.11 and footnote 821 to paragraph 11.59 we reflect that China's use of the term "basic reasonableness test" with respect to Article 14 was a reference to the Panel Report in *EC – Countervailing Measures on DRAM Chips*, as reflected in China's answer to Panel question 7 following the second meeting. The United States does not object to including a reference or a footnote in paragraph 11.11 indicating that China cited to the *EC – DRAMs* report, but disagrees that such a note should be repeated in footnote 821, as that footnote reflects the Panel's conclusion. The United States considers that the test that China sought to have the Panel establish in the present dispute is not at all similar to that applied by the panel in *EC – DRAMs*. In response to China's request, we have indicated in footnote 768 to paragraph 11.11 that China was referring to the *EC – DRAMs* panel report. In addition, in footnote 821, we have introduced language further explaining our conclusion contained in that footnote.

6.15 **China** requests that we delete the first sentence of paragraph 14.84 on the grounds that China has never stated that "the issue of double remedies in respect of domestic subsidies is an issue which the covered agreements do not address." The United States does not object to this request. As requested by China, we have deleted this sentence.

**B. REQUEST FOR REVIEW SUBMITTED BY THE UNITED STATES**

6.16 The **United States** requests that we delete the second sentence of paragraph 8.104 of the Interim Report, including the footnote thereto, as that sentence is inaccurate. In particular, the United States indicates that, contrary to the characterization in that sentence, in the LWR investigation the USDOC did not rely on facts available to determine that certain SOEs were "public bodies". The United States also requests us to delete the third sentence of paragraph 8.129 of the Interim Report for the same reason, and that we identify Baosteel as a trading company rather than as a producer. China does not object to these requests. We have made the modifications requested by the United States.

6.17 The **United States** requests that in paragraph 8.122, we refer to Bridgestone as "a domestic interested party", rather than as "the applicant". China does not object to this request. We have made the change requested by the United States.

6.18 The **United States** requests that in paragraph 9.14 we modify the drafting to indicate that the USDOC found that the planning documents prohibited policy lending to "restricted" projects and "projects to be abolished". China raises no objection to this request. We have modified paragraph 9.14 as requested by the United States.

6.19 The **United States** requests that we add to paragraph 9.101 references to two pieces of evidence in addition to those already referred to as the basis for the USDOC's determination that SOCBs followed government policies in making their lending decisions. The United States requests, in particular, that we indicate that the USDOC also had before it a Chairperson's report on the transitional review of China at the WTO, and interviews of independent financial experts conducted by the USDOC in 2007. China objects to this request. Concerning the Chairman's report on the transitional review of China at the WTO, China submits that the modification requested by the United States would be misleading as the statement in that report quoted by the United States in its request for interim review in fact was a statement by the United States during the transitional review, and was not, contrary to the United States' implication, a finding by the WTO Committee on Subsidies and Countervailing Measures. China further argues that, contrary to the language proposed by the United States, the Committee did not make any "finding" that could have been "confirmed" through USDOC interviews of "financial experts". China further notes that the identities of these "experts" were never disclosed, and that the only record of their opinions are the summaries that the USDOC itself prepared in *ex parte* meetings from which all interested parties were excluded. The **United States** also requests that we clarify, in the fourth sentence of this paragraph, that the
verification referred to was that in the CFS Paper investigation. China does not object to this request. We have inserted the requested reference to the CFS Paper investigation, but have not made the other changes requested by the United States. Concerning the report on the transitional review of China, while this document apparently was at least partially on the record of the investigation, we find no reference to it in the USDOC's determination. Concerning the USDOC's interviews of financial experts, we see no need to add anything to our Report, given that footnote 394 already cites the references to these interviews in the USDOC's determination.

6.20 The United States requests that we insert in paragraph 11.19 a summary of two points that it raised in response to China's argument based on the term "good" in Article 14(d) of the SCM Agreement, as in the Interim Report this paragraph reflected only one of the three points raised by the United States. China raises no objection to this request. We have modified paragraph 11.19 as requested by the United States.

6.21 The United States requests that we insert in footnotes 863 and 864 to paragraph 12.53 references to the exhibits containing information on GTC, as in the Interim Report these footnotes only referred to exhibits pertaining to TUTRIC. China does not object to this request. We have modified these footnotes to refer to the exhibits pertaining to GTC identified by the United States.

6.22 The United States requests that we make certain changes to paragraph 14.69 and footnote 965. The United States submits that this paragraph and footnote could be misunderstood to suggest that the NME methodology necessarily entails a comparison with unsubsidized costs of production, whereas there is nothing inherent in the use of an NME methodology that results in a comparison with unsubsidized costs of production, and the costs of production in the surrogate economy may well be subsidized themselves. The United States therefore requests that the Panel revise its statement to reflect the fact that the use of an NME methodology may result in the use of unsubsidized costs of production. For similar reasons, the United States suggests that we revise the second sentence in paragraph 14.72 so that it would read: "... the use of an NME methodology leads to an asymmetric dumping margin comparison to the extent that an unsubsidized normal value is being compared to a subsidized export price." (our emphasis) China objects to the changes proposed by the United States, arguing that, as it explained in its first written submission, when using its NME methodology the USDOC seeks to ensure that the surrogate values that it uses represent "market determined" values, which by definition are unsubsidized values, and that the USDOC avoids the use of any surrogate value that may itself be subsidized in the surrogate economy. Referring to Exhibit CHI-123, China also submits that the U.S. Congress has specifically directed the USDOC to "avoid using any prices which it has reason to believe or suspect may be dumped or subsidized"; China also notes that in GPX, the CIT observed that the U.S. NME methodology compares the producer's export price to a "presumptively subsidy-free constructed normal value." We note, in response to the United States' request, that paragraphs 14.69 and 14.72 form part of the Panel's discussion of the effects, at the conceptual level, of the use of NME methodologies. As indicated in these paragraphs, conceptually, a market-economy surrogate value is a value that is market-determined, and therefore unsubsidized. Thus, in our view, making the change requested by the United States would not add to the clarity of the Panel's discussion of the effects of the use of NME methodologies. We have nonetheless added the word "presumptively" in footnote 965 to reflect the fact that, in practice, surrogate values may not, in all instances, be exempt from any subsidization. In response to the United States' request we also have clarified the parties' arguments on the issue (by adding new footnote 936 and modifying footnote 974) to more accurately reflect their respective positions on the issue.

6.23 The United States also suggests typographical and other technical corrections to paragraph 9.24, footnote 425 to paragraph 9.118, paragraph 11.39, footnote 998 to paragraph 14.90, paragraph 14.138, footnote 1109 to paragraph 15.9, footnote 1125 to paragraph 15.30, and footnote 1146 to paragraph 15.48. China does not object to these
suggestions. We have made the corrections suggested by the United States, as well as a number of
others in other paragraphs of the Report.

VII. INTRODUCTION TO FINDINGS BY THE PANEL

A. GENERAL PRINCIPLES REGARDING TREATY INTERPRETATION, THE APPLICABLE STANDARD OF
REVIEW, AND BURDEN OF PROOF

1. Rules of treaty interpretation

7.1 Article 3.2 of the DSU directs panels to apply "customary rules of interpretation of public
international law" in the interpretation of the provisions of the covered agreements. It is well settled
in WTO law that the principles codified in Articles 31-33 of the Vienna Convention on the Law of
Treaties ("Vienna Convention") are such customary rules. These provisions read as follows:

"Article 31: General rule of interpretation

1. A treaty shall be interpreted in good faith in accordance with the ordinary
meaning to be given to the terms of the treaty in their context and in the light of its
object and purpose.

2. The context for the purpose of the interpretation of a treaty shall comprise, in
addition to the text, including its preamble and annexes:

(a) any agreement relating to the treaty which was made between all the
parties in connection with the conclusion of the treaty;

(b) any instrument which was made by one or more parties in connection
with the conclusion of the treaty and accepted by the other parties as
an instrument related to the treaty.

3. There shall be taken into account, together with the context:

(a) any subsequent agreement between the parties regarding the
interpretation of the treaty or the application of its provisions;

(b) any subsequent practice in the application of the treaty which
establishes the agreement of the parties regarding its interpretation;

(c) any relevant rules of international law applicable in the relations
between the parties.

4. A special meaning shall be given to a term if it is established that the parties
so intended.

Article 32: Supplementary means of interpretation

Recourse may be had to supplementary means of interpretation, including the
preparatory work of the treaty and the circumstances of its conclusion, in order to
confirm the meaning resulting from the application of article 31, or to determine the
meaning when the interpretation according to article 31:

(a) leaves the meaning ambiguous or obscure; or

(b) leads to a result which is manifestly absurd or unreasonable.
Article 33: Interpretation of treaties authenticated in two or more languages

1. When a treaty has been authenticated in two or more languages, the text is equally authoritative in each language, unless the treaty provides or the parties agree that, in case of divergence, a particular text shall prevail.

2. A version of the treaty in a language other than one of those in which the text was authenticated shall be considered an authentic text only if the treaty so provides or the parties so agree.

3. The terms of the treaty are presumed to have the same meaning in each authentic text.

4. Except where a particular text prevails in accordance with paragraph 1, when a comparison of the authentic texts discloses a difference of meaning which the application of articles 31 and 32 does not remove, the meaning which best reconciles the texts, having regard to the object and purpose of the treaty, shall be adopted.

2. Standard of review

7.2 Article 11 of the DSU sets out the standard of review applicable in WTO panel proceedings in general. This provision imposes upon panels a comprehensive obligation to make an "objective assessment of the matter", both factual and legal. Article 11 of the DSU provides, in relevant part:

"The function of panels is to assist the DSB in discharging its responsibilities under this Understanding and the covered agreements. Accordingly, a panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements, and make such other findings as will assist the DSB in making the recommendations or in giving the rulings provided for in the covered agreements".

7.3 It is well settled that in reviewing (inter alia) a countervailing duty determination, a panel may not conduct a "de novo review" of the evidence or substitute its judgement for that of the competent authorities. A panel may not reject an agency's conclusions simply because the panel would have arrived at a different outcome if it were making the determination itself. A panel must also limit its examination to the evidence that was before the agency during the course of the investigation, and must take into account all such evidence submitted by the parties to the dispute. At the same time, a panel must not simply defer to the conclusions of the investigating authority. A panel's examination of those conclusions must be "in-depth" and "critical and searching".

7.4 A panel reviewing an investigating authority's determination should examine whether the determination is "reasoned and adequate", and more specifically, whether the investigating authority provided a "reasoned and adequate" explanation as to: (i) how the evidence on the record supported its factual findings; and (ii) how those factual findings supported the overall subsidy determination. In US – Softwood Lumber VI (Article 21.5 – Canada), the Appellate Body provided more guidance on how a panel should apply these principles in its evaluation of factual findings:

"A panel's examination of [an investigating authority's] conclusions must be critical and searching, and be based on the information contained in the record and the

explanations given by the authority in its published report. A panel must examine whether, in the light of the evidence on the record, the conclusions reached by the investigating authority are reasoned and adequate. What is 'adequate' will inevitably depend on the facts and circumstances of the case and the particular claims made, but several general lines of inquiry are likely to be relevant. The panel's scrutiny should test whether the reasoning of the authority is coherent and internally consistent. The panel must undertake an in-depth examination of whether the explanations given disclose how the investigating authority treated the facts and evidence in the record and whether there was positive evidence before it to support the inferences made and conclusions reached by it. The panel must examine whether the explanations provided demonstrate that the investigating authority took proper account of the complexities of the data before it, and that it explained why it rejected or discounted alternative explanations and interpretations of the record evidence. A panel must be open to the possibility that the explanations given by the authority are not reasoned or adequate in the light of other plausible alternative explanations, and must take care not to assume itself the role of initial trier of facts, nor to be passive by 'simply accept[ing] the conclusions of the competent authorities'.

3. Burden of proof

7.5 The general principles regarding the allocation of the burden of proof in WTO dispute settlement require that a party claiming a violation of a provision of a WTO agreement by another Member assert and prove its claim. With respect to these general rules on allocation of the burden of proof, the Appellate Body observed that:

"[...]'in WTO dispute settlement, as in most legal systems and international tribunals, the burden of proof rests on the party that asserts the affirmative of a claim or defence. A complaining party will satisfy its burden when it establishes a \textit{prima facie} case by putting forward adequate legal arguments and evidence. The nature and scope of arguments and evidence required 'will necessarily vary from measure to measure, provision to provision, and case to case'. When a claim is brought against a WTO Member's legislation or regulation, a panel may, in some circumstances, consider that the text of the relevant legal instrument is sufficiently clear to establish the scope and meaning of the law. However, in other cases, a panel may consider that additional evidence is necessary to do so. Once the complaining party has established a \textit{prima facie} case, it is then for the responding party to rebut it".

7.6 China, as the complaining party in this dispute, must therefore make a \textit{prima facie} case of violation of the relevant provisions of the WTO agreements it invokes, which the United States must refute. A \textit{prima facie} case is one which, in the absence of effective refutation by the other party, requires a panel, as a matter of law, to rule in favour of the party presenting the \textit{prima facie} case. We also note, however, that it is generally for each party asserting a fact, whether complainant or respondent, to provide proof thereof. In this respect, therefore, it is also for the United States to provide evidence supporting the facts which it asserts.

\footnotetext{62}{Appellate Body Report on \textit{Chile – Price Band System (Article 21.5 – Argentina)}, para. 134. (footnotes omitted)}
B. CHINA'S PROTOCOL OF ACCESSION

7.7 In addition to the obligations contained in the covered agreements, which apply to all Members, China has undertaken special obligations under its Protocol of Accession. Section 15 of China's Protocol of Accession is of relevance to the issues before the Panel. It provides as follows:

"15. Price Comparability in Determining Subsidies and Dumping

Article VI of the GATT 1994, the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 ("Anti-Dumping Agreement") and the SCM Agreement shall apply in proceedings involving imports of Chinese origin into a WTO Member consistent with the following:

(a) In determining price comparability under Article VI of the GATT 1994 and the Anti-Dumping Agreement, the importing WTO Member shall use either Chinese prices or costs for the industry under investigation or a methodology that is not based on a strict comparison with domestic prices or costs in China based on the following rules:

(i) If the producers under investigation can clearly show that market economy conditions prevail in the industry producing the like product with regard to the manufacture, production and sale of that product, the importing WTO Member shall use Chinese prices or costs for the industry under investigation in determining price comparability;

(ii) The importing WTO Member may use a methodology that is not based on a strict comparison with domestic prices or costs in China if the producers under investigation cannot clearly show that market economy conditions prevail in the industry producing the like product with regard to manufacture, production and sale of that product.

(b) In proceedings under Parts II, III and V of the SCM Agreement, when addressing subsidies described in Articles 14(a), 14(b), 14(c) and 14(d), relevant provisions of the SCM Agreement shall apply; however, if there are special difficulties in that application, the importing WTO Member may then use methodologies for identifying and measuring the subsidy benefit which take into account the possibility that prevailing terms and conditions in China may not always be available as appropriate benchmarks. In applying such methodologies, where practicable, the importing WTO Member should adjust such prevailing terms and conditions before considering the use of terms and conditions prevailing outside China.

(c) The importing WTO Member shall notify methodologies used in accordance with subparagraph (a) to the Committee on Anti-Dumping Practices and shall notify methodologies used in accordance with subparagraph (b) to the Committee on Subsidies and Countervailing Measures".  

---

63 China's Protocol of Accession, annexed to Ministerial Decision on China's Accession, WT/L/432.
7.8 Also referred to by the parties and of potential relevance to this dispute are certain paragraphs of the Report of the Working Party on the Accession of China (the "Working Party Report"), namely paragraphs 150-151 and 171-173.  

VIII. CHINA'S CLAIMS PERTAINING TO THE USDOC'S DETERMINATIONS THAT CERTAIN SOES AND SOCBS WERE PUBLIC BODIES

A. CLAIMS OF CHINA

8.1 China claims, in respect of the provision of goods (inputs), that the USDOC's determinations that certain SOEs were "public bodies" were inconsistent with Article 1.1(a)(1) of the SCM Agreement. Thus, China argues, the USDOC's findings in the four countervailing duty investigations of financial contributions by a government in the form of provision of goods to respondent producers were inconsistent with Article 1.1 of the SCM Agreement. China further claims that, as a consequence, the United States acted inconsistently with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.  

8.2 China claims, in respect of the provision of loans, that the USDOC's determinations that certain SOCBs were "public bodies" were inconsistent with Article 1.1(a)(1) of the SCM Agreement. Thus, China argues, the USDOC's finding in the OTR countervailing duty investigation of financial contribution by a government in the form of alleged "policy lending" was inconsistent with Article 1.1 of the SCM Agreement. China further claims that, as a consequence, the United States acted inconsistently with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.

B. MAIN ARGUMENTS OF THE PARTIES

1. China

8.3 China challenges as invalid the USDOC's findings in the investigations at issue that SOEs producing inputs, and SOCBs providing loans, were "public bodies" within the meaning of Article 1.1(a)(1) of the SCM Agreement. Therefore, China considers inconsistent with that Article the USDOC's determinations that the provision of inputs and of loans by these entities constituted financial contributions by public bodies. China argues that in the absence of evidence that these entities were vested with and exercised governmental authority, as a matter of law their actions needed to be deemed those of private, not public, bodies. Given this, only if the USDOC had found that these entities were "entrusted or directed" in the sense of Article 1.1(a)(1)(iv) of the SCM Agreement to provide the inputs or the loans could it have lawfully concluded that the financial contributions were made by the Government of China. China maintains that because the USDOC did not examine whether there had been such entrustment or direction, its determinations of financial contributions by the Government of China were inconsistent with Article 1.1 of the SCM Agreement, and as a consequence, with Articles 10 and 32.1 of the SCM Agreement, as well as with Article VI:3 of the GATT 1994.

8.4 China argues that the Appellate Body recognized in US – Countervailing Duty Investigation on DRAMS that under well-established principles of customary international law, the actions of state-

---

65 Paragraphs B.1(a)(i) and B.1(e)(i)-(iii) of the "as applied" claims in China request for establishment of the Panel; China first written submission, para. 468 (a); second written submission, para. 315 (a).
66 Paragraphs B.1(c)(i) and B.1(e)(i)-(iii) of the "as applied" claims in China request for establishment of the Panel, China first written submission, paras. 468 (d); second written submission, para. 315 (e).
67 See, e.g., China first written submission, paras. 95-96 and 158-160.
68 China first written submission, paras. 34-40.
owned corporate entities are *prima facie* private, and thus presumptively not attributable to a Member under Article 1.1 of the SCM Agreement. China argues that instead of focusing as it should have on whether the SOEs and SOCBs were "private bodies" that had been "entrusted or directed" by the Government of China or a public body to provide inputs and loans, respectively, the USDOC relied on a *per se* rule of majority government ownership in determining that these entities were "public bodies." In China's view, this interpretation of the term "public body" is impermissible under a correct application of the principles of treaty interpretation. For China, while government ownership is relevant to the question of control, and thus to the inquiry in Article 1.1(a)(1)(iv) as to whether a private body has been directed to perform governmental functions, ownership has little relevance in determining whether an entity is a public body.

8.5 Rather, China asserts, to be a "public body", an entity must be authorized by the law of the state to exercise functions of a governmental or public character, and the acts in question must be performed in the exercise of such authority. In this context China, paraphrasing the Appellate Body in *Canada – Dairy*, argues that a "public body" should be defined as "an entity which exercises powers [or authority] vested in it by a 'government' for the purpose of performing functions of a 'governmental' character." According to China, what distinguishes the conduct of public bodies from that of private bodies is not the degree of government ownership – the government may have ownership interests in both – but the source and nature of the authority the entities possess and exercise. China states therefore that in the investigations at issue in the present dispute, absent actual evidence establishing that the state-owned entities were vested with authority to exercise governmental authority in connection with the provision of the alleged financial contributions at issue, as a matter of law those entities' actions must be deemed to be those of private entities.

8.6 China asserts that it is not arguing that government-owned entities can never be public bodies within the meaning of Article 1.1(a)(1), but rather that their conduct should be deemed presumptively private, and consistent with that presumption, their conduct ordinarily should be examined under the entrustment or direction standard of Article 1.1(a)(1)(iv) of the SCM Agreement. If the evidence in a particular case established that a government-owned entity was exercising delegated authority to perform functions of a governmental character, then it would be appropriate to conclude that it was a public body and that subparagraph (iv) was inapplicable. But absent such evidence, China argues, subparagraph (iv) should apply and there is no legitimate justification in the text, context or object and purpose of the SCM Agreement for the arbitrary test the United States has advanced that would make such entities public bodies in all cases merely by virtue of their government ownership.

8.7 China relies on various dictionary definitions of the term "public" to argue that the ordinary meaning of the term "public body" requires the essential elements that such an entity acts for the welfare and best interests of a nation or community as a whole, and does so under the authority, or officially on behalf, of the nation or community as a whole. China argues further that the phrase in Article 1.1(a)(1), "a government or other public body" explicitly equates, and treats as "functional equivalents", the terms "government" and "public body". According to China, the Agreement differentiates between this type of entity and "private bodies" in Article 1.1(a)(1)(iv), the actions of which require "entrustment or direction" from a government to perform one of the functions

73 China first written submission, para. 61.
74 China oral statement at the second meeting of the Panel, paras. 30-31.
75 China first written submission, paras. 50-51; second written submission, para. 6.
76 China first written submission, para. 52.
enumerated in Article 1.1(a)(i)-(iii) in order to be deemed financial contributions by a government. For China, the fact that entrustment or direction of the actions of private bodies brings those actions within the purview of "government financial contribution" demonstrates that in all cases, the *sine qua non* of a "financial contribution" is the exercise of some element of governmental authority in connection with performing functions of a governmental character.77

8.8 China also considers that the definitions of the corresponding French and Spanish terms "organisme public" and "organismo público" in Article 1.1 of the SCM Agreement support its argument concerning the ordinary meaning of the term "public body". China argues that all three terms are presumed to have the same meaning under Article 33(3) of the Vienna Convention, and that the Panel must examine this meaning. According to China, the French term "public" and the Spanish term "público" connote "governmental", which is consistent with several dictionary definitions of the English term "public". China also points to the OECD Economics Glossary which it argues equates "organisme public" with the English term "government agency".78 China further argues that in the Agreement on Agriculture the Spanish term "organismo público" is expressly equated to the English term "government agency", and that the Appellate Body in *Canada – Dairy* established unequivocally that the same Spanish and French terms at issue in Article 1.1 of the SCM Agreement have the same meaning as the English term "government agency".79 According to China, Article 33 of the Vienna Convention requires the Panel to interpret the English term "public body" consistently with the fact that the French and Spanish versions of that term mean "government agency", and the only coherent way to do so is to interpret the English terms "public body" and "government agency" as functional equivalents, just as they are treated in the French and Spanish languages.80

8.9 China disagrees with the United States concerning the meaning of the conjunction "or" in Article 1.1(a)(1) between the terms "government" and "public body". In China's view, this word does not suggest that the two terms must have wholly dissimilar and unrelated meanings, but only that the terms are not identical. China argues that "or" frequently connects words or phrases that are similar or functional equivalents, and cites the report of the *US – Export Restraints* panel's reference to the word "or" between the phrases "a government makes payments to a funding mechanism" and "entrusts or directs a private body" in subparagraph (iv) of Article 1.1(a)(1) as meaning that the two phrases captured equivalent government actions.81

8.10 China also disagrees with the United States concerning the significance of the adjective "any" to modify "public body" in Article 1.1(a)(1) of the Agreement. According to China, the "any" only indicates that all entities that qualify as public bodies – however that term is defined – are captured within the scope of Article 1.1, but says nothing about the characteristics that define a public body, and offers no support for the United States' *per se* majority government ownership test.82

8.11 China argues that its interpretation of the term "public body" also is supported contextually by the General Agreement on Trade in Services (the "GATS"). According to China, paragraph 5(c)(i) of the Annex on Financial Services to the GATS (the "GATS Financial Services Annex") defines the term "public entity" as an "entity owned or controlled by a Member, that is principally engaged in carrying out governmental functions or activities for governmental purposes [...]". For China, this

79 China second written submission, paras. 10-11, citing to Appellate Body Report on *Canada – Dairy*, para. 97.
80 Id., paras. 8 and 13; oral statement at the second meeting of the Panel, paras. 4-10.
81 China response to Panel question 14 (first meeting); oral statement at the second meeting of the Panel, paras. 11-12, citing to Panel Report on *US – Export Restraints*, para. 8.32.
82 China oral statement at the second meeting of the Panel, para. 13.
definition reflects a similar view of the functional equivalence between "government" and "public body" that, in China's view, exists in Article 1.1 of the SCM Agreement. In addition, China argues, the GATS definition indicates that when an entity is "merely owned or controlled by a Member", it will qualify as a public entity only if it is "carrying out governmental functions or activities for governmental purposes", that entities owned or controlled by governments may carry out both governmental and commercial functions, and that they are deemed to be "public" only when principally engaged in the former. According to China, Article I:3(a) of the GATS also provides relevant context by defining "measures by Members" to include measures by governmental actors ("central, regional or local governments or authorities") and non-governmental bodies "in the exercise of powers delegated by central, regional or local governments or authorities". China argues that if the actions of non-governmental bodies may be attributed to a Member for purposes of the GATS only when they are exercising authority delegated to them by the government, it is difficult to envision any rational justification for applying any less demanding a standard for attributing the actions of a "public body" to a Member under Article 1.1 of the Agreement.83

8.12 China refers to the International Law Commission's Draft Articles on Responsibility of States for Internationally Wrongful Acts (the "Draft Articles") as compelling its interpretation of the term "public body" in Article 1.1 of the SCM Agreement. According to China, as a general matter prior panels and the Appellate Body have considered the Draft Articles "relevant rules of international law applicable in the relations between the parties", in the sense of Article 31(3)(c) of the Vienna Convention, for purposes of interpreting the covered agreements.84

8.13 In this regard, concerning the interpretation of Article 1.1 of the SCM Agreement, China recalls that in US – Countervailing Duty Investigation on DRAMS the Appellate Body referred to the Draft Articles in the section of its report entitled "The meaning of the terms 'entrusts' and 'directs'" in Article 1.1(a)(1)(iv).85 In particular, China notes the Commentary to Article 8 of the Draft Articles, to which the Appellate Body referred in a footnote in the US – Countervailing Duty Investigation on DRAMS report.86 According to China, this passage of the Commentary makes clear that state ownership is not sufficient to attribute the conduct of a state-owned corporate entity to a state, and by extension to a Member for purposes of Article 1.1 of the SCM Agreement, and that instead it supports China's view of the term "public body". Furthermore, in China's view, the Appellate Body's citation of this passage demonstrates that the Draft Articles are "relevant rules of international law" for purposes of interpreting the WTO Agreement, and thus must be relied upon in the present dispute in determining whether the USDOC's determination that the SOEs and SOCBs were public bodies was consistent with the SCM Agreement.87

8.14 China further argues that to the extent that the panel in Korea – Commercial Vessels can be read as endorsing a test for determining whether an entity is a public body solely by reference to government ownership or control, its reasoning is not persuasive and should not be followed. China argues in this regard that among other errors, that panel failed to acknowledge the mandatory nature

---

83 China first written submission, paras. 62-67; response to Panel question 21 (first meeting).
84 See, e.g., China first written submission, para. 70; citing to Appellate Body Reports on Canada – Continued Suspension, para. 382; US – Line Pipe, para. 259; US – Cotton Yarn, para. 120 and footnote 90; Panel Reports on Brazil – Retreaded Tyres, para. 7.305 and footnote 1480; Mexico – Taxes on Soft Drinks, para. 8.180; and Decision by the Arbitrator(s) on Brazil – Aircraft (Article 22.6 – Brazil), para. 3.44; US – FSC (Article 22.6 – US), paras. 5.26 and 5.58-5.61; and EC – Bananas III (US) (Article 22.6 – EC), para. 6.16.
85 China first written submission, para. 72, citing to Appellate Body Report on US – Countervailing Duty Investigation on DRAMS, para. 112 and footnote 179.
86 Id. The cited passage from the Commentary reads: "Since corporate entities, although owned by and in that sense subject to the control of the States, are considered to be separate, prima facie their conduct in carrying out their activities is not attributable to the State unless they are exercising elements of governmental authority [within the meaning of Article 5 of the Draft Articles]". (Id.).
87 China first written submission, paras. 72-73.
of recourse to customary principles of international law under Article 31(3)(c) of the Vienna Convention, an oversight that in China's view cannot be reconciled with what it considers the Appellate Body's express reliance on the Draft Articles in interpreting Article 1.1(a)(1)(iv) of the SCM Agreement. According to China, defining "public body" solely by reference to government ownership or control cannot be reconciled with the Appellate Body's recognition in *US – Countervailing Duty Investigation on DRAMS*, consistent with customary international law, that the conduct of a state-owned corporate entity presumptively is not attributable to a government unless that entity is exercising governmental authority within the meaning of Article 5, or determined to be under the direction or control of the State within the meaning of Article 8, of the Draft Articles.88

8.15 Concerning the object and purpose of the SCM Agreement, China considers that the United States' interpretation, if accepted, would have far-reaching and troubling implications for the proper application of the SCM Agreement. Here, China disagrees with the argument advanced by the United States that a majority ownership rule is necessary to "prevent circumvention of the SCM Agreement […] so that subsidizing governments cannot hide behind their ownership interests in enterprises to avoid the reach of the SCM Agreement." China considers this to be a baseless concern, because subparagraph (iv) of Article 1.1 is an acknowledged anti-circumvention provision that squarely addresses it.89 China also disagrees with what it views as the United States' argument that the entrustment or direction standard is too burdensome and might be evaded when government-owned entities are involved. China is concerned that if the position of the United States is accepted, subparagraph (iv) would become a dead letter for entities with majority government ownership – a category of entities to which, in China's view, subparagraph (iv) was previously considered applicable by both panels and WTO Members alike.90

8.16 China considers that the interpretation advocated by the United States, which in its view is not based on the actual treaty standards, would flout the object and purpose of the SCM Agreement. In particular, China argues, the SCM Agreement "reflects a delicate balance between the Members that sought to impose more disciplines on the use of subsidies and those that sought to impose more disciplines on the application of countervailing measures". Both aspects of this "balance" are evident in Article 1.1, including the "discipline" imposed by the entrustment or direction standard. For China, the possibility that it may not be easy, as a practical matter, to meet the standards of a covered agreement has never dissuaded the Appellate Body from strictly enforcing those standards, and it urges the Panel to be guided by the same approach here.91

8.17 Concerning the USDOC's findings of financial contribution in the form of provision of inputs by SOEs, China argues that the determination that the SOEs were public bodies was flawed, such that the financial contribution findings were inconsistent with the SCM Agreement. In particular, China argues that for the USDOC to have validly concluded that the SOEs were public bodies, it would have had to, but did not, examine whether they were authorized by Chinese law to exercise functions of a governmental character or public character normally exercised by State actors, "and" the acts alleged to have constituted financial contributions were performed in the exercise of such authority. Rather, China argues, the USDOC applied a per se rule of majority ownership to conclude that the SOEs were public bodies.92 China makes the same argument in respect of the USDOC's findings that the SOCBs were public bodies.93

88 China first written submission, para. 83.
89 China oral statement at the second meeting of the Panel, paras. 21-24.
90 Id., paras. 25-27.
91 Id., paras. 28-29.
92 China first written submission, paras. 86-87.
93 In its first written submission, China argues that the analytical framework applied by the USDOC to determining whether the SOCBs were public bodies "bears some resemblance to a proper interpretation of
8.18 China criticizes the USDOC for not applying the five-factor test that it had applied in certain prior cases\(^94\): (i) government ownership; (ii) the government's presence on the entity's board of directors; (iii) the government's control over the entity's activities; (iv) the entity's pursuit of governmental policies or interests; and (v) whether the entity is created by statute. China argues that in some prior cases where this test was applied, the USDOC had found that even 100 per cent government-owned entities were not public bodies under U.S. law, and thus could not convey financial contributions unless they were "entrusted or directed" to do so.\(^95\) While China asserts that it is not raising before the Panel the consistency with Article 1.1 of the SCM Agreement of the five-factor test\(^96\), China also takes issue with the USDOC's statements in three of the investigations in the present dispute that there was insufficient record evidence to apply the five-factor test as, beyond the levels of government ownership for some companies, the Government of China had not provided the information needed to apply the test. China argues that this statement indicates that for the USDOC any provision of goods by a state-owned entity may be presumed to be a financial contribution unless there is evidence establishing that the entity is not a public body.\(^97\) China states that the five-factor test is relevant for this dispute to establish that prior to the investigations at issue, the USDOC had recognized that determining whether a state-owned entity qualified as a public entity was a multi-factor, fact-intensive inquiry even under U.S. law.\(^98\) China considers that the USDOC improperly shifted the burden to the Government of China to disprove the presumption that all SOEs are public bodies, thereby abrogating its responsibilities as an investigating authority. In this context, China cites a statement by the Appellate Body that "the investigating authority has a duty to seek out information on relevant factors and evaluate their probative value in order to ensure that its determination is based not on presumptions, but on a sufficient factual basis".\(^99\) (emphasis added by China)

2. United States

8.19 The United States rejects China's arguments. Concerning the ordinary meaning of "public body", the United States submits that the definitions of the term "public" include: "belonging to, affecting, or concerning the community or nation", and that dictionary definitions identified by China include: "Relating or belonging to an entire community, state, or nation" and "of or relating to the people as a whole; that belongs to, affects or concerns the community or the nation". The

---

\(^94\) While China indicates that the five-factor test is "exclusively a creature of U.S. law" whose consistency with the SCM Agreement is not before the Panel (China first written submission, footnote 69), China also states that in the investigations at issue, the USDOC “abandoned” this test in favour of a "**per se** majority ownership test" (Id., para. 91); China refers to the “fatal” problems with the USDOC’s "excuse" and "rationale" for not applying the test (Id., paras. 94-95); and China indicates that it "takes no solace" in the USDOC's statement in some of the final determinations at issue that it would reconsider the feasibility of applying the five-factor test during an administrative, should a countervailing duty order be imposed (Id., para. 100), arguing that a Member "may not avoid responsibility for failure to honour its WTO obligations by promising to consider complying with them in the future" (Id., para. 101).

\(^95\) China first written submission, para. 90.

\(^96\) Id., footnote 69.

\(^97\) Id., para. 94-95.

\(^98\) Id., footnote 69.

\(^99\) Id., para. 98, citing to Appellate Body Report on **US – Anti Dumping Measures on Oil Country Tubular Goods**, para. 201.
United States notes that one of the dictionaries relied upon by China defines "public" as: "In general, and in most of the senses, the opposite of private (adj.)", and that the word "private" means: "Of a service, business, etc.: provided or owned by an individual rather than the State or a public body". For the United States, this is an important point because the bodies at issue in the dispute are businesses. Accordingly, because the ordinary meaning of the term "public" is the opposite of "private", the meaning of the term "public" would include "provided or owned by the State or a public body rather than an individual". According to the United States, therefore, however the term "public" is examined, its ordinary meaning includes the notion of belonging to, or being owned by, the state, and if an entity is owned by the state, the ordinary meaning of the term "public" indicates that it can be a "public body" under the SCM Agreement.

8.20 In terms of context, the United States notes that the term "public body" in Article 1.1(a)(1) is part of the disjunctive phrase "by a government or any public body [...]". By using two different terms to refer to the type of entity that can provide a financial contribution, the SCM Agreement expresses distinct and different meanings for the terms "government" and "public body". Treaty interpretation should give meaning and effect to all terms of a treaty, and "a treaty interpreter is not free to adopt a meaning that would reduce parts of a treaty to redundancy or inutility". The United States also argues that the word "any" before "public body" means, inter alia, "of whatever kind" of the being or thing at issue, and that through the use of the term "any", the SCM Agreement indicates that there might be different "kinds" of public bodies. For the United States, "any" also indicates that the drafters of the SCM Agreement did not intend the term "public body" to have a meaning that would relate back to the term "government".

8.21 The United States also disagrees with China that the French and Spanish versions of the SCM Agreement require reading the term "public body" as "government agency" (i.e., as the same as "government"). The United States argues that the issue in the present dispute is the interpretation of the term "public body" or "organismo público" or "organisme public". The United States considers that there is no discrepancy between these terms. Regarding China's argument that in Article 9.1 of the Agreement on Agriculture the English term "government agency" is translated in the Spanish version as "organismo público", the United States considers that any discrepancy between the English and Spanish versions exists in that Agreement, which is not before this Panel.

8.22 The United States rejects China's argument that Article 1.1(a)(1) "explicitly equates" the terms "government" and "public body" making them "functional equivalents", and that therefore the essence of a "public body" should be the same as the essence of a "government", namely to perform certain functions pursuant to government authority and power. In the view of the United States, if this were the case, there would have been no need for the use of two different terms in Article 1.1(a)(1). Pursuant to accepted rules of treaty interpretation, the terms "public body" and "government" cannot be equivalent. The United States argues that the term "private body" in Article 1.1(a)(1)(iv) is relevant context. In the view of the United States, given that the term "private body" is the opposite of "public body", and the ordinary meaning of the term "private" includes the notion of being owned by individuals, not the state, the term "private" in the context of Article 1.1(a)(1) indicates that a "public body" can be an entity owned by the state. For the United States, because "government" and

---

100 United States first written submission, paras. 95-96.
101 Id. para. 97; opening statement at the first meeting of the Panel, para. 22.
102 United States first written submission, para. 98; second written submission, para. 24.
103 United States second written submission, paras. 20-21; opening statement at the second meeting of the Panel, para. 4.
104 United States second written submission, para. 36; opening statement at the second meeting of the Panel, paras. 11 and 14.
105 United States first written submission, para. 99; opening statement at the first meeting of the Panel, para. 23.
"public body" are distinct, the fact that state-owned enterprises and state-owned commercial banks are not the government does not bar them from being considered public bodies. The United States also considers that the distinct terms "private body" and "public body", mean that a public body is not a privately-owned entity, and can be an entity owned by the government. Taken together, this means that a "public body" includes entities owned by the government, but not necessarily exercising functions of a governmental character. The United States argues that, not surprisingly this interpretation is consistent with the ordinary meaning of the word "public".106

8.23 The United States finds further context in China's Protocol of Accession, which "include[s] the commitments referred to in paragraph 342 of the Working Party Report" as an "integral part of the WTO Agreement". The United States cites language in the Report concerning the discussion of state-owned enterprises in China (including banks) which in its view makes clear that China's state-owned enterprises are government actors, or at least public bodies, within the meaning of the SCM Agreement. The United States argues that at the very least this language demonstrates that China accepts that actions by state-owned enterprises constitute financial contributions by a government, without the need for a finding of entrustment or direction, and that this is a recognition that Chinese state-owned enterprises are "public bodies" within the meaning of Article 1.1(a)(1) of the SCM Agreement.107

8.24 The United States disagrees with the contextual argument of China based on the term "public entity" in the GATS Financial Services Annex. The United States argues that the GATS is a different agreement with an entirely different field of application, and that the term "public entity" used in the GATS is different from the term "public body". The United States argues that the term "public entity" in that context should not be considered to have the same meaning as "public body" in the SCM Agreement; and that the definition of "public entity" is solely "for the purposes of" the GATS, and thus was not intended to create implications for other Agreements. The United States also disagrees with China that Article I:3 of the GATS is relevant context, as that provision contains neither the term "public body" nor anything else that sheds light on the meaning of that term.108

8.25 The United States points to prior statements of the Appellate Body and panels that the object and purpose of the SCM Agreement is to "strengthen and improve GATT disciplines relating to the use of both subsidies and countervailing measures, while, recognizing at the same time, the right of Members to impose such measures under certain conditions" and "to impose multilateral disciplines on trade-distorting subsidization".109 Accordingly, the United States argues, the Appellate Body and panels have sought to ensure that the SCM Agreement not be interpreted rigidly or formalistically in a manner that would undermine its disciplines on trade-distorting subsidization. Consistent with this object and purpose, and the need to prevent circumvention of the SCM Agreement, in the view of the United States the term "public body" should be interpreted so that subsidizing governments cannot hide behind their ownership interests in enterprises to avoid the reach of the SCM Agreement.110

8.26 The United States disagrees with China that the Draft Articles are relevant rules of international law for purposes of interpreting the term "public bodies". The United States argues that the Draft Articles are not an agreement relating to the SCM Agreement made in connection with the

106 United States first written submission, paras. 100-101.
107 See, e.g., United States first written submission, paras. 102-103; second written submission, para. 39.
108 United States first written submission, paras. 104 and 106; response to Panel question 21 (first meeting); second written submission, para. 35.
conclusion of the SCM Agreement, nor an instrument made by any parties relating to the SCM Agreement, in the sense of Article 31 of the Vienna Convention, nor one of the "covered agreements" set forth in Appendix 1 to the DSU. They thus are not "context" as that term is used in the Vienna Convention. Nor are the Draft Articles a subsequent agreement or practice regarding the interpretation or application of the SCM Agreement. A report of which the United Nations General Assembly merely "took note" in 2001 cannot, in the view of the United States, inform the meaning of provisions of the WTO agreements that entered into force almost six years earlier.111 The United States also disagrees that the Draft Articles are a "relevant rule of international law" that are applicable in this case. The United States further considers that China inappropriately lifts the standards in the Draft Articles and reads them almost verbatim into the SCM Agreement. The United States argues that by their own terms, the Draft Articles are inapplicable to an interpretation of Article 1.1(a)(1) of the SCM Agreement.112

8.27 In this regard, the United States submits that the Draft Articles state that their purpose is not to define the primary rules establishing obligations under international law, but rather to define when a state (as opposed to some other entity) is responsible for a breach of those primary rules. In the context of countervailing duties under the SCM Agreement, according to the United States the primary rule is contained in Article 10 of the SCM Agreement, and the question in the present dispute is whether the United States breached this primary obligation, about which the Draft Articles have nothing to say.113 The United States also notes the lex specialis clause of the Draft Articles. In the view of the United States, the SCM Agreement is a special rule of international law in the sense of that provision, which governs when a financial contribution occurs, and defines the "State" in a way that may produce different consequences from the Draft Articles, using the phrase "a government or any public body within the territory of a Member [...]", the proper interpretation of which is based on its ordinary meaning when read in its context and in light of the object and purpose of the SCM Agreement. The United States argues that the standards in the Draft Articles thus have no relevance or application to the special rule in Article 1.1(a)(1) of the SCM Agreement.114

8.28 The United States also disagrees that the Appellate Body in US – Countervailing Duty Investigation on DRAMS endorsed the principles in the Draft Articles. Rather, in a footnote constituting dicta, the Appellate Body noted the unremarkable proposition that the conduct of private bodies is presumptively not attributable to the State and cited to the commentaries on the Draft Articles. The question in US – Countervailing Duty Investigation on DRAMS, whether certain private bodies were entrusted or directed by the government within the meaning of Article 1.1(a)(1)(iv) of the SCM Agreement, such that their provision of loans and equity was attributable to the government, is different from that in the present dispute, i.e., whether certain entities constitute "public bodies" within the meaning of Article 1.1(a)(1) of the SCM Agreement, a question to which the Appellate Body did not speak in US – Countervailing Duty Investigation on DRAMS.115

8.29 The United States further disagrees that the Appellate Body found the Draft Articles to be relevant rules of international law. The United States submits that the Appellate Body's comment only notes the existence of the Draft Articles, and appears in passing, making the reference to the Draft Articles all the less compelling. By contrast, in the view of the United States, China reads

---

111 United States first written submission, paras. 112-113; opening statement at the first meeting of the Panel, para. 18.
112 United States first written submission, para. 114; second written submission, para. 47.
113 United States first written submission, para. 115.
114 Id., paras. 116-117.
115 See, e.g., United States first written submission, para. 118; response to Panel question 16 (first meeting); second written submission, para. 41.
provisions of the Draft Articles into the SCM Agreement as integral parts of the text, although they are not relevant to interpreting the term "public body".116

8.30 The United States agrees with the conclusion of the panel in Korea – Commercial Vessels that "an entity will constitute a 'public body' if it is controlled by the government (or other public bodies)". In the view of the United States, this reasoning is consistent with the ordinary meaning of the term "public body" in its context and in light of the object and purpose of the SCM Agreement.117 The United States states that majority government ownership can demonstrate control, in that government ownership gives the government the ability to appoint managers and directors and thereby to oversee operations. For the United States, it would be an unusual situation where the owners of the entirety of, or a majority share in, a company could not appoint the leadership (and thereby oversee operations), or could not control the company.118 The United States thus agrees with the Korea – Commercial Vessels panel that in all cases, public body status "can be determined on the basis of government (or other public body) control", and notes that in analyzing control, although the panel cited evidence that the government appointed various entities' managers and directors, and that the government approved and oversaw the entities' operations, it gave the most weight to government ownership of the body. It called the fact that one bank was almost fully government-owned "highly relevant and arguably determinative" in the question of government control.119

8.31 The United States submits that when concluding that a public body is one controlled by a government or other public body, the panel rejected Korea's argument that an entity is not a "public body" if it engages in market activities on commercial terms. The panel noted that this would mean that the panel should apply the "benefit" test in a "public body" analysis, such that on one day a given entity could provide financing on market terms, and thus constitute a "private" entity, while the next day it could make cash grants and then constitute a "public" body. For that panel, "the question of whether an entity is a public body should not depend on an examination of whether that entity acts pursuant to commercial principles". In the view of the United States, China repeats Korea's failed argument when it argues that an entity is only a public body when it engages in government functions, not commercial activities.120 The United States also agrees with the Korea – Commercial Vessels panel that pursuit of a public policy objective is not essential to a public body determination. The United States asserts that China's proposed elements of (i) legal authority to exercise functions of a governmental or public character, and (ii) actions performed in exercise of such authority, are similar to those rejected in Korea – Commercial Vessels.121 In the view of the United States, a standard of government ownership or control is consistent with the object and purpose of the SCM Agreement because it will ensure that subsidizing governments cannot hide behind their ownership interests, while at the same time not treating any entity with which a government has a merely tangential relationship as a public body.122

8.32 The United States thus rejects China's argument that ownership and control are irrelevant to a "public body" analysis, and are only relevant to an "entrustment or direction" analysis pursuant to Article 1.1(a)(1)(iv) of the SCM Agreement. The United States asserts that most of China's argument on this point flows from its mistaken reliance upon the Draft Articles, in particular Article 5, which China analogizes to the public body question, and Article 8, which it analogizes to the entrustment or

120 Id., para. 122, citing to Panel Report on Korea – Commercial Vessels, paras. 7.44-45.
121 Id., para. 123, citing to Panel Report on Korea – Commercial Vessels, para. 7.55.
122 Id., para. 126.
According to the United States, in *US – Countervailing Duty Investigation on DRAMS* (which China cites in support of its argument concerning the Draft Articles), both the panel and Appellate Body recognized a distinction between, on the one hand, entities which potentially could be public bodies because they were owned or controlled by a government and, on the other hand, entities which could not be public bodies because they were not owned or controlled by a government. The Appellate Body noted that there were three classes of creditors in that case, following from the USDOC's grouping of the creditors in the countervailing duty investigation: (A) public bodies; (B) government-owned or controlled creditors; and (C) creditors not owned or controlled by the government. The United States notes that some creditors in Group B were 100 per cent owned by the government, and recalls that the Appellate Body in this context cited the panel's statement that "in its view, the USDOC might have been entitled to treat these 100 per cent-owned firms as 'public bodies', but having refused to so classify them, the USDOC was required to establish entrustment or direction with respect to such creditors". In the view of the United States, while this statement does not constitute a finding by the Appellate Body or the panel in that case, it suggests that the distinction in that case was between creditors that were owned or controlled by the government, on the one hand, and creditors that were not owned or controlled by the government, on the other hand. Those in the first group could be public bodies and those in the second group were entrusted or directed by the government or by public bodies.

The United States considers this distinction important because, in its view, China posits a false dichotomy whereby ownership or control is relevant only to the question of entrustment or direction, but not to the question of whether an entity is a public body. For the United States, ownership and control, while perhaps relevant in an entrustment or direction analysis, are the central factors in a public body analysis, as was recognized by the panel and the Appellate Body in *US – Countervailing Duty Investigation on DRAMS*, and rightly adopted by the panel in *Korea – Commercial Vessels*. Control, indicated by whole or majority ownership, can lead to a public body analysis, while the giving of responsibility to, or exercising authority over, an entity that is not necessarily government-owned or controlled will lead to an entrustment or direction analysis.

The United States maintains that the USDOC's determinations in the investigations at issue that certain state-owned enterprise producers of HRS, rubber, and petrochemicals were "public bodies" are consistent with Article 1.1(a)(1) of the SCM Agreement. According to the United States, the USDOC applied a rule of majority ownership to determine whether an entity was a public body, and found that if the government was the majority owner, then that producer was a public body. Given that the "public body" findings are consistent with the SCM Agreement, the United States argues that there was no need for the USDOC to determine whether the government entrusted or directed the state-owned enterprises to provide goods for less than adequate remuneration.

Concerning the provision of loans by SOCBs in the OTR investigation, and the USDOC's determination that the SOCBs in question were public bodies, the United States rejects China's characterization that this determination was based on (i) whether there was a policy in place to provide preferential lending to the OTR industry, and (ii) whether there was evidence that the SOCBs provided preferential loans to the industry pursuant to this policy. Rather, the United States argues, the USDOC relied upon "all information on the record" and its finding in the 2007 *Coated Free Sheet Paper* countervailing duty investigation (the "CFS Paper investigation"). In the *CFS Paper* investigation, according to the United States, the USDOC found that the SOCBs were public bodies.

---

123 United States first written submission, para. 131.
125 Id., para. 133.
126 Id., para. 135.
127 Id., paras. 164-166.
on the basis that they were controlled by the government, in which connection "[g]overnment ownership of the banks, of course, figured prominently". Other factors included the legacy of state control over the banks, the incomplete banking sector reforms in China, and government involvement in bank decision-making. The United States argues that the USDOC's finding in the OTR investigation thus was based on these same factors.\textsuperscript{128}

8.36 The United States rejects China's assertion that the USDOC should have applied a fact-intensive inquiry to determine whether the input producers were empowered by Chinese law to exercise governmental authority and in fact were exercising that authority, rather than applying a rule of majority ownership. In the view of the United States, the USDOC's use of a five-factor approach in prior cases is irrelevant in the present dispute, as the only question for the Panel is whether the USDOC's determination in the challenged investigations that the Chinese state-owned enterprises are "public bod[i]es" is consistent with the SCM Agreement.\textsuperscript{129}

8.37 The United States nevertheless discusses the five-factor test to clarify for the Panel some of China's statements. In the countervailing duty investigation of DRAMs from Korea, the USDOC analyzed five factors to determine whether entities were public bodies. This approach was based upon factors analyzed in a 1987 investigation of Fresh Cut Flowers from the Netherlands and a 1992 investigation of Pure Magnesium and Alloy Magnesium from Canada. The United States notes first that these two investigations pre-dated by many years the adoption in the SCM Agreement of the "public body" and "entrusts or directs" language, as well as the equivalent language in U.S. domestic law.\textsuperscript{130} In the Flowers investigation, the relevant entity was 50 per cent owned by the government, and it therefore was necessary to examine other factors, because majority ownership by the government was not present. The USDOC concluded that the government provided subsidies "through" this entity, but there is no way to tell whether this conclusion would be a "public body" finding or an "entrustment or direction" finding under today's standards. In the Magnesium investigation, the USDOC found that an entity was a "government entity" (which is probably more akin to today's "public body" term) based largely upon government ownership and control.\textsuperscript{131}

8.38 In answer to a question from the Panel, the United States indicates that the USDOC also had applied the five-factor test in an investigation of Coated Paper from Korea, in an investigation and review of DRAMs from Korea, in an investigation of Hot-Rolled Steel Flat Products from South Africa, and in an initiation of an investigation of steel wire rod from various countries. The United States indicated that in other cases, however, the USDOC had taken a different approach, analyzing primarily ownership or control. According to the United States, these past cases indicate that the USDOC approaches public body issues on a case-by-case basis, with the five-factor test usually arising where there is not clear evidence of government ownership or control. For the United States, this makes sense as most of the five factors relate to ownership or control of an entity.\textsuperscript{132}

8.39 The United States thus considers that these past decisions do not indicate a USDOC interpretation of the "public body" language in the SCM Agreement. Concerning the DRAMs from Korea investigation, the United States recalls that the USDOC analyzed five factors and, as China notes, concluded that certain 100 per cent government-owned banks in that case were not public bodies. The United States submits that the critical factor explaining this determination that 100 per cent government-owned banks were not necessarily public bodies was that, as the USDOC stated in that investigation, "temporary [government] ownership of the banks due to the financial crisis is not, by itself, sufficient to make them public bodies. Factors such as whether the government retains substantial control over such banks is relevant in determining whether they are public bodies. These include government involvement in decisions made by the banks, and government subsidies and other transfers to the banks. The USDOC's finding in the OTR investigation was based on these same factors?\textsuperscript{128}"

\textsuperscript{128} United States first written submission, paras. 166-167.
\textsuperscript{129} Id., para. 137.
\textsuperscript{130} Id., paras. 138-139.
\textsuperscript{131} Id., para. 140.
\textsuperscript{132} United States response to Panel question 22 (first meeting).
by itself, indicative that these banks are [government] authorities". Accordingly, the United States argues, the history of this issue makes clear that the USDOC's analysis of more factors than ownership was born out of a case (the Flowers from the Netherlands investigation) in which there was a 50-50 ownership split between the government and a private entity. Then, in the DRAMS from Korea investigation, an analysis of more than ownership, and even of entrustment or direction for some banks, was necessary due to the fact that the Korean government had assumed many temporary ownership stakes as a result of the Korean financial crisis. The United States considers logical the statement of the panel in US – Countervailing Duty Investigation on DRAMS that "[d]epending on the circumstances, 100 percent government ownership might well have justified the treatment of such creditors as public bodies". The United States further notes that in a subsequent countervailing duty administrative review of Hot-Rolled Carbon Steel Flat Products from India, the USDOC found that a 98 per cent government-owned mining company governed by the Ministry of Steel was a public body, without reference to any more factors.

8.40 Thus, in the view of the United States, the USDOC did not abandon any five-factor analysis, and no such analysis was either pertinent or necessary, in the cases in the present dispute. Furthermore, any five-factor analysis or abandonment thereof is irrelevant to the question before the Panel in the present dispute, that is, whether the USDOC's application of a rule of majority ownership to Chinese state-owned companies is consistent with the SCM Agreement. In the view of the United States, while the discussion concerning the investigation of DRAMS from Korea demonstrates that there may be situations in which government ownership, even majority government ownership, may not be determinative of the public body question, the present dispute is not such a case.

8.41 Finally, concerning burden, the United States objects to China's argument that the USDOC improperly placed the burden upon the Government of China to provide evidence pertaining to the public body question. The United States argues that given China's recognition in the Working Party Report that state-owned enterprises can be treated as public bodies, the USDOC's approach was entirely reasonable, and that there was no evidence on the record to suggest that Chinese state-owned enterprises should be treated any differently during the four countervailing duty investigations at issue than what China committed to at the time of its accession to the WTO. For these reasons, the United States asserts that the USDOC's findings that Chinese state-owned enterprises are "public bodies" are not inconsistent with the SCM Agreement, and that accordingly, the USDOC had no obligation to consider whether these entities were entrusted or directed to provide financial contributions.

C. MAIN ARGUMENTS OF THE THIRD PARTIES

1. Argentina

8.42 Argentina disagrees with China that "welfare" and "best interests" are more relevant factors than government control to determine whether an entity is a "public body" within the meaning of the SCM Agreement. Argentina considers that the difference between public and private in Article 1.1 of the SCM Agreement has to do with the corporate form of control of entities and not with the ultimate destination of the goods and services that these entities provide. In fact, Argentina argues, while there are public entities producing private goods, there are private entities producing public goods. Thus, Argentina agrees with the standard of government control enunciated by the Korea – Commercial
Vessels panel as the basis for determining whether an entity is a public body. In Argentina's view, government ownership is sufficient to establish control and to establish that an entity is a public body within the meaning of the SCM Agreement.138

2. Australia

8.43 Australia believes that, consistent with the findings of the Appellate Body in US – Countervailing Duty Investigation on DRAMS, it is important not to conflate the test for entrustment or direction (which has to do with the nature of the action being undertaken) with the definition of a public body (which has to do with the identity of the actor). In Australia's view, the government control test enunciated in Korea – Commercial Vessels is correct, and government ownership is strong evidence of government control, but not necessarily determinative. Australia considers that the Draft Articles do not address the definition of "public body", and that therefore they offer no interpretative assistance as to Article 1.1 of the Agreement. Similarly, Australia considers that the definition of "public entity" in paragraph 5(c) of the GATS Financial Services Annex does not provide relevant interpretative context since this definition is limited to the purpose of that agreement. In Australia's view, an apparent interpretative recourse to "context" cannot be used to transform the scope of a provision in a way that is not otherwise available from the text. Nor can interpretative context be used to include an additional test of exercising government authority that is not apparent from the text, particularly when the inclusion of such a test would undermine the clear distinction between the definition of public body and the test for entrustment or direction. Finally, Australia considers that paragraph 172 of China's Working Party Report provides historical evidence of the nature of Chinese SOEs (including banks), rather than evidence of their current nature, but that such historical evidence could be relevant for assessing whether an entity is a "public body" within the meaning of the SCM Agreement.139

3. Brazil

8.44 Brazil considers that majority state shareholding does not suffice to characterize an enterprise totally or partially-owned by the State as a "public body". Rather, "public body" refers to an entity closely assimilated to the government itself and, consistent with the approach adopted by the Appellate Body in US – Countervailing Duty Investigation on DRAMS, the use of the term "government" throughout the Agreement – to refer indistinctly to "a government or any public body" – emphasizes the closeness of the nexus between both concepts. Brazil believes that an entity is closely assimilated to the government if it performs functions and exercises attributions that are typical of the government, and that this understanding is confirmed by the Draft Articles and by the Appellate Body precedents. Relying on the Appellate Body's reasoning in US – Countervailing Duty Investigation on DRAMS, Brazil considers that ownership is not determinative but that it may be one relevant element in assessing both if an entity has the nature of a "public body" or if it is a "private body" entrusted or directed by the government. Thus, for Brazil, investigating authorities must establish whether the government entrusted or directed a company which, albeit owned or controlled by the government, is prima facie a private entity; or if investigating authorities believe that such company has the nature of a public body, they must establish that the company is closely assimilated to the government itself. In Brazil's view, the anti-circumvention objective in the SCM Agreement was meant to be achieved through the standard of "entrustment or direction" and not by a broad and "fast track" interpretation of the term "public body" which, Brazil adds, would rather allow the

139 Australia third-party submission, paras. 9-13; third-party oral statement, paras. 10-14; third-party response to Panel question 1(a).
circumvention of the steps provided for in Article 1.1(a) for the determination of a financial contribution.140

4. Canada

8.45 Canada believes that government control determines whether an entity is a "public body", consistent with the findings of the Korea – Commercial Vessels panel which, according to Canada, found that control was "evidenced primarily" by the fact that an entity was wholly government-owned. Canada also notes that upon its accession to the WTO, China conceded that its SOEs constitute public bodies. Further, Canada argues that China's interpretation of the term "public body" would render such term inutile, i.e., in the case of government provision of goods, SOEs would putatively be "private bodies" except where they are exercising governmental authority attributed to them by the law of the State to sell such goods. Thus, Canada argues, there would be no need for SOEs to be defined as "public bodies" for their actions to be considered as a financial contribution under Article 1.1 (a)(1)(iii). In addition, Canada argues that under China's interpretation of "public body", sales made by Chinese SOEs would not be considered "financial contributions" under Article 1.1(a)(1)(iii). Moreover, Canada agrees with the United States that the term "private" excludes the notion of being owned by the State, and argues that sales made by Chinese SOEs also could not be considered "financial contribution" under Article 1.1 (a)(1)(iv). As a result, Canada submits that under China's interpretation, a government could do indirectly (through an entity it controls) what it cannot do directly (i.e., to provide goods without the application of the SCM Agreement's disciplines). Thus, in Canada's view, China's interpretation is inconsistent with the main object and purpose of the SCM Agreement.141

5. European Communities

8.46 The European Communities considers that the Panel should examine China's Working Party Report in assessing whether the SOEs at issue are "public bodies". Regarding Article 1.1 of the SCM Agreement, the European Communities considers that the terms "government" and "public body" should be understood as equivalents, since Article 1.1(a)(1) states that both are "referred to in this Agreement as 'government'". The European Communities also considers that a high level of government ownership is a very relevant factor in determining whether an entity is a "public body" in the sense of the Agreement, and notes that previous panels and the Appellate Body have considered this factor (although among other factors) in determining whether an action by an entity is attributable (directly or indirectly) to the government. The European Communities does not consider that a test, such as the "five-factor" test alleged by China, is required by the SCM Agreement.142

6. Japan

8.47 Japan considers that the Draft Articles are irrelevant to interpreting the term "public body", in particular that they neither define nor use the term "public body" in any way. Japan points to the fact that Members agreed to the definition of "public entity" in paragraph 5(c) of the GATS Financial Services Annex as suggesting that Members did not import this definition into the SCM Agreement but rather left the term "public body" undefined. Japan also considers that no provision of the WTO Agreements suggests that a "public body" under Article 1.1(a)(1) of the SCM Agreement would be limited to entities that have been empowered by the "law of the State", and that the scope of this term should be rather examined in accordance with the particular facts of any given case. Thus, Japan is of the view that the consistency of the USDOC's findings of public bodies should be examined based on

140 Brazil third-party submission, paras. 4-12; third-party oral statement, paras. 3-7.
141 Canada third-party submission, paras. 10-17; third-party response to Panel questions 1 and 2.
142 European Communities third-party submission, paras. 6-12; third-party response to Panel question 1.
the totality of the facts underlying the investigations at issue. Japan agrees with China that government ownership does not conclusively establish that an entity is a "public body".143

7. India

8.48 India considers that the ordinary meaning of the term "public body" does not warrant a presumption that government control or ownership are sufficient to determine that a company is a "public body". India is of the view that a high level of government ownership may be a pertinent factor, but not determinant for determining whether an entity is a "public body", and that such an interpretation is consistent with previous WTO cases where panels have looked at the level of government ownership and at "other" relevant factors. India also considers that in order to consider an entity closely assimilated to the government, such assimilation must go beyond mere ownership and the entity must perform functions or attributions that are typical of the government. Finally, India states that because government ownership is considered insufficient to guarantee "entrustment" in Article 1.1(a)(1)(iv), it is even more implausible to argue that ownership brings to the conclusion that an entity is a "public body".144

8. Mexico

8.49 Mexico considers that China's interpretation of "public body" is erroneous. According to Mexico, this interpretation is not only inconsistent with the Working Party Report but also would exclude public enterprises that provide goods and services as provided for in Article 1.1(a)(1)(iii) of the Agreement. Mexico further notes that in US – Countervailing Duty Investigation on DRAMS the Appellate Body did not address the definition of "public body", nor did the Appellate Body determine that the "public" characterization of an entity was dependant on the way in which such entity acts. Mexico adds that whether an entity acts in accordance with market principles is relevant to the benefit determination but that whether an entity is a "public body" must be determined on the basis the level of government ownership. Mexico also considers that the Draft Articles are irrelevant to interpreting the term "public body" (i.e., the concept of "public entity" in the Draft Articles is limited to the context of "wrongful acts", whereas subsidies under the WTO rules are not considered wrongful acts) and that the fact that a term appears in several WTO Agreements does not imply that its meaning is the same in all agreements (i.e., the ordinary meaning of a term should be determined in its context and in light of the purpose of the Agreement in which the term appears). According to Mexico, an entity is a "public body" if it is controlled by the government and there is evidence that the government, in fact, exercises such control. Mexico considers that this interpretation is consistent with the ordinary meaning of this term, arguing that according to the "Dictionario Esencial de la Lengua Española", "public body" means any legal person that belongs to the State.145

9. Norway

8.50 Norway considers that Article 1.1(a)(1)(iv) of the Agreement is relevant to interpreting the term "public body" in the SCM Agreement. According to Norway, this provision makes clear that the distinction between "public bodies" and "private bodies" rests on whether the body in question performs governmental functions or not. That is, if the body does not perform governmental functions, any financial contribution it provides is only attributable to the State if the government has entrusted or directed it to provide such contribution. Although the panel reports on EC – Countervailing Measures on DRAM Chips and Korea – Commercial Vessels are differently worded (i.e., while the former considered 100 per cent ownership as insufficient to establish "entrustment" or

143 Japan third-party submission, paras. 16-21.
144 India third-party submission. (This submission contains no paragraph numbering).
145 Mexico third-party submission, paras. 38-43 and 47; third-party oral statement, paras. 10-11 and 13-16; third-party response to Panel questions 1 and 2.
"direction", the latter considered that such percentage (among other factors) was sufficient to establish that an entity was a public body), Norway considers that both reports support the position that government ownership is not sufficient, in itself, to determine that an entity is a "public body", and that other factors (in particular, the exercise of governmental functions) must be present. Thus, Norway submits, not all companies with more than 50 per cent government ownership (or even 100 per cent ownership) are automatically to be considered "public bodies", but rather, the determining factor would be whether the body exercises "governmental functions".146

10. Saudi Arabia

8.51 Saudi Arabia considers that the term "public body" refers to an entity vested with governmental authority that exercises governmental functions and that government ownership (alone) does not suffice to deem an entity a "public body" under the Agreement. Saudi Arabia argues, inter alia, that: (i) the terms "organismo publico" and "organisme public" (in the Spanish and French versions of the Agreement, respectively) refer indistinctively to both "public body" and "government agency", and that in Canada – Dairy the Appellate Body interpreted both terms to mean an entity that "exercises powers vested in it by a government to perform functions of governmental character"; (ii) the drafters considered the terms "government" and "public body" to be equivalents since Article 1.1(a)(1) states that both are to be "referred to in this Agreement as 'government'"; (iii) the fact that "public bodies" can "entrust or direct" private bodies confirms that they must possess some sort of governmental authority; (iv) consistently with the panel's finding in EC – Countervailing Measures on DRAM Chips, state ownership is not sufficient to conclude that an entity is entrusted or directed and, thus, a fortiori, such ownership is not sufficient to consider an entity to be a "public body", as such a finding would eliminate the need to determine the existence of entrustment or direction; (v) in US – Countervailing Duty Investigation on DRAMS the Appellate Body accepted, in the context of Article I of the Agreement, the Draft Articles' conclusion that the conduct of state-owned entities is not attributable to the State "unless they are exercising elements of governmental authority"; (vi) in Korea – Commercial Vessels, the panel's findings were based on "control" and not "ownership" and therefore that report supports that a "public body" is an entity that is controlled by the government; and (v) the GATS definition of "public entity", which requires more than mere government ownership or control, provides useful context to interpreting "public body" in the SCM Agreement. Finally, Saudi Arabia considers that China's Working Party Report should not be used as the basis for interpreting the term "public bodies", i.e., the Working Party Report contains commitments specific to China, while the WTO Agreement, including Article I of the SCM Agreement, applies to all WTO Members.147

11. Turkey

8.52 Turkey considers the terms "government" and "public body" in Article 1.1(a)(1) of the SCM Agreement as distinct, and thus requiring to be constructed differently. Namely, Turkey is of the view that institutions falling under the definition of the term "government" cannot be classified as "public bodies". According to Turkey, China's interpretation narrows the actual meaning of the term "public body" and equates it to the term "government", annulling therefore the distinction between the two terms and rendering the term "public body" meaningless. Turkey considers both the Draft Articles and the GATS Financial Services Annex to be irrelevant. In Turkey's view, the Draft Articles' lex specialis clause makes it impossible to apply them, and the GATS Financial Services Annex makes clear that the definition provided therein applies "for the purposes of [that] Annex" exclusively. Turkey agrees with the panel in Korea – Commercial Vessels that government control is the most

146 Norway third-party submission, paras. 12-21.
147 Saudi Arabia third-party submission, paras. 23-28, 32-46 and 47-50; third-party oral statement, paras. 2-12.
proper criterion for determining whether an entity is a "public body", and that government ownership is the main indicator of control.\(^{148}\)

D. **ASSESSMENT BY THE PANEL**

1. **Interpretation of the term "public body" in Article 1.1(a)(1) of the SCM Agreement**

8.53 In examining China's claims concerning the USDOC's determinations in all four of the countervailing duty investigations at issue in this dispute that the SOEs that provided certain inputs were public bodies, and in the OTR investigation that the SOCBs that provided loans also were public bodies, the first issue that we must address is the meaning of the term "public body" in Article 1.1(a)(1) of the SCM Agreement.

8.54 The relevant text of Article 1.1 of the SCM Agreement reads as follows:

"1.1 For the purpose of this Agreement, a subsidy shall be deemed to exist if:

(a)(1) there is a financial contribution by a government or any public body within the territory of a Member (referred to in this Agreement as "government"), i.e. where:

[...]

(iv) a government makes payments to a funding mechanism, or entrusts or directs a private body to carry out one or more of the type of functions illustrated [...] above." (emphasis added)

On its face, Article 1.1 of the SCM Agreement identifies three possible types of actors that could convey government financial contributions: "governments", "public bodies", and "private bodies" that have been "entrusted or directed" by the government to make a financial contribution. Given that the USDOC found that the entities in question were "public bodies", the focus of China's claim is the meaning of the term "public body" in the SCM Agreement. We note nevertheless that we must interpret the entire phrase "a government or any public body within the territory of a Member (referred to in this Agreement as 'government')" in order to find that meaning.

8.55 We recall that China's argument is that the terms "government" and "public body" are "functional equivalents", with the meaning of the latter (while not identical to "a government")\(^{149}\) being "an entity which exercises powers [or authority] vested in it by a 'government' for the purpose of performing functions of a 'governmental' character" (in essence, the same definition as that given by the Appellate Body to the term "government agency" in Article 9.1 of the Agreement on Agriculture).\(^{150}\) For the United States, on the other hand, the terms "government" and "public body" have distinct meanings.\(^{151}\) The particular interpretative question thus posed by China's claim is how broad or narrow a meaning should be given to the term "public body", as used in Article 1.1(a)(1) of the SCM Agreement.

8.56 We note that the interpretative process under Article 31 of the Vienna Convention is a holistic one, that the ordinary meaning of treaty terms may be ascertained only in their context and in light of

\(^{148}\) Turkey third-party submission, paras. 4-25; third-party oral statement, paras. 4-8.
\(^{149}\) China second written submission, paras. 15-16.
\(^{150}\) China first written submission, para. 55, paraphrasing the definition of "government agency" set forth by the Appellate Body in Canada – Dairy.
\(^{151}\) United States first written submission, para. 98.
the object and purpose of the treaty,\textsuperscript{152} and that dictionary meanings alone are not necessarily capable of resolving complex questions of interpretation.\textsuperscript{153} That said, the task of interpreting a treaty must begin with its specific terms.\textsuperscript{154}

8.57 As the SCM Agreement contains no definition of either "government" or "public body", dictionary definitions provide a useful starting point. The definitions of "government" include: "The governing power in a State; the body or successive bodies of people governing a State; the State as an agent; an administration, a ministry".\textsuperscript{155} The definition of "to form a government" is consistent with this definition: "Establish an administration, esp. after a general election".\textsuperscript{156} These definitions seem to conform to the meaning of this term in common parlance as referring to the formal organs of government (agencies, offices, ministries, etc.). This is in fact the meaning ascribed to the term "government" by both parties.

8.58 The dictionary definition of "public" includes the following: "Of or pertaining to the people as a whole; belonging to, affecting, or concerning the community or nation".\textsuperscript{157} Both parties submit definitions of the term "public" that are similar to this. China also submits additional definitions which, in its view, indicate that the essential elements of a "public" body are that it acts for the welfare and best interests of a nation or community as a whole, and does so under the authority of, or officially on behalf of, the nation or community as a whole.\textsuperscript{158}

8.59 The dictionary definition of "body" includes: "a group of individuals regarded as an entity; a corporation";\textsuperscript{159} and "a number of individuals spoken of collectively, usually as united by some common tie, or as organized for some purpose; a collective whole or totality; a corporation; as, a legislative body, a clerical body".\textsuperscript{160} On the basis of these definitions, therefore, the term "public body" standing alone could include, \textit{inter alia}, "corporations" "belonging to the community or nation". We note here that there seems to be no universally-accepted definition of the term "public body", and China has not put one forward. We recall that China argues that the dictionary definitions of the word "public" compel a narrow reading of the term "public body" as something functionally equivalent to "government agency" or "government", i.e., as an entity authorized by law to exercise functions of a governmental or public character, whose acts are performed in the exercise of such authority. We consider that the above definitions would appear to encompass, but could not be said to be limited to, such entities.

8.60 Nor, in practice, do governments share a uniform and narrowly-drawn meaning of the term "public body" such that as proposed by China in their actual usage. To the contrary, different jurisdictions have varying definitions and practices as to what for purposes of their own domestic laws

\textsuperscript{154} Appellate Body Report on \textit{US – Carbon Steel}, para. 62.
\textsuperscript{156} Id., Vol. I, p. 1123.
\textsuperscript{157} Id., Vol. II, p. 2404.
\textsuperscript{158} China first written submission, para. 51. The definitions submitted by China are: "of or relating to the people as a whole; that belongs to, affects or concerns the community or the nation"; "authorized by, serving or representing, the community; carried out or made on behalf of the community or State"; "aimed at or devoted to the promotion of the general welfare; committed to the best interests of the community or nation"; "[a]acting in an official capacity on behalf of the people as a whole"; "of, relating to, or affecting all the people or the whole area of a nation or state … of or relating to a government"; and "relating or belonging to an entire community, state, or nation". (Id., para. 50).
\textsuperscript{160} \textit{Accurate and Reliable Dictionary online} (accessed 28 April 2010) <http://ardictionary.com>. (emphasis added)
and systems are considered "public bodies". Some of these go well beyond government agencies or similar organs of government, and include, *inter alia*, government-owned or -controlled corporations providing goods and/or services.\(^{161}\)

8.61 We also consider the French and Spanish versions of Article 1.1(a)(1) of the SCM Agreement, and in particular, of the term "public body", about which the parties have presented arguments. The French term for public body is "organisme public", and the Spanish is "organismo público". In French, the word "organisme" (in the non-biological sense) has the broad meaning of an organized grouping of elements (persons, offices, etc.) working to a common purpose (e.g., "institution formée d'un ensemble d'éléments coordonnés entre eux et remplissant des fonctions déterminées; [...], chacun des services ainsi coordonnés, ou des associations de personnes les constituant"\(^ {162}\), and "[e]nsemble des services, des bureaux affectés à une tâche"").\(^ {163}\) The French word "public" also has a broad meaning, including related to, belonging to, or controlled by the State (e.g., "d'État, qui est sous contrôle de l'État, qui appartient à l'État, qui dépend de l'État, géré par l'État")\(^ {164}\). The Spanish term "organismo" is defined similarly to the French "organisme" as referring to a grouping of elements forming a body or institution (e.g., "conjunto de oficinas, dependencias o empleos que forman un cuerpo o institución").\(^ {165}\) The Spanish term "público", like the French "public", is defined as belonging to or related to the government (e.g., "perteneciente o relativo al Estado o a otra administración").\(^ {166}\) Here, as in the English, we consider that while these definitions

\(^{161}\) We note two examples:

*Example 1:* (from *Free Dictionary online* (accessed 28 April 2010) <http://encyclopedia.thefreedictionary.com/Scottish+public+bodies>): "Scottish public bodies are a group of organizations that are funded by the Scottish Government. It includes executive and advisory non-departmental public bodies [...]; tribunals, and nationalised industries. These bodies are distinct from executive agencies of the Scottish Government, as they are not considered to be part of the Government and staff of public bodies are not civil servants". (emphasis added)

Any public authority or entity set up under public law by a state or one of its authorities (e.g. government). Even if such an entity has a legal personality (e.g. French universities), it acts on behalf of the State with regard to and within the limits of its specific areas or competencies. Activities carried out by such authorities or entities may be of a commercial nature". (emphasis added)

\(^{162}\) "Institution composed of inter-related elements, and performing a specific function; each of the services thus coordinated, or of the associations of the persons comprising it". (*Centre National de Ressources Textuelles et Lexicales* (accessed 28 April 2010) <http://www.cnrtl.fr/definition/organisme>).

\(^{164}\) "Of the State, that is controlled by the State, that belongs to the State, that depends on the State, that is run by the State". (*Centre National de Ressources Textuelles et Lexicales* (accessed 28 April 2010) <http://www.cnrtl.fr/definition/public>). See also Le Nouveau Petit Robert, J. Rey-Debove and A. Rey (ed.) (Dictionnaires Le Robert, 2002), p. 2114): "Qui concerne le peuple pris dans son ensemble, qui appartient à la collectivité sociale, politique et en émane; qui appartient à l'État ou à une personne administrative [...]" ("That relates to the people taken in its totality, that belongs to society, the body politic, and emanates from it; that belongs to the State or to an administrative entity").

\(^{165}\) "Group of offices, dependencies or employing that form a body or institution". (*Real Academia Española Dictionary online* (accessed 28 April 2010) <http://buscon.rae.es/drae/>).

\(^{166}\) "Belonging or related to the State or other administration". (*Real Academia Española Dictionary online* (accessed 28 April 2010) <http://www.rae.es>). We note that this is the Spanish definition put forward
could encompass the narrow meaning espoused by China of the term public body, or organisme public, or organismo público, we see no indication that they are limited to that meaning.

8.62 Our view is confirmed by examples that we find of uses of the terms "organisme public" and "organismo público" to cover, inter alia, government-owned or -controlled entities that are engaged in activities other than those of a strictly governmental character. For example, in French one use of the term "organisme public" (identified as a synonym of the term "organisme gouvernemental") is a body or entity created by a law or decree, the majority of whose directors are appointed by the government or a minister, and which has a certain autonomy, even if a large part of its global financing comes from the State.\textsuperscript{167} The synonymous term "organisme gouvernemental" in turn can mean "distinguished from the Ministerial apparatus, from other decentralized public entities, and from entities covered by private law", and as including "State enterprises", whose "main function is [...] of a commercial, financial or industrial nature, and which seeks to be self-financing".\textsuperscript{168} An example in Spanish is Spain's Law 6/1997 of 14 April 1997, on the Organization and Functioning of the General Administration of the State, which identifies three types of "organismos públicos": "autonomous bodies", "public business entities", and "State agencies".\textsuperscript{169} Not only do the above sources showing various governments' usages give meaning to the terms "organisme public (gouvernemental)" and "organismo público" that go well beyond government agencies and formal arms of the government as such, both also include as public bodies certain "business" entities owned and/or controlled by governments.

8.63 Given the above, we are not persuaded by China's argument that the meaning of the terms "organisme public" and "organismo público" is limited to "government agency" or other entity vested with and exercising governmental authority, and thus that the English term "public body" must be understood to be the "functional equivalent" of "government". China bases this argument principally on the fact that the English term "governments or their agencies" in Article 9.1 of the Agreement on Agriculture appears in the Spanish version as "gobiernos o [...] organismos públicos", and on the French and Spanish versions of the Appellate Body Report in Canada – Dairy, in which the English term "government agency" is translated respectively as "organisme public" and "organismo público". China also cites the OECD Economics Glossary which translates "organisme public" as "government agency" in this context. While these definitions and usages indicate that "public body" can have the narrow meaning of "government agency" or similar entity, as discussed above we have found other definitions and usages showing a broader possible scope. We thus do not consider this definitional

by China for the word "público". While China translates the term "perteneciente a" as "pertaining to", in fact this term connotes "belonging to". \textit{(See, e.g., The Oxford Spanish Dictionary, B. Galimberti (ed.) (Oxford University Press, 2003), p. 630; Spanish Dict online (accessed 28 April 2010) <http://www.spanishdict.com/translate/perteneciente>.)}\textsuperscript{166}

\textsuperscript{169} In particular, Article 43.1 of this Law reads:

"1. Los Organismos públicos se clasifican en:

a. Organismos autónomos.

b. Entidades públicas empresariales.

c. Agencias Estatales, que se regirán por su normativa específica y, supletoriamente, por esta Ley."
analysis to give a conclusive answer to how the term "public body", as it appears in the SCM Agreement, should be understood.

8.64 Indeed, as noted, a treaty term can only be properly understood in its context and in the light of the object and purpose of the treaty, and we thus now turn to the immediate context of the term "public body" in Article 1.1(a)(1) of the SCM Agreement, and in particular how "public body" is related to the term "a government" in the drafting of the provision. In this regard, the question raised by China's claim is whether the clause "a government or any public body within the territory of a Member (referred to in this Agreement as 'government')", by collectively referring to the two terms "a government" and "any public body" as "government", means that these terms must be read as "functional equivalents", such that a "public body" must possess characteristics similar to those of a government, i.e., must be an entity which "exercises powers [or authority] vested in it by a 'government' for the purposes of performing functions of a 'governmental' character".

8.65 We consider significant that in Article 1.1(a)(1) the terms "a government" and "any public body" are separated by the disjunctive "or", suggesting that they are two separate concepts rather than a single concept or nearly synonymous. In addition, the use of the word "a" before "government" at the beginning of the clause, and the use of the word "any" before "public body", further suggest that these terms have separate meanings. Furthermore, the word "any" before "public body" suggests a rather broader than narrower meaning of that term, i.e., as referring to "public bodies" of "any" kind. Taking these contextual elements together suggests a meaning of the term "public body" as something separate from and broader than "government" or "government agency", and we consider that given the use of the words "a", "or" and "any", this reading of the phrase "a government or any public body" gives meaning to that phrase as a whole.

8.66 We now turn to the collective term "government" that is equated to the entire phrase "a government or any public body within the territory of a Member" in the clause at issue. We recall that the phrase as a whole reads: "a government or any public body within the territory of a Member (referred to in this Agreement as 'government')". While for China, the use of the collective expression "government" compels a reading of the terms "a government" and "any public body" as "functional equivalents", we consider more likely that the use of the collective expression is merely a device to simplify the drafting, to avoid having to repeat the entire phrase "a government or any public body" throughout the SCM Agreement. This can easily be the case even if the two elements "a government" and "any public body" have very distinct meanings. We note that a similar drafting device is employed in Article 2.1 of the SCM Agreement, on specificity, where the undeniably very different concepts of "an enterprise or industry or group of enterprises or industries" are collectively referred to as "certain enterprises". In our view, this collective expression is used to simplify the drafting of Article 2, as it obviates the need to repeat the entire long phrase "an enterprise or industry or group of enterprises or industries" every time this concept appears in the text. Yet, given that the term "certain enterprises" is defined as having the meaning of the longer phrase, where "certain enterprises" appears in Article 2 it must, by definition, refer to any of its underlying constituent elements. Thus, a subsidy that is limited to a single enterprise ("an enterprise") is, for purposes of the SCM Agreement, limited to "certain enterprises". Equally, a subsidy that is limited to, e.g., three industries (i.e., a "group of industries") also is limited to "certain enterprises". This does not mean that a single enterprise is the functional equivalent of, or synonymous with, a group of industries. Nor must this be the case for the term "certain enterprises" to make sense in the text of the Agreement. In the same way, while the drafting of the phrase that we are examining does not on its face exclude an interpretation of the terms "any public body" and "a government" as "functional equivalents", the latter referring to entities vested with and exercising governmental authority, such an interpretation is certainly not necessary for the collective term "government" to make sense in the text of the SCM Agreement. To the contrary, entities of whatever type controlled by governments, along with formal governmental organs, could all be encompassed by the collective term "government" as that term subsequently is used throughout the Agreement.
8.67 The phrase "within the territory of a Member" that also appears in the same phrase in Article 1.1(a)(1) of the SCM Agreement provides additional immediate context, as a further modifier to the collective term "government" that appears in parentheses and that encompasses both "a government" and "any public body". Again, the entire phrase in Article 1.1(a)(1) reads "by a government or any public body within the territory of a Member (referred to in this Agreement as 'government')". This phrase seems to say, in essence, that where the author of the financial contribution is either an executive organ of any level of government, or a public body of any kind at any level of government, within the territory of a Member, the Agreement considers the financial contribution to have been made by the "government" of that "Member" (directly). In other words, the drafting "a government […] within the territory of a Member" seems to connote a broad reading of the term "a government" to cover whatever forms and organs of government, be they national, provincial, municipal, etc., that may be present within the territory of a given Member. Similarly, the word "any" before "public body" also conveys a broad sense of that term, particularly when coupled with the phrase "within the territory of a Member", reinforcing that the word "or" means that "any public body" is something other than "a government" as such. Seen in its totality, therefore, in our view the collective term "government" – which equates to "a government within the territory of a Member, or any public body within the territory of a Member" – conveys breadth, suggesting a wide range of different possible types of entities whether formally part of, or owned by, or controlled by, any level of government.

8.68 Perhaps the most important contextual element in Article 1.1(a)(1) is the term "private body" in Article 1.1(a)(1)(iv), and its relationship with the terms "a government" and "any public body". In particular, we note that Article 1.1(a)(1) describes three kinds of potential providers of subsidies for purposes of the SCM Agreement, namely "governments", "public bodies" and "private bodies". From the standpoint of pure logic, this is a complete universe of all potential actors: every entity (individual, corporation, association, agency, Ministry, etc.) must fall into one of these three categories. In other words, the SCM Agreement does not a priori rule out any entity from potentially coming within its scope. The specific question raised in this dispute is whether wholly or majority government-owned enterprises that produce and sell goods and services are more appropriately categorized as "governments", "public bodies" or "private bodies" for purposes of the SCM Agreement. Neither party argues, and we do not consider, that such enterprises could in any way be termed "government" as such. Rather, China's argument is that such enterprises are, as a matter of law, presumptively "private bodies", whose actions would be covered by the SCM Agreement only to the extent that those actions were the result of "entrustment or direction" by a government. Thus, the question is the correct basis on which to distinguish between "public" and "private" bodies.

8.69 We find the dictionary definitions of the terms "private enterprise" ("a business etc. that is privately owned and not under State control")170, and "public sector" ("that part of an economy, industry etc. controlled by the State")171 helpful in understanding the relationship between the terms "private body" and "public body". In particular, these definitions taken together suggest that a "public" body is any entity that is under State control, while a "private" body is an entity not controlled by the State, and that ownership is highly relevant to the question of control, a point which we address below. This is fully in keeping with the everyday notions of "private" meaning unrelated to the government, and "public" meaning governmental in some sense. It also is consistent with the usage of the term "public body" (and its French and Spanish equivalents) by various governments, as discussed above. If we were nonetheless to interpret the term "public body" narrowly, as meaning government agencies and other entities vested with and exercising governmental authority, and as presumptively excluding government-owned and/or government-controlled enterprises, by default this

171 Id. (emphasis added).
would mean that such entities would be "private bodies". In our view, such a reading would constitute a complete reversal of the ordinary meaning of the term "private body", and we find no support for in the text of the SCM Agreement for such a reversal.

8.70 A further contextual element informing the meaning of the term "any public body" is the list of types of financial contributions in Article 1.1(a)(1)(i)-(iii), i.e.:

"(i) a government practice involves a direct transfer of funds (e.g. grants, loans, and equity infusion), potential direct transfers of funds or liabilities (e.g. loan guarantees);

(ii) government revenue that is otherwise due is foregone or not collected (e.g. fiscal incentives such as tax credits) [footnote omitted];

(iii) a government provides goods or services other than general infrastructure, or purchases goods".

In particular, pursuant to the chapeau of Article 1.1(a)(1), these are the functions that "a government" or "any public body" might in the first instance perform directly (i.e., rather than by entrustment or direction of a private body in the sense of subparagraph (iv)). Among these functions are the provision of loans and loan guarantees, as well as the provision of goods or services, functions that are typically carried out by, indeed in the first instance are the core business of, firms or corporations rather than governments. Thus, to read the term "any public body" as presumptively excluding government-owned or -controlled corporations or any other types of public entities engaging in these sorts of typical business functions (absent specific evidence in a particular case that they are vested with and exercising governmental authority), would appear largely to deprive these provisions of their common sense meaning and role.

8.71 We also note the reasoning of the panel in Korea – Commercial Vessels, in respect of a similar issue raised before it. In that case, Korea had argued that for an entity to be a public body, it must be acting in an official capacity, or pursuing a public policy purpose, and that if in a particular instance or overall it was behaving commercially, it would not be a public body in that instance, or overall. The panel rejected that argument, in part because it introduced the concept of benefit (i.e., whether the entity was behaving commercially in a particular instance or overall) into the determination of whether the entity in question was a public body, while, as has been confirmed by the Appellate Body, the SCM Agreement treats "financial contribution" (where the question of "public body" arises) as a separate, independent concept from "benefit". The panel noted in this

---

172 This is China's legal interpretation of the Agreement. For instance, at the second substantive meeting with the Panel, China stated:

"China is not arguing that government-owned entities can never be public bodies within the meaning of Article 1.1(a)(1). Our position is only that their conduct should be deemed presumptively private […]. Consistent with that presumption, their conduct ordinarily should be examined under the entrustment or direction standard of Article 1.1(a)(1)(iv). If the evidence in a particular case established that a government-owned entity was exercising delegated authority to perform functions of a governmental character, then it would be appropriate to conclude that it was a public body and that subparagraph (iv) was inapplicable. But absent such evidence, subparagraph (iv) should apply […]." (China oral statement at the second substantive meeting, paras. 30-31).

173 The Korea – Commercial Vessels panel stated in this regard:
regard that if the test advanced by Korea was applied, a given entity potentially could be a "public body" on one day and a "private body" the next, solely on the basis of its behaviour on those days, a result that the panel did not accept because it would make the public/private body determination entirely dependent on the existence of a benefit in particular transactions.\textsuperscript{174}

8.72 We share the concern of the Korea – Commercial Vessels panel in respect of China's argument that "public bodies" are limited to "entities which exercise powers or authority vested in them by a 'government' for the purpose of performing functions of a 'governmental' character". In this regard, we note that China argues that only if, in a particular case, a government-owned or -controlled firm were actually exercising governmental authority to carry out governmental functions would such an entity, in that particular instance, be a "public body". We consider that such an approach would suffer from the same flaw of mixing considerations of benefit (behaviour in a particular instance) with determining the nature of the entity (without regard for its behaviour in a particular instance). Contrary to China's argument, under the SCM Agreement the question of the nature of the entity (i.e., whether it is "a government or any public body") is entirely separate from the behaviour of that entity in a given instance (i.e., whether there is a financial contribution, whether a benefit is thereby conferred, and whether there is specificity).

8.73 To us, the foregoing detailed examination of the text of Article 1.1(a)(1) of the SCM Agreement in its context strongly suggests that a "public body" extends to entities controlled by governments, and is not limited to government agencies and other entities vested with and exercising governmental authority. We now consider this reading in the light of the object and purpose of the SCM Agreement.

8.74 This object and purpose has been characterized by the Appellate Body as "to strengthen and improve GATT disciplines relating to the use of both subsidies and countervailing measures, while recognizing at the same time, the right of Members to impose such measures under certain conditions"\textsuperscript{175}, and by various panels as, \textit{inter alia}, "to impose multilateral disciplines on subsidies which distort international trade"\textsuperscript{176} and to "disciplin[e] trade-distorting subsidies in a way that provides legally binding security of expectations to Members".\textsuperscript{177} As these statements indicate, subsidies are certain types of government interventions in markets on non-commercial terms, which interventions can distort trade to the detriment of other Members' interests.

8.75 In their discussions of the object and purpose of the SCM Agreement, including in respect of predictability and certainty, the Appellate Body and various panels have emphasized the importance of avoiding overly-narrow interpretations of the Agreement that would create loopholes by which Members could largely, if not entirely, escape the reach of these disciplines. For example, the Appellate Body stated in \textit{US – Softwood Lumber IV} that:

"It is in furtherance of [the Agreement's] object and purpose [of strengthening GATT disciplines] that Article 1.1(a)(1)(iii) recognizes that subsidies may be conferred, not

\textsuperscript{174} Panel Report on Korea – Commercial Vessels, para. 7.44 (quoting Appellate Body Report on Brazil – Aircraft, para.157)).
\textsuperscript{175} Panel Report on Korea – Commercial Vessels, para. 7.45.
\textsuperscript{176} Appellate Body Report on \textit{US – Softwood Lumber IV}, para. 64.
\textsuperscript{177} Panel Report on \textit{Brazil – Aircraft}, para. 7.26.
only through monetary transfers, but also by the provision of non-monetary inputs. Thus, to interpret the term 'goods' in Article 1.1(a)(1)(iii) narrowly, as Canada would have us do, would permit the circumvention of subsidy disciplines in cases of financial contributions granted in a form other than money...]."178

Similarly, the panel in US – FSC (Article 21.5 – EC) stated that:

"[I]t is evident that the interpretation [of 'revenue foregone'] advanced by the United States would be irreconcilable with the object and purpose [of disciplining trade distorting subsidies in a way that provides security to Members], given that it would offer governments 'carte-blanche' to evade any effective disciplines, thereby creating fundamental uncertainty and unpredictability. In short, such an approach would eviscerate the subsidies disciplines in the SCM Agreement".179 (emphasis original)

8.76 In keeping with this object and purpose, we consider it important to read Article 1.1(a)(1) in a manner that does not allow avoidance of the SCM Agreement's disciplines by excluding whole categories of government non-commercial behaviour undertaken by government-controlled entities. In this regard, we note that the categorization of a given entity as a government, a public body or a private body under Article 1.1(a)(1) is simply the first filter in a multi-part analysis to determine whether a given measure is covered by the SCM Agreement. That first filter does not look at the behaviour (i.e., the measure), but rather is concerned with whether the entity undertaking the behaviour is or is not the WTO Member, i.e., the entity covered by the WTO Agreement. In this sense, the juxtaposition of "a government or any public body" with the term "private body" makes clear that the SCM Agreement does not cover and thus does not discipline, in any way, any purely private "subsidies" or other purely private transactions, in which the government has no involvement (direct or via entrustment or direction).

8.77 In this connection, we agree with the following statement by the Korea – Commercial Vessels panel:

"We do not accept Korea's argument that there is only a 'financial contribution' in the meaning of Article 1.1(a)(1)(i) if the relevant government or public body is engaged in 'government practice' such as regulation or taxation. Article 1.1(a)(1) states in relevant part that the term 'government' refers to both 'government' and 'public body'. Since the phrase 'government practice' in Article 1.1(a)(1)(i) therefore refers to the practice of both governments and public bodies, the practice at issue need not necessarily be purely 'governmental' in the narrow sense advocated by Korea. In this regard, we consider that the concept of 'financial contribution' is writ broadly to cover government and public body actions that might involve subsidization. Whether the government or public body action in fact gives rise to subsidization will depend on whether it gives rise to a 'benefit'. Since the concept of 'benefit' acts as a screen to filter out commercial conduct, it is not necessary to introduce such a screen into the concept of 'financial contribution'".180

8.78 Thus, to say that an entity is part of the SCM Agreement's collective term "government" is not to condemn that entity, or otherwise to cast it in a negative light. Rather, such a characterization simply allows a further analysis to be conducted as to whether the entity's behaviour in particular instances is covered by the SCM Agreement. (Obviously, much "government" behaviour has nothing..."

180 Panel Report on Korea – Commercial Vessels, para. 7.28.
to do with “financial contributions” and thus subsidization). Similarly, to say that certain behaviour of an entity is covered by the SCM Agreement (i.e., is a specific subsidy) in itself carries no negative connotation. Only in the particular, narrow instance of a prohibited subsidy does the existence of the subsidy give rise to such a connotation, and otherwise the existence of specific subsidies is a neutral event under the Agreement, actionable only where it causes, in particular instances, defined forms of adverse effects on another Member’s interests.

8.79 In this sense, we consider that interpreting "any public body" to mean any entity that is controlled by the government best serves the object and purpose of the SCM Agreement. This reading ensures that whatever form a public entity takes (whether agency, Ministry, board, corporation, etc.) the government that controls it is directly responsible for those of its actions that are relevant under the Agreement. In our view, the particular form of government-controlled entity intervening in a market cannot be determinative of whether a government financial contribution (and hence potentially a subsidy) exists. To read "any public body" in Article 1.1(a)(1) as excusing from a Member government's direct responsibility a wide swathe of government-controlled entities engaging in exactly the sorts of transactions listed in Article 1.1(a)(1)(i)-(iii) of the SCM Agreement would fundamentally undermine the Agreement's logic, coherence and effectiveness, and thus would be at odds with its object and purpose.

8.80 Here, we agree with the finding of the panel in Korea – Commercial Vessels that a public body is an entity controlled by a government. In terms of the object and purpose of the SCM Agreement, we consider particularly relevant that panel's statement that "it is the fact that a financial contribution is provided by a public body (or pursuant to entrustment or direction by a public body) that gives rise to the possibility that the financial contribution might be provided on below-market terms in order to advance public policy goals". In our view, it is the government's control of an entity that gives that entity the potential to intervene in markets so as to advance public policy goals, by providing financial contributions on better-than-market terms.

8.81 In short, the systemic implications for Members of interpreting "any public body" to mean any government-controlled entity are fully in line with the object and purpose of the SCM Agreement of effectively disciplining trade distorting subsidies provided by Member governments. These implications fall very far from disciplining, let alone condemning, every act of such entities. This interpretation simply means that the actions of a government-controlled entity are, for purposes of the SCM Agreement, directly attributable to the government itself – no more, no less. Finding that a given entity is a public body does not speak to the nature of its actions, including whether they are even covered by the Agreement.

8.82 By contrast, the systemic implications of interpreting "any public body" as limited to government agencies or other entities vested with and exercising governmental authority would be to seriously undermine the entire SCM Agreement, something that cannot be reconciled with the Agreement's object and purpose. Large numbers of government-controlled entities whose very raison d'être is to engage in the kinds of transactions identified in Article 1.1(a)(1)(i)-(iii) would be legally presumed to be unrelated to the government (i.e., effectively "private bodies"). Governments could easily hide behind the presumptively "private" nature of such entities, even while running those entities as deliberately to provide trade-distorting subsidies. Yet, before the SCM Agreement could even apply to any such entity, such that an inquiry could be started into the possible existence of a subsidy and specificity, a particular instance of "entrustment or direction" in the sense of Article 1.1(a)(1)(iv) would need to be established. In our view, this would be equivalent to inquiring whether the government "entrusted or directed" itself to do something, and would turning the "entrustment or direction of a private body" provision on its head.

181 Panel Report on Korea – Commercial Vessels, para. 7.44. (emphasis added).
8.83 The foregoing analysis of the ordinary meaning of the terms of the treaty at issue, in their context and in the light of the object and purpose of the treaty, leads us to conclude that for the purposes of the SCM Agreement, "any public body" is any government-controlled entity. By contrast, in our view, the narrow reading advanced by China is not supported either by the context of this term or by the object and purpose of the SCM Agreement and, to the contrary, would seriously weaken the integrity and effectiveness of the SCM Agreement.

8.84 We recall that China's arguments are not limited to the foregoing elements based on the SCM Agreement itself. Rather, China also has advanced arguments based on other international instruments that it considers relevant context for interpreting the term "any public body". The question we now turn to is whether any of these other instruments would override our analysis and conclusions based on the text of the SCM Agreement itself.

8.85 The first of the other instruments cited by China is the Draft Articles. China argues that these Draft Articles constitute "relevant rules of international law applicable in the relations between the parties" in the sense of Article 31(3)(c) of the Vienna Convention, and that they thus must be "taken into account" in the analysis of the term "public body". In particular, China considers that the Draft Articles codify customary international law with respect to certain principles of state responsibility, a proposition that in China's view has repeatedly been recognized by panels and the Appellate Body.182

8.86 As such, China argues, the term "public body" must be interpreted in a manner analogous to Article 5 of the Draft Articles such that the actions of state-owned corporate entities will be attributed to the State only when "empowered by the law of that State to exercise elements of the governmental authority [...] provided the person or entity is acting in that capacity in the particular instance").183 China considers that the Appellate Body "expressly endorsed" the principles of the Draft Articles with respect to when the conduct of state-owned entities may constitute a financial contribution within the meaning of Article 1.1(a)(1) of the SCM Agreement.184

8.87 Before we address the substance of this argument, we consider the status of the Draft Articles, and in particular whether as China argues we must as a matter of law interpret the provisions of the SCM Agreement at issue in conformity with language and concepts in certain provisions of the Draft Articles. In this regard, the first question is whether the Draft Articles are recognized in the WTO as "rules of international law applicable in the relations between the parties" to the dispute, and the second question is whether they are "relevant" to this dispute. On the first question, in our view, China significantly overstates the status that has been accorded to the Draft Articles where they have been referred to by panels and the Appellate Body. Indeed, in not a single instance of such citations identified by China has a panel or the Appellate Body identified the Draft Articles as "relevant rules of international law applicable in the relations between the parties" in the sense of Article 31(3)(c) of the Vienna Convention, such that they should be "taken into account together with the context" when interpreting the treaty. Rather, in our view, the various citations to the Draft Articles have been as conceptual guidance only to supplement or confirm, but not to replace185, the analyses based on the ordinary meaning, context and object and purpose of the relevant covered Agreements. In particular, while in some cases the Draft Articles have been cited as containing similar provisions to those in certain areas of the WTO Agreement, in others they have been cited by way of contrast with the

---

182 See, e.g., China response to Panel question 15(a) (first meeting).
183 See., e.g., China first written submission, paras. 75-79.
184 Id., para. 72.
185 Indeed, in at least one prior proceeding, one of the parties strenuously objected to preferring the meaning of the term “countermeasures” in the Draft Articles over dictionary definitions advanced by the parties, on the grounds that the Draft Articles are not "relevant rules of international law applicable to the relations between the parties" within the meaning of Article 31(3)(c) of the Vienna Convention. (Decision by the Arbitrators on Brazil – Aircraft (Article 22.6 – Brazil), para. 3.44 and footnote 48).
provisions of the WTO Agreement, as a way to better understand the possible meaning of the provisions of the WTO Agreement. In all cases, however, the exercise undertaken by these panels and the Appellate Body has been to interpret the WTO Agreement on its own terms, i.e., on the basis of the ordinary meaning of the terms of the treaty in their context and in the light of the object and purpose of the treaty.

8.88 We note that this is true of the Appellate Body's reference to the Draft Articles in *US – Countervailing Duty Investigation on DRAMS*, the instance at the heart of China's arguments before us concerning the Draft Articles. In particular, that reference – which appears in a footnote making the observation, in the context of the issue of "entrustment or direction" of a "private body", that the conduct of private bodies is presumptively not attributable to the state – does not state that the Draft Articles constitute relevant rules of international law in the sense of Article 31(3)(c) of the Vienna Convention for purposes of interpreting language in the SCM Agreement. Indeed, the footnote says nothing whatsoever about the status of the Draft Articles *vis-à-vis* the WTO Agreement.186

8.89 Furthermore, in some cases, panels and the Appellate Body have made explicit that the Draft Articles are not binding.187 We thus find no basis for the assertion that as a general matter the Appellate Body and panels have found that the Draft Articles must be "taken into account" as "rules of international law applicable in the relations between the parties" in interpreting the WTO Agreement, and we note that in the present dispute, the United States has explicitly rejected this proposition.188

8.90 In any event, even by their own terms, the Draft Articles "do not attempt to define the content of the international obligations the breach of which gives rise to responsibility,"189 i.e., they are not concerned with the substance of the underlying international obligations, but are rather concerned with determining whether a state is or is not responsible for a given action that may constitute a substantive breach of such an obligation. In this regard, of particular relevance to the issue before us, the Draft Articles contain a provision on *lex specialis*: "These articles do not apply where and to the extent that the conditions for an internationally wrongful act or the content or implementation of the international responsibility of a State are governed by special rules of international law".190 We view the taxonomy set forth in Article 1.1 of the SCM Agreement at heart as an attribution rule in the sense that it identifies what sorts of entities are and are not part of "government" for purposes of the Agreement, as well as when "private" actors may be said to be acting on behalf of "government". This has precisely to do with "the content or implementation of the international responsibility of a State"191 for purposes of the SCM Agreement, a further indication that the Draft Articles are not

---

186 We recall that in another footnote in the *US – Countervailing Duty Investigation on DRAMS* report, the Appellate Body also noted the statement of the panel that the USDOC might have been entitled to treat wholly-government owned entities as "public" rather than "private" bodies. (Appellate Body Report on *US – Countervailing Duty Investigation on DRAMS*, footnote 225).

188 The United States argues, for example, that even if certain parts of the Draft Articles may have the status of customary international law, this does not mean that the Draft Articles in their entirety, and in their full detail have that status, a question which the United States characterizes as "open" and "contested". (United States second written submission, para. 58).

189 General Commentary, para. 1 of the Draft Articles.

190 Article 55 of the Draft Articles.

191 We emphasize that here we express no view as to other possible parts of the WTO Agreement that might also fall within the scope of the *lex specialis* provision of the Draft Articles. The issue before us is the interpretation of Article 1.1 of the SCM Agreement, and our analysis thus is limited to that provision. We do note, however, that the Commentary to this provision of the Draft Articles refers at length to the WTO Dispute Settlement Understanding as an example of a treaty whose text makes clear "that only the consequences specified [therein] are to flow". (Commentary (3) to Article 55 of the Draft Articles).
relevant to interpreting Article 1.1 of the SCM Agreement. In this connection, we recall that the panel in Korea – Commercial Vessels, presented with virtually the same argument by Korea that China makes before us, declined to rely on the Draft Articles. In that panel's view, Korea's entire line of argumentation concerning the meaning of "public body" (which included its arguments based on the Draft Articles) conflated the concept of "benefit" with the nature of the actor.

8.91 On the basis of the foregoing considerations, we do not find that the Draft Articles are "relevant rules of international law applicable to the relations between the parties", such that we should "take them into account, together with the context" in the sense of Article 31(3)(c) of the Vienna Convention. Given this, we do not need to take up the other issues that would need to be resolved in that situation, not least of which is the meaning of "take into account" for that purpose.

8.92 The second instrument invoked by China as context is the GATS, in particular its Annex on Financial Services. This Annex contains the term "public entity", and China argues that this term must inform the meaning of the term "public body" in the SCM Agreement. We note that China's argument is the same as one raised by Korea in Korea – Commercial Vessels: That panel rejected this argument, on the grounds that the argument continued to conflate the concepts of financial contribution and benefit. The panel also questioned the relevance of the GATS to the interpretation of different language in an entirely different agreement, and finally noted that even the text of the GATS Financial Services Annex itself seemed to imply that, in the absence of the clarification in the cited provision, "an entity principally engaged in supplying financial services on commercial terms" might be treated as a "public entity", a fact that in the view of the panel undermined Korea's argument that a public entity acting on commercial terms could not be treated as a "public body". We, like the panel in Korea – Commercial Vessels, do not see the relevance for the interpretation of the term "public body" in Article 1.1 of the SCM Agreement, of the different term "public entity" in a different Agreement, and in particular we see nothing to require us to equate these terms or to give them the same interpretation. Nor do we consider the term "non-governmental bodies" in Article I:3 of the GATS, which China invokes, to be relevant to the interpretation of "public body" in Article 1.1(a)(1) of the SCM Agreement. These are very different terms in separate Agreements, and we find no indication in either Agreement of any conceptual or other link between them.

8.93 Finally, in terms of other instruments, we recall that the United States points to the discussion in paragraph 172 of the Working Party Report on China's accession as relevant context making clear

192 The panel in EC – Commercial Vessels reached a similar conclusion that it was unwarranted to read public international law concepts including elements of the Draft Articles into the WTO Agreement to determine the meaning of Article 23.1 of the DSU. In this regard, that panel stated:

"The Panel recalls that it has concluded, based on an interpretation of Article 23.1 of the DSU in accordance with the ordinary meaning of its terms and in light of the object and purpose of the provision, that measures not involving a suspension of WTO concessions or other obligations are not excluded from its scope. While the Panel realizes that in a number of WTO dispute settlement and arbitration cases reference has been made to the public international law concepts invoked by the European Communities, the Panel can see no basis for using these concepts to read into Article 23.1 a limitation that is unsupported by an interpretation based on its text, context and object and purpose." (footnotes omitted) (Panel Report on Korea – Commercial – Vessels, para. 7.205).

Similarly to that panel, we can see no basis to read into Article 1.1 of the SCM Agreement any concept from public international law that is unsupported by an interpretation based on that Article's text, context and object and purpose.

193 Panel Report on Korea – Commercial Vessels, footnote 42.
194 Id., para. 7.47.
that China accepted that its state-owned enterprises (including banks) are government actors, or at least public bodies, within the meaning of the SCM Agreement.\textsuperscript{195} We note that the United States does not rely directly on this language, and does not argue that it constitutes a commitment by China as to any particular interpretation of Article 1.1(a)(1) of the Agreement. In light of our conclusions based on the text of that provision, we do not consider it necessary to analyze the cited language of the Working Party Report.

8.94 For the foregoing reasons, we conclude that a "public body", as that term is used in Article 1.1 of the SCM Agreement, is any entity controlled by a government. In our view, this is the correct interpretation, which emerges from an analysis of the ordinary meaning of the term in its context and in the light of the object and purpose of the provision and of the SCM Agreement.

2. The USDOC's determinations that certain SOEs and SOCBs were "public bodies"

8.95 Having interpreted the term "public body", we now turn to the USDOC determinations in the four countervailing duty investigations before us that certain entities were public bodies, and that their respective provisions of inputs and loans thus were financial contributions by the government, in the sense of Article 1.1(a)(1) of the SCM Agreement.

(a) Background

8.96 The USDOC made "public body" and "financial contribution" determinations in respect of (i) state-owned suppliers of inputs, including some transactions made through private trading companies (government provision of goods); and (ii) state-owned commercial banks (government provision of loans).

8.97 In the four investigations at issue, the USDOC determined that China's provision of inputs through state-owned producers (SOEs) constituted countervailable subsidies. It particular, the USDOC determined that the SOEs were "public bodies" that provided financial contributions in the form of certain goods – HRS, rubber, and petrochemicals – to investigated producers of, respectively, CWP, LWR, OTR, and LWS, for less than adequate remuneration thus conferring benefits to those producers, and that these subsidies were specific.\textsuperscript{196} Before us, China challenges all of these public body determinations.

\textsuperscript{195} The passage of paragraph 172 of the Working Party Report reads as follows:

"Some members of the Working Party, in view of the special characteristics of China's economy, sought to clarify that when state-owned enterprises (including banks) provided financial contributions, they were doing so as government actors within the scope of Article 1.1(a) of the SCM Agreement. The representative of China noted, however, that such financial contributions would not necessarily give rise to a benefit within the meaning of Article 1.1(b) of the SCM Agreement. He pointed out that China's objective was that state-owned enterprises, including banks, should be run on a commercial basis and be responsible for their own profits and losses. The Working Party took note of this commitment."

\textsuperscript{196} In the CWP and LWR investigations, the USDOC determined that the government provision of HRS through SOE producers for less than adequate remuneration was a financial contribution which conferred a benefit to CWP and LWR investigated producers. (See, e.g., Exhibits CHI-1, p. 9 and CHI-2 p. 8).

In the LWS investigation, the USDOC determined that the government provision of petrochemicals – BOPP – through SOE producers for less than adequate remuneration was a financial contribution which conferred a benefit to LWS investigated producers. (See, e.g., Exhibit CHI-3, p. 18).

In the OTR investigation, the USDOC determined that the government provision of natural and synthetic rubber through SOE producers for less than adequate remuneration was a financial contribution which conferred a benefit to OTR investigated producers. (See, e.g., Exhibit CHI-4, pp. 9-10).
8.98 In three of the four investigations at issue (CWP, OTR and LWS), the USDOC also determined that loans provided by SOCBs to investigated producers constituted countervailable subsidies.\(^{197}\) In particular, the USDOC found that the SOCBs were "public bodies" providing financial contributions in the form of loans, that the loans were on terms more favourable than the market, and that these subsidies were specific. In the present dispute, China only challenges the USDOC's "public body" determination regarding SOCBs in the OTR investigation.\(^{198}\)

(b) USDOC public body determinations in respect of government-owned input suppliers (SOEs)

8.99 In all of the investigations at issue, the USDOC determined that the SOE input suppliers were "public bodies" (referred to as "authorities" in the U.S. statute and thus in the USDOC's determinations\(^{199}\)) by applying a rule of majority government-ownership. Under this approach, the USDOC treated as a public body any input producer in which the government held a majority ownership share.\(^{200}\) Where the parties presented additional arguments and evidence related to this issue, the USDOC also referred to these in its determinations. The analysis conducted in each of the investigations is summarized below.

(i) CWP investigation

8.100 In its final determination in the CWP investigation, the USDOC determined that SOE producer-suppliers of HRS were public bodies ("authorities"). In particular, any producer-supplier in which a government entity held a majority ownership share was treated as a public body.\(^{201}\) In this regard the determination indicates, and China does not contest, that the Government of China provided ownership information only in respect of some of the investigated producer-suppliers of HRS. The USDOC treated the entities in respect of which the Government of China failed to provide the requested ownership information as public bodies (on the basis of applying facts available or adverse facts available).\(^{202}\)

8.101 During the course of the investigation, the Government of China contested the USDOC's majority-ownership approach to its public body determinations, which also had been used in the preliminary determination. China argued that the USDOC should conduct the factual five-factor analysis it had applied in certain prior investigations, in particular Korea – DRAMS, to determine whether entities were public bodies. The five factors that the USDOC had examined in that case were: (i) government ownership; (ii) government presence on the board of directors; (iii) government

\(^{197}\) In the LWR investigation, the USDOC concluded that any government programme to provide loans to the steel industry was "not used" by the respondents. (Exhibit CHI-2, p. 47).

\(^{198}\) China first written submission, footnote 132. As discussed in Section X, infra, China challenges the USDOC's determinations of benefit from these loans in all three of the investigations in which producers were found to have received countervailable subsidies in the form of government-provided loans.

\(^{199}\) According to the United States, under its domestic statute the definition of the term "authority" includes the term "public entity"; and this latter term means "public body". (United States first written submission, footnote 87). There is no disagreement between the parties as to the equivalence of the terms "public entity" under U.S. law and "public body" in Article 1.1(a)(1) of the SCM Agreement.

\(^{200}\) Exhibits CHI-1, p. 63; CHI-2, pp. 29-30; CHI-3, p. 67; and CHI-4, p. 77.

\(^{201}\) Exhibit CHI-1, pp. 62-63.

\(^{202}\) Id., pp. 10-11. With regard to other specific suppliers for which petitioners had claimed SOE status, the USDOC noted that the identities of those suppliers were proprietary and therefore addressed petitioners' comments in a "BPI Memorandum". (Id., p. 63). This document is not on the record of the present dispute.
control over activities; (iv) pursuit of governmental policies/interests; and (v) whether the entity was created by statute.203

8.102 The USDOC acknowledged that it had used such a five-factor test in prior investigations204 but stated that there was insufficient evidence on the record to do so in the CWP investigation. In particular, the USDOC noted that other than the levels of government ownership of certain companies, the Government of China had not provided the information that was needed to consider the five-factor analysis, and that therefore the USDOC had applied a rule of majority ownership.205 The USDOC noted, however, that it would reconsider the feasibility of applying the five-factor test during an administrative review, should a countervailing duty order result from the investigation.206

8.103 Finally, the USDOC stated that because it had determined that the SOEs were public bodies, it did not reach the issue of whether they were private entities entrusted or directed by the government to provide financial contributions.207

(ii) LWR investigation

8.104 In its final determination in the LWR investigation, the USDOC determined on the basis of majority government ownership that SOE producer-suppliers of HRS were public bodies, pursuant to an essentially identical analysis to that performed in the CWP investigation.208

8.105 During the course of the investigation, the Government of China and an investigated producer/exporter contested the USDOC's "public body" preliminary determinations, which were made on the same basis. They asserted that government ownership was insufficient grounds for an entity to be a public body, and that not every government entity is a public body, as the USDOC had recognized in the Preamble to its countervailing duty regulations. (The Preamble states that the USDOC would continue to treat "most" government-owned corporations as the government itself).209 These respondents further argued that the USDOC should have applied the five-factor factual analysis that it had used in Korea – DRAMS (as described above in respect of the CWP investigation).210 They noted that in Korea – DRAMS, the USDOC itself had found that certain wholly government-owned companies should not be treated as government entities. For these respondents, the "real question" under the approach taken in DRAMS was whether an entity exercised governmental authority.

8.106 The USDOC acknowledged that it had used such a five-factor test in some, but not all, prior investigations211, but determined that there was insufficient evidence on the record of the LWR investigation to perform such an analysis because, beyond the levels of government ownership of the companies involved, the Government of China had not provided the information needed to conduct

---

203 Exhibit CHI-1, p. 62. In addition to contesting the basis for the public body determination, the Government of China also asserted that the USDOC had not established that the Government of China had "entrusted" or "directed" those companies to provide the financial contributions at issue. (Id.).
204 Specifically, the USDOC noted that it had used the five-factor test in DRAMS from Korea and Magnesium from Canada. (Id., p. 62).
205 Exhibit CHI-1, pp. 62-63.
206 Id., p. 63.
207 Id.
208 Exhibit CHI-2, pp. 28-30.
210 Id., p. 27.
211 The USDOC noted that it had previously used the five-factor test in DRAMS from Korea and Magnesium from Canada, but also noted that in other investigations it had not applied this test where a government-owned entity provided a financial contribution to a respondent. (Id., p. 28 and footnote 103).
the analysis.\textsuperscript{212} The USDOC noted that it would reconsider the necessity and feasibility of applying the five-factor test during an administrative review.\textsuperscript{213}

8.107 The USDOC nevertheless specifically discussed in its final determination China's arguments in support of the five-factor analysis in respect of one input supplier, Baosteel. In so doing, however, the USDOC stated that it was not making a finding as to whether it was required to apply the five-factor test in respect of Baosteel.

8.108 Concerning the five factors as applied to Baosteel, the USDOC stated that although the Government of China had cited record information related to each of the five factors, the information was not sufficient for the USDOC to conclude that Baosteel was not an “authority”. Further, because Baosteel was majority-owned by the government, the first of the five factors clearly supported that it was a public body.\textsuperscript{214} On the other four factors, the USDOC's analysis was as follows:

- With respect to government presence on the Board of Directors, the USDOC stated that the Government of China had contended that there was no evidence that any member of Baosteel's board of directors was a government official. The USDOC referred to record evidence suggesting that some members of the board had ties to the government.\textsuperscript{215}

- Concerning government control over activities, the USDOC stated that the Government of China had argued that there was no evidence of government control over Baosteel's activities, including production or pricing, and in support had contended that no government authority regulated steel producers or set prices. The USDOC noted, however, that the Government of China had cited no information specific to the activities of Baosteel.\textsuperscript{216}

- With respect to pursuit of government policies or interests, the USDOC noted the Government of China's argument that Baosteel did not pursue government interests because it had a duty under Chinese law to protect shareholders and maximize profitability. The USDOC stated that these facts did not demonstrate that Baosteel did not pursue government interests. In this regard, the USDOC cited statements from Baosteel's 2005 and 2006 annual reports referring, \textit{inter alia}, to implementation of the government's five year plan, and the government's steel industry policy. The USDOC noted that although these were general statements, they suggested that the government might pursue government policies and interests through its ownership of Baosteel.\textsuperscript{217}

\textsuperscript{212} Exhibit CHI-2, pp. 28-29.
\textsuperscript{213} Id., p. 29.
\textsuperscript{214} According to China, Baosteel's private ownership amounted to 27 per cent. (Exhibit CHI-2, p. 27).
\textsuperscript{215} Id., p. 29. The USDOC noted that according to the Baosteel's 2006 Annual Report ("2006 Annual Report"), one of the members of the board of directors during the period of investigation "has been trusted by the State-Owned Assets Supervision and Administration Commission of the State Council as the outside director of Baosteel Group as well as director of the Company". Moreover, it noted that the Baosteel's 2005 Annual Report ("2005 Annual Report") indicated that at least one independent director was also a director of state-owned China Minmetals Corp. Ltd. (Id.).
\textsuperscript{216} Id., p. 30.
\textsuperscript{217} Id., p. 30. The USDOC noted that the 2005 Annual Report indicated that "China has strengthened macroeconomic control over steel industry since 2004 and issued the first Steel Industry Development Policies in 2005 [...] The Steel industry will undergo strategic restructuring" and that "one of the Major Tasks of Baosteel's 2006 Business Plan is to Speed up the implementation of the 11\textsuperscript{th} Five Year Projects". It further noted that the 2006 Annual Report also referred to China's steel industry policy and indicated that "Baosteel Group Corporation, the controlling shareholder [of Baosteel], mainly deals with state-owned assets within the authorized scope set by the State Council". (Id.).
• Concerning creation by statute, the USDOC noted the Government of China's argument that Baosteel operated under the same Chinese law as private enterprises, but stated that this information was not sufficient to determine that Baosteel was not created by statute. The USDOC indicated that China had provided no information on Baosteel's ultimate controlling shareholder, the State-owned Assets Supervision and Administration Commission of the State Council ("SASAC").

8.109 Overall, the USDOC found that the information on the record was not sufficient to conclude that Baosteel was not an "authority", noting that the Government of China had presented general information on each of the five factors, which was contradicted by other general information on the record. The USDOC stated that it therefore had used the same rule of majority ownership applied to other producer-suppliers to determine whether Baosteel was an "authority". The USDOC noted that because it determined that the SOEs at issue were public bodies, it did not reach the issue of entrustment or direction.

(iii) LWS investigation

8.110 In the LWS investigation, the USDOC determined that the state-owned petrochemical producers under consideration were public bodies on the basis of majority government ownership. The USDOC stated that this was consistent with its approach in the CWP investigation, as well as with the Preamble to its countervailing duty regulations ("we intend to continue our longstanding practice of treating most government-owned corporations as the government itself […]").

8.111 During the investigation, the Government of China contested the public body preliminary determinations, arguing, inter alia, that the USDOC should have applied the five-factor test, and that the respondents had provided sufficient information for the test to be applied.

8.112 Although the USDOC acknowledged that it had used such a five-factor test in some prior investigations, it rejected the Government of China's argument on the grounds that there was insufficient evidence on the record, as beyond the levels of government ownership of the companies in question, the Government of China had not provided the information necessary to conduct a complete analysis. Nevertheless, the USDOC responded to the Government of China's arguments and "limited" evidence on this issue as follows:

• Concerning government ownership, the USDOC stated that the Government of China had simply relied on the fact that the companies were not wholly government-owned (one being a joint venture with a publicly listed corporation, and the other being a publicly listed company with shares traded on foreign and Chinese stock exchanges), but had not demonstrated that the companies had significant private ownership. Rather, the record evidence was "clear" that the SOE suppliers were majority government-owned.

• Concerning government presence on the Board of Directors and pursuit of governmental interests, the USDOC stated that China's argument simply rested on the fact that the companies were listed on domestic and foreign stock exchanges, and that this argument

---

218 Exhibit CHI-2, p. 30.
219 Id.
220 Exhibit CHI-3, p. 67.
221 Id., p. 65.
222 Id., pp. 66-67. The USDOC noted that it had used the five-factor test in the following prior investigations: DRAMS from Korea and Magnesium from Canada. (Id., p. 67).
223 Id. p. 67. The USDOC cites the February 1, 2008 submission of verification exhibits, which are not on the record of the present dispute. (Id.) China does not contest this point before the Panel.
reflected the unsubstantiated assumption that being listed on these exchanges somehow showed that the directors of the companies acted independently in pursuing only commercial and not governmental interests.\textsuperscript{224}

- Concerning government control over the activities of the companies relating to pricing and production decisions, the USDOC stated that the Government of China failed to acknowledge the role that the SASAC exercised over managing SOEs "based on 'the rights attendant to the ownership of shares'" (citing to the Government of China's questionnaire response). The USDOC considered that this management would be substantial based on the government's majority ownership of the SOEs in question.\textsuperscript{225}

8.113 The USDOC concluded that it had therefore applied a rule of majority ownership to determine whether a government-owned petrochemical input supplier was an "authority" (a public body). It further concluded that because it had found these SOEs to be public bodies, it did not reach the issue of entrustment or direction.\textsuperscript{226}

\textit{(iv) OTR investigation}

8.114 In the OTR investigation, the USDOC determined that majority government ownership of a rubber producer qualified it as a public body, and that this was consistent with the Preamble to its countervailing duty regulations and with past practice (namely, the CWP and LWS investigations, \textit{Hot-Rolled Steel from India}, and \textit{Stainless Steel from Korea}).\textsuperscript{227} While respondents argued that the USDOC was required to apply the five-factor test, the USDOC found that "conducting such a test is not necessary absent information that calls into question whether government ownership does not mean government control".\textsuperscript{228} In this respect, it cited other investigations where it had not applied the five-factor test, but had made a public body determination purely on the basis of government ownership.\textsuperscript{229} The USDOC noted that it would, if appropriate, reconsider the necessity of applying the test if there were a countervailing duty order, and an administrative review were required.\textsuperscript{230}

8.115 Finally, the USDOC found that because it had determined that SOEs were public bodies, it was not necessary to evaluate the question of entrustment or direction.\textsuperscript{231}

\textbf{(c) USDOC public body determination in respect of SOCBs}

8.116 As discussed above, concerning loans by SOCBs China challenges the USDOC's public body determinations only in the OTR investigation, although it challenges the USDOC's benefit

\textsuperscript{224} Exhibit CHI-3, p. 67. The Government of China's arguments were (i) that several directors were independent non-executive directors and that some were officers of the company with no outside government positions, and that these companies pursued only commercial interests based on their stock exchange listings; (ii) that by law they were required to protect the interest of shareholders and to maximize profits; (iii) that one was listed on the New York Stock Exchange and thus was subject to US corporate governance requirements; and (iv) that SOEs in China operate under the same company law as private enterprises and they do not exist by virtue of any special statute. (Id., pp. 65-66).

\textsuperscript{225} Exhibit CHI-3, p. 67. The cited questionnaire response is not on the record of this dispute, but China does not contest the USDOC's characterization thereof.

\textsuperscript{226} Id.

\textsuperscript{227} Exhibit CHI-4, pp. 10 and 77.

\textsuperscript{228} Id., p. 10.

\textsuperscript{229} The USDOC cited, for example, its prior investigation in \textit{Hot-Rolled Steel from India}, where it had countervailed the provision of iron ore from a mostly government-owned mine without any reference to the five-factor test. (Id., pp. 10 and 77).

determinations in respect of loans by SOCBs in three of the four countervailing duty investigations before us. (The claims concerning these benefit determinations are addressed in Section X, infra).

8.117 In the OTR investigation, the USDOC found that the Government of China provided subsidies to the tire industry in the form of preferential lending by state-owned commercial banks. It determined that the SOCBs were "authorities" (i.e., public bodies) on the basis of its previous finding in the CFS Paper investigation, where it had concluded that Chinese policy banks and SOCBs constituted such "authorities". In the OTR investigation, the USDOC stated that the parties in the investigation had not demonstrated that the Chinese banking sector had significantly changed such that reconsideration of the CFS decision was warranted. The USDOC also cited scholarly publications on the record that reported that SOCBs were required to support the government's industrial policies.

8.118 In the CFS Paper investigation, in turn, the USDOC stated that in its general practice, loans provided in any given country by state-owned commercial banks are not necessarily, or in all cases, treated as government loans, since these banks may operate on a commercial basis. However, it determined that in respect of China, treatment of SOCBs as commercial banks was not warranted. The USDOC found that the record evidence did not indicate that China's banking sector operated on a commercial basis, as it was subject to significant distortions, mainly from the continued dominant role of the government in that sector and the legacies associated with the sector's longstanding pursuit of government policy objectives. Therefore, while stating that government control over SOCBs in China had been changing and that the record evidence in that regard was mixed, the USDOC nevertheless determined that the reforms were still in transition and that the government's influence remained a significant factor in the operation of China's banking sector.

8.119 In the CFS Paper investigation, the USDOC first stated that the central government had been very cautious on completely reforming the banking system; and that as a result, and because banks in China had never operated on a commercial basis, the government was still very involved in the banking sector. The USDOC found this view, to varying degrees, confirmed by independent experts. It reported some experts stating that "recent trends have moved away from local government influence over bank operations" and "[t]here still is some local government control over the bank branches, but [while] this has lessened in recent years […] it is still an ongoing process". Other experts stated that "the banking law prohibited government interference […] but […] this prohibition was not very effective in decreasing local government influence […] [however] the creation of the

---

232 According to China, there are four principal state-owned commercial banks in China (i.e., the so-called "Big Four" banks): the China Construction Bank ("CCB"); the Industrial and Construction Bank of China ("ICBC"); the Bank of China ("BOC"); and the Agricultural Bank of China ("ABC"). (China first written submission, para. 164; second written submission, para. 116).

233 Exhibit CHI-4, p. 101. For example, the USDOC noted that at verification, an official from the Tianjin municipal government confirmed that SOCBs are supervised by the Tianjin State-Owned Assets Supervision and Administration Commission ("Tianjin SASAC"). Tianjin is the city where an investigated OTR producer (TUTRIC) was located. (Id.).

234 As an example, the USDOC cites the IMF Working Paper on China's Banking System Reform (Exhibit US-52), which states that "it is difficult to find clear evidence that SCBs have changed their behavior and become commercially oriented" and that governments should avoid "interference for policy purposes". (Exhibit CHI-4, footnote 45).

235 Issues and Decision Memorandum for the Final Determination in the Countervailing Duty Investigation of Coated Free Sheet from the People's Republic of China ("CFS Paper Countervailing Duty I&D Memo"), Exhibit CHI-93, p. 55. As an example, the USDOC cites its previous findings in DRAMS from Korea. (Id.).

236 Id., p. 55.

237 Id., pp. 58, 60-61.

238 Id., p. 56.
[Chinese Banking Regulatory Commission] [has led] to significant decreases in the extent of local government interference […] [although it] continues to lack the enforcement powers it needs to properly implement its regulations and fulfill its mandate” and “there is still a control perspective, as banks continue to be dominated by government and are exposed to outside political influences”.

8.120 Second, the USDOC determined that China's banking system still operated in accordance with governmental planning policies. For example, the Chinese Commercial Banking Law required banks to carry out their loan activities consistently with "the needs of national economy and the social development and under the guidance of State industrial policies". Further, the USDOC found that while SOCBs were improving their risk management capacities, they still lacked adequate risk management and analysis skills. It also stated that interest rates remained generally undifferentiated – interest rates were quite close to the benchmark set by the People's Bank of China ("PBOC").

8.121 Furthermore in this context, in addition to its findings as to inadequate risk management and analysis, and as to SOCBs' lending in pursuance of government economic plans, the USDOC pointed to government ownership in the banking sector. In particular, the USDOC determined that China's banking sector remained almost entirely state-owned and that even if the largest SOCBs had undergone some reorganization to become formal corporate entities – limited initial public offerings, and sale of minority stakes to foreign interests – the Government of China as the majority shareholder continued to exert control over the largest commercial banks. The USDOC noted in this regard that foreign investment in Chinese banks was tightly constrained, with total foreign ownership limited to 25 per cent in SOCBs.

8.122 According to the USDOC's OTR Countervailing Duty I&D Memo, the Government of China argued in that case that the SOCBs' specific actions should be analyzed to determine whether "a financial contribution was provided through preferential lending". TUTRIC (one of the investigated producers), is cited as arguing that the SOCBs were not necessarily government authorities, as they had undergone significant reorganizations to become formal corporate entities operating under market

---

239 Exhibit CHI-93, pp. 56-57.
240 Id., pp. 57-58.
241 Id., p. 58. Similarly, it noted that the Bank of China Offering states that "Commercial Banking Law requires commercial banks to take into consideration government macroeconomic policies in making lending decisions. [They] are encouraged to restrict their lending to borrowers in certain industries in accordance with relevant government policies". (Id.) The USDOC also noted that, at verification, officials from the People's Bank of China stated that "it may be necessary for banks to heed industrial policies; banks may be taking on great risk if their customers use loans in a way that is inconsistent with industrial policies". (Id.).
242 Id., p. 59. For example, the USDOC noted that at verification, the PBOC explained that interest rate spreads are close to the PBOC-set benchmark rate because "the Big Four [(the largest SOCBs in China)] attract the largest borrowers […] [which] are creditworthy […] and have long-term relationship with the banks". (Id.).
243 The USDOC’s examination of the SOCBs’ ownership appears in the section of the Issues and Decision Memorandum covering “benchmarks” for SOCB lending, which is cross-referenced in the section of the Memorandum addressing “policy lending”. The analyses in these two sections overlap substantively to a considerable extent.
244 The USDOC noted that according to the data provided by the OECD ("Economic Survey of China, Paris: Organization for Economic Cooperation and Development" (2005)) the state ownership in the Chinese banking sector is much more widespread than in any other major world economy. The OECD report states that the “extent of ownership in China’s financial system is exceptional. All but one of the major commercial banks are controlled by the central or local government […] the four largest banks […] known as the state owned commercial banks (SOCBs), still account for almost three-quarters of commercial bank assets”. (Exhibit CHI-93, p. 67; and OECD Economic Surveys: China (2005), Exhibit US-54, p. 140). In its first written submission, China acknowledges that at the end of 2006, China's ownership in the Big Four was as follows: 75 per cent in the ICBC; 74 per cent in the CCB; 68 per cent in the BOC; and 100 per cent in the ABC. (China first written submission, para. 165).
245 Exhibit CHI-93, p. 67.
conditions, and that the USDOC had in previous cases found that wholly government-owned banks were not government authorities. Starbright (another investigated producer), is cited as arguing that its loan from the Bank of China was not countervailable as the USDOC had incorrectly determined that SOCBs in China were government authorities. The Memorandum also indicates that Bridgestone (a domestic interested party in the investigation) disagreed with the Government of China that the banks were private entities not controlled by the government, arguing that record evidence and scholarly publications demonstrated that the Government of China owned almost all banks in China, and that Chinese law required that the banks support government industrial policies. Bridgestone contended that trends such as decreasing government ownership did not contradict the record evidence that during the period of investigation the government "maintained a strong hold on both bank ownership and lending", such that in Bridgestone's view the USDOC should find that SOCB lending and debt forgiveness to the tire producers were financial contributions.246

8.123 The final determination in the OTR investigation summarizes the USDOC's finding that the SOCBs were public bodies as being based on the facts: (i) that national, provincial and municipal government authorities effectuated policies to provide countervailable loans to OTR producers, and that the loans at issue were provided pursuant to these policies; (ii) that the parties in the OTR investigation had not demonstrated that conditions in the Chinese banking sector had significantly changed since the CFS Paper determination, such that a reconsideration was warranted, citing in this regard the verification report of the Tianjin Government, where a Tianjin municipal government authority had confirmed that SOCBs were under Tianjin SASAC supervision; and (iii) that scholarly publications on the record reported that SOCBs were required to support the government's industrial policies.247

(d) Assessment by the Panel

8.124 We recall our finding above that the meaning of "public body" in Article 1.1 of the SCM Agreement is an entity controlled by a government. We note that China's claim concerning the USDOC's determinations that the SOEs and SOCBs at issue were public bodies is based not only on its own, different, legal interpretation of the term "public body", but also on the public body analysis and conclusions of the USDOC in the four investigations. In particular, China claims that these determinations by the USDOC were based on a "per se majority ownership test", and that the USDOC did not conduct the "five-factor analysis" that it had applied in some prior cases, which China holds up as evidence that the USDOC had recognized that a "fact-intensive" inquiry (including an entity's pursuit of governmental policies or interests, and whether an entity is created by statute), was necessary to establish that an entity is a public body in the sense of Article 1.1 of the SCM Agreement. More generally, China considers that the USDOC failed to meet its investigatory burden by improperly basing its public body determinations on a presumption that government-owned entities are public bodies, rather than gathering and analyzing the factual information necessary for the five-factor test.

8.125 We start by considering China's statements concerning the five-factor test. While we note China's disclaimer that it is not arguing about the consistency of the five-factor test with Article 1.1 of the SCM Agreement, we view China's statements about the test as implying (as China had argued during the investigations), that the USDOC was obligated to have applied that test, in which government ownership is just one factor. For example, citing the USDOC's statements regarding the non-application of the test in the investigations, that it would "reconsider the feasibility of applying the five-factor test during an administrative review", China states that it "takes no solace in this response".248 Thus, for the sake of the completeness of our analysis, we examine the potential

---

246 Exhibit CHI-4, pp. 100-101.
247 Id., p. 101.
248 China first written submission, para. 100. See also footnote 94, supra.
relevance of the five-factor test to the concept of "public body" in Article 1.1 of the SCM Agreement. In this regard, we recall China's argument that the "key" question regarding whether an entity is a public body is whether it exercises governmental authority, and China appears to consider that the five-factor test addresses that question. Given our finding that a public body is an entity controlled by a government, however, the legal question is whether under the SCM Agreement it would be necessary to examine the five factors to establish that an entity is government-controlled. We recall that the factors are (i) government ownership; (ii) the government's presence on the entity's board of directors; (iii) the government's control over the entity's activities; (iv) the entity's pursuit of governmental policies or interests; and (v) whether the entity is created by statute. While these factors appear generally to be related to the issue of control, we see no basis in the SCM Agreement on which to conclude that consideration of these particular five factors (or any other specific factors) is a legal prerequisite for a valid finding that an entity is a "government authority" (which the evidence before us suggests is not the case), the failure to conduct that test in a given investigation would be a matter for the U.S. judicial review system, not the WTO.

8.126 This brings us to the analyses that the USDOC did conduct in the four investigations in respect of the SOE input suppliers, and in the OTR investigation in respect of SOCBs. The question for the Panel is whether these analyses were reasoned and were based on adequate evidence of government control of the entities in question.

(i) SOE input suppliers as public bodies

8.127 Concerning the SOE input suppliers in the four investigations, as described above the USDOC's public body determinations were principally based on the uncontested fact that these entities were majority government-owned. China characterizes this as a simple per se majority ownership test. We read the USDOC's determinations differently, however. In particular, we do not see the USDOC's determinations as depicting the mechanical application of a per cent-of-ownership test, without regard for any other evidence or arguments. To the contrary, these determinations show that the USDOC examined all of the evidence and arguments that were before it in reaching its conclusions that the SOEs were public bodies.

8.128 In particular, in the CWP investigation, the USDOC noted that other than the levels of government ownership of certain companies producing HRS, the Government of China had not provided the information that was needed to consider the five-factor analysis, and that therefore the USDOC had applied a rule of majority ownership. In this context, where ownership information was not available for certain HRS producers, the USDOC found them to be government-owned, and thus public bodies, on the basis of facts available.

8.129 In the LWR investigation, the USDOC determined that there was insufficient evidence on the record to perform the five-factor analysis in respect of HRS producers, because the Government of China had not provided such evidence. Rather, it had provided only ownership information, and only for some companies, but otherwise had not furnished information necessary to conduct the five-factor analysis. Despite this, the USDOC did include a specific, detailed discussion of the arguments advanced by the Government of China concerning the five factors in respect of one trading company, Baosteel, while stating that it made no finding as to whether a five-factor test was required. As described supra, the USDOC found that the evidence was insufficient to conclude that Baosteel was

---

249 See, e.g., China first written submission, paras. 90-102.
250 Exhibit CHI-1, pp. 62-63.
251 Exhibit CHI-2, pp. 28-29.
not a public body, and/or that the evidence contradicted the factual assertion in support of which it was advanced.\textsuperscript{252}

8.130 In the LWS investigation, the USDOC again found that there was insufficient evidence on the record for it to be able to conduct a five-factor analysis, as beyond the levels of government ownership of the companies in question, the Government of China had not provided the information necessary to conduct a complete analysis. The USDOC nevertheless conducted a detailed discussion of the Government of China's arguments and "limited" evidence on the five factors, concluding that either that evidence was not apposite to the questions examined, or disproved the Government of China's argument. Of particular relevance in this regard was the statement in the Government of China's questionnaire response that the State-Owned Assets Supervision and Administration Commission of the State Council played a role in managing SOEs "based on 'the rights attendant to the ownership of shares'".\textsuperscript{253}

8.131 In the OTR investigation, the USDOC found that a five factor test is not necessary in the absence of evidence calling into question whether government ownership does not mean government control.\textsuperscript{254} The record documents before us make no mention of any party submitting evidence suggesting an absence of government control, and before us China points to none. Rather, the USDOC's OTR Countervailing Duty I&D Memo indicates that the Government of China and the respondent parties focused most of their argumentation on the USDOC's failure to conduct an entrustment or direction analysis. Thus, it appears that there was no evidence other than that of the government's share of ownership of the input suppliers before the USDOC in respect of whether these SOEs were public bodies.

8.132 On the basis of our review of the USDOC's public body determinations, we find sufficient discussion and analysis to explain the basis for those determinations and the reasons therefore. In other words, it is clear to us from these determinations what evidence was before the USDOC and, where there were gaps, the reasons for those gaps, and how the USDOC addressed them. It also is clear to us from the determinations what specific arguments and evidence were presented to the USDOC and how the USDOC took them into consideration. In particular, we note the statements of the USDOC that in a number of instances, factual assertions were made without any supporting evidence, or with evidence that contradicted the assertions. We further note that the USDOC explained why it considered that it was not legally required to conduct the five-factor test, in particular that in making its public body findings, it relied on the evidence of record that the input suppliers in question were majority government-owned.

8.133 This then brings us to the legal question of whether the evidence of government ownership of the SOE input producers was a sufficient basis on which to conclude that they were government controlled and thus public bodies. Here, the United States argues extensively before us that majority ownership indicates control, and indeed China also acknowledges that ownership can indicate control. The difference is that for China, government control is the wrong legal test for determining whether an entity is a public body.\textsuperscript{255}

8.134 We recall, however, our conclusion that a public body is any entity controlled by a government, and in this regard we consider government ownership to be highly relevant (indeed potentially dispositive) evidence of government control. Here we note in particular the everyday

\textsuperscript{252} See summary at para. 8.109, \textit{supra}. See also Exhibit CHI-2, pp. 29-30.

\textsuperscript{253} Exhibit CHI-3, p. 67.

\textsuperscript{254} In this investigation, a petitioner had argued that "treating Chinese SOEs as public entities is consistent with China's commitments to the WTO" (citing paragraph 172 of the WTO Working Party Report). (Exhibit CHI-4, p. 76). The USDOC, however, did not address this argument in its "public body" analysis.

\textsuperscript{255} See, \textit{e.g.}, China first written submission, para. 61.
financial concept of a "controlling interest" in a company. The technical definition of what is needed for a controlling interest is a maximum of 50 per cent plus one share of the voting stock of a company, with the possibility that a much smaller voting block can be controlling, depending on how dispersed the ownership of the remaining shares is, and the extent to which the other shareholders participate in voting.256

256 "Controlling interest" is defined as:
"Strictly speaking, an ownership stake of any business which is 50% or more. In practice it means a sufficiently large stake in a company by an individual shareholder to allow effective control. In principle, a stake of 50% plus one share gives a blocking majority, but in practice effective control can be had with a smaller holding. Key holding levels are 25%, which can block changes in the articles of the company, 51%, which gives voting control, and 76%, which permits changes to the articles. In a company setting it usually means holding a majority of the voting rights which usually comes from the ownership of equity. The ability to capture ownership, or acceptances or pledges, of around this percentage of the voting equity in a company can be crucial in such situations as contested takeovers”. (The Handbook of International Financial Terms, P. Moles (ed.) (Oxford University Press, 1999), p. 110). (emphasis original)

See also the following online dictionaries:

- From Investment Dictionary: "When one shareholder or a group acting in kind holds a high enough percentage of ownership in a company to enact changes at the highest level. By definition, this figure is 50 per cent of the outstanding shares or voting shares, plus one. However, controlling interest can be achieved with less than 50 per cent ownership of the stock if that person/group owns a significant proportion of the voting shares, because in many cases, not every share carries a vote in shareholder meetings."

- From Financial & Investment Dictionary and Business Dictionary: "Ownership of more than 50 per cent of a corporation's voting shares. A much smaller interest, owned individually or by a group in combination, can be controlling if the other shares are widely dispersed and not actively voted."

- From Wikipedia: "Controlling interest in a corporation means to have control of a large enough block of voting stock shares in a company such that no one stock holder or coalition of stock holders can successfully oppose a motion. In theory this normally means that controlling interest would be 50 per cent of the voting shares plus one.

In practice, though, controlling interest can be far less than that, as it is rare that 100 per cent of a company's voting shareholders actively vote.

In addition, a company that requires a 2/3 super-majority of shares to vote in favour of a motion, can grant, in effect, veto power to a minority shareholder or block of shareholders that own essentially 1/3 of the shares. Thus in some cases, a single entity can essentially maintain control, with only 33.4 per cent of the outstanding shares. Ford Motor Company's former 33.9 per cent ownership of Mazda is an example of a controlling interest with minority shareholding."

- From Investopedia: "For the majority of large public companies (such as those that belong to the S&P 500), a shareholder with much less than 50 per cent of the outstanding shares can still cause a lot of shake-up at the company. Single shareholders with as little as 5-10 per cent ownership can push for their own seats on the board, or enact changes at shareholder meetings by publicly lobbying for them."

8.135 We see no reason to consider that the concept that "control" of a company resides with its majority owner, which is uncontested in the private sector, would be inapplicable to government-owned companies. Logically, quite the reverse should be true, given the generalized power of governments over economic affairs within their territories. As such, we consider that, on its own, majority government ownership is clear and highly indicative evidence of government control, and thus of whether an entity is a public body for purposes of the SCM Agreement.

8.136 We find no legal error, in analyzing whether an entity is a public body, in giving primacy to evidence of majority government-ownership. Of course, public body determinations are to be made case-by-case, on the basis of the evidence of record in a given investigation, and the authority's determination must explain its analysis based on the evidence before it, in order for that determination to be reasoned and adequate and thus consistent with the SCM Agreement. We note in this regard that there could be cases (however rare in practice) in which a government-owned entity was completely insulated (e.g., by law) from any government involvement in, or influence over, its operations, such that the entity was not controlled by the government and thus fell outside the scope of the term "public body". In such a situation, it would be the entity and the government in question that would have in their possession the information as to the absence of government control, and in our view it would be incumbent upon them, and certainly it would be in their interest, to bring that information to the attention of the investigating authority. To the extent that such evidence were placed on the record, the investigating authority would be required to include its analysis of that evidence in its determination as to whether the entity was or was not a public body.

8.137 In the investigations at issue in this dispute, as noted above, respondents advanced certain information and/or arguments regarding the question of public body in respect of SOE input producers – mainly based on the five-factor test that the respondents considered the USDOC was legally required to perform, and some of which went to the issue of control – and in all such instances the USDOC in its determinations discussed and responded to that information and those arguments. In no case does it appear that the USDOC refused to consider, or dismissed summarily, any such information or arguments, and China does not allege any such instances. The USDOC did not find in any case that there was record evidence to indicate that in spite of being owned by the government, the SOEs in question were not public bodies. Furthermore, it is not the USDOC's factual findings as to the extent of government ownership or control of input suppliers that is the focus of China's challenge, but rather the legal relevance thereof as determinative of whether an entity is a public body. In particular, China advances the same argument that the respondents advanced in the investigations, namely that the USDOC – as a matter of law – should have treated the SOEs as private bodies, and thus conducted an entrenchment or direction analysis.

8.138 We have rejected this legal argument, as well as the legal test advanced by China, in respect of "public body". We also have concluded that the USDOC's determinations that the SOE input suppliers were public bodies were based on relevant evidence of government control (which in these cases was principally evidence of government ownership), and that the determinations acknowledge and come to reasoned conclusions in respect of all of the additional evidence and arguments before it, including in particular those advanced by respondents, as to the question of public body. We therefore find that China has failed to establish that the USDOC acted inconsistently with the obligations of the United States under Article 1.1(a)(1) of the SCM Agreement in determining in the four countervailing investigations at issue in this dispute that the SOE input producers were public bodies.

257 See, Section VII.A.2, supra.
258 Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, infra.
(ii) **SOCBs as public bodies**

8.139 We turn now to the USDOC's determination in the OTR investigation that the SOCBs were public bodies. In that case, the undisputed record evidence shows that the government owned the large majority share of the SOCBs, and exercised significant control over their operations. Before us China does not contest these factual findings but instead argues that government ownership and control are not relevant to whether the banks in question are public bodies.

8.140 In particular, in the OTR investigation, the USDOC's determination that SOCBs were public bodies is based on, and incorporates by reference, the entirety of its analysis of the same issue in the earlier *CFS Paper* investigation. In the OTR investigation, the USDOC maintained the same conclusions that it had reached in *CFS Paper* on this issue, stating that the parties in the investigation had not demonstrated that the Chinese banking sector had significantly changed such that reconsideration of the *CFS Paper* decision was warranted. We find no indication in the USDOC's determination in the OTR investigation that the respondents provided evidence or arguments seeking to establish that the USDOC's factual findings from the *CFS Paper* case were no longer valid, nor did they challenge the USDOC's characterization in the OTR investigation that the situation in the banking sector had not significantly changed since the *CFS Paper* investigation. In particular, the respondents in the OTR investigation did not contest any of the information or analysis from the *CFS Paper* investigation either as to the degree of government ownership of these banks or the extent to which they were controlled by the government. In this regard, we note the uncontested statement on the record of the OTR investigation, by a Tianjin government official, that the SOCBs were under government supervision. Rather, the respondents advanced legal arguments as to the interpretation of the term "public body" and as to the kind of analysis they considered that the USDOC was required to conduct.

8.141 Before us China does not challenge either the factual evidence or the conclusions drawn therefrom by the USDOC as to the extent of government ownership of the SOCBs or the government's involvement in their operations. Rather, China argues that the USDOC's analysis was based on the legally incorrect and irrelevant element of government ownership and control, i.e., the same legal argument that it advances in respect of the SOE input suppliers.

8.142 For the same reasons as discussed *supra* in the context of the SOE input producers, we reject China's arguments as to the interpretation of the term "public body", and as to the necessity of applying the five factor test or any other specific test to determine whether an entity is a public body. Rather, we have found that the determinant of whether an entity is a public body is government control, and that majority government ownership is strong evidence of control.

8.143 We have reviewed the determination in the OTR investigation, and the cross-referenced determination from the *CFS Paper* investigation, that the SOCBs are public bodies. We note the lengthy discussion in the *CFS Paper* determination of the evidence that the SOCBs during the period of investigation were either wholly or majority government-owned, and that there was extensive government involvement in and control over their operations. As noted, China does not challenge these factual findings. We consider that the USDOC's findings constitute a sufficient basis for its public body determination in respect of the SOCBs. We therefore conclude that China has failed to establish that the USDOC acted inconsistently with the obligations of the United States under Article 1.1(a)(1) of the SCM Agreement in determining that the SOCBs were public bodies.259

---

259 Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, *infra*. 
Having found that China has failed to establish that the United States acted inconsistently with its obligations in so far as its determinations of "public body" in the investigations before us in this dispute, we recall, as we have already emphasized, that a finding that an entity is a public body is simply the first step in a multi-part analysis. This finding, on its own, does not mean in any way that the entity in question acted in a non-commercial manner, by conferring a benefit, nor that any such benefit was specific. Those elements are independent and as such each must established in order for a valid basis to exist for the imposition of a countervailing measure.

IX. CHINA'S CLAIMS PERTAINING TO SPECIFICITY

A. De jure Specificity of SOCB Lending to the Tire Industry

1. Claims of China

China claims that the USDOC acted inconsistently with the obligations of the United States under Article 2.1(a) of the SCM Agreement, by finding in the OTR investigation that preferential lending by SOCBs to the tire industry was de jure specific. China further claims that, as a consequence, the United States acted inconsistently with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.\footnote{Paragraphs B.1(c)(iii) and B.1(e)(i)-(iii) of the "as applied" claims in China request for establishment of a Panel; China first written submission, para. 468 (d); second written submission, para. 315 (e).}

2. Main arguments of the Parties

(a) China

China submits that the legislation upon which the USDOC relied as the basis for this finding of de jure specificity neither refers to the alleged subsidy, nor explicitly limits access to the alleged subsidy to the tire industry.\footnote{China first written submission, paras. 208 and 214.} China further argues that the SOCB loans were not made pursuant to the legislation in question.\footnote{Id., paras. 223 and 225.}

9.3 According to China, a valid determination under Article 2.1(a) of the SCM Agreement that certain legislation confers a subsidy that is de jure specific requires the establishment of three elements: (i) that the legislation define or refer to all of the elements of a subsidy (i.e., the financial contribution and the benefits that will be conferred thereby); (ii) that the legislation explicitly limit the access to the subsidy to certain enterprises (i.e., that it must clearly and unambiguously provide that the relevant subsidy – the financial contribution and benefit – is only available to "certain enterprises", to the exclusion of other "certain enterprises"); and (iii) that the countervailed transaction must have been made pursuant to the subject legislation (i.e., must be an instance of the subsidy that the legislation defines, and the recipient must be among the "certain enterprises" to which the subsidy is explicitly limited).\footnote{Id., para. 209.}

9.4 China notes in addition that pursuant to Article 2.4 of the SCM Agreement, any specificity determination must be "clearly substantiated on the basis of positive evidence", and argues that "clear substantiation" is an even higher standard than "positive evidence" as that term was interpreted by the
In this regard, China submits that evidence showing that a particular subsidy is broadly available throughout an economy is inconsistent with a valid finding of specificity.\footnote{China first written submission, paras. 210-211, citing to Appellate Body Report on \textit{US – Hot-Rolled Steel}, para. 192. China contends in this regard that any determination of specificity must be based upon a thorough examination of all relevant evidence. (Id., para. 212).}

9.5 China argues that the USDOC's specificity determination in respect of SOCB lending to the tire industry is deficient in respect of all three of the elements it considers to be necessary. First, China asserts, the USDOC relied on broad statements in various planning documents and then implicitly linked these statements to other statements in the same planning documents that refer to providing support to various industries.\footnote{Id., para. 213.} China submits that none of these statements refers to preferential lending by SOCBs to the tire industry – the subsidy that the USDOC actually countervailed – and that the only statement in which SOCBs are mentioned does not indicate that SOCBs provide loans at preferential interest rates.\footnote{China first written submission, para. 215.} For example, China argues that the USDOC misinterpreted the statement in the "Hebei Province 9th Five-Year Plan" that the "automobile and components industry' would, among other industries, be 'developed greatly and stronger'" as requiring SOCBs (which are not even mentioned) to provide preferential loans (which also are not mentioned) to companies in the "automobile and components industry."\footnote{Id., paras. 214, 216-217; oral statement at the first meeting of the Panel, para. 61.} In China's view, these documents do not explicitly refer to the alleged subsidy, and therefore (on that basis alone) cannot constitute the basis for a finding of \textit{de jure} specificity within the meaning of Article 2.1(a) of the SCM Agreement.\footnote{China first written submission, footnote 184 (referring to Exhibit CHI-4, p. 14).}

9.6 Second, China submits, even assuming that the legislation at issue referred to the alleged subsidy, the USDOC's final determination provided no analysis of and made no findings as to whether the alleged subsidy was explicitly limited to companies in the tire industry.\footnote{Id., para. 219 and footnote 185 (referring to Exhibit CHI-4, p. 98).} China considers that the USDOC's statement that "there are no discrete policy plans for the tire industry, \textit{per se}, [but] the totality of the information on this record [...] shows that the government is directing policy lending to the tire industry or to specific enterprises in the tire industry" does not support the conclusion that the alleged subsidy was explicitly limited to the tire industry.\footnote{Id., para. 221 and footnote 186 (referring to the \textit{Guiding Catalogue of the Industrial Restructuring (2005), promulgated by the National Development and Reform Commission} (the "GOC Catalogue"), Exhibit CHI-70).} In this connection, China asserts that if the SOCBs were required to support China's industrial policies as the USDOC contended, this would mean that the SOCBs were required to support all of the Chinese industrial policies that concerned the vast array of industries covered by the planning documents. In this regard, China notes that the "GOC Catalogue" (one of the documents on which the USDOC based its specificity determination) identifies 539 "encouraged national projects" in 26 broad categories. China contends that if the "subsidy" inferred from this document applied to the tire industry, then it should apply to all of the industries identified in the GOC Catalogue.\footnote{Id., para. 219 and footnote 185 (referring to Exhibit CHI-4, p. 98).} In this regard, China considers that the list of encouraged national projects is both so long (539) and so broad (in 26 diverse categories) that it could not, as a legal matter, form the basis for a specificity finding. China considers that the findings of the panel in \textit{US – Upland Cotton}, in particular its statement that "a subsidy would cease to be specific because it is sufficiently broadly available throughout an
9.7 China further argues in this context that contrary to the USDOC’s finding, the preferential loans by SOCBs are available to any borrower in China that borrows money from SOCBs at prevailing interest rates. For China, given the broad availability and use of this financing, it cannot be considered specific.

9.8 Finally, China asserts that the USDOC failed to demonstrate that the SOCB loans were made pursuant to the legislation on which the USDOC relied. China submits that the USDOC merely "presumed" that all of the loans that SOCBs extended to GTC were made pursuant to the legislation identified by the USDOC. According to China, such a presumption does not meet the stringent requirements for a finding of specificity under Article 2.1(a) of the SCM Agreement. Furthermore, China submits, the evidence on the record does not support this presumption. China asserts that the interest rates that GTC paid on RMB-denominated loans from SOCBs were entirely in the range of interest rates paid by borrowers across all other industry sectors in China, and that the interest rates that GTC paid on dollar-denominated loans were consistent with the USDOC’s own benchmark.

9.9 For these reasons, China contends that the USDOC did not clearly substantiate, based on positive evidence, its de jure specificity determination in the OTR investigation.

(b) United States

9.10 The United States argues that the USDOC’s de jure specificity finding in respect of SOCB loans to the tire industry was consistent with Article 2 of the SCM Agreement. According to the United States, the USDOC found the "policy lending" in question to be specific because the loans were provided as part of government programmes guiding financial institutions to lend to tire producers.

9.11 The United States notes that Article 2.1 of the SCM Agreement provides that a subsidy is de jure specific if the granting authority, or the legislation pursuant to which that authority operates, explicitly limits access to the subsidy to certain enterprises. The United States points to Article 2.4, which requires that any determination of specificity must be "clearly substantiated on the basis of positive evidence", and notes the Appellate Body's finding that such evidence must be of "an affirmative, objective and verifiable character", which is "credible". The United States argues that where an investigating authority clearly substantiates on the basis of positive evidence that access to a subsidy is explicitly limited, then a finding of specificity is consistent with Article 2 of the SCM Agreement; and the USDOC's finding of de jure specificity in respect of SOCB lending to the tire industry met this test.
9.12 The United States argues that the USDOC found that the Chinese laws, plans and policies – which operated at central, provincial and municipal levels of government – limited access to policy lending to a group of industries that explicitly included the OTR tires industry. Furthermore, the USDOC found that the provincial and municipal policies and plans were designed to implement central government plans and were intended to be consistent with those.282

9.13 According to the United States, a catalogue of encouraged projects, which formed "an important basis for guiding investment directions" and for government investment and fiscal policies, *inter alia*, pursuant to the central government's 11th Five-Year Plan, included "advanced belt tires" and related materials and equipment. The 10th Five-Year Plan had referred to "meridian radial tires" as a national security priority, to which the contribution of funds should be "reasonably directed". The United States asserts that the provincial and municipal governments closely coordinated their own plans with those in the central plans.283

9.14 Regarding the interpretation of Article 2 of the SCM Agreement, the United States argues that this provision does not require the identification of legislation that defines the elements of a subsidy, as this would conflate the determination of specificity and benefit with that of financial contribution.284 The United States also disagrees with China that the range of projects in the planning documents was so broad as to render policy lending non-specific. In the view of the United States, the referenced projects concerned a "group of industries" (the terminology of Article 2.1 of the SCM Agreement). The United States also notes that the USDOC found that the planning documents prohibited policy lending to projects in the "restricted" and "to be abolished" categories.285

9.15 The United States further argues that the question of specificity in respect of the SOCB lending is different from that of benefit (i.e., the terms of the lending): specificity has to do with making credit available to certain enterprises, including tire companies.286 In this regard, the United States argues that the USDOC found that SOCBs acted pursuant to Chinese laws, policies and plans in providing policy loans to the OTR tire industry. The United States considers that the primary means of differentiating among borrowers from the SOCBs was not lending rates (most borrowers paid rates near government-set benchmarks) but the availability of credit at all.287

3. **Main arguments of the Third Parties**

(a) **Australia**

9.16 Australia disagrees with China's contention that for a *de jure* specificity finding the legislation must specify a subsidy, that the legislation must explicitly limit access to the subsidy to certain enterprises "to the exclusion of other enterprises", and that the specific transaction must be made pursuant to the legislation forming the basis of the *de jure* specificity finding. According to Australia, this argument conflates elements of Article 1 with Article 2.1, whereas *de jure* specificity does not require legislation identifying the elements of a subsidy. Rather, Australia considers that the tests for the existence of a subsidy, and for specificity, are separate, and that this approach is consistent with that taken by previous panels. Australia considers that statements of government policies, plans and intentions are highly relevant in determining, *inter alia*, that subsidies are targeted to certain enterprises. Quoting Article 2.1 of the SCM Agreement, Australia argues that for a finding that policy

283 United States first written submission, paras. 337-338.
284 I.d., paras. 346-347; opening statement at the first meeting of the Panel, para. 43.
285 United States first written submission, paras. 348 and 351-353; opening statement at the first meeting of the Panel, para. 33.
286 United States first written submission, paras. 354-356.
287 I.d., paras. 357-360.
lending is *de jure* specific, the policy statement that forms the basis of the programme must "explicitly limit access to certain enterprises". Australia sees nothing in this language requiring that such limitation be *explicitly* to the exclusion of others. Australia adds that the test for *de jure* specificity does not require a direction from the government on "what the benefit will be" and "who it will go to". Australia also argues that once the existence of a subsidy, and specificity, are established in accordance with Articles 1 and 2 of the SCM Agreement, there is no need to impose the third requirement advanced by China that the individual transactions be made pursuant to the legislation in question.288

(b) European Communities

9.17 Without prejudice to the determination of specificity in the present dispute, the European Communities submits that a subsidy that reaches a wide number of beneficiaries and industries may call into question the specificity of the measure. Recalling the panel report on *US – FSC (Article 21.5 – EC)*, the European Communities notes that it is unlikely that a subsidy in the form of a loan could be either *de jure* or *de facto* specific under Article 2 of the SCM Agreement if the loan can be obtained by companies of all sizes (as long as they are sufficiently credit-worthy) with respect to projects across all sectors of the economy. The European Communities also submits that the specificity analysis should focus on the characteristics of the measure at issue rather than merely on the disbursements made thereunder, because it is the subsidy itself that *de jure* or *de facto* limits access to an "enterprise or industry or group of enterprises or industries". The European Communities adds that the Panel must determine "financial contribution" and "benefit" as a matter independent from "specificity" since these elements must be identified and examined separately in order to find the existence of specific subsidies within the meaning of the Agreement.289

(c) Saudi Arabia

9.18 Saudi Arabia considers that specificity is a separate and independent condition from financial contribution and benefit, consistent with previous panels' decisions. Saudi Arabia is also of the view that specificity must be found with regard to the subsidy as a whole, i.e., financial contribution and benefit. To illustrate its point, Saudi Arabia argues that the provision of low-interest loans to a limited group of enterprises or industries does not fulfil the specificity criterion if the preferential lending rates do not differ materially from the rates that all enterprises in the country of provision may receive for similar loans.290

4. Assessment by the Panel

9.19 The issues presented by this claim are: what the required analytical elements are for a valid finding of *de jure* specificity under Article 2.1(a) of the SCM Agreement; in this regard whether the three-part test advanced by China is required by that provision; and finally, on the basis of both the facts of the OTR investigation and applicable legal requirements, whether the USDOC's *de jure* specificity determination in respect of SOCB lending to the OTR tire industry was inconsistent with the United States' obligations under the SCM Agreement. Concerning the analytical elements for a valid finding of *de jure* specificity, China's claim raises both how the limitation of access to a subsidy must be structured, and the meaning of the term "certain enterprises".

Interpretation of Article 2.1 of the SCM Agreement

9.20 We start by considering the text of Article 2.1 of the SCM Agreement:

"Article 2

Specificity

2.1 In order to determine whether a subsidy, as defined in paragraph 1 of Article 1, is specific to an enterprise or industry or group of enterprises or industries (referred to in this Agreement as "certain enterprises") within the jurisdiction of the granting authority, the following principles shall apply:

   (a) Where the granting authority, or the legislation pursuant to which the granting authority operates, explicitly limits access to a subsidy to certain enterprises, such subsidy shall be specific.

   (b) Where the granting authority, or the legislation pursuant to which the granting authority operates, establishes objective criteria or conditions\(^2\) governing the eligibility for, and the amount of, a subsidy, specificity shall not exist, provided that the eligibility is automatic and that such criteria and conditions are strictly adhered to. The criteria or conditions must be clearly spelled out in law, regulation, or other official document, so as to be capable of verification.

   (c) If, notwithstanding any appearance of non-specificity resulting from the application of the principles laid down in subparagraphs (a) and (b), there are reasons to believe that the subsidy may in fact be specific, other factors may be considered. Such factors are: use of a subsidy programme by a limited number of certain enterprises, predominant use by certain enterprises, the granting of disproportionately large amounts of subsidy to certain enterprises, and the manner in which discretion has been exercised by the granting authority in the decision to grant a subsidy.\(^3\) In applying this subparagraph, account shall be taken of the extent of diversification of economic activities within the jurisdiction of the granting authority, as well as of the length of time during which the subsidy programme has been in operation".

\(^2\) Objective criteria or conditions, as used herein, mean criteria or conditions which are neutral, which do not favour certain enterprises over others, and which are economic in nature and horizontal in application, such as number of employees or size of enterprise.

\(^3\) In this regard, in particular, information on the frequency with which applications for a subsidy are refused or approved and the reasons for such decisions shall be considered.

Limitation of access

9.21 We begin our analysis of this claim by noting the general role in the SCM Agreement of the specificity requirement, which is related to the overall object and purpose of the SCM Agreement to
discipline trade-distorting subsidies. In particular, the specificity provisions establish that the subsidies deemed under the Agreement to be potentially trade distorting are those that are targeted in some way to particular beneficiaries, rather than being broadly available throughout the economy of a Member. In other words, the specificity requirement is not about the existence of a subsidy, which is dealt with in Article 1.1, but rather about access thereto. Article 2 of the SCM Agreement makes clear that specificity can take a number of different forms (enterprise, industry, regional, as well as deemed specificity in the case of prohibited subsidies), and that the superficial appearance of non-specificity is not sufficient for a subsidy to avoid coverage by the SCM Agreement. In short, the issue under Article 2 of the Agreement is the limitation, on some basis, of access to the subsidy. Subsidies to which access is limited in any of the ways referred to in that provision are specific and thus covered by the SCM Agreement.

9.22 Furthermore, the limitation can be "explicit" (commonly referred to as "de jure") as per Article 2.1(a), or can be determined on the basis of how, in practice, an apparently non-specific subsidy is allocated (commonly referred to as "de facto") as per Article 2.1(c) of the SCM Agreement. In this regard, we note the balance struck in Article 2 of the SCM Agreement – a subsidy to which access is automatic based on neutral, horizontally-applicable economic criteria is not specific, and thus falls outside the scope of the SCM Agreement, but the appearance of non-specificity can be overridden by the facts of how the subsidy is allocated in practice. We thus must guard against both an overly-broad reading of the specificity requirement which would sweep within the coverage of the SCM Agreement non-specific subsidies, and an overly-rigid or restrictive reading which would subvert the purpose of the specificity requirement, and thus undermine the effectiveness of the SCM Agreement.

9.23 In the provision at issue, Article 2.1(a) of the SCM Agreement, the text requires, and the parties do not dispute, that the limitation in question must be explicit. Where the parties disagree is with respect to how that explicit limitation must be structured for a measure to fall within the scope of Article 2.1(a) of the SCM Agreement.

9.24 We recall that the text of Article 2.1(a) of the SCM Agreement establishes two bases on which de jure specificity can be established: either the granting authority, or the legislation pursuant to which it operates, "explicitly limits access to a subsidy to certain enterprises". We recall that the first element of the test advanced by China is that the granting authority, or the legislation setting forth the measure in question, must identify or specify the elements of a subsidy, i.e., financial contribution and benefit. We understand that China bases this contention on the words "explicitly" and "subsidy" in Article 2.1(a), i.e., that the granting authority, or the legislation pursuant to which it operates, must explicitly limit access to a subsidy. For China, this means that if the granting authority or the legislation in question does not explicitly set forth both the financial contribution and the benefit elements, the measure cannot be a de jure specific subsidy. (China does not rule out that such a measure could, in particular instances, be a de facto specific subsidy).

9.25 The first issue raised by this claim is whether, to explicitly limit access to a subsidy, a granting authority or a legislation must specify all of the elements of a subsidy, i.e., financial contribution and benefit. As noted, for China, this is first and foremost a textual question following from the definition of "subsidy" in Article 1 of the SCM Agreement, i.e., that the use of the word "subsidy" in Article 2.1(a) requires that both the financial contribution and the benefit be explicitly

291 For instance, in response to a question from the Panel, China states: "[T]he necessary consequence of the use of the defined term 'subsidy' in Article 2 of the SCM Agreement is that the investigating authority must find that the subsidy is 'explicitly limited' [...] It is [ ] inadequate, as a matter of law, for an investigating authority to find that only a financial contribution or a benefit is de jure specific". (China response to Panel question 55 (first meeting)).

292 Id.
identified by the granting authority or the law. Another way to look at this issue, however, is from a functional standpoint. That is, functionally, could a granting authority or a legislation explicitly limit access to a "subsidy" without identifying both the financial contribution and the benefit flowing therefrom? Or put another way, would the only way for a granting authority or a legislation to explicitly limit access to a subsidy be to explicitly identify both the financial contribution and the benefit, and explicitly limit access to both?

9.26 We consider that there are many ways in which access to a subsidy could be explicitly limited, and we do not see that both the financial contribution and the benefit necessarily would have to be set forth explicitly to effect such a limitation. In particular, if access is explicitly limited to a particular type of financial contribution, which sometimes but not always gives rise to benefits, the particular cases in which the benefits existed would be *de jure* specific subsidies. This is because the explicit limitation of access to the financial contribution would have the effect of also limiting any benefits resulting from the financial contribution, without the limitation of access to the benefits itself needing to be explicit. Similarly, access could be explicitly limited to a particular set of benefits without the access to the underlying financial contributions also needing to be explicitly limited, and again, in our view, the access to the "subsidy", the combination of the financial contribution and the benefit, would be explicitly limited.

9.27 Hypothetical examples help to illustrate this point. Suppose that a law established a government credit facility exclusively for the cardboard box industry, but was silent concerning the terms and conditions on which the financing was to be provided. In this example, it is clear that while access to the financial contribution would be explicitly limited to a particular industry, there would be no explicit limitation of any benefits that might arise therefrom. Suppose that some of the financing under this facility were provided on better-than-market terms, i.e., that benefits were conferred. In this scenario, because by law *only* the cardboard box industry could obtain any financial contributions (the loans) under the programme, any benefits flowing therefrom necessarily also would be limited to the cardboard box industry, meaning that any subsidies under this programme would be *de jure* specific to that industry. Alternatively, suppose that a law established a government credit facility accessible to all enterprises in all industries, and further provided that companies in the cardboard box industry (and only that industry) would get loans under this facility on better-than-market terms. In this second example, access to the financial contribution (the loans) would not be limited, but access to the benefits flowing therefrom would be – to a single industry. By virtue of this explicit limitation on access to the benefits, this subsidy also would be *de jure* specific.

9.28 We consider that a reading of Article 2.1(a) of the SCM Agreement that would require explicit limitation of both the financial contribution and the benefit, such as China advocates, is not supported by the text of that provision. In our view, it would limit *de jure* specificity to a single, narrow set of circumstances, in which a single piece of legislation (or perhaps more than one formally interrelated pieces of legislation) or some action by the granting authority, would explicitly set forth, in the form of a formal programme, the financial contribution and benefit elements (including the form they would take and how they would operate) and would then specify the particular eligible beneficiaries (and possibly also would state explicitly that only those beneficiaries were eligible). We cannot agree with such a reading, which in our view would exclude many situations in which access to a given subsidy was explicitly limited, by virtue of a limitation of access to *either* the financial contribution or the benefit.

9.29 We note that a wide variety of possible forms of subsidization falls within the definition in Article 1 of the SCM Agreement, and we see nothing in Article 2 that would narrow down those forms, in a scenario of either *de jure* or *de facto* specificity. In this regard, Article 1.2 of the SCM Agreement treats the concepts of subsidy and specificity as separate. In particular, that provision establishes that subsidies in the sense of Article 1 are subject to the SCM Agreement only if they are specific in the sense of Article 2. Indeed, financial contribution, benefit and specificity are three
independent and cumulative elements, all of which must be present for a measure to be covered by the SCM Agreement. Concerning financial contribution and benefit in this regard, we recall the findings of the Appellate Body in Brazil – Aircraft, that these are independent concepts, both of which must be present for a measure to be a subsidy in the sense of the SCM Agreement.293 Similarly, we agree with the approach taken by the panels in EC – Countervailing Measures on DRAM Chips, US – Countervailing Duty Investigation on DRAMS, and Korea – Commercial Vessels, all of which analyzed the question of specificity separately from financial contribution and benefit. In EC – Countervailing Measures on DRAM Chips, the panel overturned some of the European Communities' determinations as to the existence of financial contributions and the amounts of benefits pursuant to the measures at issue, but nevertheless as a separate matter considered, and upheld, the European Communities' specificity finding in respect of the measures as a whole.294 The US – Countervailing Duty Investigation on DRAMS panel followed the same approach, affirming the investigating authority's finding of de jure specificity of the measures at issue while overturning some of the investigating authority's findings of financial contribution and benefit.295 The panel in Korea – Commercial Vessels likewise separately evaluated the existence of specificity of the measures before it from the questions of financial contribution and benefit.296

9.30 While ultimately all three elements (financial contribution, benefit and specificity) must be present for a given measure to be covered by the SCM Agreement, a formalistic reading of the specificity provisions as implying a particular conjunction of these elements, or a particular order of analysis, might have the effect of omitting from coverage measures which viewed in their entirety have all three necessary elements to be covered by the SCM Agreement. As we noted above, in the particular case of de jure specificity, to require that a given legislation or granting authority lay out all elements of a specific subsidy, explicitly limiting access to both the financial contribution and the benefit, would have the effect of treating as non-de jure specific a wide variety of subsidies to which access was explicitly limited. This would mean that the only basis on which specificity could be found for such subsidies would be on a de facto basis, a fact-intensive, case-by-case inquiry that would be both illogical and entirely superfluous under the described scenarios where an explicit limitation of access to a subsidy existed. Furthermore, where the details as to the actual distribution of the subsidy could not be obtained, the subsidy would be left outside the scope of the SCM Agreement in spite of its undeniably being explicitly limited to particular beneficiaries. We consider that such a reading would frustrate the purpose of the specificity provisions, and would open considerable scope for circumvention of the SCM Agreement, based on a distinction in form but not substance.

9.31 By the same token, we see no potential that being able to establish de jure specificity on the basis of an explicit limitation of access either to a financial contribution or to a set of benefits could improperly bring within the scope of the SCM Agreement measures that in fact are not specific subsidies. In whatever order the analysis is conducted, and regardless of whether access is explicitly limited in respect of the financial contribution or the benefit or both, the three elements of financial contribution, benefit and explicit limitation of access would be present, and the measure thus would be a de jure specific subsidy and hence covered by the SCM Agreement.

9.32 For the same reasons, we disagree with the third part of China's three-part test, i.e., that the specific transaction under investigation must be an instance of the subsidy that the legislation defines. We consider that this is largely a restatement of China's argument that the de jure specificity provision

---

296 Panel Report on Korea – Commercial Vessels, para. 7.192.
requires the granting authority or the relevant legislation to identify both the financial contribution and the benefit. We see no limitation in the text to such a specific scenario, and thus no such requirement. Again, we note that subsidies can take many forms and can be provided through many different kinds of mechanisms, some more and some less explicit. Of course, where a countervailing measure is applied in respect of de jure specific subsidies, the limitation to "certain enterprises" must be explicit, but again we consider that the limitation to those recipients could be in respect of the financial contribution, or the benefit, or both. Furthermore, for the application of a countervailing measure, there must be evidence that the subsidy that has been provided and is being countervailed is the subsidy that has been found to be specific, but this would be the case for any sort of specific subsidy, not just a de jure specific subsidy.

(ii) "Certain enterprises"

9.33 China's claim also raises the meaning of the term "certain enterprises" in Article 2.1 of the SCM Agreement. In particular, the second element of China's three-part test is that the legislation pursuant to which the subsidy is provided must clearly provide that the subsidy (the financial contribution and benefit) is only available to "certain enterprises" to the exclusion of other "certain enterprises". We understand that what China is emphasizing in this element is the explicit limitation to "certain enterprises". While Article 2.1(a) of the SCM Agreement requires such an explicit limitation, that provision does not address the related but separate question of the breadth or narrowness of the term "certain enterprises".

9.34 The relevant text of Article 2.1 of the SCM Agreement reads:

"In order to determine whether a subsidy [...] is specific to an enterprise or industry or group of enterprises or industries (referred to in this Agreement as "certain enterprises"), the following principles shall apply:"

9.35 Concerning the meaning of the term "certain enterprises", China cites with approval the statement of the panel in US – Upland Cotton that:

"[a]t some point that is not made precise in the text of the agreement, and which may modulate according to the particular circumstances of a given case, a subsidy would cease to be specific because it is sufficiently broadly available throughout an economy as not to benefit a particular limited group of producers of certain products". (emphasis added by China)

China argues on the basis of this statement that "a 'group of enterprises or industries' within the meaning of Article 2 of the SCM Agreement must be 'sufficiently discrete' so that the 'group of enterprises or industries' represents no more than a 'limited group of producers of certain products'". China acknowledges that there is a certain amount of "indeterminacy" in the concept of specificity, but argues that the "539 'encouraged' industries in China spanning 26 broad sectors of economic activity" identified in the GOC Catalogue (one of the documents on which the USDOC's de jure specificity determination was based), are too broad to be "specific" for purposes of the SCM Agreement.

9.36 We see China's argument as pointing to two different elements of the availability of a subsidy: the diversity of the recipients, and the breadth of availability of the subsidy. Concerning diversity, we
understand China's argument to mean that the sheer diversity of the "encouraged" projects or industries, and of the economic sectors from which they come, as identified in the documents relied on by the USDOC, is too great to support a finding of specificity.

9.37 Starting with the text of the definition of "certain enterprises" we see nothing that addresses the question of diversity of the "certain enterprises". The text simply says that "certain enterprises" can be single enterprises or industries, or groups thereof, but in our view does not imply that there needs to be any similarity among them in order for them to constitute "certain enterprises". If anything, the context suggests the contrary. Article 2.1(b) of the SCM Agreement, on non-specificity, emphasizes entirely other factors, namely the non-selectivity of the eligibility criteria (economic in nature and horizontal in application) and the automaticity of eligibility, which speak to broad availability. Article 2.1(c), on de facto specificity, suggests that an apparently non-specific subsidy might be confirmed as non-specific even if the facts concerning its actual distribution show that it is being used by a narrow range of enterprises, again emphasizing the breadth of availability of a subsidy throughout an economy. In particular, this provision cautions that in examining whether de facto specificity exists based on patterns of usage, "account shall be taken of the extent of diversification of economic activities within the jurisdiction of the granting authority". This suggests that where the extent of the underlying economic diversification is low, lack of diversification in the distribution of benefits would not by itself give rise to a finding of de facto specificity. We note that the panel in US – Upland Cotton based its analysis of specificity on how broadly available a subsidy is throughout an economy, and that the panel in US – Softwood Lumber IV found that specificity has to do with subsidies that, either in law or in fact, "[are] not broadly available". We consider the breadth of availability of a given subsidy in an economy to be a fundamentally different concept from the diversity of activities of the subsidy's recipients.

9.38 For these reasons, we do not consider that the sheer diversity of economic activities supported by a given subsidy is sufficient by itself to preclude that subsidy from being specific, and we do not read US – Upland Cotton as standing for such a proposition. To the contrary, the main emphasis of the panel in US – Upland Cotton was on the case-by-case nature of the analysis of the breadth of availability of a subsidy in the context of a specificity finding, and we consider that if anything the panel was cautioning against interpreting the concept of specificity too narrowly. For example, the panel emphasized that the SCM Agreement, as an agreement covering trade in goods, is applicable to all goods, and that the concept of specificity must be understood from that perspective. We note as well in this context that the US – Upland Cotton panel found that a particular subsidy programme benefiting some 100 different agricultural commodities (crops as well as livestock) was a "sufficiently discrete" segment of the United States economy to qualify as specific for purposes of the SCM Agreement. We take these as indications that that panel did not consider the economic diversity of beneficiaries, by itself, necessarily to bar a finding of specificity.

---

301 In this regard, we agree with the US – Upland Cotton panel that: "The plain words of Article 2.1 indicate that specificity is a general concept, and the breadth or narrowness of specificity is not susceptible to rigid quantitative definition. Whether a subsidy is specific can only be assessed on a case-by-case basis". (Panel Report on US – Upland Cotton, para. 7.1142).

302 The panel specifically stated that: "the concept of specificity in Article 2 of the SCM Agreement is germane to the disciplines imposed by the SCM Agreement. The SCM Agreement is an agreement on trade in goods, in Annex 1A of the WTO Agreement. By its own terms, subject to considerations reflected in the text of some of its provisions, it applies in respect of all goods. The concept of specificity must be considered within the legal framework and frame of reference of that agreement as a whole". (Id., para. 7.1144). The panel noted in this connection that the Agreement on Agriculture contains no specificity requirement. (Id., footnote 1274).

303 Id., paras. 7.1150-7.1151.
9.39 Indeed, we can imagine many examples of subsidies that could be specific in spite of benefiting very diverse recipients. For instance, a subsidy might be limited to producers of oranges, producers of dental implants, producers of computers, producers of scuba diving equipment, and producers of certain parts for the space shuttle. There is no question that these are extremely diverse industries – their products are essentially totally unrelated, and come from five very different sectors of the economy. Or a subsidy might be explicitly limited to one particular company in each of 200 distinct and unrelated industries or sectors. Again, there would be no question that the recipients were economically very diverse. Yet, (subject to the complete facts of the case), we consider that each of these subsidies could easily be specific, given its availability to only that particular "group of enterprises or industries".

9.40 Thus, as a matter of legal interpretation, we do not consider that economic diversity of subsidy recipients, by itself, is sufficient to prevent a subsidy from being de jure specific.

9.41 The second element of China's argument has to do with the breadth of availability of a subsidy which, as noted, is the question addressed by the US – Upland Cotton panel. We agree with that panel that the dividing line between a subsidy to which access is limited enough to be specific, as opposed to broadly enough available throughout an economy to be non-specific, is not precisely defined in the SCM Agreement and can only be determined on a case-by-case basis. We therefore consider this question infra, in our analysis of the details of the USDOC's determination of de jure specificity in respect of lending by SOCBs to the OTR tire industry.

9.42 We note, finally, that China also argues in regard to "certain enterprises" that "the legislation must provide that the relevant subsidy [...] is only available to 'certain enterprises', to the exclusion of other 'certain enterprises'". China does not make clear whether it is suggesting that Article 2.1(a) of the SCM Agreement requires the granting authority or the legislation to identify explicitly both the "certain enterprises" that are and the "certain enterprises" that are not eligible for the subsidy. To the extent that China is making this argument, we find no such requirement in Article 2.1(a) of the SCM Agreement.

9.43 To recall, the provision states that for de jure specificity to exist, the granting authority or the legislation must explicitly limit access to certain recipients, i.e., it must in some manner identify or define the eligible or affected enterprises, and these enterprises must be "certain enterprises" in the sense of Article 2.1(a) of the SCM Agreement. We see no requirement that in addition, the legislation must explicitly exclude from access the other "certain enterprises" that are not eligible.

(b) USDOC de jure specificity determination

9.44 In the light of the foregoing considerations as to the interpretation of Article 2 of the SCM Agreement, we now take up China's arguments concerning the USDOC's determination that SOCB lending to the OTR tire industry was de jure specific. In particular, we examine whether the USDOC provided a "reasoned and adequate" explanation as to: (i) how the evidence on the record supported its factual findings; and (ii) how those factual findings supported its determination of de jure specificity.

9.45 In the OTR investigation, the USDOC determined that China provided subsidies in the form of preferential lending by SOCBs (referred to by the USDOC as "policy lending") to the tire

---

304 China first written submission, para. 209.
306 China contests this term, arguing that there is no programme known as "policy lending" by SOCBs in China, and that to the contrary, the SOCBs are commercial banks operating on a commercial basis. (See, e.g., China first written submission, paras. 155 and 165).
industry, in particular to two companies, GTC and Starbright. It determined that these subsidies were *de jure* specific on the basis that relevant Chinese laws, plans and policies explicitly limited access to such "policy lending" by SOCBs to a group of industries that included the OTR tires industry.

9.46 We turn to an assessment of this determination in the light of our interpretation, above, of Article 2.1(a) of the SCM Agreement regarding *de jure* specificity. In particular, we understand that the USDOC based this determination on a finding that a number of central, provincial and municipal government planning documents provided for the development of the OTR tire industry, *inter alia*, through the provision of loan financing by SOCBs (i.e., government financial contributions) to the tire producers, in some instances identified by name. The USDOC's benefit determination in respect of this lending was made in a separate part of its determination, not on the basis of these planning documents. Given our interpretation of Article 2.1(a), we find no legal error in this separate analysis of these two elements.

9.47 The remaining question before us in respect of the USDOC's *de jure* specificity determination, therefore, is whether that determination is reasonably supported by the documents on which it was based. We must consider, in particular whether the evidence before the USDOC supports its findings that the various planning documents identified "certain enterprises", which included the OTR tires industry, for development, *inter alia*, through the provision of loan financing, and whether documents on the record also support the USDOC's finding that SOCBs were acting pursuant to the prescriptions of the planning documents when they provided loan financing to the OTR tire producers.

9.48 Turning now to the USDOC's findings and the related record evidence, the USDOC found that at the central government level the Government of China's Five-Year Plans set the overall economic policies for China, which policies then were implemented in detail through subsidiary central government-level instruments (the Implementing Regulations, the GOC Catalogue, the SETC Circular). The USDOC further found that the provincial and local governments implemented at their respective levels these national plans and policies. The USDOC stated, *inter alia*, that the record indicated that GTC had been a "key target for economic development by Guizhou province and Guiyang municipality", citing specific references to GTC in their respective provincial and municipal five-year plans, and indicating that the plans also stated that lending should be allocated according to the plans, and that record evidence showed that GTC had received numerous project development loans from SOCBs. Summarizing its view of how these policies at the various levels of government were related, the USDOC found that "central level plans should be considered a central government policy or programme that local governments adopt and implement through their own five-year plans".

9.49 Via this statement, we consider that the USDOC made a finding that the "policy lending programme" was a central-government programme, i.e., a programme designed and mandated at the central government level, and that this central-level policy then was implemented at the provincial and municipal levels. This is significant as it defines the level of analysis for our review of the USDOC's determination. Thus our first and principal task is to analyze whether the central government-level planning documents could support the USDOC's finding of *de jure* specificity. Put another way, given the USDOC's determination that the programme is a central level programme, we must analyze

---

307 The USDOC found that a third company, TUTRIC, had received debt forgiveness with respect to certain of its outstanding loans, and the USDOC therefore did not calculate a benefit for this company in respect of government policy lending. (Exhibit CHI-4, footnote 16).
308 Exhibit CHI-4, pp.13 and 98.
309 Id., p. 112.
310 Id., pp. 13-14.
its specificity determination at the same level. If we were to find that the specificity determination was not supported by the central government-level planning documents, such that the programme was non-specific, then provincial and/or municipal-level evidence of specific instances of implementation of the central-level programme (even if they referred explicitly to particular industries and/or enterprises) could not over ride the programme's non-specificity. We thus begin our analysis by reviewing the USDOC's findings in respect of the central government-level planning documents.

9.50 Here, we recall that specificity is an issue in respect of which an investigating authority has affirmative obligations under the SCM Agreement, even without any party raising arguments during an investigation. We also recall that pursuant to Article 2.4 of the SCM Agreement, any determination of specificity must be "clearly substantiated on the basis of positive evidence".\(^{311}\) We thus cannot reach a conclusion on China's claim under Article 2.1(a) without considering in some detail the evidence relied upon, and the conclusions drawn therefrom, by the USDOC, as well as the arguments raised both during the investigation and before us concerning that evidence. In conducting this analysis, we are conscious of the need to avoid a *de novo* review of the evidence, but we are equally mindful of the Appellate Body's admonition that it is the duty of a panel reviewing an investigating authority's determination to conduct a "critical and searching" examination, based on the information contained in the record and the explanations given by the authority in its published report.\(^{312}\) We also recall the Appellate Body's finding that it is not necessary for an authority conducting a countervailing duty investigation to cite or discuss *every* piece of supporting record evidence for each fact in the final determination.\(^{313}\) By the same reasoning, we consider *a fortiori* that where a given piece of evidence forms an explicit part of a finding by an investigating authority, it can be presumed that that evidence has been fully examined even if the discussion in the determination is limited to certain of its aspects.

9.51 These are admittedly fine lines, which can only be drawn on a case-by-case basis. In this case, we consider that the most appropriate way to approach our consideration of the various planning documents referred to in the USDOC's specificity determination is to examine them both on their own terms and in the light of the USDOC's actual determination, with a view to seeing whether they constitute positive evidence on the basis of which a reasonable and objective administering authority could have found that these documents describe a "sufficiently discrete segment of the economy" (in the words of the *US – Upland Cotton* panel) as to support a finding of *de jure* specificity in respect of any subsidies provided thereunder to that segment of the economy.

9.52 Finally, we note that by its own terms, the USDOC's specificity determination in respect of SOCB lending to the OTR tire industry was based on the "totality" of the evidence.\(^{314}\) In this regard, we recall the Appellate Body's ruling that a panel reviewing a determination on a particular issue that is based on the "totality" of the evidence relevant to that issue must conduct its review on the same basis. In particular, the Appellate Body held that if an investigating authority relies on individual pieces of circumstantial evidence viewed together as support for a finding, a panel reviewing such a determination normally should consider that evidence in its totality in order to assess its probative value with respect to the agency's determination, rather than assessing whether each piece on its own would be sufficient to support that determination. Furthermore, to examine the evidence in the light of the investigating authority's methodology, a panel's analysis usually should seek to review the agency's decision on its own terms, in particular, by identifying the inference drawn by the *agency* from the evidence, and then by considering whether the evidence could sustain that inference. In

---

\(311\) We note that although China refers to Article 2.4 of the SCM Agreement in its arguments, it makes no claim pursuant to that provision. Nonetheless, the standard in Article 2.4 must guide our evaluation of the USDOC's findings of specificity.

\(313\) Appellate Body Report on *US – Countervailing Duty Investigation on DRAMS*, para. 164.

\(314\) See para. 9.80, infra.
particular, where a piece of evidence led the investigating authority to an intermediate inference, the panel should examine whether that evidence supports that intermediate inference, rather than whether that evidence could directly lead to the ultimate conclusion arrived at on the basis of the totality of the evidence.\textsuperscript{315} We will follow this approach in reviewing the USDOC's \textit{de jure} specificity finding in respect of SOCB lending to the OTR tire industry.

(i) \textit{Central Government planning documents}

9.53 At the central government level, the USDOC determined that through a number of related planning documents the Government of China encouraged the tire industry. The USDOC noted in particular that: (i) the 11\textsuperscript{th} Five-Year Plan of the Government of China (the "GOC 11\textsuperscript{th} Five-Year Plan") provided for increasing the development of important spare parts for the automobile industry\textsuperscript{316}; (ii) the GOC Catalogue identified the "production of advanced belt tires" as an "an encouraged national project"\textsuperscript{317}; (iii) the "Implementing Regulation"\textsuperscript{318} identified the GOC Catalogue as the "important basis for funding investments directions, etc."\textsuperscript{319}; and (iv) the "SETC Circular 716"\textsuperscript{320} under the 10\textsuperscript{th} Five-Year Plan identified the production of "meridian tyres" as a national priority and required that the contribution of public funds be reasonably directed in order to guarantee the realization of the target under the plan.\textsuperscript{321} In reviewing this determination, we examine in some detail the documents cited by the USDOC in the light of its determination, with a view to seeing whether those documents support the inferences, and the ultimate conclusion, drawn from them by the USDOC.

(1) The GOC 11\textsuperscript{th} Five-Year Plan\textsuperscript{322} (2006-2010)

9.54 The USDOC determined that in general, under its 11\textsuperscript{th} Five-Year Plan covering 2006-2010, the central government of China set goals regarding macroeconomic policies. In this regard, the USDOC quotes a questionnaire response of the Government of China as indicating that the plans "provide a vision for economic development, market and regulatory activities, social administration and the provision of public services".\textsuperscript{323} Concerning the GOC 11\textsuperscript{th} Five-Year Plan in particular, the USDOC found that it calls for "increasing the development of important spare parts for the automobile industry."\textsuperscript{324}

9.55 We note that in its own words, the stated purpose of the GOC 11\textsuperscript{th} Five-Year Plan is "to clarify the national strategic intention, define the key emphasis in the government work and guide the

\begin{footnotes}
\item[316] The USDOC identifies the GOC 11\textsuperscript{th} Five-Year Plan as the source document for this statement. (Exhibit CHI-4, p. 13). We understand that this is the same document as that identified by China as the "Guidelines of the 11\textsuperscript{th} Five-Year Plan for Economic and Social Development" in Exhibit CHI-69 (p. 3) on the \textit{Examination of the Measures identified by Commerce in the OTR Final Determination as the Basis for its Finding of De Jure Specificity in Respect of the Alleged "Policy Lending" Programme}. The full text of the "Guidelines of the 11\textsuperscript{th} Five-Year Plan for Economic and Social Development" is contained in Exhibit CHI-71.
\item[317] Exhibit CHI-4, p. 13. The GOC Catalogue, as provided by the parties, is contained in Exhibits CHI-70 and US-86.
\item[318] The \textit{Decision of the State Council on Promulgating the "Interim Provisions on Promoting Industrial Structure Adjustment" for Implementation} (the "Implementing Regulation"), Exhibit US-87.
\item[319] Exhibit CHI-4, p. 13.
\item[321] Exhibit CHI-4, p. 13.
\item[322] Id., p. 13.
\end{footnotes}
behaviour of market subject”.\(^{325}\) Given that it constitutes the guidance for the economy as a whole, its scope clearly is very broad. In particular, the GOC 11\(^{th}\) Five-Year Plan contains 14 Parts and 48 Chapters. The Parts refer in general terms to: Guiding Principles and Development Objectives, Construction of Social Villages, Industrial Structure Optimization and Upgrading, Service Industry, Regional Development, Resource Efficiency and Environment, Science and Education, Structural Reform, Trade and Foreign Investment, Construction of Socialist Society, National Defence, and Mechanism for Implementation.\(^{326}\) That said, particular industries and sectors are mentioned explicitly as priorities for development. One of these industries is the automobile industry: in Chapter 11, "Vigorously Develop Equipment Manufacturing Industry", Section 2 is devoted to "Promote Automobile Industry Level" and calls for "acceleration of the development of automobile engine, automobile electronics, key assemblies and parts and components with independent intellectual property rights". (emphasis added) This section also "encourage[s] the development and use of energy saving and environmental protection and new type fuel automobiles”.\(^{327}\) In addition, in Chapter 19, "Implement the Overall Regional Development Strategy", both Section 2 ("Boom the Old Industrial Bases such as Northeast Region") and Section 3 ("Promote the Grow-Up of Central Region") refer to the automobile industry among the industries to be promoted/supported.\(^{328}\) Given these references, we consider that this document supports the USDOC’s conclusion that this document identified automobile spare parts as a target for development.

(2) The Implementing Regulation of the 11\(^{th}\) Five-Year Plan\(^{329}\)

9.56 The Implementing Regulation, in its own words, sets forth implementing provisions "to achieve the objective of the Eleventh Five-Year planning" (2006-2010) and to "propel the industrial structure adjustment" (among other goals).\(^{330}\) According to the USDOC, this Regulation identifies the GOC Catalogue as the "important basis for funding investments directions, etc.".\(^{331}\)

9.57 The Implementing Regulation provides that:

"[t]he people's governments of all provinces, autonomous regions and municipalities directly under the Central Government [...] shall, in accordance with the [Regulation] and in light of the local situation on industrial development, formulate specific measures, rationally guide the investment directions, encourage and support the development of advanced production capacities, restrict and eliminate outdated production capacities, prevent blind investments and low-level redundant construction, and effectively propel industrial structure optimization and upgrading. All relevant administrative departments shall speed up the formulation and amendment of policies of public finance, taxation, credit, land, import and export, etc., effectively intensify the coordination and cooperation with industrial policies, and further improve and promote the policy system on industrial structure adjustment".\(^{332}\)

---

\(^{326}\) Id.

\(^{328}\) Id., p. 23.

\(^{329}\) Exhibits CHI-4, p. 13; and US-87.

\(^{330}\) Exhibit US-87, p. 5.

\(^{331}\) Exhibit CHI-4, pp. 13. The text of the Implementing Regulation cited in the USDOC's determination refers to "guiding" rather than "funding" investment directions (Exhibit USA-87, p. 11).

\(^{332}\) Exhibit US-87, p. 5.
9.58 As indicated in the USDOC's determination, the Implementing Regulation states that the GOC Catalogue constitutes the "important basis for guiding investment directions". It also indicates that the GOC Catalogue is the important basis "for the [sub-central] governments to administer investment projects, to formulate and enforce policies on public finance [...] credit [...] import and export, etc.".

9.59 Of particular relevance to the present dispute, the Implementing Regulation further describes the functions of the industry categories referred to in the GOC Catalogue (discussed in the next section) as follows:

- **Encouraged category**: The Regulation describes this category as covering investment projects that are to be encouraged and supported with policies and measures. The Regulation further indicates that the category mainly includes key technologies, equipment, and products with important functions of economic and social development, resource saving, environmental protection, and industrial structure optimization and upgrading, and states that investment projects within this category must be examined, approved, ratified or archived according to the relevant provisions of the state on investment administration. In addition, it indicates that "all financial institutions are required to provide credit supports in compliance with economic principles". Furthermore, it provides that equipment imported in connection with encouraged projects shall be exempted from customs duties and import value added tax.

- **Restricted category**: The Regulation describes this category as covering production capacities, techniques, equipment and products with outdated techniques that do not meet the conditions for industry access, are conducive to industrial structure optimization and upgrading, and thus need to be transformed or prohibited from being newly built. The Regulation prohibits investments in projects in this category, and provides that no financial institution shall grant loans for such projects, and that no administrative departments, urban planning, construction, customs, etc. are permitted to handle the procedures for such projects. Violations of any of these provisions are subject to penalties. The Regulation indicates that nevertheless, under certain circumstances, enterprises with existing production capacities in a restricted industry can be allowed to transform or upgrade themselves, and that in those circumstances, the financial institutions shall, in compliance with the credit principles, continue providing supports.

- **Eliminated category**: The Regulation describes this category as covering outdated techniques, equipment and products that do not conform to the relevant laws and regulations, seriously waste resources, pollute the environment, do not meet work safety conditions, and need to be eliminated. Not only are financial institutions required to stop providing any form of credits in support of such projects, but those institutions are instructed to take measures to recover previously granted loans. Furthermore, the Regulation provides that all localities and departments "shall take powerful measures" to eliminate such projects, and that violations will be subject to penalties.

- **Non-listed projects**: Article 13 of the Regulation states that projects not belonging to the encouraged category, the restricted category or the eliminated category, but conforming to the relevant laws, regulations and policies of the state, belong to the "permitted" category, and are not listed in the catalogue.

---

333 Exhibit USA-87, p. 11.
334 Exhibit US-87, p. 10.
335 Exhibit US-87, pp. 5 and 10-12.
9.60 In our view, the Implementing Regulation in its own words confirms the finding of the USDOC that the function of the GOC Catalogue which it cross-references is to form the basis for investment direction by the various levels of government. It also appears from the mandatory wording of the Regulation, and its references to penalties for violating the restrictions on financing, investment, and business transactions relating to the categories, that the categories, and thus the GOC Catalogue elaborating the details thereof, are mandatory. We further note that the Regulation explicitly provides that a principal function of the GOC Catalogue is the allocation of loan financing by financial institutions – the categories are defined in large part in terms of whether funds are required to be provided, prohibited from being provided, and/or subject to recovery. In other words, the Regulation indicates that the function of the GOC Catalogue is to provide the details on how the investment priorities in the central government plan are to be implemented by the lower levels of government. We thus find the USDOC's characterization of the Implementing Regulation to be reasonable and supported by the record evidence.

(3) The GOC Catalogue\textsuperscript{336} (11th Five-Year Plan)

9.61 This brings us to the GOC Catalogue itself. Before considering its contents in detail, it is important to place this document into its context among the various central government planning documents. In particular, we recall that the central government's five-year plan indicates certain priority industries and activities for investment, and that its Implementing Regulation both defines the encouraged, restricted and prohibited categories, and indicates that the GOC Catalogue contains the list of the particular projects that fall within each of these categories. Thus, the GOC Catalogue – in particular its encouraged category – identifies the universe of types of projects singled out as a matter of national policy for encouragement and investment. Thus, in our view, this document is the central document in the USDOC's specificity determination: our conclusion as to the de jure specificity finding must necessarily hinge on whether the encouraged projects, taken as a whole, could reasonably be viewed as a sufficiently discrete segment of the economy as to constitute, collectively, "certain enterprises". If so, then we must continue our analysis by examining the remaining documents relied upon by the USDOC. If we find, by contrast, that the universe of encouraged projects must be seen as so broad as to be non-specific, then our analysis necessarily would stop at that point, as no further references to particular instances of funding pursuant to this category would override the non-specificity of the programme as a whole.

9.62 We recall that the USDOC in its determination cites the GOC Catalogue's listing as an "encouraged national project" of "the production of advanced belt tire radial, its supporting materials and equipment production".\textsuperscript{337} We note in this regard that the Catalogue lists types of projects, and not, for example, either whole industries or single enterprises.

9.63 As discussed above in connection with the Implementing Regulation, the GOC Catalogue classifies projects into three categories, "encouraged", "restricted" and "to be abolished", as follows:

- **Encouraged**: 539 projects are listed, in the following 26 sectors: Agriculture and Forestry; Irrigation and Water Conservancy; Coal; Electric Power; Nuclear Energy; Petroleum and Natural Gas; Steel; Nonferrous Metals; Chemical Industry; Building Materials; Medicine; Machinery; Automobiles; Ships; Aerospace; Light Industry; Textile; Architecture/Construction; City Infrastructure and Real Estate; Railway; Highway; Shipping; Air Transport; Information Industry; Other Service Industry; and Combination of Environmental Protection and Resources Savings. (As noted by the USDOC, the

\textsuperscript{336} Exhibits CHI-70 and US-86. In this section, we rely principally on the version of the GOC Catalogue submitted by the United States (Exhibit US-86), as in many places in the version submitted by China (Exhibit CHI-70), the English translations are unintelligible.

\textsuperscript{337} Exhibit CHI-4, p. 13.
"Production of advanced belt tyre radial, its supporting materials and equipment production" is identified as an encouraged project within the Chemical Industry sector).\(^{338}\) (emphasis added)

- **Restricted:** 190 projects are listed, in the following 17 sectors: Agriculture and Forestry; Coal; Electric Power; Petroleum, Natural Gas and Chemical Industry; Information Industry; Steel; Non-ferrous Metals; Gold; Building Materials; Medicine; Machinery; Ships; Light Industry; Textile; Tobacco; Fire Fighting Equipment; Other.

- **To be abolished:** 399 projects (subdivided into "Backward Production Technique Equipment" and "Backward Products") are listed, in the following 17 sectors: Agriculture and Forestry; Coal; Electric Power; Petroleum, Natural Gas and Chemical Industry; Steel; Non-ferrous Metals; Gold; Building Materials, Medicine; Machinery; Railway, Light Industry; Textiles; Printing; Fire Fighting; Other.\(^{339}\)

9.64 The record documents before us do not contain any indication that either the parties to the investigation or the USDOC engaged in detailed discussion of the GOC Catalogue, in particular concerning the diversity or breadth of the "encouraged" projects listed therein, during the investigation.\(^{340}\) Rather, this point has only been raised before us.

9.65 In the present dispute China's main argument about the GOC Catalogue is that, even if this document referred to all elements of a subsidy, its coverage is too broad to give rise to a finding of specificity. China points in this regard to both the diversity and the breadth of the sectors covered by the "encouraged" category ("26 broad categories spanning virtually the entire range of economic activity").\(^{341}\) Concerning diversity, as discussed above, as a legal matter we are not persuaded that the diversity of the listed sectors in the "encouraged" category by itself precludes a finding of de jure specificity based on the GOC Catalogue.

9.66 Concerning the breadth of the sectors referred to in the GOC Catalogue we note that, as China argues, the sectors or categories under which the encouraged projects are grouped do cover a wide swath of economic activity. Nonetheless, as a factual matter what is either "encouraged", "restricted", or "to be abolished" within a given sector pursuant to the GOC Catalogue is clearly not the entirety of that sector. Indeed, there is considerable overlap in the sectors identified in the three respective categories: twelve sectors appear in all three lists\(^{342}\); and an additional five sectors appear in two of the lists.\(^{343}\) Purely as a matter of logic, it would be impossible for a given sector, in its entirety, to be

\(^{338}\) We note that the USDOC's determination refers to the "production of advanced belt tires [...] and equipment production", which is how this item appears in the translation of the GOC Catalogue submitted by the United States (Id., p. 13 and US-86). The translation of the same item in the version of the GOC Catalogue submitted to us by China reads: "high-performance meridian tires and the special materials and equipment". (Exhibit CHI-70, p. 7).

\(^{339}\) Exhibit US-86.

\(^{340}\) The arguments by the parties during the investigation, in particular those of the Government of China and the Chinese tire producers, were in the main that the planning documents were not binding, and that references to particular industries or companies did not mean that support for those industries was required. These respondent parties also raised arguments similar to those raised by China before us that the planning documents did not refer to, or require, preferential SOCB lending to the tire industry. (See, e.g., Exhibit CHI-4, pp. 93-94).

\(^{341}\) See, e.g., China response to Panel question 54 (first meeting).

\(^{342}\) That is, agriculture and forestry; coal; electric power; steel; non-ferrous metals; chemical products; petroleum and natural gas; building materials; medicine; machinery; light industry; and textiles. (In the "encouraged" category, chemicals is treated as a separate sector from petroleum and natural gas, while in the other two categories, chemicals, petroleum and natural gas are treated as a single sector).

\(^{343}\) Ships; railway; information industry; gold; and fire fighting equipment.
simultaneously "encouraged", "restricted", and/or "to be abolished". Thus, to note that the sectors under which the encouraged projects are grouped cover a broad spectrum of economic activity adds little to our analysis of the USDOC's de jure specificity determination.

9.67 We consider more relevant the characterization by the US – Upland Cotton panel that non-specific subsidies are broadly available throughout an economy, in contrast to specific subsidies to which access is limited to a "sufficiently discrete segment" of an economy as to constitute "certain enterprises". From this perspective, we consider whether the USDOC could reasonably have concluded on the basis of positive evidence before it that the list of encouraged projects taken as a whole, in spite of being lengthy and diverse, constituted a "sufficiently discrete segment of the economy" as to constitute "certain enterprises".

9.68 In this respect, we consider significant that the GOC Catalogue does not describe what is to be either encouraged, restricted or abolished in general, broad terms. To the contrary, these are individual project types, described in very specific and narrowly-circumscribed terms. To us, the impression given by the narrowness of the projects described within each of the listed sectors (in spite of the breadth of those sectors as a whole, individually and collectively), is not one of broad availability but rather of singling out of very particular types of projects. Furthermore, as the Implementing Regulation makes clear, the express purpose of both the "restricted" and "eliminated"/"to be abolished" categories is to impose limitations on investment, provision of credit, etc., in respect of the projects in those categories.

9.69 We note that in a number of cases, closely related projects appear in two or three of the categories, with one variant to be encouraged, a second to be restricted, and a third to be abolished. For example, among the "encouraged" projects in the "chemical products" sector is "manufacture of PVC by oxychlorination means with the annual yield no less than 200,000 tons"; while the "restricted" category lists "ethylene oxychlorination PVC units with its annual yield no more than 200,000 tons annually, calcium PVC units with its annual yield no more than 120,000 tons". In other words, it appears that in respect of the PVC industry, the emphasis pursuant to the GOC Catalogue is to increase the size of production facilities, on the basis of detailed parameters. A similar tendency appears in respect of electric power: among the encouraged projects are "heat-supply machines with the concentrated integrated thermal power capacity no less than 300,000 kw [...]", whereas among the restricted projects are "normal coal-fuel thermal power generating units with the unit machine capacity no more than 300,000 kw [...]", and among projects to be abolished are "normal condenser coal-fueled thermal power generation units with [...] single machine less than 10,000 kw within the range of large grid coverage". Most significantly for the present dispute, tires of various kinds appear in all three lists, with an apparent tendency away from bias tires and toward radial tires. In particular, "production of advanced belt tyre radial, its supporting materials and equipment production" is listed as an encouraged project, "bias ty[re]" (not further described) appears as a restricted project, and "bias tyre or tyre production line with natural cotton flat chafer fabric as framework and with its annual yield no more than 500,000" is identified as a project to be abolished.

9.70 In addition, we recall that the Implementing Regulation makes explicit that the "encouraged", "restricted" and "eliminated" projects, taken together, do not describe all economic activity in China.

---

344 Exhibit US-86, pp. 7 and 19.
345 Id., pp. 4, 19 and 25.
346 The English translation of the GOC Catalogue submitted by the United States contains a typographical error, i.e., for this entry it reads "bias type" (emphasis added) (Exhibit US-86, p. 20). We note, however, that the corresponding entry in the version of the Catalogue submitted by China refers to "Inclined tire item." (Exhibit CHI-70, p. 24).
347 Exhibit US-86, pp. 7 and 25.
Rather, as noted supra, there is a default "permitted" category, which covers all activities not specifically listed but otherwise in conformity with the relevant laws and regulations. While there is no information on the record as to the absolute or relative magnitude of this category, or of the three listed categories, the existence of a "permitted" category by definition narrows the maximum possible scope of the "encouraged" category (as well as of the "restricted" and "eliminated" categories) relative to the economy as a whole.

9.71 In this respect, we do not see that the documents of record demonstrate that the list of projects in the "encouraged" category spans "virtually the entire range of economic activity in China", as suggested by China.\(^{348}\) We thus do not consider that these documents would compel a reasonable and objective investigating authority to conclude that any subsidies granted on the basis of that category were non-specific. To the contrary, we consider that a reasonable and objective investigating authority could conclude that any subsidies granted on the basis of the "encouraged" category were to a sufficiently discrete segment of the economy as to be limited to "certain enterprises".

9.72 For these reasons, we consider reasonable the USDOC's reliance, in reaching its de jure specificity determination in respect of SOCB lending to the OTR industry, on the reference in the GOC Catalogue to "'advanced belt tires [...]"' as an "encouraged" project.

(4) The GOC 10th Five-Year Plan (2001 – 2005) and the SETC Circular 716

9.73 In addition to the central government planning documents pertaining to the 11th Five-Year Plan, the USDOC also examined and took into account in its specificity analysis the SETC Circular 716\(^{349}\), which relates to China's 10th Five-Year Plan (2001-2005).

9.74 The USDOC points to two particular statements in the Circular; first, its reference to "the production of 'meridian tires' (i.e., radial tires) as a national priority under the GOC 10th Five-Year Plan"\(^{350}\), and second, that the contribution of public funds be reasonably directed "so as to [...] guarantee the realization of the target [...]".\(^{351}\)

9.75 We note, first, that the SETC Circular 716 is directed to:

"The economy and trade commissions (economy commissions) of all provinces, autonomous regions, municipalities directly under the Central Government and municipalities separately listed on the State plan and Xinjiang Army Corps of Production and Construction, all associations directly under the State Economy and Trade Commission".\(^{352}\)

We further note that in the preamble to the Circular, the SETC states that:

"We have printed the Guidance of Recent Development in the Industrial Sector and hereby distribute it to you. Please abide by and implement it".\(^{353}\) (emphasis added)

9.76 The full passage partially quoted in the USDOC's determination, which sets forth in general terms the orientation of the Circular, reads:

---

348 China response to Panel question 54 (first meeting).
349 Exhibit US-83.
350 Exhibit CHI-4, p. 13.
351 Id. According to the USDOC, "OTR tires" can be "bias ply" tires, "meridian tires" and "radial" tires. (Id., pp. 14 and 99).
353 Id.
"[W]e should, taking the enterprises as the main body, the market as the orientation, the development as the topic, the structural adjustment as the motif, and the improvement of the competitive power as the target, reasonably direct the contribution of public funds and foreign investments, adjust the public investment structure, improve the efficiency and benefits of using funds, so as to promote the structural adjustment of the industrial sector, and guarantee the realization of the target under planning."

The Circular goes on to say:

"The recent development orientation of the industrial sector is hereby proposed pursuant to the industrial development direction clarified in the industry and sector planning of the Tenth Five-Year Plan for the sake of strengthening the macro-control, leading the acts of market subjects, and optimizing the allocation of resources."

9.77 The Circular then identifies five "basic principles" – market orientation, highlighting key industries and products, technical progress, coordinative development, and sustainable development – in accordance with which:

"[W]e have proposed the recent development orientation for machinery, automobiles, metallurgy, non-ferrous metal, petroleum, petrochemical industry, chemical industry, medicine, coal, building materials light industry, textiles, etc., which is offered to all investors and the financial, securities and public consulting departments for reference."

Following this introductory section, the Circular then contains sections headed "Recent Development Orientation" for each of the sectors listed in the above-quoted passage. These sections set forth in some detail (in similar fashion to the project listings in the GOC Catalogue under the 11th Five-Year Plan), a series of priority projects or areas for investment.

9.78 The section on "Recent Development Orientation for Chemical Industry" contains four subheadings, one of which is "Meridian Line Tires". The text of this subsection reads:

"We should accelerate the product structural adjustment of tyre enterprise, and continue developing meridian line tyres. We should accelerate the development of new varieties, and emphatically develop the 65, 60, 55 and 50 series with the rim diameter at 15-17 inches, and meridian tyres of high-speed serial saloon cars and high-capacity meridian tyres of low section without inner tyres; we should enhance the technical renovations of a few major enterprises, and form 2 to 3 large tyre enterprise groups with the annual production capacity reaching 5 to 8 million (with the annual consumption of raw rubber at 40,000 tons or more). We should appropriately support the backbone tire enterprises in central and western regions, so as to enable the regional distribution of meridian tyre production to become more reasonable."

9.79 We note that some of the language in the SETC Circular 716 appears to be non-mandatory, and that before the USDOC the Government of China argued that the central government planning documents were "aspirational recitations of general development goals", rather than "instruments

355 Id.
356 Id., p. 3.
357 Id., p. 15.
through which government policies are implemented”. Likewise before us, China argues that the central planning documents are non-binding general policy orientations. Given the detailed and precise descriptions, in respect of tire industry investments to be "encouraged" or "supported", however, and the fact that these encouraged investment projects are specifically addressed to all of the sub-central government entities, which are enjoined to "abide by and implement" the Circular, we consider that their own wording seems to support the USDOC's finding that the SETC Circular 716 conveyed policy directions, inter alia, concerning investment in the OTR tires industry, to those other levels of government.

(ii) Provincial and municipal governments planning documents

(1) General

We now take up the USDOC's analysis and conclusions in respect of the sub-central planning documents, with a view to assessing whether they contain evidence, as the USDOC found, that the sub-central governments established and carried out their own planning by implementing the central government plans. Concerning these documents, the USDOC found that:

"Information on the record shows that provincial and municipality goals and objectives conform with and implement the central government policy goals and objectives with a focus more tailored to the particular interests and circumstances of that province or municipality. Specifically, the central-level plans set goals regarding macroeconomic policies and [quoting a Government of China's questionnaire response] 'provide a vision for economic development, market and regulatory activities, social administration, and the provision of public services'. [citation to record omitted] Information on the record also shows that the provincial and municipal five-year plans are drafted based on the goals and objectives of the central-level plans. [citation to record omitted] In other words, local governments (i.e., provinces and municipalities) align their policies with stated central government policies and carry out those policies to the extent that such measures affect their locality. Therefore, central-level plans should be considered a central government policy or program that local governments adopt and implement through their own five-year plans. [cross-reference omitted]"

[...]

Although in this case there are no discrete policy plans for the tire industry, per se, the totality of the information on this record [...] shows that the government is directing policy lending to the tire industry or to specific enterprises in the tire industry. 358

In this respect, the USDOC indicated that it disagreed with the Government of China that the plans were purely aspirational in nature, stating:

"If [the plans] were simply aspirational recitations of general development goals with no meaning, there would be little reason for the provinces and municipalities to develop plans in accordance with central government plans. Nor would there be any reason for provinces or municipalities to tailor their plans to conditions and needs within their jurisdictions, and there certainly would be no reason to single out companies, industries or specific development projects (e.g., technology renovation) within those plans. The fact that companies or tires or rubber are specifically mentioned in these plans or catalogues and the fact that these plans and catalogues

358 Exhibit CHI-4, p. 98.
discuss support, including loans for 'key' or promoted projects demonstrates that
government policy lending in the OTR tires industry is *de jure* specific".\(^{359}\)

(2) GTC

\[(A)\quad \text{USDOC determination}\]

9.82 With respect to GTC, the USDOC examined record evidence pertaining to Guizhou province, and
within that province, Guiyang municipality where GTC was located. The USDOC determination
noted that: (i) GTC had been explicitly targeted as a key enterprise for economic development by
Guizhou province and Guiyang municipality since earlier five-year plans; (ii) the number of
enterprises specifically targeted was limited (in particular, that the Guizhou 10\(^{th}\) Five-Year Plan,
besides singling out GTC for the project of technology renovation for two meridian tire lines,
mentioned three other enterprises); (iii) the Guizhou 10\(^{th}\) Five-Year Plan further required that policy
bank loans and loans from abroad be allocated according to the plans; and (iv) the loans were actually
provided to GTC by Guizhou province and Guiyang municipal policy lending.\(^{360}\) The USDOC
further noted that the plans indicated that both the provincial and municipal governments were
required to give priority to the 5-million-unit semi-steel radial tire project of GTC.\(^{361}\)

9.83 In this regard, the USDOC cited the Guizhou 11\(^{th}\) Five-Year Plan as requiring that "under the
leadership of Guizhou Tyre, [the rubber industry] shall give priority to the 5-million-unit semi-steel
radial tire project of Guizhou Tyre".\(^{362}\) The USDOC stated that Section 6 of the Guizhou 10\(^{th}\) Five-
Year plan also singled out GTC, for the project of technology renovation for two meridian tire lines
(i.e., "radial" tires), noting that OTR tires also can be "bias ply" tires. The USDOC noted that the
number of enterprises specifically targeted in Section 6 was limited, in that only three other
enterprises, in addition to GTC, were singled out for the technology renovation, and concluded that
therefore section 6 was "clearly targeted rather than broad in its scope".\(^{363}\) In addition, the USDOC
stated that that plan indicated that policy bank loans and loans from abroad were to be allocated
according to the plans.\(^{364}\) Finally, the USDOC stated that, at the municipal level, the Guiyang 10\(^{th}\)
Five-Year Plan also had given priority to GTC's 5-million-unit radial tire project.\(^{365}\)

\[(B)\quad \text{Guizhou and Guiyang planning documents}\]

9.84 We now examine the Guizhou (provincial) and Guiyang (municipal) plans relied upon by the
USDOC, in the light of the USDOC's analysis and conclusions.

9.85 At the provincial level, we note that the Guizhou Province 11\(^{th}\) Special Industrial
Development Plan (the "Guizhou 11\(^{th}\) Five-Year Plan") makes very specific reference to GTC's five-
million unit tire project, stating that "under the leadership of Guizhou Tyre, (the rubber industry shall)
[...] reduce the production of bias tires, vigorously develop radial tires and new high-speed low-
section tubeless and give priority to the 5-million-unit semi-steel radial tire project of Guizhou
Tyre".\(^{366}\)

\(^{359}\) Exhibit CHI-4, p. 99.

\(^{360}\) Exhibit CHI-4, pp. 13-14 and 99. The USDOC noted that business proprietary information provided
by GTC underlined GTC's importance in early five-year plans. (Id., p. 14).

\(^{361}\) Id., p. 112.

\(^{362}\) Id.

\(^{363}\) Id., pp. 14 and 99.

\(^{364}\) Id., p. 112.

\(^{365}\) Id.

\(^{366}\) Exhibit CHI-77. It is not clear whether this document also refers to other industries/projects since
the document (as presented) only contains the translation of this one paragraph.
9.86 The Tenth Five-Year Plan Outline For the National Economic and Social Development of Guizhou Province (the "Guizhou 10th Five-Year Plan"), in Section 6 ("Traditional industry shall be improved through high technology") of Chapter 7 ("Industry shall be optimized, industry with specific advantages shall be promoted"), states that the "renovation of traditional industry and development of high technology industry shall be combined to promote the whole industry's updating and continuous development". This Section states that the technology renovation of industries with chemistry advantages must be supported, and specifically refers to the technology renovation project of meridian line tires of GTC as well as the renovation projects for three other enterprises. The same plan also encourages support to, *inter alia*, automobile components, and states that by 2005, the renovation and updating of key equipment of enterprises of chemicals, machinery, etc., must be completed and the production base of automobile components established.

9.87 The Guizhou 9th Five-Year Plan states that "policy banks loans and loans from abroad should continue to be allocated according to the plans". Here we note that although in the USDOC's determination this statement is attributed to the Guizhou 10th Five-Year Plan, before us it was clarified between the parties that this statement in fact appears in the Guizhou 9th Five-Year Plan. According to the United States, this mistake was due to errors made by the Government of China in the information it submitted to the USDOC.

9.88 At the municipal level, the Guiyang Municipality Economic and Social Development 11th Five Year Plan (the "Guiyang 11th Five-Year Plan") states that the automotive manufacturing industry must, *inter alia*, "develop auto parts, tires and other auto-use rubber products aimed at both domestic and world markets" as well as "facilitate the development of new products [...] and foster famous products with intellectual property rights". This plan explicitly requires the government to give priority to GTC's 5-million-unit tire project. The plan also calls for "loans from State policy banks" and strengthening the "public credit system, and increase credit loans". The plan also "encourage[s] financial institutions to provide funds to the projects in conformity with economic policies" and states that "cooperation between banks and enterprises" should be "enhanced".

9.89 Given the explicit references to GTC's tire project in the provincial and municipal planning documents cited by the USDOC, and the similarity of the priorities for the tire industry in these documents to the description in the GOC Catalogue of the "encouraged" tire project, and the references to the provision of credit financing to the projects targeted for development, and given the indications in the central-level documents that the lower-level governments are to establish their own plans based on the central plans, we consider that it was reasonable for the USDOC to have concluded, in respect of GTC, that these provincial and municipal plans implemented the central plans for development of the OTR tires industry, including in respect of the provision of credit financing.

---

367 Exhibit CHI-72, p. 2.
368 Exhibit CHI-72, p.2.
369 Exhibit US-82, p.41.
370 In its first written submission, the United States notes that, as China has pointed out to the Panel, this statement was mistakenly cited to the 10th Five-Year Plan rather than the 9th Five-Year Plan. The United States attributes this error to the fact that when it submitted the 9th and 10th Five-Year Plans to the USDOC, China had reversed all but the first pages of both documents, attaching the Chinese language version of the 10th Five-Year Plan to the English translation of the 9th Five-Year Plan and *vice versa*. The United States further argues that China failed to provide the USDOC with an English translation of the portion of the 9th five-year plan discussing the allocation of loans, which the USDOC only became aware of because a domestic producer provided the USDOC with a partial translation of the Chinese language version. (United States first written submission, footnote 518 (referring to Exhibits CHI-69, US-84 and US-82)). China does not contest this representation by the United States.
371 Exhibit CHI-78.
372 Id.
373 Id.
(3) Starbright

(A) USDOC determination

9.90 Concerning Starbright, the USDOC's determination states that, in contrast to the Guizhou and Guiyang five-year plans, the five-year plan of the province of Hebei (where Starbright was located) identified as "key projects" for development certain industries, rather than individual enterprises or projects. According to the USDOC's determination, the Hebei 11th Five-Year Plan for technology referred to "automobile parts and the rubber industry as 'key projects'" and the Implementing Guidelines of this plan "direct[ed] commercial banks to support 'key projects'". The USDOC also found that the Hebei 10th Five-Year Plan stated that "auto parts, among other industries, shall be supported", and that the Hebei 9th Five-Year Plan stated that the "automobile and components" industry, among other industries, would be "developed greatly and stronger". According to the USDOC, tires were considered to be part of the automobile parts industry in China.

(B) Hebei planning documents

9.91 Starting with the Hebei Province Science & Technology 11th Five Year Plan & 2020 Long Term Target (the "Hebei 11th Five-Year Plan for technology"), we note that this plan states that the "economic and social development of the Province heavily depends on the technology development". In this context, inter alia, the plan calls for arranging "a layout for the key industries" and developing "new products with independent intellectual property rights", referring specifically to the "development of key automobile parts". In addition, among "key technology projects", the plan identifies the establishment of industrial bases for several industries, including the "rubber industry" and the "rubber and plastics industry". The plan designates the automobile and automobile spare parts industries, among several others, as the priority industries for accomplishing the provincial "equipment manufacture industry" goal, and states that three to five leading enterprises will be involved in the provincial equipment manufacture industry scheme. Furthermore, the plan designates certain cities (including Xingtai City, where Starbright is located) as the bases for automobile development, and identifies automobile spare parts as among the "supported products" for which the production base was to be developed.

9.92 The Guidelines for the Implementation of Hebei Province Science & Technology 11th Five Year Plan (the "Implementation Guidelines of the Hebei 11th Five-Year Plan") state that policy financial institutions "shall support" national and provincial key technology projects and key technology industrialization projects. The Guidelines further state that commercial banks "shall support" these projects through the granting of credit loans in accordance with national investments and credit loan policies.

---

374 Exhibit CHI-4, pp. 14 and 99.
375 Id., p. 99-100.
376 In this regard, the USDOC noted that the Guiyang 11th Five-Year Plan referred to the GTC 5-million-unit tire project within the context of identifying automobile parts as a key industry, and that given the parallels among the central and provincial plans, the central, provincial and municipal governments appeared to consider radial tires to be part of the automobile parts industry. (Id., footnote 17).
377 Exhibit CHI-73.
378 Id.
379 Id.
380 Exhibit US-88.
381 United States first written submission, para. 342.
382 Exhibit US-88.
383 Exhibit CHI-74.
The Tenth Five-Year Plan Outline for the National Economic and Social Development of Hebei Province (the "Hebei 10th Five-Year Plan") requires that "the equipment industry such as environment protection, auto parts, packing, foodstuff, machinery shall be supported." 384 Finally, the Ninth Five-Year Plan Outline for the National Economic and Social Development of Hebei Province and Year 2010's Prospective Goals (the "Hebei 9th Five-Year Plan") identifies the automobile industry as one of the "mainstay" industries "which can take the lead for the whole economic growth and structural upgrade. The plan specifies that among other "mainstay" industries, "the machinery industry which takes the automobile and its components and large-scale complete plants and equipment as the dominance", "will be developed greatly and stronger". 385

Given the explicit references in the Hebei planning documents to the rubber industry and the automobile parts industry, as well as to the provision of credit financing in support of projects in these industries, we consider that it was reasonable for the USDOC to have concluded that these documents implemented the central-level plan in respect of the OTR tires industry, which included the provision of financing to that industry.

(iii) Conclusion in respect of planning documents

For the foregoing reasons, we conclude that a reasonable and objective investigating authority could have determined, on the basis of the evidence on the record, that the Government of China, at the central level, explicitly identified "certain enterprises" in the sense of Article 2.1(a) of the SCM Agreement for encouragement and development (including the tire industry), and instructed the sub-central governments to implement this policy. We also conclude that a reasonable and objective investigating authority could have determined that pursuant to these same planning documents, SOCBs (among other financial institutions) were instructed to provide financing to the "encouraged" projects. Thus, we find no legal error in the USDOC's determination on the basis of these documents that government authorities at all levels of government in China (central, provincial and municipal) effectuated policies to ensure the provision of loans to the OTR tire industry.

(iv) USDOC determination that SOCBs acted pursuant to government industrial policies in making loans to the tire industry

The final element of the USDOC's de jure specificity determination in respect of SOCB lending to both GTC and Starbright was its finding that both policy banks and SOCBs acted pursuant to the government policies set forth in the planning documents just discussed when they provided loans to tire producers. We note in this regard that there is no disagreement between the parties as to the existence of SOCB lending to the two tire producers. Instead, the disagreement in the context of the de jure specificity finding centres on whether the SOCBs made these loans pursuant to the policies set forth in the planning documents.

Concerning GTC, the USDOC's determination indicates that business confidential information on the record indicated that loans to GTC were policy lending by Guizhou and Guiyang, at the provincial and municipal levels, respectively. The determination states in this regard:

"The Department notes that both the provincial and municipal five-year plans discuss GTC. Based on verification and the documentation on the on the record, we have determined that these loans were provided to GTC by Guizhou provincial and Guiyang municipal policy lending. (A full discussion of our analysis concerning GTC's loans is only possible by means of reference to business proprietary information. [cross-reference omitted]) Therefore, the Department continues to find

---

384 Exhibit CHI-76, p. 5.
385 Exhibit CHI-75, p.4.
that all of the loans received by GTC and its cross-owned affiliates from SOCBs were made pursuant to a government policy to provide loans to the tire industry.\textsuperscript{386}

9.98 Concerning Starbright, the USDOC cited the Heibei Five-Year Plans and related documents just discussed, which identified automobile parts and the rubber industry as key projects, and called for financing support to these projects. The USDOC then stated that "[t]herefore, the Department continues to find that the loans received by Starbright from SOCBs were made pursuant to a government policy to provide loans to the tire industry."\textsuperscript{387}

9.99 Concerning SOCBs' lending to the OTR tire producers in general, the USDOC stated that:

"After examining all information on the record, we continue to find that national, provincial and municipal government authorities effectuate policies to provide countervailable loans to OTR tire producers. Acting pursuant to these official policies, PRC policy banks and SOCBs provided loans to OTR tire producers".\textsuperscript{388}

The USDOC then cited its prior "public body" finding in respect of Chinese policy banks and SOCBs, in the investigation on \textit{CFS Paper}, incorporating by reference that finding and analysis into the record of the OTR investigation.\textsuperscript{389} The USDOC stated that in the OTR investigation, parties "ha[d] not demonstrated that conditions within the Chinese banking sector ha[d] changed significantly since that previous decision such that a reconsideration of that decision is warranted".\textsuperscript{386} The USDOC also cited a statement at verification by an official from the Tianjin municipal government confirming that SOCBs there were supervised by the Tianjin SASAC, and noted that there were scholarly publications on the record reporting that SOCBs were required to support the Government of China's policies.\textsuperscript{391}

9.100 One such publication cited by the USDOC in this context was the IMF Working Paper. The USDOC quoted that publication as stating that "it is difficult to find clear evidence that SCBs have changed their behavior and become commercially oriented" and as recommending that governments should avoid "interference for policy purposes".\textsuperscript{392}

9.101 We note that in the \textit{CFS Paper} investigation, which formed part of the record in the OTR investigation, the USDOC had determined that SOCBs followed government policies in making their lending decisions.\textsuperscript{393} First, the USDOC had found that the state ownership of the Chinese banking sector and the legacies associated with the longstanding pursuit of government policy objectives undermined the SOCBs' ability to act on a commercial basis.\textsuperscript{394} Second, the USDOC had examined the Chinese legal framework for banking, noting that the Chinese Commercial Banking Law required banks to carry out their loan activities consistently with "the needs of national economy and the social

\textsuperscript{386} Exhibit CHI-4, p. 99.
\textsuperscript{387} Id., p. 100.
\textsuperscript{388} Id., p. 101. This statement appears in the section entitled "SOCBs and Financial Contribution".
\textsuperscript{389} Id.
\textsuperscript{390} Id.
\textsuperscript{391} Id. TUTRIC, the third investigated tire producer, was located in Tianjin. The USDOC did not calculate a benefit to TUTRIC from policy lending, as it found that instead outstanding loans to TUTRIC had been forgiven. (Id., footnote 16).
\textsuperscript{392} Id., footnote 45 (quoting the IMF Working Paper, pp. 18-19).
\textsuperscript{393} Exhibit CHI-93, pp. 49-58.
\textsuperscript{394} Id., p. 55. The USDOC noted that it had found evidence of reforms in almost all sectors of the economy in China, including the banking sector. It stated that the central government however had been very cautious in completely reforming the banking system, and that as a result, and because banks in China had never operated on a commercial basis, the government was still very involved in the sector. The USDOC noted that this view was to varying degrees confirmed by independent experts interviewed by the USDOC. (Id., pp. 55-58).
development and under the guidance of State industrial policies”. At the CFS Paper verification, officials from the People's Bank of China had stated that "it may be necessary for banks to heed industrial policies, banks may be taking on greater risk if their customers use loans in a way that is inconsistent with industrial policies". Similarly, the Bank of China Offering had stated that "Commercial Banking Law requires commercial banks to take into consideration government macroeconomic policies in making lending decisions. [They] are encouraged to restrict their lending to borrowers in certain industries in accordance with relevant government policies". Third, the USDOC had determined that while SOCBs were improving their risk management capacities, they still lacked adequate risk management and analysis skills. The USDOC had stated that interest rates remained generally undifferentiated, and were close to the benchmark set by the People's Bank of China.

9.102 In the OTR investigation, as noted, the USDOC determined that the respondent parties had not demonstrated that this situation had changed sufficiently to warrant a reconsideration of the analysis and conclusions concerning SOCBs from the CFS Paper investigation. In this regard, the main specificity-related argument of the respondents in the OTR investigation was that the central government and provincial and municipal planning documents were indicative only, and not mandatory. It is not clear what evidence was put on the record of the investigation in support of this point, and before us China identifies none. As noted above, the USDOC determined in this regard that "central-level plans should be considered a central government policy or program that local governments adopt and implement through their own five-year plans". We recall in this context the USDOC's specific rejection of the respondents' argument that the plans were not binding, as described in paragraph 9.81, supra.

9.103 In addition, before us, the United States refers to a range of documents from the CFS Paper investigation, on the record of the OTR investigation, which in the view of the United States demonstrates that the SOCBs lent in accordance with government policies. These documents include annual reports and other publications of certain Chinese banks, verification reports, and other documents. In particular, the United States cites to the following statements by banks: (i) the People's Bank of China "guided financial institutions to grant loans at a proper pace"; (ii) the People's Bank of China briefs bank officers on "how credit should be guided"; (iii) the Bank of China takes industrial policies into account "in assessing a company's total credit limit"; and (iv) "commercial banks are encouraged to restrict their lending to borrowers in certain industries in accordance with relevant government policies".

9.104 We note that China does not contest the accuracy of the United States' representations of these statements. Nor does it point to any evidence contradicting the USDOC's conclusion, from either the CFS Paper or OTR investigation.

9.105 For the reasons described above, we consider that a reasonable and objective investigating authority could conclude on the basis of the record evidence that the SOCBs followed the policies set forth in the planning documents in providing credit to GTC and Starbright. We thus find no error in this conclusion by the USDOC.

---

(v) Conclusion by the Panel

9.106 As discussed supra, we have found that a reasonable and objective investigating authority could have determined, on the basis of the evidence on the record, that the government of China, at the central level, explicitly identified "certain enterprises" in the sense of Article 2.1(a) of the SCM Agreement for encouragement and development, and instructed the sub-central governments to implement this policy, and that among these "certain enterprises" were advanced radial tires, which all parties acknowledge include OTR tires. We have found that a reasonable and objective investigating authority could have determined that pursuant to these same planning documents, SOCBs (among other financial institutions) were instructed to provide financing to the "encouraged" projects, and that SOCBs did lend to both GTC and Starbright's OTR tire facilities. Finally, we have found that a reasonable and objective investigating authority could conclude on the basis of the record evidence that the SOCBs followed the policies set forth in the planning documents when they lent to GTC and Starbright.

9.107 For these reasons, we therefore conclude that China has failed to establish that the USDOC's finding in the OTR investigation, that lending by SOCBs to the OTR tire industry (in particular to GTC and Starbright) was de jure specific, was inconsistent with the obligations of the United States under Article 2.1(a) of the SCM Agreement.405

B. REGIONAL SPECIFICITY OF LAND-USE RIGHTS

1. Claims of China

9.108 China challenges the USDOC's determination in the LWS investigation that the provision of land-use rights to one company (Aifudi) located in the "New Century Industrial Park" (the "Industrial Park" or the "Park") was regionally specific. China claims that this determination was inconsistent with Article 2 of the SCM Agreement and, as a consequence, Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.406

2. Main arguments of the Parties

(a) China

9.109 China argues that for a subsidy to be regionally specific, it must be limited in three ways: (i) it must be limited to certain enterprises within a designated geographical region within the jurisdiction of the granting authority; (ii) it must be limited to "certain enterprises" as that term is defined in Article 2.1 of the SCM Agreement; and (iii) those certain enterprises must be located within the designated region. China argues that it follows a contrario from the limitations in Article 2.2, that if a subsidy is available to all enterprises within the designated region, then it is not regionally specific; and that if it is available to enterprises outside that region, it likewise is not regionally specific.407

9.110 In respect of the provision of land-use rights in the New Century Industrial Park, China argues that it is implicit in its specificity analysis that the USDOC considered the industrial park to be the "designated geographical region" in the sense of Article 2.2 of the SCM Agreement. China considers, however, that the term "designated geographical region" should be understood to mean an economic or administrative subdivision (region) within a particular physical area of a country.

405 Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, infra.
406 Paragraphs B.1(b)(i) and B.1(e)(i)-(iii) of the "as applied" claims in China request for establishment of the Panel; China first written submission, para. 468 (f); second written submission, para. 315 (g).
407 China first written submission, paras. 283-284.
(geographical) that has been set apart for some special purpose (designated). 408 China finds contextual support for this reading of the term in Article 8.2(b) of the SCM Agreement (non-actionable subsidies), which referred to an eligible disadvantaged region, inter alia, as "a clearly designated contiguous geographical area with a definable economic and administrative identity". China argues that the similarity of the phrasing in Articles 2.2 and 8.2(b) means that the same concepts should apply to the term "designated geographical region" in Article 2.2 of the SCM Agreement. 409

9.111 China cites the negotiating history of Article 2.2 of the SCM Agreement in support of its position. In particular, China recalls that the Dunkel Draft of the SCM Agreement provided that "a subsidy which is available to all enterprises located within a designated geographical region shall be specific irrespective of the nature of the granting authority", but that the phrase "available to all enterprises" was changed to "limited to certain enterprises" in the final version of the SCM Agreement. 410 For China this signifies that the drafters of the SCM Agreement considered – and rejected – the meaning that the United States now seeks to give to Article 2.2 of the SCM Agreement. By using the term "certain enterprises" in Article 2.2, as it is used elsewhere in Article 2, the drafters clearly intended that a subsidy would be regionally specific if it were limited to "certain enterprises located within a designated geographical region". This requires the same inquiry into whether the beneficiaries of the regional subsidy represent no more than a "discrete segment" of the economy, just as it does elsewhere in Article 2 of the SCM Agreement. 411

9.112 In this regard, in response to a question from the Panel concerning the purpose of Article 2.2, in the light of this argument that for a subsidy to be specific under Article 2.2 it would need to be limited to only certain beneficiaries within the region, China states that this provision addresses the particular circumstance in which a subsidy is in fact limited to certain enterprises located within such a region. China notes in this regard that unlike Article 2.1(a), Article 2.2 does not refer to an "explicit limitation" of access to the subsidy by the granting authority or the legislation in question. 412

9.113 China argues that the New Century Industrial Park is not a designated geographical region in the sense of Article 2.2 of the SCM Agreement because it did not have its own definable economic and administrative identity and had not been designated for any purpose, let alone to provide subsidies. Rather, it was simply an area of land that Huantai County had rezoned from agricultural to industrial use, and which it decided to call the "New Century Industrial Park". 413 China considers that the United States' argument, under which provision of land to any single company for less than adequate remuneration would be regionally specific to that land, would be "absurd". In particular, under the logic of the USDOC's "regional specificity" finding in respect of the Industrial Park, any parcel of land could be called "regionally specific". 414

9.114 China asserts that during the investigation, the USDOC made no finding that the alleged subsidy was limited to "certain" enterprises located "within" the Industrial Park (i.e., a subset of all enterprises in the Park), and thus that it was not limited in the manner required by Article 2.2 of the SCM Agreement. 415 China further states that the USDOC did not find that the alleged subsidy was limited to enterprises obtaining land use rights in the Industrial Park, to the exclusion of companies obtaining such rights elsewhere in the county where the Park is located. 416 Finally, China argues, the

416 Id., para. 295.
USDOC's specificity finding was that the provision of land rights (i.e., the financial contribution) was limited to enterprises in an industrial park within the county's jurisdiction, whereas the Agreement requires that for a valid finding of specificity, the USDOC would have needed to find that the subsidy was limited to certain enterprises within the Park, to the exclusion of others within the Park, and to the exclusion of others located elsewhere in the county.\(^{417}\)

9.115 Finally, China argues, even if the USDOC had applied the legal framework advanced by China, the evidence would not support a finding that the alleged subsidy was limited to the Industrial Park. According to China, the evidence showed that all companies (with a small number of exceptions) within the Park paid the same lease rate, such that if there were a subsidy, it was not specific as all holders of the land-use rights paid the same rate. China states that the evidence also demonstrated that commercial leaseholders elsewhere in the county paid the same or lower rates than those within the Park. Thus, any subsidy was not limited to the Park, the area considered by USDOC as the "designated geographic region".\(^{418}\)

(b) United States

9.116 The United States argues that the USDOC found that China's provision of land-use rights to Aifudi was regionally specific because it was limited by a county to enterprises located in an industrial park within the county's jurisdiction.\(^{419}\) The United States argues that pursuant to Article 2.2 of the SCM Agreement, a subsidy is specific if it is limited to certain enterprises located within a designated geographical region within the jurisdiction of the granting authority, and Huantai County limited the land rights to enterprises located within a designated geographical region – the Industrial Park.\(^{420}\) The United States argues that China's interpretation – that a "designated geographical region" must have its own economic and administrative identity – is overly strict, as these requirements do not appear in Article 2.2 of the SCM Agreement. Nevertheless, even by this overly-restrictive definition, the industrial park would qualify.\(^{421}\) For the United States, "designated" means "specified" or "called by a name". Geographical means, *inter alia*, "pertaining to, or of the nature of, geography", with geography defined to include "the features or arrangement of a region or a place, building, etc."; and "region" means, *inter alia*, "[a] large tract of land; a country; a definable portion of the earth's surface".\(^{422}\) Thus, for the United States, a "designated geographical region" is a large tract of land, defined by the tract of land's feature or arrangement, called by a name or described. According to the United States, the Industrial Park met this definition.\(^{423}\)

9.117 The United States considers that it and China are of more or less the same view in terms of the meanings of "designated" and "geographical", but that they differ in respect of "region", where the United States' reading is much broader than China's "economic or administrative subdivision". Here, the United States disagrees that Article 8.2(b) of the SCM Agreement supports China's argument: among other things, if the drafters had meant "region" to connote "administrative or economic subdivision", they would not have had to include in Article 8.2(b) of the SCM Agreement the modifier "a definable economic and administrative identity" to the term "disadvantaged region".\(^{424}\)

9.118 The United States takes further issue with China's argument that Article 2.2 of the SCM Agreement requires that a subsidy must be limited to "certain enterprises" (i.e., a subset of enterprises)

\(^{417}\) China first written submission, paras. 296-297.
\(^{418}\) Id., paras. 299-301.
\(^{419}\) United States first written submission, para. 364.
\(^{420}\) Id., para. 366.
\(^{421}\) Id., paras. 367-368.
\(^{422}\) Id., para. 369.
\(^{423}\) Id., para. 370.
\(^{424}\) Id., paras. 371-372.
within the region in order to be regionally specific. For the United States this would render Article 2.2 itself redundant, as in any case, even without any geographical limitation, the subsidy would be specific to "certain enterprises" pursuant to Article 2.1(a), and such an interpretation would be impermissible. 425 Furthermore, the United States considers that Article 8.2(b) of the SCM Agreement supports its, not China's view, as that provision indicates that in order to be non-actionable, the specified regional subsidies among other things would need to be "non-specific" within the regions. Under China's interpretation, this would be unnecessary to specify, as such non-specific aid within a region would already fall outside the scope of the Agreement. 426 The United States also points to Article 8.1(b) of the SCM Agreement which refers to the various non-actionable subsidies listed in Article 8.2 as specific, including the regional subsidies referred to in Article 8.2(b) which are, by definition, non-specific within the regions in question. According to the United States, here again, the non-specificity requirement in Article 8.2(b) would be unnecessary if those subsidies already were, in general, non-specific pursuant to Article 2.2 of the SCM Agreement. 427

9.119 Finally, the United States argues that the availability of similar subsidies to enterprises outside the region does not invalidate a finding of regional specificity. The United States asserts that if this were the case, governments could easily circumvent the SCM Agreement by providing a given subsidy to one company outside the region. According to the United States, the land-use rights subsidy at issue was used as an incentive to relocate producers to the Industrial Park, and was tied to the level of investment within the Park. The fact that the county granted other types of land-use rights to other leaseholders outside the Park is irrelevant to the regional specificity of the land-use subsidy provided to enterprises in the Park. 428

9.120 Concerning the facts of the investigation, the United States asserts that evidence on the record distinguished the way in which land-use rights were provided by the government in the Industrial Park, in that only enterprises with a certain level of investment qualified, and the subsidy was available only to enterprises willing to physically locate in the Park. In addition, the record evidence indicated that land-use rights were not provided in accordance with government-established requirements, as the land in question had not been converted from agricultural to industrial use at the time the land-use rights were provided to the enterprises in the Park. Furthermore, the local authorities had not conducted a formal appraisal of the land, as was required. In these ways, the United States argues, the provision by the county government of land-use rights in the Park was distinct from its provision of land-use rights outside the Park. 429

3. Main arguments of the Third Parties

(a) Australia

9.121 Australia disagrees with China that a subsidy is non-specific if it is available to all enterprises located within a designated geographic region under the jurisdiction of the granting authority. Rather, regional specificity stems from the limitation based on regional locality. Australia therefore disagrees with China that Article 2.2 of the SCM Agreement involves a three-step test. Australia considers that such a test would render the regional specificity provision (Article 2.2) redundant, as one of the other bases for specificity (2.1(a)-(c)) already would be present under the three-step test. Australia considers Articles 8.1(b) and 8.2(b) of the SCM Agreement to be relevant context, and also suggests

425 See, e.g., United States first written submission, paras. 374-376; opening statement at the first meeting of the Panel, para. 35; second written submission, para. 167.

427 Id., paras. 380-382.
428 United States response to Panel question 8 (second meeting).
that the Panel consider whether the reference in Article 2.2 to "certain enterprises" is descriptive to distinguish between enterprises that are located within the designated geographical regional and those that are outside.\(^\text{430}\)

(b) Canada

9.122 Canada agrees with the United States that Article 2.2 of the SCM Agreement simply covers subsidies that are limited to a designated geographical region. According to Canada, reading Article 2.2 as also targeting subsidies that are limited to certain enterprises as provided for in Article 2.1, would allow all enterprises located in a designated geographical region to escape the disciplines of the SCM Agreement, even if these subsidies are not broadly available within the country.\(^\text{431}\)

(c) European Communities

9.123 The European Communities argues that subsidies destined to all enterprises in a geographical region are not considered specific under Article 2.2 of the SCM Agreement, noting that the text of this provision was changed from what was proposed in the Dunkel Draft of the SCM Agreement, which would have rendered all regional subsidies specific. For the European Communities, such a change should have meaning. The European Communities argues that the specificity of regional subsidies must be established by an integrated reading of Article 2 of the SCM Agreement. In particular, the European Communities is of the view that if eligible regions under a regional subsidy programme are chosen on the basis of objective criteria under Article 2.1(b), there would be no regional specificity.\(^\text{432}\)

4. Assessment by the Panel

(a) Interpretation of Article 2.2 of the SCM Agreement

9.124 We begin our analysis with the text of Article 2.2 of the SCM Agreement which reads as follows:

"2.2 A subsidy which is limited to certain enterprises located within a designated geographical region within the jurisdiction of the granting authority shall be specific. It is understood that the setting or change of generally applicable tax rates by all levels of government entitled to do so shall not be deemed to be a specific subsidy for the purposes of this Agreement".

9.125 The particular language in dispute between the parties is the first sentence. First, the parties disagree whether the reference to "certain enterprises" means that for specificity in the sense of Article 2.2 of the SCM Agreement to exist, there must be a limitation of a subsidy to a subset of enterprises located within a designated geographical region, or instead whether limitation of a subsidy on a purely geographic basis, to part of the territory within the jurisdiction of the granting authority, is sufficient.

9.126 The parties also disagree as to the meaning of "designated geographical region". For China, this language refers to a formal administrative entity, whereas for the United States it refers to any specified, identified large piece of land (whether or not it has a separate administrative identity or apparatus).

\(^\text{430}\) Australia third-party submission, paras. 33-36.
\(^\text{431}\) Canada third-party submission, paras. 60-62.
\(^\text{432}\) European Communities third-party submission, para. 46.
"Certain enterprises" as referred to in Article 2.2 of the SCM Agreement

9.127 Beginning with the term "certain enterprises" we recall, as discussed supra in the context of de jure specificity, that the chapeau to Article 2.1 of the SCM Agreement defines this term as follows:

"In order to determine whether a subsidy, as defined in paragraph 1 of Article 1, is specific to an enterprise or industry or group of enterprises or industries (referred to in this Agreement as "certain enterprises") within the jurisdiction of the granting authority, the following principles shall apply:.(emphasis added)

9.128 Thus, the first question concerning the meaning of the term "certain enterprises" in Article 2.2 of the SCM Agreement is whether that phrase covers all enterprises located within the designated geographical region within the jurisdiction of the granting authority, or is limited to some subset thereof. For China, this term should be understood to mean that only if a subsidy is limited to some subset of enterprises within the region is that subsidy regionally specific. For the United States, however, the reference to "certain enterprises" in the particular context of Article 2.2 serves to distinguish those enterprises within the designated region from those outside it. To try to answer this question, we first substitute into the text of Article 2.2 of the SCM Agreement the full phrase that is equivalent to the contraction "certain enterprises". This would read, in pertinent part, "[a] subsidy which is limited to [an enterprise or industry or group of enterprises or industries] located within a designated geographical region within the jurisdiction" of a granting authority. We do not consider, however, that the text of the provision, in isolation, either with or without this substitution, sheds particular light on the question at issue.

9.129 We thus next turn to the context of the provision, the most relevant of which we find to be that afforded by Articles 8.1(b) and 8.2(b) of the SCM Agreement, as these Articles together shed considerable light on the question before us. These provisions read, in relevant part:

"8.1 The following subsidies shall be considered as non-actionable [footnote omitted]:

(a) subsidies which are not specific within the meaning of Article 2;

(b) subsidies which are specific within the meaning of Article 2 but which meet all of the conditions provided for in paragraphs 2(a), 2(b) or 2(c) below.

8.2 Notwithstanding the provisions of Parts III and V, the following subsidies shall be non-actionable:

[...]

(b) assistance to disadvantaged regions within the territory of a Member given pursuant to a general framework of regional development [footnote omitted] and non-specific (within the meaning of Article 2) within eligible regions provided that:

(i) each disadvantaged region must be a clearly designated contiguous geographical area with a definable economic and administrative identity;
(ii) the region is considered as disadvantaged on the basis of neutral and objective criteria \[footnote omitted\], indicating that the region's difficulties arise out of more than temporary circumstances; such criteria must be clearly spelled out in law, regulation, or other official document, so as to be capable of verification;

(iii) the criteria shall include a measurement of economic development which shall be based on at least one of the following factors:

[...].

9.130 Before considering the exact wording of these provisions, we first recall that the overall purpose and effect of Article 8 of the SCM Agreement during the period when it was in force\(^{433}\), as indicated in Article 8.1(b), was not to change the specificity rule of Article 2 of the SCM Agreement. Rather, Article 8 gave a special non-actionable status to a limited subset of the universe of specific subsidies which, in the absence of that Article, would have been actionable by virtue of their specificity. Upon the lapsing of Article 8, the formerly non-actionable subsidies simply reverted to the same (actionable) status as all other specific subsidies.

9.131 Turning now to the text of Article 8.1(b) of the SCM Agreement, we note that this provision explicitly identifies as "specific" all of the subsidies described in Article 8.2 as non-actionable. In particular, this provision describes the non-actionable subsidies as "subsidies which are specific within the meaning of Article 2 but which meet" the conditions provided for in the various subparagraphs of Article 8.2, including Article 8.2(b), covering assistance to disadvantaged regions. In other words, Article 8.1(b) makes clear that the subsidies for disadvantaged regions described in Article 8.2(b), as well as the other subsidies described in Article 8.2 are, by definition, "specific" within the meaning of the SCM Agreement. This of course is logical, as if these subsidies were not specific, they would not be covered by, and thus would not be actionable pursuant to, the SCM Agreement. Indeed, Article 8.1(a) of the SCM Agreement makes this point explicitly, identifying as one of the two categories of non-actionable subsidies those "subsidies which are not specific within the meaning of Article 2".

9.132 As for Article 8.2(b) of the SCM Agreement, the relevant point for this dispute is that in order for a subsidy to a disadvantaged region to have had non-actionable status, that subsidy, \textit{inter alia}, had to be "\textit{non-specific [\ldots] within [an] eligible region [\ldots]}". What this means is that a subsidy to a particular, disadvantaged region was defined by the SCM Agreement as specific in the sense of Article 2 of the Agreement, in spite of being non-specific \textit{within} the region in question. Had the non-specificity within the region been enough to render the subsidy non-specific in the sense of Article 2, this would have made Article 8.2(b) entirely redundant given, as just noted, that non-specific subsidies are not covered by, and thus not actionable in any way under, the SCM Agreement. Furthermore, in view of the fact that the regional aid in question, to be non-actionable, had to be non-specific within the region in question, the only possible basis for such aid to be specific pursuant to Article 2 was its geographical limitation, i.e., on the basis of Article 2.2 of the SCM Agreement on regional specificity.

\(^{433}\) Pursuant to Article 31 of the SCM Agreement, Articles 6.1, 8 and 9 applied provisionally for five years from the entry into force of the WTO Agreement, and the period of application could have been extended by consensus decision of the SCM Committee. No such consensus was reached, however, and these provisions thus lapsed.
9.133 Finally, we consider the role of Article 2.2 within Article 2, especially in relation to Article 2.1 of the SCM Agreement. Here, we are concerned by the implications of China's argument that subsidies limited to a designated geographical region within the jurisdiction of a granting authority would have to be further limited to a subset of the enterprises located within that region in order to be specific in the sense of Article 2.2 of the SCM Agreement. In our view, such an interpretation would be inconsistent with the principle of effective treaty interpretation: it would entirely deprive Article 2.2 of meaning and purpose, as any such subsidy already would be specific pursuant to Article 2.1 of the SCM Agreement. By the same token, to view Article 2.2 as a particular case of the specificity referred to in Article 2.1, i.e., where the "certain enterprises" in Article 2.2 are those located within the designated geographical region, does not render Article 2.2 redundant. This is particularly clear when Article 2.2 and Article 8.2(b) are considered together, given that Article 8.2(b) defined and singled out for special treatment under the disciplines of the SCM Agreement a subset of the regionally specific subsidies covered by Article 2.2 of the SCM Agreement.

9.134 We recall that in response to our question on this point, China argued that the purpose of Article 2.2 of the SCM Agreement is to address "the particular circumstance in which a subsidy is in fact limited to certain enterprises located within" a designated geographical region, by which we understand China to argue that specificity in the sense of Article 2.2 can exist only in the de facto, and not in the de jure, sense. In the first place, such an interpretation would not resolve the issue, as a subsidy such as the one described by China already would be specific pursuant to Article 2.1(e) of the Agreement. Nor do we see any limitation to de facto specificity in the text of Article 2.2 of the SCM Agreement. Indeed, the only textual basis that China offers in support of this argument is that, unlike Article 2.1(a), Article 2.2 does not refer to an "explicit limitation" of access to the subsidy by the granting authority or the legislation in question. Given, however, that regional specificity appears in its own article (Article 2.2), separate from the general provisions containing the respective definitions of de jure and de facto specificity, and given as well that Article 2.2 does not refer either to de jure or de facto specificity, we see no basis in the text for concluding that Article 2.2 would pertain only to a de facto situation, and not a de jure one, or vice versa. In our view, such an interpretation not only is unsupported by the text, but also is considerably less plausible than one that would read Article 2.2 as a particular case of specificity, on the basis of geographic limitations, which could arise in either the de jure or the de facto sense.

9.135 On the basis of the foregoing analysis we conclude that the term "certain enterprises" in Article 2.2 of the SCM Agreement refers to those enterprises located within, as opposed to outside, the designated geographical region in question, with no further limitation within the region being required.

9.136 Given that we find this meaning to be clear based on the text of the provision in its context and in light of the object and purpose of the provision and the SCM Agreement, we see no need to resort to supplemental means of interpretation in respect of this issue. We note, however, that China has raised arguments based on the negotiating history of Article 2.2 of the SCM Agreement, and we thus now consider those arguments.

9.137 In particular, China compares the adopted Uruguay Round text of Article 2.2 of the SCM Agreement with the counterpart provision in the "Dunkel Draft" of the Agreement. China recalls that the Dunkel text read, in pertinent part:

---

434 China refers to the Draft Text on Subsidies and Countervailing Measures of 7 November 1990 (MTN.GNG/NG10/23). (China second written submission, footnote 160). We note that this document is one of the so-called "Cartland drafts" of 1990 and that the "Dunkel Draft" (20 December 1991) was circulated in document MTN.TNC/W/FA. The relevant texts of both documents, however, contain the wording on regional specificity cited by China.
"A subsidy which is available to all enterprises located within a designated geographical region shall be specific irrespective of the nature of the granting authority".

while the adopted language in the SCM Agreement reads:

"A subsidy which is limited to certain enterprises located within a designated geographical region within the jurisdiction of the granting authority shall be specific".

For China, the change of the language from "available to all enterprises" in the Dunkel Draft to "limited to certain enterprises" in the final, adopted Agreement means that the negotiators considered – and rejected – the meaning whereby a subsidy would be specific pursuant to Article 2.2 based on geographical limitation only.

9.138 In considering this argument, we note that the changes between the Dunkel text and the adopted text of the SCM Agreement go beyond the substitution of the term "limited to certain enterprises" for "available to all enterprises", and that the meaning of this change can only be understood by looking at the entirety of the two sentences. In particular, the Dunkel text provided that even if a subsidy granted within a region were completely generally available, to "all enterprises" within a designated geographical region, it would have been specific, without regard to who the granting authority was or what its territorial reach was. In practical terms, this would have meant that even a subsidy granted by a provincial government to all enterprises within the entirety of its own territory would have been regionally specific.

9.139 By contrast, Article 2.2 of the SCM Agreement changes the focus of the provision, to the granting authority in juxtaposition with its geographical jurisdiction, such that only where a subsidy is limited to a subpart of the territory within the jurisdiction of the granting authority would specificity arise under this provision. It is this change in orientation and focus between the Dunkel text and the SCM Agreement that explains the need, from the point of view of technical drafting, to change "available to all" to "limited to certain". The negotiating history of the provision thus certainly does not detract from, and if anything supports, the conclusion that we have reached regarding the term "certain enterprises" in Article 2.2 of the SCM Agreement based on our analysis of that provision itself.

(ii) "Designated geographical region" in Article 2.2 of the SCM Agreement

9.140 A further question of legal interpretation raised by China's claim is whether a "designated geographical region" in the sense of Article 2.2 of the SCM Agreement must necessarily have some sort of formal administrative or economic identity as China argues, or whether any identified tract of land within the territory of a granting authority can be a "designated geographical region" for the purposes of a specificity finding pursuant to Article 2.2 of the Agreement. Starting with the text of Article 2.2, we find no limitation of the kind advanced by China, nor does China point to one. Thus, the text on its own would appear to allow any identified tract of land within the jurisdiction of a granting authority to be a "designated geographical region" in the sense of Article 2.2 of the SCM Agreement.

9.141 We recall that China's main support for its argument is the context provided by Article 8.2(b) of the SCM Agreement. In particular, China recalls that Article 8.2(b) required that a disadvantaged region in the sense of that provision, inter alia, had to be clearly designated and contiguous, and had to have a definable economic and administrative identity. China argues that due to the similarity of the language in Articles 2.2 and 8.2(b), the concepts in the latter provision should also apply to the term "designated geographical region" in Article 2.2 of the SCM Agreement.
9.142 We note first that in fact the texts of the two provisions are different. As an initial matter, we consider that if the drafters had intended for their meanings to be the same, they would have used the same language in both places.

9.143 In addition, we recall that the purpose and function of Article 8 of the SCM Agreement was to confer non-actionable status on a certain subset of the subsidies that are specific in the sense of Article 2 of the SCM Agreement. Given this, we consider that the context provided by Article 8.2(b) in respect of the meaning of the term "designated geographical region" in Article 2.2 points rather to the opposite conclusion from that drawn by China. In particular, the requirements in Article 8.2(b) imposed special restrictions and conditions the purpose of which was to define and circumscribe, from among the universe of subsidies that were specific on the basis of Article 2.2, those that were non-actionable. The need for these restrictions and conditions thus is obvious, i.e., to ensure that the assistance was in reality limited to generalized economic assistance to regions that were economically disadvantaged based on specified, quantifiable parameters, and to prevent the non-actionability provisions from being used to disguise what in fact were targeted, trade distortive subsidies. Indeed, without the additional restriction that a disadvantaged region, to qualify under Article 8.2(b), among other things had to have a definable economic and administrative identity, it would have been possible for Members to define any parcel of land — including, say, a particular, individual factory — as a "disadvantaged region" and on that basis to provide non-actionable subsidies to that plant, thus entirely avoiding the disciplines of the SCM Agreement. Similarly, if China's argument as to the meaning of "designated geographical region" in Article 2.2 were correct, it would become a simple matter to circumvent the SCM Agreement by providing subsidies through industrial parks or similar geographical areas, without targeting particular enterprises within those areas.

9.144 On the basis of the foregoing analysis, we conclude that a "designated geographic region" in the sense of Article 2.2 of the SCM Agreement can encompass any identified tract of land within the jurisdiction of a granting authority.

(b) USDOC regional specificity determination

9.145 Having reached our conclusions regarding the legal interpretation of Article 2.2 of the SCM Agreement, we now turn to the USDOC's regional specificity determination in the LWS investigation, in respect of the provision of allegedly subsidized land-use rights.

(i) USDOC determination

9.146 In the LWS investigation, the USDOC determined that China's provision of land-use rights in the New Century Industrial Park to an investigated producer (Aifudi) constituted a countervailable subsidy in the form of land-use rights for less than adequate remuneration. The USDOC first found that China's provision of land-use rights to Aifudi constituted a financial contribution by a government in the form of provision of goods or services. The USDOC then found that this financial contribution was de jure specific because the provision of the land-use rights within the Industrial Park was limited to an enterprise or industry located within a designated geographical region. Furthermore, since the provision of land-use rights was found to be "regionally specific", the USDOC determined that factors such as the number of users and the types of industries were not relevant to its specificity analysis. The USDOC then found, as a separate step, that the land-use rights were

---

435 The USDOC's determination indicates that "Golden Moon" was the enterprise that actually obtained the land-use rights, that it shared the land with Aifudi in the Industrial Park, and that the two enterprises were cross-owned. The USDOC therefore referred to Aifudi as the buyer of the land-use rights. (Exhibits CHI-3, p. 14 and CHI-34, p. 67906).

436 Exhibit CHI-3, pp. 14 and 55.
provided for less than adequate remuneration and therefore conferred a benefit.\footnote{Exhibit CHI-3, p. 14.} We consider China's claims in respect of this benefit determination in Section X, infra.

9.147 Concerning specificity, the USDOC found that the provision of land-use rights was specific because the provision of those rights in an industrial park within the county's jurisdiction was limited to an enterprise or industry or group thereof located within a designated geographical region.\footnote{Id.} In particular, the USDOC found that Aifu di was situated in an industrial park that had been created by the Huantai County government for the purpose of providing industrial land-use rights to industries within that government's jurisdiction, i.e., that the New Century Industrial Park was within the authority of Huantai County and thus that Aifu di received land-use rights by virtue of its location in the Industrial Park.\footnote{Id., p. 55.}

9.148 The USDOC indicated that at verification it had confirmed that the county had identified a specific, contiguous area of land within its jurisdiction, designated that land as an industrial park, and controlled the granting of land-use rights within the industrial park.\footnote{Id.} On the latter point, officials from the Huantai County Land Bureau had indicated at verification that the county government gave the final approval to companies for land-use rights, and that all levels and all agencies of the county government had to approve land-use rights.\footnote{Id.}

9.149 Thus, the USDOC's determination makes clear that its regional specificity finding was in respect of the government financial contribution, i.e., the provision of land-use rights. The USDOC's benefit determination was a separate step in its analysis of this programme.

9.150 As discussed supra, China's basic arguments against this approach are that regional specificity cannot be determined solely on the basis of geographic location but must involve a further selectivity, and that regional specificity can only exist in a \textit{de facto} but not in a \textit{de jure} sense. China's general argument that \textit{de jure} specificity (on whatever basis) cannot be found unless the law or regulation in question specifies all elements of a specific subsidy (financial contribution and benefit, as well as specificity) also is relevant here.

9.151 Part of China's specificity argument thus also concerns the benefit element of USDOC's finding regarding the provision of land-use rights. That part of the finding was that the land prices within the park, the purpose of which was to provide land-use rights, were below-market, as measured against an external market benchmark (certain land-use prices in Bangkok and adjacent provinces). China argues however that the evidence on record showed that land prices within the Industrial Park were if anything higher than those outside the Park in the same county, and that this comparison should have factored into both the specificity and benefit determinations. In particular, for China, even if regional specificity were determined on the basis of geography alone, the price for land use inside the Industrial Park would need to be lower than land use prices elsewhere in the county for either a benefit or any possibility of regional specificity to exist.

(ii) \textit{Assessment by the Panel}

9.152 The question before the Panel in respect of the LWS investigation is whether the USDOC's finding that the provision of land-use rights to Aifu di was regionally-specific was consistent with the SCM Agreement. The United States argues that there was a financial contribution by a government (provision of land-use rights which are totally controlled by the government), and that the particular

\footnotesize{\textsuperscript{437} Exhibit CHI-3, p. 14.} \textsuperscript{438} Id. \textsuperscript{439} Id., p. 55. \textsuperscript{440} Id. \textsuperscript{441} Id., pp.14 and 55.
land-use rights in question – those to Aifudi, which were in the Industrial Park – were regionally specific because they were available only to the companies operating in the Industrial Park. The United States also argues that there was very little record evidence on prices of land-use outside the Park, and that even if there were some subsidies conferred to some land-users outside the Park that would not alter the fact that land-users in the Park were receiving land-use subsidies by virtue of their location (i.e., regionally-specific subsidies).

9.153 China, in addition to its legal arguments that regional specificity cannot be determined on the basis of a geographic limitation alone, and that an industrial park cannot be a designated geographic region, argues that the evidence of record did not show that any benefit was enjoyed by Aifudi that was not also enjoyed by other companies inside the Industrial Park and, moreover, showed that the price for land-use in the Industrial Park was if anything higher than that outside the Park in Huantai County. As such, according to China, being located in the Industrial Park conferred no special advantage. China thus seems to be saying that even if any subsidy existed, it was generally available to purchasers of land-use rights in Huantai County. China also argues that by the USDOC’s logic, the provision by a government of any piece of land would be regionally specific purely by virtue of the geographical nature of land; an outcome that China considers would be absurd.

9.154 We note that there is no substantial disagreement between the parties as to the facts of the situation. The record evidence indicates that all of the land in China ultimately was owned by the government, that before agricultural land could be put to industrial use it had to be converted by the relevant provincial government, and that the provision of land-use rights to particular enterprises was the responsibility of the relevant municipal (county) government. The record evidence also indicates, and the parties do not disagree, (i) that the Industrial Park was created through the conversion, by the Huantai County government, of a tract of agricultural land to industrial use, and (ii) that only sometime after the establishment of the Industrial Park and the installation of a number of enterprises (including Aifudi) in the Park was that land conversion brought to the attention of, and approved by, the provincial government. Finally, there is no disagreement between the parties as to the price that Aifudi paid for the land, or as to the prices paid under other land-use contracts on the record, for certain land both inside and outside of the Industrial Park. Where the disagreement on the latter point lies is in respect of the relevance of such other land prices to the question of specificity, and in respect of the representativeness of this other pricing information (the United States notes that only a few such contracts were produced by the respondents in response to the USDOC’s request).

9.155 We recall our finding, supra, that it is not necessary for a granting authority or the relevant legislation to identify all elements of a specific subsidy for a valid finding of de jure specificity. We thus find no legal error in the USDOC having based its determination of regional specificity on the element of the financial contribution, i.e., on the provision of land-use rights by Huantai County.

9.156 We also recall our finding that an industrial park, as a designated tract of land within the jurisdiction of a granting authority, would fall within the scope of the term "designated geographical area within the jurisdiction of the granting authority" in Article 2.2 of the SCM Agreement. We thus find no error in the USDOC’s having found the Industrial Park to be a "designated geographical area" within the jurisdiction of Huantai County.

442 China second written submission, para. 200.
443 Id., para 202. In particular, China argues that the subsidy that the USDOC determined to be countervailable was the provision of land by the government at a price that the USDOC considered to represent less than adequate remuneration, but that the United States fails to identify any aspect of the alleged subsidy that was “only available” to companies located within the New Century Industrial Park. According to China, the same government – Huantai County – provided land to enterprises located outside of the "designated geographical region" at the same or lower prices, and the subsidy identified by the USDOC therefore was not “unique” or “only available” to companies located within the New Century Industrial Park. (Id.).
9.157 Finally, we recall our finding that specificity in the sense of Article 2.2 of the SCM Agreement refers to limitation of access to a subsidy on the basis of geographic location alone, and that no further limitation to a subset of the enterprises in the region in question is necessary for such specificity to exist. Thus, we find no error in the fact that the USDOC, in reaching its regional specificity determination, did not examine whether some of the companies in the Industrial Park obtained their land-use rights on more favourable terms than others.

9.158 We do not consider that these findings fully resolve this claim, however. In particular, we are troubled by the implications of the USDOC's analytical approach in the context of the specific facts of the LWS investigation. In this regard, we read the USDOC's determination as meaning that the provision of the land-use rights to Aifudi was regionally specific because the land was physically located in a designated area within the jurisdiction of the granting authority, i.e., inside the Industrial Park. In particular, the USDOC indicated in its determination that the Industrial Park was created for the purpose of providing land-use rights to companies that were located there, and thus met the criteria for regional specificity. We consider that this reasoning is essentially circular, however, given that land itself is a location.

9.159 Furthermore, we recall the undisputed fact of record that in China the government was the ultimate owner of all land. This implies first that any time an enterprise obtained land-use rights anywhere in China it was receiving a financial contribution by a government. The further implication of the USDOC's approach would be that those land-use rights, wherever in China they were provided, would be regionally specific, given that land is by definition always limited by and to its geographic location. Here, we note that in the investigation before us, while a perimeter was drawn around a particular tract of land within the jurisdiction of the granting authority, which was labelled the New Century Industrial Park, and the USDOC considered the Park, rather than Aifudi's particular piece of land within it, to be the "geographical region" in question, we see no basis under the USDOC's analytical approach, and the United States points to no record evidence, to establish that the provision of land-use rights in the Industrial Park constituted a distinct regime for the provision of that financial contribution, compared with the provision of financial contributions in the form of land-use rights outside the Park.

9.160 Nor has the United States pointed to anything in the record that shows that the creation of the Industrial Park went beyond the re-zoning of a particular tract of land from agricultural to industrial use. While this re-zoning initially was undertaken by the county government without the required provincial government authorization, that authorization was subsequently obtained. We note in this regard that the verification report indicates that there was no separate land policy for land in industrial zones, and that as long as land was for industrial use, it had to be in accordance with industrial land policy, which applied whether the land was inside or outside an industrial zone. We further recall that the USDOC's determination and the evidence cited therein indicates that the county government set the industrial land-use prices both within and outside the Industrial Park, and the United States points to no record evidence showing that the industrial land-use prices within the Park were uniform, or that these prices had any clear distinctive identity compared with the prices outside the Park, indicating that the land-use regime for the Park was a distinct financial contribution. We emphasize that we refer here to land-use prices, and in particular to any indication on the record of differences in land-use prices within and outside the Industrial Park, as possible factual evidence of the existence of a separate land-use regime for the Industrial Park. We do not mean to imply that any such price differences would be indicative of the existence or amount of a benefit, which is a separate issue, addressed in Section X, infra. The ultimate implication of the USDOC approach to regional

---

445 The Verification Report indicates that there were at least two land-use prices within the Park. (Id., pp. 12-14).
specificity in respect of the land-use rights at issue is that if it was then determined (as was the case in
the LWS investigation) that the particular land-use rights in question were provided for less than
adequate remuneration, the result would be that a regionally specific subsidy would be provided. This
would be the case even if all purchasers of land-use rights throughout the jurisdiction of the granting
authority paid exactly the same below-market price for land, because each individual purchase, due to
its inherent geographical limitation, would be regionally specific.

9.161 We consider that such an outcome, and thus the approach that generates it, cannot be
reconciled with Article 2 of the SCM Agreement, the purpose of which is to identify those subsidies
that by virtue of being limited on some basis, are subject to the Agreement's disciplines. We therefore
find that the USDOC's determination of regional specificity in respect of the provision of land-use
rights to Aifudi is inconsistent with the obligations of the United States under Article 2 of the SCM
Agreement.

9.162 We emphasize here that our conclusion concerning the USDOC's regional specificity finding
in the LWS investigation is driven by the specific facts that were on the record of that investigation.
In particular, we emphasize that we are not saying that the intrinsic geographic nature of land-use
rights would always preclude a regional specificity finding in respect of the provision of land-use
rights. Nor, when we say that the United States has pointed to no record evidence that the Industrial
Park constituted a unique land-use regime, as might have been indicated by special rules or distinctive
pricing or other elements that distinguished the provision of land in the Park from the provision of
land outside the Park, do we mean to imply any factual findings of our own that the Industrial Park
was or was not such a regime, or that the terms and conditions for land-use inside the Park were or
were not indistinguishable from those outside. It is entirely possible that evidence relevant to these
points existed, and had such evidence been placed on the record, it might have resulted in a finding of
regional specificity consistent with Article 2.2 of the SCM Agreement.

9.163 It does not appear to us, however, that the USDOC pursued these or similar lines of inquiry
assiduously. Indeed, while before us the United States argues that the record evidence on land prices
outside the Industrial Park was thin because China only supplied a few examples of such land-use
contracts, and while in its determination the USDOC implies that those contracts were not fully
relevant to its inquiry 446, we note that when it verified that information, the USDOC appears not to
have requested any additional land-use contracts, but instead simply verified the ones it was given.447
As for the nature of the Industrial Park, we see no indication in the record evidence that the USDOC
examined whether it constituted a land-use regime that was clearly distinguishable from the general
provision of land-use rights by the county government. Instead, the USDOC appears to have focused
principally on the process by which the Industrial Park was created, and the irregularities in that
process, as well as on how the land-use prices were set both inside and outside the Industrial Park, but
with no findings as to any clear basis on which the provision of a financial contribution in the form of
land-use rights differed as between land inside and outside the Park. In short, had the USDOC made

446 On this point, the USDOC's determination reads:

"Although the Department was provided some documentation at verification showing the
prices charged for land-use rights in an industrial park in another county, these two contracts
were not contemporaneous with the original contracts negotiated for Aifudi's land-use rights
[...] Similarly, our examination of two other contracts for industrial land located in Huantai
county that is outside of the industrial park, did not provide us any information as to how
these prices were determined". (Exhibit CHI-3, p. 59).

447 The Verification Report indicates that "we [...] requested and the land bureau provided us with
information on contracts for industrial land outside of the industrial zone". (Exhibit US-79, p. 14). There is no
indication in the report either that the information in the contracts was unable to be verified, or that any
additional contracts were requested.
further inquiries into these or similar issues, and depending on the outcome of those inquiries, our conclusions as to the WTO-consistency of the USDOC's regional specificity finding in respect of the provision of land-use rights to Aifudi might have been different.

9.164 For the foregoing reasons, we conclude that the USDOC's determination of regional specificity in respect of the provision of land-use rights to Aifudi was inconsistent with the obligations of the United States under Article 2 of the SCM Agreement.448

X. CHINA'S CLAIMS PERTAINING TO BENCHMARKS

A. CLAIMS OF CHINA

10.1 China claims that, "in connection with each instance in which US authorities resorted to a benchmark outside of China for the purpose of determining the existence and amount of any alleged subsidy benefit", the USDOC's "rejection of prevailing terms and conditions in China as the basis for determining whether, and to what extent, subject producers received a subsidy benefit under the methodologies set forth in Article 14" was inconsistent with that provision and, as a consequence, with Articles 10 and 32.1 of the SCM Agreement, and Article VI:3 of the GATT 1994.449 Under this generally-worded claim, China raises the following series of specific allegations.

10.2 First, China alleges, in respect of SOE-produced inputs450 in the CWP, LWR and LWS investigations, that the USDOC unlawfully presumed that Chinese private prices were distorted, based exclusively on the extent of government involvement in the market, and that it thus acted inconsistently with Article 14(d) of the SCM Agreement when it rejected those prices as benchmarks and resorted instead to benchmarks based on out-of-country prices, i.e., it failed to determine the adequacy of remuneration for the inputs in relation to prevailing market conditions in China. China argues that the USDOC's reliance on these alternative benchmarks for measuring adequate remuneration with respect to the provision of inputs in the three investigations "was predicated exclusively on its invalid findings that private prices were distorted", and that "[a]ccordingly, all of [the USDOC's] benefit calculations relying on those alternative benchmarks likewise are invalid".451

10.3 Also concerning these inputs, China notes that the alleged unlawfulness of the distortion findings and consequential rejection of Chinese private prices "makes it unnecessary for the Panel to inquire whether each alternative benchmark [...] satisfied the requirements set forth in Article 14(d)".452

10.4 Second, China alleges, in respect of government provision of land-use rights in the LWS and OTR investigations, that the USDOC unlawfully presumed that private prices for land-use in China were distorted due to the significant government role in the market, and that it thus acted inconsistently with Article 14(d) of the SCM Agreement when it rejected those prices as benchmarks and resorted instead to benchmarks based on out-of-country prices. i.e., it failed to determine the adequacy of remuneration for land-use rights in relation to prevailing market conditions in China.453

---

448 Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, infra.
449 Paragraphs B.1(d)(i) and B.1(e)(i)-(iii) of the "as applied" claims in China request for establishment of the Panel; China first written submission, para. 468 (b) and (e)-(g); second written submission, para. 315 (c) and (f)-(h).
450 Both sourced directly from SOEs and purchased from trading companies. (China first written submission, para. 129).
451 See, generally, China first written submission, paras. 113-130.
452 Id., paras. 129-130.
453 China first written submission, paras. 302-306.
10.5 Third, also in connection with land-use rights, China alleges that the USDOC failed to satisfy the requirements of Article 14(d) in respect of the particular benchmark that it used (certain land prices in Bangkok, Thailand), because Thai land prices (and foreign land prices more generally) do not relate or refer to prevailing market conditions for land-use rights in China.454

10.6 Fourth, China alleges, in respect of SOCB loans denominated in RMB, the USDOC’s rejection in the OTR, CWP and LWS investigations of Chinese RMB interest rates as benchmarks was inconsistent with Article 14(b), as only Chinese RMB-denominated loans are "comparable commercial" loans that the borrowers "could actually obtain" in a lending market in which they were able to borrow in that currency.455

10.7 Fifth, also concerning SOCB loans denominated in RMB, China argues that the USDOC’s 33-country regression analysis used in the OTR, CWP and LWS investigations to generate the benchmark interest rates did not represent "comparable commercial loans" that the borrower could "actually obtain on the market", as the fictitious loans were not denominated in the same currency and, being fictitious, no borrower could "actually obtain" these loans in any commercial market.456

10.8 Sixth, concerning SOCB loans denominated in U.S. dollars, China alleges that by using as a benchmark in the OTR investigation an average annual LIBOR rate, the USDOC used a benchmark that was inconsistent with Article 14(b), as it did not reflect what the tire producer at issue (GTC) "would pay on a commercial loan" that it "could actually obtain on the market". That is, GTC would not have paid an average annual LIBOR rate, but rather the correct daily LIBOR rates for a dollar-denominated loan of the same maturity and the same interest rate terms as the SOCB loans.457

B. APPLICABLE PROVISIONS OF THE COVERED AGREEMENTS

10.9 China's request for the establishment of the Panel included claims under both Article 14 of the SCM Agreement as well as under Section 15, paragraphs (b) and (c), of China's Protocol of Accession. Section 15(b) of China's Protocol of Accession contains rules pertaining to the determination of the existence and amount of benefit in countervailing duty investigations on Chinese products.458 Section 15(c) imposes upon importing Members the obligation to notify, inter alia, the methodologies that it uses pursuant to Section 15(b).

10.10 In its submissions to the Panel, China requested that the Panel only make findings with respect to the WTO-consistency of the USDOC benefit determinations at issue under the provisions of Article 14 of the SCM Agreement.459, 460 China reserved its right to present arguments under Sections 15(b) and (c) of its Protocol in the event that the United States invoked the disciplines
contained therein.\textsuperscript{461} The United States indicated that, in its view, the Panel did not need to make findings under Section 15(b) of the Protocol of Accession.\textsuperscript{462}

10.11 In response to a specific question from the Panel on the issue, the United States confirmed that even if we were to find that the determinations at issue are inconsistent with its obligations under Article 14(b) and (d), we would not, in the view of the United States, have to evaluate whether the USDOC determinations nevertheless were justified under China's Protocol of Accession. Conversely, China indicated that it is not seeking findings from the Panel under its Protocol of Accession in the event that we find that the USDOC determinations are consistent with the obligations of the United States under Article 14 SCM Agreement.\textsuperscript{463}

10.12 In sum, neither China nor the United States is invoking the specific provisions contained in Section 15(b) of China's Protocol of Accession pertaining to the application of the disciplines set forth under the SCM Agreement and Article VI of the GATT in countervailing duty investigations on imports from China. In addition, the application of Section 15(b) of China's Protocol of Accession in specific factual circumstances raises a number of interpretative issues that have yet to be considered by a panel or by the Appellate Body, and the parties have only provided us with limited argumentation as to how, in their view, the terms of this provision should be interpreted. In light of these considerations, we consider it appropriate to limit our analysis of the consistency with the covered agreements of the USDOC's benefit determinations to the provisions of the SCM Agreement invoked by China, primarily Article 14 thereof.\textsuperscript{464}

C. ORDER OF ANALYSIS OF CLAIMS

10.13 As indicated in the above summary, the issues raised by China in respect of benchmarks fall into two broad categories. The first category concerns the USDOC's rejection of internal Chinese input prices, land-use prices, and interest rates as the benchmarks used to measure the amount of the benefit from SOE-produced inputs, government-provided land-use rights, and SOCB loans, respectively. The second category concerns the benchmarks actually used by the USDOC to measure the benefits from land-use rights and SOCB loans. (As indicated, China makes no allegations concerning the benchmarks actually used in respect of inputs).

10.14 Because the two broad categories are conceptually distinct, and because we address \textit{infra} our doubts as to whether the second category of issues is covered by our terms of reference, we first analyze all of the issues related to the rejection of Chinese input prices, land-use prices and interest rates, in the light of the requirements of Articles 14(d) and 14(b) of the SCM Agreement, respectively, before turning to the issues related to the benchmarks actually used by the USDOC in the three investigations at issue.

\textsuperscript{461} China first written submission, para. 31. Later, China confirmed its understanding that the United States was not invoking Section 15. (China response to Panel question 25 (first meeting); second written submission, para. 53).

\textsuperscript{462} In essence, the United States argues that its determinations were consistent with Article 14 of the SCM Agreement. We note, however, that the United States also argued that it was neither necessary nor appropriate for the USDOC to seek to justify its determinations on other bases than U.S. law. (See, e.g., United States response to Panel questions 25-27 and 29 (first meeting); second written submission, para. 67). Later, the United States argued that China had "abandoned" its claims under Section 15 of its Protocol of Accession, having made no arguments in this respect. (United States response to Panel questions 25-26 and 31 (first meeting)).

\textsuperscript{463} United States and China responses to Panel question 10 (second meeting).

\textsuperscript{464} To be clear, while we mention, in our summary of its position on the interpretation of Article 14(d) below, the United States' arguments referencing China's Protocol of Accession (see \textit{infra}, paras. 10.26 and 10.70), we do not take these arguments into account in our analysis of China's claims on benchmarks.
10.15 Before doing so, however, we note that there have been two past, closely related disputes in which both of these categories of issues were addressed. We consider that these disputes provide useful background for the analyses that we are called upon to make, and we therefore start by summarizing the pertinent parts of those findings.

D. REJECTION OF IN-COUNTRY BENCHMARKS AND RESORT TO ALTERNATIVES – THE SOFTWOOD LUMBER DISPUTES

10.16 The questions of whether it is possible to reject private benchmarks from within the country allegedly providing a subsidy, and to resort to alternative benchmarks, including out-of-country benchmarks, first arose in the context of government provision of goods in the disputes concerning the United States' countervailing duty investigations and measures on imports of softwood lumber from Canada. In those investigations, the United States had found that private Canadian stumpage\(^{465}\) prices were distorted by virtue of the fact that the government was the predominant owner of the forested land, and provider of stumpage contracts, in Canada. On this basis, the United States rejected private stumpage prices in Canada as the benchmark to compare with government stumpage prices, and instead used certain U.S. stumpage prices as the benchmark. On that basis, the USDOC found that Canada provided stumpage for less than adequate remuneration. Canada challenged this approach on the grounds that it was inconsistent with the language in Article 14(d) of the SCM Agreement that adequacy of remuneration is to be determined in relation to prevailing market conditions for the good in question "in the country of provision" of that good. The panels in the disputes concerning both the USDOC's preliminary and final investigations and determinations agreed with Canada, finding that Article 14(d) of the SCM Agreement (calculation of the benefit, inter alia\(^{466}\), from government provision of goods) did not permit the rejection of in-country private prices, because of the language requiring that the adequacy of remuneration be determined in relation to the prevailing market conditions "in the country of provision" of the good in question.

10.17 The United States appealed this panel ruling in the dispute concerning the final investigation and determination\(^{466}\), and the Appellate Body reversed that panel on this point. First, concerning whether any benchmark other than private prices in the country of provision of the good in question can be used, the Appellate Body found that Article 14(d) does not require in all cases the use of private prices in the country of provision; rather, it found that the requirement in that provision is that any benchmark used must "relate or refer to, or be connected with" the prevailing market conditions in that country.

10.18 Second, concerning the "very limited" circumstances under which a benchmark other than private prices in the country of provision can be used, the Appellate Body found that such an alternative benchmark can be used "when it has been established that the private prices are distorted, because of the predominant role of the government in the market as a provider of the same or similar goods"\(^{467}\). This was the sole issue on appeal on this point. In particular, the question as framed by the United States, to which the Appellate Body thus limited its analysis, concerned the situation in which "the government has such a predominant role in the market as a provider of the goods that private suppliers will align their prices with those of the government-provided goods"\(^{468}\).

---

\(^{465}\) Stumpage refers to the right to harvest standing timber.

\(^{466}\) The panel report was circulated in document WT/DS257/R. There was no appeal of the panel report in respect of the preliminary investigation and determination (WT/DS236/R).

\(^{468}\) Id., para. 99. The Appellate Body stated in particular that its examination was limited to "whether an investigating authority may use a benchmark other than private prices in the country of provision in th[e] particular situation" of "government predominance in the market, as a provider of certain goods". (Id.).
We note here, however, that the panel also had found that a benchmark other than private prices in the country of provision of a good would be allowable in the situations where the government is the sole supplier in the country of the good in question, and where the government administratively controls all of the prices for that good in that country. In considering the issue appealed by the United States, the Appellate Body expressed "some difficulty with the Panel's approach of treating a situation in which the government is the sole supplier of certain goods differently from a situation in which the government is the predominant supplier of those goods. In terms of market distortions and effect on prices, there may be little difference between [these] situations." We take this to mean that the Appellate Body did not disagree with the panel that rejection of in-country prices was allowable where the government is the sole supplier of the good in question. Furthermore, to us this statement indicates a fortiori that the Appellate Body had no difficulty with the panel's conclusion that rejection of in-country prices is allowed where the government administratively controls all of the prices for the good in question.

Concerning the sole issue on appeal in US – Softwood Lumber IV on this point, i.e., "the situation of government predominance in the market, as a provider of certain goods", the Appellate Body distinguished the situations where the government is a "significant" supplier from that where it is "the predominant" supplier, noting that "an allegation that the government is a significant supplier would not, on its own, prove distortion and allow an investigating authority to choose a benchmark other than private prices in the country of provision." Rather, the Appellate Body found, "[t]he determination of whether private prices are distorted because of the government's predominant role in the market, as a provider of certain goods, must be made on a case-by-case basis, according to the particular facts" of each investigation.

Third, concerning the alternative benchmarks that could be available in such situations, the Appellate Body agreed with the participants and third participants in the dispute that "alternative methods for determining the adequacy of remuneration could include proxies that take into account prices for similar goods quoted on world markets, or proxies constructed on the basis of production costs". The Appellate Body emphasized that in proceeding in this manner, an investigating authority "is under an obligation to ensure that the resulting benchmark relates or refers to, or is connected with, prevailing market conditions in the country of provision, and must reflect price, quality, availability, marketability, transportation and other conditions of purchase or sale, as required by Article 14(d)". The Appellate Body noted that it was not called upon in that appeal to suggest particular alternative methods, nor to assess the consistency with Article 14(d) of all alternative methods suggested by the participants and third participants in the appeal, as such an assessment would depend on how a given method was applied in a particular case, and could not be performed in the abstract.

Finally, concerning the specific alternative method used by the USDOC, which was to use certain stumpage prices in the United States as the benchmark, although the Appellate Body emphasized the need for considerable caution when resorting to an out-of-country benchmark, it did not find that the benchmark used by the United States was inconsistent with Article 14(d) by virtue of being an out-of-country benchmark (or on any other basis). Concerning the use of out-of-country benchmarks in general, the Appellate Body warned that:

---

470 Id., para. 102. (emphasis added).
471 Id. (emphasis added).
472 Id., para. 106.
473 Id.
474 Id.
"prices in the market of a WTO Member would be expected to reflect prevailing market conditions in that Member; they are unlikely to reflect conditions prevailing in another Member. Therefore, it cannot be presumed that market conditions prevailing in one Member [...] relate or refer to, or are connected with, market conditions prevailing in another Member [...]. Indeed, it seems to us that it would be difficult, from a practical point of view, for investigating authorities to replicate reliably market conditions prevailing in one country on the basis of market conditions prevailing in another country. First, there are numerous factors to be taken into account in making adjustments to market conditions prevailing in one country so as to replicate those prevailing in another country; secondly, it would be difficult to ensure that all necessary adjustments are made to prices in one country in order to develop a benchmark that relates or refers to, or is connected with, prevailing market conditions in another country, so as to reflect price, quality, availability, marketability, transportation and other conditions of purchase or sale in that other country".475

The Appellate Body then noted that different factors can result in one country having a comparative advantage over another with respect to the provision of certain goods, and that necessary adjustments would need to be made to any out-of-country benchmark to ensure that any resulting countervailing duties were used only for the purpose of offsetting a subsidy, and not for offsetting the difference in comparative advantages between the countries involved.476

10.23 The Appellate Body made no finding in respect of the USDOC's particular finding of market distortion due to the predominant role of the government as the supplier of stumpage, because the panel had not reached that issue, but instead had stopped its analysis once it concluded that Article 14(d) did not allow use of any benchmark other than private prices in the country of provision of the good.

E. CHINA'S CLAIMS UNDER ARTICLE 14(D) OF THE SCM AGREEMENT – SOE-PRODUCED INPUTS

1. Claim of China

10.24 China claims that the USDOC's determinations to reject private prices in China for HRS inputs in the CWP and LWS countervailing duty investigations, and for BOPP in the LWS countervailing duty investigation, were inconsistent with Article 14(d) of the SCM Agreement, as interpreted by the Appellate Body in US – Softwood Lumber IV.477, 478

2. Main arguments of the Parties

(a) China

10.25 China argues that the prices at which private suppliers in China sold the same inputs alleged to be provided by SOEs should have been used as the "primary benchmark" in order to determine the adequacy of remuneration under Article 14(d) of the SCM Agreement.479 In addition, China submits that the USDOC's rejection of Chinese private prices for HRS and BOPP was inconsistent with

476 Id., para. 109.
477 China first written submission, para. 123; opening oral statement at the first meeting of the Panel, para. 42.
478 As indicated at para. 10.1, supra, China also raises consequential claims pursuant to Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.
Article 14(d). Specifically, China argues that the USDOC did not establish that such prices were distorted, but, rather, used a *per se* rule under which it relied exclusively on the purported predominance of SOEs as suppliers of the inputs concerned to determine that private prices in China for HRS and BOPP were distorted.\(^{480}\) This, in China's view, disregards the Appellate Body's decision, in *US – Softwood Lumber IV*, that distortion cannot be "presumed" but rather must be "established" through a factual inquiry.\(^{481}\) China submits that the Appellate Body in that case established unequivocally that the predominant role of a government in the market does not, in any circumstances, suffice to establish distortion.\(^{482}\) Accordingly, China argues that investigating authorities are obliged to establish that the predominant role of the government in a market has, in fact, caused private suppliers to "align their prices" with those of the government such that "the government effectively acts as a 'price-setter'" and private suppliers as "price-takers".\(^{483}\) To this end, China submits that investigating authorities must conduct an analysis of the relevant market, and establish the conditions under which prices were established in that market.\(^{484}\) China asserts that the USDOC, however, disregarded the evidence on the record that would have established that private prices of HRS and BOPP in China were not distorted.\(^{485}\)

(b) United States

10.26 The United States rejects China's claims and submits that the USDOC's benefit determinations are consistent with Article 14(d) of the SCM Agreement. In particular, the United States argues that the Appellate Body has recognized that Article 14 provides flexibility and permits the use of out-of-country benchmarks in certain situations.\(^{486}\) In addition, the United States observes that Section 15(b) of China's Protocol of Accession and paragraph 150 of the Working Party

---

\(^{480}\) China first written submission, para. 124; second written submission, para. 48. For instance, China notes that in the CWP and LWR investigations, the USDOC rejected China's arguments – that it had an obligation to "look beyond the degree of state-ownership" and consider the actual nature and structure of the HRS industry – *solely* on the basis that "the government accounts for a significant portion of production" of the HRS market. China also submits that the USDOC's determination that it would have found private prices of HRS to be distorted even if it would have relied on China's data rather than on facts available further indicates that the "level of government ownership" was the dispositive factor in the USDOC's distortion analysis. (See, *e.g.*, China opening oral statement at the first meeting of the Panel, paras. 37-38; response to Panel Question 13 (second meeting)).

\(^{481}\) China opening oral statement at the first meeting of the Panel, para. 40. According to China, the United States has effectively conceded that it resorted to out-of-country benchmarks without conducting any price distortion analysis. (China second written submission, paras. 48, 54 and 61).

\(^{482}\) China cites in this regard the Appellate Body's statement that "an allegation that a government is a significant supplier would not, on its own, prove distortion and allow and investigating authority to choose a benchmark other than private prices in the country of provision", but rather, "[t]he determination of whether private prices are distorted because of the government's predominant role in the market", must be made on a "case-by-case basis". (emphasis omitted) (See, *e.g.*, China first written submission, para. 128; second written submission, paras. 55-58, citing to Appellate Body Report on *US – Softwood Lumber IV*, para. 102).

\(^{484}\) Id. China argues that in *US – Softwood Lumber IV*, the Appellate Body declined to complete the analysis, though the undisputed facts demonstrated that a single government supplier in each of the Canadian provinces set prices administratively and held market shares for the good in question ranging from 83 to 99 per cent. (Id., para. 60, citing to Appellate Body Report on *US – Softwood Lumber IV*, para. 115 and footnote 141).

\(^{485}\) China points, in particular, to the evidence it provided with respect to the structure and operation of the HRS and BOPP markets in China. (China first written submission, paras. 125-127).

\(^{486}\) United States first written submission, paras. 182, 184-185, 189-190 and 193; response to Panel question 30 (first meeting), citing to Appellate Body Reports on *Japan – DRAMs (Korea)*, para. 191 and *US – Softwood Lumber IV*, paras. 92-95, 100.
Report confirm the permissibility of using out-of-country benchmarks to measure any benefit in countervailing duty investigations involving imports from China.487

10.27 The United States argues that, based on all of the evidence on the record, the USDOC determined that China had a predominant role in the HRS and BOPP markets, and therefore, resorted to out-of-country benchmarks to measure the benefits at issue. Thus, the United States disagrees with China's assertion that the USDOC determined that private prices in China were distorted by applying a per se rule that only considered the degree of government ownership in the input markets at issue.488 In respect of the LWR and CWP investigations, the United States submits that China failed to provide necessary information regarding its control of the HRS market and that, as a result, the USDOC determined on the basis of facts available that over 96 per cent of HRS production in China was accounted for by SOEs. In addition, the USDOC found that the private prices of HRS in China (i.e., four per cent of the HRS market) reflected the predominant role of the government in the HRS market. The USDOC also considered the role played by imports in the market, but determined that they were small relative to the state-owned production of HRS, representing only three per cent of the total Chinese HRS production. On that basis, the USDOC concluded that the Government of China had a predominant role in the market of HRS.489 Similarly, in the LWS investigation, the United States submits that the USDOC's analysis was impaired by China's failure to supply requested information on the percentage of government production of BOPP. The USDOC therefore relied on facts available to determine that one government-owned producer accounted for 90 per cent of the petrochemical industry and, as a result, the USDOC concluded that the Government of China played a predominant role in the BOPP market.490

10.28 The United States further submits that, contrary to China's assertions, neither the text of Article 14 nor the Appellate Body report in US – Softwood Lumber IV requires Members to perform a separate "price distortion" analysis before resorting to out-of-country benchmarks. In US – Softwood Lumber IV, according to the United States, the Appellate Body did not find that the Agreement requires a "price distortion" analysis, but, instead, held that where the participation of the government in the market is "so predominant", "it effectively determines the price at which private suppliers sell the same or similar goods, so that the comparison contemplated by Article 14 would become circular", and therefore, investigating authorities do not act inconsistently with Article 14(d) by using out-of-country benchmarks where they have determined that a government plays such a role.491 The

487 See, e.g., United States first written submission, para. 195.
488 See, e.g., United States first written submission, para. 201-202; second written submission, 84, 88-89; response to Panel question 37 (first meeting). To illustrate its point, the United States also submits that in the OTR countervailing duty investigation, although China owned a significant portion of the natural and synthetic rubber produced domestically, the USDOC relied upon the investigated producers' import prices and domestic purchase prices as a benchmarks. Similarly, in the CWP investigation, the USDOC relied on import prices of HRS in addition to world market prices. (See, e.g., United States response to Panel question 16 (second meeting); opening statement at the first meeting of the Panel, para. 33).
489 United States first written submission, paras. 215-219; second written submission, para. 84-85; response to Panel question, 37 (first meeting); response to Panel question 14 (second meeting).
490 See, e.g., United States first written submission, paras. 221-223; second written submission, paras. 84, 86, 89. The United States further indicates that the USDOC could not assess the viability of the private BOPP sector in China because China failed to provide requested information on the size of the private sector. Moreover, there was no basis upon which the USDOC could assess import data with respect to BOPP. The applicable Chinese tariff code for BOPP also covered another petrochemical product, and therefore, China could not provide imports figures for BOPP. Likewise, China was unable to provide domestic consumption figures for BOPP. (United States response to Panel question 37 (first meeting); response to Panel question 14 (second meeting).
491 See, e.g., United States second written submission, paras. 75-76, 79; response to Panel question 36 (first meeting), citing to Appellate Body Report on US – Softwood Lumber IV, para. 93. The United States further argues that the analysis of the Appellate Body reflects the so-called "Dominant Firm Model" according to which price distortion is the "result" of the predominant role of a dominant firm(s) that holds a dominant
United States asserts that the USDOC’s determinations in the underlying investigations were consistent with the reasoning of the Appellate Body in *US – Softwood Lumber IV*. That is, the USDOC determined that private prices in China were not "sufficiently free" from the effects of the government's distortions, and therefore, could not be considered as appropriate benchmarks.\(^{492}\) The United States further emphasizes that while China improperly conflates the terms "significant" and "predominant", the USDOC's determinations were based on the Government of China's "predominant" rather than "significant" role in the markets at issue.\(^{493}\)

10.29 Finally, the United States argues that, although China alleges that the USDOC applied a *per se* rule, China has cited no evidence on the record contradicting the USDOC's findings that the government of China owns 96 per cent of the production of HRS and 90 per cent of the production of BOPP. Nor, it contends, has China explained what other factors should have been taken into consideration to determine whether the government has a predominant role and which record evidence was not assessed to that effect. Instead, the United States argues, China restates the arguments it made during the investigations, without addressing the USDOC’s determinations that these arguments have no bearing on whether the government played a predominant role in the markets at issue.\(^{494}\)

3. **Main arguments of the Third Parties**

(a) **Australia**

10.30 Australia recalls the Appellate Body’s findings in *US – Softwood Lumber IV* that Members have some flexibility in the use of methodologies for calculating benefit, provided that such methodologies conform with the "mandatory" guidelines provided for in Article 14. In this regard, Australia further considers that the panel's statement in *EC – Countervailing Measures on DRAM Chips* that "the investigating authority is entitled to considerable leeway in adopting a reasonable methodology" is limited to the specific circumstances where, in the absence of a comparable market benchmark, the text of Article 14 provides no guidance on how to determine the benefit (e.g., Article 14(b)). With respect to Article 14(d), Australia notes that this provision permits the use of out-of-country benchmarks so long as investigating authorities calculate the benefit "in relation to" the prevailing market conditions in the country of provision.\(^{495}\)

(b) **Canada**

10.31 Canada considers that the United States' reading of the Appellate Body's decision in *US – Softwood Lumber IV* is erroneous. In particular, Canada considers that according to the interpretation of Article 14(d) of the Appellate Body in that dispute, the predominance of the government as a provider of goods in the market is not sufficient, in and of itself, to establish that private prices are distorted and therefore unusable as benchmarks. In Canada's view, distortion must actually be demonstrated. In this respect, Canada considers that in the CWP and LWR investigations, the USDOC's determinations to reject private prices in China do not satisfy the requirement, under *US –
to establish that government predominance has actually distorted private prices in the market of the country of provision. Canada considers that the USDOC's determinations were nevertheless consistent with Section 15(b) of China's Protocol of Accession.\footnote{Canada third-party submission, paras. 22, 27 and 29-41.}

(c) European Communities

10.32 The European Communities agrees with the panel statement in Korea – Commercial Vessels that public bodies "do not constitute a reliable market benchmark with which to assess the existence of benefit". Accordingly, the European Communities considers that prices set by public bodies may not be considered as a relevant market benchmark as those bodies are also involved as players in the market concerned. The European Communities also considers that the observations of the Appellate Body in US – Softwood Lumber IV are pertinent to the present dispute. In particular, the European Communities is of the view that the fact that the government plays a predominant role in the market as a supplier of certain goods is likely to be a determining factor in ascertaining whether private prices can be used as benchmarks. In the investigations at issue, the European Communities understands that the USDOC's rationale to use an external benchmark was primarily based on the preponderant share of SOEs in China. The European Communities considers that if it is demonstrated that private prices are almost fully determined by SOEs representing public bodies and that such prices are highly distorted, then an investigating authority would have sufficient grounds to depart from the general rule of prices in the country of provision. The European Communities also notes that Section 15(b) of China's Protocol of Accession provides an additional set of rules which permit the use of a benchmark outside China in certain circumstances and subject to certain conditions.\footnote{European Communities third-party submission, paras. 19-24.}

(d) India

10.33 India considers that the United States' use of external benchmarks must be assessed in light of the limitations on the use of such benchmarks expressed by the Appellate Body in US – Softwood Lumber IV, notably the Appellate Body's indications that the circumstances in which a Member may use benchmarks other than the private prices in the country of provision are "very limited" and that the price distortion analysis "must be made on a case-by-case basis, according to the facts underlying each countervailing duty investigation".\footnote{India third-party oral statement. (this statement contains no paragraph numbering).}

(e) Japan

10.34 Japan considers that, consistently with the findings of the Appellate Body in US – Softwood Lumber IV, the question before the Panel is whether the USDOC had sufficient evidence (including adverse inferences) to arrive at the conclusions that private prices of inputs in China were distorted and thus unavailable as benchmarks under Article 14(d). Japan is of the view that where the evidence on the record shows such distortion, the investigating authority has a certain discretion to find a reasonable methodology but that, as indicated by the Appellate Body, this discretion is not unlimited – Article 14 establishes mandatory guidelines within which a benefit must be calculated. Japan therefore submits that the USDOC was required to find benchmarks that "related or referred to, or were connected with" prevailing market conditions in China. In this regard, Japan further considers that requiring investigating authorities to replicate such market conditions "at a level practically too high to comply" would ignore the balance that Part V of the SCM Agreement seeks to strike – between the right to impose countervailing duties to offset injurious subsidization, and the obligations that Members must respect in order to do so. Finally, Japan is of the view that although the Appellate Body has determined that "Article 14 provides a WTO Member with some latitude as to the method it chooses to calculate the amount of benefit", the Appellate Body has also acknowledged that the terms...
of Article 14 do not become completely inapplicable. For Japan, whether investigating authorities may deviate from the parameters set forth in Article 14 depends on the facts underlying the case under consideration and the Panel's task is to determine whether the evidence on the record supports the "reasonableness" of the benchmarks selected by the USDOC in light of the latitude given to investigating authorities under Article 14.\(^\text{499}\)

(f) **Mexico**

10.35 Mexico considers that a benefit determination must be consistent with the guidelines set forth in Article 14, regardless of whether the benchmark used is internal or external to the country allegedly granting the subsidy. Mexico agrees with the standard provided by the Appellate Body in *US – Softwood Lumber IV* according to which an investigating authority can resort to the use of out-of-country benchmarks where private prices are distorted because of the government's predominant role in the relevant market. Thus, Mexico considers that in determining whether the benchmarks used by the USDOC are WTO-consistent, the essential factor to be analyzed is the presence or absence of distortions caused by the role of the Government of China. In this regard, Mexico considers that China's arguments do not address the standard provided by the Appellate Body in *US – Softwood Lumber IV* and that the Panel should confirm the USDOC's use of external benchmarks, provided that there was evidence that the role of the Government of China in the markets in question was "predominant". Mexico does not however opine as to whether the alternative benchmarks used by the USDOC meet the requirements set out by the Appellate Body in that case.\(^\text{500}\)

(g) **Saudi Arabia**

10.36 Saudi Arabia considers that, according to the Appellate Body report in *US – Softwood Lumber IV*, Article 14(d) only permits the use of out-of-country benchmarks in very exceptional circumstances (i.e., when private market prices are distorted by the government's predominant role as a provider) and only after actual distortion of the domestic market has been established according to the facts of the investigation. According to Saudi Arabia, presumptions based on indirect evidence or on theoretical economic deductions, including presumptions of distortion based on the mere fact that the government is a significant supplier or has a major presence in the market, are insufficient to meet this requirement. Saudi Arabia also considers that, consistent with the Appellate Body report in that case, the investigating authority's discretion to choose a benchmark is limited by the mandatory parameters set forth in Article 14, and that therefore the benchmark used still must "relate or refer to, or be connected with" the prevailing market conditions in the country of provision and must not be used to "offset differences in comparative advantages between countries". Saudi Arabia further notes that while the Appellate Body indicated that external benchmarks are theoretically alternative benchmarks under Article 14(d), "in practice", their application in a manner consistent with the requirements of this provision is virtually impossible, because of the nature and extent of the adjustments that would be required for the external benchmark to reflect in-country market conditions. Thus, Saudi Arabia considers that benchmarks based on the domestic cost of production of the goods or services in question are the most appropriate alternative benchmark where private prices have been found to be distorted, and that these benchmarks have been endorsed by the Appellate Body in *US – Softwood Lumber IV* and in *Canada – Dairy (Article 21.5 – New Zealand and US)*.\(^\text{501}\)

---

\(^{499}\) Japan third-party submission, paras. 27-31; third-party oral statement, paras. 7-9; third-party response to Panel questions 6 and 7.

\(^{500}\) Mexico third-party submission, paras. 57-60; third-party oral statement, paras. 19-20; third-party response to Panel question 6.

\(^{501}\) Saudi Arabia third-party submission, paras. 65-71 and 73-75; third-party response to Panel question 6; third-party oral statement, paras. 14-15.
Turkey agrees with the findings of the Appellate Body in *US – Softwood Lumber IV* that investigating authorities may use out-of-country benchmarks where they have established that private prices on the exporting country are distorted because of the predominant role of the government. In Turkey's view, by accepting the terms and conditions in the Protocol of Accession, China has confirmed its predominant role in the Chinese economy. In this regard, Turkey notes that the findings of the Appellate Body on the use of external benchmarks related to cases in market economy conditions, and considers it obvious that an investigating authority may apply external benchmarks when dealing with non-market economy conditions.502

4. Assessment by the Panel

(a) Can evidence of government predominance alone suffice to establish market distortion?

The central legal question raised by this set of claims is whether record evidence that the government was the predominant supplier of a good can be sufficient, on its own, to establish market distortion such that rejection of in-country private prices as benchmarks would be permissible under Article 14(d) of the SCM Agreement. In this regard, given the findings of the Appellate Body in *US – Softwood Lumber IV* to the effect that market distortion due to government predominance must be established on a case-by-case basis for in-country private prices to be rejected, would some evidence in addition to the government's share of the market for the good in question always be required before in-country private prices could be rejected?

We note that China takes the latter position. China argues that for rejection of in-country private prices to be valid, the investigating authority must have determined that the government's predominant role in a market has, in fact, caused private suppliers to "align their prices" with those of the government-provided goods "such that the government effectively acts as a price-setter and private suppliers as price takers".503 According to China, before an investigating authority could make findings in this respect, it would have to conduct an analysis of the relevant market, and evaluate conditions under which prices were established in that market.504

For a number of reasons, we read the Appellate Body report in *US – Softwood Lumber IV* differently from China. We wish to emphasize at the outset, however, that we share China's view that that report does not envisage or countenance the application of a "per se" rule, whereby in every case and regardless of any other evidence, the fact that a government was the predominant supplier of a particular good would be a sufficient basis for rejecting private in-country prices as the benchmark.

That said, we consider that the Appellate Body report makes clear that evidence of government predominance as a supplier is the principal evidence relevant to this question. We note in this regard, in particular, the Appellate Body's indication that it sees no material difference between the situations where the government is the predominant as opposed to the sole supplier of a good, and its implicit endorsement in that context of the panel's finding that the latter situation, without more, would justify looking elsewhere than private in-country prices for a benchmark (as such prices would not exist).

Concerning the issue of government as the predominant supplier of the input, we note that the analytical justification for the possibility to reject private in-country prices in that situation is identical for the other two cases of government involvement that were identified in *US – Softwood Lumber IV*,

---

502 Turkey third-party submission, paras. 33-35; third-party oral statement, para. 12.
503 China second written submission, para. 59.
504 Id.
and indeed applies *a fortiori* to both, i.e., where the government administratively controls all of the prices for the good in the country; and where the government is the sole supplier of the good in the country. In particular, the Appellate Body's analysis was that to require that private prices in the country be used as the benchmark whenever they exist could give rise to situations in which there is no way of telling whether the recipient is "better off" than it otherwise would be, absent the government financial contribution. That is, the Appellate Body said, where "the government's role in providing the financial contribution is so predominant that it effectively determines the price at which private suppliers sell the same or similar goods, [...] the comparison contemplated by Article 14 would become circular".\(^{505}\)

10.43 By the same token, where the government is the *sole* supplier, i.e., where there are no private in-country suppliers and no or negligible imports\(^{506}\), there would be no private prices at all, and thus nothing to compare with the government prices for purposes of calculating benefits. Similarly, where the government administratively controls all of the prices, the private suppliers' prices would not reflect in any way their own pricing decisions, but instead would be those established and mandated by the government, such that again, effectively, there would be no "private" prices to compare with the government prices.

10.44 Returning to the situation where the government is the predominant supplier (the situation that the USDOC found to exist in the investigations at issue before us), the Appellate Body emphasized that to require an effectively circular price comparison in such a situation is not supported by the objective of Article 14 which, as indicated by its title, deals with the calculation of the amount of a subsidy in terms of the benefit to the recipient. The Appellate Body recalled its statement in *Canada – Aircraft* that "there can be no 'benefit' to the recipient unless the 'financial contribution' makes the recipient 'better off' than it would otherwise have been, absent that contribution".\(^{507}\) The circular comparison that would result if Article 14(d) required in-country private prices even where the government was the predominant supplier of the good would, in the words of the Appellate Body, "frustrate the purpose of Article 14", as well as, "[m]ore generally, [...] the object and purpose of the SCM Agreement, which includes disciplining the use of subsidies and countervailing measures while, at the same time, enabling WTO Members whose domestic industries are harmed by subsidized imports to use such remedies".\(^{508}\) The Appellate Body noted here that if the calculation of the benefit yielded a result that was artificially low or even zero, as could be the case from an overly-restrictive interpretation of Article 14(d), then a WTO Member could not fully offset, by applying countervailing duties, the effect of the subsidy as permitted by the SCM Agreement.\(^{509}\)

10.45 Thus, we view the Appellate Body's report as underscoring the many reasons why, where the government is the predominant supplier of a good, being forced nevertheless always to use private prices in the country of provision of the good as the benchmark would "frustrate the purpose" of both Article 14 and the SCM Agreement more generally. In our view, this indicates that the evidence of the government's predominance as supplier of the good is the central fact that must be established for a decision to depart from private in-country prices to be valid. While this is of course not to the exclusion of other evidence that may be relevant to the question of whether the government's predominance as a supplier would lead to a circular price comparison in a particular investigation, we see the Appellate Body's report as indicating that evidence of predominance is the *sine qua non* for any such decision by an investigating authority. Similarly, we see nothing in that report that would

---

\(^{506}\) This is the scenario evoked by the panel in *US – Softwood Lumber IV*. (Panel Report on *US – Softwood Lumber IV*, footnote 135).

\(^{508}\) Id., para. 95 (quoting Appellate Body Report on *US – Carbon Steel*, paras. 73-74).

\(^{509}\) Id.
prohibit, a priori, a finding of market distortion, and a decision to depart from in-country private prices, where the only relevant evidence was that the government is the predominant supplier of the good.

10.46 In this regard, we disagree with China that the Appellate Body used the terms "predominant" and "significant" interchangeably. In our view, these are distinct concepts and we read the Appellate Body’s report as treating them as such. In particular, "a significant" supplier, in our view, refers to something smaller than "the predominant" supplier. Furthermore, to us it is clear that being the largest or even the only domestic supplier in the country in question is not at all the same as being "the predominant" supplier of the good in question in the country. In particular, the concept of "predominance" is in relation to the domestic market as a whole for the good in question, including imports. Obviously, the larger the share of imports, the lower the possibility to find that a government is "the predominant" supplier of the good in the country in question.

10.47 Ultimately, as the Appellate Body stated, the decision to reject in-country prices as the benchmark due to the role of the government in the market for the good in question can only be made on a case-by-case basis, in accordance with the relevant evidence in the particular investigation, rather than in the abstract. We thus now turn to the facts of the investigations before us.

(b) USDOC determination with respect to HRS inputs (CWP and LWR investigations)

10.48 The USDOC’s determinations of market distortion due to government predominance as a supplier of HRS in the CWP and LWR investigations are identical. We thus conduct a single, joint analysis of both.

10.49 In its final determinations in these investigations, the USDOC determined that because of the Government of China’s “overwhelming” involvement in the HRS market, private prices of HRS in China were not an appropriate basis of comparison for determining whether a benefit existed. In particular, the USDOC relied on facts available and drew adverse inferences, on which basis it established that 96.1 per cent of Chinese HRS production was from SOEs.

10.50 The final determinations recall that in the preliminary determinations in both investigations, the USDOC had not relied on observed HRS prices in China because the Government of China had failed to provide any requested information with regard to the HRS industry as a whole. Instead, relying on "adverse facts available", the USDOC had used world market prices from a private publication, "Steel Benchmarker", to preliminarily determine whether HRS from SOEs was provided for less than adequate remuneration. The final determinations indicate that following the

---

510 In particular, the Appellate Body contrasts an allegation that a government is a "significant" supplier (which would not be sufficient to establish distortion) to a finding of distortion based on the government's "predominant" role. (Appellate Body Report on US – Softwood Lumber IV, para. 102). (emphasis added).

511 Exhibits CHI-1, p. 11 and CHI-2, p. 4. The USDOC considered that the Government of China had failed to properly disclose information as regards the ownership of CISA (China Iron and Steel Association) members, and therefore considered that the Government of China did not act to the best of its ability. As a result, the USDOC drew adverse inferences with respect to the ownership of HRS producers in China. (Id.). We note that in the present dispute, China does not challenge the USDOC’s reliance on facts available and adverse inferences to establish this percentage of government ownership of HRS producers. Rather, as discussed in Section XVI, infra, China’s facts available claim is limited to the USDOC’s reliance on the same percentage to estimate the amount of the HRS purchased from trading companies by CWP and LWR producers that had been produced by SOEs.

512 Exhibits CHI-1, p. 64 and CHI-2, p. 35.

513 Exhibits CHI-1, pp. 11-12 and 64; and CHI-2, p. 37. In both investigations, the USDOC used Steel Benchmarker prices of “hot-rolled band” which is a type of HRS that is 5 mm thick x 1200-1500 mm wide. In the LWR investigation the USDOC used these prices even though it acknowledged that hot-rolled band could
preliminary determinations, the Government of China provided some information concerning the ownership structure of the Chinese HRS industry, so that the USDOC did not simply reject in-country prices, but instead examined record evidence regarding "all potential benchmark prices" to determine the appropriate one under the hierarchy in the U.S. law (including whether it could use in-country private prices).  

10.51 The final determinations indicate that the parties on both sides of the investigation presented arguments to the USDOC as to whether private prices could and should be used as the benchmarks. The applicants presented, and made arguments based on, record evidence, to the effect that the government's dominant position in the HRS market distorted private prices. In particular, in the CWP investigation, the petitioners referred to the high level of government ownership of the industry, and the market power of SOEs, as well as record evidence that the Government of China successfully carried out policies to suppress domestic prices, and the existence of industrial policies aimed at enhancing the output of downstream steel-using industries. The applicants also argued that "substantial" record evidence indicated that Chinese prices were distorted because SOEs had significant market power. In this regard, they argued that verified record evidence supported a private ownership share of only 2.5 per cent of the industry, meaning that the state could act as a monopolist; that documentation from government agencies indicated that the state controlled sectors it deemed important to national economic performance, including the steel industry, and that record evidence for specific companies demonstrated the government's "significant influence" over the operations of private producers. In the LWR investigation, the final determination indicates that the applicants argued that they had submitted evidence that made clear that there was not a usable market-determined price for HRS in China.

10.52 In both investigations, the Government of China and the respondent companies urged the USDOC to look beyond government ownership and consider the actual nature and structure of the HRS market. The Government of China argued in particular that certain aspects of the market demonstrated that government involvement did not distort the market. In this regard, the Government of China argued that: (i) there was no single or uniform government-set price for HRS in China, and that SOE producers competed with one another; (ii) the HRS industry was highly fragmented (i.e., the 44 large-and medium-sized steel producers that reported their production data to the China Iron and Steel Association, together accounted for only 52 per cent of HRS production in China; the single largest producer only accounted for 9.6 per cent; and the five largest producers combined accounted for less than 30 per cent of total production and one of the five largest producers was privately-owned); (iii) the major SOE producers operated on the basis of the same laws as private producers, and thus had the duty to protect their shareholders and maximize profits (noting that some SOEs had

not be used to produce LWR (i.e., the wall thickness of hot-rolled band was 5 mm thick, while the wall thickness for LWR was less than 4 mm). While it noted that it was not able to find another world market price for HRS that could be used to produce LWR, the USDOC nevertheless considered that "additional rolling would be required to produce the thinner HRS used in LWR production and, therefore, the market price for thinner HRS would presumably be higher". Therefore, relying on facts available, the USDOC determined that Steel Benchmarker prices were appropriate to measure the adequacy of remuneration for state-owned HRS. (Exhibit CHI-2, p. 37).

514 Exhibits CHI-1, p. 64 and CHI-2, p. 35. U.S. law specifies a hierarchy of "market-determined" benchmarks in this regard: "(1) market prices from actual transactions within the country under investigation (e.g., actual sales, actual imports or competitively run government auctions) ('tier one'); (2) world market prices that would be available to purchasers in the country under investigation ('tier two'); or (3) an assessment of whether the government price is consistent with market principles ('tier three')". (Exhibits CHI-1, p. 63 and CHI-2, p. 35).

515 The determination indicates that the applicants referred in particular to the National Development and Reform Commission (the "NDRC"), and the SASAC. (Exhibit CHI-1, p. 60).

516 Id., pp. 56-57 and 59-61.

517 Exhibit CHI-2, p. 34.
significant shares of private ownership); (iv) the HRS industry had increasing levels of private investment and encompassed significant private producers; (v) the SOEs were profitable, and thus were unlikely to be selling for less than adequate remuneration; and (vi) a functioning HRS market existed in China, as evidenced by prices fluctuating from day to day, and varying across regions, with no clear pattern of higher or lower prices being charged by private or SOE producers.\footnote{518} The Government of China also argued that available private pricing demonstrated that there was a functioning market, such that private prices for HRS were not distorted and could be used as a benchmark.\footnote{519} China also urged the USDOC, if it found that private prices could not be used, to assess whether the prices charged by SOEs were consistent with "market principles" as per the U.S. domestic legislation.\footnote{520}

10.53 In both determinations, the USDOC considered and rejected as unpersuasive these arguments by the respondents. First, the USDOC considered that the Government of China's "assertions" that there was no single or uniform government-set price; that the HRS industry was highly fragmented; that the SOEs behaved like private producers; that private investment in the industry was growing; and that a functioning market existed, as prices fluctuated from day to day and varied across regions, did not mitigate the fact that the government accounted for 96.1 per cent of Chinese HRS production. The USDOC stated that "in such instances, it is reasonable to conclude that domestic prices for comparable goods provided from private sources are effectively determined by the government provided prices".\footnote{521} Second, the USDOC found, the profitability of state-owned HRS producers was irrelevant for determining whether HRS was provided for less than adequate remuneration.\footnote{522}

10.54 Thus, in its final determinations the USDOC, as it did in the preliminary determinations, rejected private prices in China (both from domestic producers and from imports into China) as benchmarks. In this regard, the final determinations refer first to the 96.1 per cent share of the HRS produced in China that was produced by SOEs (which the USDOC characterized as "the government's overwhelming involvement" in the HRS market in China).\footnote{523} The determinations indicate that because of this, using private producer prices in China "would be akin to comparing the benchmark to itself, (i.e., such a benchmark would reflect the distortions of the government presence)".\footnote{524} The determinations also indicate that trade statistics showed that the import quantities of HRS were small relative to the Chinese domestic production, such that unit values of imports into China were not sufficient to serve as reliable benchmarks.\footnote{525} The USDOC considered that where the government accounts for a significant portion of production, private prices for comparable goods effectively align with those set by the government. The USDOC's assessment in respect of the government's 96.1 per cent share, as noted above, was that "in such instances, it is reasonable to conclude that domestic prices for comparable goods provided from private sources are effectively determined by the government provided prices".\footnote{526} Overall, the USDOC thus concluded that "prices stemming from private transactions within China cannot give rise to a price that is sufficiently free from the effects of

\footnote{518} Exhibits CHI-1, pp. 58-59 and CHI-2, pp. 32-33.  
\footnote{519} Exhibits CHI-1, p. 58 and CHI-2, p. 33.  
\footnote{520} Exhibits CHI-1, pp. 58-59 and CHI-2, p. 33.  
\footnote{521} Exhibits CHI-1, p. 65 and CHI-2, p. 36.  
\footnote{522} Id.  
\footnote{523} Exhibits CHI-1, pp. 64-65 and CHI-2, p. 36.  
\footnote{524} Exhibits CHI-1, p. 64 and CHI-2, p. 36. In this context, in both determinations the USDOC cited its determination in its investigation of Canadian Lumber, where it had noted that "[w]here the market for a particular good […] is so dominated by the presence of the government, the remaining private prices in the country in question cannot be considered to be independent of the government price. It is impossible to test the government price using another price that is entirely, or almost entirely, dependent upon it. The analysis would become circular because the benchmark price would reflect the very market distortion which the comparison is designed to detect". (Id.).  
\footnote{525} Exhibits CHI-1, footnote 212 and CHI-2, p. 36.  
\footnote{526} Exhibits CHI-1, p. 65 and CHI-2, p. 36.
the [Government of China's] actions, and therefore cannot be considered to meet the statutory and regulatory requirement [under U.S. law] for the use of market-determined prices to measure the adequacy of remuneration".527

10.55 We recall that China's legal argument, essentially, is that in these investigations the USDOC applied an unlawful "per se" rule whereby evidence that the government was the majority supplier of a good led ipso facto to the determinations that the Chinese market prices for HRS were distorted such that they were not suitable as benchmarks. On the basis of the determinations, as just summarized, we do not view the USDOC's determinations in the same way. To the contrary, given the extensive summaries and discussion contained in the determinations, it is clear that the USDOC received from parties on both sides of the investigation, and considered, arguments and evidence relevant to the role of the government in the Chinese HRS market. In this regard, we note that because China did not provide complete, verifiable information regarding the amount of domestically-produced HRS that was accounted for by SOEs, the USDOC relied on "facts available" and drew adverse inferences in establishing this fact. China does not argue before us, and there is no indication in the record, that the Government of China provided during the investigation any information that demonstrated that the government was not the predominant supplier, and indeed the various arguments raised by the Government of China (which the USDOC characterized as based on "assertions" rather than evidence) were found by the USDOC not to be relevant to the question of the government's predominance as a supplier or its ability effectively to set the prices for HRS in China.

10.56 In this regard, we disagree with China's interpretation of a statement in a footnote in these determinations, to the effect that even if the (unverifiable) figure of approximately 71 per cent advanced by China as the share of Chinese HRS produced by SOEs were accepted, the USDOC still would have found that lower figure to be a reasonable basis on which to conclude that private prices in China were distorted and thus unusable as benchmarks. For China, this statement confirms that the USDOC applied a "per se" rule. To us, however, this is simply an indication that the USDOC would have considered this percentage to be a level that could give rise to distortion. We see nothing in the USDOC's determinations that indicates that the USDOC's analysis would have stopped at that point. Indeed, the determinations indicate the contrary in that, although the government's share as a domestic supplier actually found in the investigations was much higher than 71 per cent, the record shows that the USDOC obtained and analyzed a range of other information, including information gathered on its own initiative (such as that on the volume and market share of imports). The fact that the USDOC ultimately did not find that that other information led to the conclusion that government predominance did not distort the market provides no indication, in our view, that a "per se" rule was applied in these investigations.

10.57 Finally, we consider that the USDOC's analysis and conclusions in the OTR investigation provide strong circumstantial evidence that the USDOC's general approach to predominance is not a mechanical, per se test under which, any time the government is "a significant" supplier, the USDOC mechanically concludes that private in-country prices are unusable as benchmarks. Rather, this investigation was clearly based on a case-by-case analysis of the particular facts of the investigation, on the basis of which the USDOC found that the domestic prices were not distorted, in spite of SOEs being major producers of the rubber inputs in question.

10.58 In particular, in the OTR investigation, the USDOC found that SOE producers accounted for a significant portion of Chinese production of natural and synthetic rubber inputs. Nevertheless, the USDOC decided to use as benchmarks, for the tire producers' purchases of rubber from SOEs, both prices of their rubber purchases from private Chinese producers, and prices that they paid for

527 Id. We note in this regard that according to the USDOC's determination, under U.S. law, "market prices from actual transactions" include prices from "actual sales, actual imports or competitively run government auctions". (Exhibits CHI-1, p. 63 and CHI-2, p. 35).
imported rubber. In other words, the USDOC considered that market prices (including import prices) within China constituted suitable benchmarks. The basis for this conclusion was the record evidence demonstrating the high import penetration of the Chinese markets for the relevant goods (50 per cent for natural rubber and 75 per cent for synthetic rubber), and the absence of any other evidence demonstrating government control or distortion of these markets.528

10.59 The USDOC found that while SOE producers accounted for "a significant portion" of the domestic production of both categories of rubber:

"imports of natural rubber exceed the total domestic production of natural rubber as a percentage of natural rubber consumption in the PRC. Imports of synthetic rubber exceed the total domestic production of synthetic rubber as a percentage of synthetic rubber consumption in the PRC. Thus, given the large penetration of imports of natural rubber and synthetic rubber in the PRC rubber markets and the lack of other evidence on the record to show that SOEs or government agencies through other methods had control of, or otherwise distorted, these markets during the POI, we do not find government distortion of the PRC rubber markets".529 (footnote omitted)

10.60 Thus, to relate this finding back to the reasoning of the Appellate Body in US – Softwood Lumber IV, it is clear based on the import penetration figures in the OTR determination that there was no evidence that the government was "the predominant supplier" or otherwise controlled prices. The USDOC's determination recognized this and thus relied on the observed prices (of private suppliers and imports) in China as benchmarks.

10.61 For the foregoing reasons, we find that China has not established that the USDOC acted inconsistently with the obligations of the United States under Article 14(d) of the SCM Agreement by rejecting in-country private prices in China as benchmarks for HRS in either the CWP or the LWR investigations.530

(c) USDOC determination with respect to BOPP inputs (LWS investigation)

10.62 In the LWS investigation, the USDOC determined that SOE involvement in the petrochemical industry distorted the market, and that therefore it would be inappropriate to rely on private domestic input prices in China as a benchmark.531 We note that these conclusions were the result of the USDOC's application of facts available and adverse inferences because the Government of China did not provide the requested information necessary for determining whether domestic prices could be used as benchmarks, and did not act to the best of its ability.532

10.63 In particular, the USDOC found on this basis that SOEs accounted for 90 per cent of the BOPP production in China and distorted the market. The final determination indicates in this regard that in spite of repeated requests to the Government of China, including at verification, to provide information concerning the ownership of Chinese BOPP producers, no such information was provided. The USDOC therefore stated that "because the [Government of China] failed to provide us with the necessary information, we are unable to gauge the extent of government involvement in the petrochemical industry which produces these three inputs. Without such information, the Department is unable to analyze the nature and structure of the market in order to determine whether the level of

528 Exhibit CHI-4, pp. 79-80.
529 Id., p. 11.
530 Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, infra.
531 Exhibit CHI-3, p. 19.
532 Id.
government ownership significantly distorts the prices for these inputs in the PRC.\textsuperscript{533} In this regard, the USDOC stated that because the Government of China had failed to provide the requested information:

"we have no record evidence to contravene petitioners' allegation that SOES such as China Petroleum and Chemical Corporation (Sinopec), which was alleged to control 90 percent of the Chinese petrochemical industry and produces [...] BOPP, distort the market. As such, we determine in this final determination that domestic private prices for these inputs are distorted and not usable as benchmarks".\textsuperscript{534}

10.64 On the basis of this determination, the USDOC concluded that "prices stemming from private transactions within China cannot give rise to a price that is sufficiently free from the effects of the Government of China's distortions" to be used as benchmarks.\textsuperscript{535} The USDOC noted that this approach was consistent with its decision in the CWP investigation, where it had determined that because of the government's overwhelming involvement in the market for the inputs, the use of private producer prices in China would be akin to comparing the benchmark to itself (i.e., such a benchmark would reflect the distortions of the government presence).\textsuperscript{536} The USDOC also cited its regulations as providing that "where it is reasonable to conclude that actual transaction prices are significantly distorted as a result of the government's involvement in the market, we will resort to" sources other than in-country private prices for benchmarks. The USDOC also noted that there were no actual, company-specific import transactions that it could consider using as benchmarks, as Aifudi had not imported BOPP.\textsuperscript{537}

10.65 We note that here again, China's claim is that the USDOC unlawfully based its decision to reject private in-country prices as the benchmark for BOPP on a \textit{per se} test based on the government's share as a producer of the product. We disagree with this characterization. It is clear from the record of the investigation that China did not cooperate with the USDOC in respect of the information regarding the Chinese industry producing BOPP. Indeed, the USDOC found that the Government of China provided none of the requested information in this regard, and before us China makes no representation to the contrary. In the words of the USDOC, this left it in the situation where it had before it "no record evidence to contravene" the allegations of applicants that the SOE petrochemical producers accounted for 90 per cent of domestic production of BOPP and distorted the market. In other words, the applicants had made these allegations, and the USDOC had requested from the Government of China but had not received, information on the structure and operation of the Chinese petrochemical industry. The USDOC thus had no evidence to rebut the allegations that had been made and in addition found that the Government of China had not cooperated such that the drawing of adverse inferences (concerning both the government's share of production, and government distortion of the market) was justified. We do not consider that this set of facts can be construed as the mechanical application of a \textit{per se} test, given that it was based on the failure by the Government of China and the respondent companies to provide requested or other evidence to rebut the allegations as to both government ownership and market distortion. Instead we consider that this conclusion is one which the USDOC could lawfully reach on the circumstances of the case.

\textsuperscript{533} Exhibit CHI-3, pp. 69-70.
\textsuperscript{534} Id., pp. 19-20.
\textsuperscript{535} Id., p. 72.
\textsuperscript{536} Id., pp. 20.
\textsuperscript{537} Id., pp. 20 and 72.
For the foregoing reasons, we find that China has not established that the USDOC acted inconsistently with the obligations of the United States under Article 14(d) of the SCM Agreement by rejecting in-country private prices in China as benchmarks for BOPP in the LWS investigation.538

F. CHINA'S CLAIMS UNDER ARTICLE 14(D) OF THE SCM AGREEMENT – GOVERNMENT-PROVIDED LAND-USE RIGHTS

1. Claim of China

We now take up China's challenge to the USDOC's decision to reject in-country prices as the benchmark to use for the adequate remuneration determination with respect to subsidies in the form of the provision of land-use rights.539 China's claim is that the USDOC's decisions to reject land prices in China as the appropriate benchmark to determine benefit in the LWS and OTR countervailing duty investigations was inconsistent with Article 14(d) of the SCM Agreement.540, 541

2. Main arguments of the Parties

(a) China

China argues that the USDOC's decisions to reject land prices in China as the appropriate benchmark disregarded the plain language of Article 14(d), as interpreted by the Appellate Body in US – Softwood Lumber IV.542

In particular, China submits that, although the USDOC acknowledged that there are secondary markets for land-use rights in China, the USDOC rejected these private prices on two grounds: (i) the application of a per se rule based on its finding that the government is the ultimate owner of all land in China; and (ii) its finding that property rights in China "remain poorly defined and weakly enforced".543 Concerning what it considers to be the USDOC's application of a per se rule, China argues that in US – Softwood Lumber IV the Appellate Body rejected the notion that a presumption of distortion could provide a sufficient basis for resorting to out-of-country benchmarks.544 With regard to the USDOC's characterization of the legal status of property rights in China, China alleges that there is no basis in Article 14(d) to reject "prevailing market conditions" merely because they do not accord with an investigating authority's conception of how markets should be structured and regulated, or because they are insufficiently "pure".545 China emphasizes that the term "prevailing market conditions" in the country of provision, as interpreted by the Appellate Body in US – Softwood Lumber IV, does not refer to a "pure market", a "market undistorted by government

538 Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, infra.
539 China's related challenge, in respect of the benchmark actually used, is addressed in Section X.I, infra.
540 See, e.g., China first written submission, para. 304.
541 As indicated at para. 10.1, supra, China also raises consequential claims pursuant to Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.
542 See, e.g., China second written submission, para. 64.
543 China first written submission, paras. 303 and 305; response to Panel question 34 (first meeting).
544 See, e.g., China second written submission, para. 49; response to Panel question 34 (first meeting), citing to Appellate Body Report on US – Softwood Lumber IV, para. 102.
545 See, e.g., China response to Panel questions 34 and 43 (first meeting). China also argues that the sources relied upon by the USDOC for its Thai benchmark prices provide no indication that prices in China are distorted or that China is a "special case" in this respect, and that these sources rather contradict the USDOC's finding that all land prices in China are distorted. China notes that the reports relied on by the USDOC to this effect illustrate the wide variations for land prices within China, thus, confirming that China has a functioning market for land-use rights. (China response to Panel question 34 (first meeting)).
intervention”, or to a "fair market value". Moreover, China submits that the Appellate Body limited the possibility of using benchmarks other than in-country private prices to a single situation, that where distortion exists due to the "government's predominant role in the market as provider of the same or similar goods". Thus, China argues, investigating authorities do not have carte blanche to reject private prices whenever they consider "prevailing market conditions" not quite "market enough".

(b) United States

10.70 The United States argues that China's claim is unsupported by the text of the SCM Agreement and China's Protocol of Accession, and therefore, should be rejected. In particular, the United States submits that nothing in the text of Article 14(d) suggests that land-use rights are exceptional, or that they should be treated differently than other goods with respect to the use of external benchmarks. The United States also argues that China's position is contradicted by the "flexibility" of Article 14, which the Appellate Body has explained permits the use of out-of-country benchmarks, and by the terms of Section 15(b) of China's Protocol of Accession, which provides no basis to exclude government-provided land-use rights, but rather confirms the permissibility of using out-of-country benchmarks in countervailing duty investigations concerning imports from China. In addition, the United States submits that China's restrictive interpretation, if accepted, would eliminate the possibility of countervailing the subsidized provision of land-use rights, contrary to the object and purpose of the SCM Agreement.

10.71 The United States submits that the USDOC's determination to use an out-of-country benchmark is consistent with Article 14(d), as interpreted by the Appellate Body in US – Softwood Lumber IV. Specifically, the United States argues that, based on all the evidence on the record, the USDOC determined that due to China's predominant role in the land market, it was necessary to use an out-of-country benchmark to measure the benefits at issue. Furthermore, the United States submits that the USDOC did not limit its distortion analysis to the mere fact that the Chinese government owns all the land in China. Rather, the United States argues that the USDOC also found that China retains and exercises significant control over the supply side of the entire land market in China, including land-use rights for private industrial use, so as to distort prices in the primary and

547 In China's view, the Appellate Body did not even suggest that other situations, such as government intervention in markets generally, could justify the rejection of private prices. (See, e.g., China response to Panel question 32 (first meeting), citing to Appellate Body Report on US – Softwood Lumber IV, paras. 93 and 106).
548 China opening statement at the first meeting of the Panel, para. 46.
549 United States first written submission, paras. 272-273. The United States emphasizes that it is not necessary that goods be tradable across borders for them to be covered by the Agreement, arguing that in US – Softwood Lumber IV the Appellate Body noted that excluding non-tradable goods would permit the circumvention of the WTO's subsidies disciplines. (Id., para. 274, citing to Appellate Body Report on US – Softwood Lumber IV, paras. 57, 67, 64).
550 See, e.g. United States first written submission, para. 276; opening statement at the first meeting of the Panel, para. 32, citing to Appellate Body Report on US – Softwood Lumber IV, para. 103.
551 United States first written submission, para. 275. For instance, the United States argues, China's position would prevent Members from measuring the benefit of land-use rights provided by the government since the comparison of this financial contribution to the benchmark would become circular, i.e., prices for government-provided land would be compared to itself. (United States opening statement at the first meeting of the Panel, para. 31, citing to Appellate Body Report on US – Softwood Lumber IV, para. 93).
552 The United States argues that in US – Softwood Lumber IV the Appellate Body considered that the government's predominant role in the market suffices to distort private prices and to justify the use of out-of-country benchmarks. (See, e.g., United States second written submission, para. 80; response to Panel question 44 (first meeting), citing to Appellate Body Report on US – Softwood Lumber IV, para. 93).
secondary markets. Thus the United States submits that contrary to China's assertions, the USDOC's determination was not based on a finding that market conditions were insufficiently "pure", but rather on a finding that the land market in China had significant distortions from the government's predominant role in the market. In addition, the United States rejects China's argument that, because there is a differentiation in pricing for land-use rights in China, it has an undistorted "functioning market". The United States submits that uniform pricing in China was not a basis for the USDOC's findings that China had a predominant role in the land market.

3. Main arguments of the Third Parties

(a) Australia

10.72 Australia considers that nothing in the SCM Agreement supports the argument that the provision of land should be treated differently from the provision of other goods under Article 14(d). Consistently with the interpretation of the Appellate Body in US – Softwood Lumber IV, Australia notes that the term "goods" has been given a broad meaning under Article 1.1(a)(1)(iii) of the Agreement to include immovable property.

(b) European Communities

10.73 The European Communities recalls that, consistent with the observations of the Appellate Body in US – Softwood Lumber IV, investigating authorities may use out-of-country benchmarks if they find that prices in the relevant market are distorted.

(c) Mexico

10.74 Mexico recalls that the Appellate Body found in US – Softwood Lumber IV that resorting to out-of-country benchmarks in the case of the provision of land is consistent with Article 14(d) provided that benchmark used "relates or refers to, or is connected with" prevailing market conditions of the country of provision.

(d) Saudi Arabia

10.75 Saudi Arabia agrees with China that the use of external benchmarks is especially inappropriate with respect to financial contributions in the form of the provision of land, inter alia, because the value of land is determined not only by its physical characteristics, but also by the legal system in which the land exists.

---

553 See, e.g., United States second written submission, paras. 105-106; response to Panel question 42(b) (first meeting).
554 The United States also disagrees with China's assertion that factors other than the government's predominant role in the market cannot justify rejecting in-country prices as benchmarks. The United States submits that the Appellate Body in US – Softwood Lumber IV did not address and, therefore, did not exclude the possibility that other types of government intervention would also distort the market so as to render private prices unreliable. (See, e.g., United States second written submission, paras. 81-82 and 107).
555 The United States adds that the fact that prices differ is not dispositive of whether the government has a predominant role in the market. (United States second written submission, para. 108).
556 Australia third-party oral statement, para. 21.
557 European Communities third-party submission, para. 47.
558 Mexico third-party response to Panel question 6.
559 Saudi Arabia third-party submission, para. 77.
4. **Assessment by the Panel**

10.76 In the LWS and OTR investigations, the USDOC determined that China's provision of land-use rights to investigated producers (Aifudi and Starbright) for less than adequate remuneration constituted a countervailable subsidy. In this context, the USDOC determined that it could not use an in-country benchmark for government-provided land-use rights because Chinese land prices were distorted by the significant government role in the market that prohibited private land ownership in China and resulted in all land being owned by some level of government. The USDOC indicated in this regard that it had verified that all urban land was state-owned (owned by the national government), and that all rural land was collectively-owned (owned by the local government), i.e., that the government, either at the national or local level, was the ultimate owner of all land in China.\(^{560}\)

10.77 We note here that, on the basis of the reasoning of the panel and the Appellate Body in *US – Softwood Lumber IV*, the USDOC's finding that the government was the sole supplier of the good in question might have been sufficient for a conclusion by the USDOC that it could not use in-country prices for land as the benchmark. We do not consider, however, that in fact the USDOC based any conclusion as to the availability of in-country benchmarks directly on the government's degree of ownership of the land or the general fact that it was significantly involved in the market as a provider of land-use rights, as such. To the contrary, these were cited as facts describing the nature of the government's significant involvement in the land-use market, which then was further analyzed.

10.78 In particular, the USDOC did not stop with these statements but instead continued its analysis, gathering, assessing and verifying a wide variety of information as to land-use pricing in China, aimed at determining "whether the [...] [G]overnment [of China] exercises control over the supply side of the land market in China as a whole so as to distort prices in the primary and secondary markets".\(^{561}\) In this regard, the USDOC found that government authorities controlled, albeit on a decentralized basis, the supply and allocation of land that could be used by non-state-owned enterprises for non-agricultural purposes, and that the restrictions imposed extended the control by the government to the secondary in addition to the primary market. The USDOC further found that this control significantly distorted the price paid for the granted land-use rights in both primary and secondary markets, and that land-use prices in China were not set in accordance with market principles.\(^{562}\)

10.79 In this connection, the USDOC found that notwithstanding the legal reforms implemented by China, agricultural land-use rights remained limited in scope and were poorly defined and weakly enforced, such that land-use rights of farmers in China still were not secure and their right to alienate their land was severely restricted. Local governments had often exercised broad and unrestricted powers to expropriate land from farmers and had given them only partial compensation for such expropriation. Further, agricultural land could be sold for non-agricultural use only if its legal status was first changed from "collective land" to "state-owned land", and the power to effect that conversion rested solely with local governments.\(^{563}\) The supply of land for non-agricultural use in the

---

\(^{560}\) Exhibits CHI-3, p. 58 and CHI-50, pp. 71368-71369.

\(^{561}\) See, e.g., Exhibit CHI-3, p. 58.

\(^{562}\) Id., pp. 15-17 and 58-59; and Exhibit CHI-50, p. 71369.

\(^{563}\) Exhibits CHI-34 p. 67907 and CHI-50, p. 71369. In the *Antidumping Duty Investigation of Certain Lined Paper Products from the People's Republic of China* (the "Lined Paper investigation"), the USDOC noted that the status of agricultural land could only be changed after it had been expropriated. Therefore, local governments acted in the dual roles of owners of the agricultural land and as representatives of the state, and as such, could expropriate land from farmers, convert it into state-owned land, and thereafter sell the land-use rights to private enterprises. (Antidumping Duty Investigation of Certain Lined Paper Products from the People's Republic of China ("China") – China's status as a non-market economy ("NME"), Exhibit US-69, p. 42).
primary and secondary markets further depended, in part, on the "allocated" land-use rights which were provided to SOEs on a purely administrative basis: the government allocated land-use rights to SOEs for a nominal one-time charge and annual fee. "Allocated" land-use rights were transferable for commercial purposes only if they were first converted into "granted" land-use rights. The power to convert "allocated" land-use rights into "granted" land use rights (and therefore, the land available to private enterprises for commercial use) rested solely with the government.\textsuperscript{564} The USDOC also found that some SOEs illegally (without first converting their land-use rights as required) had used their allocated land-use rights in order to attract foreign investments. Consequently, the USDOC found, the conversion of land from "allocated" to "granted" was not a \textit{pro forma} process.\textsuperscript{565}

10.80 The USDOC further determined that China's government control of the land market distorted the prices of "granted" land-use rights in both the primary and secondary markets.\textsuperscript{566} Although noting that the Government of China had implemented certain land reforms in order to increase transparency and competitive market conditions, the USDOC determined that these reforms had not been fully implemented – i.e., that there was a wide divergence between the \textit{de jure} reforms and their \textit{de facto} implementation.\textsuperscript{567} Specifically, it found that land-use rights were still transferred via "closed-door" negotiations and not via public auctions, tenders or listings as required by law. Therefore, the USDOC determined that the Government of China retained a predominant role in the land market and that this control distorted the supply and pricing of land-use rights in China, such that private prices in China were not an appropriate basis of comparison for determining whether a benefit existed.\textsuperscript{568}

10.81 Given all of these findings, we also disagree with China that the USDOC's determinations were based simply on a finding that land-use rights were limited in scope and weakly enforced. While this was among the USDOC's characterizations of certain aspects of the land-use market in China, it is by no means the entirety of the USDOC's analysis or determinations. To the contrary, we are satisfied that the USDOC conducted an extensive analysis of the land-use market in China. Before us, the only specific record evidence that China points to is the "existence" of a secondary market, which it argues the USDOC "rejected" as a source for benchmarks.\textsuperscript{569} We note, however, as indicated, that the USDOC's inquiry was not whether there was a secondary market, but whether the evidence showed that prices in that market were distorted. The USDOC found that the evidence indicated that those prices were distorted, and before us China points to no record evidence to the contrary.

10.82 For the foregoing reasons, we find that China has not established that the USDOC acted inconsistently with the obligations of the United States under Article 14(d) of the SCM Agreement by rejecting in-country land-use prices in China as benchmarks for government-provided land-use rights in the LWS and OTR investigations.\textsuperscript{570}

\textsuperscript{564} Further, the USDOC noted that enterprises could also purchase "granted" land-use rights directly from the government, and therefore determined that such purchases were government-controlled. (Exhibit CHI-34, p. 67907).

\textsuperscript{565} Exhibit CHI-34, p. 67907.

\textsuperscript{566} As an example, the USDOC noted that if farmer land-use rights were well-defined and effectively enforced, there would be less land available for non-agricultural use and therefore higher prices for granted land-use rights. (Id.).

\textsuperscript{569} China response to Panel question 34 (first meeting).

\textsuperscript{570} Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI.3 of the GATT 1994 in connection with this claim see Section XIII, \textit{infra}. 
G. CHINA'S CLAIMS UNDER ARTICLE 14(b) OF THE SCM AGREEMENT – GOVERNMENT PROVISION OF PREFERENTIAL LENDING

1. Claims of China

10.83 In the CWP, LWS and OTR investigations, the USDOC determined that China provided subsidies to producers of the investigated products in the form of RMB-denominated loans by SOCBs. In addition, in the OTR investigation, the USDOC determined that one of the investigated producers, GTC, received subsidies in the form of U.S. dollar-denominated loans from SOCBs.

10.84 In the three investigations at issue, the USDOC found that lending rates in China were significantly distorted, and therefore unsuitable as market benchmarks. For this reason, the USDOC resorted to external benchmarks to determine whether loans from SOCBs conferred a benefit. According to the USDOC, the use of external benchmarks was consistent with its past practice.

10.85 Before us, China challenges, as inconsistent with Article 14(b) of the SCM Agreement, the USDOC's decision to reject Chinese in-country interest rates, and to resort to external benchmarks, for calculating the existence and amount of any benefit from SOCB-provided loans denominated in RMB. China makes no such claim in respect of the USDOC's decision to reject Chinese in-country interest rates and resort to external benchmarks for calculating the existence and amount of any benefit from SOCB loans denominated in U.S. dollars. In respect of both RMB- and U.S. dollar-denominated loans, China also challenges the specific benchmarks used by the USDOC. The issues concerning the specific loan benchmarks are discussed in Sections X.J and X.K, infra.

2. Main arguments of the Parties

(a) China

10.86 China argues that the USDOC's decision to reject interest rates in China as benchmarks for the RMB loans was inconsistent with the requirements in Article 14(b) of the SCM Agreement. In particular, China alleges that under Article 14(b) the benchmark for determining whether a loan provided by the government confers a benefit is a "comparable commercial loan that the firm could actually obtain on the market", and that a benchmark can meet these criteria only if it is denominated in the same currency as the government-provided loan. China argues that because interest rates differ by currency, loans denominated in different currencies cannot be "comparable". According to China, a comparison involving loans in different currencies will necessarily measure the "factors that cause interest rates to be different in different currencies", rather than the extent to which the recipient of the government-provided loan is "better off" as required by Article 14(b). In addition, China considers that the "market" in which a firm can "actually obtain" a "comparable" loan will depend

---

571 Exhibits CHI-1,p. 6; CHI-3,pp. 11 and 83; CHI-4, pp. 7 and 104.
572 Exhibits CHI-1, pp. 6-7; CHI-3, p. 83; CHI-4, pp. 104-105.
573 The USDOC cited its previous findings in Softwood Lumber from Canada; CFS from the PRC; and CFS from Indonesia, where it had resorted to out-of-country benchmarks. (See, e.g., Exhibits CHI-1, p. 7; CHI-3, p. 83; and CHI-4, pp. 7 and 104-105).
574 As indicated at para. 10.1, supra, China also raises consequential claims pursuant to Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.
575 China first written submission, para. 233; oral statement at the first meeting of the Panel, paras. 50-51; second written submission, para. 77.
upon the characteristics of the loan, including the currency in which it is denominated.\textsuperscript{577} Thus, China submits that because the RMB can only be borrowed in the Chinese market, the USDOC was required to identify "comparable commercial loans" as benchmarks within this market.\textsuperscript{578} China argues that despite the existence of such loans in the Chinese market, the USDOC unlawfully rejected them on the ground that China's "predominant role in the banking sector results in significant distortions that render lending rates in [China] unsuitable as market benchmarks".\textsuperscript{579}

10.87 China disagrees with the United States that the Appellate Body's interpretation of Article 14(d) in \textit{US – Softwood Lumber IV} is relevant to the question of interest rates under Article 14(b). Even accepting \textit{arguendo} that the concept of "distortion" as discussed by the Appellate Body in that case had some relevance in the context of interest rates under Article 14(b), China submits that, consistently with the Appellate Body's finding, the benchmark selected under Article 14(b) would still need to be based on "a comparable commercial loan which the firm could actually obtain on the market".\textsuperscript{580} China also submits that none of the factors of government control and intervention on which the United States seems to base its distortion rationale (i.e., government ownership of banks, government regulation of deposit and lending rates, and government actions to influence the direction of interest rates) can plausibly support the USDOC's disregard of the requirements of Article 14(b).\textsuperscript{581}

10.88 China argues, first, that interest rates are a direct consequence of the monetary policies pursued by governments, and that as a consequence, the interest rates set by governments affect the commercial interest rates charged by all banks, regardless of their level of state ownership.\textsuperscript{582} In fact, China argues, the record evidence demonstrates that all interest rates in China, including those charged by non-state owned banks, are affected by the efforts of the central bank to curb monetary expansion through the setting of interest rates, rather than by the extent of the government's ownership of banks.\textsuperscript{583} Thus, in light of the direct relationship between interest rates and national monetary

\textsuperscript{577} China second written submission, para. 83; response to Panel question 18 (second meeting). In support of its position, China relies on the Appellate Body's finding in \textit{US – Upland Cotton} that the geographic scope of the relevant "market" will "depend on the product itself and its ability to be traded across distances". Consistently with this interpretation, China adds that factors such as the currency in which a loan is denominated, the borrower's creditworthiness, and the regulatory factors affecting the ability of borrowers and banks to operate across national borders are all relevant to determine the geographic "market" under Article 14(b). China therefore disagrees with the United States that there is a "world market" for lending, and adds that neither the United States, nor the USDOC have provided any evidence that the relevant "market" for RMB-denominated loans is anything "other" than China's lending market. (\textit{See, e.g.}, China first written submission, paras. 237-239; comments on the United States' response to Panel question 17 (second meeting), citing to Appellate Body Report on \textit{US – Upland Cotton}, para. 405).

\textsuperscript{578} China first written submission, para. 239. China further submits that, as also acknowledged by the USDOC, the mere fact that a bank is wholly or partially owned by a government does not mean that loans by that bank are not "commercial". That is, a benchmark loan is "commercial" if it is made by a bank in the ordinary course of commerce. (Id, para. 235).

\textsuperscript{579} \textit{See, e.g.}, China oral statement at the first meeting of the Panel, para. 51.

\textsuperscript{580} China first written submission, paras. 247-248; second written submission, paras. 88-92.

\textsuperscript{581} \textit{See, e.g.}, China first written submission, paras. 249, 264, 273.

\textsuperscript{582} Id., paras. 255-256, 261; second written submission, paras. 98-102; oral statement at the first meeting of the Panel, para. 54. China refers in this context to an expert report (which was prepared for and submitted in the CVD investigation), stating that government intervention in credit markets to affect the level of interest rates is a widespread tool of monetary policy, (China first written submission, para. 256, referring to Exhibit, CHI-81, para. 7).

\textsuperscript{583} China explains that the main tool used by its central bank (the PBOC) to direct commercial interest rates is a system of benchmark rates under which all commercial banks in China may not extend loans at less than 90 per cent of the prevailing benchmark rate applicable to the loan in question, and that as the PBOC raises or lowers the benchmark rates, it affects the rates at which commercial banks lend to borrowers. (China first written submission, para. 261).
policies, China submits that the United States' implicit analogy that government ownership of financial institutions is akin to the "role of the government in the market as a provider of the same or similar goods" is unfounded. China argues that even if such analogy had any basis, the United States' ownership argument would amount to the same *per se* test for "distortion" that the Appellate Body has already rejected in respect of Article 14(d). China adds that such a *per se* test is even more inappropriate in the context of Article 14(b), since the government's role as a provider of a financial contribution is unrelated to the factors that determine interest rates, and the USDOC in fact identified no evidence indicating that state ownership in commercial banks had any bearing upon the direction of interest rates. (Id., paras. 270-271; second written submission, para. 102).

10.90 Third, in regard to the government intervention in setting interest rates, China submits that it is undisputed that governments all over the world set interest rates for their currencies, and that therefore the whole premise of the USDOC's rationale for rejecting Chinese interest rates as "distorted" is invalid. For China, there are no interest rates that are "undistorted" by government "control" and "intervention", and as such, government "distortion" of interest rates cannot provide a basis for disregarding the requirements of Article 14(b), even if there were any lawful basis to do so.

10.91 China disagrees with the United States' argument that given the lack of commercial loans in China the USDOC would have been unable to measure the benefit at issue had it applied Article 14(b) *verbatim*. China submits that, according to the record evidence, there are plenty of "comparable commercial loans" in China that provide an appropriate benchmark as required by Article 14(b). In addition, China considers that because prevailing interest rates are determined by government action, the problem of circularity referred to by the Appellate Body in *US–Softwood Lumber IV* does not arise in the case of interest rates. Specifically, China argues that, unlike the situation in *US–Softwood Lumber IV*, it is the government's role "as a government" – rather than as a provider of the financial contribution – that affects prevailing interest rates and therefore the applicable benchmark.

---

584 China first written submission, paras. 263-264; second written submission, para. 102. China argues that even if such analogy had any basis, the United States' ownership argument would amount to the same *per se* test for "distortion" that the Appellate Body has already rejected in respect of Article 14(d). China adds that such a *per se* test is even more inappropriate in the context of Article 14(b), since the government's role as a provider of a financial contribution is unrelated to the factors that determine interest rates, and the USDOC in fact identified no evidence indicating that state ownership in commercial banks had any bearing upon the direction of interest rates. (Id., paras. 270-271; second written submission, para. 102).

585 China first written submission, footnote 223.

586 Id., para. 272; second written submission, paras. 105-106, 110; response to Panel question 41 (first meeting).

587 China second written submission, paras. 111-112.

588 Id., para. 115. For instance, China argues that the "big four" SOCBs are among the largest commercial banks in the world, are traded on international stock exchanges, and have attracted strategic investments from major international financial institutions. China adds that other commercial banks in China, which have either minority state ownership or no state ownership, are also traded on stock exchanges and have domestic and overseas investors. (Id., paras. 116-117).
under Article 14(b). Therefore, China submits, when an investigating authority compares the interest rate of a government-provided loan to prevailing national interest rates, it is not comparing the government-provided loan to itself, but rather, to the interest rate conditions that affect all commercial lenders in that market. China also argues that this comparison is consistent with the notion of benefit under Articles 1 and 14 of the SCM Agreement. That is, a borrower would be "better off" only if it obtains an interest rate on a government-provided loan that is lower than the interest rate that it would have paid on a comparable commercial loan under prevailing interest rate conditions. Thus, according to China, it was entirely possible to apply Article 14(b) to government-provided loans in China in order to determine whether the recipient was better off as a result of the financial contribution at issue.

10.92 China rejects the "access to credit" argument advanced by the United States during the proceedings in this dispute. China argues that the United States' argument – that the "benefit" of the alleged "policy lending" subsidy is the mere "access to credit", even if the credit is provided at prevailing interest rates – amounts to an impermissible *ex post* rationalization, since it bears no relationship with the "benefit" that the USDOC actually purported to measure, i.e., the difference between interest rates in China and the benchmarking interest rates. In any event, China submits that "access to credit", on its own, does not confer a benefit under Article 14(b). For China, "access to credit" at ordinary commercial interest rates could provide a benefit only if the firm receiving the government-provided loan could not "actually obtain" an interest rate from a commercial bank because of its credit status. The record evidence does not indicate that companies in China could not "actually obtain" loans from non-SOCSAs in the absence of the alleged "policy loans".

10.93 Finally, China points to the broader systemic implications of the issue before the Panel. According to China, the rationale used by the USDOC to reject interest rates in China as benchmarks could open the way for WTO Members, through their countervailing duty laws, to judge other Members' sovereign monetary policy.

(b) United States

10.94 The United States rejects China's arguments and submits that the USDOC's determination to use out-of-country interest rates was consistent with Article 14(b) of the SCM Agreement. In particular, the United States argues that, based on all of the evidence on the record, the USDOC determined that not only did China have a predominant role in the lending market as an owner of the

---

589 China notes that in *US – Softwood Lumber IV* the Appellate Body was concerned with the situation in which "the government's role in providing the financial contribution is so predominant that it effectively determines the price at which private suppliers sell the same or similar goods, so that the comparison contemplated by Article 14 would become circular". (emphasis as added by China) (China response to Panel question 34 (first meeting), citing to Appellate Body Report on *US – Softwood Lumber IV*, para. 93).

590 China second written submission, para. 100; citing to Appellate Body Report on *Canada – Aircraft*, para. 157; response to Panel question 34 (first meeting).

591 China second written submission, paras. 120-121. In particular, China submits that it is consistent with Article 14(b) to compare the interest rate on a government-provided loan in China to the PBOC benchmark rate. In China's view, there is nothing "circular" in this comparison, as it is a comparison of the interest rate on the government-provided loan to the interest rate conditions that affect all borrowers of comparable commercial loans in the same market. (Id.).

592 Id., para. 122; oral statement at the first meeting of the Panel, paras. 11-12, citing to the Appellate Body Report on *US – Softwood Lumber IV* (Article 21.5 – *Canada*), para. 93.

593 China second written submission, paras. 125-130.

594 China first written submission, paras. 273-275; oral statement at the second meeting of the Panel, para. 47.
majority of banks in China, it also directly controlled interest rates through its regulations of the market, thereby distorting loan rates in China. 595

10.95 The United States disagrees with China's argument that "[a]ll interest rates are distorted by government intervention", arguing that China's intervention in the lending market is significantly different from that of most other governments. For the United States, the mechanism of having both a floor on lending rates and a cap on deposit rates renders China's regulation different from a typical government lending market regulation, and ensures that banks in China earn considerable profits through lending at or near the floor rate. 596 Accordingly, the United States argues, the USDOC's determination to reject in-country interest rates as a benchmark was not based only on China's intervention in the banking sector, but also on the extent and nature of its intervention and the resulting distortion in the lending market. 597 The United States therefore rejects China's assertions that the USDOC rejected Chinese loan rates because they were not "fully" market-based, or that the USDOC presumed that all loans by SOBCs were made on non-commercial terms, merely by virtue of state ownership. 598

10.96 Likewise, the United States maintains that the USDOC's concern was not to judge China's monetary policies and/or to determine whether China's direct control over interest rates was traditional. Rather, the United States submits, the USDOC determined, consistently with the reasoning of the Appellate Body in US–Softwood Lumber IV, whether such control created distortion in the Chinese lending market. 599 In fact, the United States argues, the USDOC evaluated the extent to which China's invasive control over interest rates distorted the lending market, such that it was inappropriate to rely upon any in-country interest rates as benchmarks. 600 The United States also

595 United States first written submission, para. 230; second written submission, paras. 80-81; opening statement at the second meeting of the Panel, para. 29. The United States notes that in determining that the lending rates in China were unsuitable as market benchmarks, the USDOC relied on the reasoning it had applied in the previous investigation of CFS Paper, where the USDOC concluded that China's intervention in the lending market distorted that market. The USDOC's findings relied largely upon three major factors: (i) China's banking sector remained almost entirely state-owned; (ii) there was extensive government regulation of interest rates; and (iii) foreign bank lending in China was subjected to the same distortions as domestic bank lending. (United States first written submission, para. 236). The United States observes that China does not contest the facts upon which the USDOC relied, e.g., the fact that it owns the majority of the banking sector or the fact the Chinese banks are still operating on non-commercial basis. (United States second written submission, para. 91).

596 United States first written submission, para. 240; second written submission, para. 92. The United States indicates that China ensures that its banks earn a profit on "each" loan by (i) capping the deposit rate below the interest rate floor and (ii) preventing competition among banks for savers' capital. The United States adds that China's policies further provide savers' few investment options beyond depositing their savings with the banking system. (United States second written submission, para. 92).

597 The United States observes that while China does not contest the USDOC's factual findings regarding its regulations in the lending market, its indication that "most commercial borrowers in China obtain interest rates of loans [...] that fall somewhere between the interest floor and the benchmark itself" confirms the distortion provoked by these regulations in the lending market. For the United States, the marginal difference between such interest rates is due to the fact that banks can lend at the floor rate and are still ensured a profit, and therefore, the interest rates are not at the level they otherwise would be absent these controls. (Id., para. 93).

598 United States first written submission, paras. 201-202, 235.

599 United States second written submission, para. 96, citing to Appellate Body Report on US–Softwood Lumber IV, para. 101; response to Panel question 41 (first meeting). The United States indicates that in the OTR investigation the USDOC refrained from judging China's monetary policies as it rejected arguments made by domestic producers that "China had monetary policies that distorted the inflation rate and, therefore, Commerce should not adjust for inflation in its lending benchmark." (See, e.g., United States second written submission, footnote 161).

600 Id., para. 96. The United States rejects China's argument that the Appellate Body's recognition of the possibility of resorting to out-of-country benchmarks is limited to Article 14(d), arguing that the "Dominant Firm" theory applies equally to the lending market. (Id., para. 95).
submits that China's position would require the use of loans distorted by the government's intervention as benchmarks and that this position is at odds with prior panel and Appellate Body findings.\(^{601}\)

10.97 The United States also disagrees with China that the terms "comparable" and "actually obtain on the market" in Article 14(b) require that the benchmark be denominated in the currency of the government-provided loan. The United States submits that nothing in Article 14(b) requires the use of a benchmark loan denominated in any particular currency, and that such an outcome would be incongruous with the flexible nature of Article 14 of the Agreement which, as the Appellate Body has explained, permits the use of out-of-country benchmarks.\(^{602}\) The United States adds that while this flexibility is confirmed by China's Protocol of Accession, China's interpretation would exclude all RMB lending from the scope of that provision, and there is no basis in the text of the Accession Protocol for such an exclusion.\(^{603}\) According to the United States, China's interpretation is also inconsistent with the object and purpose of the SCM Agreement, since it would prevent Members from fully offsetting the effects of a subsidy.\(^{604}\)

10.98 The United States submits that the term "market" is not qualified in Article 14(b), and that the context of Article 14 suggests that the relevant "market" is not limited to the country of provision. In this regard, the United States observes that while Articles 14(a) and (d) refer to a geographical indicator, no geographic specification is reflected in Article 14(b). The United States also notes that although Article 14(d) contains a geographical indicator, the Appellate Body found that Article 14(d) does not bind investigating authorities to select only in-country benchmarks when the government has a predominant role in the market. Therefore, the United States submits, there is no basis for interpreting Article 14(b) as imposing a more restrictive "geographical limitation" than Article 14(d).\(^{605}\) Nor does the term "market" in Article 14(b) require or exclude the possibility of a national market or a world market for lending.\(^{606}\)

10.99 Finally, the United States submits that the term "market" in Article 14(b) must not be read in such a way as to require the use of benchmark loans distorted by government predominance and other interventions, as such an interpretation would effectively eliminate the word "commercial" from the term "comparable commercial loan", and would in some cases imply a circular benefit comparison. In addition, the United States argues that in \textit{EC – Countervailing Measures on DRAM Chips} the panel recognized the difficulties that investigating authorities face in measuring the benefit of government-provided loans, finding that investigating authorities are "entitled to considerable leeway" in adopting reasonable methodologies to calculate the benefit.\(^{607}\)

3. Main arguments of the Third Parties

(a) Australia

10.100 Australia considers that there is no basis in Article 14(b) for the benchmark used to "relate or refer to, or be connected" with the conditions prevailing in the market of the country of provision. Australia notes in this respect that loans are available on an international financial market that is subject to international influences. Furthermore, Australia considers that there is no basis in the text

\(^{602}\) United States first written submission, paras. 249-253; opening statement at the first meeting of the Panel, para. 32.

\(^{603}\) United States first written submission, para. 254.

\(^{604}\) Id., para. 252.

\(^{605}\) See, \textit{e.g.}, United States response to Panel question 17 (second meeting), citing to Appellate Body Report on \textit{US – Softwood Lumber IV}, para. 103.

\(^{607}\) Id., citing to Panel Report on \textit{EC – Countervailing Measures on DRAM Chips}, para. 7.213.
of Article 14(b) to limit the permissible benchmark to loans in the same currency as that of the loans being investigated given that loans obtained in one currency can be used to purchase any currency at rates determined by international markets.608

(b) European Communities

10.101 The European Communities considers that the interpretation of Article 14(d) by the Appellate Body in US – Softwood Lumber IV is relevant for clarifying the meaning of Article 14(b). The European Communities notes that the Appellate Body based its interpretation on the objective of Article 14 of the SCM Agreement ("Calculation of the amount of a subsidy in terms of the benefit to the recipient"). The European Communities is of the view that in light of this objective, once it has been established that the relevant market conditions are distorted, the comparison contemplated by Article 14 would become useless. The European Communities considers that if it has been shown that the "comparable commercial loan which the firm could actually obtain on the market" is also distorted because of the government intervention, then having recourse to alternative benchmarks could be possible on a reasonable basis, and such other benchmarks might correspond to a "comparable commercial loan" as provided for by Article 14(b), which has no express territorial limitation.609

(c) Japan

10.102 Japan considers that, consistent with the findings of the Appellate Body in Japan – DRAMs (Korea), where the government dominates the relevant financial market, an investigating authority has "some latitude as to the method it chooses to calculate the amount of benefit", although it still has to identify a "comparable" and "commercial loan" as a benchmark. Therefore, Japan considers that the question before the Panel is whether sufficient evidence supports the USDOC's conclusion that there was no benchmark within China that could be used, and should the Panel find that there were no such benchmarks, it should then examine the consistency with Article 14(b) of the benchmark selected by the USDOC.610

(d) Mexico

10.103 Mexico disagrees with China that the USDOC relied on China's monetary policy in order to reject the interest rates in China as a benchmark. In Mexico's view, the USDOC's determinations were based on other considerations, which included the predominant position of public bodies in the commercial banking sector and the extent to which this situation distorted the interest rates fixed by China's central bank.611

(e) Saudi Arabia

10.104 Saudi Arabia considers that a benchmark loan must comply with the "cumulative" criteria set forth in Article 14(b) of the Agreement. In this regard, Saudi Arabia is of the view that the term "comparable" suggests that the benchmark loan should be a loan denominated in the same currency, and subject to the same generally applicable financial regulations of the country providing the government loan. In addition, the word "commercial" refers to any transaction that is made in the ordinary course of commerce, while the phrase "which the firm could actually obtain on the market" imposes a requirement that the benchmark be based on the actual borrowing experience of the recipient firm. Saudi Arabia argues that the use of constructed benchmarks based on loans that are

608 Australia third-party submission paras. 37-40; third-party response to Panel question 7.
609 European Communities third-party submission, paras. 39-40; third-party response to Panel question 7.
610 Japan third-party submission, paras. 33-37.
611 Mexico third-party response to Panel question 7.
not actually available, but rather represent an average of a set of loans gathered in a discretionary manner to represent the "average commercial loan" are inconsistent with Article 14(b). Saudi Arabia takes issue with the United States' argument that the reasoning of the Appellate Body in US−Softwood Lumber IV, although decided under Article 14(d), is "equally applicable" under Article 14(b). Saudi Arabia argues, inter alia, that nothing in the Appellate Body's report indicates its application to Articles 14 (a), (b), and (c), nor to the "entirety of Article 14". However, assuming arguendo that the reasoning of the Appellate Body in that case applies to Article 14(b), Saudi Arabia considers that the clear admonitions made by the Appellate Body on the use of out-of-country benchmarks would apply as well.612

4. Assessment by the Panel

(a) Whether Article 14(b) permits rejection of in-country interest rates as benchmarks, and if so, under what circumstances

10.105 The central question of legal interpretation raised by this claim is whether, and if so under what circumstances, Article 14(b) of the SCM Agreement permits the rejection of in-country interest rates as benchmarks for government-provided loans. We recall here that China's claim and arguments in this regard are limited to SOCB loans denominated in RMB, and in particular that RMB loans can only be obtained in China, and that to be "comparable" in the words of Article 14(b), a benchmark loan must be denominated in the same currency as the one under investigation. We note that China does not challenge the rejection of in-country interest rates as benchmarks in respect of SOCB U.S. dollar-denominated loans.613 That said, the USDOC's determinations in the investigations at issue made no distinction on the basis of the currency of the loans as to whether or not in-country interest rates could be used. To the contrary, the USDOC's analysis and conclusions were in respect of the Chinese banking sector, and lending market, in general. Thus, our analysis under Article 14(b) focuses on the general question of whether, and if so when, rejection of in-country interest rates is permissible.

10.106 We turn first to the text of Article 14 of the SCM Agreement:

"Article 14

Calculation of the Amount of a Subsidy in Terms of the Benefit to the Recipient

For the purpose of Part V, any method used by the investigating authority to calculate the benefit to the recipient conferred pursuant to paragraph 1 of Article 1 shall be provided for in the national legislation or implementing regulations of the Member concerned and its application to each particular case shall be transparent and adequately explained. Furthermore, any such method shall be consistent with the following guidelines:

(a) government provision of equity capital shall not be considered as conferring a benefit, unless the investment decision can be regarded as

612 Saudi Arabia third-party submission, paras. 91-99.
613 In fact, China appears to agree in principle with the USDOC's choice of benchmark for these loans, citing the USDOC's use in the OTR investigation of a LIBOR-based benchmark for U.S. dollar-denominated loans as indicative of the USDOC's "recognition" that a "comparable" loan must be denominated in the same currency as the loan under investigation, and that this is consistent with a proper understanding of what it means for a loan to be "comparable". (China first written submission, para. 234).
inconsistent with the usual investment practice (including for the provision of risk capital) of private investors in the territory of that Member;

(b) a loan by a government shall not be considered as conferring a benefit, unless there is a difference between the amount that the firm receiving the loan pays on the government loan and the amount the firm would pay on a comparable commercial loan which the firm could actually obtain on the market. In this case the benefit shall be the difference between these two amounts;

(c) a loan guarantee by a government shall not be considered as conferring a benefit, unless there is a difference between the amount that the firm receiving the guarantee pays on a loan guaranteed by the government and the amount that the firm would pay on a comparable commercial loan absent the government guarantee. In this case the benefit shall be the difference between these two amounts adjusted for any differences in fees;

(d) the provision of goods or services or purchase of goods by a government shall not be considered as conferring a benefit unless the provision is made for less than adequate remuneration, or the purchase is made for more than adequate remuneration. The adequacy of remuneration shall be determined in relation to prevailing market conditions for the good or service in question in the country of provision or purchase (including price, quality, availability, marketability, transportation and other conditions of purchase or sale).”

10.107 As discussed in Section XI.E.3, infra, the chapeau of Article 14 indicates that the provisions set forth in sub-paragraphs (a)-(d) of this provision are "guidelines", and that while investigating authorities must respect these guidelines in calculating the benefits from the particular kinds of financial contributions identified in the respective sub-paragraphs, they have flexibility as to the precise methodology that they use, so as to be able to take into account the particular facts of a given investigation.

10.108 Concerning the specific provision at issue, Article 14(b) of the SCM Agreement provides that the relevant comparison for determining whether a government loan confers a benefit is with "a comparable commercial loan that the firm could actually obtain in the market". In our view, the key concept in this phrase is the word "commercial". In particular, the basic task in calculating a benefit from a government loan is to determine whether, when an investigated entity borrows from the government, the terms are better-than-commercial, i.e., better than a commercial lender would charge for the same loan.

10.109 This view of Article 14(b) is in keeping with the general interpretation of the concept of benefit as an advantage that makes the recipient better off, by virtue of the government's provision of the financial contribution in question, than the recipient would be if it obtained the same financial contribution from the market (i.e., commercially).614 Indeed, in broad terms this is the comparison required by all of the subparagraphs of Article 14, namely, to compare the terms of the government financial contribution with the terms that would be offered through the commercial market for the same financial contribution.

10.110 Furthermore, we consider that the chapeau of Article 14 establishes this comparison with commercial market terms as the general principle for the determination of the amount of benefit from

---

any kind of government financial contribution (including those not specifically referred to in the sub-
paragraphs of Article 14), via its generally worded requirement that "any method used [...] to calculate
the benefit to the recipient conferred pursuant to paragraph 1 of Article 1 [...] be consistent with the
guidelines" in the sub-paragraphs. 615 Our view in this regard is essentially the same as the general
characterization of Article 14 by the panel in Canada – Aircraft, namely that the guidelines in
Article 14 "employ a commercial benchmark, whereby a financial contribution 'shall not be
considered as conferring a benefit' unless that financial contribution is made on terms that are more
advantageous than would have been available to the recipient on the commercial market". 616

10.111 Thus, pursuant to Article 14(b) of the SCM Agreement, the comparator to be used to
determine the existence and amount of any benefit from a government loan must be, first and
foremost, "commercial". One possible interpretation of this term could be that any loan made by a
government would, ipso facto, not be "commercial", because to require otherwise would involve the
comparison of the terms of one financial contribution by a government to those of another. We are
not, however, called upon in this dispute to definitively rule on this question, because in fact the
USDOC did not reach its determination that interest rates in China could not be used as benchmarks
on the basis that the government was the predominant supplier of credit in China, but instead looked
at a number of other factors as well, as discussed in Section X.J, infra.

10.112 Second, Article 14(b) indicates that the benchmark loan must be "comparable". That is,
Article 14(b) indicates that not any "commercial" loan can be used as a benchmark, but instead the
particular benchmark loan selected must be "comparable" to the investigated government loan. We
view the term "comparable" to mean, in general terms, that the benchmark loan should have been
established around the same time, should have the same structure as (fixed or floating interests rates)
and similar maturity to the government loan, should be about the same size, and should be
denominated in the same currency, as these are the fundamental elements used to describe loans, and
thus the elements on the basis of which different loans can be compared.

10.113 Finally, the benchmark loan should be one that the borrower "could actually obtain on the
market". We see this as a reference first and foremost to the individual characteristics of that
particular borrower (essentially, its risk profile). In other words, how would a commercial lender
evaluate that borrower in deciding whether to make the investigated loan? Most importantly, what
interest rate would the commercial lender charge, and what repayment terms, collateral, etc., would it
require, for a loan of the same structure and maturity as the government loan, based on its evaluation
of the borrower's likelihood of defaulting?

10.114 The guidelines thus would prevent, for instance, the amount paid on a one-year floating rate
government loan from being directly compared to the amount that would be paid on a 10-year fixed
rate commercial loan. Similarly, the guidelines would prevent the amount paid on a government loan
to a AAA-rated borrower from being compared with the amount that would be paid on a commercial
loan to a B-rated borrower. Furthermore, they would prevent the amount paid on a government loan
denominated in Canadian dollars from being directly compared to the amount that would be paid on a
commercial loan denominated in Japanese yen, and so forth. Ultimately, therefore, the guidelines of
Article 14(b) provide that the benchmark interest rate used to determine the existence and amount of

615 For example, in the case of grants, which are not listed in Article 14, the comparison with the
market would give the result that the benefit amount is the full amount of the grant because grants are in essence
gifts, and it is clear that the market does not give gifts. Similarly, the amount of the benefit from a tax
exemption or similar tax measure also would be the full amount of the taxes not paid, as the tax exemption or
reduction also would be in essence a gift from the government to the recipient.

616 Panel Report on Canada – Aircraft, para. 9.113. (emphasis added) We recall that in Canada –
Aircraft, the Appellate Body upheld the panel's analysis and interpretation of the term "benefit" in Article 1.1(b)
of the SCM Agreement, including its reliance on Article 14 as relevant context. (Appellate Body Report on
Canada – Aircraft, paras. 155 and 161).
benefit from a government loan reflect not only the basic features of the government loan, but also reflect the risk level of the borrower.

10.115 On the basis of this analysis, it is clear that the "ideal" benchmark in terms of Article 14(b) of the SCM Agreement would be an actual loan from a commercial lender of the same size, maturity, structure and currency, to the investigated entity, taken out on the same day as the investigated government loan. It also is clear, however, that in practice the existence of such an ideal benchmark loan will be extremely rare. The commercial loans actually held by a given borrower will almost inevitably have certain differences, whether in timing, size, maturity, structure, and/or currency from the investigated government loan, that would make them not perfectly comparable, or even not comparable at all, to that government loan. As one example, in a given country there may be no commercial market for long-terms loans -- all such loans may be government-provided. In such a situation, the only commercial loans in existence in that country would be short-term. Similarly, a given borrower may have on its books a commercial loan that is essentially identical to the government loan except for its origination date, and there may have been a very large generalized movement in interest rates during the interval that would make these loans not directly comparable.

10.116 The question then becomes how Article 14(b) addresses such situations, which will arise frequently, indeed probably in the large majority of cases. In particular, where there are differences in existing commercial loans held by the borrower such that in the strict sense of the term they are not "comparable" with the investigated government loan, does Article 14(b) require an investigating authority to conclude that there simply is no benchmark, and that as a result no benefit amount can be determined (which would mean, in effect, that the benefit amount is zero)? In our view, this is not the case.

10.117 We note, first, the phrase "the amount the firm would pay on a comparable commercial loan that which the firm could actually obtain on the market". In our view, the use of the conditional mode here, in conjunction with the reference to the individual borrower's situation, is an indication that where loans are concerned, the very individualized nature of borrowing, as discussed above, often will limit an investigating authority's ability to identify a fully comparable existing commercial loan held by the investigated borrower to use as a benchmark for the investigated government loan, meaning that some degree of approximation will be inevitable. Often this approximation can be accomplished by making adjustments to a loan that is not comparable in every respect, such that, following the adjustments, the resulting adjusted loan's terms have been made comparable. In this sense, an adjusted non-comparable loan would be a proxy for a theoretical "comparable commercial loan" that the borrower "could actually obtain on the market". We thus see that Article 14(b), by its own terms, makes allowance for the use of proxies when an identical or nearly-identical loan is not available as a benchmark. The same terms, however ("comparable" and "could actually obtain on the market"), also require that, where adjustments and/or proxies are necessary due to the absence of an existing commercial loan that is comparable in every respect, the resulting benchmarks must be appropriate.617

10.118 In this regard, we view the identification of a loan benchmark pursuant to Article 14(b) as a series of concentric circles. The first best option, as noted, is to find a commercial loan to the same borrower that is identical or nearly identical to the investigated loan (in terms of timing, structure, maturity, size and currency). If that borrower has no such loan, then the next place to look logically would be the borrower's other existing commercial loans, to see if any of them is sufficiently similar that its terms could be adjusted to reflect the basic characteristics of the government loan. Such

617 Of course, the SCM Agreement does not require the imposition of countervailing measures, meaning that an investigating authority always has the option not to apply a countervailing measure in respect of a given subsidy. In this sense, if an investigating authority had difficulty in identifying a suitable benchmark for a given government financial contribution, it could choose not to perform a benefit calculation, and thus to omit the particular financial contribution from its overall calculation of subsidization of the investigated product.
adjustments might reflect, for example, different dates of origination of the loans (to account for interest rate fluctuations that may have taken place in the market during the interval), different sizes, different maturities, different currencies, different structures, changes in the borrower's credit risk (e.g., if a loan on the borrower's books was originated at a time when the borrower had a high credit rating, but the rating had been downgraded by the time the government loan was made), etc. There are many possible examples, and we do not mean here to rule on all potential situations that might arise or to pronounce in any way as to what particular kinds of adjustments might or might not be acceptable under Article 14(b) in the circumstances of a given investigation. These are questions that could only be resolved on a case-by-case basis, and our point here is, simply, that in many or most cases, certain adjustments will need to be made to ensure that ultimately the amount of the benefit that is calculated is based on the amount that "would" be paid on a "comparable commercial loan" that the borrower "could" actually have obtained on the market.

10.119 There may be circumstances, however, where the actual differences between any of the commercial loans on a borrower's books and the investigated government loan are so significant that it is not realistically possible to address them through adjustments; or the investigated government loan might be the only loan on the borrower's books; or the borrower's only other loans might also be from the government. In these circumstances, the investigating authority would need to look beyond actual loans held by the investigated borrower, and use other sources of information. One possibility in this regard could be a similar commercial loan granted to another borrower with a similar credit risk profile as the investigated borrower (if such a loan could be identified). If no appropriate commercial loan benchmark can be identified, then the authority could construct a benchmark loan proxy. While Article 14(b) contains no specific guidance as to how this would need to be done, we see no a priori restriction to any geographical market (as exists, for example, in Articles 14(a) and 14(d)), or any prohibition of any particular approach to constructing a proxy. Rather, the fundamental rule in Article 14(b) is that the measurement of the benefit be based on what "would" have been paid on a comparable commercial loan that "could" actually have been obtained by the investigated borrower, even if no such loan exists.

10.120 We note in this regard that China invokes the particular case of RMB-denominated loans as a situation in which it is impossible to use any interest rate other than one found inside China as a benchmark, due to the impossibility of borrowing RMB anywhere outside China. We acknowledge that the currency in which a loan is denominated is of course one of its most important characteristics, and that using as a benchmark a loan in another currency poses particular challenges. That said, in our view, currency differences do not necessarily pose the insurmountable hurdle that China posits. In particular, there are means to determine the equivalence of loans expressed in different currencies, notably the various forms of swap transactions that are routinely used in international financial markets, whereby borrowers in different currencies swap principal amounts and/or interest payment streams on their respective loans. By definition, these exchanges between willing partners express the equivalence of the values of the dissimilar things being exchanged. We note that swap transactions of this type were originally developed to circumvent restrictions and limitations on borrowing in foreign currencies. Thus, unlike China, we do not consider that the geographic restriction of lending in a particular currency precludes, as a matter of law, a comparison with a benchmark loan expressed in a different currency from that of the government loan. Rather, this is a feature of a loan that can, at least in certain circumstances, be made to be "comparable", in the sense of Article 14(b), to the investigated government loan.

618 See http://www.sjsu.edu/faculty/watkins/swaps.htm. We further note that in 2005, the People's Bank of China reportedly allowed banks for the first time to engage in cross-currency swaps for forward foreign exchange contracts (although not interest). (Risk magazine, "China opens up renminbi swaps market", 1 September 2005).
10.121 More generally, we see China's interpretation of the terms of Article 14(b) as excessively formalistic, in that it would effectively limit an investigating authority's ability to identify an appropriate benchmark, forcing it instead to fall back on a choice from among inappropriate benchmarks. In particular, in our view, the implication of China's argument is that even if all loans in a given country were made by the government, the investigating authority would have no choice but to identify as a benchmark for the investigated government loan another government loan, so long as the second loan was made in the "ordinary course of commerce" (a term for which China offers no explanation). In our view such a comparison would be entirely circular given that the point of the exercise under Article 14(b) is to compare the government loan in question to something that is not a government loan. Similarly, we consider that pursuant to China's argument, if a loan were made in a particular currency which was only lent in the country subject to the investigation, then even if all of the loans in that currency were government-provided loans, the fact of the currency restriction again would force the investigating authority to identify the benchmark from among the same-currency government loans, in spite of the circularity of the resulting comparison. To us, this is directly counter to the directives of Article 14 in general and Article 14(b) in particular, which are aimed at a meaningful comparison with the commercial market.

10.122 In this respect, we see the logic of the Appellate Body's reasoning in US – Softwood Lumber IV in regard to Article 14(d) of the SCM Agreement to be equally applicable to Article 14(b), and indeed to Article 14 in its entirety. Here we recall in particular the Appellate Body's analysis of the terms "in relation to prevailing market conditions [...] in the country of provision" in Article 14(d). The Appellate Body reversed the panel's interpretation that this required the use of in-country prices as the benchmark even if distorted by the government's predominance as a supplier of the good. The Appellate Body found that instead any benchmark, to be "in relation to" those market conditions, had to "relate or refer to, or be connected with" them. In this regard, the Appellate Body specifically indicated that where in-country benchmarks were not available, "proxies" could be used so long as these related or referred to, or were connected with, the "prevailing market conditions in the country of provision".

10.123 We recall in this context that the problem where in-country benchmarks cannot be used to determine adequacy of remuneration for goods is that the prevailing, observed conditions of purchase or sale in the country of provision of the good reflect the government's role as predominant supplier or as controller of the prices. As such, it is clear that the appropriateness of any selected proxy in such a situation (in terms of how well it reflects the "prevailing market conditions" for the good in that country) cannot be verified directly. We thus understand the Appellate Body, in these statements, to indicate that while proxies can be used in place of the directly observed prices in certain circumstances, those proxies must be carefully selected and adjusted as necessary to as closely as possible represent the market conditions that would prevail if the government was not the predominant supplier or did not control the prices. Furthermore, given that the Appellate Body has found that the language in Article 14(d) referring to the "country of provision" does not limit, in a formalistic way, the selection of a benchmark from among the observed prices in that country, we consider that the same is equally true where, as in Article 14(b), the term "market" is not geographically modified in any way.

10.124 We note China's argument that its approach would not result in a circular comparison. In particular, China views the United States' approach as based on a misplaced analogy between the Appellate Body's reasoning in US – Softwood Lumber IV in respect of the "role of the government in

---

619 See, e.g., China first written submission, para. 235.
620 China only provides a dictionary definition of the term "commercial" and cites a paragraph of the Panel Report on China – Intellectual Property Rights and a paragraph of the Panel Report on Canada – Wheat Exports and Grain Imports in which the dictionary definition of the term "commercial" appears. China provides no definition and/or explanation of its own phrase "ordinary course of commerce".
the market as a provider of the same or similar goods" under Article 14(d), and government ownership of financial institutions. China states that implicit in this argument is the suggestion that government ownership of financial institutions somehow "distorts" the interest rates charged by all financial institutions within a country, such that national interest rates are "unreliable" or "unsuitable" as a benchmark under Article 14(b). China disagrees because, it argues, central banks set interest rates as a tool of monetary policy, which rates in turn affect the interest rates on commercial loans charged by all banks, whether or not the latter are government-owned. According to China, there is nothing "circular" about comparing the interest rate on a government-provided loan to the interest rate conditions that affect all borrowers in the same currency, regardless of the source of the loan, because the effect that governments have on interest rates does not result from whatever role they play in the market for commercial lending, i.e., from their "role in providing the financial contribution". Rather, it arises from their role as a government in guiding monetary policy.621

10.125 We do not consider that this argument by China resolves, or even squarely addresses, the legal issue before us. In particular, China's argument presumes that all government control or regulation of or intervention in lending markets, of whatever kind and degree, must be treated as the simple implementation of general monetary policy, which by definition cannot give rise to distortion of lending rates so as to make the observed interest rates within the country unusable as benchmarks (even if all of those observed interest rates happened to be for government-provided loans). We see no such rule in Article 14(b) or anywhere else. Indeed, we recall that the overall purpose of the SCM Agreement includes, precisely, to discipline certain forms of market interventions by governments. We can see no logic, given this, to considering that a particular class of government market interventions (relating to interest rates) must be accepted "as is" as the underlying "market" condition, particularly where the question to be resolved is exactly whether on a given loan transaction the interest rate charged by that same government is "below-market".

10.126 Furthermore, we see no requirement that observed interest rates in the particular country or geographical market must simply be accepted as the "commercial" rates against which to measure the investigated government loan, even if the government's interventions of whatever kind (as opposed to the operation of market forces) effectively dictate the levels of those interest rates. Here, we see a clear distinction between, on the one hand, the government as the setter and implementer of the general monetary policy of a country; and, on the other hand, the government participating as a lender and/or otherwise intervening in the lending market as such, in a way and to an extent that effectively it is the government, and not the market, that establishes the lending rates.

10.127 We acknowledge, as China points out, that government influence over interest rates is an important feature of monetary policy. Indeed, adjusting their own lending rates up or down is one of the principal tools by which central banks influence the money supply. It also is true that interest rate movements at the central bank level ripple through the commercial lending market such that the different sorts of commercial lending rates (short- and long-term, fixed and floating, for borrowers of different risk levels, etc.) tend to move in parallel with the central bank rates. This indeed is generally the goal of such central bank actions, as the loosening or tightening of commercial credit directly increases or decreases the money supply.

10.128 This is a very different matter, however, from a hypothetical situation in which, for example, the government is the only lender in a country. In such a situation, whatever its underlying monetary policy, the government itself would directly set all of the lending rates to all of the firms in the country. Thus, there would be no commercial benchmark interest rate in that country to which the interest rate on any government loan could be compared in the sense of Article 14(b). Any in-country comparison would be inherently circular.

621 China second written submission, paras. 98-100; response to Panel question 34 (first meeting).
10.129 It also is very different from a hypothetical situation in which the government simply dictated the lending rates to be charged by "commercial" banks. That is, even if the government itself was not a lender, and even if the banks were not government-owned, and regardless of the underlying monetary policy, it would be the government, not market forces, that set the lending rates for commercial borrowers, by fiat. Thus, here again there would be no commercial benchmark rate to which the interest rate on a government loan could be compared in the sense of Article 14(b). Again, any in-country comparison would be inherently circular.

10.130 Similarly, some combination of a large government role as a lender to commercial borrowers, and significant direct control over lending and interest rates to commercial borrowers, also could result in a situation in which the interest rates to commercial borrowers do not reflect the operation of market forces, but instead are distorted in the sense that they are effectively established by the government. In this situation as well, we consider that comparing the interest rate on a government loan to another loan in the same country would be a circular exercise. We view such a situation as analogous to that analyzed by the Appellate Body in US – Softwood Lumber IV (government predominance as a supplier of a good), and as discussed we consider that inherent in Article 14(b), as in Article 14(d), is sufficient flexibility to permit the use of a proxy in place of observed rates in the country in question where no "commercial" benchmark can be found.

10.131 In the three investigations at issue, the USDOC stated that the benefit from a government-provided loan normally is measured by comparison to a "loan that the recipient could actually obtain on the market" and therefore "the benchmark should be a market-based rate". In these investigations, however, the USDOC determined that there was not a functioning market for loans within China, and that therefore none of the sources of Chinese interest rates could be used as benchmarks, as follows:

- SOCBs loans, which were found to be made under the "Government Policy Lending" program, could not used as benchmarks since these loans were the very loans for which suitable benchmarks were needed;
- Chinese national interest rates were not reliable as benchmarks because of the pervasiveness of China's intervention in the banking sector – i.e., loans provided by Chinese banks reflected significant government intervention and did not reflect the rates that would be found in a functioning market;

---

622 Exhibits CHI-1, p. 6; CHI-3, p. 11; and CHI-4, p. 7. The USDOC considered that while benchmarks must be comparable commercial loans – i.e., they must be from a commercial lending institution, and similar in structure to government loans with respect to whether they are fixed or variable, the date of maturity, and the currency in which they are granted – interest rates are unusable to measure the benefit from government loans where they are found to be distorted. In the LWS and OTR investigations, citing to its previous findings in the CFS Paper investigation, the USDOC further determined that these market distortions could not be adjusted. It noted that for an adjustment to be practical, an underlying market-based rate must exist; however, in China (where no underlying market-based rate exists), determining what the necessary adjustments would be in order to form a market-determined interest rate would be highly complex, speculative, and impracticable. (Exhibits CHI-3, p. 83; CHI-4, p. 104; and CHI-93, p. 70).

623 The USDOC noted that it does not treat comparable commercial loans, which it normally uses for benchmarking purposes, as commercial loans where they were provided pursuant to a government programme. (Exhibits CHI-1, p. 6; CHI-3, p. 11 and CHI-4, p. 7).

624 Exhibits CHI-1, p. 6; CHI-4, pp. 7 and 104; and CHI-34, p. 67900.
- Foreign bank lending in China was unsuitable as a benchmark since China's involvement in
  the banking sector created significant distortions, restricting and influencing foreign banks
  operating within China.  

10.132 The USDOC's assessment and conclusions in the three investigations that Chinese interest
  rates were distorted and did not reflect the rates that would be established by a functioning market
  were based on its previous findings in the CFS Paper investigation. In that investigation, the USDOC
  had reviewed the role of the Government of China in the banking sector and concluded that China's
  intervention in the lending market distorted the market.  In the three investigations at issue before
  us, the USDOC determined that the respondents had not demonstrated that these findings no longer
  held. The USDOC's determinations in the three investigations thus are based on, and cross-reference
  extensively, its determination in CFS Paper. Given this, before we examine the USDOC's specific
  findings in the three investigations, we summarize the relevant portions of the CFS Paper
determination.

(i) The CFS Paper determination relied upon by the USDOC in the OTR, CWP and LWS
investigations

10.133 In CFS Paper, China and investigated producers had generally argued that:

- There was not a program in place to provide preferential lending: The Government of China
  and Chinese producers argued that "policy banks" and "policy lending" no longer existed as
  such in China. They noted that the importance of both had decreased since the year 2000
  when the need for policy lending (and thus, for policy banks) declined. Since that time, the
  lending from policy banks had shifted from policy loans to commercial loans. The
  respondents argued that record evidence – statements by the PBOC and the China Bank
  Regulatory Commission (the "CBRC") – demonstrated that both SOCBs and policy banks
  functioned essentially as commercial banks, independent from government influence, and that
  industrial policy was only one of the factors that such banks considered in analyzing risk.
  Thus, they argued, these banks' decisions were based on commercial considerations.  

- SOCBs and Policy Banks operated on a commercial basis: The respondents also argued that
  other characteristics of the banking system demonstrated that SOCBs as well as policy banks
  operated on a commercial basis and acted independently from the government: (i) the loan
  application and approval processes were similar to those in the United States and other
  countries, and the government was not involved in such processes (as demonstrated at
  verification); (ii) banks in China had adopted and implemented risk analysis systems based on
  best practices, the implementation of which was monitored by the CBRC (the effect of the
  adoption of these risk analysis systems was that the number of non-performing loans was
  declining); (iii) the refusal of loans to some of the companies under investigation proved that
  they did not enjoy preferential lending from SOCBs; and (iv) according to record evidence
  (verification), banks competed regarding interest rates and customers were able to shop
  around for the best rates.

625 Exhibits CHI-1, p. 6; CHI-4, p. 105; and CHI-34, p. 67900.
626 In its previous anti-dumping duty investigation in Lined Paper, (in which, consistent with its
  practice, it treated China as a non-market economy), the USDOC determined that the banking sector in China
  did not operate on a commercial basis and that it was subject to significant distortions because of the continued
  dominant role of the government in the banking sector. This finding was further elaborated in CFS Paper,
  where the USDOC found that the government of China continued to dominate the domestic banking sector and
to prevent banks from operating on a fully commercial basis. (Exhibits CHI-1, p. 7 and CHI-34, p. 67900).
627 Exhibit CHI-93, pp. 42-43.
628 Id., p. 44.
The role of the government was similar to that of any other government: The respondents submitted that the role of the government in China was similar to that of any other government in allocating credit to specific industries: (i) the main role of the PBOC, which was macroeconomic analysis and monetary policy (including issues such as interest rates and inflation), did not indicate that it was able to ensure that banks' lending decisions and credit allocations conformed to government policies; (ii) the provisions of the Commercial Banking Law were not internally-inconsistent (some provisions prohibited government interference in the banks while others encouraged lending consistent with State industrial policy). Taken together, they provided that lending should take into consideration government policy and its effect on the borrower/project to be financed; (iii) banking reforms in China had been implemented, thus, the assumption that banks based their lending decisions on industrial policy was entirely based on "policy statements"; (iv) there was no evidence that bank officials appointed by the government were required to implement government industrial policies; (v) there was no "direct" record evidence to support the proposition that lending and credit allocation in China was directed (i.e., the studies referred to by the applicants contained outdated data (before 2005) and were subject to an opposite interpretation from that of petitioners)\(^{629}\); and (vi) numerous studies, which showed that a significant amount of capital flowed into and out of China, demonstrated that the Government of China could not constrain Chinese capital markets.\(^{630}\)

Internal benchmark in China: The respondents argued that there were appropriate benchmarks in China that the USDOC should use in its benefit calculation.\(^{631}\) Interest rates in China were like those in a functioning market since, although in the past there had been government intervention, there had not been in the recent past and during the period of investigation, and there had been a gradual liberalization of the financial markets.\(^{632}\) Interest rates for foreign currency loans\(^{633}\) and interest rates on loans received by investigated producers from privately-owned Chinese banks (which were fully verified) were the rates that should be used for benchmarking purposes.\(^{634}\)

10.134 The USDOC rejected these arguments. The USDOC stated that government influence was still present in the lending sector and that China's banking reforms had not been fully implemented. Specifically, the USDOC determined that:

\(^{629}\) Respondents further argued that where information from secondary sources (e.g., articles, and commentaries) is in conflict with primary source information, the USDOC should rely on the latter. They noted that evidence from primary sources on the record indicated that SOCBs and policy banks functioned as commercial banks – i.e., statements by bank officials, bank loan approval documents, bank project guidelines as well as banking regulations and policies indicated that banks evaluated loans on a commercial basis and that government industrial policies were a minor factor in the lending decision making process. (Exhibit CHI-93, p. 45).

\(^{630}\) Id., p. 44-45.

\(^{631}\) Id., p. 62.

\(^{632}\) Similar to its arguments in the present dispute, the Government of China argued that its interventions on interest rates were not that different from those carried out by other countries around the world, and that the mechanisms applied by the government did not distort interest rates, rather it actually kept them too high (and not too low as asserted by petitioners). (Id., p. 63).

\(^{633}\) They argued that in fact, the USDOC found government control only of RMB-denominated lending and deposit rates, and not of foreign-currency lending in China. Further, the USDOC did not determine that the Government of China controlled foreign-currency lending practices. (Id., pp. 63-64).

\(^{634}\) Id., p. 64. The Government of China and Chinese investigated producers also made a number of arguments with respect to the out-of-country benchmark calculated by the USDOC: they, inter alia, challenged the USDOC's reliance on gross national income (GNI) to determine the proper basket of comparison countries (challenged as an outdated World Bank categorization), and argued that the rate of inflation should also be considered in determining the real cost of a loan. (Id.).
• **China's banking system was still under state-control:** The USDOC found that China's banking system remained under state control and continued to suffer from legacies related to the longstanding pursuit of government policy objectives, undermining the SOCBs' ability to act on a commercial basis.\(^{635}\) While the scope and extent of government control over SOCBs was changing and evidence on the record with respect to such control was mixed, the central government had been very cautious on completely reforming the banking system; as a result, and since banks in China had never operated on a commercial basis, the government was still very involved in the sector.\(^{636}\) Further, the USDOC found that while banking reforms in China might be starting to take effect, the evidence on the record indicated that they had not yet been fully implemented and that the influence from the government remained a significant factor in the operation of China's banking sector.\(^{637}\) The USDOC noted that although the largest SOCBs had undergone some reorganization to become corporate entities (limited initial public offerings had been conducted and minority stakes in SOCBs were sold to foreign banks) their primary shareholder remained the Chinese government. Foreign investment in Chinese banks was tightly constrained, with total foreign ownership limited to 25 per cent in SOCBs.\(^{638}\)

• **China's banking system still operated in accordance with governmental planning-policies:** The USDOC found that (i) the government ownership of the banking sector in China was "one" factor in the legacy effects of government control of the banking sector; (ii) the legal framework of China's banking sector contradicted the argument that SOCBs operated independently from the government\(^{639}\); (iii) the Government of China had not demonstrated

---

635 The USDOC relied on statements from various reports as follows: (i) the OECD Report stated that "chief executives of the head offices of the SOCBs are government appointed and the party retains significant influence in their choice"; (ii) the 2005 IMF Staff Report stated that "[t]he legacy of government directed lending, and training banks to make lending decisions based on purely commercial considerations ... remains a major reform challenge"; (iii) the 2005 PBOC Annual Report stated that "[a]s the economic reform was not completed yet, investment was still orchestrated to a large extent by government [...]"; (iv) the 2004 PBOC Annual Report stated that "some local governments still seek to promote economic growth by expanding investment"; (v) the 2004 China Monetary Policy Report stated that "[i]n 2004 the PBC under the guidance of the central government [...] strengthening its window guidance and credit policy advice for commercial banks to follow the State industrial policy constrain credit to overheated industries and those inconsistent with the State industrial policy and to increase financial support for development of agriculture small and medium-sized enterprises consumption employment education and non-state sector guided"; and (vi) the 2005 Monetary Policy Report stated that "[t]he PBC implemented [...] the macroeconomic strategy mapped out by the central government which called for differentiated treatment to different sectors by timely conveying to financial institutions the governments policy intentions so as to guide the commercial banks in taking forward-looking approach to respond to changes of economic cycles and industrial development and to improve the credit structure". (Exhibit CHI-93, pp. 55-57).

636 The USDOC noted that this view was, at varying degrees, confirmed by independent experts. (Id., pp. 56-57).

637 Id., p. 58.

638 Id., p. 67. As we have noted, footnote 244, supra, China acknowledges that at the end of 2006, government ownership of the Big Four was as follows: 75 per cent in the ICBC; 74 per cent in the CCB; 68 per cent in the BOC; and 100 per cent in the ABC. (China first written submission, para. 165).

639 The USDOC noted that while the Chinese Commercial Banking Law states that "commercial banks are responsible for their own profits and losses, must protect the interests of their depositors, and are protected from government influence", it further requires banks to "carry out their loan business upon the needs of national economy and the social development and under the guidance of State industrial policies". Similarly, the Bank of China Global Offering stated that "Commercial Banking Law requires commercial banks to take into consideration government macroeconomic policies in making lending decisions. [T]hey are encouraged to restrict their lending to borrowers in certain industries in accordance with relevant government policies". At verification, officials from the People's Bank of China stated that "it may be necessary for banks to heed industrial policies; banks may be taking on great risk if their customers use loans in a way that is inconsistent with industrial policies". Further, the 2006 Report from State Council revealed that the reforms on
how or to what extent industrial policy was considered in the loan approval process, although
it had argued that industrial policies were only one of the factors considered in this process;
(iv) while SOCBs were improving their risk management capacities, they still lacked
adequate risk management640; (v) despite several requests, the USDOC had not been provided
with sufficient evidence to examine the complete loan-approval process, or with evidence
necessary to show that the loans were made on a commercial basis641; and (vi) since the
Chinese legal banking framework required banks to take into consideration government
macroeconomic policies in making lending decisions, China's excess liquidity (or high
volumes of loans) did not indicate that the Government of China could not have control over
the SOCBs and guide their loan portfolios.642

• Interest rates regulated by the government: The USDOC found that the continued dominance
of the State in Chinese banks as well as China's long history of using the banks to carry out its
policy objectives, made uncertain the reliability of interest rates in China and their suitability
as commercial benchmarks. Although the CBRC had been established in 2003, it was
supervised by the PBOC until 2004. Thus, it was improbable that it could have
revolutionized the operations of the banking sector only one year after taking on its
supervisory role.643 Furthermore, while banks were improving their risk management
capacities, the way that interest rate formation was regulated in China both distorted lending
rates and proved that SOCBs were not fully able to price their loans on a commercial basis.
China maintained a system of both deposit rate caps and lending floor rates in such as way to
guarantee the banks a considerable profit margin on their loans.544 The lending rate floor was
set so as to prevent the banks from pricing their loans at unsustainably low levels. In fact,
interest rates remained generally undifferentiated – interest rates were quite close to the
PBOC-set benchmark. On the other hand, the cap on deposit rates was set at a level slightly
higher than inflation. Therefore, savers in China, beyond being restricted by the government
to access alternative forms of investment, were prevented (by law) from receiving more than a
negligible real return on their savings. As such, banks in China did not compete on deposit
rates and almost had an unlimited access to the savers’ capital at very little cost.645

"implementing a system that grants independence in investment coupled with responsibility for risk" were an
ongoing process and were not complete in 2005. (Exhibit CHI-93, p. 58).
640 According to the USDOC, this was partially demonstrated by the fact that interest rates in China
remained generally undifferentiated. At verification, an official from the PBOC explained that interest rates
spreads were close to the PBOC-set benchmark rate because "the Big Four attract the largest borrowers [which]
are creditworthy […] and have long-term relationship with the banks". (Id., pp. 59, 68-70). The USDOC further
noted that the risk analysis system of most of these banks was not fully implemented: the PBOC stated that the
ceiling on the deposit rate had been put in place "in order to afford banks time to restructure and a floor on
lending rates to maintain order in the market […] these restrictions will eventually be eliminated when banks
have fully developed risk management and cost controls"; the CBRC stated that it "ha[d] […] established a
framework for achieving an international level of risk management" but at the same time acknowledged that
"[such a] framework does not necessarily indicate a high level of risk management in practice"; and the BOC
stated that its risk management implementation "is an on-going process [and that] there was not a
comprehensive risk management system fully established in 2005". (Exhibit CHI-93, pp. 59-60).
641 Id., p. 60.
642 Id.
643 Id., p. 68.
644 The USDOC noted that at verification "the PBOC conceded that this floor and cap system sets
China apart from other countries and that it is necessary because the banks have not yet fully implemented risk
control". (Id., p. 68).
645 The USDOC noted that the cap on deposit rates was both binding in 2005 and set at a level that was
barely higher than inflation. Thus, according to the USDOC, savers were prevented from receiving more than a
negligible real return on their savings and banks in China "do not compete on deposit rates and have access to
savers' capital at very little cost". Thus, given that the government directs China's savings to the banking sector,
that only a low return on deposits is allowed, and that banks cannot compete on deposit rates, the USDOC
Furthermore, the interest rates of the "issuance of commercial paper" or "corporate bills" – the equivalents for lending rates in China that were not regulated by the government – were not market-based and therefore not useable as a benchmark.  

- Foreign-owned banks in China were subject to the same restrictions as SOCBs: The USDOC determined that foreign-owned banks operated in the same distorted environment as the Chinese banks. It further found that these banks' share of financial assets and lending activity was negligible compared with those of SOCBs. While their participation in the domestic banking sector had increased, they provided only a very small share of credit in China and still operated mostly in niche markets. They did not compete directly with SOCBs.  

- Foreign currency lending rates in China for measuring the benefit of loans issued in RMB: While the rates for foreign-currency loans in China might follow international trends to some extent – being influenced by the monetary policies of the foreign country's central bank – foreign currency lending in China formed a very small portion of the overall financial sector. Further, these rates did not provide any basis for a benchmark of what RMB rate would prevail in a market situation (as China's dominance of and intervention in the banking sector meant that such a benchmark did not exist in China).  

10.135 As noted, in each of the investigations at issue in the present claim, the USDOC relied on these findings. It determined that the market distortions it had found in the CFS Paper case were still present and that the Government of China and interested parties had not demonstrated that the Chinese banking sector had significantly changed such that reconsideration of the CFS Paper decision was warranted. As a result, the USDOC determined in each of the investigations at issue that interest rates in China did not provide a suitable basis for assessing whether the loans provided to investigated producers conferred a benefit.  

10.136 The specific arguments of the respondents and the findings of the USDOC in these three investigations were as follows:  

(ii) OTR Investigation  

10.137 In the OTR investigation, the Government of China argued that according to the evidence on the record, banks in China operated on market principles, and that the government five-year plans and other policy documents did not instruct banks to provide preferential financing to the OTR tire
industry. Further, the Government of China claimed that government influence over the operations of the SOCBs was little and that state ownership of banks was diminishing and the state was not influencing competition among banks or influencing their lending decisions. The Government of China noted that it had eliminated control of inter-bank lending, liberalized the ability of banks to determine lending and deposit rates, and provided greater latitude to the banks in paying interest on consumer deposits by only setting a ceiling on deposit interest rates. The Government of China argued that therefore domestic interest rates in China should have been used as a benchmark. An investigated producer argued that interest rates from foreign banks operating within China should have been considered as the internal benchmark since foreign banks were not controlled by the government and provided loans on commercial terms.

10.138 In its determination in the OTR investigation, the USDOC stated that the government's predominant role in the banking sector resulted in significant distortions that rendered the lending rates in the country unsuitable as benchmarks, cross-referencing its findings to this effect in CFS Paper. The USDOC noted that pursuant to U.S. domestic law, benchmarks must be comparable commercial loans, i.e., they must come from a commercial lending institution, they must be similar in structure (variable or fixed rate), date of maturity, and currency. Because of the distortion of the interest rates in China, however, these interest rates were unusable to measure the benefit from government loans, and it was not possible to adjust for those distortions, as such an endeavour would be "highly complex, speculative, and impracticable." 654

10.139 The USDOC found that the government's intervention in the banking sector created significant distortions, restricting and influencing even foreign banks within China, such that the interest rates of neither Chinese nor foreign banks could be used as benchmarks. Concerning the government involvement in the banking sector, the USDOC found that while there had been some positive developments in SOCBs' lending practices in respect of increased credit risk analysis and other scrutiny measures before making lending decisions, the government continued to play a predominant role with significant distortions in its commercial banking sector. 655 In this regard, the USDOC noted that it had been denied access to many loan documents that it needed for its analysis. The USDOC further found that parties in the investigation had not demonstrated that conditions within the banking sector had changed since its determination in CFS Paper that the Chinese credit market was distorted. Although the period of investigation in the OTR investigation was one year later than that in the CFS Paper investigation, the respondents had not pointed to specific changes that had occurred between those periods that would warrant a reconsideration of the determination that the credit market was distorted. The USDOC noted that the government's guidance in assisting reform, and in moving the banking system toward a commercial footing, did not mean that the credit market was not distorted through the government's ownership and control of banks. It also noted that

---

651 Exhibit CHI-4, p. 101. The Government of China noted that banks in China, including the four largest SOCBs, made their lending decisions according to commercial considerations and had in place written procedures for risk analysis and loan approval similar to those of United States' banks and other market economies. At verification, BOC officials informed the USDOC that it considered all relevant factors when evaluating loan applications (including the company's operation and management, financial performance, competitive position, industrial risks, future prospects, the development cycle of the industry, changes in that cycle, information on the particular industry, and the structure of competition in the industry) and that its lending practices followed very detailed internal credit risk analysis guidelines. (Id., p. 102).

652 Exhibit CHI-4, p. 102.

653 Id., p. 104.

654 Id.

655 The USDOC's determination was based on the fact that it was denied access to many of the loan documents that it deemed critical for its analysis. In addition, the USDOC noted that the parties did not point to any specific changes that occurred between 2005 (the period of investigation in the CFS Paper investigation) and 2006 (the period of investigation in the OTR investigation) that would have warranted a reconsideration of the determination in CFS Paper that the credit market in China was distorted. (Id. p. 105).
although SOCBs were moving toward a more solid commercial focus, this did not preclude them from serving as the implementing arm of government policy lending.\textsuperscript{656}

(iii) \textit{CWP Investigation}

10.140 In the CWP investigation, the Government of China argued that the record evidence demonstrated that: (i) China had a commercially-oriented lending market; (ii) loan pricing was determined by market forces, with banks making lending decisions based upon commercial considerations, including proper risk assessment; and (iii) governmental industrial policy had a very limited role in lending decisions, and was only one factor that a bank might take into account in examining risk.\textsuperscript{657}

10.141 The USDOC rejected the Government of China's arguments. It recalled that in the \textit{Lined Paper} investigation it had found that China's banking sector did not operate on commercial basis and was subject to significant distortions, primarily arising out of the continued dominant role of the government in the sector. It also recalled its determination in \textit{CFS Paper} that the government still dominated the domestic Chinese banking sector and prevented banks from operating on a fully commercial basis. In the CWP investigation, the USDOC found that these distortions were still present in the Chinese banking sector, and that therefore the interest rates of the domestic Chinese banking sector did not provide a suitable basis for benchmarking the loans in question.\textsuperscript{658} Also recalling the \textit{CFS Paper} determination, the USDOC found that foreign-owned banks operating in China were subject to the same restrictions as the SOCBs, and that their share of assets and lending was negligible compared with those of the SOCBs. Therefore, for the same reasons discussed in the \textit{CFS Paper} investigation, the USDOC determined that foreign bank lending did not provide a suitable benchmark.\textsuperscript{659}

(iv) \textit{LWS Investigation}

10.142 During the LWS investigation, the Government of China argued that the USDOC had committed a legal error in the preliminary determination when it used an out of country benchmark to determine whether the government loans at issue conferred benefits. The Government of China argued that under U.S. domestic law, the benchmark must be a comparable commercial loan that the borrower could actually obtain on the market, and that the world-wide interest rates used did not represent loans that a recipient could obtain in China.\textsuperscript{660}

10.143 For its final determination in the LWS investigation, the USDOC relied on its preliminary determination as well as its previous findings in CWP and \textit{CFS Paper} to determine that interest rates in China were distorted and thus unusable as benchmarks to measure the benefit from government loans. The USDOC also had found that while foreign-owned banks operated in China, they were subject to the same restrictions as the SOCBs and their share of assets and lending was negligible compared with those banks.\textsuperscript{661} The USDOC stated in this regard that no new information had been submitted subsequent to the preliminary determination to give a reason to revisit that determination as

\textsuperscript{656} Exhibit CHI-4, pp. 104-105.
\textsuperscript{657} China did not identify any specific evidence on the record. (Exhibit CHI-1, p. 72).
\textsuperscript{658} Id., p. 7. In its overall benchmarking determination, the USDOC noted that "there is not a functioning market for loans within the PRC. Therefore, because of the special difficulties inherent in using a Chinese benchmark for loans, the Department is selecting [an out-of-country benchmark]". (Id., p. 6).
\textsuperscript{659} Id.
\textsuperscript{660} Exhibit CHI-3, p. 82.
\textsuperscript{661} Id., p. 11 and CHI-34, p. 67901.
to the benchmark issue. The USDOC also noted that it was not possible to adjust for the market distortions it had found, because to do so would be too complex, speculative and impracticable.662

(c) Assessment by the Panel

10.144 Having reached the legal conclusion that, where lending rates in a given market are distorted due to government involvement such that no commercial benchmark can be found, Article14(b) of the SCM Agreement permits resort to alternative sources for benchmarks, we now analyze the USDOC's determinations not to rely on Chinese interest rates as benchmarks. In particular, we consider whether, based on the evidence before the USDOC, a reasonable and objective investigating authority could have reached the conclusion reached by the USDOC, namely that rates in China were distorted by government involvement in and control over the lending market such that there were no commercial interest rates that could be used as benchmarks.

10.145 We note that although the analysis as presented in the determinations in the investigations before us in this claim is relatively brief, in each case there is a cross-reference to the determination in the CFS Paper investigation. That determination thus formed the principal substantive basis for the USDOC's determinations, in the three investigations before us, that Chinese interest rates were unusable as benchmarks. We note, further, that the descriptions in the determinations in the CWP, LWS and OTR investigations appear to indicate that little new evidence in respect of the government's role in the banking sector was adduced by respondent parties beyond what had been relied upon in the CFS Paper investigation, and that what was submitted did not lead the USDOC to change its assessment of the government's role in the banking sector. Before us, China makes little reference to any new record evidence of this type having been submitted, instead raising legal issues as to the permissibility of disregarding the interest rates in China. In other words, before us China does not argue that, contrary to the USDOC's determination, there had been a major change in the government's role in the banking sector between the determination in the CFS Paper investigation and those in the CWP, LWS and OTR investigations.

10.146 We thus now turn to the analysis and conclusions from the determination in the CFS Paper investigation. Here we note that the CFS Paper determination makes extensive reference to publications by outside institutions (OECD and IMF) as well as internal documents including published reports of Chinese banks, laws, etc. in support of its basic finding that the Chinese government played a predominant role in the Chinese banking sector and distorted interest rates. The USDOC also conducted extensive verification at which various officials made statements indicating the same role and influence of the Chinese government. Furthermore, there was extensive discussion in the CFS Paper determination to the effect that lending rates were largely undifferentiated, with most loans being made at rates close to the government-set benchmark rate. While before us, China refers to this as evidence of interest rate competition, and the operation of market forces, we consider that the USDOC was not unjustified in concluding that this was rather evidence that market forces were not operating, in particular, that banks still lacked adequate risk management and analysis skills.663 We also note that China does not dispute the USDOC's factual findings that the foreign banks in China were subject to the same government controls as domestic banks, and that privately-owned Chinese banks accounted for a very small percentage of total lending.

10.147 In sum, on the basis of the record evidence before the USDOC, we find that a reasonable and objective investigating authority could have concluded that the government played a predominant role in the Chinese commercial lending market as both a lender and in terms of controlling the operation of

---

662 Exhibit CHI-3, p. 83. From the record evidence before the Panel, it appears that the Government of China did not present arguments and/or evidence on the question of governmental control of the banking sector in the LWS investigation.

663 Exhibit CHI-93, p. 59-60.
this market, and thus distorted interest rates, such that the observed rates were not suitable as benchmarks. We also note the statements by the USDOC in the LWS and OTR investigations that it would not be possible to make the necessary adjustments to the observed rates to convert them into usable benchmarks. It is not the role of a Panel to conduct a *de novo* review of the evidence, and China has not objected to this conclusion of the USDOC. We thus find no basis in the evidence before us to question this judgement by the USDOC.

10.148 For the foregoing reasons we therefore find that China has not established that the USDOC's decision not to rely on Chinese interest rates as benchmarks for SOCB loans denominated in RMB was inconsistent with the obligations of the United States under Article 14(b) of the SCM Agreement.664

H. PANEL'S TERMS OF REFERENCE – BENCHMARKS ACTUALLY USED BY THE USDOC

1. Introduction

10.149 WTO dispute settlement panels are under a duty to address and dispose of certain issues of a fundamental nature on their own motion if the parties to the dispute remain silent on those issues. No doubt, the vesting of jurisdiction on a panel through its terms of reference constitutes such an issue of a fundamental nature.665 Because we wanted to ascertain the scope of our terms of reference in respect of China's claims under Article 14 of the SCM Agreement, at the second meeting of the Panel with the parties, we asked the parties' views on whether the text of China's request for the establishment of the Panel – in particular paragraph B.1(d)(i) thereof – provides a sufficient basis for China's claims in respect of the benchmarks actually used by the USDOC in its benefit determinations in respect of land-use rights and loans.666 The issue does not arise with respect to subsidies in the form of inputs because for these, China does not challenge the benchmarks that were actually used by the USDOC.667

2. Main arguments of the Parties

(a) China668

10.150 China argues that the language of paragraph B.1(d)(i) of its panel request provides a sufficient basis for its claims in respect of the benchmarks actually used by the USDOC for land use rights and loans. China first argues, in this respect, that paragraph B.1(d)(i) necessarily encompasses the use of benchmarks that are not based on prevailing terms and conditions in China. Second, China submits that the USDOC's out-of-country benchmarks for land-use rights and loans are the embodiment of its decision to reject market conditions in China as the basis for determining the existence and amount of the benefits in question. Third, China argues that it was only through the use of these benchmarks that the USDOC, in fact, rejected market conditions in China as the basis for identifying the relevant benchmark under Article 14 of the SCM Agreement.

10.151 China further argues that it listed the articles that it alleged to have been violated (including Article 14 of the SCM Agreement), and that this, by itself, is sufficient to encompass its claims against the benchmarks that the USDOC actually used for land-use rights and loans. China notes that panel requests have sometimes done nothing more than list the articles that are alleged to have been violated.

---

664 Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI.3 of the GATT 1994 in connection with this claim see Section XIII, *infra.*

666 Panel question 5 to the Parties (second meeting).

667 China response to Panel question 35 (first meeting).

668 China response to Panel question 5 (second meeting).
violated. Even in those instances, the Appellate Body has found that the panel request satisfied the requirements of Article 6.2 of the DSU.

10.152 Finally, China notes that there is no indication that the United States harboured any misunderstanding as to the scope of China's claims or suffered any prejudice as a result of how China phrased its panel request. (China notes that by contrast, the United States requested a preliminary ruling with respect to the measure challenged as part of China's "as such" claims on double remedies.) Thus, even if there were some ambiguity in paragraph B.1(d)(i) of the panel request, China argues, it is clear from the course of the Panel proceedings that there has been no misunderstanding concerning China's claims against the benchmarks that the USDOC actually used for loans and land-use rights.

(b) United States

10.153 The United States notes that the claim identified in China's request is directed at the "rejection of prevailing terms and conditions in China [...]" and that nowhere in paragraph B.1(d)(i) or elsewhere in China's request for the establishment of the Panel, does China refer to the "benchmarks actually used" by the USDOC for land-use rights or loans.

10.154 The United States notes that the panel request specifies that China's claim relates only to "the following obligations of the United States" and lists certain aspects of the USDOC determinations in connection with Article 14 of the SCM Agreement, indicating that this is the extent of China's claims with respect to the use of benchmarks. Thus, the United States argues, to the extent that China is bringing a different claim, this claim would be outside the scope of its panel request. In this regard, the United States notes that the China – Publications and Audiovisual Products panel found that by listing certain specific requirements under the Chinese measures at issue, the United States had only notified China of a claim in respect of these specific requirements to the exclusion of other requirements contained in the measures at issue.

10.155 The United States disagrees with China that the language in paragraph B.1(d)(i) of its panel request "necessarily encompasses the use of a benchmark that is not based on prevailing terms and conditions in China". The United States considers that the USDOC's rejection of prevailing terms and conditions in China and its selection of benchmarks actually used are separate determinations.

10.156 Likewise, the United States notes that China has discussed these issues separately throughout its submissions in this dispute, showing that in China's view, the consistency with the covered agreements of the USDOC's determination to "reject prevailing terms and conditions in China" and the benchmark "actually used" are distinct analytical questions. That said, the United States considers it irrelevant whether China made it clear in its submissions to the Panel that it was challenging the benchmarks actually used by the USDOC for land-use rights and loans: The question is whether a claim against the benchmarks "actually used" was included in China's request for the establishment of the Panel. Finally, the United States considers it irrelevant that it did not raise any objection to China's claims before the Panel posed a question on the issue, noting that WTO panels have to address and dispose of certain issues of a fundamental nature, even if the parties to the dispute remain silent on those issues.

3. Assessment by the Panel

10.157 Article 6.2 of the DSU sets out the requirements pertaining to a complaining party's request for the establishment of a panel. It provides as follows:

---

669 United States response to Panel question 5 (second meeting); comments on China's response to Panel question 5 (second meeting).
"The request for establishment of the panel [...] shall indicate whether consultations were held, identify the specific measures at issue and provide a brief summary of the legal basis of the complaint sufficient to present the problem clearly".

10.158 The requirement, in Article 6.2 of the DSU, to identify the measures at issue in a dispute and to provide a brief summary of the legal basis of the complaint has been linked to the dual necessity of establishing the Panel's terms of reference and the due process objective of notifying the responding party (and third parties) of the case it has to answer:

"The requirements of precision in the request for the establishment of a panel flow from the two essential purposes of the terms of reference. First, the terms of reference define the scope of the dispute. Secondly, the terms of reference, and the request for the establishment of a panel on which they are based, serve the due process objective of notifying the parties and third parties of the nature of a complainant's case [...]". 670 (footnote omitted)

10.159 Compliance with Article 6.2 must be demonstrated on the face of the request for the establishment of a panel, and reading the panel request "as a whole". 671 We agree with the Japan – DRAMs (Korea) panel's reasoning that the principles embodied in Article 6.2 of the DSU may only properly be upheld if panels apply that provision on the basis of the text of the panel request, i.e., without regard to whether or not the responding party suffered a prejudice by considering what happened during the course of the panel proceedings. 672

10.160 In raising with the parties the question of our terms of reference, we sought to ascertain our jurisdiction by identifying the precise claims at issue in the present dispute. Specifically, we sought to ascertain whether the terms of China's panel request were sufficiently broad to cover both aspects of China's "benchmarks" claims in respect of land-use rights and loans, i.e., concerning not only the USDOC's rejection of land-use prices and interest rates in China as benchmarks, but also the consistency with Article 14 of the benchmarks actually used by the USDOC in each instance.

10.161 The relevant part of China's panel request, section B.1.(d)(i), reads as follows:

"B. Legal Basis of the Complaint

[...]

1. As Applied Claims

China considers that the CWP, OTR, LWRP, and LWS anti-dumping and countervailing duty investigations, determinations and orders, the definitive anti-dumping and countervailing duties imposed pursuant thereto, as well as the combined effect of the anti-dumping and countervailing duty determinations, orders, and duties in each such investigation, are inconsistent, at a minimum, with the following obligations of the United States under the covered agreements

672 Panel Report on Japan – DRAMs (Korea), paras. 7.5-7.10. The panel, in its analysis, attached great importance to comments made by the Appellate Body in para. 126 of its Report in US – Carbon Steel. The panel also noted the approach taken by the Canada – Wheat Exports and Grain Imports panel. Given that the United States did not raise the issue we discuss here on its own initiative, we might in any case be hard pressed to conclude that the United States was prejudiced by any defect in China's panel request.
(d) in connection with each instance in which the US authorities resorted to a benchmark outside of China for the purpose of determining the existence and amount of any alleged subsidy benefit –

(i) the US authorities' rejection of prevailing terms and conditions in China as the basis for determining whether, and to what extent, subject producers received a subsidy benefit under the methodologies set forth in Article 14 of the SCM Agreement;

10.162 We are satisfied that read in its totality, China's panel request provides a sufficient basis for China's claims in respect of the benchmarks actually used by the USDOC. We note in particular that the introductory sentence to paragraph B.1.(d) refers to the instances in which the USDOC relied on "benchmarks outside of China". This, in our view, is a sufficient indication of China's intent to challenge before the Panel not only the consistency with Article 14 of the SCM Agreement of the USDOC's decision to reject terms and conditions prevailing in China, but also the consistency with the same provision of the external benchmarks that the USDOC actually relied upon.

10.163 For the foregoing reasons, we find that China's claims in respect of the benchmarks actually used by the USDOC with respect to loans and land-use rights fall within our terms of reference. Given this finding, we now turn to an assessment of these claims of China.

I. CONSISTENCY WITH ARTICLE 14(D) OF THE SCM AGREEMENT OF THE BENCHMARKS ACTUALLY USED BY THE USDOC – LAND-USE RIGHTS

1. Claim of China

10.164 China claims that the benchmark relied upon by the USDOC in the LWS and OTR investigations to determine the existence and amount of benefit conferred by the provision of land-use rights on, respectively, Aifudi and Starbright, was inconsistent with Article 14(d) of the SCM Agreement.673, 674

2. Factual background

10.165 In the LWS and OTR investigations, the USDOC determined the existence and amount of benefit conferred by the provision of land-use rights by comparing the price paid by the investigated producers to prices for certain industrial property in Bangkok and adjacent provinces in Thailand.675, 676 The USDOC also considered, and rejected, two additional benchmarks: First, the USDOC rejected the possibility of using world market prices as benchmark because there is no "world market" for land (the USDOC reasoned that land being an in situ property, it could not simultaneously be "available to an in-country purchaser" while located and sold out-of-country on the world market). The USDOC also examined whether land prices in China were determined in accordance with market principles. The USDOC found that they were not, due to the government's involvement in the land-use rights market as well as the widespread and documented deviation from the authorized methods of pricing and allocating land. In this context, the USDOC also rejected an argument of the Government of China that it should have applied the price discrimination test provided for in its "market-principles analysis"; the Government of China had argued that Chinese land-use rights prices were consistent with market-principles analysis because (i) the investigated producer at issue did

---

673 See, generally, China first written submission, paras. 302-319.
674 As indicated at para. 10.1, supra, China also raises consequential claims pursuant to Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.
675 Exhibits CHI-3, p. 17; CHI-34, p. 67909; and CHI-50, p. 71369.
676 The USDOC also considered, and rejected, two additional benchmarks: First, the USDOC rejected the possibility of using world market prices as benchmark because there is no "world market" for land (the USDOC reasoned that land being an in situ property, it could not simultaneously be "available to an in-country purchaser" while located and sold out-of-country on the world market). The USDOC also examined whether land prices in China were determined in accordance with market principles. The USDOC found that they were not, due to the government's involvement in the land-use rights market as well as the widespread and documented deviation from the authorized methods of pricing and allocating land. In this context, the USDOC also rejected an argument of the Government of China that it should have applied the price discrimination test provided for in its "market-principles analysis"; the Government of China had argued that Chinese land-use rights prices were consistent with market-principles analysis because (i) the investigated producer at issue did
conditions", taking into consideration certain economic and demographic factors. Specifically, the USDOC found that (i) China and Thailand had similar per capita gross national income ("GNI") at $2,010 and $2,990, respectively and that (ii) population density in China and Thailand were roughly comparable at 141 persons/km² in China and 127 persons/km² in Thailand. The USDOC also found that producers consider a number of markets, including Thailand, as an option for diversifying production bases in Asia beyond China. In the LWS investigation, the USDOC further took into consideration that population density was higher than national averages in both Shandong province (where the investigated producer was located) and in Zone 1 in Thailand (the benchmark used), at 562/km² and 908/km², respectively and that Shandong province had a per capita GNI of approximately $2900, i.e., closer to that of Thailand than China's overall GNI.

In its price-comparison analysis, the USDOC relied on Thai land prices reported in independent real estate market reports. In the LWS investigation, in which the land-use rights at issue were "granted" land-use rights (rights which required a large up-front fee but no annual fees aside from taxes), the USDOC used a one-time purchase benchmark in order to measure the benefit at issue. For this purpose, the USDOC selected industrial land prices in one of three industrial promotion zones in Thailand (comprising Bangkok and adjacent provinces) as reported in the market reports.

In the OTR investigation, in which the land-use rights also included "allocated" rights (land-use rights provided to SOEs for a nominal one-time charge and an annual land-use fee), the USDOC determined that these more closely resembled a lease or rental arrangement rather than a one-time purchase. The USDOC therefore looked for an appropriate "property yield" for commercial land in Thailand, i.e., the annual cash flow from rent that a land owner in Thailand could expect to earn, and to that effect used dividend yields from real estate investment trusts ("REITs"), as reported in market reports prepared by the same source that compiled the reports on which it relied to determine the industrial land prices.

not benefit from any price discrimination in acquiring its land-use rights; and (ii) the government's price covered its own costs and made profits for managing and selling land-use rights. (Exhibits CHI-3, pp. 15-16 and 59; CHI-34, p. 67908; and CHI-50, p. 71369).

677 Exhibits CHI-34, p. 67909 and CHI-50, p. 71369.
678 The USDOC considered that the same producers could compare prices across borders when deciding what land to buy. It noted that the market reports from which it obtained its benchmark prices compared real estate prices in China with other prices in Asia (including Thailand). Further, the USDOC noted that studies by the Japan External Trade Organization (JETRO) comparing Asian alternative investment destinations beyond China reported that "Thailand got the highest score as the best location for establishing a production base over the next five to 10 years" and that "Thailand ranks as the second-best choice after China as a location for expanding both high and mid to low end production". Finally, the USDOC took into consideration a statement contained in a market report that "[m]any foreign companies believe that Thailand is still a strategic choice for a Southeast Asian production base". (Exhibits CHI-34, p. 67909 and CHI-50, p. 71369).

679 Exhibit CHI-34, p. 67909.
680 Id., p. 67909 and CHI-50, p. 71369.
681 Exhibit CHI-50, pp. 71369-70.
682 REITs "are trusts that are dedicated to owning and/or operating income-producing real estate" and their dividends "are based on the income, often rent, generated from the real estate holdings". The USDOC noted that REITs portfolios in Thailand held not only industrial but also non-industrial real estate and that there was a wide range of returns. The USDOC considered that nothing on the record indicated that industrial land would yield a higher or lower income than other types of real estate in Thailand and on that basis concluded that dividend yields from REITs were a reasonable proxy for assessing the market-value annual rent for industrial land in Thailand. In order to calculate an annual rent, the USDOC calculated an annual yield percentage (i.e., the average dividend yield of the REITs in Thailand in the period contemporaneous with the one-time purchase benchmark established in the LWS determination), which it multiplied by the up-front purchase price per square foot established in the LWS determination. (Id., pp. 71369-70).
3. Main arguments of the Parties

(a) China

10.168 China submits that the benchmark actually used by the USDOC in the investigations at issue, i.e., land prices in Bangkok, Thailand, is inconsistent with Article 14(d) of the SCM Agreement, as interpreted by the Appellate Body in *US – Softwood Lumber IV*. 683

10.169 China argues that land prices in Thailand (or any other country) do not "relate or refer to" the prevailing market conditions for land in China, and that the Thai benchmark, 3000 km away, bears no relationship to prevailing market conditions in China. 684 China adds that the factors affecting the value of land (its physical and legal characteristics) are unique to a particular country and even often significantly vary within a country 685 and questions whether it would ever be possible to make what the Appellate Body referred to as "all necessary adjustments" to undertake that sort of comparison with respect to land-use rights. 686 In addition, China argues that the USDOC did not explain how the factors it considered relevant for choosing land prices in Thailand (e.g. the similar levels of per capita GNI) have any connection to prevailing market conditions for land in a particular country or location. 687 China also notes the admission by the United States that the USDOC made no adjustments to its Thai benchmark to ensure that it would "relate or refer to, or be connected with" prices prevailing on the Chinese land-use rights market. 688

10.170 Further, China argues that the USDOC could have used alternative benchmarks other than land prices in another country: China argues that the USDOC has in the past resorted to methods, other than the use of external benchmarks for evaluating the existence and amount of benefit in the case of land. In particular, China notes that the USDOC has for instance, in the past, looked at whether land prices are determined in accordance with market principles. 689 This, in China's view,

---

683 See, e.g., China second written submission, para. 64; response to Panel question 43 (first meeting), citing to Appellate Body Report on *US – Softwood Lumber IV*, paras. 103 and 108.
684 China first written submission, para. 324.
685 Id., paras. 310 and 313-314. According to China, land is a non-tradable good and its value is inherently locational, that is, the value of land cannot be separated from its physical and legal characteristics, for instance, topography, transportation infrastructure, taxes, land-use restrictions, labour and environmental laws. (Id., para. 308) China submits that the sources relied upon by the USDOC for its Thai land price data confirm that national and local property factors affect the value of land and therefore that land values significantly vary among different countries, regions, and even within a single country. (Id., paras. 311-313).
686 Id., paras. 307 et seq. China argues in this respect that while Article 14(d) makes clear that availability, marketability, and transportation form part of the "prevailing market conditions" for the good in question, land is an unmovable good so that it is impossible to "replicate reliably" the prevailing market conditions for land in China by referring to land prices in Thailand. (See, e.g., China first written submission, paras. 314-315, citing to Appellate Body Report on *US – Softwood Lumber IV*, para. 108).
687 Id., para. 318.
688 China second written submission, para. 50; opening statement at the first meeting of the Panel, para. 49.
689 China argues that in previous investigations where the government was found to be the sole provider of the land in question, the USDOC determined the existence of the benefit by evaluating whether there was price discrimination among the users of such land, a method which China argues, the Preamble to the USDOC's countervailing duty regulations recognizes. (China response to Panel Question 34 (first meeting) (quoting from comments made by the USDOC in the CWP investigation and USDOC determinations in *Steel Wire Rod from Trinidad and Tobago* (Exhibit CHI-149) and *Certain Cut-to-Length Carbon-Quality Steel Plate from the Republic of Korea* (Exhibit CHI-150)). China argues that, had the USDOC applied a similar approach in the LWS investigation, there would have been no subsidy to the investigated producer concerned (Aifudi). China also adds that in all three of these instances, the USDOC recognized that land values are unique to particular locations, and therefore that any benchmark must be drawn from the same general location and take into account specific factors that affect land values at that location. (Id.).
belies the United States' argument that it would be impossible to calculate the benefit at all in certain circumstances if China's position were accepted. 690

10.171 Finally, China does not consider sufficient the United States' defence of the benchmarks on the ground that "[t]here is not always a perfect set of data upon which to rely" and that it may consequently not always be possible to make all the adjustments required by Article 14(d) of the SCM Agreement. China argues that the mandatory language of the Agreement cannot be disregarded on the ground that it was too difficult a standard to apply. China also adds that the fact that it would be impractical to adjust for all the factors in Article 14(d) was precisely why the Appellate Body, in US – Softwood Lumber IV, seriously questioned whether out-of-country benchmarks could ever lawfully be used. China also highlights the warning of the Appellate Body, in US – Softwood Lumber IV, that even in the limited circumstance in which out-of-country benchmarks may be used, the benchmark must – without exception – "relate or refer to, or be connected with" the prevailing, i.e., existing market conditions in the country of provision. 691

(b) United States

10.172 The United States defends the consistency with Article 14(d) of the Thai benchmark used by the USDOC in the LWS and OTR investigations.

10.173 The United States argues that nothing in the text of Article 14(d) suggests that land-use rights are exceptional, or that they should be treated differently than other goods with respect to the use of external benchmarks. 692 The United States considers that China's restrictive interpretation, if accepted, would eliminate the possibility of countervailing the subsidized provision of land-use rights, contrary to the object and purpose of the SCM Agreement. 693

10.174 The United States submits that by selecting land prices in a country with a comparable per capita GNI and population density and by using prices for comparable types of land (e.g., industrial zones, allocated versus granted land-use rights), the benchmark used by the USDOC reasonably reflected the "prevailing market conditions for the good in question".

10.175 Specifically, the United States argues that the Thai prices used accounted for the prevailing market conditions, consistent with Article 14(d) of the SCM Agreement. The United States notes the factors that the USDOC took into consideration in selecting Thai prices as the benchmark (per capita GNI, population density, and types of land transactions) to ensure that these prices would "relate or refer to or be connected with" China's prevailing market conditions. The United States submits that

690 China response to Panel question 34 (first meeting).
691 See, e.g., China opening statement at the first meeting of the Panel, para. 49; first written submission, para. 309.
692 The United States notes that in US – Softwood Lumber IV, the Appellate Body rejected an argument similar to China's argument that land use-use rights should be treated differently under Article 14(d): the Appellate Body rejected an argument of Canada that standing timber is attached to the land and incapable of being traded across borders. The Appellate Body explained that excluding non-tradable goods would permit the circumvention of the WTO's subsidies disciplines. (United States first written submission, paras. 273-274, referring to Appellate Body Report on US – Softwood Lumber IV, paras. 57, 64 and 67).
693 Id., para. 275. In addition to its arguments based on Article 14(d) of the SCM Agreement, the United States also argues that China's position is contradicted by the terms of Section 15(b) of China's Protocol of Accession, which provides no basis to exclude government-provided land use rights, and which confirms the permissibility of using out-of-country benchmarks in countervailing duty investigations concerning imports from China. (Id., para. 276). Because, as explained in Section X.B, supra, the United States has clarified to the Panel that it is not relying on the Protocol of Accession in defending this or any of China's claims pursuant to Article 14 of the SCM Agreement, we do not take these arguments of the United States into account in our analysis.
Article 14(d) of the SCM Agreement lists several factors in relation to which the adequacy of remuneration should be determined, including price, quality, availability, marketability, transportation and other conditions of purchase or sale. The United States considers that demand is typically the primary determinant of the price for urban land (because supply is considered to be fixed) and that demand in turn is a function of population density and the level of economic development, as measured by per capita GNI. The United States also submits that quality and marketability of land-use rights prices in China were taken into consideration by the fact that producers, in general, consider a number of markets, including Thailand, as an option for diversifying production bases in Asia beyond China. Moreover, the USDOC used prices for land in industrial zones, as the land-use rights in China were also located in industrial zones; the United States argues that use of similar types of land (i.e., land in industrial zones) would account for the quality and marketability of the land. The USDOC also took into account whether the transaction involved allocated or granted land-use rights, which would impact the marketability of the land-use rights. Availability was accounted for by selecting benchmark prices from an urban area, Bangkok, where population densities were higher than on average for Thailand, because the land-use rights at issue in the OTR and LWS investigations were also from urban areas of China. Therefore, the United States argues, the Thai prices selected by the USDOC reasonably reflected the "prevailing market conditions" for the land-use rights in China.

10.176 The United States notes that China argues that the USDOC should have taken into account other factors such as capital control measures limiting foreign ownership of companies in Thailand or various incentives that governments provide to companies, but does not point to any relevant information on the record that would have allowed the USDOC to make any such adjustments. The United States submits that investigating authorities are restrained in their ability to adjust prices because of the limited information before them so that it may not always be possible to adjust for all of the items listed in Article 14(d), but that this should not preclude a Member from selecting a comparison price. The United States also argues that if the bar for selecting the out-of-country benchmark is set so high that it requires the use of unavailable data, investigating authorities will be required to use in-country prices even where they contain the very subsidy that they are trying to measure, and that such measurement, in turn, would not capture properly the benefit of the subsidy due to the predominant role of the government. The United States also argues that China's position ignores the inherent "flexibility" in the guidelines under Article 14 of the SCM Agreement.

10.177 In response to arguments of China, the United States argues that it considers benchmarks used in other USDOC investigations to be irrelevant to this dispute and that the other cases cited by China are not analogous to the land-use rights market in China as the USDOC did not find in any of these cases that the land markets were distorted by the government's predominant role. The United States also argues that in the investigations at issue, the USDOC did in fact perform a "market principles analysis" and found that land-use rights in China are not priced in accordance with market principles. The United States adds that China's argument that a "price discrimination" analysis could have been

---

694 United States first written submission, para. 278-284; second written submission, paras. 115-119. The United States also argues that transportation is not a factor in valuing land as land is not transported
695 See, e.g., United States first written submission, para. 293.
696 Id., para. 286.
698 See, e.g., United States first written submission, para. 286, citing to Panel Report on EC – Countervailing Measures on DRAM Chips, para. 7.213; response to Panel question 46 (first meeting).
699 United States second written submission, paras. 110-112. The United States submits that China misrepresents the USDOC's practice since the USDOC consistently relies on out-of-country benchmarks when it determines that the government plays a predominant role in the market. In addition, the United States submits that one of the cases cited by China did not even concern the provision of land, but, instead, pertained to an analysis of "revenue forgone" by the USDOC. (Id.).
applied is misleading because such an analysis is part of the "market principles" analysis that the USDOC performed.700

4. Main arguments of the Third Parties

(a) European Communities

10.178 The European Communities considers that the mere fact that a piece of land is located 3000 km away is not a sufficient reason alone to conclude that a market benchmark is unreasonable. The European Communities also argues that any comparison must be adjusted in order to replicate the prevailing terms and conditions which would have existed absent price distortion.701

(b) Saudi Arabia

10.179 Saudi Arabia argues that the use of external benchmarks is especially inappropriate with respect to financial contributions in the form of the provision of land and that, as a result, the adjustments required under Article 14(d) (as acknowledged by the Appellate Body in US – Softwood Lumber IV) apply a fortiori when the benchmarks concerns the provision of land.702

5. Assessment by the Panel

10.180 We recall our finding above that China has not established that the USDOC's decision not to rely on Chinese prices for land-use rights as benchmarks was inconsistent with Article 14(d) of the SCM Agreement. The remaining question before us thus is whether China has established that the actual benchmarks used by the USDOC are inconsistent with Article 14(d) of the SCM Agreement.

10.181 We recall that under the terms of Article 14(d) of the SCM Agreement, the adequacy of remuneration for the government-provision of goods "shall be determined in relation to prevailing market conditions for the good or service in question in the country of provision or purchase (including price, quality, availability, marketability, transportation and other conditions of purchase or sale)". We further recall that the Appellate Body, in US – Softwood Lumber IV, cautioned that:

"[w]hen an investigating authority resorts [...] to a benchmark other than private prices in the country of provision, the benchmark chosen must, nevertheless, relate or refer to, or be connected with, the prevailing market conditions in that country, and must reflect price, quality, availability, marketability, transportation and other conditions of purchase or sale, as required by Article 14(d)." 703

10.182 The Appellate Body indicated that a range of factors would have to be taken into account when making adjustments to replicate conditions that would prevail in the country of provision (in the absence of the distortion caused by the government's role that led to the conclusion that in-country prices could not be used as benchmarks). In the particular situation of reliance on prices in another country as a proxy for the prices that would prevail in the country of provision of a good or service, the Appellate Body noted that "it would be difficult, from a practical point of view, for investigating authorities to replicate reliably market conditions prevailing in one country on the basis of market

700 The United States explains that, according to the Preamble to the USDOC's regulations, the USDOC "will assess whether the government price was in accordance with 'market principles'" in situations where the government is the only source available to consumers in the country, and that, one factor which the USDOC "may" rely upon in that assessment, is "possible price discrimination". (Id., paras. 113-114).
701 European Communities third-party submission, para. 47.
702 Saudi Arabia third-party submission, para. 77.
conditions prevailing in another country", and that appropriate adjustments would need to be made to avoid in particular the countervailing of comparative advantages.704

10.183 Concerning the implications of these findings by the Appellate Body for the use of cross-border benchmarks for land-use rights, China argues first that because land is by definition not traded across borders and because its value is significantly determined by its location and by the applicable legal regime, it is impossible to replicate reliably the prevailing market conditions for land in one country by referring to land values in another country, which has its own physical, social, political and economic environment.705

10.184 In our view, the considerations identified by China certainly mean that ensuring that any benchmark (especially any out-of-country benchmark) used for land-use rights "relate[s], refer[s] or is connected with" prevailing market conditions in the country of provision of the land is a difficult exercise. Yet, we do not consider that the terms of Article 14(d) exclude, a priori, the possibility of determining the existence and amount of benefit for subsidies in the form of provision of land on the basis of land prices in another country. Further, accepting that it would never be permissible to resort to land prices in other countries as benchmarks in situations such as were found to exist in the LWS and OTR investigations would mean that precisely because the land market in the country of provision is distorted, it would become impossible for the investigating authority to determine the existence and amount of any benefit. Such a result – that countervailing certain forms of subsidies would become impossible in certain situations706 – would, in our view, undermine the object and purpose of the SCM Agreement, "which is to strengthen and improve GATT disciplines relating to the use of both subsidies and countervailing measures, while, recognizing at the same time, the right of Members to impose such measures under certain conditions."707

10.185 The other principal argument of China focuses on what it perceives as a requirement under Article 14(d) of the SCM Agreement for the investigating authority to make adjustments, in all cases, to any alternative benchmark that may be selected, to ensure that that benchmark approximates prevailing conditions in the country of provision. In other words, we see China as arguing that without "adjustments", any proxy benchmark will be, ipso facto, inconsistent with Article 14(d). In this regard, China argues, and the United States does not contest, that in the investigations at issue, the USDOC performed no adjustments to the Thai land-use prices it used as benchmarks. The United States' response to this argument of China is that the USDOC ensured that it met the requirements of Article 14(d) through its selection of the benchmark, such that it was not necessary to perform further adjustments.

10.186 We recall that the ultimate goal in selecting a benchmark is to ensure the comparability of that benchmark with the relevant market conditions, and this is particularly true where proxies are used.

705 China first written submission, paras. 310 and 315.
706 The claims before us are limited to the benchmarks actually used by the USDOC. Hence, we do not have to consider what benchmarks other than land-use prices in China or land-use prices in other countries the USDOC could possibly have resorted to. Yet, we note China's arguments that in other instances in which it considered domestic land prices to be distorted, the USDOC relied on benchmarks such as whether the price paid for the land was consistent with market principles or the price paid by the investigated producer was different than that paid by other entities (price discrimination). (China response to Panel question 34 (first meeting)). The United States responds that those other cases did not involve situations where the market was found to be distorted, and that in the investigations at issue in this dispute, in fact the USDOC did conduct a market principles examination, of which the price discrimination analysis is a part. In our view, the facts of the investigations at issue underscore the inherent difficulties that would arise from the use of benchmarks focusing on market distortions in a situation in which it has been found that the entire land-use rights market in the country of provision is distorted.
due to the unavailability of in-country prices. In turn, comparability can be achieved either through
the selection of the particular benchmark to be used, or through application of adjustments to a price
on which the benchmark price will be based, or through some combination of selection and
adjustment. This is how we read the Appellate Body’s discussion in US − Softwood Lumber IV about
the need to ensure that all necessary adjustments are made. That is, rather than establishing a
litmus test that in every case, "adjustments" must be made no matter how inherently comparable the
selected benchmark is to the market conditions that it is being used to approximate, we see the
Appellate Body as highlighting the elements of comparability that must be reflected in the benchmark
ultimately applied. That is, the inquiry under Article 14(d) is whether the benchmark as actually used
is one that "relates or refers to, or is connected with" the prevailing market conditions in the country
of provision, in particular as to "price, quality, availability, marketability, transportation and other
conditions of purchase or sale".

10.187 While this is a demanding standard, we recall that the use of a benchmark other than private
prices in the country of provision is, in the first place, made necessary by the fact that the (land-use)
market in the country of provision is distorted. It would in our view be incongruous to interpret
Article 14(d) so as to effectively require the investigating authority, confronted with such a situation,
nevertheless to choose between not performing the benefit calculation or calculating it on the basis of
a benchmark based on distorted market conditions. In sum, in such a situation, we see Article 14(d)
as requiring an investigating authority to do its best to identify a benchmark that approximates the
market conditions that would prevail in the absence of the distortion. While inherently such a
benchmark cannot be perfect as it will never be possible to take into account all of the myriad factors
that establish market conditions, and it will never be possible to know with certainty the market
conditions that would prevail in the absence of the government-caused distortion, the authority must
conduct a reasoned analysis based on factual information, selected and adjusted as necessary to be as
comparable as possible to such market conditions. In other words, whatever benchmark is selected
and whatever methodology is used must be ones that a reasonable and objective investigating
authority could use for that purpose.

10.188 Turning now to the approach taken by the USDOC in selecting its land-use benchmarks in the
LWS and OTR investigations, we are satisfied that the method adopted by the USDOC meets these
requirements. We note in particular that when selecting the benchmark to use for Chinese land-use
prices, the USDOC took into consideration a number of factors such as per capita GNI, population
density (in the case of the LWS investigation, both for the countries and the provinces at issue), the
types of land transactions, and the type of land at issue (land in industrial zones), with a view to
approximating what the market conditions would be for the land-use rights at issue in China but for
the market distortions. We recall that we have determined that China has not demonstrated that the
USDOC was not justified in resorting to a benchmark other than land-use prices in China in the first
place. This being the case, the USDOC was faced with a situation in which it had to construct a
benchmark to approach what essentially would be a counterfactual situation – what prices for land-use
rights in China would be in the absence of distortion.

10.189 Before us, China identifies various factors that, in its view, may affect the value of land, such
as the tax incentives that may be provided to investors or the quality of infrastructure (availability of
schools, hospitals, public transportation, etc.). In China’s view, the USDOC’s methodology was flawed, inter alia, because the USDOC did not “even attempt to account for these factors” in its
comparison of land prices in Bangkok to land prices in the Chinese industrial parks at issue. Before
us, as before the USDOC in the investigations at issue, the arguments of the Government of China and
the other respondents have primarily focused on the permissibility as such of using out-of-country

709 Id., para. 103.
710 China first written submission, paras. 313-314.
prices for land-use rights and on whether Thai prices could at all provide an appropriate proxy for Chinese land market prices, rather than on identifying specific adjustments which the USDOC ought to have made to ensure the consistency of its benchmarks with Article 14(d) of the SCM Agreement.\footnote{While in the OTR investigation GTC argued that the USDOC should make adjustments to reflect market conditions in Guizhou Province – i.e. account for the fact that Guizhou Province is one of China's most impoverished provinces – ultimately, the USDOC did not countervail the provision of land-use rights to GTC and to TUTRIC. (Exhibit CHI-4, pp. 187, 191).} We might add that while there can be no question that the Thai land prices and constructed annual rents relied upon by the USDOC do not provide a perfect picture of what prices for land-use rights would be in China in the absence of the distortions that the USDOC found to exist, it nevertheless is not clear that the fact of adjusting those benchmarks, as such, would ensure a closer approximation of the counterfactual situation (an undistorted land use rights market in China). In any case, China has not demonstrated that the USDOC failed to make any specific adjustment which it was required to make or which the Government of China or interested parties had identified, before the USDOC or before us.

10.190 Finally, we note that China's argument in respect of the USDOC's use of the Thai benchmark in the OTR investigation is limited to a footnote to its first written submission, in which it refers to its argument in respect of the USDOC's LWS determination.\footnote{Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, infra.} For this reason, our examination of the USDOC's Thai benchmarks in the OTR investigations is limited to the general arguments presented by China in respect of the USDOC's LWS determination.

10.191 For the foregoing reasons, we find that China has not established that the benchmarks relied upon by the USDOC for land-use rights in the LWS and OTR investigations were inconsistent with the obligations of the United States under Article 14(d) of the SCM Agreement. In making this finding, we note that we are limiting ourselves to the questions raised by China in connection with this claim.\footnote{See, e.g., China first written submission, para. 273.}

J. CONSISTENCY WITH ARTICLE 14(B) OF THE SCM AGREEMENT OF THE LOAN BENCHMARKS ACTUALLY USED BY THE USDOC – RMB-DENOMINATED LOANS

1. Claim of China

10.192 China claims, in respect of SOCB loans denominated in RMB, that the benchmarks used by the USDOC in its benefit calculations in the OTR, CWP and LWS investigations were inconsistent with Article 14(b) of the SCM Agreement.\footnote{See, e.g., China first written submission, para. 273.}

2. Factual background

10.193 In the CWP, LWS and OTR investigations, having determined that it could not use interest rates in China as benchmarks for RMB-denominated loans from SOCBs, due to the distortion of the Chinese lending market as a whole, the USDOC constructed a proxy interest rate using a regression analysis of inflation-adjusted interest rates in 33 lower-middle-income countries\footnote{As identified by the World Bank's classification of countries. (See, e.g., Exhibit CHI-1, p. 8).}, on the basis of a "broad inverse relationship" that it had found between income levels and lending rates.\footnote{The USDOC cited its findings to this effect from the CFS Paper investigation based on its analysis of IMF data. (Exhibits CHI-1, pp. 7-8; CHI-3, p. 12; CHI-4, p. 8; and CHI-93, p. 71).} According to the USDOC, the inflation adjustments served as a proxy for the adjustment for exchange rate expectations necessary when comparing interest rates across currencies. The USDOC stated that a
cross-country comparison of "real" interest rates is a rough proxy for a comparison of exchange rate-adjusted nominal rates because of the general link between inflation and (nominal) exchange rate expectations. The regression analysis also took into account the "quality of a country's institutions" (including political stability, government effectiveness and rule of law) which, the USDOC stated "is not directly tied to state-imposed significant distortions in the banking sector". The USDOC stated that the governance factors facilitated cross-country comparisons because they incorporated other important factors that can influence interest rate formation, in particular because differences in these factors will give rise to differences in perceived risk associated with the particular country which will be reflected in a country's overall level of interest rates.717

3. Main arguments of the Parties

(a) China

10.194 China claims that the interest rates derived from the USDOC's 33-country regression analysis are inconsistent with Article 14(b) of the SCM Agreement. In particular, China submits that these interest rates do not reflect "comparable commercial loans" that a borrower could "actually obtain in the market".718

10.195 China argues that the benchmark loans are not denominated in the same currency as the RMB-denominated loans under investigation and are therefore not comparable. China rejects the United States' assertion that its benchmark loan was "comparable" because it was "based upon lending rates from countries with similar [per capita gross national incomes] and institutional quality as measured by World Bank governance indicators". China asserts that neither the USDOC nor the United States has provided any coherent explanation as to why these factors (i.e., per capita GNI and institutional quality) somehow relate to whether loans are "comparable" within the meaning of Article 14(b).719 Moreover, China argues that the United States' notion of "comparability" fails to give any legally operative meaning to the term "comparable" in Article 14(b), contrary to the fundamental principle of effectiveness in treaty interpretation.720

10.196 China also alleges that no borrower could "actually obtain" the USDOC's benchmark loans in "any" commercial lending market – whether in China or elsewhere. For China, fictitious, non-existent loans cannot be obtained by anyone.721 China disagrees with the United States' assertion that the regression analysis it used was "tailored to approximate" a comparable loan that a firm could "actually obtain on the market". According to China, the USDOC's loan benchmark does not "approximate" a comparable commercial loan in China, nor is "tailored to approximate" the applicable standard under Article 14(b). Rather, China argues, Article 14 establishes mandatory parameters with which any methodology used by investigating authorities must comply.722 China also rejects the argument

---

717 Exhibits CHI-1, pp. 7-8 and 78; CHI-3, pp. 12-13; and CHI-4, p. 8 and 109-110.

718 See, e.g., China first written submission, para. 244. According to China, whatever "flexibility" exists in the application of Article 14(b), any methodology used by investigating authorities must refer to a "comparable commercial loan which the firm could actually obtain on the market". (China response to Panel question 30 (first meeting)).

719 China first written submission, para. 245; second written submission, paras. 74 and 81. China adds that the USDOC provided no explanation of how "governance indicators" such as government effectiveness, regulatory quality and political stability had any bearing upon the process of interest formation or the policy choices of monetary authorities as regards the direction of monetary conditions and interest rates. (China first written submission, para. 266).

720 China second written submission, para. 82.

721 China first written submission, para. 245; second written submission, para. 84; oral statement at the first meeting of the Panel, para. 52.

advanced by the United States that the benchmark loans were "from the market" because they were "based on a regression of actual average lending rates reported by each country". China argues that there was no evidence that respondent borrowers could "actually obtain" loans in any of these lending markets, and no amount of regressing could overcome the lack of such evidence.\textsuperscript{723}

\section*{(b) United States}

10.197 The United States argues that, due to the government's predominant role in the banking sector and other government interventions, the USDOC found that the lending "market" in China was so distorted that there were no comparable "commercial" loans for benchmark purposes. Therefore, the USDOC selected a benchmark lending rate that was both "commercial" and "comparable", as required by Article 14(b) of the SCM Agreement.\textsuperscript{724}

10.198 The United States argues that the USDOC used an out-of-country benchmark derived from interest rates from a group of countries rather than a single country, because various factors can affect national interest rates.\textsuperscript{725} The United States also submits that the USDOC controlled for the most significant factors affecting interest rates by selecting inflation-adjusted rates in countries with per capita GNI similar to that of China, and then performed a regression of those rates, the GNI data and a range of World Bank governance indicators to determine a yearly comparison interest rate. Countries in the same GNI category (lower middle income) as China that were found to be anomalously high or low in terms of their interest rates, or were non-market economies, were excluded from the regression analysis.\textsuperscript{726}

10.199 The United States indicates that the USDOC adjusted the interest rates of the included countries for inflation, because of the general link between inflation and exchange rate expectations. In addition, the United States argues that the factors related to the quality of the countries' institutions were included because banks take these into account when assessing risk of lending to businesses in a particular country, and because the Federal Reserve Board had found a correlation between higher quality of institutions and lower real interest rates. The United States further submits that the benchmark used took account of the maturity of the loans and matched lending during the same time periods. Thus, the benchmark was "tailored to approximate a comparable commercial loan which the firm could actually obtain on the market".\textsuperscript{727}

10.200 The United States rejects China's contention that the benchmark in Article 14(b) must be an actual interest rate available to a borrower in China, arguing that the regression analysis was, in fact, based on a regression of actual interest rates available to borrowers in China.\textsuperscript{728} The United States

\textsuperscript{723} China second written submission, para. 86.
\textsuperscript{724} See, \emph{e.g.}, United States response to Panel question 17 (second meeting). The United States argues that investigating authorities are entitled to considerable leeway in adopting reasonable methodologies, including the use of out-of-country benchmarks where alternatives are inappropriate. (United States response to Panel question 39 (first meeting)).
\textsuperscript{725} The United States submits that the USDOC could have chosen an out-of-country benchmark from one particular country, but that such an approach could have sacrificed comparability. That is, each country's lending rates may be affected by a variety of economic factors for which there may be insufficient information to permit an adjustment, and therefore, those rates individually would not provide sufficient comparability. (United States response to Panel question 17 (second meeting)).
\textsuperscript{726} United States first written submission, paras. 244-246; second written submission, para. 99.
\textsuperscript{727} United States first written submission, paras. 247-248; second written submission, paras. 99 and 102.
\textsuperscript{728} See, \emph{e.g.}, United States second written submission, para. 101. The United States adds that a regression analysis is essentially an average of interest rates that takes more factors into account than a simple average, and that China has not objected the USDOC's use of average prices in other instances (e.g. the USDOC's use of average world market prices for HRS and BOPP). Furthermore, the United States argues that
also disagrees with China that a benchmark loan can meet the criteria of Article 14(b) only if it is denominated in the same currency as the government-provided loan. The United States submits that although the use of such a benchmark may be preferable, Article 14(b) contains no obligation to do so, and that China's restriction of its currency from international lending markets cannot be interpreted as to require Members to use a lending benchmark within China's distorted banking market.\(^\text{729}\)

4. **Main arguments of the Third Parties**

(a) **Australia**

10.201 Australia considers that there is no basis in Article 14(b) for the benchmark used to "relate or refer to, or be connected with" the conditions prevailing in the market of the country of provision. Australia notes in this respect that loans are available on an international financial market that is subject to international influences. Furthermore, Australia considers that there is no basis in the text of Article 14(b) to limit the permissible benchmark to loans in the same currency as that of the loans being investigated given that loans obtained in one currency can be used to purchase any currency at rates determined by international markets.\(^\text{730}\)

(b) **Saudi Arabia**

10.202 Saudi Arabia considers that a benchmark loan must comply with the "cumulative" criteria set forth in Article 14(b) of the Agreement. In this regard, Saudi Arabia is of the view that the term "comparable" suggests that the benchmark loan should be a loan denominated in the same currency, and subject to the same generally applicable financial regulations of the country providing the government loan. In addition, the word "commercial" refers to any transaction that is made in the ordinary course of commerce, while the phrase "which the firm could actually obtain on the market" imposes a requirement that the benchmark be based on the actual borrowing experience of the recipient firm. Saudi Arabia argues that the use of constructed benchmarks based on loans that are not actually available, but rather represent an average of a set of loans gathered in a discretionary manner to represent the "average commercial loan" are inconsistent with Article 14(b). Saudi Arabia takes issue with the United States' argument that the reasoning of the Appellate Body in *US-Softwood Lumber IV*, although decided under Article 14(d), is "equally applicable" under Article 14(b). Saudi Arabia argues, *inter alia*, that nothing in the Appellate Body's report indicates its application to Articles 14 (a), (b), and (c), nor to the "entirety of Article 14". However, assuming *arguendo* that the reasoning of the Appellate Body in that case applies to Article 14(b), Saudi Arabia considers that the clear admonitions made by the Appellate Body on the use of out-of-country benchmarks would apply as well.\(^\text{731}\)

5. **Assessment by the Panel**

10.203 We have found above that where lending rates in a country are distorted by the government's role in the lending market it is permissible under Article 14(b) of the SCM Agreement to rely on sources other than in-country interest rates as benchmarks. We have further found that in such cases it is permissible to use constructed proxies for what a borrower "would pay" on a comparable commercial loan that it "could actually obtain on the market". In other words, we have concluded that the terms "would pay" and "could actually obtain on the market" accommodate the use of proxies, and

---

\(^{729}\) United States second written submission, para. 100. Moreover, the United States recalls that the USDOC adjusted for inflation as a proxy for an adjustment for currency exchange rate expectations. (Id.).

\(^{730}\) *Australia third-party submission paras. 39-40; third-party response to Panel question 7.*

\(^{731}\) *Saudi Arabia third-party submission, paras. 91-99.*
do not mean that where an actual benchmark loan is not available, the investigating authority is forced to conclude that it is impossible to calculate a benefit (effectively meaning a benefit of zero). We also recall our finding that China has not established that the USDOC’s determination that interest rates in China could not be used as benchmarks because of the distortion of the lending market due to the government's role was inconsistent with Article 14(b). The remaining question before us thus is whether China has established that the actual benchmark used by the USDOC is inconsistent with Article 14(b) of the SCM Agreement.

10.204 In our view, the legal question in this regard is whether the constructed proxy used as a benchmark by the USDOC sufficiently approximates what "would" have been paid on a comparable commercial loan that "could actually" have been obtained on the market, in the particular circumstances of the CWP, LWS and OTR investigations, where it was found not only that no such specific loans existed, but that in fact it was not possible to identify any interest rates in China that could even be adjusted to approximate what would be paid on such a commercial loan. In this regard, we recall that the USDOC did consider the possibility of adjusting the observed interest rates to try to approximate what the commercial rates would be, but decided not do so because this would have been a highly complex, speculative, and impracticable exercise.732 We further note that before us China makes no arguments as to any such adjustments that should have been made, as its position is that the observed interest rates in China should have been used as benchmarks.

10.205 We thus must determine on what basis to evaluate the proxy benchmark actually used. In our view, the appropriate approach is to consider whether the methodology applied by the USDOC is one that a reasonable and objective investigating authority could use, in the particular situation found to exist in the CWP, LWS and OTR investigations, to generate a proxy for the interest rate that "would" have been paid on a commercial RMB loan that the borrower "could actually" have obtained if the Chinese lending market were not distorted. We consider this approach appropriate because, in view of the USDOC’s finding that there were no undistorted RMB interest rates in China that could be used as benchmarks, there is no point of reference in the record evidence on the basis of which we could judge the absolute value of the benchmark used. We also note in this context that China makes no arguments as to specific flaws in the USDOC’s methodology that could and should have been corrected733, as indeed its argument is that no such proxy methodology based on other countries' interest rates is permissible as a matter of law, a proposition that we have rejected.

10.206 Given that constructing such a proxy is an exercise in estimation and approximation, in considering whether the USDOC's methodology is aimed at generating, in an unbiased and objective way, a proxy for commercial RMB interest rates that would exist (and thus "could" be obtained) in an undistorted market, we consider that our task is to evaluate the internal logic of the methodology employed, and the soundness and appropriateness of the data relied upon by the USDOC, in constructing the proxy.

10.207 In this light, we first consider the USDOC's use of a basket of other countries' currencies as the basic source for its proxy interest rate. Under the circumstances in the investigations, we find that this approach was permissible. Further, the reliance on the World Bank grouping of countries in the same income category as China based on GNI per capita also seems to us not unreasonable, as this is a pre-existing grouping, not one created for the investigations. This appears to us to introduce a certain element of macroeconomic similarity among these "benchmark" countries, reflecting the

---
732 Exhibits CHI-3, p. 83 and CHI-4, p.104. China makes no argument that this is what the USDOC should have done. Rather, China's argument is that the USDOC should simply have used observed interest rates in China, directly, as the benchmarks.
733 For example, China makes no argument that the wrong countries were included in or excluded from the basket of countries, or that the inflation adjustments were incorrect or should not have been applied at all, or any other arguments as to any specific aspects of the methodology.
USDOC's identification of a broad inverse relationship between real interest rates and income levels. We accept that the USDOC's exclusion of countries whose interest rates it found to be anomalous, and of NME countries, enhances this macroeconomic similarity. The adjustment for inflation also seems appropriate, inter alia, as a way of accounting at least partially for exchange rate expectations, which are influenced by inflation, as noted by the USDOC. Finally, we do not consider the USDOC's inclusion of factors related to the quality of the countries' institutions to be unreasonable, as factors such as political stability, government effectiveness and rule of law are taken into account by lenders when assessing the riskiness of lending to borrowers in a given country. Nor has China argued that there was a mismatch in terms of either maturities or dates of the benchmark interest rates and the investigated government loans. We thus do not find the methodology used by the USDOC to be unreasonable under the circumstances of the three investigations at issue.

10.208 In reaching this conclusion, we emphasize that the benchmark established by the USDOC was not perfect and could not literally represent the situation that would have been faced by any given borrower in China in the absence of the distortions that were found to exist. However, our conclusion reflects our view that the methodology seems to be based on a reasoned and even-handed approach to the unusual situation with which the USDOC was confronted, rather than appearing arbitrary, or biased. In particular, as noted, the USDOC had the right under Article 14(b) of the SCM Agreement to approximate on a reasonable basis the RMB interest rate that would have been available on "comparable commercial loans" that borrowers in China could "actually" have obtained if an undistorted market for such loans existed in China. We consider that a reasonable and objective investigating authority could have used the methodology used by the USDOC, and relied on the data that it did, to make such an approximation.734

10.209 For the foregoing reasons, we thus find that China has not established that the benchmark actually used by the USDOC to calculate the benefit from RMB-denominated SOCB loans was inconsistent with the obligations of the United States under Article 14(b) of the SCM Agreement.735

K. CONSISTENCY WITH ARTICLE 14(B) OF THE SCM AGREEMENT OF THE LOAN BENCHMARK ACTUALLY USED BY THE USDOC – U.S. DOLLAR-DENOMINATED LOANS

1. Claim of China

10.210 China claims that in the OTR investigation the USDOC acted inconsistently with Article 14(b) of the SCM Agreement when it applied as a benchmark an annual average LIBOR-based

---

734 In making our findings related to SOCB lending, while we are mindful of the uniqueness of the situation in the investigations at issue, we do not consider that the findings imply that all lending in China ipso facto confers subsidies covered by the SCM Agreement. In particular, our findings are confined to the particular facts of the investigations at issue in this dispute. In this regard, first, we do not mean to imply by our findings that all lending in China is a "financial contribution" in the sense of Article 1.1 of the SCM Agreement (i.e., that it is by the government, or a public body, or is made pursuant to government entrustment or direction of a private body). Second, we do not mean to imply that all lending in China is made pursuant to the economic planning documents on the basis of which the USDOC found specificity. Third, concerning the existence of a benefit, while record evidence indicated that the lending rates were in a narrow range during the period of investigation, there was some, albeit limited, differentiation of interest rates. Finally, while we have not found that the benchmark used by the USDOC was inconsistent with the provisions cited in China's claim, this certainly does not imply that this is the only possible benchmark that could have been or could be used, and another benchmark may have led to a different outcome in the investigations.

735 Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, infra.
interest rate, instead of the applicable daily rates, to U.S. dollar-denominated SOCB loans to GTC.\textsuperscript{736, 737} 

2. Main arguments of the Parties

(a) China

10.211 China argues that the USDOC's benchmark methodology for U.S. dollar-denominated loans was not based on a comparison of like terms. Specifically, China argues that GTC's U.S. dollar-denominated loans were short-term (generally between 90 and 120 days) fixed-rate loans, with interest rates based on the applicable U.S. dollar interest rates in effect on the days that GTC received the loans. China argues that because LIBOR is a rate that changes daily, the interest rate benchmark applied to each loan also should have varied according to the date on which the loan was received. Thus, according to China, the correct method of determining the existence and amount of the benefit at issue was to compare the interest rate on the allegedly government-provided loan to the corresponding benchmark rate in effect on the same date. China argues that the annual average benchmark rate used does not represent what would be paid by GTC on a comparable commercial loan because GTC would not have paid an average annual LIBOR rate, something that can only be determined in retrospect given that LIBOR fluctuates on a daily basis. China submits that, alternatively, the USDOC could have applied an average-to-average comparison, i.e., compare an average annual LIBOR rate to GTC's average interest rate on its dollar-denominated loans for the same year.\textsuperscript{738} China alleges that the USDOC, however, compared the actual interest rate on each loan to a retrospectively-determined average annual LIBOR rate, and that, as a result, it found "benefits" where, in fact, none existed.\textsuperscript{739}

10.212 China disagrees with the United States' argument that nothing in Article 14(b) requires the use of daily rates over annual average rates. China submits that Article 14(b) requires the use of "comparable" commercial loans as benchmarks, and that LIBOR interest rates change daily throughout the year, such that a loan taken out at one point in the year is not "comparable" to a loan taken out at another point in the year. China adds that the USDOC's comparison did not measure whether the recipient of a government-provided loan was "better off", but only the extent to which interest rates varied throughout the year.\textsuperscript{740} China also rejects the United States' argument that no party provided the relevant information (i.e., daily interest rate data) to the USDOC, arguing that it is the investigating authorities' obligation – not that of the interested parties – to identify and collect the "information which the authorities require" to ensure that the imposition of countervailing duties is consistent with the requirements of the Agreement.\textsuperscript{741}

10.213 Finally, China submits that had the USDOC made a proper comparison, it would have found unequivocally that GTC did not obtain a benefit on its U.S. dollar-denominated loans; and that although this argument was not raised during the investigation at issue, the Appellate Body has

\textsuperscript{736} See, generally, China first written submission, paras. 240-243.
\textsuperscript{737} As indicated at para. 10.1, supra, China also raises consequential claims pursuant to Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994.
\textsuperscript{738} See, e.g., China response to Panel question 25 (second meeting). According to China, the USDOC had the data on the record to undertake such comparison. (Id.).

established that a WTO Member "is not confined merely to rehearsing arguments that were made [...] during the domestic investigation".742

(b) United States

10.214 The United States argues that the benchmark developed by the USDOC for the U.S. dollar-denominated loans was consistent with Article 14(b) of the SCM Agreement. The United States explains that the USDOC used the one-year average of the daily interest rates for LIBOR, and that in order to adjust the LIBOR rate to one that a private company could receive, the USDOC determined the average spread between the LIBOR rate and the one-year U.S. corporate bond rates for companies with a BB rating. The USDOC then added this average spread to the LIBOR rate to measure the benefit at issue.743

10.215 The United States submits that this benchmark interest rate was constructed on the same basis as GTC's loans, which were also based on LIBOR plus a spread. The United States submits that the benchmark also matched the duration and currency denomination of the underlying loans, and that therefore, it represented a "comparable commercial loan". In addition, the United States argues that the benchmark was from the "market" because it was based on an average of actual LIBOR interest rates.744

10.216 The United States disagrees with China's argument that the USDOC was required to use daily rather than annual averages rates. The United States submits that daily LIBOR rates were not on the record of the investigation and that no party argued that the USDOC should depart from its usual practice of using annual rates.745 Furthermore, the United States argues that Article 14(b) contains no preference for daily over yearly average rates, and that in using an annual interest rate, the USDOC was within the flexibility afforded by Article 14(b).746

3. Assessment by the Panel

10.217 This claim raises a single legal issue: the comparability of loans due to, in essence, differences in timing. In particular, the issue raised by China is whether, to be comparable to the government loans provided to GTC, the commercial benchmarks should have reflected the rates prevailing on the particular days on which those loans were taken out.

10.218 We recall our discussion, supra, of the characteristics that make a loan comparable in the sense of Article 14(b) of the SCM Agreement. Among these are the date, i.e., to be comparable, a benchmark loan should be established around the same date as the government loan. In this regard, as China points out, LIBOR changes on a daily basis. While we agree with the United States that Article 14(b) affords certain flexibility to investigating authorities in the identification and/or construction of suitable benchmarks, particularly where no strictly comparable commercial loans are available, we do not consider that this is the situation before us. In particular, there seems to be no dispute between the parties as to the basic suitability of comparing the interest rate on GTC's U.S.

742 China second written submission, para. 134, citing to Appellate Body Reports on US – Lamb, para. 113; US – Corrosion-Resistant Steel Sunset Review, para. 131; and Panel Report on Japan – DRAMs (Korea), para. 7.304.
743 See, e.g., United States first written submission, paras. 257-258.
744 United States response to Panel question 39 (first meeting).
745 The United States explains that the USDOC's regulations generally provides for the use of annual averages to determine the benefit from government-provided loans.
dollar-denominated fixed-rate loans to the LIBOR-based rates used by the USDOC. 747 Thus, the availability of a suitable benchmark rate is not in question. Nor is there any dispute between the parties that daily LIBOR rates are publicly and easily available. Given that over the course of a year, LIBOR, like any interest rate, can and does fluctuate, sometimes considerably, we consider that by not making any attempt to match the LIBOR interest rate benchmarks to the actual origination dates of GTC’s U.S. dollar-denominated loans (which were the dates on which their respective interest rates were fixed), the USDOC did not sufficiently ensure that its benchmarks were "comparable" to the investigated loans, in the sense of Article 14(b) of the SCM Agreement.

10.219 For the foregoing reasons, we find that China has established that the USDOC acted inconsistently with the obligations of the United States under Article 14(b) of the SCM Agreement by using average annual interest rates as benchmarks for GTC’s U.S. dollar-denominated loans from SOCBs in the OTR investigation. 748

XI. CHINA’S CLAIM PERTAINING TO "CREDIT" OR "OFFSET" FOR UNSUBSIDIZED TRANSACTIONS

A. CLAIMS OF CHINA

11.1 China claims that the USDOC’s inclusion, in the OTR investigation, of only positive "benefits" (and its corresponding exclusion of negative "benefits") in its benefit calculations with respect to the provision of rubber inputs by SOE rubber producers was an arbitrary methodology inconsistent with Articles 10, 14, 19.1, 19.4 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994. 749

B. MAIN ARGUMENTS OF THE PARTIES

1. China

11.2 Based on the use of the word "product" in Article VI:3 of the GATT and Articles 10, 19.3 and 19.4 of the SCM Agreement, China submits that the SCM Agreement establishes that a countervailing duty is to be imposed in respect of the "product" under investigation. Therefore, subsidization, like dumping, is to be defined in relation to a "product as a whole", and "margins of subsidization", like "margins of dumping", can only be calculated for the product under investigation "as a whole". 750 Thus, China submits, paraphrasing the Appellate Body's findings on zeroing in the anti-dumping context, while the USDOC could choose to undertake multiple comparisons at an intermediate stage to establish the margin of subsidization, it could only establish the margin of subsidization for each producer on the basis of aggregating all these "intermediate values". China adds that the Appellate Body's findings on zeroing in the anti-dumping context apply with even greater force in the countervailing duty context given that subsidization is not investigated on an individual transaction basis but instead necessarily involves an aggregated inquiry focusing on the "manufacture" or "production" of a product over the entire period of investigation. In particular, China submits, the

747 As noted supra, China appears to consider the USDOC’s choice of a LIBOR-based benchmark to have been appropriate. (China first written submission, para. 234).
748 Concerning China’s claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, infra.
749 Paragraph B.1(a)(vi) of the “as applied” claims in China request for establishment of the Panel; China first written submission, para. 468 (c); second written submission, para. 315 (d).
principal policy justification advanced by the proponents of zeroing in the anti-dumping context – targeted dumping – does not arise in the countervailing duty context.\textsuperscript{751}

11.3 Further, China argues, when goods are purchased frequently over the period of investigation, determining whether remuneration was "adequate" necessarily requires an aggregate analysis that takes into account all purchases over that entire period. China adds that because of the lack of perfect information and frequent fluctuations in market conditions, buyers and sellers never know with certainty what the market price is on any given day. As a consequence, the USDOC’s approach implies that government suppliers would have to sell at or above a retroactively-established benchmark price in every transaction to avoid a finding of subsidization. China submits that no market actor could ever meet this test, and that the drafters of the SCM Agreement could not have had such an outcome in mind when they created the "adequate remuneration" standard in Article 14.\textsuperscript{752}

11.4 China argues that the use of the singular terms "a benefit" and "the good" in Article 14(d) of the SCM Agreement limit an investigating authority’s discretion in selecting benefit calculation methodologies and mandate that for alleged subsidies in the form of inputs, adequacy of remuneration be determined on an aggregated basis for that "good" over the entire period of investigation.\textsuperscript{753} China submits that under the plain text of Article 14(d), where the same good is purchased on multiple occasions over the period of investigation, the only way for "a subsidy" to exist in the form of the provision of "the good" for less than adequate remuneration is if the individual transactions are considered in the aggregate. China considers that its interpretation of Article 14(d) is the only one compatible with the definition of a subsidy in Article 1.1 as interpreted by the Appellate Body in past jurisprudence: a producer is not "better off" over a period of investigation if it ends up paying, on average, more than the market price for any "good" that it purchases from the government.\textsuperscript{754}

11.5 In this regard, China indicates that, contrary to the United States' characterisation, it is not arguing that the SCM Agreement requires that credit be provided across different types of subsidies or across different types of inputs: if more than one input is provided, Article 14(d) requires a separate adequate remuneration analysis for each such "good". China submits, however, that in the investigation at issue, the USDOC defined the programme under investigation as the provision of a single good – rubber – by the Chinese government for less than adequate remuneration, notwithstanding the fact that rubber was purchased in various forms.\textsuperscript{755} China states that the USDOC then calculated a single, period-wide subsidy margin for rubber, regardless of the form in which it was purchased, rather than calculating five different period-wide subsidy margins for each separate type of input.\textsuperscript{756}

11.6 Concerning the other provisions of which it alleges a violation, China argues that within the legal framework of Article VI:3, it is neither logical nor lawful to consider adequacy of remuneration on an individual transaction-by-transaction basis in the circumstance where multiple inputs are purchased over the period of investigation, since that provision makes clear that subsidization is to be investigated on an aggregate basis (i.e., on the "manufacture" or "production" of a product, the investigation, in turn, leads to the calculation of a single subsidy margin for an entire period of

\end{footnotesize}
investigation).\textsuperscript{757} China submits that the Appellate Body, in \textit{US – Softwood Lumber IV}, noted that the requirements of Article VI:3 of the GATT 1994 and of Articles 10 and 32.1 of the SCM Agreement "apply on a cumulative basis" and that, any inconsistency with Article VI:3 would necessarily also render the countervailing measures inconsistent with Articles 10 and 32.1 of the SCM Agreement. China also relies on the Appellate Body Reports in \textit{US – Countervailing Measures on Certain EC Products} and \textit{US – Softwood Lumber IV} as support for the propositions that to comply with the overarching obligations that these provisions impose, investigating authorities, before imposing countervailing duties, must ascertain the precise amount of subsidy, and that to carry out this obligation in an original investigation, Article 19.1 of the SCM Agreement, read in conjunction with Article I, requires the investigating authority to make a determination of the existence of a benefit before countervailing measures can be imposed.\textsuperscript{758} China also argues (relying on the panel report in \textit{US – Lead Bismuth II}) that Article VI of the GATT, and Articles 19.1 and 19.4 of the SCM Agreement collectively "establish[] a clear nexus between the imposition of a countervailing duty, and the existence of a (countervailable) subsidy", and are all based on the premise that no countervailing duty may be imposed absent (countervailable) subsidization.\textsuperscript{759} Concerning the United States' argument that Article 19.4 of the SCM Agreement does not apply to original investigations, China replies that panels and the Appellate Body have determined that Article 19.4 of the SCM Agreement and Article VI:3 of GATT 1994 do impose obligations on the USDOC during original investigations under the United States' retrospective system.\textsuperscript{760}

11.7 In response to a question from the Panel concerning Canada's third party argument that depending on the facts of a given case (for example, where there is an on-going contractual relationship) it may be necessary to examine more than one input transaction to determine whether government provision of a good is made for adequate remuneration\textsuperscript{761}, China considers that aggregation in countervailing duty investigations is inevitable, and that the question therefore is not whether but how an investigating authority should aggregate when calculating benefit under Article 14(d).\textsuperscript{762} China argues in particular in this regard that subsidies are identified, investigated, and measured on a programme-specific basis in the first instance, and where the "programme" is the alleged provision of a "good" for less than adequate remuneration, and there are multiple transactions during the period of investigation involving the purchase of that "good", the investigating authority necessarily has to perform an aggregation in order to arrive at a single, period-wide subsidy benefit amount for that programme. For China, therefore, because the benefit from such a "less than adequate remuneration" programme is ultimately determined on a period-wide basis, aggregation is simply the natural and inevitable by-product of the Article 14(d) "benefit to the recipient" evaluation. Only where there was a single transaction for the good in question during the period would aggregation not occur.\textsuperscript{763}

11.8 Regarding the specific example cited by Canada of an "on-going contractual relationship", China agrees that in such an instance the adequate remuneration inquiry would be legally required to examine all of the transactions during the period of investigation. China considers, however, that it is not the nature of the contractual relationship between buyer and seller that compels that outcome, but instead the plain language of Article 14(d), the Appellate Body's interpretation in \textit{Canada – Aircraft} and in \textit{US – Softwood Lumber IV} of the circumstances in which a "benefit" may be deemed to exist,

\textsuperscript{757} China second written submission, paras. 146-147.

\textsuperscript{763} Id.
and the requirement in Article VI:3 of the GATT 1994 that countervailing duties be imposed to offset subsidies bestowed on the "manufacture" or "production" of "the product" over the entire period of investigation.\textsuperscript{764} China argues in this regard that if a producer of subject merchandise purchases ten units of an input during the period of investigation, and pays on average at or above the market price for those inputs, it has not received the "good" for less than adequate remuneration, it is not "better off" for having made purchases from the government, and the "manufacture" and "production" of its merchandise can in no objective sense be considered subsidized. For China, this is the case whether the ten purchases of inputs were made from the same government supplier as part of an "on-going contractual relationship", or from ten different government suppliers in one-time only transactions.\textsuperscript{765}

11.9 Finally, China argues that the USDOC used "aggregate" monthly benchmarks, which it compared to individual transactions in performing its benefit analysis and, in some instances, used benchmark prices that were not contemporaneous to the input transactions, such that the USDOC did not perform an "apples-to-apples" comparison. In response to a question from the Panel as to the relationship between this apples-to-apples argument and its claim that the USDOC was required to include both positive and negative results from its "less-than adequate remuneration" calculations concerning rubber inputs, China asserts first that it is not raising a new issue, but showing that the USDOC used aggregations in its calculations, such that the issue in the dispute was whether the method of aggregation used by the USDOC was consistent with the covered agreements.\textsuperscript{766}

11.10 China notes that the USDOC, in calculating benchmarks where there was more than one transaction per month, aggregated by calculating a single, weighted-average monthly benchmark based on all of the transactions in that month. China argues that the USDOC then aggregated the individual transactions involving the "good" that it was investigating – rubber – over the period of investigation whenever the purchase price was lower than the benchmark price to determine a single, period-wide benefit for that subcategory of rubber. Finally, the USDOC conducted a further aggregation when it added each of the "benefits" for these subcategories together into a single, period-wide benefit for the overall programme entitled "provision of rubber for less than adequate remuneration".\textsuperscript{767}

11.11 China argues that this method of aggregation, in which the USDOC included in its aggregate benefit calculation the 18 instances in which the two respondents paid less than the benchmark price for rubber inputs, but ignored the 55 transactions in which they paid more than the benchmark price, cannot plausibly be considered consistent with the covered agreements. In particular, China submits that the USDOC's aggregation methodology in the OTR investigation cannot pass the "basic reasonableness test" Article 14 imposes\textsuperscript{768}, but instead produces manifestly arbitrary and punitive results, not reasonable ones. China argues that the United States has not offered a single justification for its methodology based on market conditions, business practices, commercial considerations or anything else.\textsuperscript{769}

11.12 China indicates that its second reason for referring to the USDOC's use of benchmark prices that were not contemporaneous to the transactions alleged to have been made for less than adequate remuneration was to underscore why China's legal arguments regarding the proper interpretation of Article 14(d) and the unreasonableness of the USDOC's methodology must be correct.\textsuperscript{770}

\textsuperscript{769} Id.
\textsuperscript{770} Id.
11.13 China argues that for GTC's purchases of butadiene rubber ("BR"), one of the subcategories of rubber examined, the USDOC used a single import transaction for the month of May 2006 as the benchmark for GTC's purchases of BR in January through May. China states that during that period, prices for BR in China steadily increased. China asserts that more than 90 per cent of the purported benefit that GTC obtained from its purchases of BR during the period of investigation was due to the USDOC's use of the single May import transaction as a benchmark for GTC's January to April purchases.771

11.14 According to China, a similar situation occurred for the other respondent, TUTRIC, where the USDOC used a single import transaction involving one category of synthetic rubber – SBR – as the benchmark for all of TUTRIC's purchases during the entire period of investigation, not only of SBR, but of BR as well. China states that the only instances in which TUTRIC's purchase price for any category of rubber was found to be below the benchmark resulted from this comparison of its actual purchase price to a single import price.772

11.15 According to China, the limitations in the benchmarks that the USDOC developed, and their lack of contemporaneity with the transactions being investigated, underscore why the USDOC was legally required to aggregate the results of all of the comparisons during the period of investigation – not just those that yielded positive "benefits". China asserts that doing so was the only means consistent with the Article 14(d) for determining if GTC and TUTRIC paid less than adequate remuneration for their purchases of the "good" the USDOC was investigating. Only by aggregating all of the comparisons could the USDOC know whether GTC and TUTRIC were "better off" for having made purchases from SOEs, and whether the manufacture or production of their tires during the period of investigation benefited from subsidies.773

2. United States

11.16 The United States argues that the USDOC was not required to provide a credit in the calculations for instances in which SOEs provided rubber inputs for adequate remuneration. The United States submits, first, that Article 14 of the SCM Agreement affords Members a great deal of flexibility in calculating benefit in countervailing duty investigations.774 Recalling the panel report in US – Countervailing Measures on Certain EC Products (Article 21.5 – EC), the United States argues that Article 14 does not prescribe any particular level of aggregation at which the benefit calculation must be conducted, but instead permits investigating authorities to apply methodologies that account for different factual situations and the conditions under which the subsidy was provided.775 The United States also argues that Article 14 contains no obligation to consider instances in which a government provides no benefit or to provide a credit for such instances when calculating the benefit conferred by a subsidy; the concept of "benefit" relates only to situations in which a firm received an

771 China response to Panel question 7 (second meeting).
772 Id.
773 Id.
775 The United States notes that the panel in US – Countervailing Measures on Certain EC Products (Article 21.5 – EC) found that it was consistent with the SCM Agreement for an investigating authority to segment a share offering into four categories of transactions in order to evaluate whether the change in ownership effected through the offering extinguished the benefit of prior subsidies, and that in particular, the panel found that there was no legal basis to require the investigating authority to conduct its analysis on either a segmented or a non-segmented basis, as long as the authority's methodology was transparent and "not unreasonable", adding that it could find no legal basis "to require the USDOC to conduct its analysis in a particular manner". (Id., para. 292, citing to Panel Report on US – Countervailing Measures on Certain EC Products (Article 21.5 – EC), para. 7.121).
advantage.\textsuperscript{776} The United States considers in this respect that China's argument cannot be reconciled with the definition of a subsidy under Article 1 of the SCM Agreement: any time a government provides a financial contribution and a benefit is thereby conferred, a subsidy is "deemed to exist". In the present case, each time China provided a rubber input for less than adequate remuneration, a benefit was conferred, and a subsidy was deemed to exist. The fact that at other times, China may have provided rubber inputs to the investigated producer for adequate remuneration, and therefore that no subsidy existed in those instances, is irrelevant. These non-subsidies could not eliminate or diminish the benefits conferred when China provided rubber inputs for less than adequate remuneration.\textsuperscript{777}

11.17 Overall, with respect to the various claims of inconsistencies put forward by China, the United States submits that:\textsuperscript{778} (i) China has failed to establish that the United States acted inconsistently with Article 14 of the SCM Agreement; (ii) it is not clear whether China is making a claim under Article 1 of the SCM Agreement, because although China makes an assertion that the United States acted inconsistently with that provision in the relevant section of its first written submission, it makes no request for panel finding in this respect; (iii) China provides no explanation in support of its claims that the United States acted inconsistently with the other provisions it cites (Articles 10, 19.1, 19.4, 32.1 of the SCM Agreement, Article VI:3 of the GATT 1994). With respect to the latter, the United States notes that China merely points to the use of the term "product" in Articles 10 and 19.4 of the SCM Agreement and Article VI:3 but does not otherwise explain how the United States acted inconsistently with these provisions; and that China makes no reference whatsoever to Articles 19.1 and 32.1 of the SCM Agreement in its arguments. Finally, the United States submits that Articles VI:3 of the GATT 1994 and 19.4 of the SCM Agreement do not impose obligations with respect to countervailing duty investigations as they both pertain to the levying of countervailing duties, i.e., the definitive or final legal assessment or collection of a duty or tax which, in the United States' retrospective system, only occurs after the conclusion of administrative reviews.

11.18 The United States further argues that China's reliance on the Appellate Body reports with respect to "zeroing" is misplaced as the legal provision on which those decisions are based applies solely to anti-dumping determinations. The United States also states that neither the term "margins of subsidization" used by China in its first written submission, nor the term "margin", appears in the SCM Agreement. The United States submits that accepting China's argument would mean that the mere use of the term "product" in certain provisions of the SCM Agreement or the GATT 1994 would override the flexibility afforded to investigating authorities under Article 14.\textsuperscript{779} The United States also submits that a necessary implication of China's argument is that the obligation to provide a credit would apply to all of Article 14, such that an investigating authority would have to provide a credit whenever it found that a financial contribution did not provide a benefit, including across different types of input products and even different types of subsidies.\textsuperscript{780} The United States notes in this respect that in the investigation at issue, the USDOC investigated the provision of five different types of rubber inputs by SOEs, i.e., the provision of five different goods and that, for one company, China only arrives at an overall "negative benefit" by offsetting the positive benefits in respect of one of the input products with negative benefits in respect of another input product.\textsuperscript{781}

11.19 The United States also rejects China's argument based on the use of the term "good" (in the singular) in Article 14(d). The United States considers it unlikely that the drafters of the SCM

\textsuperscript{776} United States first written submission, para. 294.
\textsuperscript{777} Id., paras. 300-301.
\textsuperscript{778} Id., paras. 310-315.
\textsuperscript{779} United States first written submission, para. 299.
\textsuperscript{780} Id., paras. 302-304.
\textsuperscript{781} Id., para. 305.
Agreement would have sought, through the mere use of that term, to establish an obligation to aggregate the benefits of all transactions during the entire period of investigation involving the provision of a good; and an obligation to provide credit in such an aggregate benefit calculation for transactions in which the good was sold for more than the established benchmark; while also limiting these obligations to the unique situation of government-provided goods or services.\(^{782}\) For the United States, the term "good" in the second sentence of Article 14(d) is in the singular, and associated with the terms "in question", because, while a government may provide a variety of goods and services, the adequacy of remuneration for a particular good provided by the government must be determined at the "prevailing terms and conditions" for that good. The United States notes that the investigating authority must look at the terms and conditions prevailing at the time of the sale of the good, "including price, quality, availability, marketability, transportation and other conditions of purchase or sale": such terms and conditions would be expected to vary over time and in many cases would be unique to each given transaction. Hence, for the United States, the text of Article 14(d) supports the conclusion that the adequacy of remuneration, and the benefit, may be determined on a transaction-specific basis.\(^{783}\)

11.20 According to the United States, the different types of inputs at issue in the OTR investigation constituted different types of goods. The United States notes that the respondents in the OTR investigation reported that SOEs provided them with several distinct types of rubber, and that China itself, in its first written submission referred to "five separate types of rubber inputs".\(^{784}\)

11.21 The United States submits that under the SCM Agreement, investigating authorities are permitted to apply methodologies that account for different factual situations, including the conditions under which the subsidy was provided. In all cases, benefit determinations are made on a case-by-case basis and depend on the particular facts of a given situation.\(^{785}\)

11.22 Indeed, the United States argues, the context of the SCM Agreement supports analyzing the benefit to the recipient on a disaggregated basis. The SCM Agreement defines a subsidy in the singular form, supporting the conclusion that investigating authorities have the option of analyzing each subsidy on a transaction-by-transaction basis.\(^{786}\) Moreover, the United States asserts, even if an authority were to choose to conduct an analysis at a particular level of aggregation in certain circumstances, nothing in the SCM Agreement requires an authority to provide a credit for those transactions that do not provide a benefit when performing such an analysis.\(^{787}\)

11.23 Concerning China's "apples-to-apples" argument, the United States argues that it is not clear how this criticism of the USDOC methodology relates to China's countervailing duty credit/offset argument. Additionally, the United States notes that this argument appears to be a reversal of China's prior position that it was within the USDOC's discretion under the covered agreements to compare financial contributions and benchmarks on a monthly basis.\(^{788}\)

---

\(^{782}\) United States second written submission, para. 127. The United States notes, inter alia that, by contrast, in paragraph 6 to Annex IV of the SCM Agreement (concerning the calculation of the overall rate of subsidization under Article 6.1 of the Agreement) the drafters used the term "aggregated": "In determining the overall rate of subsidization in a given year, subsidies given under different programmes and by different authorities in the territory of a Member shall be aggregated". (United States first written submission, footnote 227).

\(^{788}\) United States response to Panel question 7 (second meeting).
11.24 In any event, the United States argues, China's arguments misrepresent the facts. The comparison the USDOC performed in evaluating the benefit conferred by the provision of rubber was an "apples-to-apples" comparison fully consistent with Article 14 of the SCM Agreement. In the OTR investigation, the USDOC requested that the investigated producers report their purchases of each kind of rubber input by providing the "monthly, weighted-average price paid [...] to each of your suppliers". The USDOC calculated benefits for the provision of rubber for less than adequate remuneration by comparing the monthly price of each government-sourced input to a monthly benchmark based on the average price in a given month that the investigated producer paid to private input suppliers (i.e., private Chinese producers and/or the price of the input imported from outside China).

11.25 The United States argues that in most instances, the USDOC compared the monthly benchmark to one monthly price for the government-sourced input as reported by the investigated Chinese producers. However, in a number of instances, investigated producers reported two or three prices in a given month. Where this was the case, the USDOC accepted the data in the manner provided by the investigated producers and compared the monthly benchmark to each price reported for purchases of the rubber inputs in question. In addition, the United States argues, in most instances the monthly benchmarks were based on private prices from the same month in which the investigated producers reported purchases of the government-produced input. However, for some rubber inputs, the USDOC employed monthly data from a proximate month because the investigated producer did not have private purchases of the input in the given month.

11.26 The United States submits that the USDOC complied with the guidelines in Article 14(d) by employing benchmarks based on the investigated producers' actual purchases of inputs from private suppliers during the period of investigation. According to the United States, this provision does not require that an investigating authority measure the benefit on any particular temporal basis (i.e., daily, monthly, annually). Thus, the USDOC's comparison of the monthly government-sourced prices reported by the investigated producers to a monthly benchmark — whether it was one, two or three reported government prices in a given month — was not inconsistent with Article 14(d). Nor, according to the United States, does this provision require that benchmarks be exactly contemporaneous with the purchase of goods, i.e., from the same month, same week or same day. Introducing such a requirement could make benefit calculations almost impossible in many situations. Thus, in the view of the United States, the USDOC's use of benchmark data from a proximate month when data for the month of purchase was unavailable is not inconsistent with the obligations of the United States.

11.27 The United States considers that if China's argument were accepted, authorities would effectively be required, in all cases, to compare the average price paid in all transactions during the period of investigation against a single average benchmark for the same period. Nothing in the text of Article 14(d) of the SCM Agreement supports China's view, and China's reading would have the perverse effect of prohibiting authorities from taking into account the market conditions that in fact prevailed at the time of each individual purchase when determining the adequacy of remuneration for the good in question.

C. MAIN ARGUMENTS OF THE THIRD PARTIES

1. Canada

11.28 Canada sees no basis for extending the Appellate Body's reasoning in the "zeroing" disputes to the interpretation of the SCM Agreement. Specifically, Canada notes that in a dumping context, the calculation of a dumping margin is made by examining various transactions that involve the product under investigation. In a subsidy context, although the focus of the investigation is on a product that is allegedly subsidized and causing injury, the calculation of the amount of benefit does not necessarily involve directly that product under investigation. More generally, Canada considers that there is no provision in the SCM Agreement that specifically requires the offsetting argued for by China. However, under certain circumstances, the examination of whether the provision of a good through one or more transactions is made for adequate remuneration may require that other transactions be examined; in particular, Canada considers that where there is an on-going contractual relationship between a government supplier and a purchaser, it may be appropriate to take into account a range of transactions between the same parties concerning the same goods in order to determine whether one or more transactions were made for adequate remuneration.795

2. European Communities

11.29 The European Communities does not view the issue of "offsets" raised by China as comparable to the "zeroing" issue arising under the AD Agreement: (i) the AD Agreement contains specific provisions, which are not present in the SCM Agreement, and which when taken together preclude a dumping determination on a transaction-specific basis; and (ii) the calculation of benefit under the SCM Agreement is not conceptually comparable to the calculation of a dumping margin. Generally, in comparing a particular price with a benchmark under the SCM Agreement, the guiding principle is that like must be compared with like, due adjustment being made where necessary, unless there is a justification for doing otherwise, and on a case-by-case basis. If that is done, then the prevailing market conditions will take into account the normal fluctuations or variations in the price of the product in question within the selected period of time.796 On the other hand, the European Communities considers that injurious subsidisation is not investigated on an individual transaction basis; rather, Article VI:3 of the GATT and various provisions of the SCM Agreement refer to "merchandise", "product" or "product under investigation". Thus, the calculation of the total amount of subsidisation granted to a particular product allows for the aggregation of "all" subsidies found to have been granted to that product during the period of investigation. As to whether a similar aggregation can be done when calculating the amount of subsidisation in a particular subsidy scheme, the European Communities is of the view that when calculating the amount of subsidisation in a given case, the question is what amount of benefit has been given to a particular product through the specific subsidy scheme during the period of investigation, and in that exercise, great importance should be given to how the investigating authority defines the relevant subsidy scheme and the period of investigation. Once the subsidy scheme has been defined and the period selected, the investigating authority must be "coherent" with its own selection throughout the investigation when calculating the "overall" benefit granted to the product concerned through that subsidy practice in the selected period.797

---

795 Canada third-party response to the United States' question to Canada; third-party oral statement, paras. 22-23.
796 The European Communities gives as example the issue of whether the terms of the transaction are determined ex ante (at the time of the contract) or ex post (at the time of the order) – the benchmark used must then correspond to prevailing market conditions either as of the date of contract or as of the date of the order.
797 European Communities third-party submission, paras. 29-34; response to Panel questions 8 and 9.
3. **India**

11.30 India submits that benefit must be calculated on the basis of an *aggregate analysis* of all transactions during the period of investigation, and not by reference to isolated transactions or merely of those transactions which confer benefit, disregarding other transactions.\(^{798}\)

4. **Japan**

11.31 Japan considers that the benefit should be examined on a subsidy-specific basis without zeroing and that China's argument on "zeroing" may have certain merit. Japan notes that a countervailing duty may be imposed to offset the amount of a subsidy, and that the question before the investigating authority (and this Panel) is to define the scope of "a subsidy".\(^{799}\) As regards benefit, Japan considers that the benchmark under Article 14(d) must be the prevailing market price for the sale of the goods at issue under comparable terms available at the time that the financial contribution was granted. Whether normal fluctuations or variations in the price of a good or service should be reflected or taken into account to determine the benchmark would depend on the terms of the financial contribution. For example, a government might sell input materials under certain terms and conditions for a certain period of time through multiple shipments. Japan considers that in such a case, the entire series of shipments could be considered to be a financial contribution and the calculation of the amount of the subsidy should be based on the total value of all shipments – rather than the assessment of the benefit for an individual shipment based on the value of its shipment. Japan adds that it also may not be reasonable to pick certain transactions and disregard other transactions to assess the amount of benefit conferred by the financial contribution.\(^{800}\)

5. **Norway**

11.32 Norway considers that two elements support China's claim that the use of "zeroing" in the benefit calculations to create a countervailable subsidy where none would otherwise exist is inconsistent with Article VI:3 of the GATT. First, Article VI:3 makes clear that a countervailing measure is to be levied on a product, and any duty shall not be in excess of the benefit granted on the manufacture, production or export of "such" product. For Norway, the use of the singular form makes clear that the calculation of benefit from inputs received from SOEs must be for all input transactions during the period of investigation; the reasoning that led the Appellate Body, in its "zeroing" jurisprudence, to find that similar words in Article VI:2 of the GATT precluded a finding of dumping for individual transactions applies with equal force to the calculation of benefits derived from single input transactions viewed separately. Second, Norway states that the United States resorted to monthly external benchmarks, and thus that the "benefit" determination was not based on a calculation of the product cost for the SOEs providing the five types of rubber, and took no account of factors that could have explained cyclical differences in product types of these enterprises as compared to the monthly variations in the benchmark prices. Using monthly benchmark prices in such a situation, and "zeroing" monthly results which showed "no benefit" made a finding of benefit almost certain from the outset. Norway considers that the application of a methodology that is almost certain to lead to a conclusion of benefit in all cases, based on single transactions compared to a

---

\(^{798}\) India third-party oral statement (this statement contains no paragraph numbering). India cites a number of provisions (Articles VI:3 of the GATT, Articles 19.2 and 19.4 of the SCM Agreement) in making its arguments with respect to "offset", but does not directly link these provisions to the obligation to take all transactions into consideration which it puts forward.

\(^{799}\) Japan notes that Article 1.1(a)(1) and 2.1(c) refer to the existence and specificity of "a subsidy".

\(^{800}\) Japan third-party submission, paras. 40-44; response to Panel questions 8 and 9.
benchmark set by the investigating authorities, cannot be said to comply with the requirements of Article 14(d) of the SCM Agreement and Article VI:3 of the GATT.  

D. FACTUAL BACKGROUND

11.33 In the OTR investigation, the USDOC calculated benefits to each investigated tire producer from its purchases of rubber inputs from SOEs as follows.  For each month in which rubber was purchased by a tire producer from an SOE, the USDOC calculated, for each type of rubber input purchased (natural rubber, butadiene rubber (BR), styrene butadiene rubber ("SBR"), neoprene), whether a benefit was provided during that month, by comparing the purchase price of the rubber input in question to a monthly benchmark price for that type of rubber. The benchmark prices were constructed from the price paid by the tire producer in question for imported rubber of the same type and, where available, for domestically-produced rubber from private producers. For any monthly comparison in which the purchase price for a given rubber input sourced from an SOE was less than the benchmark price, the USDOC calculated a monthly "benefit" in the amount of the difference. For any month in which the purchase price was greater than the benchmark price, the USDOC concluded that no benefit had been provided.

11.34 For each type of rubber input, the USDOC then aggregated all of the positive monthly "benefit" amounts, to arrive at a total benefit for that input for the entire period of investigation. These total amounts then were further aggregated to arrive at an overall benefit amount for the tire producer from its purchases from SOEs of all types of rubber inputs combined. In other words, for each tire producer, the USDOC aggregated all positive monthly comparisons for each type of rubber input, and then aggregated all of the resulting input-specific sub-totals to arrive at the total benefit amount for rubber inputs. For two of the three producers (GTC and TUTRIC), the USDOC determined that there were positive overall benefit amounts. For the third producer (Starbright) the USDOC determined that there was no benefit from purchases of rubber inputs from SOEs. Therefore, the remainder of our discussion focuses only on GTC and TUTRIC.

11.35 The following table illustrates the approach taken by the USDOC to calculate the benefits from government provision of rubber inputs, and the approach that China argues should have been taken instead. Here we note that the numbers in the table are fictitious and are used simply to illustrate the two approaches:

---

801 Norway third-party submission, paras. 34-37.
802 See, Final Calculation Memorandum for Guizhou Tire Company Limited (GTC) (the "USDOC Calculation Memorandum for GTC"), Exhibit CHI-56; Final Calculation Memorandum for Tianjin United Tire & Rubber International Co., Ltd. (TUTRIC) (the "USDOC Calculation Memorandum for TUTRIC"), Exhibit CHI-57; China's Calculations with Offsets, Exhibit CHI-58; and CHI-4, p. 92.
803 The USDOC requested, and the investigated producers reported, information on rubber purchases separately by type of rubber, on a monthly basis. (Attachment to the Supplemental Questionnaire Concerning the Countervailing Duty Investigation of New Pneumatic Off-The-Road Tires from the People's Republic of China – Government of the People's Republic of China, Exhibit US-107, part III(c)). In some instances, an investigated producer reported a single volume and value of a given type of rubber input purchased from a given SOE during a particular month, in other instances the producer reported more than one volume and value of a given type of rubber purchased from a given SOE during a particular month. The USDOC made comparisons to the monthly benchmarks on whatever basis the investigated producer reported their input purchases. (United States first written submission, footnote 477).
804 Exhibit CHI-4, p. 12.
805 Id.
11.36 We recall that, as illustrated above, China is challenging the fact that the USDOC did not "offset" the positive benefit amounts it found in certain months for certain types of rubber inputs with negative amounts in the other months, and for the other types of rubber. In other words, in China’s view, the USDOC was required by Article 14(d) of the SCM Agreement, Article VI:3 of the GATT 1994, and the other provisions cited in this claim, to have summed these positive and negative amounts over the entire period of investigation and – the USDOC having defined the good at issue as "rubber" – all four kinds of rubber inputs. In particular, China argues that the references to "product" in Article VI:3 of the GATT 1994, and Articles 10, 19.3 and 19.4 of the SCM Agreement require an aggregate analysis of the inputs in question over the entire period of investigation. China first written submission, paras. 145-149.

Furthermore, specifically in regard to Article 14(d) of the SCM Agreement, China argues that "in the context of a case like OTR, where the alleged government-provided goods were purchased frequently over the period of investigation, determining whether remuneration was 'adequate' [in the sense of Article 14(d)] necessarily required an aggregate analysis that took into account all of the respondents' purchases over the entire period of investigation." For China, if the net effect of these transactions over the course of a year is that the average price charged by the government supplier equals or exceeds the average "market price" benchmark, it would be nonsensical to suggest that the government received insufficient remuneration for the goods it sold. China further argues that if a purchaser of inputs pays on average at or above the market price for those inputs, it has not received the "good" for less than adequate remuneration, it is not "better off" for having made purchases from the government, and the "manufacture" and "production" of its merchandise can in no objective sense be considered subsidized.

China’s view is that there is a legal obligation under the covered agreements, at least in some circumstances, to use a method of aggregation that takes into account the

809 China response to Panel question 6 (second meeting).
full range of transactions that occurred during the period of investigation, not just some of them. In sum, China argues, the USDOC was obligated to conduct an aggregate analysis of all transactions involving the purchase of rubber inputs over the period, including those that were made for more than the benchmark price, and not merely those that were made for less than the benchmark price.

11.37 The record shows that, as described above, the USDOC calculated monthly benchmarks for each of four kinds of rubber inputs (SBR, BR, natural rubber, and neoprene), and compared these with the monthly average unit values of the corresponding kinds of rubber purchased by the tire producers from SOE suppliers. We note here that China is not challenging the benchmarks that were applied, but rather the fact that the USDOC did not calculate the amount of benefit on an average, net basis, aggregating positive and negative amounts from all transactions, for all types of rubber inputs combined, across the entire period of investigation.

E. **ASSESSMENT BY THE PANEL**

11.38 We recall that China's claim cites a number of provisions of the SCM Agreement, as well as Article VI:3 of the GATT 1994, and that China based its initial arguments principally on this latter provision, in particular the word "product" in Article VI:3 of the GATT 1994. This word is the basis for China's argument drawing on an analogy with the Appellate Body's findings in the anti-dumping "zeroing" disputes. We address that argument infra.

11.39 China's explanation, in response to an argument advanced by the United States, of the legal basis of this claim, however, focuses in detail on Article 14(d) as a source of the substantive obligations it asserts. China then explains that the USDOC's benefit calculations relating to rubber inputs also were inconsistent with Article VI:3 of the GATT 1994 and Article 10, as well as Articles 19.1 and 19.4 of the SCM Agreement because the USDOC used a benefit methodology that resulted in an inflated benefit amount, or produced a purported benefit where none existed. On the basis of this explanation, we understand that the alleged violations of Article VI:3 of the GATT 1994 and of Articles 10, 19.1 and 19.4 of the SCM Agreement in the context of this particular argument are consequential to the alleged substantive violation of Article 14(d). We thus begin our analysis with a consideration of Article 14(d) of the SCM Agreement.

11.40 There is no disagreement between the parties that Article 14(d) of the SCM Agreement directly pertains to the calculation of benefit from government provision of goods. This provision reads:

"Article 14

*Calculation of the Amount of a Subsidy in Terms of the Benefit to the Recipient*

For the purpose of Part V, any method used by the investigating authority to calculate the benefit to the recipient conferred pursuant to paragraph 1 of Article 1 shall be provided for in the national legislation or implementing regulations of the Member concerned and its application to each particular case shall be transparent and

---

810 China response to Panel question 6 (second meeting).
811 China first written submission, para. 152.
812 SBR and BR are collectively referred in some of the record documents as "synthetic rubber".
813 China response to Panel question 35 (first meeting).
814 China second written submission, paras. 137-152.
815 Id., paras. 153-160.
adequately explained. Furthermore, any such method shall be consistent with the following guidelines:

[...]

(d) the provision of goods or services or purchase of goods by a government shall not be considered as conferring a benefit unless the provision is made for less than adequate remuneration, or the purchase is made for more than adequate remuneration. The adequacy of remuneration shall be determined in relation to prevailing market conditions for the good or service in question in the country of provision or purchase (including price, quality, availability, marketability, transportation and other conditions of purchase or sale)".

11.41 The precise question before us is whether the methodology used by the USDOC to determine that the provision of rubber inputs by SOEs conferred benefits on OTR tire producers was inconsistent with Article 14(d). We recall that China's argument based on the text is that because Article 14(d) refers to "the good [...] in question", and to "a benefit", in the singular, and the USDOC identified the "good" in question as "rubber", the calculation regarding the adequacy of remuneration must be conducted on an aggregate basis in respect of all of the rubber inputs, combined. China also argues that where a given good is purchased on multiple occasions over a period of investigation, Article 14(d) requires that those individual transactions be considered in the aggregate to determine whether a producer is "better off" over a period of investigation. In China's view, the producer is not better off if it ends up paying, on average, more than the market price for any "good" that it purchases from the government over that period. China further considers that pursuant to Article 14(d) some aggregation is inevitable, such that the question becomes not whether, but how, to aggregate in a WTO-consistent manner.

11.42 We further recall China's argument that in the OTR investigation, the USDOC identified as a "programme" the provision of rubber inputs by the government for less than adequate remuneration. China argues that the USDOC thus was required to aggregate all of the different types of rubber (as "the good" in question) in performing its benefit calculations.

11.43 We thus see two main components to China's argument based on Article 14(d): temporal (the period of investigation as a whole); and regarding the meaning of "good" in this provision (how the input "programme" is defined by the investigating authority).

1. Period of investigation

11.44 Starting with the temporal element, we note that there is no direct reference to time in Article 14(d), or elsewhere in Article 14 of the SCM Agreement. In fact, the only way in which Article 14(d) refers to time, albeit indirectly, is through its reference to "prevailing market conditions", which we understand to mean the conditions in the market prevailing at the time of the purchase of the good or service in question from the government. But this is a different issue from the one raised by China.

11.45 From the practical point of view, we agree with China that countervailing duty investigations inherently have a temporal component, as alleged subsidies must be analyzed in relation to a particular period to ultimately arrive at an overall amount of subsidization of the investigated product,
ad valorem and/or per unit, as provided for in Articles 11.9 and 19.4 of the SCM Agreement. For this reason, an investigating authority will define a period of investigation and typically will need to perform a certain amount of aggregation and/or disaggregation of benefit amounts from different investigated subsidies to determine the total amount of subsidization of the product during that period.

11.46 This observation, which is shared by China, that benefit amounts from different subsidies need somehow to be aggregated over the period of investigation in order to arrive at the total amount of subsidization of the investigated product, does not however address the temporal issue raised by China. In particular, China is arguing that Article 14(d) (via its references to a "good" and "a benefit" in the singular) requires that the determination of whether purchases of inputs from government sources were for less than adequate remuneration must be calculated on an overall, net basis for the entire period of investigation for the good in question, using for each transaction the benchmark price identified by the investigating authority as the yardstick. In other words, China's argument is that if some purchases during the period of investigation are made for a higher-than-benchmark, or above-market, price, the full amount of these "negative" benefit amounts, as measured against the benchmark price, must, as a matter of law, be offset against the "positive" benefit amounts, over the full period of investigation.

11.47 In assessing this argument, we note first that Article 14(d) of the SCM Agreement contains no reference to any notion of offsetting, or "negative benefits" or of averaging across the period of investigation, for a particular good. Indeed, in our view, the language of the provision – especially the statement that "the provision of goods or services or purchase of goods by a government shall not be considered as conferring a benefit unless the provision is made for less than adequate remuneration" – if anything suggests both a disaggregated analysis and a focus on instances where benefits are found to exist. We note in particular the negative terms in which this sentence is drafted – a benefit "shall not" be conferred "unless" – which could be restated as there being no benefit, i.e., a benefit of zero, where the remuneration is at least "adequate".

11.48 The fact that the comparison required by Article 14(d) is with "prevailing market conditions", in our view, also cuts against China's argument that if on average over the period of investigation a purchaser of a good has not paid a below-market price, there is no benefit. In particular, given that "prevailing market conditions" can and do change over time, an investigating authority would need to ensure that its benchmark price was updated as necessary to reflect any such changes that might occur during the period of investigation. This suggests that rather than viewing the period of investigation monolithically, an investigating authority should be seeking to match the transactions under examination to contemporaneous benchmarks, and that the existence or absence of a benefit in respect of one transaction or group of transactions is independent of the existence or absence of a benefit in other transactions.

11.49 We also note that the approach advocated by China has a significant internal inconsistency which is most easily seen in a hypothetical situation where all of the purchases of a given good from a government are for prices above "prevailing market conditions". Under China's methodology, the benefit calculations would generate "negative benefits", both individually and overall. China argues that it sees no requirement under the SCM Agreement to offset any such net negative benefits from provision of goods against positive benefits from any other kinds of subsidies. Yet, we can find no basis in China's argument on which such a distinction could be made between positive and negative benefit amounts from one given kind of subsidy and positive and negative benefit amounts across different kinds of subsidies. We see no such requirement in the SCM Agreement, and to the contrary

---

816 Article 11.9 of the SCM Agreement establishes that subsidization of less than 1 per cent ad valorem is de minimis and must result in termination of an investigation. Article 19.4 of the SCM Agreement refers to calculation of "the amount of the subsidy found to exist [...] in terms of subsidization per unit of the subsidized and exported product".
consider that the Agreement – starting with the basic definition in Article 1 – instead provides that each subsidy must be analyzed and assessed independently.\textsuperscript{817} China's proposed methodology is inconsistent with this principle.

11.50 For the foregoing reasons, we find no requirement in Article 14(d) of the SCM Agreement that, as such, positive and "negative" benefits from government provision of a good must be offset over the period of investigation.

2. "Good" in the sense of Article 14(d) of the SCM Agreement

11.51 The second aspect of China's aggregation argument is that the USDOC should have treated all rubber inputs as a single "good" in the sense of Article 14(d), and that an overall net benefit amount (positive or negative) should have been calculated for "rubber" of all types together, for each tire producer. China bases this argument on the fact that the USDOC notionally treated provision of "rubber inputs" for less than adequate remuneration as a "programme" in its investigation.

11.52 While this argument of China would at first sight appear to be a purely factual one, it raises a legal question, that of the breadth of the term "good" in Article 14(d), and the extent to which what is considered to be a "good" for the benefit determination pursuant to Article 14(d) should be determined by the way in which the investigating authority groups various alleged subsidies in the investigation.

11.53 We consider that the text of Article 14(d) must be understood to refer to the intrinsic characteristics of the good itself, i.e., that the existence of a benefit must be determined based on how, in practice, the specific good in question is sold. In particular, this is the purpose of the language in that provision referring to "prevailing market conditions" as "including price, quality, availability, marketability, transportation, and other conditions of purchase or sale". This means that any benchmark identified as representing the "prevailing market conditions" for the good provided by a government must reflect the price for that same good as it would be or is sold by private sources at that time and on comparable terms and conditions. This language thus requires a careful matching of the transactions being examined with appropriate benchmarks, and militates against an aggregated, averaged approach across different kinds of goods.

11.54 We thus consider that, like the temporal question, Article 14(d) of the SCM Agreement points more to a disaggregated than an aggregate analysis of the pricing of a government-provided "good" for purposes of benefit calculation. Given this, we see no requirement in the text that simply because an investigating authority may refer to the provision of certain goods as a "programme" for purposes of its analysis, all of those goods must be treated as a bloc, on the basis of their average unit value, in the benefit calculations. To the contrary, we see a clear requirement that the benchmark must in fact reflect the actual market conditions, starting with price, for any given good at issue.

3. Degree of flexibility for investigating authorities under Article 14 of the SCM Agreement

11.55 We note that while China argues that the methodology it advances is required in all cases, the United States counters that Article 14 provides investigating authorities with considerable leeway to perform benefit calculations, within the general framework mandated by Article 14 of the SCM Agreement. We thus now turn to this question. In this regard, we note first that the chapeau of Article 14 explicitly characterizes the rules set forth in the four subparagraphs of Article 14 as

\textsuperscript{817} For example, Article 1 of the SCM Agreement refers to "a subsidy", "a financial contribution", and "a benefit"; and "countervailing duty" is defined in footnote 36 as a special duty to offset "any subsidy" bestowed upon the manufacture, production or export of any merchandise.
"guidelines". In this respect, we agree with the findings of past panels and the Appellate Body that as such, these "guidelines" establish the basic framework for the calculation of benefits from the kinds of financial contributions referred to in the various subparagraphs, but that they leave a considerable amount of leeway to investigating authorities as to precisely how those calculations are to be undertaken in any given case, depending on the specific facts under investigation. We note in particular the following statements of the Appellate Body in US – Softwood Lumber IV:

"[...] The chapeau of Article 14 requires that 'any' method used by investigating authorities to calculate the benefit to the recipient shall be provided for in a WTO Member's legislation or regulations, and it requires that its application be transparent and adequately explained. The reference to 'any' method in the chapeau clearly implies that more than one method consistent with Article 14 is available to investigating authorities for purposes of calculating the benefit to the recipient. [...]"

"[T]he term 'guidelines' suggests that Article 14 provides the 'framework within which this calculation is to be performed', although the 'precise detailed method of calculation is not determined'. [...] [T]hese terms establish mandatory parameters within which the benefit must be calculated, but they do not require using only one methodology for determining the adequacy of remuneration for the provision of goods by a government. Thus, [...] the use of the term 'guidelines' in Article 14 suggests that paragraphs (a) through (d) should not be interpreted as 'rigid rules that purport to contemplate every conceivable factual circumstance'.  

We further note the Appellate Body's similar statement in Japan – DRAMs (Korea):

"The chapeau of Article 14 provides a WTO Member with some latitude as to the method it chooses to calculate the amount of benefit. Paragraphs (a)-(d) of Article 14 contain general guidelines for the calculation of benefit that allow for the method provided for in the national legislation or regulations to be adapted to different factual situations".

11.56 We recall that we have found, above, no requirement in Article 14(d) for either the temporal or the product "offsetting" advocated by China. The above findings of the Appellate Body support this view, by indicating that no one specific methodology (whether that put forward by China or any other) is required by Article 14(d) of the SCM Agreement. We also have found that the language of Article 14(d) suggests more a disaggregated than an aggregate approach, both temporally and in respect of a "good" in the sense of that provision. That said, as discussed above, we consider that the basic requirement of Article 14(d), as expressed by the phrase "prevailing market conditions for the good [...] in question [...] (including price, quality, availability, marketability, transportation and other conditions of purchase or sale)", is that the benchmark used must correspond to the particular good at issue, as it is actually sold, at the time of the transaction being analyzed (i.e., it must reflect the factual situation found to exist in respect of the government-provided good). It is within this basic "guideline" that an investigating authority can exercise the methodological flexibility accorded to it under Article 14 so as to appropriately take into account the specific facts of the investigation.

11.57 Finally, we recall China's initial argument, based on an analogy with certain dispute settlement findings on the issue of "zeroing" in the context of anti-dumping, that Article VI:3 of the GATT 1994 as well as Articles 10, 19.3 and 19.4 of the SCM Agreement establish that a countervailing duty is to be imposed in respect of the "product" under investigation, and that therefore

---

819 Appellate Body Report on Japan – DRAMs (Korea), para. 191.
subsidization, like dumping, is to be defined in relation to a "product as a whole", and that "margins of subsidization", like "margins of dumping", can only be calculated for the product under investigation "as a whole". China submits therefore that while the USDOC could choose to undertake multiple comparisons at an intermediate stage to establish the "margin of subsidization", it could only establish that "margin" for each producer on the basis of aggregating all these "intermediate values", and that the Appellate Body's findings on zeroing in the anti-dumping context apply with even greater force in the countervailing duty context given that subsidization is not investigated on an individual transaction basis but, rather, necessarily involves an aggregated inquiry focusing on the "manufacture" or "production" of a product over the entire period of investigation.

11.58 As we have discussed above, we consider that a countervailing duty analysis does inherently involve a certain amount of aggregation, of benefits from distinct subsidies benefiting the manufacture, production or export of an investigated product, and of those benefits over the course of the period being investigated. In our view, however, such aggregation of benefits to the investigated product from different subsidies is unrelated to China's contention that "negative" benefit amounts must offset "positive" benefit amounts in calculations pertaining to the government provision of a given good (one among several possible subsidies affecting a given investigated product). We recall here that in any case, China itself argues (and we agree) that offsets of "positive" and "negative" benefit amounts across different subsidy programmes are not required, by Article 14 of the SCM Agreement or any other provision of the WTO Agreement. We thus do not find China's zeroing analogy to be apposite to this claim.

11.59 For these reasons, we do not find that, as a matter of law, Article 14(d) or any of the other provisions cited in China's claim requires the methodology advanced by China, or any specific methodology, to be applied in calculating benefits from the government provision of a good. We have instead found that Article 14(d), the directly applicable provision, requires that benefit be determined in a way that reflects the actual facts of the investigation. We do not here exclude, a priori, the possibility that a given set of factual circumstances (perhaps a hypothetical scenario along the lines referred to in Canada's third party arguments) might dictate the methodology advocated by China in a specific case. That said, the question remains whether the OTR investigation presented such a situation.

4. The USDOC benefit determination in respect of rubber inputs

11.60 Having considered the legal issues under Article 14(d) of the SCM Agreement and the other provisions cited by China, we now turn to the USDOC's analysis and determination of benefit from the government provision of rubber inputs to OTR tire producers. In particular, we consider whether the particular facts of the OTR investigation necessitated the methodology advocated by China.

11.61 The record demonstrates that in the OTR investigation, the USDOC referred to the subsidy at issue as the provision of "rubber" for less than adequate remuneration. In its calculations,

---

820 We note further that the term "margin of subsidization" does not appear in the SCM Agreement.
821 Nor do we consider that China has established the existence of a "basic reasonableness test" under Article 14 that would impart particular obligations that do not appear on the face of that provision. Indeed, China provides no discussion of what it means by the term "basic reasonableness test", instead simply citing a paragraph of the report of the panel in EC – Countervailing Measures on DRAM Chips in which that term appears.
822 See, inter alia, Exhibit CHI-4 pp. 9 and 69 (title of the programme "determined to be countervailable" is the "Government Provision of Rubber for Less than Adequate Remuneration"); Exhibit CHI-50, p. 71372-71374, ("Provision of Natural and Synthetic Rubber by SOEs for Less than Adequate remuneration"); Exhibit CHI-51 p. 40484, item D ("Government Provision of Rubber for Less than Adequate Remuneration"); Exhibits CHI-56 and CHI-57 (Final Calculation Memoranda for GTC and TUTRIC ("Government Provision of Rubber for Less than Adequate Remuneration")).
consistent with the basis on which the information was reported by investigated producers, the USDOC performed a separate calculation for each of the rubber inputs. \(^{823}\) GTC and TUTRIC both reported to the USDOC their purchases of rubber inputs from SOEs by month (sometimes reporting more than one transaction during a given month), separately for each of the types of rubber. There is no indication in the record of the investigation or before us that this was at odds with how the tire producers maintained the records of their rubber purchases.

11.62 The USDOC calculated monthly market benchmark prices for each type of rubber, based on the tire producers' actual purchases of rubber from private sources, and used these monthly benchmarks to determine on a monthly basis whether a benefit had been conferred. For each tire producer, the USDOC summed the positive benefit amounts thus calculated for each type of rubber, to arrive at a total benefit for the period of investigation to that tire producer from that type of rubber. These input-product-specific benefit totals then were added together to arrive at the total benefit to the tire producer from government provision of rubber inputs of all kinds during the period of investigation.

11.63 We note first that China does not contend that all of the different types of rubber were sold for a single, undifferentiated price. Nor does the record evidence indicate that this was the case. To the contrary, the record evidence shows that each type of rubber was sold as a specific, separate product with its own pricing, and that the tire producers maintained their purchase records separately for each type. \(^{824}\) Furthermore, we recall that China raises no claim in respect of the benchmarks used by the USDOC in these benefit calculations, or the matching of any particular benchmark to any particular rubber purchase. In other words, China does not claim that the benchmarks used by the USDOC failed to reflect "prevailing market conditions" either temporally or in terms of the characteristics or terms and conditions of sale of the particular kinds of rubber at issue.

11.64 Instead, what China contends is that in spite of their differentiated pricing, all of the different rubber inputs were legally required to be treated as a single "good" in the sense of Article 14(d) because the USDOC treated the government provision of rubber inputs to the OTR tire producers as a "programme".

11.65 In our view, China's characterization of the USDOC's description of the measure places undue weight upon the title given by the USDOC to the programme at issue, and we are not convinced that the USDOC sought to define the "good" at issue as "rubber" in the aggregate, without distinction between various types of rubber inputs. But in any case, even if we were to agree with China's characterization of the USDOC's description of the subsidy or good at issue, we find no basis in the SCM Agreement for China's arguments, nor do we consider that aggregating all "rubber" inputs, as China suggests was required, would reflect any market reality. Indeed, we note that there would be a considerable margin for inaccuracy if investigating authorities were legally required to ignore the actual pricing of a given good in favour of an average value across a range of goods with differentiated pricing. Furthermore, we consider that the guidelines of Article 14(d) mean that the level of aggregation or disaggregation of the analysis of a given "good" must correspond to how that good is marketed in reality. Given the facts of the case before us, we thus consider it appropriate for the USDOC to have separately calculated benefit amounts for the different kinds of rubber purchased by the tire producers.

11.66 Turning to the USDOC's approach of analyzing the rubber transactions on a monthly basis and taking into account only the positive monthly amounts, we recall that China contends that the USDOC should instead have calculated the overall positive or negative net benefit for the period of investigation as a whole, i.e., that it should have compared the average price paid for all forms of

---

\(^{823}\) See Exhibits CHI-56 and CHI-57 (Final Calculation Memoranda for GTC and TUTRIC).

\(^{824}\) Exhibits CHI-56 and CHI-57.
rubber over that period with the average benchmark.\textsuperscript{825} We consider that there could be certain situations in which some sort of grouping or averaging of transactions might be necessary in order to arrive at a determination of the amount of the benefit. Examples might include where a given set of transactions was made pursuant to a contract, or possibly where the actual prices paid to the government fluctuated slightly around the market benchmark(s) over the entire period of investigation. In the OTR investigation, however, the positive benefits calculated by the USDOC were clustered in particular months of the period of investigation and generally were sizeable, rather than being small amounts above and below the benchmarks spread uniformly over that period. This fact pattern, to us, does not mandate the kind of temporal averaging advanced by China. We thus consider that the USDOC acted within the limits of the flexibility accorded to it by Article 14(d) of the SCM Agreement in performing as it did the benefit calculations on a monthly basis.

11.67 Finally, we consider China's argument that the fact that the USDOC compared "aggregate" monthly benchmarks to individual transactions in performing its benefit analysis, and in some instances used benchmark prices that were not contemporaneous to the input transactions, resulted in comparisons that were not "apples-to-apples". We note that China reiterates, in making this argument, that it is not raising any new issues pertaining to non-contemporaneous (or non-like) benchmarks. We consider, however, that the benchmarks used by the USDOC are in fact the precise focus of this argument, which we see as a different issue from the "offset" issue that is the subject of China's claim as set forth in its request for establishment of the Panel. We thus do not find this argument germane to our consideration of that claim.

5. Conclusions

11.68 For the foregoing reasons, we find that China has not established that the USDOC acted inconsistently with the obligations of the United States under Article 14(d) of the SCM Agreement by not "offsetting" positive benefit amounts with "negative" benefit amounts, either across different kinds of rubber or across different months of the period of investigation, nor that the United States also thereby acted inconsistently with its obligations under Articles 10, 19.1, 19.4 or 32.1 of the SCM Agreement, or Article VI:3 of the GATT 1994.

11.69 We recall that we are called upon by this claim, as by all others before us, to determine whether the United States has acted inconsistently with its obligations on the basis alleged by China. In finding that China has not established its claim we thus are not making a judgement as to the overall consistency or inconsistency of the USDOC's benefit calculations in respect of rubber inputs with the United States' obligations, under the cited provisions or any other provisions.

XII. CHINA'S CLAIMS PERTAINING TO THE PROVISION OF SOE-PRODUCED INPUTS BY PRIVATE TRADING COMPANIES

A. CLAIMS BY CHINA

12.1 China submits that even if the USDOC's finding that SOE input producers were public bodies were valid, in the CWP, LWR and OTR investigations the USDOC acted inconsistently with Article 1.1 of the SCM Agreement (and as a consequence with Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994) by finding subsidies where inputs produced by SOEs were purchased from private trading companies by the producers of the investigated products, as the

\textsuperscript{825} See para.11.36, supra. This is another way used by China to express its argument that the positive and negative subsidy amounts should have been "offset".
USDOC made no finding that the trading companies were "entrusted" or "directed" in the sense of Article 1.1(a)(1)(iv) of the SCM Agreement to provide the goods.826

12.2 China further submits that if the Panel were to conclude that the USDOC was not obligated to make a finding that the trading companies themselves provided a financial contribution, the benefit analysis in respect of the sale of inputs was nonetheless flawed because it was predicated on an unlawful presumption that the trading companies received, and passed-through to the producers of the investigated products, countervailable benefits from their purchases of the inputs from SOEs.827

12.3 Concerning the first issue (the entrustment or direction issue), the relevant portion of China's request for establishment of the Panel (paragraph B.1(a)(iii)) reads as follows:

"(iii) even assuming a valid determination that certain SOEs are public bodies, the US authorities' failure to make a determination that SOEs "entrust or direct" trading companies to provide goods to producers of subject merchandise, within the meaning of Article 1.1(a)(1)(iv) of the SCM Agreement;" (footnote omitted)

12.4 Concerning the second issue (the pass-through issue), which China raises in the alternative to the financial contribution issue discussed supra, China, in response to a question from the Panel, identifies paragraphs B.1(a)(iv) and B.1(a)(v) of its request for establishment of the Panel as setting forth its claim(s) relative to the pass-through issue.828 These paragraphs read:

"(iv) the US authorities' determination that the sale of goods by trading companies to producers of subject merchandise confers a countervailable subsidy within the meaning of Article 1 of the SCM Agreement and a benefit under the guidelines set forth in Article 14(d) of the SCM Agreement;

(v) the US authorities' failure to determine whether the alleged benefit received by trading companies was passed through to producers of subject merchandise, in violation of Article VI:3 of the GATT 1994 and Articles 10, 14, 19.1, 19.4, and 32.1 of the SCM Agreement."

B. MAIN ARGUMENTS OF THE PARTIES

1. China

12.5 China argues that the USDOC had no basis to conclude that the respondents obtained "government-provided goods" when they purchased inputs from the trading companies, since the USDOC made no findings that the private trading companies themselves had made a financial contribution when selling SOE produced inputs, i.e., that they had been "entrusted or directed" to "provide goods" within the meaning of Article 1.1. For China, this necessarily means that the subsidies at issues were countervailed unlawfully.829

12.6 China alleges that even if the Panel were to disagree with this conclusion, the USDOC’s findings with respect to trading companies would still be unlawful, because they are based on an erroneous benefit analysis as well. In particular, China submits that the USDOC never established that the private trading companies themselves received subsidies, in particular that it did not examine

826 Paragraphs B.1(a)(iii) and B.1(e)(i)-(iii) of the "as applied" claims in China request for establishment of the Panel; China first written submission, para. 132; second written submission, paras. 44 and 315 (b).
827 China first written submission, paras. 133-138.
828 China response to Panel question 34 (second meeting).
829 See, e.g., China first written submission, para. 132.
the price paid by the trading companies for the inputs they purchased from SOEs in any of the investigations. Rather, according to China, the USDOC "presumed, without any investigation or analysis, that the purported financial contribution to the trading companies – the provision of [inputs] by SOEs – conferred a benefit on the trading companies". By presuming, rather than actually determining, whether and to what extent a benefit was conferred in the transaction between the SOEs and the trading companies, the USDOC acted inconsistently with Articles 1.1(b) and 14(d) of the SCM Agreement.

12.7 China further argues that without a valid finding that the trading companies themselves had received a benefit, the USDOC had no legitimate basis to conclude that "all or some portion of the benefit" they purportedly received was "conferred on the [...] producers who purchase the [...] from the trading company suppliers". In other words, China submits, the USDOC presumed the "pass through" of a benefit that had not been found to exist. According to China, the USDOC analysed the purchase of inputs from trading companies as if they were "indirect" subsidies, and although the USDOC did not expressly characterize it as such, its rationale for concluding that the investigated producers received a benefit was based on an assumption that some or all the subsidy conferred to the trading companies "passed through" to the investigated producers when they purchased inputs from the trading companies. In China's view, the USDOC's approach cannot be reconciled with the Appellate Body's jurisprudence on "pass through": the USDOC could not lawfully establish that the SOEs had conveyed an indirect subsidy upon the investigated producers "via" their purchases from the trading companies unless it had first established that the trading companies themselves were the direct recipients of a subsidy. China argues that the USDOC had to examine both the transactions between the SOEs and the private trading companies and the transactions between the private trading companies and the investigated producers. By examining only the latter of these transactions, the USDOC's benefit determinations with respect to the trading companies transactions were inconsistent with Articles 10, 14, 19.1, 19.4, and 32.1 of the SCM Agreement and Article VI:3 of the GATT.

2. United States

12.8 With respect to sales through trading companies, the United States argues that the USDOC properly applied the SCM Agreement when it determined that the public bodies (the SOEs) made financial contributions to the trading companies, and that these financial contributions conferred benefits to the producers of investigated products.

12.9 Concerning the financial contribution issue, the United States argues that no entrustment or direction analysis was required, and that China has not substantiated its claim that the USDOC's analysis was improper. According to the United States, the USDOC found that "the [Government of China's] financial contribution (provision of a good [by an SOE]) is made to the trading company suppliers that purchase the [good], while all or some portion of the benefit is conferred on the OTR tire producers who purchase rubber from the trading companies", and explained that the producer is the key link in the sales chain, such that when the producer is state-owned, there is a financial

---

830 China first written submission, para. 133-135; response to Panel question 34 (second meeting).
831 China explains that under the USDOC’s approach, the "full difference" between its benchmark price and the price paid by investigated producers to trading companies would presumptively be considered a countervailable "benefit". However, China argues, there is no basis for such a presumption: there are a number of reasons (unrelated to subsidization) why the price between the trading companies and the investigated producers may be lower that the (unlawfully presumed) subsidized price at which the trading companies originally purchased from SOEs. For example, China notes, the market price for the inputs in question could have been lower at the time the trading company resold the inputs than when it purchased them from SOEs. (China first written submission, para. 136; response to Panel question 34 (second meeting)).
832 China response to Panel question 34 (second meeting), citing to Appellate Body Report on US – Softwood Lumber IV, paras. 129 and 140-146.
833 United States first written submission, para. 147.
contribution by a public body. The United States argues that there is no indication in Article 1.1(a) of the SCM Agreement of who must receive a financial contribution, as that provision only addresses who grants a financial contribution.

12.10 In this regard, the United States submits that, although the financial contribution must confer a benefit, Article 1.1(b) does not specify upon whom the benefit must be conferred. The United States quotes the finding of the Appellate Body that "the 'benefit' of a financial contribution [...] [does not necessarily have to] be 'received and enjoyed' by the same person, or put differently, there is nothing indicating that the 'benefit' cannot be 'received and enjoyed' by two or more distinct persons". The United States recalls that in Mexico – Olive Oil, the panel interpreted the Appellate Body's findings as meaning that "a benefit might be received by different recipients, that the recipient of the benefit might be different from the recipient of the financial contribution, and that a subsidy can be bestowed directly or indirectly, and in respect of production, manufacture or export of a product".

12.11 According to the United States, China's claim that the USDOC "presumed" a financial contribution from the trading companies misses the point, as the USDOC instead found a financial contribution to the trading companies. For the United States, this argument by China assumes that Article 1.1 of the SCM Agreement requires there to be only one recipient, which must receive both the financial contribution and the entire amount of the benefit, an assumption for which China has offered no support.

12.12 The United States argues that in the investigations at issue, the financial contribution occurred with the sale of goods by the SOE to the "intermediary" trading company, and that this government provision of goods then conferred benefits upon the respondent producers of investigated products, when the trading companies sold the goods to those producers. According to the United States, although the trading companies received "perhaps some benefit" this did not preclude the producers of the investigated products from receiving a benefit, which existed to the extent that the prices paid by those producers for the goods were less than the corresponding benchmark prices.

12.13 Concerning the pass-through issue, the United States disagrees that the USDOC presumed the pass-through of a benefit that had not been found to exist. According to the United States, to the extent that a trading company received a benefit from the financial contribution provided by an SOE in the form of provision of goods, and some portion of that benefit in effect passed through the trading company to a producer of subject merchandise, the USDOC accounted for this and properly calculated the benefit conferred upon the producer of the investigated product. To do so, the United States submits, the USDOC compared the price the producer of the investigated product paid for the goods in question with an appropriate benchmark price. The United States cites the Appellate Body and the Olive Oil panel for the propositions that a pass-through analysis is not required every time there is an arms'-length transaction between unrelated companies in the chain of

834 United States first written submission, paras. 148 and 156.
835 Id., para. 150.
836 Id., para. 152, citing to Appellate Body Report on US – Countervailing Measures on Certain EC Products, para. 110. (emphasis original).
838 Id., paras. 155-156.
839 Id., para. 157.
840 Id., para. 320.
production of an investigated product, and that the recipient of a benefit may be different from the recipient of the financial contribution.841

12.14 The United States further argues that in the transactions at issue, the USDOC accurately measured the benefit by comparing the price paid by the producer of the investigated product for the input with an appropriate benchmark price. In particular, any difference between the price paid by the trading company to the SOE for the input and the price paid to the trading company by the producer of the investigated product, e.g., the mark-up added by the trading company, was reflected in the benefit calculations. Put another way, the United States argues, even if the USDOC had first determined the difference between the benchmark and the price paid by a trading company to an SOE for a government-provided good, and then also determined the difference between the benchmark and the price paid by the producer of the investigated product to the trading company for the good, the resulting determination of benefit would be the same.842 The United States concludes that whether the trading company sells the goods for the price it paid for them or with a mark-up, the benefit calculation properly determines the benefit conferred on the last buyer, the producer of the investigated product.843

C. MAIN ARGUMENTS OF THE THIRD PARTIES

1. Australia

12.15 Australia considers that when trading companies are mere intermediaries in a transaction, a complete pass-through analysis may not be necessary, and that this approach is consistent with the findings of the Appellate Body in US – Countervailing Measures on Certain EC Products and US – Softwood Lumber IV. Australia further notes that where intermediaries do not change the nature of the input, the benefit is most accurately calculated at the level of the exporters concerned. Australia suggests that the Panel examine what could constitute a pass-through analysis, which could include establishing the existence of a subsidy to an input product, and the price paid by the producer of the investigated product for the input compared with an appropriate benchmark.844

2. Canada

12.16 Canada argues that to impose a valid countervailing duty on a product as a result of the successive sales at issue, the USDOC had to determine that the sales of inputs by the SOEs to the trading companies constituted a financial contribution that conferred a benefit both directly upon the trading companies and indirectly upon the respondent producers, recalling that pursuant to Appellate Body findings, no separate financial contribution determination would be required for the sale of inputs to those producers. Concerning benefit, Canada submits that where the direct recipient purchases goods from a government or public body, and resells them without further processing them, the difference between the resale price paid by the indirect recipient and the benchmark price reflects the extent to which the benefit has passed through.845

3. European Communities

12.17 The European Communities considers that provision of goods by trading companies is a mere intermediate act, that does not change the nature of the financial contribution (i.e., the fact that the

---

842 United States first written submission, paras. 323-324.
843 Id., para. 324.
844 Australia third-party submission, para. 24; third-party oral statement paras. 16-18.
845 Canada third-party oral statement, paras. 8-12 and 17.
suppliers of the goods are SOEs), and in such cases, where there is no transformation of the product concerned, it would be unnecessary for the USDOC to have shown pass-through.846

4. Mexico

12.18 Mexico recalls the Appellate Body finding that a financial contribution may be granted to a company indirectly. In the present dispute, because the private trading companies were only the vehicle through which the financial contribution reached the companies under investigation, the investigated companies received the contribution indirectly, and thus it was not necessary to make a finding of benefit to the trading companies. Concerning pass-through, such an analysis is only needed when the subsidies are given for the production of a good that is an input for the product under investigation (in other words, upstream), which was not the case in the investigations at issue.847

5. Saudi Arabia

12.19 Saudi Arabia argues that in case of alleged subsidized inputs, a pass-through analysis should be conducted to determine if the downstream producer has received a benefit. Saudi Arabia argues that a two steps analysis must be undertaken each time the investigated product did not directly receive a subsidy from the government. The investigating authority must first determine whether a subsidy (financial contribution and benefit) was provided to the original recipient; second, it must determine whether all or part of the benefit from the original subsidy passed through to the exporter of the investigated product by the sale of the input product.848

6. Turkey

12.20 Turkey, referring to the report of the panel in Mexico – Olive Oil, considers that the SCM Agreement does not require the recipients of a benefit and a financial contribution to be the same. Acceptance of the opposite proposition would lead to the circumvention of the disciplines on subsidization simply by including a private party in the distribution chain.849

D. ASSESSMENT BY THE PANEL

12.21 We find a certain lack of clarity as to the exact nature and basis of China's claims concerning the provision of SOE-produced inputs by private trading companies. In respect of the first issue raised by China (the entrustment or direction issue), the relevant portion of China's request for establishment of the Panel (paragraph B.1(a)(iii)) reads as follows:

"(iii) even assuming a valid determination that certain SOEs are public bodies, the US authorities' failure to make a determination that SOEs "entrust or direct" trading companies to provide goods to producers of subject merchandise, within the meaning of Article 1.1(a)(iv) of the SCM Agreement". (footnote omitted)

This formulation indicates that the inconsistency alleged by China in its request for establishment focuses not only on the USDOC's failure to make a determination that trading companies were entrusted or directed to provide goods to producers of the investigated product, but also that in the view of China that determination, to be valid, should have been in respect of the SOE input producers (presumably as the public bodies that would have had to so entrust or direct the trading companies).

846 European Communities third-party submission, para. 27.
847 Mexico third-party oral statement, para. 18; third-party submission, paras. 54-56.
849 Turkey third-party submission paras. 36-40; third-party oral statement, para. 14.
12.22 In its first written submission, China again argued that the USDOC erred by not finding that the trading companies made financial contributions, i.e., that the USDOC made no finding that the trading companies were entrusted or directed to provide goods. China makes no reference in the context of this argument to the role of the SOEs as entrusters or directors. In the same submission, China makes a generally-worded request for findings in respect of the issue of financial contributions connected to the provision of goods, in particular that the Panel find the USDOC's determination of financial contributions in respect of the alleged provision of goods to be inconsistent with the provisions referred to in paragraph 12.1, supra. There is no specific request for findings in respect of the transactions involving trading companies.

12.23 In its second written submission, China argues that in the absence of a finding of entrustment or direction of the trading companies, the USDOC had no basis for its conclusion that the producers of the investigated products purchased "government-provided" as opposed to "government-produced" goods, so that the USDOC's failure to make a finding that the trading companies provided financial contributions rendered its subsidy findings in respect of those transactions inconsistent with Article 1.1 of the SCM Agreement. In the same submission, however, the finding requested by China in respect of this claim is that the USDOC's "findings [...] that private trading companies provided financial contributions [...]" was the source of the inconsistency with the cited provisions. Thus while the argument refers to the failure to make the finding as the legal error, the ruling requested of the Panel identifies as the source of the legal error findings that were made to the effect that private trading companies provided financial contributions.

12.24 China's oral statements make no reference to this issue.

12.25 In short, the arguments and requests for findings made by China during the course of the present dispute in respect of the financial contribution issue do not exactly match the claim as set forth in its request for establishment of the Panel.

12.26 Concerning the second issue (the pass-through issue), which China raises in the alternative to the financial contribution issue discussed supra, there also is a lack of clarity as to China's claims. In the first place, it is not entirely clear on the face of the request for establishment of the Panel whether only paragraph B.1(a)(v) pertains to this claim, or whether paragraph B.1(a)(iv) also is relevant to this issue. We note that China, in responding to a question from the Panel, identifies both of these paragraphs as setting forth the claim(s) relative to the pass-through issue. These paragraphs read:

"(iv) the US authorities' determination that the sale of goods by trading companies to producers of subject merchandise confers a countervailable subsidy within the meaning of Article 1 of the SCM Agreement and a benefit under the guidelines set forth in Article 14(d) of the SCM Agreement;

(v) the US authorities' failure to determine whether the alleged benefit received by trading companies was passed through to producers of subject merchandise, in violation of Article VI:3 of the GATT 1994 and Articles 10, 14, 19.1, 19.4, and 32.1 of the SCM Agreement".

12.27 In its first submission, China argues in regard to the pass-through issue that the USDOC never established that the trading companies received subsidies when they purchased inputs from SOEs.

---

850 China first written submission, paras. 103-110.
851 Id., para. 468(a).
852 China second written submission, para. 44.
853 Id., para. 315(b).
Instead, according to China, although the USDOC found that the trading companies received financial contributions when they purchased inputs from the SOEs, it never investigated whether the trading companies also received benefits therefrom. Without a valid finding of benefit, China argues, there was no legitimate basis for the USDOC to conclude that benefits were conferred on the producers of the investigated products when they purchased inputs from the trading companies; that is the USDOC presumed the pass-through of a benefit that had not been found to exist.

12.28 We note that this argument in the first submission makes no reference to any alleged violation of any provision, nor does it contain any cross-reference to any part of the request for establishment of the Panel. Furthermore, in the list of requested findings contained in the first submission, China asks the Panel to make the generally-worded finding that the USDOC’s benefit determinations in respect of the provision of goods are inconsistent with Article 14 and, as a consequence, with Articles 10 and 32.1 of the SCM Agreement, and Article VI:3 of the GATT 1994. There is no request for a finding that the benefit determination in respect of the provision of goods was inconsistent with Article 1 of the SCM Agreement. We note that China's second written submission contains no arguments related to the pass-through issue, and China makes no specific request for findings on this issue in that submission. Nor do China's oral statements refer to this issue.

12.29 In response to a question from the Panel at the second substantive meeting as to what, in particular, China was asking the Panel to do in respect of the pass-through issue as referred to in its first written submission, China stated that this issue corresponded to the claims in paragraphs B.1(a)(iv) and (v) of its request for establishment of the Panel, quoted above. China argues that the USDOC presumed a pass-through of benefits by trading companies (an indirect subsidy) without first finding that the trading companies had received benefits (a direct subsidy). According to China, this result cannot be reconciled with the Appellate Body's findings relating to pass-through of a subsidy from one transaction to another. According to China, under the Appellate Body's reasoning in US – Softwood Lumber IV, the USDOC could not lawfully establish that the SOEs had conveyed an indirect subsidy upon the producers of the subject goods via their purchases from trading companies without first establishing that the trading companies were themselves the direct recipients of a subsidy via their purchases from SOEs. According to China, the only way for the USDOC lawfully to find an indirect subsidy would be to examine both the transactions between the SOEs and the private trading companies, and those between the private trading companies and the investigated tire producers. China argues that a number of reasons having nothing to do with subsidization might cause the price between the trading company and the subject producer to be lower than the (unlawfully presumed) subsidized price at which the trading companies originally purchased from the SOE. China cites as a possible example a situation where the market price of the input declines between the time the trading company purchases and resells that input, which might occur where the trading company holds inventory. China argues that presuming rather than determining a benefit in the transactions between SOEs and trading companies was inconsistent with Articles 1.1(b) and 14(d) of the SCM Agreement, and that examining only the second transaction (between the trading companies and the producers of investigated products) in making the benefit determination for these purchases was inconsistent with Article VI:3 of the GATT 1994 and Articles 10, 14, 19.1, 19.4, and 32.1 of the SCM Agreement.

854 Here, China argues that the Appellate Body found that a pass-through analysis is required where "a subsidy is received directly by an entity other than a producer of subject products, and that entity subsequently sells inputs to producers of subject products. [...] In other words, it cannot be assumed that some or all of the indirect subsidy has passed through". (China response to Panel question 34 (second meeting), citing Appellate Body Report on US – Softwood Lumber IV, para. 129. (emphasis original)) We note, however, that this passage does not reflect a statement of opinion or reasoning by the Appellate Body, but rather summarizes an argument by the United States.
12.30 We note that this set of arguments explaining the legal basis of this claim does not exactly match the claim as set forth in the request for establishment of the Panel. In particular, while the claim in paragraph B.1(a)(iv) of that request identifies the transactions between the trading companies and the tire producers as the source of the alleged inconsistencies with Articles 1 and 14(d), in the arguments presented in support of this claim the source of these alleged inconsistencies are the transactions between the SOEs and the trading companies.

12.31 As outlined above, we find a certain lack of clarity concerning this set of claims, due to the somewhat variable way in which China characterized the issues in its submissions, and due to the inconsistencies between the statement of the claims in China's request for establishment of the Panel and China's descriptions of them in its submissions. We thus have some doubts as to whether these claims are properly before us. That said, we note that the United States has raised no objection in this regard. To the contrary, not only does the United States appear to understand the claims, it has presented full and substantive rebuttals to China's arguments, in spite of noting (at least in its first submission) that China's first submission makes no reference, in respect of the pass-through issue, to any alleged inconsistency with any provision of the WTO Agreement. Thus, we have decided to analyze the substance of these claims in spite of our doubts.

1. Financial contribution

12.32 China's claim regarding the financial contribution issue, as expressed in the arguments in its submissions, is that because the USDOC made no findings, in the CWP, LWR and OTR investigations, that the trading companies that supplied SOE-produced inputs were entrusted or directed to, in turn, make a financial contribution to the producers of the investigated product in the form of the inputs, the USDOC's finding that these transactions conferred subsidies on those producers was inconsistent with SCM Article 1.1 of the SCM Agreement.

12.33 Article 1 of the SCM Agreement requires that, for a subsidy to exist, there must be a financial contribution, as defined, and a benefit conferred thereby. That provision does not, however, specify who must be the recipient of the financial contribution and the benefit. In particular, it does not indicate that for a subsidy to exist, a single entity must receive both the financial contribution and the benefit.

12.34 This point was made by the Appellate Body in *US – Countervailing Measures on Certain EC Products*, and by the panel in *Mexico – Olive Oil*. Furthermore, the analyses by both the panel and the Appellate Body in *US – Softwood Lumber IV* reflected the same understanding. In particular, the issue in *US – Softwood Lumber IV* was whether the initial recipient of a subsidy (i.e., a financial contribution conferring a benefit) retained all of the benefits when it sold an input to a producer of the investigated product, or instead whether some or all of the benefits from the subsidy were passed along to the producer of the investigated product. That analysis thus was not premised on a series of government financial contributions at each successive transaction (i.e., an initial financial contribution by the government itself, followed in each later transaction by a passing along of the financial contribution via entrustment or direction in the sense of Article 1.1(a)(1)(iv) of the SCM Agreement). To the contrary, the initial financial contribution, to the initial recipient, was sufficient for there to have been, for the purposes of the SCM Agreement, a financial contribution by a government. (The issue of benefit was treated as a separate question).

12.35 In all of the investigations at issue pursuant to this claim (CWP, LWR and OTR), the USDOC found that there was a financial contribution by the government to the trading companies in the form of the provision of goods (the inputs in question) by SOE input producers. The USDOC then found, as a separate matter, that the benefits from those financial contributions were conferred in whole or in
part on the producers of the investigated products when those producers purchased the inputs for less than the applicable benchmark prices.855

12.36 While the factual situations in the prior disputes just discussed were somewhat different from that before us, we consider that the basic principles from those disputes apply here. First, the recipient of the financial contribution can be someone other than the recipient of the benefit. Second, where an initial government financial contribution has been made (under any of the subparagraphs of Article 1.1(a)(1)), the SCM Agreement does not require, for a valid finding of the existence of a subsidy, that in any ensuing transactions involving the proceeds of the financial contribution the government has entrusted or directed the initial recipient of the financial contribution itself to make a financial contribution. In other words, if the government makes a financial contribution in the form of a loan to a goods producer, the SCM Agreement does not require, for a valid finding of the existence of a subsidy to be possible, that the sale of goods produced with the proceeds of that loan be the result of government entrustment or direction. Again, the question of benefit is separate, and where the purported recipient of the benefit is someone other than the recipient of the financial contribution, the recipient of the benefit must be connected somehow to the matter at issue (whether in a countervailing duty investigation or a subsidy dispute pursuant to the SCM Agreement's multilateral disciplines), but again, the issue of benefit requires a separate analysis.

12.37 We consider that if, instead, a chain of entrustment or direction by a government were required for every subsequent transaction involving the proceeds of a financial contribution, in order for a valid finding of the existence of a subsidy to be possible, the disciplines of the SCM Agreement could be easily circumvented. This is particularly evident in the case of government provision of goods.

12.38 For these reasons, we find that China has not established that by not determining in the CWP, LWR and OTR investigations that the trading companies were entrusted or directed by the government to make financial contributions (in the form of provision of goods) to the producers of the investigated products, the USDOC acted inconsistently with the obligations of the United States under Article 1.1 of the SCM Agreement.856

2. Pass-through of benefits

12.39 China's claim in respect of the pass-through issue, as expressed in its arguments, is an argument in the alternative. In particular, China makes this claim in the event that the Panel finds that the USDOC was not required by Article 1.1 of the SCM Agreement to determine that the trading companies were entrusted or directed by the government to make financial contributions (in the form of provision of goods) to the producers of the investigated products in the CWP, LWR and OTR investigations. Having made this finding, we now take up China's pass-through claim.

12.40 In this regard, we note first that we find, infra, that in the CWP and LWR investigations, the United States acted inconsistently with its obligations under Article 12.7 of the SCM Agreement by resorting to facts available in determining the amount of HRS produced by SOEs that was purchased by CWP and LWR producers. Given this finding, there is no need for us to reach the pass-through issue in respect of the CWP and LWR investigations. Our analysis and findings in respect of this claim thus are confined to the OTR investigation.

855 We recall here that we have found no inconsistency in the USDOC's determination that the SOE input producers were public bodies, and as a consequence, no inconsistency in the USDOC's determination that the sales of inputs by the SOE producers to trading companies constituted financial contributions by the government in the form of government provision of goods. See Section VIII, supra.

856 Concerning China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with this claim see Section XIII, infra.
12.41 Unlike in the CWP and LWR investigations, in the OTR investigation, GTC and TUTRIC (the tire producers found to have received subsidies in the form of government provision of goods)\textsuperscript{857}, reported the full details of their rubber purchases, by producer, source and supplier (i.e., seller). The USDOC thus based its analysis of rubber inputs (those sold directly by SOEs and those produced by SOEs and sold by trading companies) on verified information gathered in the investigation, and not on facts available.

12.42 This brings us to the substance of China's claims related to the pass-through issue, in respect of which we note that China presents no specific legal argumentation concerning the provisions it cites, or of how precisely it considers that these provisions apply in this dispute. For its claims under Articles 1.1 and 14(d) of the SCM Agreement, China's legal reasoning seems to be, in essence, that no benefit, and thus no subsidy, to the trading companies was found to exist in the first place, meaning that Articles 1.1(b) and 14(d) of the Agreement were violated.

12.43 Concerning the remaining provisions cited, China says only that because the USDOC's examination was limited to the transactions between the trading companies and the producers of investigated products, and did not also include an analysis of the transactions between the SOEs and the trading companies, the USDOC's benefit determinations in respect of the purchases of inputs from trading companies were inconsistent with Articles VI:3 of the GATT 1994 and Articles 10, 14, 19.1, 19.4 and 32.1 of the SCM Agreement. China's apparent legal basis for this set of alleged violations is the Appellate Body's reasoning in \textit{US – Softwood Lumber IV}, as China simply asserts that the USDOC's analytical approach cannot be reconciled with that reasoning.

12.44 Turning in more detail to the particular provisions cited by China, starting with Articles 19.1 and 19.4 of the SCM Agreement, we recall that neither the panel nor the Appellate Body in the \textit{US – Softwood Lumber IV} dispute – the only prior dispute cited by China in support of its claims related to pass-through – made findings under any of these provisions, as the panel exercised judicial economy in respect of those claims. Given that China has provided no legal reasoning in support of its claims under these provisions, nor even identified any prior dispute settlement findings concerning those provisions\textsuperscript{858}, we find that China has not established that the USDOC's determination in respect of the provision of SOE-produced rubber inputs by private trading companies is inconsistent with the obligations of the United States under Article 19.1 or 19.4 of the SCM Agreement.

12.45 Concerning China's citation of Article 14 of the SCM Agreement in this context, it is not clear to us whether this second citation is in addition to the inconsistency alleged due to the absence of a finding that trading companies received a benefit described in paragraph 12.42, \textit{supra}. To the extent that that allegation is the basis for this second reference to Article 14, we consider that argument by China, although brief, to be reasonably clear. To the extent, however, that China is making a second, different claim of violation of Article 14, in particular in connection with the issue of pass-through of benefits as such, it has made no argument whatsoever as to the legal basis for this claim, nor did either the panel or the Appellate Body in \textit{US – Softwood Lumber IV} make any finding under Article 14 of the SCM Agreement in the context of pass-through, as Canada raised no such claim. Therefore, to the extent that China is asserting that the absence of a finding by the USDOC that benefits received by trading companies selling rubber were passed through (as such) to producers of tires was inconsistent with Article 14 of the SCM Agreement, we find that China has not established this claim.

\textsuperscript{857} We recall that the USDOC found that Starbright received no benefits from its purchases of rubber inputs from SOE producers.

\textsuperscript{858} We do not here mean to imply that citing prior dispute settlement findings by itself would have been sufficient in terms of legal argumentation. We simply wish to emphasize the entire absence of any legal basis, in China's representations to the Panel, for its claims under Articles 19.1 and 19.4 of the SCM Agreement.
12.46 Concerning the remaining provisions cited by China in its claims related to pass-through, (Article VI:3 of the GATT 1994, and Articles 10 and 32.1 of the SCM Agreement), we note that these provisions formed the basis of the pass-through findings of the panel and Appellate Body in US – Softwood Lumber IV. In particular, the substantive obligations were found in Article 10 of the SCM Agreement and Article VI:3 of the GATT 1994, with Article 32.1 of the SCM Agreement found also to have been violated as a consequence. As noted above, the only apparent legal basis for these claims advanced by China is its implication that the reasoning of the Appellate Body in that dispute directly applies to the situation at issue before us.

12.47 We recall that in US – Softwood Lumber IV, the panel and the Appellate Body found that the United States had impermissibly presumed that benefits from subsidies provided to input producers were passed through, in full, to producers of the investigated products when the latter purchased the inputs. The specific problem identified in that dispute was that, although the United States had calculated the amount of the subsidy benefits provided to the producers of inputs (raw logs), it had not examined the extent to which the input producers passed along any of the benefits when they sold the inputs to the producers of the investigated products.

12.48 The panel found in favour of Canada's claims under Article 10 of the SCM Agreement, and consequentially Article 32 of the SCM Agreement, as well as Article VI:3 of the GATT 1994, in respect of the situations where producers of logs were unrelated to the sawmills that processed the logs into primary lumber, as well as where producers of remanufactured lumber were unrelated to the lumber manufacturers (sawmills) from which the remanufacturers obtained their lumber inputs. The panel found that no pass-through analysis was required where the producer of the inputs was related to the lumber producer (i.e., where the production was vertically integrated). The panel exercised judicial economy in respect of Canada's Article 19 claim.859

12.49 The Appellate Body upheld the panel's findings that Article 10 of the SCM Agreement and Article VI:3 of the GATT 1994 require a pass-through analysis in circumstances in which a subsidy is received by a producer of an input product, and the investigated product is a different, downstream product produced by an unrelated producer using the subsidized input. More specifically, the Appellate Body found that:

"Where a subsidy is conferred on input products, and the countervailing duty is imposed on processed products, the initial recipient of the subsidy and the producer of the eventually countervailed product, may not be the same. In such a case, there is a direct recipient of the benefit—the producer of the input product. When the input is subsequently processed, the producer of the processed product is an indirect recipient of the benefit—provided it can be established that the benefit flowing from the input subsidy is passed through, at least in part, to the processed product. Where the input producers and producers of the processed products operate at arm’s length, the pass-through of input subsidy benefits from the direct recipients to the indirect recipients downstream cannot simply be presumed; it must be established by the investigating authority. In the absence of such analysis, it cannot be shown that the essential elements of the subsidy definition in Article 1 are present in respect of the processed product".860 (Italic emphasis in original; underline emphasis added)

12.50 We note and agree with the characterization by the panel in Mexico – Olive Oil that in US – Softwood Lumber IV the Appellate Body "emphasized that not every situation in which a subsidy is provided on the production of an input product gives rise to an obligation to conduct a pass-through analysis", and that the existence of such an obligation also depends on the relationship between the

---

producer of the input product and the producer of the imported, processed product, as well as on the scope of the investigated product. In the latter regard the Appellate Body, reversing one of the panel's pass-through findings, held that no pass-through analysis was required in respect of sales by lumber producers to unrelated lumber remanufacturers because both the lumber inputs and the remanufactured (further processed) lumber products were imported products covered by the countervailing duty investigation.861

12.51 In this regard, we note that the quotation that China characterizes as an opinion or reasoning of the Appellate Body in US – Softwood Lumber IV (quoted at footnote 854, supra) in fact is the summary of an argument by the United States, and that the Appellate Body's actual findings and reasoning are as quoted at paragraph 12.49, supra. We also note that the factual situation in the US – Softwood Lumber IV dispute was quite different from that before us, in that the entities from which the producers of the investigated products purchased inputs were the producers of those inputs, and those input producers were the recipients of subsidies in respect of their production of the inputs. The language in the Appellate Body's reasoning indeed refers only to that particular factual situation (i.e., the situation in which the immediate recipient of the subsidy is a producer of an input that is then sold to and used by a producer of an investigated product). We do not consider that a reference to a misattributed statement in the Appellate Body report from US – Softwood Lumber IV is sufficient to establish China's claim that the USDOC's determination in the OTR investigation is inconsistent with Article VI:3 of the GATT 1994 and Articles 10 and 32.1 of the SCM Agreement because the USDOC did not conduct an analysis to determine whether any subsidy benefits received by trading companies selling rubber inputs were passed through to the tire producers purchasing those inputs.

12.52 This leaves us with China's claims that the USDOC's failure to establish that the trading companies received a benefit when they purchased the rubber inputs from the SOEs meant that the determination that the tire producers received a benefit when they purchased the rubber inputs from the trading companies was inconsistent with Articles 1.1 and 14(d) of the SCM Agreement. While, as discussed above, the actual arguments presented by China, and its related requests for findings, are somewhat internally inconsistent; and there is an apparent discrepancy between the arguments, which focus on the existence of a benefit to the trading companies, and the description of the claim in the request for establishment of the Panel, which focuses on the existence of a benefit to the producers of the investigated products; we nevertheless consider the essential legal basis of this claim to be relatively clear. That is, China argues that the methodology used by the USDOC did not establish the existence of a benefit (and thus of a subsidy) consistently with the two cited provisions of the SCM Agreement.

12.53 As noted above, in the OTR investigation, GTC and TUTRIC (the tire producers found to have received subsidies in the form of government provision of goods)862 reported the full details of their rubber purchases. This included not only the dates, quantities, prices and delivery terms for these purchases, by type of rubber, but also the details as to the identity of the producer of each purchase of rubber.863 GTC and TUTRIC also provided details concerning which particular purchases were from trading companies and which were directly from producers. Furthermore, these companies

---

862 We recall that the USDOC found that Starbright received no benefits from its purchases of rubber inputs from SOE producers.
863 With respect to TUTRIC, see Final Calculation Memorandum for Tianjin United Tire & Rubber International Co., Ltd. (TUTRIC) (“USDOC Calculation Memorandum for TUTRIC”) as contained in Exhibit US-156; and Further Detail on Reported Rubber Prices, Exhibit US-157. As regards GTC, see Final Calculation Memorandum for Guizhou Tire Company Limited (GTC) (“USDOC Calculation Memorandum for GTC”), Exhibit CHI-56; and GTC Minor Corrections and Supporting Documents, “Rubber Purchases”, Exhibit US-155.
provided information as to which of the producers from which they purchased rubber inputs (whether directly or through trading companies) were SOEs. Thus, the record evidence shows that in respect of every purchase of each type of rubber, including from trading companies, the two tire producers at issue had full knowledge both of the identity of the producer of the rubber that they were buying, and of whether that producer was an SOE.864

12.54 We recall that the methodology used by the USDOC to determine the existence of a benefit to the tire producers from the rubber purchased from trading companies was to calculate the difference between the price paid by those producers to the trading companies and the applicable benchmark price. We note that the United States justifies basing its analysis exclusively at this level of transaction, and not also performing such a calculation for the sales by SOE rubber producers to the trading companies, on the basis that any portion of the initial benefit retained by the trading companies would be reflected in their selling price for the inputs. By this we understand the United States to be arguing, for example, that if the trading company received a benefit of 10 (based on the market benchmark) when it purchased rubber from an SOE, and it added a mark-up of 4 when it sold the rubber to a tire producer, the comparison of the price paid by the tire producer with the market benchmark would yield a benefit of 6 to the tire producer.

12.55 We see a certain logic in this methodological approach to the extent that it could (at least under certain circumstances) accomplish in a single step exactly the same result that otherwise would require a two-step calculation. That is, this approach would not give rise to an inflated calculation of benefits, or a finding of benefits where there were none, where the trading company acted as a simple logistical intermediary in individual transactions, for which services it charged a commission or a mark-up on the transaction (or was otherwise compensated), and did not itself purchase for and/or sell out of its own inventory, or hold title to the goods in question over an extended period. Thus, in a situation where a producer of an investigated product nominally purchases from a trading company, but the trading company in turn places a specific order for that purchase with the producer of the input, and the merchandise is then shipped to the producer of the investigated product on the basis of that particular order, in our view the methodology used by the USDOC would not give rise to an inflated calculation of the amount of the benefit, and thus would not raise any concerns under Article 1 or 14(d) of the SCM Agreement. This is because in such a situation it would be perfectly reasonable to assume that the trading company, as a simple logistical intermediary, would always collect its commission or mark-up, such that the price it charged its customer (the producer of the investigated product) would always be higher by that amount than the price it paid to the input producer.

12.56 We note, however, that this is one particular role that a trading company might play, but that trading companies in fact operate in a range of different ways. For example, some trading companies act as distributor/stockists, taking ownership and physical possession of goods and selling out of their own inventories. Others might enter into contracts to purchase in bulk (even if they never take physical possession), and then make individual sales from their bulk purchases. In these and similar circumstances, the methodology used by the United States would not be accurate. Price fluctuations in the market between the time a trading company purchased inputs (whether or not it physically inventoried them) and the time it sold them to a producer of an investigated product would inevitably give rise to situations where the benchmark price applicable to the trading company's purchase of the inputs was different from the benchmark price applicable to its sale of those inputs to the producer of the investigated product, and this would require some adjustments to the methodology, or the use of an entirely different methodology.

12.57 This brings us to the facts of the OTR investigation, where, as described, the tire producers provided full details on all of their rubber purchases, including the precise identity of the producer of

each reported purchase. This fact suggests that the trading companies involved may well have been acting purely as intermediaries, on a transaction-by-transaction basis, rather than as distributor/stockists or as bulk purchasers. This is further suggested by the "ex-works" delivery terms of a number of purchases\textsuperscript{865}, a phrase generally synonymous with "ex-factory". That said, there is no reference in the USDOC's determination in the OTR investigation to any evidence regarding the precise role played by the trading companies from which GTC and TUTRIC purchased rubber inputs, nor any indication that the USDOC made inquiries in that regard. Before us, the United States makes no arguments in this respect. We consider that, for the reasons explained above, given the methodology that the USDOC chose to use to establish the existence and amount of the benefit to the tire producers from their purchases of inputs from trading companies, it was incumbent on the USDOC to have investigated the precise role played by the trading companies, so as to ensure that its methodology did not calculate a benefit in excess of that conferred by the government provision of SOE-produced inputs.

12.58 The record evidence presented to us does not indicate that the USDOC undertook any such inquiries. Therefore, there is nothing before us that demonstrates that, under the particular facts of the investigation, the USDOC's methodology could not and did not give rise to a calculation of benefit in excess of that conferred by the provision of the inputs. We therefore find on this basis that the USDOC acted inconsistently with the United States' obligations under Article 1.1 and Article 14 of the SCM Agreement.

XIII. CHINA'S CONSEQUENTIAL CLAIMS

13.1 We now turn to various consequential claims raised by China. In particular, at paragraph B.1(e) of its request for establishment of the Panel, China alleges consequential violations of Articles 10 and 32.1 of the SCM Agreement, and of Article VI:3 of the GATT 1994, "in connection with all countervailing duty investigations, determinations and orders specified above" (i.e., specified at paragraphs B.1(a)-(d) of the request for establishment of the Panel). China requests findings in respect of these consequential claims at paragraphs 468 (a), (b), (d), (e), (f), and (g) of its first written submission, and at paragraphs 315 (a), (b), (c), (e), (f), (g), and (h) of its second written submission. We note that China has presented no argumentation in support of these consequential claims, but simply requests findings on them in the paragraphs just identified. Particularly under these circumstances, in the light of the findings we have made\textsuperscript{supra}, we see no need to rule on these consequential claims. We therefore apply judicial economy in respect of all of them.

13.2 We recall, however, that in respect of its other allegations pursuant to Article 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 (specifically, those raised in connection with its claims addressed at Sections XI and XII.D.2\textsuperscript{supra}, and Section XIV,\textsuperscript{infra}) China did present argumentation. As set forth in the respective sections and as summarized below at Section XVII, we have examined and made findings in respect of these allegations.

XIV. CHINA'S CLAIMS PERTAINING TO "DOUBLE REMEDIES"

A. INTRODUCTION

14.1 We now consider China's claims with respect to "double remedies". China's claims in this respect arise from the concurrent imposition, by the United States, of countervailing duties and of

\textsuperscript{865} See Exhibit US-156. Ex Works is defined as: "An <Incoterm> whereby the seller is responsible only for having the ordered <goods> available for pickup at the agreed place, which is usually the seller's own premises. The seller is also usually responsible for export packing to the extent that the transportation particulars are made available [...]". (A to Z of international trade, F. Reynolds (ICC Publishing S.A., 2002), p. 79).
anti-dumping duties calculated pursuant to the USDOC's NME methodology on products from China in the four sets of parallel anti-dumping and countervailing duty investigations at issue.

1. Background

14.2 In anti-dumping investigations involving products from countries it considers to be non-market economies ("NMEs"), the USDOC calculates the normal value on the basis of surrogate values taken from countries which it considers to be "market economies" rather than on the basis of the prices or costs of production actually incurred by the investigated producer. Specifically, under its NME methodology, the USDOC: (i) determines the quantities of the factors of production (e.g. inputs, labour, energy) actually used by the respondent producer in producing the investigated good; (ii) multiplies those quantities by the prices of each of those factors based on a "surrogate value" from a market economy country (or, where available, the actual price paid for an input imported from a market economy country); and (iii) adds an amount for factory overhead, selling, general and administrative (SG&A) expenses, and profit, calculated on the basis of ratios of these costs to the costs of the other inputs in the surrogate country.

14.3 The USDOC generally treats China as an NME in anti-dumping investigations, and did so in the anti-dumping investigations at issue in this dispute. As a result, the USDOC applied its NME methodology in calculating the normal value for the investigated Chinese producers. The normal value so constructed was then used to determine these producers' dumping margins.

14.4 As China points out, the four countervailing duty investigations at issue in this dispute mark a policy change on the part of the USDOC. The USDOC had taken the position, in 1984, that its countervailing duty legislation did not apply to imports from non-market economies: In its investigations on Wire Rod from Poland and from Czechoslovakia, the USDOC determined that it was impossible to identify a "bounty" or "grant" within the meaning of U.S. countervailing duty law in NMEs, because of the pervasive role played by the governments of such centrally-planned economies. This interpretation of the U.S. countervailing duty statute was affirmed by the U.S. Court of Appeals for the Federal Circuit in Georgetown Steel. In March 2007, the United States reversed this longstanding policy of not applying U.S. countervailing duty legislation to NMEs: In the CFS Paper investigation, the USDOC considered that while still not a market economy, China's economy had evolved sufficiently that it was possible to identify and countervail subsidies granted by China. At the same time, the USDOC maintained China's NME status for purposes of applying the U.S. anti-dumping regime. Ultimately, no duties were imposed in the CFS Paper case. Thus, the four

---

866 Section 773(c) of the U.S. Tariff Act of 1930 (codified at 19 U.S.C. 1677b(c)), Exhibit CHI-119. The USDOC may, in anti-dumping investigations involving an NME country, determine that the industry being investigated operates on market principles (market-oriented industry, or "MOI"). China indicates that the USDOC has never found any industry in any country that it designates as an NME to be an MOI.

867 United States first written submission, para. 450.

870 In maintaining its qualification of China as an NME, the USDOC in August 2006 considered that "market forces in China are not yet sufficiently developed" to allow it to rely on Chinese costs and prices in establishing normal value. (Final Affirmative Countervailing Duty Determination: Certain New Pneumatic Off-
countervailing duty investigations at issue in the present dispute constitute the first instances of imposition by the USDOC of countervailing duties on imports from an NME.

14.5 China claims that this imposition by the USDOC of countervailing duties concurrently with anti-dumping duties calculated under the U.S. NME methodology results in the imposition of a "double remedy". China explains that by "double remedy" it means that the subsidies at issue are "offset" twice, once through the imposition of the countervailing duties, and once through the imposition of the anti-dumping duties, because of the manner in which the latter are calculated.

14.6 The Government of China and Chinese interested parties raised the issue of double remedies in each of the four countervailing duty investigations before us. In its determinations in three of the investigations (LWS, LWR, and OTR), the USDOC indicated that it had no authority to address the issue of double remedies in the context of countervailing duty investigations, and that if any adjustment to avoid a double remedy were possible, it would only be in the context of anti-dumping investigations.871 Interested parties also raised the issue in the CWP and OTR anti-dumping investigations. In the CWP anti-dumping investigation, the USDOC declined to make adjustments for double remedies given that the interested party that had raised the issue had not received an individual company-specific margin. The USDOC also indicated that "Congress provided no anti-dumping adjustment for CVDs imposed to offset subsidies that are not export subsidies".872 In the OTR anti-dumping investigation, the USDOC considered that interested parties had not established the existence of a double remedy, and in particular had not provided sufficient evidence in support of their arguments that domestic subsidies automatically lower prices or that they "pass through", pro rata, to domestic prices.873 The USDOC also considered that the Chinese interested parties had not demonstrated that they were "entitled to an adjustment under US AD law to prevent a presumed double remedy from arising."874

871 For instance, in the LWR countervailing duty investigation, the USDOC addressed the double counting arguments presented by respondents as follows:

"[...] The [Government of China and a respondent] have not cited to any statutory authority that would allow us to terminate this countervailing duty investigation to avoid double counting and the CVD law provides no authority to make an adjustment to the CVD calculations to prevent double counting. If any adjustment to avoid a double remedy is possible, it would only be in the context of an antidumping investigation and no party raised this claim in the companion antidumping investigation of LWR". (Exhibit CHI-2, p. 19).

The USDOC made virtually identical statements in its determinations in the LWS and OTR countervailing duty investigations. (Exhibits CHI-3, p. 40 and CHI-4, p. 53). In the CWP countervailing duty investigation, the USDOC incorporated by reference its treatment of the issue in the concurrent anti-dumping investigation. (Exhibit CHI-1, p. 101).

872 Exhibit CHI-9, pp. 21-22.
873 Exhibit CHI-53, pp. 13-14. The USDOC rejected the arguments that it must assume that domestic subsidies necessarily result in lower export prices and that it had recognized that domestic subsidies lower prices pro rata in both domestic or export markets, indicating that "when it has considered the issue, the Department has sometimes presumed that, whatever the effect, if any, of domestic subsidies upon the prices subsequently charged by their recipients, that effect would be the same for domestic prices and export prices". (Id., p. 14).
874 In this respect, the USDOC stated that:

"As we noted in [CFS Paper], 'despite addressing the issue of parallel AD duties and CVDs directly, and explicitly requiring that the amount of any CVDs to offset export subsidies be added to U.S. price, Congress provided no adjustment for CVDs imposed by reason of
2. Claims of China

14.7 China considers that the imposition of a "double remedy" is incompatible with the United States' obligations under the covered agreements. China makes "as such" and "as applied" claims in this respect.

(a) China's "as applied" claims

14.8 China's "as applied" claims concern the duties imposed as a result of the four sets of anti-dumping and countervailing duty investigations at issue in this dispute. China claims that in each of these four sets of determinations, the USDOC's use of its NME methodology to determine normal value in the anti-dumping determinations, concurrently with the imposition of countervailing duties on the same products, was inconsistent with Articles 10, 19.3, 19.4, and 32.1 of the SCM Agreement and with Article VI of the GATT 1994.875

14.9 In addition, China claims that the United States acted inconsistently with Article I:1 of the GATT 1994 in each of the four sets of anti-dumping and countervailing duty determinations at issue due to the failure of the USDOC to extend to imports from China the same unconditional entitlement to the avoidance of a double remedy that it extends to like products originating in other Members.876

14.10 China also claims that, in the determinations at issue, the United States acted inconsistently with: (i) Article 12.1 of the SCM Agreement, due to the USDOC's failure to provide interested parties notice of the information which the USDOC required to evaluate the existence of a double remedy; (ii) Article 12.8 of the SCM Agreement, due to the USDOC's failure to inform China and interested parties of the essential facts under consideration that would "form the basis" for the USDOC's determinations in respect of the issue of "double remedy".877

(b) China's "as such" claims

14.11 The measure that is the subject of China's "as such" claims is an alleged omission, defined by China as the "failure of the United States to provide sufficient legal authority for Commerce to avoid the imposition of double remedies for the same alleged acts of subsidization when it imposes anti-

---

875 Paragraphs B.1(f)(i)-(iv) of the "as applied" claims in China request for establishment of the Panel; China first written submission, para. 468 (h); second written submission, para. 315 (i).
876 Paragraph B.1(f)(vii) of the "as applied" claims in China request for establishment of the Panel; China first written submission, para. 468 (j); second written submission, para. 315 (k). In its panel request, China also made claims of violation of Articles 2.4, 9.2 and 9.3 of the AD Agreement, due to the alleged imposition of double remedies. China did not pursue these claims before the Panel.
877 Paragraphs B.1(g)(vi)-(vii) of the "as applied" claims in China request for establishment of the Panel; China second written submission, paras. 269-270. China did not include this claim in its requests for findings. Further, China's panel request also included claims under Articles 2.4 and 6.1, as well as Annex II(1) of the AD Agreement, which China did not pursue.
dumping duties determined pursuant to its NME methodology simultaneously with the imposition of countervailing duties on the same product”.

14.12 China contends that, as a result of this failure, U.S. law is inconsistent "as such" with (i) Articles 10, 19.3, 19.4, and 32.1 of the SCM Agreement and Article VI of the GATT 1994; and (ii) Article I:1 of the GATT 1994 due to the absence of legal authority to extend to imports from China the same unconditional entitlement to the avoidance of a double remedy that the United States extends to like products originating in other Members.

B. UNITED STATES REQUESTS FOR PRELIMINARY RULINGS

14.13 The United States requests that we find that the measure challenged as part of China's "as such" claims, as well as China's "as such" claims themselves, fall outside our terms of reference.

The United States requests that we make findings on two distinct grounds: First, the United States submits that the alleged "failure [...] to provide legal authority" was not among the measures included in China's request for consultations. Second, the United States submits that this alleged "failure" is not a "specific measure at issue" identified in China's panel request pursuant to Article 6.2 of the DSU.

14.14 China asks us to reject these requests for preliminary rulings.

I. Main arguments of the Parties

(a) United States

(i) U.S. request for ruling concerning China's failure to consult on the "omission"

14.15 The United States argues that the alleged "failure [...] to provide legal authority" was not included in China's request for consultations and is therefore not within the Panel's terms of reference. The United States submits that the Appellate Body has indicated that, in determining whether measures not included in the consultations request fall within a panel's terms of reference, a panel should compare the respective parameters of the consultations request and of the panel request to determine whether the addition of measures in the panel request expanded the scope or changed the essence of the dispute. The United States argues that the addition, by China, of the "omission" converted the dispute from one limited to a series of "as applied" claims to one which includes a

878 China first written submission, para. 468 (i) and (k); see also paragraph B.2 of the "as such" claims in China request for establishment of the Panel and second written submission, para. 315 (j) and (l).
879 China proceeds under alternative hypotheses with respect to extent of the legal authority conferred on the USDOC to avoid the imposition of double remedies under U.S. law. China argues that while the USDOC's position on "double remedies is "opaque and apparently contradictory", it is possible to draw the conclusions that: (i) the USDOC has no authority to avoid the imposition of double remedies under the U.S. countervailing duty legislation; (ii) the USDOC "appears" to lack such legal authority under U.S. anti-dumping laws, "but this is unclear", and to the extent that the USDOC does possess authority under the U.S. anti-dumping laws to avoid imposing double remedies, "this legal authority whatever it might be, places the burden on respondent producers to present 'evidence' that 'subsidies pass through, pro rata, to U.S. prices'". (China first written submission, paras. 359-363 and footnote 1).
880 In its panel request, China also made claims of violation under Articles 2.4, 9.2 and 9.3 of the AD Agreement. China did not pursue these claims before the Panel.
881 United States first written submission, paras. 65-86; second written submission, paras. 5-16.

883 United States first written submission, paras. 74-86.
"measure" challenged "as such", resulting in an expansion of the scope and a change in the essence of the dispute.885

14.16 The United States takes issue with the argument of China that the alleged "failure" to provide legal authority to avoid the imposition of a double remedy was evident on the face of the determinations at issue. First, the United States rejects China's suggestion that the USDOC made any broad pronouncement in those determinations as to whether it had legal authority to adjust the anti-dumping duties to avoid any double remedy.886 The United States adds that even assuming that the alleged "absence of legal authority" were reflected in the determinations at issue, it would not follow that consulting on the specific investigations would have fulfilled the obligation to consult on the alleged "failure". The United States submits in this respect that higher-order measures such as statutes and regulations are often referenced in rulings and determinations that apply those measures; if such references were sufficient to place a responding Member on notice that they would be the subject of an "as such" challenge, consultations on "as such" claims would almost never be required.887 Lastly, the United States reads China's argument as an admission that China was aware of the existence of the alleged measure before it requested consultations, meaning that it consciously opted not to include the measure in its consultations request.888

(ii) U.S. request for ruling under Article 6.2 of the DSU

14.17 The United States recalls that Article 6.2 of the DSU requires a complaining party to identify in its panel request the "specific measures" at issue in the dispute. The United States argues that the "failure" identified in China's panel request is not a "specific measure at issue" in this dispute and, as a result, is not within the Panel's terms of reference. The United States considers that China's complaint is not about the absence of any "legal authority", but about a requirement that China believes exists under U.S. law to apply anti-dumping and countervailing measures in a way that results in the "double remedy" alleged by China.889 Thus, the United States argues, China is actually challenging a positive act, yet China's panel request fails to identify the specific U.S. legal provisions underlying this alleged requirement (i.e., the aspects of U.S. law allegedly requiring or authorizing the concurrent application of anti-dumping duties and countervailing duties). In fact, the United States notes, China's panel request contain no references to any U.S. legal provision.890

14.18 The United States further considers that an "omission" or "failure" presents a special case for purposes of dispute settlement, and may only be considered to be a "measure taken" if there is an affirmative obligation on a Member to take the action that it is accused of not having taken. As China fails to identify any WTO requirement for the United States to enact legislation to provide particular authority to the USDOC with respect to double remedies, and because no such WTO requirement actually exists, the United States considers that China has not established that the alleged "failure" constitutes an "omission" cognizable for purposes of WTO dispute settlement.891

(b) China

(i) U.S. request for ruling concerning China's failure to consult on the "omission"

14.19 China argues that it is well established in WTO jurisprudence that there need not be "a precise and exact identity between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel"; rather, the relevant question is whether the addition of a measure "expand[s] the scope of the dispute". China notes that in the recent US – Continued Zeroing dispute, the Appellate Body, in evaluating this issue, examined whether the additional measures "relate" to the measures identified in the request for consultations, and whether the "legal basis" of the claims raised in respect of the additional measures is the same as the legal basis of the claims set forth in the consultations request. China submits that the additional measure it added in its panel request easily meets both criteria as: (i) the USDOC's lack of legal authority was already evident on the face of the measures that were the subject of consultations and the panel request does nothing more than identify this absence of legal authority as a distinct measure; (ii) the measures are "related" because the USDOC specifically referred to the absence of legal authority in the underlying determinations, and even in the absence of such a specific reference, the absence of legal authority is one possible explanation for the USDOC's failure to avoid the imposition of double remedies in the investigations at issue; and (iii) the legal basis for China's claims in respect of the additional measure is identical to the legal basis for China's claims in respect of the measures that were the subject of consultations and the legal issue with respect to all these measures is the same (i.e., whether the imposition of double remedies for the same alleged acts of subsidization is inconsistent with the covered agreements). China also considers that the complaining party's prior awareness of a measure has no relevance to whether that measure is sufficiently related to the measures that were consulted upon.

14.20 Finally, China submits that the fact that it is challenging a measure "as such" is not relevant to whether that measure relates to the dispute that was the subject of consultations. China notes in this respect that the Appellate Body observed in US – Continued Zeroing that "the distinction between 'as such' and 'as applied' claims does not govern the definition of a measure for purposes of WTO dispute settlement".

(ii) U.S. request for ruling under Article 6.2 of the DSU

14.21 China argues that it is the United States' own conduct that is at the origin of whatever uncertainty exists as to the provisions of U.S. law – or their absence – that relate to the problem of double remedies. China considers that although the USDOC acknowledges the existence of the issue of "double remedies", the USDOC has been vague and evasive as to whether it possesses legal authority to avoid the imposition of double remedies, and under what legal framework it would analyze that issue. In any case, China notes, the Appellate Body has found that the identification of a measure under Article 6.2 need be framed only with sufficient particularity as to indicate the nature of the measure and the gist of what is at issue. China considers that it has gone well beyond this minimal requirement and that it was not required to identify the entire body of U.S. trade remedy laws.
and regulations in its panel request in order to apprise the United States of the nature of this dispute.\(^{898}\) China also argues that it has exhaustively documented the facts and circumstances that demonstrate the omission by the United States\(^ {899}\) and that the "absence of legal authority" identified in its panel request is the same omission that has been the subject of extensive consideration within the United States and that the USDOC itself identified as the explanation for its failure to avoid double remedies in the investigations at issue.\(^ {900}\)

14.22 In addition, China takes issue with the United States' characterization of its claims. China submits that its complaint does not relate to any provision of U.S. law requiring the USDOC to apply AD duties calculated under the NME methodology concurrently with countervailing duties. Rather, China's claim is that when the USDOC chooses to apply countervailing duties concurrently with anti-dumping duties determined in accordance with its NME methodology, a necessary consequence of that choice is the imposition of a double remedy and that this is because the USDOC lacks authority under U.S. law to account for the double remedy that arises in such circumstances. Thus, the impairment identified by China in this dispute finds its source in the fact that the USDOC lacks authority to avoid the imposition of double remedies whenever it applies anti-dumping and countervailing measures in respect of the same product from China.\(^ {901}\)

14.23 Finally, China notes that the Appellate Body has indicated that an examination of the sufficiency of a panel request does not entail a substantive consideration as to what types of measures are susceptible to challenge under the DSU\(^ {902}\), and has made clear that any act or omission can be a measure for purposes of dispute settlement.\(^ {903}\)

2. Assessment by the Panel

(a) U.S. request for a preliminary ruling with respect to the alleged failure to consult on the "omission"

14.24 We first consider the United States' argument that the "omission"\(^ {904}\) identified by China in its request for the establishment of the panel does not fall within our terms of reference because it is a measure that was not included in China's request for consultations.\(^ {905}\) The United States' request for a preliminary ruling in this respect raises the question of the relationship between the measures included in a complaining party's request for consultations and those included in its request for the establishment of a panel.

\(^{898}\) China response to the U.S. request for preliminary rulings, para. 24; response to Panel question 3 (first meeting).

\(^{899}\) China response to the U.S. request for preliminary rulings, paras. 21-23.

\(^{900}\) China response to Panel question 4 (a) (first meeting).

\(^{901}\) China response to the U.S. request for preliminary rulings, paras. 15-17; response to Panel question 3 (first meeting).

\(^{902}\) China response to the U.S. request for preliminary rulings, paras. 13, 20; response to Panel question 4(b) (first meeting), all citing to Appellate Body Report on US – Continued Zeroing, para. 169.

\(^{903}\) China response to the U.S. request for preliminary rulings, para. 20, citing to Appellate Body Reports on US – Corrosion-Resistant Steel Sunset Review, para. 81; EC – Selected Customs Matters, para. 133 and US – Continued Zeroing, para. 176; response to Panel question 4(b) (first meeting).

\(^{904}\) Our reference to the alleged "failure [...] to provide legal authority" as an "omission" or a "measure" in this section is for ease of reference only and is without prejudice to the United States' argument that China's panel request does not identify the "specific measure" at issue in the dispute in accordance with Article 6.2 of the DSU.

\(^{905}\) We address the United States' request for preliminary ruling with respect to the absence of consultations on the "omission" before considering the United States' request concerning the identification of this measure in China's panel request. In our view, proceeding in this order follows the logical sequence of events that determine a panel's terms of reference.
14.25 The "measure" the inclusion of which in the panel request is challenged by the United States is the following:

"In certain of the investigations specified above, the US Department of Commerce stated that US law provides no basis to make any adjustment to either the anti-dumping or countervailing duty calculations to avoid the imposition of a double remedy for the same unfair trade practice, where such a double remedy arises from the use of the US non-market economy (NME) methodology to impose anti-dumping duties simultaneously with the imposition of countervailing duties on the same product. The measures therefore include, as an omission, the failure of the United States to provide legal authority for the US Department of Commerce to avoid the imposition of a double remedy when it imposes anti-dumping duties determined pursuant to the US NME methodology simultaneously with the imposition of countervailing duties on the same product".906 (emphasis added)

14.26 Further, China's panel request contains a section entitled "As Such Claims" which indicates, *inter alia*, that:

"[...] The United States has not provided the Department of Commerce with any legal authority to adjust either the anti-dumping or countervailing duty calculations to avoid the imposition of a double remedy when it imposes anti-dumping duties determined pursuant to its NME methodology simultaneously with the imposition of countervailing duties on the same product. The Department of Commerce has acknowledged the absence of any such legal authority.

China considers that the absence of any legal authority for the Department of Commerce to avoid the imposition of a double remedy is an omission that, as such, is inconsistent with the following obligations under the covered agreements" [follows a list of provisions of the covered agreements which, the request indicates, are contravened by the "absence of legal authority to avoid a double remedy"] 907

[...]

"To the extent that US law does not permit the Department of Commerce to avoid the imposition of a double remedy for the same unfair trade practice in parallel anti-dumping and countervailing duty investigations involving imports from WTO Members that the United States has designated as non-market economies, China considers that US law is, as such, inconsistent with Article I of the GATT 1994 [...]" 908 (emphasis added)

14.27 There is no disagreement between the parties that China's request for consultations does not explicitly identify, as a "measure at issue", the omission included by China in its request for the establishment of a panel. China's request for consultations states that it "concerns definitive anti-dumping and countervailing duties imposed by the United States pursuant to the final anti-dumping and countervailing duty determinations and orders issued by the US Department of Commerce" in the four sets of anti-dumping and countervailing duty investigations at issue in this dispute. The request

---

906 China request for establishment of the Panel, Section A, p. 3.
907 Id., Section B.2, p. 7.
908 Id., Section B.2, p. 8.
concludes "China reserves the right to raise additional claims and legal matters regarding the above-mentioned measures during the course of the consultations".\footnote{909}

14.28 Article 4 of the DSU, governing requests for consultations, and Article 6 of the same Agreement, governing requests for the establishment of a panel, are relevant to the issue before us. Article 4.4 of the DSU provides:

"[...] Any request for consultations shall be submitted in writing and shall give the reasons for the request, including identification of the measures at issue and an indication of the legal basis for the complaint".

14.29 Article 6.2 of the DSU provides:

"The request for establishment of the panel [...] shall indicate whether consultations were held, identify the specific measures at issue and provide a brief summary of the legal basis of the complaint sufficient to present the problem clearly".

14.30 A panel's terms of reference are determined by the content of the request for its establishment. Yet, "as a general matter, consultations are a prerequisite to panel proceedings"\footnote{910}, and therefore to the inclusion of a measure in the request for the establishment of a panel and (by consequence) the panel's terms of reference. The Appellate Body has explained that "Articles 4 and 6 of the DSU [...] set forth a process by which a complaining party must request consultations, and consultations must be held, before a matter may be referred to the DSB for the establishment of a panel".\footnote{911} The Appellate Body has also highlighted the importance of consultations, explaining that they "provide the parties an opportunity to define and delimit the scope of the dispute between them".\footnote{912}

14.31 Past panels and the Appellate Body have recognized a certain degree of latitude to the complaining party in terms of the correspondence between the request for consultations and the panel request: there need not be "a precise and exact identity between the specific measures that were the subject of consultations and the specific measures identified in the request for establishment of a panel".\footnote{913} Where a complainant includes, in its panel request, a measure that was not part of the consultations request, it must be asked whether the complaining party, in so doing, expands the scope of the dispute\footnote{914} or changes its essence.\footnote{915}

14.32 In answering this question, panels and the Appellate Body have, in prior disputes, focused on various aspects of the relationship between the measures included in the panel request and those identified in the consultation request. Notably, in certain disputes, they considered whether the additional measures constituted "separate and legally distinct" measures from those which had been

\footnote{909} China request for consultations, pp. 1 and 6. (emphasis added).
\footnote{913} Appellate Body Report on Brazil – Aircraft, para. 132, (emphasis original), cited with approval in e.g., Appellate Body Reports on US – Upland Cotton, paras. 285 and US – Continued Zeroing, para. 222.
consulted upon, in view of the content of the measures, their legal bases, the government agencies that issued them and/or the legal linkages between them.\footnote{Appellate Body Report on \textit{US – Certain EC Products}, paras. 60-82; Panel Report, \textit{US – Customs Bond Directive}, paras. 7.173-7.204; Appellate Body Report on \textit{US – Shrimp (Thailand) / US – Customs Bond Directive}, paras. 286-295.} In other, more recent disputes, they found that the measures added in the panel request fell within the panel's terms of reference because they were similar or sufficiently related to those that had been consulted upon, and because the legal basis of the claims made in respect of the two different sets of measures were identical.\footnote{Panel Report on \textit{US – Continued Zeroing}, paras. 7.16-7.29; Appellate Body Report on \textit{US – Continued Zeroing}, paras. 213-236. See also Appellate Body Report on \textit{Brazil – Aircraft}, paras. 127-133, finding that the additional measures (regulatory instruments relating to the administration of the subsidy programme at issue) did not change the essence of the measure consulted upon. In \textit{US – Continued Zeroing}, the Appellate Body qualified its findings in \textit{US – Certain EC Products} (additional measure excluded on the basis that it was separate and legally distinct from the measures consulted upon), indicating that the two measures at issue in \textit{US – Certain EC Products} were not only legally distinct, but "were entirely different and, as a consequence, the matters covered by the consultations request and the panel request were distinct". (Appellate Body on \textit{US – Continued Zeroing}, para. 230).} 

14.33 While this prior jurisprudence offers some guidance on how to resolve the question identified above, we do not read it as establishing precise criteria that would apply in every instance, irrespective of the factual situation at issue. This understanding is consistent with the Appellate Body's indication that "whether a complaining party has 'expand[ed] the scope of the dispute' or changed the 'essence' of the dispute through the inclusion of a measure in its panel request that was not part of its consultations request must be determined on a case-by-case basis".\footnote{Appellate Body Report on \textit{US – Shrimp (Thailand) / US – Customs Bond Directive}, paras. 7.16-7.29; Appellate Body Report on \textit{US – Continued Zeroing}, paras. 213-236. In the same case, the Appellate Body indicated that its findings (which it referred to as a "dictum") in \textit{US – Certain EC Products} (considering whether the measures were "separate and legally distinct") were not to be treated "as creating an exclusive test or precedent". (Id., para. 295 and footnote 391).} 

14.34 In any event, the present dispute involves factual circumstances which have not been considered in past WTO disputes. In the present case, China's panel request added a new measure in the form of a rule or norm of general and prospective application (albeit formulated in the negative) – the "omission" – whereas the request for consultations had only included measures in the nature of individual instances of application of that rule of general application – the eight USDOC anti-dumping and countervailing duty determinations. Paralleling this expansion in the nature of the measures at issue was an expansion in the nature of the legal claims in respect of these measures which, as the United States points out, had the effect of transforming a dispute involving only "as applied" claims into one also including "as such" challenges.\footnote{The Appellate Body has indicated that panels should limit their analysis to the request for consultations, and not whether consultations actually took place with respect to the alleged measure. (Appellate Body Report on \textit{US – Upland Cotton}, para. 287). In consequence, in determining whether the inclusion of the "omission" in China's panel request had the effect of expanding the scope of the dispute or changing its essence, we limit our analysis to the text of China's request for consultations.}

14.35 In its argument that the "omission" falls within our terms of reference, China, relying on the findings of the Appellate Body in \textit{US – Continued Zeroing}, argues that the measure added in the panel request "relates" to the measures identified in the request for consultations and that the legal basis of the claims raised in respect of the additional measure is the same as the legal basis of the claims set forth in the consultations request. We consider that the examination of the nature and extent of the relationship between these two sets of measures is a tool to help us understand whether including the additional measure "expands the scope of the dispute" or "changes its essence" and, we agree with China that, in the present dispute, the additional measure is significantly related to the measures that were identified in China's request for consultations, albeit for reasons other than those put forward by...
China. Yet, we do not consider the "relationship" between the "omission" and the determinations identified in China's consultations request to be comparable to that which existed between the measures at issue in US – Continued Zeroing. In that case, the measures at issue were subsequent determinations taken in the context of the same anti-dumping orders, and "derive[d] from the same underlying legal basis".

14.36 By contrast, and as discussed above, the relationship in this dispute is between specific behaviour in the first case and the norm of general or prospective application on which that specific behaviour is allegedly based on the other. The measures identified in China's consultations request constitute specific instances of application of the measures identified in its panel request. For this reason, it comes as no surprise that the measures contained in each of these documents are closely connected. For the same reason, one would expect in such circumstances that the complaining party would allege violation of similar provisions of the covered agreements, as is the case here. Yet, this close relationship between the measures included in each of the requests and the fact that the legal claims made in respect of these measures invoke the same provisions of the covered agreements does not, in our view, outweigh the fact that the inclusion of the "omission" by China had the effect of bringing a wholly new type of measure – norms of general and prospective application – within the scope of the dispute and of adding "as such" claims to the "as applied" challenges included in the request for consultations. We consider that the addition of such new measures and claims in this case so broadens the scope of the present dispute, and changes its nature, as to place that measure outside of our terms of reference.

14.37 In reaching this conclusion, we take into consideration the recognition by panels and the Appellate Body that "as such" challenges against laws, regulations or other instruments that have general and prospective application are serious challenges that have more far-reaching implications than "as applied" challenges against individual instances of application of such norms of general and prospective application.921, 922

14.38 Our conclusion that the inclusion of the "omission" by China significantly expands the scope of the dispute and therefore that this measure and the claims made in its respect are outside our terms

---

920 In our view, the "relationship" between the measures set out in the panel request and those identified in the request for consultations derives from their substantive connection, not from the fact that the former may or may not have been "evident" on the face of the latter. See paragraph 14.39, infra.

921 See Appellate Body Report on US – Oil Country Tubular Goods Sunset Reviews, para. 172:

"...'as such' challenges against a Member's measures in WTO dispute settlement proceedings are serious challenges. By definition, an 'as such' claim challenges laws, regulations, or other instruments of a Member that have general and prospective application, asserting that a Member's conduct—not only in a particular instance that has occurred, but in future situations as well—will necessarily be inconsistent with that Member's WTO obligations. In essence, complaining parties bringing 'as such' challenges seek to prevent Members ex ante from engaging in certain conduct. The implications of such challenges are obviously more far-reaching than 'as applied' claims".

922 To be clear, we consider that taking into account the nature of the claims at issue in examining the correspondence between the measures listed in the request for consultations and those listed in the panel request is appropriate since they, together, determine the "matter" which is before a panel. We note that in US – Continued Zeroing, the Appellate Body found that the panel had properly examined both components of the "matter" before it – claims and measures – when it took into account the fact that the legal nature of the European Communities' claims regarding the additional measures "[did] not in any way differ from that of the [...] measures identified in the [...] consultations request" in reaching its conclusion that the consultations request and the panel request in that case referred to the same subject-matter, and as a result, that the additional measures fell within the panel's terms of reference. (Appellate Body Report on US – Continued Zeroing, para. 233).
of reference finds support in the findings of the Appellate Body in US – Shrimp (Thailand) / US – Customs Bond Directive. In that dispute, the Appellate Body was critical of the proposition that the inclusion, in the request for consultations, of a specific measure would suffice to bring within the scope of the dispute any legal instrument providing a general authority or legal basis for that specific measure. The Appellate Body added that such an approach would imply that laws and regulations providing general authority – including constitutional provisions – would automatically be implicated in a dispute even if they were not mentioned in a consultations request.

14.39 We recall China's view that there is a relationship between the determinations identified in the request for consultations and the alleged "omission" because those determinations "stated that U.S. law provides no basis to make any adjustment […] to avoid the imposition of a double remedy". Leaving aside whether or not China's characterization of the determinations is correct, we do not believe that such a reference, in and of itself, establishes a relationship sufficiently close as to bring the alleged omission within the scope of this dispute. An applied measure may often refer, implicitly or explicitly, to the legal basis under which it is taken and measures of general application will often be referenced in the specific instances in which they are applied. We agree with the United States that if China's arguments were followed, consultations on "as such" claims would almost never be required since consultations on related "as applied" matters would suffice. In sum, as previously explained, we consider that the addition to a dispute of "as such" claims regarding a norm of general and prospective application represents a significant expansion of the scope of the dispute, and changes its nature, even if the norm is substantively related to the individual instances of behaviour identified in the request for consultations.

14.40 Further, unlike China, we do not read the Appellate Body Report in US – Continued Zeroing as suggesting that the distinction between "as such" and "as applied" claims is irrelevant to a panel's consideration of its terms of reference. The statement of the Appellate Body relied upon by China addresses the question of what constitutes a "measure" for purposes of WTO dispute settlement and what types of measures are susceptible to WTO challenge, substantive questions that are not to be confused with the jurisdictional issues before us. In essence, in that statement, the Appellate Body makes the narrow point that "[i]n order to be susceptible to WTO challenge, a measure need not fit squarely within one of [the] two categories" of measures recognized in WTO jurisprudence. The Appellate Body did not, in that case or elsewhere, suggest that there is no significant difference between norms.

---

924 Id., footnote 390. The parties debate the relevance of the panel and Appellate Body findings in US – Shrimp (Thailand) / US – Customs Bond Directive in light of the differences between the facts of that dispute and those of the present one. As noted above, the panel and Appellate Body reports in US – Customs Bond Directive do not directly address the issue before us. Consequently, we do not consider it necessary to examine in detail the factual differences between that dispute and the present one.
925 China response to U.S. request for preliminary rulings, paras. 30-32; response to Panel question 7 (first meeting).
926 United States response to Panel question 7 (first meeting).
927 China relies on the following statement of the Appellate Body:

"We share the Panel's view that the distinction between 'as such' and 'as applied' claims does not govern the definition of a measure for purposes of WTO dispute settlement. This distinction has been developed in the jurisprudence as an analytical tool to facilitate the understanding of the nature of a measure at issue. This heuristic device, however useful, does not define exhaustively the types of measures that may be subject to challenge in WTO dispute settlement. In order to be susceptible to challenge, a measure need not fit squarely within one of these two categories, that is, either as a rule or norm of general and prospective application, or as an individual instance of the application of a rule or norm". (China response to the U.S. request for preliminary rulings, para. 36 (quoting Appellate Body Report on US – Continued Zeroing, para. 179).
of general and prospective application and individual instances of application of such norms, or that such difference is irrelevant in determining a panel's terms of reference. To the contrary, the Appellate Body has repeatedly made it clear that challenges to the former not only entail a different legal analysis on the part of the panel, but also that "as such" challenges have systemic implications that go well beyond those of "as applied" claims.928

14.41 Finally, the parties have debated the issue of the relevance of China's awareness of the existence of the additional measure at the time of its request for consultations.929 Prior cases offer little guidance on whether a complaining party's prior knowledge of such an "additional" measure is a relevant consideration. In any event, given our findings above, this is an issue we need not decide in the present case.

14.42 For the reasons set out above, we find that the "omission" challenged by China in its "as such" claims falls outside our terms of reference, and consequently, that China's "as such" claims equally fall outside our terms of reference.

(b) United States request for a preliminary ruling under Article 6.2 of the DSU

14.43 Having already determined that the measure challenged by China in the context of its "as such" claims and China's "as such" claims themselves are not properly before us because China did not identify them in its request for consultations, we do not need to address the second request for preliminary ruling presented by the United States, i.e., that these measure and claims fall outside our terms of reference due to China's failure to identify the "measure at issue" in the dispute pursuant to Article 6.2 of the DSU.

C. CHINA'S "AS APPLIED" CLAIMS

1. Introduction

14.44 In the following sections, we address China's "as applied" "double remedy" claims. Specifically, we consider China's claims that:

   (i) the United States imposed a "double remedy", inconsistent with Articles 10, 19.3, 19.4 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994;

   (ii) the USDOC's treatment of the question of "double remedy" in the investigations at issue was inconsistent with United States' obligations under Articles 12.1 and 12.8 of the SCM Agreement;

   (iii) the United States denied imports from China "most-favoured nation" treatment under Article I:1 of the GATT 1994 by imposing double remedies in the investigations at issue.

---

928 In US – Oil Country Tubular Goods Sunset Reviews the Appellate Body recognized that the distinction between "as such" and "as applied" challenges may be relevant to issues affecting a panel's jurisdiction in making observations about the identification of "as such" claims in a panel request. The Appellate Body in that case found that Argentina had sufficiently identified the measure at issue pursuant to Article 6.2 of the DSU but nonetheless opined that Argentina could have been clearer in setting out it claims. It "urge[d] complaining parties to be especially diligent in setting out 'as such' claims in their panel requests as clearly as possible". (Appellate Body Report on US – Oil Country Tubular Goods Sunset Reviews, paras. 172-173). (emphasis original).

929 We do not understand China to contest that it was aware of the existence of the alleged omission at the time it submitted its request for consultations.
Also as a preliminary remark, we consider it appropriate to emphasize that the dispute before us is limited to the consistency with the covered agreements of the USDOC's determinations in the four sets of investigations at issue; the consistency of double remedies with U.S. law is not before us.

2. General considerations with respect to the potential for "double remedies" to arise from the simultaneous imposition of countervailing duties and of anti-dumping duties calculated pursuant to the U.S. NME methodology

We first examine the parties' arguments with respect to whether the concurrent imposition of anti-dumping duties calculated under the U.S. NME methodology and of countervailing duties results in the imposition of double remedies.

(a) Main arguments of the Parties

(i) China

China argues that where anti-dumping duties calculated pursuant to a methodology that relies on surrogate, market-determined, values (NME methodology) and countervailing duties are simultaneously applied to imports of a same good, it necessarily results that any domestic subsidy bestowed upon the production of that good is offset twice, once through the calculation of the dumping margin, and once as a result of the imposition of the countervailing duties.930

By way of background, China notes that for a long time, the USDOC held the position that it could not apply countervailing duties to countries which it determined to be non-market economies, a position which the USDOC reversed in the CFS Paper case.931 The four investigations at issue in this dispute represent the first instances in which the USDOC simultaneously imposed anti-dumping duties calculated under its NME methodology and countervailing duties.

China notes that the issue of double remedies has been the subject of extensive discussions in the United States and was acknowledged by all three branches of the Government of the United States, including the USDOC itself.932 In addition, China argues that, more generally, the USDOC has consistently recognized that the manner in which it calculates anti-dumping duties can offset subsidies, including domestic subsidies. In particular, China argues that in numerous anti-dumping investigations of imports from market economy countries, the USDOC has recognized that by (i) adding subsidies to the producer's cost of production; (ii) deducting countervailing duties from the export price; or (iii) using a producer's reported costs, if these costs do not reflect subsidies received (or otherwise using unsubsidized costs) to determine constructed normal value; it would

---

930 See, e.g., China first written submission, para. 326.
931 Id., paras. 328-346. See paras. 14.2-14.4, supra, for the Panel's discussion of the evolution of the USDOC's position on the applicability of the U.S. countervailing duty regime to NMEs.
932 China oral statement at the first meeting of the Panel, para. 79; first written submission, paras. 347-354; oral statement at the second meeting of the Panel, para. 60. China notably refers to a 2005 report of the U.S. Government Accountability Office (the "GAO"), in which the GAO assessed whether it would be possible for the USDOC to apply countervailing duties to imports from China; to draft legislation (which was adopted by the U.S. House of Representatives but not the U.S. Senate) to provide the USDOC with explicit authority to address the issue of double remedies, should it apply the U.S. countervailing duty legislation to NMEs; to the recent decision of the U.S. Court of International Trade in GPX, (discussed in more detail below); and to statements made by the USDOC in relation to the CFS Paper case. (Id., referring, inter alia, to U.S. Government Accountability Office, U.S. – China Trade: Commerce Faces Practical and Legal Challenges in Applying Countervailing Duties, GAO-05-474 (June 2005) ("GAO Report"), Exhibit CHI-121; United States Trade Rights Enforcement Act, H.R. 3283, Exhibit CHI-122; and to United States Court of International Trade, GPX International Tire Corporation and Hebei Starbright Tire Co., Ltd., v. United States ("GPX"), Exhibit CHI-169).
effectively collect countervailing duties a second time.\textsuperscript{933} China submits that the United States fails to explain how the double remedy that arises from the use of an NME methodology differs from these other forms of double remedies, which the USDOC has taken all necessary steps to avoid.\textsuperscript{934}

14.50 In China's view, a double remedy arises in all instances of concurrent imposition of countervailing duties and of anti-dumping duties calculated pursuant to a methodology relying on surrogate values.\textsuperscript{935} This, in China's view, results from the overlapping rationales and effects of NME methodologies and of countervailing duties: China explains that the rationale for using an NME methodology in an anti-dumping investigation subsumes the rationale for imposing countervailing duties and that these are two different approaches for remedying the fact that a producer's costs and prices were not determined by market forces. China argues that when it uses its NME methodology, the USDOC places the producer in the position of having unsubsidized, market-determined costs of production,\textsuperscript{936} and calculates a dumping margin based on the difference between this market-determined cost of production and the producer's export price. China explains that in doing so, the USDOC necessarily captures any trade-distorting effects of alleged subsidies in the anti-dumping margin. Thus, having brought the producer's costs of production "to the market", and having calculated a duty on this basis, the USDOC's NME methodology necessarily offsets any benefit that the producer obtained by receiving financial contributions from the government on terms more favourable than those available in the market. When the USDOC simultaneously calculates the amount of subsidization in a parallel countervailing duty investigation – again by placing the producer in the position of having market-determined costs of production – it is repeating the same exercise undertaken in the anti-dumping NME calculation. Thus, China explains, the same subsidy is offset twice.

14.51 China notes the United States' arguments that the use of an NME methodology may not constitute a complete remedy for the subsidies. Consistent with the explanation above, China argues that the existence of a double remedy occurs entirely on the cost side of the equation. Accordingly, China rejects the United States' contention that the existence of a double remedy is a factual question and depends, in particular, on whether subsidies pass through, \textit{pro rata}, to U.S. prices.\textsuperscript{937} China provides a number of examples from the investigations at issue (with respect to subsidies in the form of the provision of inputs), as well as theoretical examples which it considers support its arguments in this respect.\textsuperscript{938} China also rejects the United States' argument that the existence of a double remedy

\textsuperscript{933} China second written submission, paras. 214 and 227, response to Panel question 74 (first meeting). China adds that in these investigations, the USDOC did not consider the existence of a double remedy to be "theoretical", required any "evidence" or "presumptions" about the effects of subsidies on a producer's costs or prices, or suggest that it had no legal obligation to avoid the double remedy that it had identified. (China second written submission, para. 215). See Section XIV.C.5, \textit{infra}, (Panel's consideration of China's claims under Article I:1 of the GATT 1994), for a more detailed review of China's arguments in this respect.

\textsuperscript{934} China first written submission, para. 228.

\textsuperscript{935} Id., para. 374.

\textsuperscript{936} China argues that in calculating a constructed normal value, the USDOC seeks to ensure that the surrogate values that it uses are, in fact, market-determined values and avoids the use of any surrogate value that may itself be subsidized. (China first written submission para. 371 and footnote 315, \textit{inter alia} referring to Omnibus Trade and Competitiveness Act of 1988, Exhibit CHI-123).

\textsuperscript{937} Id., paras. 330, 372 and 391-392; oral statement at the first meeting of the Panel, para. 81; second written submission, paras. 219, 233-238, response to Panel question 73 (first meeting). China considers that whether subsidies pass through, \textit{pro rata}, to U.S. prices, is entirely irrelevant. But China argues that even assuming that the United States were correct and that the existence of a double remedy depends on the effects of subsidies on export prices, the only lawful basis on which an investigating authority could impose countervailing duties would be to presume that the subsidies had precisely that effect. (China second written submission, para. 289 \textit{et seq.}).

\textsuperscript{938} China first written submission, para. 395; oral statement at the first meeting of the Panel, para. 81; second written submission, paras. 222-225, response to Panel question 73 (first meeting); response to Panel question 26 (second meeting); Exhibit CHI-142 ("Further Examples of Offsetting the Same 'Subsidies' Twice");
can be ascertained from a "mathematical" comparison between the dumping and countervailing duty margins. China's response to the United States' argument in this respect is that the use of an NME methodology necessarily offsets any competitive advantage that the producer obtained from countervailable subsidies, but that this does not mean that an anti-dumping margin determined pursuant to an NME methodology is mathematically comparable to a countervailing duty margin calculated in respect of the same product, because: (i) the use of an NME methodology is meant to address a broader set of distortions (e.g. non-specific subsidies); and (ii) the dumping margin is dependent on the level of the producer's export price, a variable that plays no role in the countervailing duty calculation. Further, for China, the fact that, in a given instance, the USDOC could theoretically arrive at a zero dumping margin does not alter the fact that in using an NME methodology, it necessarily offset the benefit of any countervailable subsidies along the way.939

14.52 Overall, China considers that the theories put forward by the United States demonstrate that the United States does not deny the existence of double remedies but rather, considers that the existence of double remedies is solely a matter of degree that depends on certain factual circumstances.940 Yet, China notes, in the investigations at issue, the USDOC did not take any steps to determine the extent of the double remedy that may have arisen.941 In any event, China considers that it has demonstrated, at a minimum, that there was at least "some overlap" between the method by which the USDOC determined normal value in the anti-dumping investigations and the subsidies that were identified and countervailed by the USDOC in the parallel countervailing duty investigations.942

14.53 Finally, China draws the Panel's attention to the 2009 decision of the U.S. Court of International Trade ("CIT") in GPX International Tire v. United States, a judicial review of the determination in the OTR investigation at issue in the present dispute. In GPX, the CIT held that the USDOC is obligated to avoid offsetting the same subsidies twice when it uses its NME methodology in conjunction with countervailing duties.943 China notes that the CIT observed that the USDOC addresses subsidization of NME producers "through the NME AD methodology" and that it is fundamentally incompatible with the purposes of the countervailing duty laws to offset the same subsidies twice; China also cites the CIT's conclusion that the USDOC has an obligation to investigate and to avoid double remedies. China posits that in GPX, the CIT rejected U.S. arguments that are similar to those the United States makes before this Panel.944

and Exhibit CHI-170 (examples, in scenarios in which subsidies "pass through" or do not "pass through" to export prices).

939 China response to Panel question 93 (a)-(b) (first meeting).
940 See, e.g., China's second written submission, para. 305. China also argues that the United States has implicitly acknowledged before the Panel the potential for at least some degree of overlap between the two remedies. In particular, China notes the United States' statements that the use of an NME methodology to determine normal value may not constitute a complete remedy for any subsidies received by the producer, and that it will "not necessarily capture the full amount" of any subsidies. China argues that these statements are consistent with the USDOC's statement, in CFS Paper that "a possibility of double counting results from simultaneous antidumping and CVD investigations" of imports from NME countries and with the statement by the GAO that anti-dumping duties determined in accordance with the U.S. NME methodology "offset much of the value of both export subsidies and domestic subsidies". (China response to Panel Question 92 (first meeting)).941 China oral statement at the first meeting of the Panel, para. 82; second written submission, para. 305.
942 China response to Panel question 92 (first meeting).
943 China oral statement at the second meeting of the Panel, paras. 56-73.
944 Id.
(ii) United States

14.54 The United States asks the Panel to reject China's argument that a double remedy results from the imposition of countervailing duties concurrently with the imposition of anti-dumping duties calculated under the U.S. NME methodology. In particular, the United States contests what in its view is an argument of China that every calculation of a dumping margin using the NME methodology will be artificially inflated by the full amount of subsidies that are remedied by countervailing duties determined and imposed simultaneously on the subject goods. The United States argues that China has not provided evidence to support its arguments in this respect.945

14.55 The United States proffers that the theory advanced by China suggests that surrogate values used to determine normal value under the U.S. NME methodology are the mathematical equivalent of what actual production costs would be if China were a market economy plus the precise amount of subsidization. The United States challenges what it sees as the theoretical premises and the assumptions underlying China's theory. The United States argues that it cannot be assumed that replacement of actual (subsidized) values of inputs with surrogate values under the NME methodology results in an increase in the normal value by an amount that is equal to or greater than the amount of the subsidy. The United States argues that it cannot be assumed that the normal value arrived at using the NME calculation is, in every instance, completely insulated from any of the effects of the countervailed subsidy. The United States posits that the subsidy could actually lower the normal value, for instance by increasing a recipient's efficiency and reducing the quantity of factors used in production, or affect the surrogate (third-country) prices and/or profit and expense ratios.946 The United States further submits that another fundamental premise for China's arguments is that subsidies reduce costs of production, pro rata; the United States contends that this would be a necessary basis for arguing that normal values determined using the NME methodology are invariably inflated by an amount that fully remedies the subsidy. The United States considers it far from clear that most subsidies achieve anything close to pro rata reductions in cost.947

14.56 The United States characterizes as "self-serving" the illustrations offered by China using the investigations at issue in the current dispute, and asks the Panel not to consider that these establish that double remedies were imposed in these investigations. The United States disagrees with China's suggestion that similarities between the surrogate values used in the anti-dumping calculations and the benchmarks used in the countervailing duty investigations prove that the resulting duties remedy the same economic "distortion". In addition, the United States submits counter-examples to demonstrate that in some instances, the surrogate values used by the USDOC in its dumping margin calculation were in fact lower than both the producer's actual costs and the benchmarks used by the USDOC in its calculation of the amount of the subsidy.948

14.57 Further, the United States argues that China incorrectly equates the normal value with the anti-dumping remedy, and notes that normal values are only one side of the anti-dumping equation.949 The United States argues that even if it is assumed that a subsidy lowers the recipient's costs of production, it may not pass-through to prices.950

945 United States first written submission, paras. 445-462; opening statement at the first meeting of the Panel, para. 56; response to Panel question 73 (first meeting).
946 United States first written submission, paras. 451-454 and footnote 612; response to Panel question 71 (first meeting); second written submission, paras. 203-207; response to Panel question 27 (second meeting).
947 United States first written submission, paras. 455-459.
948 United States comments on China's response to Panel question 26 (second meeting).
949 United States second written submission, paras. 198-202.
950 United States response to Panel questions 71 (a) and 72 (first meeting).
14.58 The United States urges the Panel to reject the argument made by China that there are "overlapping rationales" for (i) the use of NME methodologies in anti-dumping investigations and (ii) the imposition of countervailing duties. In the view of the United States, China mischaracterizes the relevant rationales and incorrectly assumes that subsidization is among the market distortions that the NME methodology is "meant to counteract". The United States argues that under the GATT, the AD Agreement, and China's Protocol of Accession, subsidization is not relevant to the application of the NME methodology. The United States submits in this regard that the USDOC does not and cannot ensure that the NME constructed normal value is "subsidy-free", and that in some instances, including in the investigations at issue, the surrogate value exceeds the producer's actual costs. The United States further submits that the effects of subsidies on costs or prices is not, under the covered agreements, relevant to the calculation of the amount of countervailing duties. On the contrary, under Article VI:3 of the GATT and Article 19.2 of the SCM Agreement, countervailing duties may be imposed for the full amount of the subsidy found to exist, irrespective of the effects these subsidies.

14.59 Finally, the United States argues that even if it is accepted at face value, the GAO Report does not support China's argument that double remedies are inherent in the concurrent application of countervailing duties to offset domestic subsidies and of anti-dumping duties calculated under an NME methodology. Rather, the United States argues, "the report agrees with Commerce's stated position [that] the concurrent imposition of AD and CV duties could create some potential for overlapping rationales". The United States also asks the Panel not to rely on, or consider dispositive or even persuasive, the Opinion of the CIT in the GPX case. The United States argues that this decision represents the Court's ruling on U.S. law and results from other considerations than those focussed on by China in the current dispute. The United States notes that the CIT concludes that some degree of double counting is likely and directs the USDOC to investigate the issue and report back to the Court. Further, the United States considers the CIT ruling to be in error and notes that it is not final as it may be appealed.

(b) Main arguments of the Third Parties

(i) Argentina

14.60 Argentina argues that China incorrectly assumes that the use of an NME methodology in an anti-dumping investigation necessarily addresses any potential subsidization. On the contrary, Argentina argues, using analogue country prices and costs to mirror market economy conditions does not mean that such costs and prices have been adjusted from subsidization. Further, Argentina is of the view that the purpose of the NME methodology is to provide an alternative to obtain undistorted prices in circumstances where there are distortions in the economy, rather than to offset subsidies, and that even assuming arguendo that subsidies are the quintessence of distortions as China contends, they are not the only category of distortions affecting a market. As a consequence, Argentina argues, the concurrent application of anti-dumping duties calculated under a surrogate country methodology and of countervailing duties does not, in itself, imply the situation of duplication alleged by China.
(ii) Australia

14.61 Australia submits that anti-dumping and countervailing duties are distinct trade remedies with different purposes and effects. Australia considers that the use of a surrogate market in an anti-dumping investigation and the calculation of an NME normal value do not relate to an assessment of whether a subsidy exists or a calculation of the amount of that subsidy, and notes that an anti-dumping investigation entails a price comparison between the normal value and the export price.956

(iii) Brazil

14.62 Brazil argues that the potential effects on pricing practices of subsidies to the "manufacture or production" of a product are normally much less direct than is the case for export subsidies and that it is therefore inappropriate to apply the logic behind Article VI:5 to domestic subsidies.957

(iv) European Communities

14.63 The European Communities expresses concern with China's allegation that there is an "inherent" double remedy in cases where normal value is established on the basis of a surrogate country and with China's apparent assumption that domestic subsidies inevitably affect prices, including export prices. The European Communities also posits that there may be cases where export subsidies have no measurable impact on export price, or have no discernable impact on prices at all.958

(v) Japan

14.64 Japan considers that in certain situations, the dumping margin calculation captures not only the dumping behaviour of exporters, but also the effects of governmental financial contributions; if in such a situation, the importing Member also imposes a countervailing duty, it would counteract the effects of the financial contribution by the government twice. Japan argues that a double remedy may or may not occur in situations other than situations of export subsidization, depending on the method used in the calculation of the margin of dumping in a given case. For example, if a subsidy is conferred on inputs and the final product is sold both in the home and export markets, both the home market price and the export price would be lowered by the same amount due to the effects of the subsidy, and in such a case, a double remedy may occur if the dumping margin is calculated by adjusting the home market price upward for the per-unit amount of the subsidy without an adjustment of the actual export price. Japan also considers that a double remedy unavoidably occurs in the case of export subsidies.959

(vi) Mexico

14.65 Mexico considers that China's argument that the application of a surrogate country methodology in an anti-dumping investigation yields a normal value free from distortions is without foundation. Mexico is of the view that an NME methodology does not offset the effect of subsidies granted in the exporting country. Further, Mexico argues that even assuming arguendo that the normal value determined on the basis of a surrogate country would reflect unsubsidized prices, these prices would be those in the surrogate country, not in China itself.960

956 Australia third-party submission, para. 42; third-party response to Panel questions 14 and 17.
957 Brazil third-party submission, para. 17.
958 European Communities third-party submission, paras. 53 and 56.
959 Japan third-party submission, paras. 4-7; third-party oral statement, paras. 2-4.
960 Mexico third-party submission, paras. 32-34; third-party oral statement paras. 6-8; response to Panel questions 21 and 23.
14.66 Norway considers that the choice of the methodology and the costs elements that go into the calculation of the normal value can have an important bearing on the issue of subsidization. Where the normal value is constructed on the basis of the producer's actual data for the inputs (i.e., subsidized input prices), the constructed normal value will be lower than for non-subsidized production. In such cases, simultaneous anti-dumping and countervailing duties may be applied. If, on the other hand, the constructed normal value is calculated not with subsidized prices, but with "non-distorted" or "benchmark" prices (including prices from a surrogate county) for the (otherwise subsidized) inputs, then the effect of any subsidy is "extinguished" in the constructed normal value calculation and applying an anti-dumping duty up to the maximum permitted by the AD Agreement will provide a remedy for the subsidization at the same time. Norway notes that China argues, and the United States does not appear to dispute, that in calculating the constructed normal value based on a third country market benchmark, the USDOC avoids the use of any surrogate value that may itself be subsidized. Thus, Norway submits, it appears that the USDOC used a market-economy cost of production free from any dumping or subsidy distortion in the dumping margin calculation. Norway submits that by applying the full anti-dumping duty up to this third-country market benchmark, all effects of the subsidization were extinguished.

(c) Assessment by the Panel

14.67 As we explain in more detail in the following paragraphs, we have no difficulty accepting the general proposition that the use of an NME methodology likely provides some form of remedy against subsidisation, and therefore, that the simultaneous imposition of anti-dumping duties calculated under an NME methodology and of countervailing duties likely results in any subsidy granted in respect of the good at issue being offset more than once.

14.68 An "NME methodology" is a methodology for the calculation of dumping margins under which the export price is compared to a normal value that is based on "surrogate" costs or prices from a third country. The rationale behind the use of such an NME methodology is that prices and costs of production in the exporting country are distorted as a result of government intervention in the economy and therefore do not reflect market economy conditions. In such a situation, it is considered that neither the sales prices of the NME producer on its domestic market nor a normal value constructed on the basis of that producer's actual costs of production would offer a reliable source of comparison to calculate a margin of dumping. This is why the normal value is determined on the basis of costs or prices prevailing in a third country where market economy conditions prevail, and hence where prices and costs are regarded as "undistorted". In practice, the investigating authority typically "constructs" the normal value on the basis of costs of production in the third country market economy, an approach which the U.S. NME methodology generally follows.

14.69 It follows from this description of NME methodologies that, conceptually, the dumping margin calculated under an NME methodology – i.e., the difference between the constructed normal value and the export price – reflects not only price discrimination by the investigated producer between the domestic and export markets ("dumping"), but also, in addition, the economic distortions that affect the producer's costs of production. Specific domestic subsidies granted to the producer of the good in question, in respect of that good – i.e., the same subsidies which are countervailed in the context of a countervailing duty investigation – are one of these economic distortions that are

---

961 Norway third-party submission, paras. 43-47.
962 See second Ad Note to Article VI:1; Section 15(a) of China's Protocol of Accession.
"captured" in the NME dumping margin calculation. Expressed differently, the dumping margin calculated under an NME methodology generally is higher than would be the case otherwise because it results from a comparison of the export price to market-determined, and hence unsubsidized, costs of production, rather than to the producer's actual, subsidized (or distorted) costs of production.

14.70 To the extent that part of the dumping margin found to exist resulted from subsidies provided in respect of the exported good, the anti-dumping duties calculated under an NME methodology will remedy both dumping and subsidization. In this sense, it can be said that if countervailing duties are simultaneously applied to imports of the same good, the subsidy is likely to be "offset" more than once, i.e., once through the anti-dumping duty, and again at least partially through the countervailing duty. For this reason, we consider that the concurrent imposition of anti-dumping duties calculated under an NME methodology and of countervailing duties creates the potential for imposition of a "double remedy", as China defines this term.

14.71 We do not understand the United States to dispute the basic notion that double remedies may result from the concurrent use of its anti-dumping and countervailing duty laws on imports from China. In fact, as China points out, the USDOC itself has recognized the potential for double remedies to arise in such circumstances. Rather, the United States in its arguments before us focuses on whether a double remedy can be demonstrated on the facts of each specific instance of concurrent imposition. One of the United States' arguments in this respect is that the existence of a "double remedy" depends on export prices (because, the United States argues, the normal value is only one half of the dumping margin equation) and in particular, on whether the subsidy leads to a reduction in the export price.

---

964 That other distortions are also captured – for instance non-specific subsidies – is irrelevant; what matters is that those same distortions which are countervailed under Part V of the SCM Agreement are also captured by the NME dumping margin calculation.

965 It is noteworthy that the U.S. NME methodology takes into account the quantities of factors of production actually used by the investigated producer in the production of the investigated good (e.g. x tonne of input). The USDOC then uses surrogate values (e.g. y dollar or renminbi/tonne of input) to calculate the costs for each of the various factors used in the production of the investigated good by that investigated producer. That the U.S. NME methodology factors in the investigated producer's actual use of factors of production does not, in our view, fundamentally alter the conclusion that using surrogate, market economy values presumptively puts the producer in the position of having unsubsidized costs of production.

966 See, e.g., the USDOC statement that:

"Since the possibility of double counting resulting from simultaneous anti-dumping and countervailing duty investigations is dependent on the specific facts arising in such investigations, to the extent that the parties to these proceedings provide evidence on the record of these investigations, Commerce will have to respond to these concerns in the course of our investigations". (USDOC – Office of Public Affairs, "Commerce Applies Anti-Subsidy Law to China", (30 March 2007), Exhibit CHI-135).

We also note that in response to a question from the Panel, the United States states that the GAO Report "agrees with Commerce's stated position [that] the concurrent imposition of AD and CV duties could create some potential for overlapping remedies." (United States response to Panel question 80 (a) (first meeting)). (emphasis added).

967 The USDOC seems to have taken a similar approach in the CFS Paper case. (Coated Free Sheet Paper from the People's Republic of China: Preliminary Determination of Sales at Less Than Fair Value and Postponement of Final Determination, CHI-137, p. 30760).

968 We note the United States' insistence that China must demonstrate that each countervailed subsidy "passes through", in full (pro rata) to the export price, and that a double remedy for the full amount of the subsidy results from every instance of double imposition. The parties' arguments concerning whether a subsidy
14.72 Taking both sides of the dumping margin equation into consideration does not alter the conclusion that double remedies are likely to result from the concurrent imposition of anti-dumping duties calculated under an NME methodology and of countervailing duties. Viewed from this perspective, the use of an NME methodology leads to an asymmetric dumping margin comparison between an unsubsidized normal value and a subsidized export price.\footnote{See Brian D. Kelly, "The Law and Economics of Simultaneous Countervailing Duty and Anti-Dumping Proceedings", 3 Global Trade and Customs Journal, (2008), p. 41, Exhibit CHI-138, p. 48. We note that this "theory" assumes that domestic subsidies lower both domestic prices and export prices.} Thus, once again, the difference between the two finds its source not only in price discrimination (dumping), but also in the subsidies that were granted to the investigated producer. This was, in essence, the reasoning underlying the conclusions of the U.S. Government Accountability Office (GAO) in its 2005 report on the implications for the United States of applying countervailing duty laws to China. The GAO explained that when an anti-dumping duty is calculated under the U.S. NME methodology,

"the normal value of the product [...] is based not on Chinese prices (which might be artificially low as a result of domestic subsidies) but on information from a country where prices are determined by free markets. Thus, when the normal value is compared with the export price, the difference will, at least in theory, reflect the price advantages that the exporting company has obtained from both export and domestic subsidies." \footnote{Exhibit CHI-121, p. 28. (footnotes omitted).}

The GAO Report concludes, on this basis, that economic theory suggests that there is a substantial potential for domestic subsidies to be "double counted" in the event that the USDOC applied countervailing duties to NME country products while continuing to use surrogate country values to calculate anti-dumping duties on those same products.\footnote{Id., pp. 27-28.} The decision of the U.S. Court of International Trade in \textit{GPX} is based on a similar theoretical foundation – in fact, the Court cites to the GAO Report in support of its finding that without some type of adjustment being made, the concurrent imposition of anti-dumping duties and of countervailing duties with respect to Chinese products could very well result in a double remedy.\footnote{Exhibit CHI-169, p. 17, citing to the excerpt of the GAO Report cited above. Certain statements of the USDOC in market economy anti-dumping investigations illustrate why a similar "double remedy" arises in the context of export subsidies, and why it generally does not in the context of domestic subsidies granted by market economies: in \textit{Cold-Rolled Corrosion-Resistant Carbon Steel Flat Products from Korea} (quoted in \textit{LEU from France}), the USDOC wrote that "domestic subsidies presumably lower the price of the subject merchandise both in the home and the U.S. markets, and therefore have no effect on the measurement of any dumping that might also occur". The USDOC contrasted this situation with that of export subsidies, which, "benefit only exported merchandise" and therefore brings about "the potential for double remedies".\textit{(Notice of}}
14.73 The United States puts forward a number of scenarios under which it is plausible that the subsidy would not have a one-for-one impact on the producer's costs of production or on export prices. The United States also points out that the imposition of countervailing duties is not conditioned upon a demonstration of the price effects of the subsidy; in other words, that a Member is allowed to countervail subsidies that have no effects on the price of subsidized imports.

14.74 All else being equal, one would expect a domestic subsidy to lower the recipient's production costs, allowing that producer to lower its prices in both the domestic and export markets. It would, in our view, be a rare case in which a subsidy bestowed upon the producer of an exported good has no effect at all on either the producer's costs of production or – assuming they are relevant – export prices, such that no portion of that subsidy would be subject to a double remedy where both anti-dumping duties based on an NME methodology, and countervailing duties, were imposed on imports of a given product.

14.75 In sum, the United States' arguments raise the question of the extent of a double remedy in specific factual circumstances – whether a complete double remedy necessarily results from all instances of concurrent imposition of anti-dumping duties calculated under an NME methodology and of countervailing duties. They do not, however, invalidate the general proposition that at least some double remedy will likely arise from the concurrent imposition of countervailing duties and anti-dumping duties calculated under an NME methodology. If anything, the arguments put forward by the United States reinforce the idea that ascertaining the precise extent of double remedy in specific investigations would be a complex task, a fact which is highlighted by both the GAO, in its 2005 Report, and by the CIT in GPX.

14.76 Because in the next section of our findings, we conclude that China has not established that the imposition of "double remedies" is inconsistent with the provisions it cites, i.e., Articles 10, 19.3, 19.4 and 32.1 of the SCM Agreement and Article VI:3 of the GATT, or with Article I:1 of the same Agreement, we do not need to examine further the extent to which the concurrent imposition of anti-dumping duties determined under the USDOC's NME methodology and of countervailing duties resulted in the imposition of "double remedies" in the four investigations at issue. For this reason, we do not decide whether China has conclusively established that, in the investigations at issue, double remedies resulted from the concurrent imposition of anti-dumping duties calculated under the U.S. NME methodology and of countervailing duties. We therefore also do not consider the specific

---

*Final Results of Antidumping Duty Administrative Review: Low Enriched Uranium From France* ("LEU from France"), Exhibit CHI-124, p. 46506). In LEU from France, the USDOC reached a similar conclusion, and stated in passing that "domestic subsidies are assumed not to affect dumping margins, because they lower prices in both the U.S. market and the domestic market of the exporting country equally". While the question is not before us, it would seem that a double remedy could arise in investigations involving market economy imports, depending on the costs that are used to calculate the normal value: A double remedy may arise when the normal value of a market economy producer is constructed using costs that do not reflect the subsidies that the producer received.

973 United States second written submission, para. 192.
974 The United States also contests the notion that surrogate values are necessarily "unsubsidized". It notes in this respect that in some instances in the investigations at issue, the surrogate value was inferior to the producers' actual costs. (United States response to Panel question 27 (second meeting); comments on China's response to Panel question 26 (second meeting). That this would be the case does not, in our view, undermine the conclusions we reach above: what we conclude is not that the totality of every dumping margin calculated under an NME methodology results from subsidization but, rather that where a margin of dumping is found to exist under such a methodology, it likely reflects not only dumping, but also subsidization.
975 Exhibits CHI-121, p. 48; CHI-169, pp. 17-19. We note that the GAO indicated that the experts it consulted agreed that in theory, the double remedy would be significant. (Exhibit CHI-169, p. 28).
examples submitted by China from these investigations in order to determine whether they support its arguments.

3. Claims under Article VI of the GATT 1994 and Articles 10, 19.3, 19.4 and 32.1 of the SCM Agreement

(a) Main arguments of the Parties

(i) China

14.77 China argues that by virtue of the collective operation of Article VI:3 of the GATT and Articles 10 of the SCM Agreement, read in light of Articles 19.1, 19.3, and 19.4 of the SCM Agreement, the United States has an affirmative legal obligation to (i) ensure that it does not impose countervailing duties to offset subsidies that it simultaneously offsets through the methods by which it calculates anti-dumping duties; (ii) take "all necessary steps" to ensure that this does not occur; and (iii) ensure that investigating authorities investigate and make a determination as to the "precise amount of a subsidy attributed to the imported products under investigation", taking into account that using simultaneously an NME anti-dumping methodology has the effect of offsetting the same subsidies. China submits that in the investigations at issue, the USDOC failed to investigate and avoid the imposition of double remedies, did not take any steps to determine "whether, and in what amount" the use of market-determined costs of production in the parallel anti-dumping investigations had the effect of offsetting the same subsidies that it identified in the countervailing duty investigations, and therefore, did not "ascertain the precise amount of a subsidy attributed to the imported products under investigation".

14.78 China makes an analogy with panel and Appellate Body jurisprudence on extinction of subsidies in the context of privatization (US – Countervailing Measures on Certain EC Products), and on pass-through of subsidies to downstream producers (US – Softwood Lumber IV) and argues that, as in these cases, the calculation of a dumping margin pursuant to the U.S. NME methodology is an event that calls into question whether any subsidy remains to offset. China further considers that, like a situation of "privatization" at arm's length for fair market value, using an NME methodology to calculate anti-dumping duties places the investigated producer in a position of having market-determined costs of production, such that there remains no benefit to be countervailed.

---

977 China second written submission, paras. 243-247; response to Panel question 76 (first meeting). China notes that in US – Countervailing Measures on Certain EC Products, the Appellate Body held that these provisions define "the obligation of Members to limit countervailing duties to the amount and duration of the subsidy found to exist by the investigating authority". China further argues that as with arm's-length sales of subsidized input products, the use of an anti-dumping methodology, which has the effect of offsetting subsidies, calls into question whether there remains a "subsidy" to "offset" through the imposition of countervailing duties and that in such circumstance it is the obligation of the investigating authority to "establish[] whether, and in what amount" there is still a subsidy to offset in respect of the imported product. On this, China cites to the Appellate Body Report in US – Softwood Lumber IV. (China response to Panel question 76 (first meeting), citing to Appellate Body Reports on US – Countervailing Measures on Certain EC Products, para. 139 and US – Softwood Lumber IV, para. 141).

978 China second written submission, paras. 248-250.

979 China response to Panel question 76 (first meeting); second written submission, paras. 245 and 249. China argues that given that the United States will already have offset the entire amount of the subsidy found to exist through the application of countervailing duties, the United States acts inconsistently with its obligations under the covered agreements to the extent that the simultaneous imposition of anti-dumping duties determined in accordance with its NME methodology offsets any portion of these subsidies. (China response to Panel question 92 (first meeting)).

980 China second written submission, paras. 233-238.
14.79  China considers that the imposition of double remedies is inconsistent with Article 19.4 of the SCM Agreement because any countervailing duty imposed in addition to the anti-dumping duty is in "excess of the subsidy found to exist" given that the United States has already offset the subsidy through the NME anti-dumping methodology. 981  Further, China rejects the United States' argument that the "amount of the subsidy" in Article 19.4 is not the amount that should have been properly determined under WTO rules. 985

14.80  China also claims that the imposition of double remedies in the investigations at issue was inconsistent with the obligation, under Article 19.3 of the SCM Agreement, to impose countervailing duties "in the appropriate amounts". 983  Citing the panel report in EC – Salmon (Norway), China argues that the "appropriateness" of the amount in Article 19.3 must be determined in light of the purpose of the duty.  Given that the purpose of countervailing duties is to "offset" subsidies, China argues that it is not "appropriate" to impose countervailing duties to offset subsidies that the investigating authority offsets through the method by which it calculates anti-dumping duties in respect of the same products. 984

14.81  China also rejects the United States' suggestion that its claims under Articles 19.3 and 19.4 are about whether "the sum" of the anti-dumping and countervailing duties is in excess of the "appropriate amounts" or that anti-dumping duties are "actually CVVs in disguise" as the United States asserts.  Rather, China submits, its claims are that the countervailing duties imposed by the USDOC are not "in the appropriate amounts" since they are in excess of the subsidy found to exist. 985  In addition, referring the Panel to prior decisions on the WTO-consistency of U.S. original investigations in which the panel and/or the Appellate Body made findings under Articles VI:3 of the GATT and 19.3 and 19.4 of the SCM Agreement or referred to these provisions, China rejects the United States' argument that the use of the term "levy" indicates that these provisions do not apply to U.S. original investigations determinations. 986

14.82  China also rejects the United States' characterization of its position as being that the importing Member must choose between the use of countervailing duties and the use of an NME methodology.  China considers that the United States is free to engage in the concurrent application of countervailing and anti-dumping duties determined in accordance with an NME methodology, and that the question before the Panel is not a question of "concurrent application" per se, but rather a question of whether the United States may impose countervailing duties without accounting for the fact that it offsets the same subsidies through the manner in which it calculates anti-dumping duties. 987  In other words, the USDOC is free to impose both remedies simultaneously, as long as it takes steps to ensure that no double remedy ensues.  China adds that in GPX, the U.S. Court of International Trade held that the USDOC may choose either to forego the imposition of countervailing duties on products to which it applies the NME methodology, or "adopt additional policies and procedures to adapt its NME AD and

982  China second written submission, footnote 218; response to Panel question 86 (first meeting).

983  China first written submission, paras. 380-384.

984  China second written submission, paras. 251-254; response to Panel question 89 (first meeting), citing to Panel Report on EC – Salmon (Norway), paras. 7.704-7.705.

985  China second written submission, paras. 253-254 and 258.

986  China response to Panel question 52 (first meeting).

987  China oral statement at the first meeting of the Panel, paras. 75-76; second written submission, paras. 208-209 and 212; response to Panel question 69; oral statement at the second meeting of the Panel, paras. 68-69.
CVD methodologies to account for the imposition of countervailing duty remedies on merchandise from the PRC.  

14.83 China also considers that the United States' position on the WTO-consistency of double remedies is based on a complete disregard for the object and purpose of the SCM Agreement. China notes that the Appellate Body has observed that the object and purpose of the SCM Agreement is "to strengthen and improve GATT disciplines relating to the use of both subsidies and countervailing measures" and that Part V of the SCM Agreement, in particular, is meant to impose disciplines on the use of countervailing duties. China considers that for a Member to obtain twice the remedy to which it is entitled is no discipline at all. 

14.84 China rejects the United States' suggestion that the drafters of the GATT, of the SCM Agreement and of China's Protocol of Accession intended to allow the imposition of double remedies resulting from the concurrent use of NME methodologies and of countervailing duties. In this respect, China argues that the fact that Article VI:5 of the GATT 1994 addresses one particular circumstance in which a double remedy could arise does not mean that (i) there are no other circumstances in which a double remedy could arise (as the USDOC has in fact recognized), or (ii) all these other forms of double remedies are therefore permissible. Nor does China believe that the absence of an express provision in the SCM Agreement and/or the GATT relating to the imposition of double remedies in the case of domestic subsidies means that double remedies are permissible. China notes that there are many issues – e.g. the WTO jurisprudence on "privatization" (effect of a privatization of state-owned assets on previously-conferred subsidies) and "pass-through" (treatment of subsidies conferred upon upstream inputs) – relating to subsidies and countervailing duties that the covered agreements do not expressly address. This has not prevented panels and the Appellate Body from finding that the covered agreements nonetheless impose disciplines on a Member's actions in respect of those issues.

14.85 Further, China considers that the fact that Article 15 of the Tokyo Round Subsidies Code was not replicated in the SCM Agreement cannot be interpreted to mean that double remedies arising from the use of an NME methodology in conjunction with countervailing duties are permissible. China argues in this regard that the circumstances surrounding the Uruguay Round negotiations strongly suggest that issues relating to these double remedies were no longer considered relevant at the time: during the Uruguay Round, (i) no Contracting Party had a practice of applying an NME methodology concurrently with the application of countervailing duties to the same product; (ii) the United States – by far the largest user of countervailing duties – had taken a clear position at the beginning of the Uruguay Round that it would not apply countervailing duties to imports of NMEs; (iii) towards the end of the Uruguay Round, the USDOC's position was that it could apply countervailing duties to imports from NME countries, but only if it were to find that the industry in question was a "market-oriented industry"; (iv) under U.S. practice, the former Soviet bloc countries (which were in a process of transition to market economies) were subject to the NME methodology, but not countervailing duties, until the United States classified them as market economies. Against this backdrop, China considers that it is likely that the drafters of the SCM Agreement no longer considered the subject-matter of Article 15 of the Tokyo Round Subsidies Code to be relevant. 

(ii) United States

14.86 The United States takes the position that the covered agreements do not prohibit the imposition of double remedies in respect of domestic subsidies.

---

988 China oral statement at the second meeting of the Panel, para. 68.
989 Id., paras. 64-65.
990 China second written submission, para. 211; response to Panel questions 69 and 70 (first meeting).
The United States argues that anti-dumping and countervailing duties are two distinct instruments, meant to address different kinds of harm, and that where the criteria for the imposition of each remedy are satisfied, duties may be imposed up to a level prescribed by the respective agreement. The sole limitation in this respect is, the United States submits, the one found in Article VI:5 of the GATT 1994, which applies only in the case of export subsidization. The United States infers from the absence of any similar provision with respect to domestic subsidies that Members did not agree that any other circumstances warranted a restriction on the concurrent application of the AD and CVD instruments. The United States also attaches significance to the fact that Article 15 of the Tokyo Round Subsidies Code (which provided that, for imports from NMEs, Members could resort to either anti-dumping or to countervailing duties) was not carried forward in the SCM Agreement. The United States further reads Article 15 as an indication that the parties to the Code considered that no other provision in the GATT 1947 contained a similar requirement prohibiting the concurrent application of anti-dumping and countervailing duties to NMEs, and infers from the non-inclusion of a similar provision in the SCM Agreement that a prohibition on the concurrent use of anti-dumping and countervailing duties to NMEs no longer exists. The United States, repeating an argument made by Argentina, also notes that the Tokyo Round Code contained provisions that were virtually identical to Articles 19.3 and 19.4 of the SCM Agreement; had these provisions prohibited the imposition of double remedies, as China contends, there would have been no need to include in the same Code an express prohibition on concurrent anti-dumping and countervailing duty investigations. Finally, the United States submits that China's Protocol of Accession makes clear, at Section 15, that Members contemplated the concurrent application of countervailing duties and of anti-dumping measures calculated on the basis of surrogate values, without any limitation on the use of countervailing duties in such circumstances, and without any limitation on the concurrent application of both remedies.

Related to this, the United States argues that the logic of China's argument necessarily imposes upon Members a choice between imposing anti-dumping duties on the basis of an NME methodology and imposing countervailing duties; in other words, that China is in fact challenging the concurrent application of countervailing duties and of anti-dumping duties calculated using the NME methodology. The United States submits in this respect that while China suggests that the concurrent application of anti-dumping and countervailing duties would still be permissible where the investigating authority takes "steps" to ensure that the NME normal value does not offset the same subsidies twice, China also considers that the NME normal value "necessarily" fully offsets the same subsidies "in all cases".

---

991 United States first written submission, paras. 389-394.
992 United States first written submission, paras. 388 and 395-409; opening statement at the first meeting of the Panel, para. 50 and 55; second written submission, para. 208; response to Panel questions 75, 84 and 85 (first meeting). The United States also finds it notable that the inclusion in the GATT, in 1955, of the second Ad Note to Article VI:1 (which recognizes that, in certain cases, surrogate prices would be used to construct the normal value) was not accompanied by a broadening of Article VI:5. The United States indicates that it was an NME Contracting Party, Czechoslovakia, that proposed an amendment to the GATT 1947 which resulted in the second Ad Note to Article VI. The United States notes that subsidies were not mentioned as one of the reasons for the amendment; rather, the focus was on finding appropriate price comparisons where the internal prices and costs of an NME were unreliable due to the State fixing prices or to State monopolization. (United States comments on China's response to Panel question 26(b)).
994 United States second written submission, para. 218; response to Panel question 28 (second meeting), referring to Articles 4.2 and 4.3 of the Tokyo Round Subsidies Code.
995 United States second written submission, paras. 177-179; opening statement at the second meeting of the Panel, paras. 51-55.
14.89 Responding to China's argument that at the time of the Uruguay Round, the concurrent application of anti-dumping and countervailing measures in respect of NMEs was no longer "relevant", the United States argues that regardless of their specific reason for doing so, the fact remains that Members did not include Article 15 of the Tokyo Round Subsidies Code in the SCM Agreement.\textsuperscript{996} The United States further indicates that China's accession was negotiated against the backdrop of this provision, and that China's Protocol of Accession affirms Members' unqualified right to apply anti-dumping and countervailing duties in the context of domestic subsidies while treating China as an NME.\textsuperscript{997}

14.90 Turning to China's arguments in support of its claims of violation, the United States submits that China's reliance on the privatization and pass-through jurisprudence is misplaced. The United States notes China's argument that this jurisprudence concerned situations that the SCM Agreement did not explicitly address, and that panels and the Appellate Body nevertheless recognized the applicability of GATT and SCM provisions to those situations. By contrast, the United States submits, the covered agreements are anything but silent on the issue before this Panel, that of the concurrent application of countervailing duties and of anti-dumping duties determined under an NME methodology.\textsuperscript{998}

14.91 The United States also notes that the provisions cited by China (primarily Articles 19.3 and 19.4 of the SCM Agreement) only impose disciplines with respect to countervailing duties and that China does not claim that the countervailing duties imposed by the USDOC in the investigations at issue exceeded the amounts of the subsidies found to exist or that the USDOC did not properly calculate the subsidies amount. Rather, in the view of the United States, China's claim under Article 19.4 is that the amount of the subsidy is exceeded by the \textit{sum} of the anti-dumping duty in each anti-dumping investigation and of the countervailing duty in each corresponding countervailing duty investigation, and as a result, China erroneously implies that an anti-dumping duty calculated under the NME methodology must be understood to constitute a countervailing duty within the meaning of the SCM Agreement, whereas those anti-dumping duties are not "levied for the purpose of offsetting any subsidy".\textsuperscript{999} According to the United States, the fact that part of the methodology used to calculate the normal value rejects home market prices and costs due to broad distortions in a non-market economy does not somehow transform the anti-dumping duty itself into a countervailing duty.\textsuperscript{1000}

\textsuperscript{996} United States opening statement at the first meeting of the Panel, para. 53; second written submission, paras. 210-211; response to Panel questions 70 and 75 (first meeting).
\textsuperscript{997} United States opening statement at the first meeting of the Panel, para. 54; second written submission, para. 212. The United States also notes that during the period of China's accession negotiations, imports from China were the subject of 30 anti-dumping investigations conducted under the NME methodology, yet China's Protocol of Accession and Working Party Report do not reflect any concerns China may have had in respect of that methodology, and in particular, any concerns China may have had that the methodology addressed not only price discrimination, but also subsidization. The United States also infers from paragraph 151(a) of the Working Party Report that China sought to ensure that Members that had not yet developed NME methodologies would do so along the lines of the U.S. NME methodology. (United States opening statement at the second meeting of the Panel, para. 58).
\textsuperscript{998} United States opening statement at the second meeting of the Panel, paras. 60-61.
\textsuperscript{999} United States opening statement at the first meeting of the Panel, paras. 58 and 60-61; second written submission, paras. 216-217.
\textsuperscript{1000} The United States also argues that if China's view that the NME methodology is designed to offset subsidization is accepted, then any anti-dumping duty calculated pursuant to the NME methodology would fall squarely within the definition of "countervailing duty" contained in footnote 36 to the SCM Agreement. Thus, the United States adds, as required by Article 10 of the SCM Agreement, such an anti-dumping duty could "only be imposed pursuant to [an] investigation[] initiated and conducted in accordance with [the SCM Agreement]", and that this would be the case whether or not a concurrent countervailing duty case were ongoing. (United States opening statement at the second meeting of the Panel, para. 77).
The United States further argues that Article 19.4 is limited to the question of whether the countervailing duties levied correspond to the amount of the subsidy found to exist by the investigating authority and does not govern whether that amount was properly determined in accordance with WTO rules (i.e., the amount that should have been found had the investigating authority complied with other WTO rules). For similar reasons – because China does not contest the fact that the duties imposed pursuant to the four countervailing duty investigations at issue in this dispute do not exceed the amount of the subsidy bestowed upon each exporter – the United States submits that China's claim under Article 19.3 has no merit. The United States argues that the "appropriateness" of the amounts of countervailing duties under Article 19.3 relates to the subsidization rate calculated for each "source[] found to be subsidized and causing injury" and that China does not allege that the countervailing duty amounts are not those that the USDOC found for "each source".

In addition to these arguments, the United States takes the view that the reference to "levy" in Article VI:3 of the GATT and in Articles 19.3 and 19.4 of the SCM Agreement, in conjunction with footnote 51 of the SCM Agreement, means that these provisions impose no disciplines with respect to original investigations. This is because, in the view of the United States, under the U.S. retrospective duty assessment system, duties are not actually collected until an administrative review is conducted or the deadline for such review lapses.

Finally, the United States submits that the Opinion of the U.S. Court of International Trade in GPX should have no bearing on the Panel's consideration of this dispute because it is an opinion of a U.S. court interpreting U.S. law, whereas this dispute concerns the interpretation of the WTO agreements, including provisions from China's Protocol of Accession, that do not appear in U.S. law. In addition, the United States notes that the Court's decision in GPX is still subject to appeal.

(b) Main arguments of the Third Parties

(i) Argentina

Argentina considers that Article VI:5 of the GATT 1994, the sole WTO provision expressly limiting the simultaneous imposition of both anti-dumping and countervailing duties, is limited to situations of "export subsidization", and that the concurrent application of both remedies in the case of actionable subsidies is therefore WTO-consistent. In Argentina's view, had the drafters intended to prohibit the simultaneous imposition of anti-dumping and countervailing duties for situations other than export subsidization, they would have done so explicitly, as they did in Article VI:5. Argentina also notes that China's Protocol of Accession recognizes not only the use of an NME methodology in anti-dumping investigations involving imports of Chinese origin but also that Chinese imports can be subject to countervailing duty investigations, and submits that to exempt China from the simultaneous imposition of anti-dumping and countervailing duties would give it preferential treatment compared to other Members. Argentina considers that neither of the provisions on which China bases its claims, Articles 19.3 and 19.4, address, directly or indirectly, the issue of simultaneous imposition of anti-dumping and countervailing duties or of double remedies. Argentina also notes that the wording of Articles 19.4 is identical to the wording of Article 4.2 of the Tokyo Round Subsidies Code, and that Article 19.3 is almost identical to Article 4.3 of the Tokyo Round Subsidies Code. Thus, Argentina

1002 United States first written submission, paras. 424-427; opening statement at the second meeting of the Panel, paras. 64-65.
1003 See, e.g., United States second written submission, para. 215; response to Panel question 87 (first meeting).
1004 See above, para.14.59, for the United States' argument to the effect that the GPX decision is in error and that, even on its own terms, it does not support the position taken by China in the present dispute.
argues, had the Tokyo Round Subsidies Code prohibited the concurrent imposition of anti-dumping duties calculated under an NME methodology and of countervailing duties, Article 15.1 of the Tokyo Round Code would have been devoid of meaning.\textsuperscript{1005}

(ii) \textit{Australia}

14.96 Australia considers that anti-dumping and countervailing duties are two distinct trade remedies and that nothing in Article VI of the GATT or elsewhere in the WTO Agreements prevents concurrent anti-dumping and countervailing duty investigations of the same product; in fact, Australia submits, the text of Article VI:5 reinforces the right of Members to do both. In Australia's view, the calculation of the normal value in an anti-dumping investigation is an inquiry that is separate from that the determination of the existence and amount of a subsidy in a countervailing duty investigation. Australia also invites the Panel to clarify the meaning of the terms "situation of export subsidization" in Article VI:5, which it considers to be unclear. Australia argues that it cannot be assumed that these terms agreed to in 1947 can be equated with any meaning attributed to the categories of subsidies as agreed to in the SCM Agreement in 1994 and that it is therefore conceivable that the expression "situation of export subsidisation" also cover certain situations in which a domestic subsidy is provided to a good which is exported. Likewise, Australia submits that it is not clear whether the terms "same situation" of dumping or export subsidization in Article VI:5 refer to the existence of subsidization or dumping or to the injurious effects.\textsuperscript{1006}

(iii) \textit{Brazil}

14.97 Brazil argues that nothing in the AD and SCM Agreements suggests that parallel anti-dumping and countervailing measures cannot be imposed, and notes that neither agreement contains any cross-reference conditioning the imposition of one remedy on the satisfaction of requirements established in relation to the other. Brazil considers that Article VI:5 of the GATT 1994 contains the sole limitation on the concurrent application of anti-dumping and countervailing measures. Further, Brazil submits, this provision shows that Members were well aware that if they intended to impose any restrictions or conditions on the parallel application of anti-dumping and countervailing measures, they had to do so explicitly. Brazil considers that the existence of an explicit ban with respect to export subsidies can be read \textit{contrario sensu} to allow for the concomitant application of both duties in all other situations. Brazil also considers that the fact that Article 15 of the Tokyo Round Subsidies Code was not replicated in the SCM Agreement underscores the intention of its drafters not to prohibit the combined imposition of anti-dumping and countervailing duties on imports from Members, irrespective of their status as market or non-market economies. Brazil is of the view that the legal permissibility for the parallel application of anti-dumping and countervailing measures, and its underlying logic, apply indistinctly to investigations conducted in relation to market economy Members and non-market economy Members. Accepting the argument that methodological challenges arising from price comparability difficulties in non-market economy Members somehow constrain the parallel application of anti-dumping and countervailing measures in relation to them would result in discrimination against "market economy" Members.\textsuperscript{1007}

(iv) \textit{Canada}

14.98 Canada agrees with the United States that the concurrent use of the NME methodology and countervailing duties is permissible under the SCM Agreement. Canada's view is that when an imported product is both dumped and subsidized, the importing Member may impose both anti-dumping duties equal to the margin of dumping and countervailing duties equal to the amount of the

\textsuperscript{1007} Brazil third-party submission, paras. 14-18; third-party oral statement, paras. 8-9.
subsidy. Canada submits that this right is confirmed – and circumscribed – by Article VI:5 of the GATT 1994, such that (read a contrario), this provision confirms the ability of WTO Members to impose concurrent anti-dumping and countervailing duties in circumstances other than export subsidization. Canada further argues that if WTO Members had intended to prohibit the concurrent application of anti-dumping duties calculated on the basis of subparagraph 15(a)(ii) of China's Protocol of Accession and countervailing duties, they could have stated that intention in the Protocol as they had done earlier in the Tokyo Round Subsidies Code; instead, Sections 15(a) and 15(b) of China's Protocol of Accession enable an importing WTO Member to impose anti-dumping duties calculated on the basis of out-of-country prices or costs, and countervailing duties. Finally, Canada rejects China's theory that the anti-dumping duty, by itself, compensates for both the dumping and the subsidization. Canada considers that duties in the amount of the subsidy would not violate Article 19.3 and 19.4 and that the amount of a concurrent anti-dumping duty has no bearing on the amount of a countervailing duty, except as provided for in Article VI:5, which is not the case here.1008

(vi) European Communities

14.99 The European Communities considers that anti-dumping and countervailing duties are two separate remedies to counter two different types of unfair trade practices under two distinct WTO agreements and that the only WTO provision expressly limiting the right of Members to impose both types of duty is Article VI:5 of GATT 1994. The European Communities agrees with the United States that by choosing not to include a provision similar to Article 15 of the Tokyo Round Subsidies Code in the SCM Agreement, WTO Members recognised Article VI:5 as the only provision limiting the simultaneous imposition of both types of remedies. The European Communities also agrees with the United States that nothing in China's Protocol of Accession expressly limits such a simultaneous imposition. Further, the European Communities considers that there can be no breach of Article 19.4 if the duty imposed does not exceed the amount of subsidy properly established under the rules of the SCM Agreement and that just because a measure taken under another agreement (in this case, an anti-dumping duty) may be alleged to in some way offset subsidization does not create a violation of Article 19.4. The European Communities further agrees with the United States that the limited scope of Article VI:5 is explained by the fact that, where the normal value is based on sales, a neutral subsidy may reasonably be considered to press down equally on both sides of the dumping calculation, and therefore the dumping calculation would remain unaffected by the subsidy analysis. Finally, the European Communities considers that the SCM Agreement does not require the showing of any causal link between subsidies and exports and/or that subsidies have caused export prices to decrease; the inquiry is limited to the effects of the subsidised imports on prices in the importing country.1009

(vi) India

14.100 India considers anti-dumping and countervailing duties to be two separate remedies to counter two different types of situations of trade distortion. India considers that the provision which expressly limits the right of WTO Members to impose both types of duty is Article VI:5 of GATT 1994. India considers that the legal permissibility for the parallel application of anti-dumping and countervailing measures, and its underlying logic, apply to investigations conducted both in relation to market economy Members and non-market economy Members.1010

1009 European Communities third-party oral statement, paras. 2-10; third-party response to Panel question 15.
1010 India third-party oral statement. (this statement contains no paragraph numbering).
(vii) Japan

14.101 Japan submits that although Article VI:5 of GATT 1994 does not prohibit the simultaneous imposition of anti-dumping and countervailing duties in situations other than "export subsidization", this provision is the expression of an underlying principle that an importing Member may not impose a double remedy against the same subsidy, a principle to which Members should give due regard. Japan submits that Article VI:5 provides no explicit requirement on the prohibition of double remedies in situations other than export subsidization because a double remedy may or may not occur, depending on the method used in the calculation of the margin of dumping in a given case. With respect to the legal bases for China's claims, Japan considers that Article 19.4 is irrelevant to how an anti-dumping duty would be determined in the separate anti-dumping investigation in accordance with the provisions of the AD Agreement. With respect to Article 19.3, Japan notes that this provision accords the importing Member the discretion to impose a countervailing duty deemed as appropriate to the extent that the duty does not exceed the amount of the subsidy found to exist, and that no further obligations are placed on the authorities' determination of the "appropriate amount".1011

(viii) Mexico

14.102 Mexico takes the view that when countervailing duties target domestic subsidies, the simultaneous application of anti-dumping and countervailing duties is consistent with the rules of the WTO.1012 Mexico argues that when the negotiators of the WTO Agreements considered it necessary to prohibit the simultaneous application of different mechanisms, they did so expressly. In this respect, Mexico notes in particular that a provision similar to Article 15 of the Tokyo Round Subsidies Code was not included in the SCM Agreement. Mexico also notes that Section 15 of China's Protocol of Accession recognizes the surrogate country methodology and acknowledges that Chinese imports may be subject to countervailing duty investigations. Mexico argues that if China, in negotiating its accession, had succeeded in negotiating a prohibition on the simultaneous application of anti-dumping and countervailing duties on its products, this would have been specified in the Protocol. Mexico considers that neither Article 19.3 nor Article 19.4 of the SCM Agreement provides a basis for China's claim. Finally, Mexico argues that exempting China from the parallel imposition of anti-dumping duties and countervailing duties would give China preferential treatment relative to all other Members.1013

(ix) Norway

14.103 Norway considers that where the normal value is constructed on the basis of "non-distorted" or "benchmark" prices (including prices from a surrogate county) for the (otherwise subsidized) inputs, then the effect of any subsidy is "extinguished" in the constructed normal value calculation and that in such cases, applying an anti-dumping duty up to the maximum permitted under the AD Agreement will provide a remedy for the subsidization at the same time. Norway argues that applying a countervailing duty in such cases will be neither appropriate under Article 19.3 of the SCM Agreement nor permissible under Article 19.4 of the SCM Agreement.1014

---

1011 Japan third-party submission, paras. 3-14; third-party oral statement, para. 5.
1012 Mexico considers that it is for interested parties to explain and demonstrate the reasons why a "double remedy" could arise in contexts other than that of "export subsidies".
1013 Mexico third-party submission, paras. 12-31; third-party oral statement, paras. 2-5; third-party response to Panel questions 19-21.
1014 Norway third-party submission, paras. 38-47. As noted above, para.14.66, Norway argues that in the investigations at issue, the USDOC appears to have used a market-economy cost of production free from any distortion and therefore that by applying the full anti-dumping duty up to this third-country market benchmark, all effects of the subsidization would have been extinguished, such that applying a countervailing duty in such
Assessment by the Panel

(i) Introduction

14.104 We understand the essence of China's argument to be that the imposition of anti-dumping duties calculated under the U.S. NME methodology in the four anti-dumping investigations at issue effectively "offset" any subsidy provided in respect of the goods concerned, such that there remained no subsidy left to countervail. Thus, China's argument goes, when the United States simultaneously imposed countervailing duties on the same products, it levied duties in excess of the amount of subsidy "found to exist", contrary to Article 19.4 of the SCM Agreement, and acted inconsistently with its obligation to levy duties "in the appropriate amounts" pursuant to Article 19.3 of the SCM Agreement. In addition, China claims that the USDOC failed to take "all necessary steps" to ensure that it imposed countervailing duties for the purpose of offsetting subsidies that continued to exist, thereby acting inconsistently with the requirements of Article VI of the GATT 1994 and of Article 10 of the SCM Agreement.

14.105 The USDOC's treatment of the issue of double remedi es in the investigations at issue is not in debate. The parties agree that where interested parties raised "double remedy" arguments in the investigations at issue, the USDOC rejected them and that the USDOC did not take into consideration the anti-dumping duties imposed on the same products when it imposed countervailing duties in the four countervailing duty investigations at issue: it imposed countervailing duties corresponding to the full amount of subsidies found to have been conferred on each investigated producer.1015

(ii) Claim under Article 19.4 of the SCM Agreement

14.106 We first consider China's claim under Article 19.4 of the SCM Agreement. China's argument in this respect is that the United States levied countervailing duties "in excess of the amount of subsidy found to exist" as a result of each of the countervailing duty orders at issue because it had already offset the subsidies at issue as a result of the concurrent imposition of anti-dumping duties calculated under the U.S. NME methodology.

14.107 We begin our analysis by considering the text of Article 19.4 of the SCM Agreement:

"No countervailing duty shall be levied51 on any imported product in excess of the amount of the subsidy found to exist, calculated in terms of subsidization per unit of the subsidized and exported product.

51 As used in this Agreement "levy" shall mean the definitive or final legal assessment or collection of a duty or tax."

14.108 By virtue of the ordinary meaning of its text, Article 19.4 of the SCM Agreement imposes a maximum limit on the amount of duties that may be "levied", corresponding to the amount of the subsidy that is found to exist. By necessary implication, Article 19.4 also provides that no countervailing duties may be imposed on an imported product if no subsidy is found to exist given that in such a case, the amount of subsidy found to exist would be zero.1016

cases will be neither appropriate under Article 19.3 of the SCM Agreement, nor permissible under Article 19.4 of the SCM Agreement.

1015 See above, para.14.6, and corresponding footnotes for a summary of the USDOC's treatment of the issue of double remedy in the anti-dumping and countervailing duty investigations at issue.

1016 Panel Report on US – Lead and Bismuth II, para. 6.52.
14.109 The parties disagree as to whether Article 19.4 is at all applicable to the situation before us. The United States argues that, by virtue of the use in Article 19.4 of the term "levy" and of the definition of this term in footnote 51 as "the definitive or final legal assessment or collection of duties", Article 19.4 imposes obligations only with respect to the final collection of duties. The United States notes that no such final collection of duties has taken place as a result of the investigations at issue. China rejects this interpretation. The parties also disagree as to whether the terms "found to exist" in Article 19.4 refer to the amount of subsidy calculated by the investigating authority, regardless of whether that amount was calculated consistently with the SCM Agreement. The distinction is important because China does not argue that the countervailing duties imposed in each of the investigations at issue, in and of themselves, exceeded the amount of the subsidy calculated by the USDOC.1017

14.110 But a more fundamental disagreement between the parties is whether a subsidy existed in the first place, thereby allowing the USDOC to impose countervailing duties. China argues that the USDOC's use of its NME methodology in the parallel anti-dumping investigations had the effect of offsetting subsidies, such that there remained no subsidy to "offset" through the imposition of countervailing duties.

14.111 China likens the concurrent imposition of an anti-dumping duty determined in accordance with an NME methodology to the factual situations examined in prior panel and Appellate Body reports in which it was found that a subsidy granted to a state-owned producer may be extinguished by its arm's length acquisition for a fair market value in a context of privatization (US – Countervailing Measures on Certain EC Products)1018, or in which it was found that the benefit of a subsidy in respect of inputs may not "pass through" to producers of downstream products processed from that input where the downstream producer purchases the input for a fair market value in an arms' length transaction (US – Softwood Lumber IV).1019 In each case, the Appellate Body found that these situations called into question whether a subsidy had been received by the investigated producer. Consequently, the Appellate Body found that the investigating authority had an obligation to establish whether and in what amount a subsidy existed in respect of the imported product. China sees the imposition of anti-dumping duties calculated under the U.S. NME methodology as a further situation of extinction of subsidy that was not explicitly dealt with under the SCM Agreement.

14.112 On its face, the terms of Article 19.4 of the SCM Agreement establish a limit to the amount of duties that may be "levied", and this limit is dependent only upon "the amount of the subsidy found to exist". Thus, by its own terms, Article 19.4 of the SCM Agreement is oblivious to any potential concurrent imposition of anti-dumping duties. Hence, that an anti-dumping duty calculated under a methodology may have the effect of "offsetting" a subsidy in totality or in part has no effect on the existence of the subsidy which, under Article 1 of the SCM Agreement, depends on the existence of a financial contribution and of a benefit; nor would it have an effect on the amount of the subsidy which, under Article 14 of the SCM Agreement, must be determined by reference to the marketplace.1020 In sum, the narrowly-crafted discipline contained in Article 19.4 of the SCM Agreement does not address situations of "double remedies".

---

1017 China challenges the USDOC's benefit calculations, but these are separate claims of violations. See Section X, supra.
1020 Indeed, it is obvious that the mere issuance of an anti-dumping order cannot have the effect of changing the position of the recipient in the marketplace.
14.113 Further, we do not consider that there is a pertinent analogy to be made between the facts of the present dispute and those in the pass-through and privatization decisions cited by China. These decisions recognize that certain events related to the life of a subsidy may extinguish it or at least call into question whether it benefits the manufacture, production or export of the investigated product. By contrast, the arguments that China makes before us pertain to the effects of parallel anti-dumping duties (i.e., remedies) that are imposed concurrently with the countervailing duties, which effects derive from the calculations that lead to the imposition of these remedies. Again, we consider that the fact that an anti-dumping duty calculated under a methodology may have the effect of "offsetting" a subsidy in totality or in part in no way means that it extinguishes that subsidy. Likewise, China's argument that the use of an NME methodology is tantamount to a "privatization" of the producer is inappropriate. China's argument concerns a calculation, more specifically, the use by an investigating authority of figures replicating the situation the producer would be in but for government distortions, in calculating a margin of dumping. This situation bears no analogy to the real world events examined in the privatization jurisprudence cited by China.

14.114 It further appears that through its arguments, China seeks to draw an analogy between the situation before us and a situation in which more than one countervailing duty is imposed with respect to a given subsidy or group of subsidies. It may very well be that in such a situation of multiple countervailing duty investigations on a given imported product, Article 19.4 of the SCM Agreement would preclude the cumulative levying of duties in excess of the amount of the subsidy found to exist in each of the investigations. But this is not the situation before us. By its terms, Article 19.4 only imposes disciplines with respect to the levy of countervailing duties, which the covered agreements define as special duties levied "for the purpose of offsetting" subsidies pursuant to investigations initiated and conducted in accordance with the provisions of the SCM Agreement. The facts that anti-dumping duties are calculated under an NME methodology and thus may be affected by subsidization, and/or that, as a result, the duties may effectively "offset" subsidies granted in respect of the product, change neither the purpose, nor the nature of these duties as anti-dumping, as opposed to countervailing, duties.

14.115 In sum, notwithstanding China's efforts to demonstrate otherwise, the terms of Article 19.4 of the SCM Agreement do not provide the necessary legal basis for its "double remedy" claim. Our interpretation of Article 19.4 is confirmed by the context to Article 19.4 provided by other relevant provisions of the covered agreements. This context confirms that the common intention of the parties to the SCM Agreement was not to address or prohibit, in Article 19.4, the imposition of "double remedies" in respect of domestic subsidies.

14.116 We note, first that the anti-dumping and countervailing duty instruments are provided for and addressed under two distinct agreements and are, with the notable exception of Article VI:5, addressed under distinct paragraphs of Article VI of the GATT 1994. Article VI:5, which precisely addresses the issue of double remedies, is the only provision under which any limitations are explicitly imposed on the concurrent use of the two remedies. It reads:

"No product of the territory of any contracting party imported into the territory of any other contracting party shall be subject to both anti-dumping and countervailing duties to compensate for the same situation of dumping or export subsidization".

14.117 Thus, by its very terms, Article VI:5 of the GATT 1994 is limited to "situation[s] of [...] export subsidization". In our view, these terms are self-explanatory in their intention to limit the scope of the prohibition in Article VI:5 to situations involving export subsidies, to the exclusion of situations in which domestic subsidies are granted on exported goods. Such a narrow reading of the

1021 See, e.g., China second written submission, paras. 233-235.
1022 Article 10 and footnote 36 of the SCM Agreement; Article VI:3 of the GATT 1994.
terms "situation of [...] export subsidization" is supported by the context to Article VI:5, and in particular by the distinction made between domestic vs. export subsidies in Article VI:3 of the GATT 1994, which deals with countervailing duties, and by the separate treatment accorded to export subsidies under Article XVI of the GATT 1994. These provisions demonstrate that the drafters intended to make a distinction between subsidies granted with respect to the production or manufacture of goods (i.e., domestic subsidies) and subsidies granted in respect of the export of goods (i.e., export subsidies). Further, we consider that this interpretation is confirmed by the principle of effet utile: since only imported goods are subject to anti-dumping or countervailing duties, reading Article VI:5 as encompassing situations in which domestic subsidies granted to exported goods are countervailed would effectively read the term "export" out of the relevant sentence of that provision. Finally, we note the use of terms equivalent to the expression "export subsidies" in both the French and the Spanish texts of Article VI:5.1023

14.118 Not only is Article VI:5 limited to potential double remedies in respect of export subsidies, but the explicit terms in which the drafters addressed the issue in that provision makes it all the more unlikely that they sought to prohibit the imposition of double remedies in respect of other types of subsidies through Article 19.4 of the SCM Agreement given, again, that Article 19.4 on its face makes no reference to that issue.1024

14.119 We also consider it significant that the predecessor to the SCM Agreement – the Tokyo Round Subsidies Code – contained a provision that explicitly addressed the concurrent use of NME methodologies in anti-dumping investigations, and of countervailing duties, in respect of imports from NMEs. Where imports from non-market economies were at issue, Article 15 of that Code imposed upon the importing Member a choice between the use of anti-dumping measures or of countervailing duties. At the very least1025, the existence of a provision explicitly addressing the issue of the concurrent imposition of anti-dumping and countervailing duties on NME imports in the predecessor to the SCM Agreement would seem, once again, to lend support to our interpretation of Article 19.4 of the SCM Agreement as not addressing or encompassing the question of the permissibility of double remedies.1026

1023 The French text reads "à une même situation résultant du dumping ou de subventions à l'exportation", whereas the Spanish text reads: "una misma situación resultante del dumping o de las subvenciones a la exportación" (our emphasis).

1024 This is a further difference between the present dispute and the privatization and pass-through jurisprudence relied upon by China: neither of these two issues is addressed explicitly under any of the provisions of the covered agreements.

1025 The parties have not identified any documentary evidence from the Uruguay Round negotiations that would cast light on why Article 15 of the Tokyo Round Subsidies Code was not carried forward in the SCM Agreement.

1026 We consider it likely that the rationale for the inclusion of Article 15 of the Tokyo Round Subsidies Code was the potential for double remedies to result from the concurrent imposition of NME methodologies in calculating anti-dumping duties and of countervailing duties, or at least the recognition that the use of an NME methodology would capture price differences resulting from subsidies granted on the product subject to anti-dumping duties. Furthermore, we note the argument of Argentina, Mexico and the United States that Article 15 of the Tokyo Round Subsidies Code would have been redundant had double remedies been prohibited under the provisions of the Code imposing a limit on the amount of countervailing duties (i.e., the precursors to Articles 19.3 and 19.4 of the SCM Agreement).
14.120 In sum, these two elements from the context\textsuperscript{1027} to Article 19.4 of the SCM Agreement suggest that the Contracting Parties to the GATT, now WTO Members, were aware of the fact that certain difficulties, e.g. double remedies, could arise from the concurrent imposition of anti-dumping and countervailing duties, and that where they wanted to address issues arising from the concurrent imposition of anti-dumping and countervailing duties, they did so in explicit terms. This makes it all the more unlikely that the terms of Article 19.4 of the SCM Agreement reflect an implicit intent on the part of the drafters to prohibit the imposition of double remedies with respect to domestic subsidies.

14.121 Finally we note that by contrast, China's Protocol of Accession contains no provision explicitly addressing the issue of double remedies even though it appears to allow for the use of countervailing duties while China remains an NME.\textsuperscript{1028} We do not need to decide whether, as the United States argues, China effectively seeks to impose a choice between the use of NME methodologies and of countervailing duties where imports from NMEs are concerned.\textsuperscript{1029} In our view, the relevant question is that of the drafters' intent, not the intent behind China's arguments. In addition, the thrust of the United States' arguments on double remedies would suggest that the United States itself does not consider the issue to be so clear cut: the practical import of the United States' arguments is that the existence of double remedies is an evidentiary one, and therefore that the overlap between the two remedies may only be partial. In any event, we need not decide whether the text of Section 15, viewed in isolation, allows the concurrent imposition of anti-dumping duties and countervailing duties in all circumstances \textit{without any limitation}, thereby imposing \textit{no constraint} on the imposition of double remedies. Rather, we merely note the absence of any provision addressing the question of "double remedy" in China's Protocol of Accession. In our view, such an absence again suggests that the drafters of Article 19.4 of the SCM Agreement did not intend this provision to address the issue of double remedies.

14.122 Finally, we note China's argument that for a Member to obtain twice the remedy would frustrate the object and purpose of the SCM Agreement which, the Appellate Body indicated, is "to strengthen and improve GATT disciplines relating to the use of both subsidies and countervailing measures". We view China's argument as implying that it is the object and purpose of the SCM Agreement to impose disciplines not only with respect to the use of countervailing duties, but also of anti-dumping duties. As explained above, we are of the view that the object and purpose of Part V of the SCM Agreement is limited to imposition of disciplines with respect to the former.

\textsuperscript{1027} The fact that a provision addressing the issue in dispute was formerly in place but disappeared in a successor agreement would seem to fall more properly under the heading of "context" to the treaty provision being interpreted (and therefore fall under Article 31 of the Vienna Convention) rather than under the category of "supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion". This is how the Appellate Body characterized the "prior existence and demise" of a provision of a predecessor agreement in \textit{US – Underwear}, where the Appellate Body characterized this as an "another element of the context" of the provision that it was interpreting. (Appellate Body Report on \textit{US – Underwear}, p. 16 DSR 1997:I, at 11).

\textsuperscript{1028} China concedes that its Protocol of Accession permits the concurrent imposition of anti-dumping duties calculated under an NME methodology and of countervailing duties. (China response to Panel questions 77 and 85 (first meeting)).

\textsuperscript{1029} See United States opening statement at the first meeting of the Panel, para. 38:

"China said that it 'does not contend that the United States must 'choose' between the use of countervailing duties and the use of an NME methodology,' only that when applying both, 'it must do so in a manner that takes into account the fact that it offsets the same alleged subsidies through the manner in which it calculates antidumping duties.' This is simply a distinction without a difference. … the logic of China's argument necessarily suggests that the United States must \textit{choose} between the use of countervailing duties and the use of an NME methodology." (emphasis original).
14.123 For these reasons, we find that China has failed to establish that the USDOC's use of its NME methodology in the anti-dumping determinations at issue, concurrently with its determination of subsidization and the imposition of countervailing duties on the same products in the four countervailing duty determinations at issue, was inconsistent with Article 19.4 of the SCM Agreement. In light of this finding, we do not need to address the other arguments of the parties with respect to the scope of application of Article 19.4 of the SCM Agreement, notably the United States' argument that this provision, as well as Articles VI:3 of the GATT 1994 and Article 19.3 of the SCM Agreement, cannot form the basis of a claim with respect to the investigations at issue since no duties were actually levied as a result of these investigations.

(iii) China's claim under Article 19.3 of the SCM Agreement

14.124 Article 19.3 of the SCM Agreement provides, in relevant parts:

"When a countervailing duty is imposed in respect of any product, such countervailing duty shall be levied, in the appropriate amounts in each case, on a non-discriminatory basis on imports of such product from all sources found to be subsidized and causing injury, except as to imports from those sources which have renounced any subsidies in question or from which undertakings under the terms of this Agreement have been accepted. [...]". (emphasis added)

14.125 On its face, Article 19.3 of the SCM Agreement imposes upon the authorities of the importing Member the obligation to levy duties (i) on a non-discriminatory basis on imports from all sources found to be subsidized and causing injury and (ii) in "the appropriate amounts" in each case.

14.126 China's arguments raise the question of the meaning to be given to the terms "appropriate amounts" in this provision. Similar to its arguments under Article 19.4 of the SCM Agreement, China submits that the imposition of anti-dumping duties calculated under an NME methodology is a relevant consideration in assessing the appropriateness of the amount of duties levied. China relies on the interpretation of Article 19.3 by the panel in EC – Salmon (Norway). Specifically, China notes that the EC – Salmon (Norway) panel found that the "appropriate" amount of a duty is the amount that is "proper" or "fitting" in light of the purpose of the duty. China argues, that, applying the same reasoning, the "appropriate" amount of a countervailing duty can be no greater than the amount necessary to offset the subsidy, such that the countervailing duty measures at issue are not "in the appropriate amounts" because they offset alleged subsidies that the United States has also offset through the manner in which it calculates anti-dumping duties under its NME methodology. China also considers that it is not "appropriate" to offset a subsidy that the investigating authority simultaneously offsets through the manner in which it calculates anti-dumping duties in respect of the same products.

14.127 The panel in EC – Salmon (Norway) considered a claim under Article 9.2 of the AD Agreement – which, aside from its reference to anti-dumping duties rather than to countervailing duties, is worded in terms that are virtually identical to those of Article 19.3 of the SCM Agreement.

---

1030 China second written submission, para. 254, citing to Panel Report on EC – Salmon (Norway), paras. 7.704-7.705.
1031 China argues, on the basis of Article VI:3 and footnote 36 to the SCM Agreement, that the purpose of a countervailing duty is to "offset" the amount of any subsidy bestowed upon the product. (China first written submission, para. 383).
1032 Id., paras. 380-384.
1033 China second written submission, para. 254.
Agreement. In light of dictionary definitions of the term "appropriate", the panel considered that it was reasonable to interpret this term in Article 9.2 of the AD Agreement to mean that the "appropriate" amount of the duty is one which is "proper" or "fitting" in the context of an anti-dumping investigation, and that what is "proper" or "fitting" should be determined in relation to the object and purpose of the collection and imposition of anti-dumping duties. Consequently, the panel, in light of Article VI:2 of the GATT 1994 and of Article 9.1 of the AD Agreement, determined that the "appropriate" amount of anti-dumping duty must be an amount that results in offsetting or preventing dumping, when all other requirements for the imposition of anti-dumping duties have been fulfilled. On this basis, and because dumping is defined in the agreements as the introduction of a product into the commerce of another country at a price which is "less than its normal value", the panel found that an anti-dumping duty may only be collected when the price of the imported product is less than its normal value, adding that "normal value constitutes a point of reference for determining when anti-dumping duties may or may not be imposed and collected".

14.128 We fail to see how the EC – Salmon (Norway) panel's interpretation of the terms "appropriate amounts" could support China's claim under Article 19.3 of the SCM Agreement. We recall that countervailing duties are special duties that are collected for the purpose of "offsetting" subsidies. This suggests that, applying the reasoning of the EC – Salmon (Norway) panel, countervailing duties are collected in the appropriate amounts insofar as the amount collected does not exceed the amount of subsidy found to exist. We further recall our conclusions above that the manner in which the dumping margin is calculated – through an NME methodology or otherwise – has no impact on the existence of subsidies, which may be found to "exist" in a parallel countervailing duty investigation; and that the fact that a "double remedy" may result from the imposition of anti-dumping duties does not transform these duties into countervailing duties under the covered agreements. For these reasons, the imposition of anti-dumping duties calculated under an NME methodology has no impact on whether the amount of the concurrent countervailing duty collected is "appropriate" or not.

14.129 Furthermore, we recall our conclusion that the context of Article 19.4 of the SCM Agreement confirms our interpretation that that provision does not address the issue of double remedies. The same considerations likewise suggest that it was not the intention of the drafters to the SCM Agreement to address the question of double remedies in Article 19.3 of the SCM Agreement.

14.130 We therefore find that China has failed to establish that the USDOC's use of its NME methodology in the anti-dumping determinations at issue in this dispute, concurrently with its determination of subsidization and the imposition of countervailing duties on the same products in the four countervailing duty determinations at issue, was inconsistent with Article 19.3 of the SCM Agreement. Given these findings, we need not address the United States' argument that Article 19.3 of the SCM Agreement finds no application in the present case given that no duties were actually levied as a result of the determinations at issue.

(iv) China's claims under Article 10 of the SCM Agreement and Article VI:3 of the GATT 1994

14.131 China argues that the United States had, under Articles 10 of the SCM Agreement and VI:3 of the GATT 1994, an affirmative legal obligation to (i) ensure that it did not impose countervailing duties to offset subsidies that it simultaneously offset through the methods by which it calculated anti-dumping duties; (ii) take "all necessary steps" to ensure that this did not occur; and (iii) ensure that the USDOC investigated and made a determination as to the "precise amount of a subsidy attributed to the imported products under investigation", taking into account that using simultaneously an anti-

---

1034 The one notable difference between the terms of Article 9.2 of the AD Agreement and those of Article 19.3 of the SCM Agreement is that the former uses the term "collected" whereas the latter uses the term "levied".

dumping methodology had the effect of offsetting the same subsidies.\textsuperscript{1036} China considers that in the investigations at issue, the USDOC failed to meet these obligations. China notes in particular that the USDOC did not take any steps to determine "whether, and in what amount" the use of market-determined costs of production in the parallel anti-dumping investigations had the effect of offsetting the same subsidies that it identified in the countervailing duty investigations\textsuperscript{1037}, and therefore, did not "ascertain the precise amount of a subsidy attributed to the imported products under investigation".\textsuperscript{1038}

14.132 Article 10 of the SCM Agreement and footnote 36 thereto provide:

"Application of Article VI of GATT 1994"

Members shall take all necessary steps to ensure that the imposition of a countervailing duty\textsuperscript{36} on any product of the territory of any Member imported into the territory of another Member is in accordance with the provisions of Article VI of GATT 1994 and the terms of this Agreement. Countervailing duties may only be imposed pursuant to investigations initiated and conducted in accordance with the provisions of this Agreement and the Agreement on Agriculture. [footnotes omitted in part]

\textsuperscript{36} The term "countervailing duty" shall be understood to mean a special duty levied for the purpose of offsetting any subsidy bestowed directly or indirectly upon the manufacture, production or export of any merchandise, as provided for in paragraph 3 of Article VI of GATT 1994.

14.133 Article VI: 3 of the GATT 1994 provides that:

"No countervailing duty shall be levied on any product of the territory of any contracting party imported into the territory of another contracting party in excess of an amount equal to the estimated bounty or subsidy determined to have been granted, directly or indirectly, on the manufacture, production or export of such product in the country of origin or exportation, including any special subsidy to the transportation of a particular product. The term "countervailing duty" shall be understood to mean a special duty levied for the purpose of offsetting any bounty or subsidy bestowed, directly or indirectly, upon the manufacture, production or export of any merchandise."

14.134 China does not make clear whether it intends its claims to pertain to the collective operation of Articles 10 of the SCM Agreement and VI:3 of the GATT 1994, and whether it intends them to be

\textsuperscript{1036} China second written submission, paras. 243-247, response to Panel question 76. China argues, referring to the findings of the Appellate Body in \textit{US – Countervailing Measures on Certain EC Products} and in \textit{US – Softwood Lumber IV}, that, collectively, Articles 10, 19.1, 19.3, 19.4 of the SCM Agreement and 21.1 of the SCM Agreement and Article VI:3 of the GATT 1994 impose upon investigating authorities an affirmative legal obligation to take "all necessary steps" to ensure that they limit countervailing duties to the amount and duration of the subsidy.

\textsuperscript{1037} China notes that the USDOC stated unequivocally that "it has no authority under U.S. law to examine in the context of a countervailing duty investigation whether the use of an NME methodology in a parallel anti-dumping investigation has the effect of offsetting the same alleged subsidies".

\textsuperscript{1038} China second written submission, paras. 245 and 248-250; response to Panel question 76 (first meeting). We address here China's claims as presented in its second written submission and subsequent submissions. In its first written submission, China presented its claims under Articles VI:3 of the GATT and 10 of the SCM Agreement and under Article 32.1 of the SCM Agreement as purely consequential to its claims of violation under Articles 19.3 and 19.4 of the SCM Agreement. (China first written submission, para. 385).
in the nature of consequential claims as one would expect to be the case for a claim under Article 10 of the SCM Agreement. In any case, implicit in China's arguments is a claim that the levying of countervailing duties in an amount exceeding the amount of the subsidy "determined to have been granted" is inconsistent with Article VI:3 of the GATT 1994. For this reason, we first consider whether China has established a violation of Article VI:3 of the GATT 1994 before considering whether China has established a violation of Article 10 of the SCM Agreement, taken in isolation, or a violation of Article VI:3 of the GATT 1994 and Article 10 of the SCM Agreement collectively.

14.135 Of relevance to China's claims, Article VI:3 of the GATT 1994 provides that countervailing duties are to be levied in amounts not exceeding the "subsidy determined to have been granted". Thus, the pertinent obligation under Article VI:3 is very similar to that under Article 19.4 of the SCM Agreement. Similar to Article 19.4, Article VI:3 is limited in scope: it only establishes a limit with respect to the imposition of countervailing duties.

14.136 For the same reasons that we have found that China has not established a violation of Article 19.4 of the SCM Agreement, we also consider that China has not established that the United States imposed duties in excess of the subsidy "determined to have been granted" in the investigations at issue inconsistently with Article VI:3 of the GATT 1994.

14.137 Turning to the second provision cited by China, we note that Article 10 of the SCM Agreement establishes that countervailing duties may only be imposed in accordance with the procedural and substantive obligations contained in the SCM Agreement, indicating that a claim of violation of Article 10 of the SCM Agreement must necessarily be consequential to a claim of violation of other provisions of the covered agreements. We also note China's argument that Article VI:3 of the GATT and Article 10 of the SCM Agreement imposed on the USDOC an obligation to investigate the amount of subsidy that remained to be offset due to the concurrent imposition of anti-dumping duties calculated under an NME methodology.1039

14.138 We have already concluded that China has failed to establish that the imposition of anti-dumping duties calculated under an NME methodology is an event that affects the existence of a subsidy or the amount of subsidy conferred on a product in the context of a concurrent countervailing duty investigation. As a consequence, we also find that the USDOC was under no obligation to investigate whether the use of an NME methodology in a parallel anti-dumping investigation had the "effect" of offsetting the same alleged subsidies. China advances no other argument in support of its claims under Articles 10 of the SCM Agreement and VI:3 of the GATT. Hence, we find that China has not demonstrated that the United States acted inconsistently with Articles VI:3 of the GATT 1994 and 10 of the SCM Agreement as a result of the concurrent imposition of anti-dumping duties calculated under the U.S. NME methodology and of countervailing duties in the investigations at issue.1040

(v) China's claim under Article 32.1 of the SCM Agreement

14.139 China makes it clear that its claim under Article 32.1 of the SCM Agreement is purely consequential to its claims under Articles 10, 19.3 and 19.4 of the SCM Agreement and Article VI:3 of the GATT of the 1994.1041 As we have found that China has failed to establish a violation of these provisions, we also find that China failed to establish that the United States acted inconsistently with Article 32.1 of the SCM Agreement.

1039 China second written submission, paras. 248-250.
1040 Given these findings, we need not address the United States' argument that Article VI:3 does not apply to the measures at issue given that no duties were actually levied as a result of these measures.
1041 China second written submission, para. 259.
14.140 In addition, we note that our findings set forth in sections (ii)-(iv) concerning China's double remedy claims of necessity are limited to the provisions cited by China in that regard. We have no mandate to, and thus do not, consider whether any other provisions of the WTO Agreement might prohibit any double remedies of the type referred to by China.

4. Claims under Articles 12.1 and 12.8 of the SCM Agreement

14.141 We now examine China's claims in respect of Articles 12.1 and 12.8 of the SCM Agreement. We do so under the assumption that China intends these claims to be independent of its other claims of violation.

(a) Main arguments of the Parties

(i) China

14.142 China claims that, in the investigations at issue, the USDOC did not provide interested parties with "notice of the information which [it] require[d]" to evaluate the existence of a double remedy, and therefore acted inconsistently with its obligations under Article 12.1 of the SCM Agreement. In support of this argument, China submits that the United States, in response to certain Panel questions, "appears to suggest that the USDOC might have taken steps to avoid imposing double remedies in the investigations at issue, had the interested parties presented supporting evidence that a double remedy would occur". China further argues that the USDOC did not inform interested parties of the essential facts under consideration that would "form the basis" for its determination in respect of double remedies and, as a result, acted inconsistently with Article 12.8 of the SCM Agreement.1042

(ii) United States

14.143 The United States argues that China's claims must fail because (i) they are premised on the existence of an inherent double remedy in the concurrent application of countervailing duties and NME anti-dumping duties; and (ii) even if a double remedy could be shown to exist, the USDOC did not "require" information to "evaluate the existence of a double remedy" as China argues and such information did not form part of the "essential facts under consideration" that the USDOC was required to disclose. In addition, the United States argues that providing a continuing opportunity for demonstration of an alleged double remedy is an appropriate position for an investigating authority, even where there is no basis for the claim and the investigating authority does not consider and has not found that such a double remedy exists. The United States adds that it is for interested parties who seek to alter the application of countervailing and anti-dumping duties to explain, with supporting evidence, why their proposed course of action is appropriate.1043

(b) Assessment by the Panel

14.144 Article 12.1 of the SCM Agreement provides:

"Interested Members and all interested parties in a countervailing duty investigation shall be given notice of the information which the authorities require and ample opportunity to present in writing all evidence which they consider relevant in respect of the investigation in question".

14.145 Article 12.8 of the SCM Agreement provides:

---

1042 China second written submission, paras. 268-270.
1043 United States opening statement at the second meeting of the Panel, paras. 66-69.
"The authorities shall, before a final determination is made, inform all interested Members and interested parties of the essential facts under consideration which form the basis for the decision whether to apply definitive measures. Such disclosure should take place in sufficient time for the parties to defend their interests".

14.146 China claims a violation of the obligation under Article 12.1 of the SCM Agreement for the investigating authorities to give notice "of the information which the authorities require", (emphasis added) Thus, to succeed in its claim, China must demonstrate that the USDOC "required" the submission of certain evidence in order to demonstrate that a double remedy existed. China's sole allegation in this respect is that the United States, in response to certain Panel questions, "appears to suggest that the USDOC might have taken steps to avoid imposing double remedies in the investigations at issue, had the interested parties presented supporting evidence that a double remedy would occur". China has not explained why the responses provided by the delegation of the importing Member to panel questions should be relevant in determining what information the authority "required" in the investigation.1044 Thus, we are not convinced that the USDOC "required" the submission of any information with respect to double remedies in the investigations at issue.

14.147 In any event, it seems that China effectively seeks a finding that would require the USDOC to adopt a set of criteria under which to assess the occurrence of double remedies, in the event that it considered that it possesses the legal authority to take action to avoid such an occurrence. We recall that we have already found that the USDOC is not, under the provisions cited by China, under a legal obligation to avoid the imposition of double remedies. While it is certainly desirable that investigating authorities adopt clear positions on certain legal issues that have the potential to arise in the investigations they conduct, we are not convinced that Article 12.1 of the SCM Agreement requires them to do so with respect to any and all such issues. We have sympathy for the United States' argument that it is for interested parties who seek to convince an investigating authority to modify its application of its trade remedy laws (especially where that application has not been shown to be WTO-inconsistent) to bring relevant evidence to the investigating authority.

14.148 Turning to Article 12.8 of the SCM Agreement, we note that this provision, on its face, relates to the obligation for the investigating authority to make a disclosure, prior to the issuance of a final determination, "of the essential facts under consideration which form the basis for the decision whether to apply definitive measures". (emphasis added) In other terms, Article 12.8 pertains to the disclosure that an investigating authority must make prior to the issuance of its final determination, in which it must set out the essential facts on which that determination is based. While China's treatment of its Article 12.8 claim in its submissions is too succinct to achieve any certainty in this respect, it seems that China's argument is not that the USDOC failed to disclose the evidence on which its determinations were based, but rather that it failed to indicate what evidence the USDOC would have accepted – if any – to establish the existence of a double remedy. Again, China seems to seek a finding that pertains to the legal framework that the USDOC would apply to the issue of double remedies, but does not explain how the terms of Article 12.8 of the SCM Agreement can accommodate such a claim.

14.149 For these reasons, we find that China has failed to establish that the United States acted inconsistently with its obligations under Articles 12.1 and 12.8 of the SCM Agreement.

5. Claims under Article I:1 of the GATT 1994

14.150 The last claim of China in respect of "double remedies" is its claim under Article I:1 of the GATT, which embodies the "most favoured-nation" (MFN) principle.

1044 China devotes less than half a page of its submissions (paras. 268-270 of its second written submission) to its arguments in support of its Articles 12.1 and 12.8 claims.
(a) Main arguments of the Parties

(i) China

14.151 China claims that in the four sets of anti-dumping and countervailing duty investigations at issue, the United States denied imports from China MFN treatment under Article I:1 of the GATT 1994 by failing to extend to these imports the same unconditional entitlement to the avoidance of double remedies that it extends to imports from market economy countries. In these investigations, China argues, the USDOC either did not avoid the imposition of a double remedy, or imposed a condition upon the avoidance of a double remedy that it does not impose upon products originating in the territory of other Members.

14.152 China directs the Panel to a number of USDOC determinations and U.S. court decisions which, it argues, demonstrate that the USDOC has repeatedly recognized that the manner in which it calculates anti-dumping duties can offset subsidies (including domestic subsidies) and that in circumstances where a potential for double remedies arose, the USDOC took steps to ensure that no double remedy would occur.

14.153 China argues, first, citing to the USDOC determination in LEU from France, that the USDOC refuses to deduct countervailing duties from the export price in calculating margins of dumping in anti-dumping investigations involving market economy countries. China adds that the USDOC has recognized that to make such a deduction would impermissibly collect countervailing duties twice.1046

14.154 Second, China argues, since at least 1986 and its determination in Tool Steel from Germany, the USDOC has considered that it would be inappropriate to add subsidies to producers' costs of production (i.e., to the actual expenses recorded in producers' books and records) in calculating the margin of dumping, because doing so would effectively collect countervailing duties twice, thereby blurring the distinction between anti-dumping and countervailing duties. China argues that making such an addition would be equivalent to deducting subsidies from the export price and that from the standpoint of a potential double remedy, the USDOC's NME methodology has the same effect as adding subsidies to a producer's costs in a market economy investigation: both approaches place the producer in the position of having market-determined costs of production.1048 China notes that in Tool Steel from Germany, the USDOC decided that it would use the producer's actual costs, even if they reflected the effect of subsidies. This determination was appealed to the U.S. Court of International Trade in Al Tech Specialty Steel Corp. In this decision, China argues, the Court found considerable support in U.S. law for the plaintiff's argument that the costs used to determine constructed normal value should be based on unsubsidized costs. China indicates that while the Court considered it a close issue, it was ultimately persuaded by the USDOC's argument that adding subsidies to the producer's costs would improperly "blur[] the distinction between antidumping and countervailing duty law". China adds that the USDOC has also recognized (in its determination in Certain Steel
Products from the Netherlands\textsuperscript{1049}, that using a producer's unsubsidized costs to determine constructed normal value would have the effect of offsetting the subsidies through both anti-dumping and countervailing duties, and that in numerous other anti-dumping investigations of imports from market economy countries, the USDOC has allowed respondents to deduct subsidies from their reported costs of production, where these reported costs did not accurately reflect the cost-reducing effects of the subsidies (Certain Pasta from Italy, Live Swine from Canada, Red Raspberries from Canada).\textsuperscript{1050} China argues that in determining the constructed normal value based on costs that do not reflect the subsidies found to be received by the producer, the USDOC's NME methodology is indistinguishable from adding subsidies to the producer's costs in a market economy investigation, or from using the producer's reported costs when those costs do not reflect the subsidies received by the producer.\textsuperscript{1051}

14.155 China submits that by, on the one hand, maintaining a consistent set of policies and practices to avoid the imposition of a double remedy when establishing margins of dumping for producers from market economy countries, without precondition and without imposing any evidentiary burden on respondents (i.e., "unconditionally") and, on the other hand, refusing to avoid imposing double remedies and/or requiring that respondents demonstrate the existence of a double remedy (e.g. by showing that domestic subsidies pass through, pro rata, to export prices) when imports from China were concerned, the United States acted inconsistently with the MFN obligation contained in Article I:1 of the GATT 1994. Referring to the terms of that provision, China argues that:

(i) anti-dumping and countervailing duties are "charges of any kind imposed on or in connection with importation";

(ii) the methods by which the United States calculates such duties (including its policies and practices to avoid the imposition of a double remedy, as well as the assumptions and burdens of proof applied in evaluating the issue) are either "methods of levying such charges", "rules or formalities in connection with importation", or both\textsuperscript{1052};

(iii) the USDOC's policy of avoiding the imposition of a double remedy is an "advantage, favour [or] privilege" that the United States extends to these imports.\textsuperscript{1053}

14.156 In response to an argument of the United States, China argues that it does not need to establish that products from China are disadvantaged as compared to "like products" from other Members in order to succeed in its "as applied" claims under Article I:1. China submits in this respect that prior WTO panels have recognized that a violation of Article I:1 occurs when an importing Member applies a discriminatory standard that relates only to the origin of the product at issue, and not to its characteristics, without having to demonstrate the presence of "like products".\textsuperscript{1054}

\textsuperscript{1049} China second written submission, paras. 214 and 227; response to Panel question 74 (first meeting).
\textsuperscript{1050} China response to Panel question 74 (first meeting).
\textsuperscript{1051} China response to Panel question 26 (second meeting).
\textsuperscript{1052} China cites to the GATT panel in US – MFN Footwear, which considered that "the rules and formalities applicable to countervailing duties [...] are rules and formalities imposed in connection with importation, within the meaning of Article I:1". (China first written submission, footnote 337, citing to GATT Panel Report on US – MFN Footwear, para. 6.8).
\textsuperscript{1053} See, generally, China first written submission, paras. 413-427; second written submission, paras. 271-277.

14.157 Finally, China rejects the United States' argument that the difference in treatment could be justified by its Protocol of Accession since nothing in the Protocol allows Members to impose double remedies. Likewise, China rejects the suggestion that it is seeking "special treatment" from the United States with respect to the concurrent imposition of anti-dumping and countervailing duties, indicating that it is only asking the United States to apply to imports from China the same standard that it has applied to imports from other Members in other circumstances in which the problem of double remedies has had the potential to arise.

(ii) United States

14.158 The United States argues that the USDOC treats imports from China no differently than it treats imports from other Members with respect to its refusal to deduct subsidies from the export price and its refusal to add subsidies to costs of production. The United States indicates that the USDOC does not make such adjustments in investigations against Chinese products, including in the investigations at issue. The United States considers that China has not demonstrated otherwise, which in its view may explain why China formulates its claim under Article I:1 more generally as pertaining to the United States' "avoidance of the imposition of a double remedy". In any case, the United States argues, referring to China's argument that the USDOC's NME methodology has the same effect as adding subsidies to a producer's cost of production, having the "same effect" is different from actually making the adjustment at issue.

14.159 The United States makes the following comments with respect to the specific USDOC determinations and U.S. court cases cited by China in support of its assertion that the USDOC avoids imposing double remedies in anti-dumping investigations on imports from market economies: First, the United States considers that the analogy drawn by China between the present dispute and the USDOC determinations in LEU from France, Tool Steel from Germany and Certain Steel Products from the Netherlands is inapposite, as these determinations were not based on subsidies being captured by the normal value, but involved the literal counting of countervailing duties twice – once in the actual levying of countervailing duties and once by either adding the countervailing duties to cost or subtracting countervailing duties from export price. The United States argues that these mathematical certainties cannot be compared to China's theoretical arguments about overlapping economic distortions or overlapping rationales. Specifically, with respect to LEU from France, the United States explains that the USDOC considered that subtracting the CVDs from the export price had exactly the same effect as would have adding the same CVDs to the dumping margin after it had been calculated. Therefore, the requested adjustment would have literally collected the CVDs twice. In Tool Steel from Germany, the USDOC refused to add subsidies to the normal value. Had it added them, the dumping margin would have automatically increased by the amount of the countervailable subsidies found in the companion countervailing duty case, thus indisputably collecting countervailing duties twice. The United States argues that the crux of the USDOC's determination in that case was that subsidies are not costs; the USDOC's determination does not contain any discussion of the issue of double remedies. With respect to Certain Steel from the Netherlands, the United States submits that the USDOC's determination was not based on assertions about the alleged effects of subsidies on normal value, but was simply an instance in which the

1061 United States second written submission, footnote 350; response to Panel question 79 (first meeting).
USDOC reduced the respondent's cost of capital by the amount of capital received from the government as a grant. Thus, the producer's actual cost of capital was the reduced amount. Further, the United States argues that the USDOC determination cited to by China is a preliminary determination – the anti-dumping and countervailing duty investigations were terminated before the USDOC issued a final determination – and therefore cannot be considered a final opinion on the matter.

14.160 The United States finally notes that in Live Swine from Canada, the USDOC included government grants as offsets to respondents' reported general and administrative (G&A) costs. The United States argues that rather than being designed to "deduct subsidies from cost" to avoid offsetting any advantage from subsidization, this approach reflects the USDOC's long-standing practice of treating as an offset to cost any income that is received as a result of producing the subject merchandise, irrespective of source, and that is duly recorded in the respondents' books. The United States adds that the USDOC routinely applies similar offsets to both G&A expenses and financial expenses and that this is merely an aspect of the calculation of the dumping margin, rather than a tool to "deduct subsidies from cost" to avoid offsetting any advantage from subsidization, as is evidenced by the fact that the USDOC applies such offsets independently of whether there is a parallel countervailing duty investigation or, in event of such parallel investigation, even if this investigation does not result in the imposition of countervailing duties.

14.161 The United States also notes that a number of WTO rules explicitly recognize that, in the context of anti-dumping and countervailing duty proceedings, a Member may – and in some circumstances must – accord differential treatment to products from certain Members. Such differential treatment takes the form, for example, of the level of duties, the method of calculating normal value in anti-dumping investigations, or the method of determining the benefit in countervailing duty investigations. The United States argues that given the explicit authorization for such actions, where they conform to the requirements of these other WTO provisions, they are not inconsistent with Article I:1 of the GATT 1994, as any other approach would render every application of certain provisions of the covered agreements or of China's Protocol of Accession an MFN violation. The United States also submits that, because of the nature of China's economy, investigations involving Chinese products pose methodological challenges which do not arise with respect to market economies, and which require investigating authorities to develop mechanisms to allow them to make the necessary determinations, as recognized in China's Protocol of Accession. In any case, the United States argues that Article I:1 is inapposite because of the explicit recognition of Members' right to use the NME methodology in respect of China in its Protocol of Accession, with no corresponding prohibition on the concurrent application of countervailing duties, which the United States reads as reflecting the judgment of Members that no double remedy results from the application of that methodology in conjunction with countervailing duties. In sum, for the United States, China's MFN complaint focuses on the application of the NME methodology, yet the

1062 United States second written submission, footnote 350.
1063 United States comments on China's response to Panel question 33 (second meeting).
1064 Id. The United States notes that Live Swine from Canada is an example of an investigation where the USDOC applied such an offset to costs even where the final determination in the corresponding countervailing duty investigation was negative.
1065 The United States refers the following provisions as examples: Articles VI:2 and VI:3 of the GATT 1994; the second Ad Note to Article VI:1 of the GATT 1994; Article 2.2 of the AD Agreement; Article 14(d) of the SCM Agreement; Article 27.10 of the SCM Agreement; paragraphs 15 (a) and (b) of China's Protocol of Accession.
1066 United States first written submission, paras. 438-442.
1067 Id., paras. 443-444.
application of that methodology is expressly authorized by paragraph 15(a) of China's Protocol of Accession and hence, does not violate Article I:1 of the GATT 1994.1068

14.162 Finally, the United States considers that China has failed to substantiate its claim of inconsistency with Article I:1 of the GATT because it does not identify the "like products" to which the alleged advantage is applied.1069

(b) Main arguments of the Third Parties

(i) Canada

14.163 Canada considers that neither the use of the NME methodology nor the concurrent imposition of anti-dumping duties calculated using that methodology and of countervailing duties on Chinese products is inconsistent with Article I:1 of the GATT 1994. Like the United States, Canada notes that the calculation of the normal value using the NME methodology is specifically allowed under China's Protocol of Accession.1070

(c) Assessment by the Panel

14.164 We now consider whether, notwithstanding our findings above that China has not established the inconsistency of the determinations at issue with Article VI:3 of the GATT 1994 and Articles 10, 12.1, 12.8, 19.3, 19.4 and 32.1 of the SCM Agreement, those determinations contravened the obligations of the United States under Article I:1 of the GATT.1071

14.165 Article I:1 of the GATT 1994 embodies the "Most-Favoured Nation" (MFN) principle, "a cornerstone of the GATT and [...] one of the pillars of the WTO trading system".1072 The object and purpose of Article I:1 is, inter alia, "to prohibit discrimination among like products originating in or destined for different countries".1073 Article I:1 of the GATT provides as follows:

"With respect to customs duties and charges of any kind imposed on or in connection with importation or exportation or imposed on the international transfer of payments for imports or exports, and with respect to the method of levying such duties and charges, and with respect to all rules and formalities in connection with importation and exportation, and with respect to all matters referred to in paragraphs 2 and 4 of Article III, any advantage, favour, privilege or immunity granted by any contracting party to any product originating in or destined for any other country shall be accorded immediately and unconditionally to the like product originating in or destined for the territories of all other contracting parties".

1068 United States opening statement at the first meeting of the Panel, para. 59; second written submission, para. 219.
1069 United States first written submission, para. 431. The United States notes in this respect that the panel in US – MFN Footwear did not consider Brazil's "as applied" claims in that case since Brazil had not established the "like products" condition. (United States response to Panel question 94 (first meeting), citing to GATT Panel Report on US – MFN Footwear, paras. 6.11-6.12).
1070 Canada third-party oral statement, paras. 29-30.
1071 China claims a violation of Article I:1 of the GATT 1994 "separate and apart" from the violations of the covered agreements discussed above. (China first written submission, para. 403).
1072 Appellate Body Report on Canada – Autos, para. 69.
1073 Id., para. 84.
14.166 By its terms, three elements must be demonstrated to establish a violation of Article I:1: there must be an "advantage", (of the type covered by that provision) which is not accorded to all "like products" of all WTO Members, "unconditionally".1074

14.167 Thus, to succeed in its Article I:1 claim, China needs to establish, first, that the United States grants an "advantage, favour, privilege or immunity" of the type covered by Article I:1 of the GATT 1994 to products originating in other Members which it did not accord to the investigated products from China in the investigations at issue. The scope of Article I:1 of the GATT 1994 has been interpreted broadly by GATT panels as well as by the Appellate Body and WTO panels. Of particular relevance to the present dispute, the GATT panel in US – MFN Footwear considered that rules and formalities applicable in the context of countervailing duty investigations were "rules and formalities in connection with importation", within the meaning of Article I:1. At issue in US – MFN Footwear were certain procedural advantages pertaining to the revocation of countervailing duty orders conferred upon certain categories of imported products.1075 Before us, the United States does not contest that advantages pertaining to the administration of countervailing duty laws fall within the scope of Article I:1 of the GATT 1994, and we see no reason to depart from the approach adopted by the US – MFN Footwear GATT panel. Further, for the same reasons, we determine that rules and formalities applicable in the context of anti-dumping investigations also fall within the scope of Article I:1 of the GATT 1994.

14.168 In the present dispute, China identifies as the relevant "advantage" under Article I:1 the USDOC "policies and practices to avoid the imposition of a double remedy for the same act of subsidisation" whenever "there is a risk that the calculation of an anti-dumping margin could result in the imposition of [such] a double remedy".1076 China argues that it is likewise an "advantage, favour [or] privilege" to permit investigated market economy producers to avoid the potential imposition of a double remedy without any requirement to produce "evidence" concerning the existence or extent of a double remedy in general, or in a particular instance.1077 China argues that in the four sets of anti-dumping and countervailing duty investigations at issue (i) the USDOC did not take any steps to avoid the imposition of double remedies and that it does not in any event have the authority to take such steps, or (ii) alternatively, that the USDOC imposed a condition – the presentation of evidence demonstrating the existence of a double remedy and in particular, evidence that the subsidies at issue had the effect of reducing the export price – upon the avoidance of a double remedy for the same alleged acts of subsidization that it does not impose upon products originating in the territory of other Members.1078

14.169 As support for its argument, China refers to a number of USDOC determinations (and U.S. court decisions reviewing these determinations) in which the USDOC made or refused to make certain adjustments. China argues that in these determinations in which a potential double remedy arose, the USDOC did not consider the existence of a double remedy to be "theoretical" or to require any evidence or presumptions about the effects of subsidies on a producer's costs or prices.1079 Rather, China argues, in each of these circumstances, the USDOC took all necessary steps to

1076 For instance, in its first written submission, China states: "In every circumstance in which the issue has arisen the United States has consistently taken the position that it will avoid the imposition of a double remedy through the manner in which it calculates anti-dumping and countervailing duties". (China first written submission, para. 404). See also China first written submission, para. 413.
1077 Id., para. 420. (emphasis added).
1078 Id., para. 427.
1079 For some of the prior determinations, China also argues that with respect to the imposition of double remedies, making (or not making) the adjustments at issue "has the same effect" as the calculation of a dumping margin under the NME methodology.
investigate and ensure that the manner in which it calculated anti-dumping duties did not have the effect of offsetting subsidies that it simultaneously offset through the imposition of countervailing duties.\textsuperscript{1080}

14.170 The first step in our analysis is to examine the USDOC determinations and court decisions cited by China to determine whether they support these allegations.\textsuperscript{1081}

14.171 First, China cites to the USDOC determination in \textit{LEU from France}, an administrative review in an anti-dumping investigation. In \textit{LEU from France}, U.S. interested parties requested the USDOC, in calculating the margin of dumping, to deduct from the export price an amount corresponding to countervailing duties that had already been imposed on the same product. The USDOC, consistent with its established practice, rejected this request. The USDOC reasoned that (i) countervailing duties are neither "import duties" nor "selling expenses" under the U.S. Tariff Act, such that the Act does not require that they be deducted from the export price, and (ii) that deducting countervailing duties from the export price "effectively would collect the CVDs a second time". The USDOC added in this respect that "in the most general terms, the US Tariff Act stands for the proposition that dumping margins should not be calculated so as to double-collect CVDs".\textsuperscript{1082} We note that in \textit{Steel Wire Rod from Korea}, also cited by China, the USDOC examined the similar question of whether U.S. anti-dumping law requires the deduction of safeguard duties from the export price, and reached the same conclusion, i.e., that it does not.\textsuperscript{1083}

14.172 China also refers us to \textit{Tool Steel from Germany}, a 1986 USDOC anti-dumping determination.\textsuperscript{1084} In this determination, the USDOC rejected a request of U.S. interested parties that in computing the cost of production and constructed value of an investigated producer, it include an amount for subsidies which the producer had received from the German federal and state governments. The USDOC took the position that it would be inappropriate to add the subsidies to the producer's actual expenses, in other words, that it was appropriate to calculate the costs of production on the basis of producers' reported costs of production, even if those costs reflected the subsidies received. The USDOC's determination makes no reference to the issue of double remedy: the sole rationale provided for the USDOC's decision is that "the purpose of [U.S. anti-dumping law] is to determine whether a company is selling at less than the cost of production, based on actual costs". The USDOC determination in \textit{Tool Steel} was appealed to the U.S. Court of International Trade (\textit{Al

\textsuperscript{1080} China second written submission para. 215.

\textsuperscript{1081} In certain instances, China submitted only excerpts from the relevant determinations and we had to retrieve the full text of the relevant decisions in order to properly understand the context in which the USDOC decisions or statements cited by China were made. We recall that China bears the burden of proof in respect of factual assertions it makes, and therefore that it is, in the first place, China's responsibility to provide the Panel with sufficient explanations and evidence to allow the Panel to make the required factual findings.

\textsuperscript{1082} The USDOC seems to have derived this "rationale" from the amendments the U.S. Congress made to the Tariff Act to prevent the imposition of double remedies with respect to export subsidies in the context of concurrent anti-dumping and countervailing duty investigations. The USDOC also noted prior U.S. court decisions that relied on the same rationale for not deducting countervailing duties from U.S. prices in calculating margins of dumping.

\textsuperscript{1083} \textit{Stainless Steel Wire Rod from the Republic of Korea: Final Results of Antidumping Duty Administrative Review} ("Steel Wire Rod from Korea"), Exhibit CHI-125, p. 19160. The Court of Appeals for the Federal Circuit upheld the USDOC's interpretation of the statute as not requiring the deduction of safeguard duties from the export price in \textit{Wheatland Tube Co. v United States}. In its findings, the Court, \textit{inter alia}, finds "reasonable" the USDOC's conclusion that deducting safeguard duties from the export price would improperly lead it to collect a double remedy. (\textit{Wheatland Tube Company and Allied Rube & Counduit Corporation v United States} ("Wheatland Tube"), Exhibit CHI-126, p. 1366). China's discussion of these two decisions is limited to a sentence in footnote 332 of its first written submission.

\textsuperscript{1084} \textit{Tool Steel From the Federal Republic of Germany: Correction to Early Determination of Antidumping Duty}, Exhibit CHI-127, pp. 10071-10072.
Tech Specialty Steel Corp. v. US), which upheld it. The Court found that the USDOC's interpretation of the U.S. Tariff Act was not unreasonable: the Court noted that administrative practice and judicial precedent were inconsistent on the issue but ultimately, it considered that to add subsidies to a producer's costs of production would improperly blur the distinction between antidumping and countervailing duty remedies by allowing the USDOC to counteract subsidization without complying with the requirements of the countervailing duty statute.

14.173 China also cites to the USDOC's preliminary determination in Certain Steel Products from the Netherlands. In this determination, "to avoid possible double-counting", the USDOC subtracted from a respondent's production costs the amount of subsidies received from the government in the form of a grant, which had been preliminarily determined to be a subsidy in a parallel countervailing duty case. The USDOC added that it considered this result to be consistent with past practice and with a prior ruling of the U.S. Court of International Trade (in Connors Steel), but provided no further explanations in this respect. The USDOC invited comments on its treatment of this issue, but ultimately, the investigations were rescinded prior to the issuance of the USDOC's final determination. Finally, China refers to the USDOC determinations in Certain Pasta from Italy, Live Swine from Canada, and Red Raspberries from Canada, as examples of instances in which the USDOC allowed investigated producers to reduce their reported costs of production by the amount of subsidies received. The USDOC's determinations in these three cases contain no discussion of the issue of double remedies; rather, the adjustments were seemingly made in application of the USDOC's normal practice of allowing, as offsets to producers' G&A costs, deduction of subsidies "attributable directly" to the production of the subject merchandise.

14.174 China characterizes these different cases as all pertaining to a single situation or issue, the avoidance of a double remedy in respect of a particular act of subsidization. We disagree. We see the determinations cited by China as pertaining to three distinct factual situations, and we do not consider that they stand for the proposition that as a factual matter the United States takes all necessary steps to avoid the imposition of double remedies in situations in which such double remedies are likely to arise, or that it maintains a policy or practice of taking such steps.

14.175 The first situation, that in LEU from France and Steel Wire Rod from Korea, pertains to the adjustments that should be made to the export price to arrive at an ex-factory price as a basis from which to calculate a dumping margin. Specifically, in these investigations, the USDOC considered whether other trade remedies (countervailing duties and safeguards, respectively) that already applied to the product at issue were normal "customs duties" (which would be deducted from the export price in the course of the ex-factory calculation) or otherwise were relevant to the determination of the export price. The USDOC's conclusion was that making a deduction for these remedies would not be appropriate as it would result directly and literally in collecting those other trade remedies twice. That these past investigations do not pertain at all to the issue of double remedies raised by China in this claim is confirmed by the fact that the USDOC applied the same approach to the deduction of

1086 U.S. interested parties had argued that not taking subsidies into account would allow foreign producers to evade anti-dumping disciplines.
1087 Preliminary Determination of Sales Not Less Than Fair Value: Certain Steel Products from the Netherlands, Exhibit CHI-156.
1088 Certain Steel Products From Belgium, France, the Federal Republic of Germany, Italy, Luxembourg, the Netherlands and the United Kingdom; Termination of Countervailing Duty and Antidumping Investigations, Exhibit US-177, p. 49059.
1089 Notice of Final Determination of Sales at Less Than Fair Value: Certain Pasta from Italy, Exhibit CHI-157; Issues and Decision Memorandum for the Final Determination in the Antiduping Duty Investigation of Live Swine from Canada, Exhibit CHI-158; and Red Raspberries from Canada; Final Determination of Sales at less Than Fair Value, Exhibit CHI-159.
safeguard duties as it did with respect to countervailing duties. Instead, the determinations cited by China stand for the narrower proposition that in performing dumping calculations, the USDOC does not deduct existing countervailing duties or safeguard duties from export price. Further, we note that China does not allege that the USDOC made deductions for existing duties in the anti-dumping investigations at issue in this dispute and thus treated imports from China differently than it treats imports from market economies.

14.176 The other determinations cited by China pertain to the question of the basis upon which the USDOC calculates costs of production in anti-dumping investigations on market economy imports: The concern of the Court in Al Tech and – to the extent that it can be discerned from its determination – that of USDOC in Tool Steel from Germany, seems to have been primarily that a producer's actual costs should serve as the basis of dumping calculations – even if they reflect subsidization – and that any subsidization allegations should be addressed not by an anti-dumping investigation but rather by a countervailing duty investigation. Not only is the issue of double remedy per se not raised, but the Court's concerns about the nature of the remedies at issue and the need to avoid using the anti-dumping statute to address questions of subsidization would be equally applicable in the absence of a parallel countervailing duty investigation; in fact, there is no reference in either decision to the USDOC conducting a concurrent countervailing duty investigation in that case, or to a countervailing duty measure already being in place.

14.177 The remaining determinations address the same issue, on the basis of the same underlying premise (the calculation of the normal value on the basis of actual costs), as in the USDOC determination in Tool Steel and the court decision in Al Tech, but pertain to a different factual situation, i.e., where a producer's reported costs of production do not reflect the subsidies that it has received. The only case in which avoidance of a double remedy was mentioned by the USDOC, Certain Steel Products from the Netherlands, is a preliminary determination and never resulted in the imposition of a measure or collection of any duties. In the other cases (in which measures were imposed) referred to by China in which deductions of subsidies from costs were allowed, those allowances were treated as "offsets", a type of adjustment used in certain instances in U.S. anti-dumping calculations. China has not demonstrated that this type of adjustment, pertaining to a known amount of subsidy received by an investigated firm, is related to the question of avoidance of double remedies. Hence, we conclude from these determinations that where the USDOC has allowed the deduction of subsidies received by a firm from its reported costs of production, and imposed measures on the basis of a methodology that allowed such deductions, it did so on another basis than to avoid the imposition of a double remedy.

14.178 In sum, the USDOC determinations and court decisions in Tool Steel from Germany/Al Tech, Certain Steel Products from the Netherlands, Certain Pasta from Italy, Live Swine from Canada, and Red Raspberries from Canada are all instances of application, in two different factual circumstances, of a USDOC policy to use a producer's actual costs in the calculation of costs of production and of constructed normal values in anti-dumping investigations of market economy imports. A similar situation does not present itself in the context of USDOC anti-dumping investigations involving imports from China: For imports from China, the USDOC uses surrogate costs which, by definition, are not the producer's actual costs. Hence, the issue of adjusting reported costs to ensure that they represent actual costs simply does not arise. Further, the USDOC methodology follows, in this respect, the second Ad Note to Article VI:1 of the GATT 1994 (incorporated by reference in the AD Agreement through Article 2.7) and Section 15(a) of China's Protocol of Accession, which recognize that market-economy and NME imports are in different factual situations and for this reason, explicitly allow the use of different methodologies – based on surrogate costs and prices – to calculate dumping margins in respect of NME imports.

1090 See, e.g., Exhibit CHI-156, p.3.
For the foregoing reasons, we consider that none of the cases cited by China establishes as a factual matter that the USDOC takes all necessary steps to avoid the risk of imposing a double remedy in respect of a single act of subsidization whenever such a risk exists, or that the United States maintains a policy or practice of taking such steps. Rather, as explained above, these determinations establish narrower points: that in calculating dumping margins: (i) the USDOC does not deduct countervailing duties or safeguard duties from the export price; and (ii) in the case of market economy investigations, the USDOC constructs normal value and calculates costs of production on the basis of a producer's actual costs of production.

Further, even if the determinations cited by China were considered relevant in establishing the existence of the policy or practice alleged by China, it is significant that in all of the instances cited by China, the existence of double remedies was a matter of mathematical equivalency. In those investigations, there was no question as to the amounts of subsidies received by the investigated firms. That is, there was clear, verified record evidence of those amounts. By contrast, while we have found above that the use of a surrogate value in principle reflects the use of unsubsidized costs, we also have indicated that the precise extent to which the NME calculation captures any subsidization is a factual issue which it could be difficult to ascertain. For these reasons, we consider misleading China's characterization of one aspect of the alleged "advantage" at issue as being that the USDOC does not, in the case of investigations on imports from market economies, require any evidence of the existence of a double remedy.

For the foregoing reasons, we consider that China fails to establish as a factual matter that, in the context of certain anti-dumping investigations of market economy imports, the USDOC has taken steps to ensure that it does not offset, through the calculation of anti-dumping duties, the same subsidies that it simultaneously offsets through the imposition of countervailing duties, or that the USDOC has done so without requiring evidence of the existence of a double remedy. As a consequence, China also fails to establish that the USDOC maintains a consistent "policy" or "practice" of taking all necessary steps to avoid the imposition of double remedies in circumstances in which there is a risk that one would arise. Thus, we find that China has failed to establish the existence of the "advantage, favour, privilege, or immunity" which it alleges.

The foregoing reasons suffice, in our view, to find that China has not established that the United States acted inconsistently with the MFN obligation contained in Article I:1 of the GATT 1994 when, as a result of the investigations at issue, it concurrently imposed anti-dumping duties calculated under the U.S. NME methodology and countervailing duties.

\[^{1091} \text{In addition, we note that the "advantage" alleged by China is not the specific course of action (e.g. adjustment or non-adjustment) taken by the USDOC in a specific instance. That is, China is asserting discrimination in terms of the effects of certain behaviours (making adjustment "x" in anti-dumping calculation results in a double remedy), rather than asserting discrimination in respect of the behaviours themselves (USDOC makes adjustment "x" in market-economy calculations but not in NME calculations). In this sense, China's claim would seem to depart from the typical claim of violation under Article I:1 of the GATT. In light of our findings above, we need not determine whether the terms of Article I:1 of the GATT 1994 are broad enough to allow a claim of this nature.} \]

\[^{1092} \text{Given these findings, we do not consider whether China had to demonstrate discrimination as between "like products" in the context of its "as applied" claims under Article I:1 of the GATT 1994.} \]
XV. CHINA'S CLAIM PERTAINING TO THE USDOC'S FAILURE TO PROVIDE AT LEAST 30 DAYS TO REPLY TO THE NEW ALLEGATIONS AND SUPPLEMENTAL QUESTIONNAIRES

A. CLAIM OF CHINA

15.1 China claims that the USDOC failed to give China and other interested parties at least 30 days to respond to the "supplemental" and "new allegations" questionnaires issued by the USDOC in the four countervailing duty investigations at issue, contrary to Article 12.1.1 of the SCM Agreement.1093

B. MAIN ARGUMENTS OF THE PARTIES

1. China

15.2 China submits that the term "questionnaires" in Article 12.1.1 of the SCM Agreement refers not only to the first questionnaire issued in a countervailing duty investigation, but to "all" questionnaires, without qualification. Therefore, China claims, the United States acted inconsistently with this provision by failing to give China and investigated producers at least 30 days to reply to the "supplemental" and "new allegations" questionnaires issued by the USDOC in the four investigations at issue.1094

15.3 China considers its interpretation of Article 12.1.1 to be the only one consistent with the ordinary meaning of that provision, read in the context of Article 12 as a whole. China submits that the ordinary meaning of the word "questionnaire" is "[a] formulated series of questions by which information is sought from a selected group, usually for statistical analysis; a document containing these", and asserts that both the "supplemental" and "new allegations" questionnaires qualify as "questionnaires" under the ordinary meaning of this term.1095 China adds that the term "questionnaires" in the plural form in Article 12.1.1 should be given its ordinary meaning. If the drafters had intended to refer to the issuance of a single questionnaire, they would have so indicated explicitly by using phrases such as "a questionnaire" or "the initial questionnaire". China therefore contends that the minimum 30 days for reply applies to all questionnaires used in an investigation.1096 China further considers that read in context, Article 12.1.1 gives content to the "ample opportunity" requirement in Article 12.1 by requiring that interested parties be given at least 30 days to reply to questionnaires, and that given that it has no caveats, this entitlement applies to all questionnaires used in a countervailing duty investigation. This right, China argues, constitutes one of the due process rights in Article 12 of the SCM Agreement that the Appellate Body has held "are enjoyed by interested parties throughout an investigation".1097

15.4 On this basis, China submits that the reasoning of the unappealed panel report in Egypt – Steel Rebar, which concluded that in anti-dumping investigations the only questionnaire to which the 30-

---

1093 Paragraph B.1(g)(ii) of the "as applied" claims in China request for establishment of the Panel; China first written submission, para. 468 (m); second written submission, para. 315 (m).
1094 China first written submission, paras. 444 and 447.
1095 Id., para. 445. China argues that "questionnaires" in Article 12.1.1 should be interpreted in accordance with this ordinary meaning such that if a document represents "a formulated series of questions by which information is sought", then it is a questionnaire, and if it is used in a countervailing duty investigation, then the 30-day requirement under Article 12.1.1 must be provided. China submits that the inquiry under Article 12.1.1 is whether (i) the document received by an interested party is a questionnaire; and (ii) whether this questionnaire was used in a countervailing duty investigation. (China response to Panel question 107 (first meeting) and question 36 (second meeting)).
1096 China first written submission, para. 447.
1097 Id., paras. 448-449, citing to Appellate Body Report on Mexico – Anti Dumping Measures on Rice, para. 292.
day requirement applies is the initial questionnaire, is not persuasive and therefore should not be followed in the present dispute. More specifically, China argues, \textit{inter alia}, that that panel did not have the benefit of the Appellate Body's decisions which collectively have emphasized that the procedural and due process obligations under Article 12 apply "throughout an investigation", and that the panel's interpretation disregarded the ordinary meaning of the term "questionnaires", as well as the balance that the AD and SCM Agreements seek to achieve.\footnote{China first written submission, para. 451; response to Panel question 107 (first meeting).}

15.5 According to China, its interpretation of Article 12.1.1 of the SCM Agreement is also consistent with the balance that Article 12 of the SCM Agreement strikes between, on the one hand, the due process rights of interested parties and, on the other hand, the right of investigating authorities to proceed expeditiously. A different interpretation of Article 12.1.1, China alleges, would give investigating authorities an "unfettered discretion" as, \textit{inter alia}, in the name of completing their investigations expeditiously, they could issue any number of extensive questionnaires with short periods for reply, for example, the far less than 30 days granted by the USDOC for replies to the various supplemental and new allegations questionnaires issued in the investigations at issue in the present dispute.\footnote{China first written submission, paras. 450 and 452. China points, in particular, to the LWS and OTR countervailing duty investigations, where the new allegations questionnaires issued by the USDOC in the investigations at issue qualify as the first questionnaire in the newly initiated "investigations" with respect to new subsidy allegations. According to China, the USDOC opens up an entirely new avenue of inquiry when it initiates an investigation into new subsidy allegations, and the questionnaires it uses neither supplement a previous inquiry nor are related in any way to prior questionnaires. China explains that therefore "new allegations questionnaires" are indistinguishable from "full initial questionnaires". \footnote{For example, China submits that in virtually every case, the new allegations questionnaires included the so called Appendix 1, i.e., a list of "Standard Questions", which respondents must fill out with respect to the subsidy programmes initiated at the outset of the investigation. (China first written submission, footnote 364; second written submission, paras. 311-313).} China adds that the similarity between those questionnaires lies in the nature of the questions and the level of detail required from respondents.\footnote{China response to Panel question 105 (first meeting).}}

15.6 China submits that even accepting \textit{arguendo} that the 30-day requirement in Article 12.1.1 applies only to the "full initial questionnaire", the USDOC failed to give at least 30 days to respond to the "first" new allegations questionnaires issued in the investigations. China argues that the "first" new allegation questionnaires issued by the USDOC in the investigations at issue qualify as the first questionnaire in the newly initiated "investigations" with respect to new subsidy allegations. According to China, the USDOC opens up an entirely new avenue of inquiry when it initiates an investigation into new subsidy allegations, and the questionnaires it uses neither supplement a previous inquiry nor are related in any way to prior questionnaires. China explains that therefore "new allegations questionnaires" are indistinguishable from "full initial questionnaires".\footnote{Id., paras. 450. According to China, providing the minimum 30-day period for reply to all questionnaires would not prevent investigating authorities from finishing their investigations within the timeframes allowed under the SCM Agreement, but rather, doing so would ensure that investigating authorities consider carefully the information they require and draft their questionnaires accordingly. For instance, if allowing 30 days for reply to new allegations questionnaires would impede the USDOC's completion of its investigations, the United States should reconsider its policy of allowing petitioners to file new subsidy allegations during the course of the investigations. (Id.; response to Panel question 36 (second meeting)).} China adds that the similarity between those questionnaires lies in the nature of the questions and the level of detail required from respondents.\footnote{China response to Panel question 105 (first meeting).}

2. \textbf{United States}

15.7 The United States considers that there is no obligation under Article 12.1.1 of the SCM Agreement to provide the minimum 30-day period for reply to supplemental and new allegations...
questionnaires. According to the United States, "questionnaires" in Article 12.1.1, for which investigating authorities must provide at least 30 days for reply, refers to the questionnaire issued at the outset of an investigation, and not to subsequent requests for information.  

15.8 First, the United States submits that the ordinary meaning of the word "questionnaire" is "[a] formulated series of questions by which information is sought from a selected group, usually for statistical analysis", and that this meaning encompasses only "formal requests for information" by an investigating authority in the form of a "series of questions". Second, the United States argues that the context of Article 12.1.1, namely paragraphs 6 and 7 of Annex VI to the SCM Agreement, clarifies that a "questionnaire" in the sense of Article 12.1.1 only refers to the questionnaire issued at the outset of an investigation, and not to every subsequent request for information by investigating authorities, even if such subsequent requests take the form of a "series of questions". According to the United States, paragraphs 6 and 7 of Annex VI clearly show that not every request for information constitutes a "questionnaire" to which the minimum 30-day requirement for response applies, and that by referring to the term "the questionnaire" in the singular in Annex VI, Members contemplated the existence of only one document to be considered "the questionnaire" for purposes of the SCM Agreement. According to the United States, the explicit reference to "the questionnaire" in Annex VI further supports its view that the term "questionnaires" in the plural form in Article 12.1.1 refers to the recipients in the plural; that is, Members, foreign producers, exporters. While it agrees with China that Members could have used words like "the initial questionnaire" instead of the term "questionnaires", it further argues that had the drafters of the Agreement intended the interpretation advanced by China, they could have done so by saying "[a]ny exporter, foreign producer or interested Member receiving questionnaires".  

15.9 In the view of the United States, the single document referred to in Annex VI could only be the questionnaire issued at the outset of an investigation. Given that this questionnaire requires more extensive information than subsequent requests for information, it is thus logical that the 30-day requirement for reply in Article 12.1.1 only refers to the questionnaire issued at the outset of the investigation. The United States also notes that if all requests for information were subject to the 30-day requirement under Article 12.1.1, investigating authorities would be prevented from seeking supplemental information from interested parties; from completing investigations within the timeframes established in Article 11.1; and/or from granting any extensions of time for replies as encouraged by Article 12.1.1.

---

1103 United States first written submission, paras. 475 and 482; second written submission, para. 226; response to Panel question 36 (second meeting). The United States argues that the Government of China and respondents were given at least 30 days to reply to the questionnaire that the USDOC issued at the outset of the investigations at issue, and therefore, the USDOC complied with Article 12.1.1 of the SCM Agreement. (United States first written submission, para. 484).

1104 Id., paras. 476-478; response to Panel question 36 (second meeting).

1105 United States first written submission, para. 486.

1106 Id., para. 479. The United States notes in this regard that in each of the investigations at issue, the questionnaire issued by the USDOC at the outset of the investigations posed far more questions than any subsequent request for information. (Id., footnote 632).

1107 In particular, the United States observes that subsequent requests for information are (i) one means by which investigating authorities "give notice of the information" that they require and (ii) a mechanism by which interested parties are provided with the "opportunity" to submit evidence, and that China's interpretation would therefore prevent investigating authorities from making such requests for information, thereby denying interested parties some of the very "notice" and "opportunity" mandated in Article 12.1 of the SCM Agreement. (Id., paras. 475 and 488).

1108 According to the United States, meeting the timeframes imposed by the SCM Agreement becomes even more difficult when a respondent fails to answer questions posed in the initial questionnaire; for instance, if a 30-day period would have been required for each of the follow-up requests for additional information made...
15.10 The United States also considers that China's interpretation of Article 12.1.1 ignores the other provisions of the SCM Agreement that ensure the due process rights of interested parties in proceedings before investigating authorities. In particular, the United States observes that Article 12.1, which provides that interested parties "be given notice of the information which the authorities require and ample opportunity to present in writing all evidence which they consider relevant", ensures that subsequent requests for information are not subject to unreasonable time constraints that would prevent interested parties from adequately defending their interests. The United States argues that in light of this, its interpretation of Article 12.1.1 would not give investigating authorities some sort of "unfettered discretion" as China contends, but rather, would give interested parties a meaningful amount of time to reply to the most comprehensive questionnaire issued in an investigation, i.e., the questionnaire at the outset of the investigation, while providing interested parties with sufficient opportunities to be informed of the additional information needed in an investigation and therefore to be better positioned to provide relevant evidence.

15.11 Lastly, the United States rejects China's argument that new allegations questionnaires are indistinguishable from initial questionnaires. According to the United States, China's contention overlooks the conceptual difference between the two types of questionnaires, i.e., an initial questionnaire is issued at the outset of an investigation and includes not only questions about specific programmes but also general (non-programme specific) questions, while a new allegation questionnaire is issued in the course of an investigation and includes questions only with respect to a specific programme (or programmes). In any case, the United States contends that China has not demonstrated that these questionnaires are indistinguishable.

C. MAIN ARGUMENTS OF THE THIRD PARTIES

1. Argentina

15.12 Argentina agrees with China that the minimum 30-day period for reply in Article 12.1.1 of the SCM Agreement applies to all "questionnaires" issued in an investigation, including the "new allegation" questionnaires. According to Argentina, this interpretation is consistent with the due process principle of "ample opportunity" in Article 12.1 of the Agreement.

In the course of the investigations at issue, the USDOC would have required between 240 and 540 days only for the collection of most of the relevant factual information with respect to subsidization. In this light, China's interpretation of Article 12.1.1 would compel investigating authorities to resort to facts available, rather than giving interested parties multiple opportunities to provide information that they have failed to submit in previous questionnaires. (United States first written submission, paras. 480-481; response to Panel question 36 (second meeting); comments on China's response to Panel question 36 (second meeting)).

United States first written submission, para. 484. The United States finds support for its interpretation in the Panel Report in the *Egypt – Steel Rebar* case in which the panel arrived at the same conclusion with regard to the term "questionnaires" in Article 6.1.1 of the AD Agreement by noting, *inter alia*, the use of the term "the questionnaire" in Annex I to the AD Agreement and the practical difficulties that would result if Article 6.1.1 were to cover requests for information other than the questionnaire issued at the outset of an investigation. (Id., para. 483, citing to Panel Report on *Egypt – Steel Rebar*, paras. 7.276-7.277).

According to the United States, had China considered that it was denied such an opportunity in respect of the new allegations questionnaires, it could have raised that claim. United States first written submission, para. 489; second written submission paras. 234-235; comments on China's response to Panel question 36 (second meeting).

In particular, the United States argues that China's reliance on questions from only two of the four investigations at issue as well as its narrow focus on the "nature" and "level of detail" of questions do not show that new allegations and initial questionnaires are indistinguishable. (United States first written submission, footnote 633; second written submission paras. 228-233; comments on China's response to Panel question 36 (second meeting)).

Argentina third-party submission, paras. 63-64.
2. **Canada**

15.13 Canada, recalling the findings of the panel in *Egypt – Steel Rebar*, considers that the 30-day requirement in Article 12.1.1 of the SCM Agreement only applies to the initial questionnaire issued in an investigation. Canada considers that this interpretation is supported by the context of Articles 12.1 and 12.1.1 of the Agreement. Canada notes, *inter alia*, the implications for respondents of a broader interpretation of Article 12.1.1: investigating authorities required to respect the timeframes imposed by Articles 11.11 and 12.12 might refrain from asking follow-up questions or pursuing new lines of questioning, and rely instead on facts available. Canada is also of the view that while the "ample opportunity" requirement in Article 12.1 applies throughout the course of an investigation, Article 12.1.1 deals only with one particular instance during the investigation (i.e., the issuance of the initial questionnaire) where "ample" means at least 30 days, and that other questions arising during the investigation are subject to the general "ample opportunity" requirement.\(^ {1114}\)

3. **European Communities**

15.14 The European Communities considers that Article 12.1.1 of the SCM Agreement should be interpreted in light of the chapeau provided by Article 12.1, and notes, in this regard, that the Appellate Body has highlighted that interested parties must be afforded "ample opportunity" for presentation of evidence, but that it does not imply that interested parties have "indefinite" rights so as enable them to submit relevant evidence as and when they choose. Therefore, the European Communities is of the view that Article 12.1 requires an "adequate balance" between the rights given to interested parties, on the one hand, and the obligation for the authorities to conclude their investigations in a timely manner, on the other hand. According to the European Communities, this analysis should be made on a case-by-case basis and on reasonable grounds, i.e., deadlines to reply to questions should be proportionate to the amount and complexity of the information requested.\(^ {1115}\)

D. **ASSESSMENT BY THE PANEL**

15.15 This claim by China raises two main issues. The first is the meaning of the term "questionnaires" in Article 12.1.1, to which the 30-day minimum period for reply applies. The second is whether the "supplemental" and/or "new allegation" questionnaires issued in the four countervailing duty investigations before the Panel are "questionnaires" in the sense of Article 12.1.1, and thus should have been subject to that provision's 30-day minimum reply period. We take these issues up in turn.

1. **Interpretation of the term "questionnaires" in Article 12.1.1 of the SCM Agreement**

15.16 Concerning the meaning of the term "questionnaires" in Article 12.1.1 of the SCM Agreement, we note at the outset that China does not dispute that the United States complied with its obligation under Article12.1.1 to give to the Government of China and investigated producers at least 30 days to respond to the initial questionnaires used in the investigations at issue.\(^ {1116}\) Rather, what China challenges is that the United States failed to provide China and investigated producers at least 30 days to reply to the so-called "supplemental" and "new allegation" questionnaires issued during the course of the investigations.

15.17 For the purpose of this dispute, we understand the parties to be referring to the following terms in accordance with the following meanings: (i) "initial" questionnaire or "questionnaire issued at the outset of an investigation" as the first comprehensive questionnaire issued once the

\(^ {1114}\) Canada third-party submission, paras. 65-70.

\(^ {1115}\) European Communities third-party submission, paras. 65-69.

\(^ {1116}\) China first written submission, para. 444.
investigation has been initiated; (ii) "supplemental" questionnaire as a questionnaire containing follow-up inquiries to questions posed in a prior questionnaire; and (iii) "new allegation" questionnaire as the first questionnaire issued in respect of each new subsidy allegation filed during the course of an investigation.\footnote{1117}

15.18 For China the term "questionnaires", and thus the 30-day rule, in Article 12.1.1 applies not only to the initial questionnaire issued at the outset of an investigation, but to "all" questionnaires, including supplemental and new allegations questionnaires. For the United States, on the other hand, the 30-day rule applies only to the comprehensive questionnaire issued at the outset of an investigation and not to any subsequent requests for information, even if these are in the form of a formulated series of questions.

15.19 We first consider the relevant text of Article 12.1 of the SCM Agreement:

"12.1 Interested Members and all interested parties in a countervailing duty investigation shall be given notice of the information which the authorities require and ample opportunity to present in writing all evidence which they consider relevant in respect of the investigation in question.

12.1.1 Exporters, foreign producers or interested Members receiving questionnaires used in a countervailing duty investigation shall be given at least 30 days for reply.\footnote{40} Due consideration should be given to any request for an extension of the 30-day period and, upon cause shown, such an extension should be granted whenever practicable".

\footnote{40} As a general rule, the time-limit for exporters shall be counted from the date of receipt of the questionnaire, which for this purpose shall be deemed to have been received one week from the date on which it was sent to the respondent or transmitted to the appropriate diplomatic representatives of the exporting Member or, in the case of a separate customs territory Member of the WTO, an official representative of the exporting territory."

15.20 The first sentence of Article 12.1.1 on its face compels investigating authorities to grant at least 30 days for replies to "questionnaires". This sentence does not, however, qualify the term "questionnaires" except to require that the 30-day period be provided to "exporters, foreign producers or interested Members receiving questionnaires". Nor does the SCM Agreement define the term "questionnaires". We thus turn to an examination of the ordinary meaning of this term in its context, and in the light of the object and purpose of the provision and the SCM Agreement.

15.21 We recall that the parties submit that the dictionary definition of the word "questionnaire" is "a formulated series of questions by which information is sought from a selected group, usually for statistical analysis", and we find this definition to be appropriate.\footnote{1118} For China, this dictionary definition should be directly ascribed to the term "questionnaires" in Article 12.1.1, in the sense that any "formulated series of questions" from an investigating authority is a "questionnaire" to which the 30-day rule applies. For the United States, however, various contextual elements in the SCM Agreement mean that not every "formal request for information in the form of a series of questions" is a "questionnaire" in the sense of Article 12.1.1.

\footnote{1117} We note that under U.S. law, the applicant or other domestic interested party in a countervailing duty investigation may file a "new subsidy allegation" no later than 40 days before the scheduled date of the preliminary determination. (Exhibit CHI-130).

15.22 We note that the above dictionary definition of "questionnaire" contains no limits or qualifications, such that on its face it would encompass any request for information in the form of a formulated series of questions. This definition on its own thus would not exclude "supplemental" and "new allegation" questionnaires. In our view, however, this definition by itself is not sufficient to ascertain the meaning of "questionnaires" as used in Article 12.1.1 of the SCM Agreement. In general, we consider that dictionary definitions, while useful, are not dispositive of the meaning of terms that appear in the WTO Agreements.\(^\text{1119}\) Rather, the meaning of such terms can only be discerned by reference to their context and in the light of the object and purpose of the agreement in question.\(^\text{1120}\) We thus now turn to this further analysis.

15.23 A number of provisions of the SCM Agreement, starting with Article 12 including its overall structure, provide relevant context for interpreting the term "questionnaires" in Article 12.1.1 of the SCM Agreement. In the first place, Article 12, entitled "Evidence", contains a series of evidentiary rules, including as to the requesting, receipt and handling of evidence by investigating authorities, the particular subject of Article 12.1 of the SCM Agreement. In this regard, the chapeau of Article 12.1 establishes two overarching requirements: that interested Members and parties be given (i) "notice" of the information required of them by the authorities; and (ii) "ample opportunity to present in writing all evidence which they consider relevant". Neither of these requirements is circumscribed in any way, in terms of form or time period. In particular, the notice requirement places no limits on how, precisely, an investigating authority must request the information it requires, and thus seems to envisage different possible types of information requests. The ample opportunity requirement also contains no specific limits, and indeed extends beyond responses to requests from investigating authorities, to encompass the provision of information by an interested Member or party at its own initiative. Where an information request from an investigating authority is concerned, in our view the word "ample" must be understood to mean "ample" in the light of the specific nature and scope of that request, something that by its very nature can only be determined on a case-by-case basis.

15.24 Turning to Article 12.1.1, in our view, the term "questionnaires" in that provision represents one specific case within the overarching "notice" requirement in the chapeau. Similarly, the 30-day rule for response to questionnaires represents one specific case within the overarching "ample opportunity" requirement. That is, in the particular case of "questionnaires" the "ample opportunity" is explicitly defined as the "minimum of 30 days", with an additional mandatory period of one week for questionnaires to exporters, per footnote 40, accompanied by a general encouragement for the granting of extensions of these periods upon cause shown. Thus, while the chapeau of Article 12.1 in conjunction with Article 12.1.1 do not directly address the meaning of the term "questionnaires" in Article 12.1.1, in our view the fact that the "questionnaires" subject to the specific 30-day "ample opportunity" rule are only one of the possible means of providing notice to interested parties of the information required suggests that not every request for information falls within the term "questionnaires" in Article 12.1.1 of the SCM Agreement.

15.25 Footnote 40 to Article 12.1.1 of the SCM Agreement provides further indications in this direction. As noted, this footnote lengthens the 30-day rule by one week for questionnaires to exporters, providing generally that "the time-limit for exporters shall be counted from the date of receipt of the questionnaire, which for this purpose shall be deemed to have been received one week

\(^{1120}\) We recall that Article 31(1) of the Vienna Convention provides in relevant part that:

"A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose".

See also Appellate Body Report on China – Publications and Audiovisual Products, para. 348.
from the date on which it was sent to the respondent". Most relevant to our inquiry is the formulation in the singular of the reference to "the questionnaire" for "exporters". That is, this provision seems to envisage one particular kind of questionnaire destined to all of the exporters. The formulation in Article 12.1.1 of "exporters, foreign producers or interested Members receiving questionnaires" seems to be an extended version of the formulation in footnote 40, suggesting that the term "questionnaires" (plural) in this Article refers to the different kinds of questionnaires sent to the different kinds of recipients referred to (exporters, foreign producers, and interested Members). In other words, this phrase in Article 12.1.1 could be seen as a collective reference to the questionnaire for the exporters, the questionnaire for the foreign producers, and the questionnaire for the interested Members. This view finds further support in the use of the definite article "the" before "questionnaire" in footnote 40. Had the drafters intended the term "questionnaires" in Article 12.1.1 to refer to any and all information requests in the form of a series of questions, one might more naturally expect either a plural formulation, or an indefinite formulation such as "any" or "a" "questionnaire", in footnote 40.

15.26 The same singular, definite formulation ("the questionnaire") appears in the other references to "questionnaire" in the provisions of the SCM Agreement pertaining to countervailing measures, i.e., paragraphs 6 and 7 of Annex VI. In particular, paragraph 6 refers to "[v]isits to explain the questionnaire". Paragraph 7 provides that a verification visit "should be carried out after the response to the questionnaire has been received". These provisions do not refer to the term "questionnaire" as "a questionnaire" or "any questionnaire" or "questionnaires" in the abstract, although any of these formulations would have been grammatically correct.

15.27 To us, these contextual elements suggest that the term "questionnaires" in Article 12.1.1 refers to one kind of document in an investigation that constitutes "the" questionnaire for each kind of questionnaire recipient referred to (exporters, foreign producers, and interested Members). This, in turn, suggests that not every formulated series of questions from an investigating authority during the course of an investigation is subject to the 30-day minimum period for reply required by Article 12.1.1 of the Agreement.

15.28 We now consider which particular documents constitute the "questionnaires" to which the 30-day rule applies. In our view, the same contextual elements discussed above aid in answering this question. In particular, the reference in paragraph 6 of Annex VI to "visits to explain the questionnaire" suggests that such a questionnaire is a substantial information request (to warrant a possible on-the-spot visit by the investigating authority to a foreign country purely for the purpose of explaining it). This provision further suggests that the questionnaire is sent to the respondent entity relatively early in the investigation (logically, an explanatory visit would only take place upon or after receipt of the questionnaire, and to be useful presumably it would need to take place well in advance of the due date for the response, and well in advance of any verification visit as referred to in paragraph 7). The provision in paragraph 7 of Annex VI that, because the main purpose of the on-the-spot investigation is to "verify information provided or obtain further details" normally that visit should take place "after the response to the questionnaire has been received", provides a further indication both that "the questionnaire" is a substantial and significant enough information request to warrant a verification visit, and that it is sent early in the investigation. The reference to the verification visit in the singular ("the on-the-spot investigation"), and the advance notice and agreement requirements related to such a visit, referred to in Article 12.6 of the SCM Agreement, and paragraphs 2, 3, 4, 5, and 7 of Annex VI, indicate, similarly, that the verification visit itself is substantial and significant, not something that can be done lightly, or that is likely to occur frequently.

---

1121 The "questionnaire" referred to in Article 25 of the SCM Agreement is the "questionnaire on subsidies" to be used by Members to notify their subsidies to the SCM Committee, and thus is not related to countervailing measures.
over the course of an investigation.\textsuperscript{1122} These textual signals of the weightiness of a verification visit provide a further indication that "the response to the questionnaire" which paragraph 7 identifies as a main focus of the visit also is substantial and significant, as otherwise such a visit would not be warranted.

15.29 While the SCM Agreement does not explicitly indicate which document constitutes the substantial and significant information request referred to in the SCM Agreement as "the questionnaire", we consider that the above elements taken together suggest that this is the initial comprehensive countervailing duty questionnaire issued to an interested Member and each of the different kinds of interested parties by an investigating authority at or following the initiation of an investigation, which questionnaire seeks information as to all relevant issues pertaining to the main questions that will need to be decided (subsidization of the product, injury and causation). Of course, as discussed above, the Agreement recognizes that there will be variations in the initial comprehensive questionnaires sent to the different kinds of questionnaire recipients (including exporters, foreign producers, and interested Members), reflecting these parties' different natures, activities and roles. Furthermore, depending on how a Member organizes its own conduct of countervailing duty investigations, there may be separate initial comprehensive questionnaires covering the subsidy-related issues and the injury and causation-related issues, and we consider that the initial comprehensive document or set of documents covering all of these issues are encompassed by the term "questionnaires" in Article 12.1.\textsuperscript{1123}

15.30 Furthermore, we recall that Members are required under the chapeau of Article 12.1 to give interested parties notice of the information required for the conduct of the investigation, and Members also are generally required (as set forth in the various provisions of the SCM Agreement) to conduct their investigations and reach their determinations on the basis of verified "evidence", and within a maximum overall timeframe. The amount and complexity of the information needed to conduct a countervailing duty investigation in accordance with the multilateral rules, and the need for that information ultimately to be subject to some sort of verification process (through a visit or otherwise) before it can be relied upon\textsuperscript{1124}, implies the use of a comprehensive questionnaire (or set of such questionnaires for the different kinds of questionnaire respondents)\textsuperscript{1125} at the outset of an investigation as the basis for gathering the necessary information.\textsuperscript{1126}

\textsuperscript{1122} We do not mean to imply that the SCM Agreement prohibits multiple verification visits to a given entity during the course of an investigation, but rather to emphasize that due to the weightiness of the exercise an investigating authority would be unlikely to conduct multiple visits.

\textsuperscript{1123} This would likely be the case, for example, where separate agencies are responsible for the subsidization and injury/causeation sides of an investigation.

\textsuperscript{1124} While the SCM Agreement does not require verification visits as such, Article 12.5 requires that investigating authorities "shall during the course of an investigation satisfy themselves as to the accuracy of the information supplied by interested Members or interested parties upon which their findings are based".

\textsuperscript{1125} We emphasize that it is the comprehensive nature of the questionnaire(s) issued at the outset of an investigation and not necessarily its exact timing that we find determinative here. In particular, different Members may circulate other kinds of "questionnaires" with a very narrow focus (aimed, for example, at determining whether sampling will be necessary) at the very outset of an investigation. Such narrow requests for information would not, in our view, fall within the meaning of the term "questionnaires" in Article 12.1.1.

\textsuperscript{1126} We note that the use of a questionnaire at the very outset of an investigation is more explicitly provided for in the AD Agreement (in paragraph 1 of Annex II, concerning "Best Information Available"): "As soon as possible after the initiation of the investigation, the investigating authorities should specify in detail the information required from any interested party and the manner in which that information should be structured by the interested party in its response". We recognize that the SCM Agreement contains no analog to Annex II of the AD Agreement, but recall the statement by the Appellate Body in Mexico – Anti Dumping Measures on Rice that conditions relative to the use of facts available similar to those in Annex II to the AD Agreement apply under the SCM Agreement. While the issue decided by the Appellate Body was different from the one before us, we consider the general indication in Annex II of the AD Agreement that at the very outset the investigating
15.31 Our reading of the term "questionnaires" based on the text and context of Article 12.1.1 is identical to that reached by the panel in Egypt – Steel Rebar in respect of the same term, "questionnaires", in Article 6.1.1 of the AD Agreement (the analog to Article 12.1.1 of the SCM Agreement). 1127 In that case, the panel rejected Turkey's claim that follow-up questions to the original questionnaire responses and requests for new information constituted "questionnaires" within the meaning of Article 6.1.1 of the AD Agreement. The panel found strong contextual support in paragraphs 6 and 7 of Annex I of the AD Agreement for concluding that the term "questionnaires" in Article 6.1.1 refers only to the original questionnaire sent to interested parties at the outset of an investigation. 1128 The panel also noted that if only some, but not all, other requests for information were considered "questionnaires", investigating authorities would be unable to determine which of their further requests for information were subject to the 30-day rule in Article 6.1.1. On the other hand, the panel considered that if all requests for information were to be considered "questionnaires" in the sense of Article 6.1.1, it could be impossible for an investigation to be completed within the maximum time limits imposed by the Agreement.1129

15.32 We consider that the last two points made by the panel in Egypt – Steel Rebar (with which we agree) speak to the object and purpose of the provision, and more generally, of the countervailing duty rules (the counterpart to the anti-dumping rules that were the subject of that dispute). Starting with the first point, we note that the SCM Agreement contains no guidance as to how to determine which requests for information other than the initial comprehensive questionnaire or set of questionnaires would be subject to the 30-day rule in Article 12.1.1 of the SCM Agreement. Thus, to treat some but not all such further requests for information (i.e., other than the initial comprehensive questionnaire or set of questionnaires) as subject to the 30-day rule in Article 12.1.1 would introduce enormous procedural uncertainty for both investigating authorities and interested parties and Members. This would be inconsistent with the Agreement’s general emphasis on due process, in Article 12 and elsewhere.1130 As for the second point, if all requests for information by investigating authorities were

---

1127 In light of the almost identical wording of Article 6.1.1 of the AD Agreement with Article 12.1.1 of the SCM Agreement, we consider that the Egypt – Steel Rebar panel's reasoning is fully applicable to the issue before us.

1129 The Egypt – Steel Rebar panel stated:

"If any requests for information other than the initial questionnaire were to be considered 'questionnaires' in the sense of Article 6.1.1, a number of operational and logistical problems would arise in respect of other obligations under the AD Agreement. First, there is no basis in the AD Agreement on which to determine that some, but not all, information requests other than the initial questionnaire also would constitute 'questionnaires'. Thus, even if an investigating authority was not obligated to provide the minimum time-period in Article 6.1.1 in respect of every request for information, it would not be able to determine from the Agreement which of its requests were and were not subject to that time-period. On the other hand, if all requests for information in an investigation were 'questionnaires' in the sense of Article 6.1.1, this could make it impossible for an investigation to be completed within the maximum one year (or exceptionally, 18 months) allowed by the AD Agreement in Article 5.10. Moreover, a 30- or 37-day deadline for requests for information made in the context of an on-the-spot verification -- i.e., the 'obtain[ing of] further details' explicitly referred to in Article 6.7 [...] as one of the purposes of such verifications -- obviously would be completely illogical as well as unworkable." (Id., at para. 7.277).

1130 See, for example, Appellate Body Report in Mexico – Anti Dumping Measures on Rice: "[...] Article 12 of the SCM Agreement as a whole 'set[s] out evidentiary rules that apply throughout the course of the
"questionnaires" within the meaning of Article 12.1.1, and thus subject to the 30-day minimum response period, investigating authorities often would find themselves having to choose between seeking the most accurate and complete information, so as to ensure a sound basis for their determinations at the risk of exceeding the allowed timeframe in Article 11.11 for completing their investigations, on the one hand, or completing their investigations within the allowed timeframe, but on the basis of poor quality and/or incomplete information, on the other hand. Neither alternative would be in the interest of investigating authorities or interested Members and parties.  

15.33 In this regard, we recall that in considering similar questions, the Appellate Body has consistently taken into account the balance of the due process rights of interested parties contained in Article 12 of the SCM Agreement against the need of investigating authorities to control the conduct of the investigation and to carry out the multiple steps required to reach a timely completion of the investigation. For example, in Mexico – Anti-dumping Measures on Rice, the Appellate Body stated that:

"[T]he due process rights in Article 6 of the AD Agreement [the analogous provision to Article 12 of the SCM Agreement]—which include the right to 30 days for reply to a questionnaire—cannot extend indefinitely’ but, instead, are limited by the investigating authority's need to 'control the conduct' of its inquiry and to 'carry out the multiple steps required to reach a timely completion' of the proceeding".

15.34 We note the specific elements of the balance struck in Article 12 in this regard. From the point of view of the investigating authority, first, an interpretation of the term "questionnaires" in Article 12.1.1 as going beyond the initial comprehensive questionnaire or set of questionnaires in an investigation is difficult to reconcile with the extension requirement under the second sentence of that provision. In particular, if a minimum 30-day period applied to all requests for information, any extensions of this time-limit pursuant to Article 12.1.1 would compromise the possibility to complete an investigation within the required timeframes. Similarly, as noted, pursuant to Article 12.5 of the SCM Agreement investigating authorities must "satisfy themselves as to the accuracy of the information supplied" upon which their findings will be based. One means by which investigating authorities may satisfy this "accuracy" requirement is by requesting clarifications and/or additional information. If all such requests were questionnaires within the meaning of Article 12.1.1, and thus subject to the 30-day rule, this again would impede the timely completion of the investigation. Furthermore, applying the 30-day rule to all requests for information would be at odds with Article 12.12 of the SCM Agreement, which generally provides that the procedures set out in Article 12 are not intended to prevent investigating authorities from "proceeding expeditiously" to reach a preliminary or final determination.

[...]

1131 The United States emphasises this point, arguing that meeting the timeframes imposed by Article 11.11 becomes even more difficult where respondents fail to answer questions posed in the initial questionnaire; for instance, if the 30-day rule would have applied to each of the follow-up requests for additional information made in the investigations at issue, the USDOC would have required between 240 and 540 days only for the collection of most of the relevant factual information with respect to subsidization, and given the subsequent phases of the proceeding, the USDOC would have been unlikely to meet the timeframes established in Article 11.11. (United States first written submission, paras. 480-481) China does not contest this.

1133 The second sentence of Article 12.1.1 states, "Due consideration should be given to any request for an extension of the 30-day period and, upon cause shown, such an extension should be granted whenever practicable".
15.35 On the other hand, we do not see that interpreting the term "questionnaires" in Article 12.1.1, as the initial comprehensive (set of) questionnaire(s) in an investigation, would leave the interested Members and parties with inadequate due process protections against unreasonable and overly burdensome information requests with unduly short deadlines, and the resultant risk of resort to facts available, as China argues. In particular, the procedural rules for collecting and handling evidence in Article 12 contain a number of provisions preventing investigating authorities from behaving in such a manner. First, Article 12.7 of the SCM Agreement, governing the use of "facts available" by investigating authorities, addresses China's concern by precluding investigating authorities from resorting to facts available where, inter alia, information is provided "within a reasonable period". Thus, even if information is submitted after a deadline, but within a reasonable period, investigating authorities are not entitled to apply facts available. In addition, the "ample opportunity" requirement in Article 12.1 of the Agreement ensures that requests for information that are not questionnaires, and thus are not subject to the 30-day rule, nevertheless are protected from unreasonable deadlines that would prevent the submitters of the information from adequately defending their interests. Furthermore, we note that pursuant to Article 12.11 of the Agreement, investigating authorities are required to take "due account" of any difficulties experienced by interested parties in supplying information requested. Therefore, we do not see that an interpretation of "questionnaires" in Article 12.1.1 as the initial comprehensive questionnaire or set of questionnaires in an investigation would deprive respondents of due process rights or would give investigating authorities unfettered license in regard to information requests. More generally, as noted, it is in the ultimate due process interests of respondent parties in countervailing duty investigations that the investigating authorities have the possibility, within the timeframes and other constraints imposed by the SCM Agreement, to obtain the information necessary for them to render well-founded determinations.

15.36 Thus, in our view, interpreting the term "questionnaires" in Article 12.1.1 of the SCM Agreement as referring only to the comprehensive (set of) questionnaire(s) issued at the outset of the investigation is supported by the object and purpose of the countervailing duty provisions, in that it effectively strikes the balance that Article 12 requires between, on the one hand, the due process rights of interested parties and, on the other hand, the right of investigating authorities to obtain the information they need to conduct their investigations in the manner prescribed in the SCM Agreement.

15.37 For the foregoing reasons, we conclude that the term "questionnaires", as used in Article 12.1.1 of the SCM Agreement, refers to the initial comprehensive questionnaire (or set of questionnaires) issued by an investigating authority at or following the initiation of a

---

1134 In this regard, we note that the Appellate Body in US – Hot-Rolled Steel held that while investigating authorities may impose deadlines for the submission of information in order to allow the timely completion of the investigations, investigating authorities are not entitled, under Article 6.8 of the AD Agreement (the analogous provision of Article 12.7 of the SCM Agreement), to reject information provided by interested parties for the "sole reason" that it was submitted beyond the deadlines for responses to questionnaires. According to the Appellate Body, investigating authorities must consider whether, in light of all the facts and circumstances of the case, the information was however submitted within a reasonable period of time. The Appellate Body went on to explain that the determination of whether information is submitted within a reasonable period of time must be defined on a case-by-case basis, "consistently with the notions of flexibility and balance that are inherent in the concept of 'reasonableness'" and in light of the specific facts and circumstances of each case. (Appellate Body Report on US – Hot-Rolled Steel, paras. 84 and 89).

1135 We recall that China has made no claim pursuant to Article 12.1 that the USDCC failed to give it "ample opportunity" to provide its responses to the supplemental and new allegations questionnaires that are the subject of this claim.

1136 Whether in one or several documents, as issued to each interested Member, and to each kind of interested party. We note here the definition of "interested parties" in Article 12.9: an exporter or foreign producer or the importer of a product subject to investigation, or a trade or business association a majority of the
countervailing duty investigation covering the spectrum of issues on which the investigating authority will have to make determinations in relation to subsidization of the investigated product, injury and causation.

2. The questionnaires and subsequent requests for information issued by the USDOC

15.38 Having interpreted the term "questionnaires" in Article 12.1.1 as referring to the comprehensive questionnaire(s) issued at or following the initiation of the investigation, the question becomes whether any or all of the "supplemental" or "new allegation" questionnaires issued by the USDOC in the investigations at issue before us constituted "questionnaires" of this type. We thus now examine the evidence concerning the nature of these questionnaires.

15.39 We recall that the "supplemental" and "new allegation" questionnaires are the only information requests subject to this claim, i.e., that there is no claim concerning the amount of time allowed for responses to the initial questionnaires issued at the outset of each investigation, or in respect of any other information requests that may have been made. We also note that the parties do not disagree that the USDOC allowed less than 30 days for responses to all of the "supplemental" and "new allegation" questionnaires.

15.40 In all of the investigations at issue, the questionnaire issued to the Government of China by the USDOC at the outset of the investigations included the following questions: (i) "general questions" including on the tariff classification of the products concerned, and their official descriptions, as well as requests for Annual reports of the People's Bank of China; (ii) "program-specific questions", requesting specific information with respect to individual alleged subsidy programmes; (iii) "Appendix 1", containing a standard series of questions to be answered for each alleged subsidy programme, including: description, purpose and date of establishment of the programme; identification of authorities administering the programme; relevant laws, regulations and reports; application process and eligibility criteria; identification of applicants and beneficiaries; and (iv) "Appendix 2", containing a standard information request to be answered for each programme involving "grants", including the date of approval and disbursement of the grant(s) and the amount of the grant(s) approved and actually authorized.

15.41 The questionnaires issued to the exporters and/or producers ("Chinese respondents") by the USDOC at the outset of the investigations included the following requests for information: (i) "Affiliated Companies", requesting information on affiliations among firms in the industry; (ii) "general questions", requesting information on, inter alia, ownership, legal structure and financial data of the firm(s) concerned; process of production of the product(s) concerned, marketing and

members of which are producers, exporters or importers of such product; and a producer of the like product in the importing Member or a trade and business association a majority of the members of which produce the like product in the territory of the importing Member.

1137 We note here that in U.S. countervailing duty investigations, the USDOC's questionnaires address only the issues related to subsidization, and do not address injury or causation. These latter issues are handled by a separate agency which issues its own questionnaires on these matters. China has raised no claims concerning injury or causation in respect of any of the investigations before us.

1138 CWP Initial Questionnaire to the Government of China; Initial Questionnaire to Respondent Producers; First Supplemental Questionnaire to the Government of China; and First Supplemental Questionnaire to Kingland (Exhibit US-104); LWS Initial Countervailing Duty Questionnaire to the Government of China; Initial Questionnaire to Respondent Producers; and First Supplemental Questionnaire to the Government of China (Exhibit US-105); LWR Initial Questionnaire to the Government of China; Initial Questionnaire to Respondent Producers; First Supplemental Questionnaire to the Government of China; and First Supplemental Questionnaire to Aifudi (Exhibit US-106); OTR Initial Questionnaire to the Government of China; Initial Questionnaire to Respondent Producers; First Supplemental Questionnaire to the Government of China; and First Supplemental Questionnaire to TUTRIC (Exhibit US-107).
channels of distribution; sales and export data; (iii) "program-specific questions", requesting specific information with respect to individual alleged subsidy programmes; (iv) "Appendix 1", containing a standard series of questions to be answered for each alleged subsidy programme, including: application and approval process; eligibility criteria; benefits received; identification of merchandise benefited; and (v) "Appendix 2", containing a standard information request to be answered for each programme involving "grants", including the amount authorized and received from all grants authorized, date of approval and receipt of the grant.1139

15.42 In each investigation, in addition to these initial questionnaires, the USDOC issued both "supplemental" questionnaires and "new allegation" questionnaires. Concerning the supplemental questionnaires issued to the Government of China and the Chinese respondents in all of the investigations1140, the record evidence shows that the questions they contained were in the nature of follow-up to the initial questionnaire responses, i.e., requests for additional information related to questions previously posed, clarifications, explanations, details, confirmations, provision of documentation and/or translations, responses to questions that had not been answered or been answered incompletely, and sources for the information provided.1141

15.43 Concerning the new allegation questionnaires, we note that these mainly contained the same standard information requests as in Appendices 1 and/or 2 of the questionnaires issued at the outset of the investigations.1142 For a limited number of subsidy programmes, however, the new allegation questionnaires omitted the Appendix 1 and 2 information requests and contained only questions related to the specific programmes concerned.1143

15.44 We recall our finding above that the term "questionnaires" to which the 30-day rule applies pursuant to Article 12.1.1 of the SCM Agreement refers to the (set of) initial comprehensive questionnaire(s) issued by an investigating authority at or following the initiation of a countervailing duty investigation. As discussed, the fact that such initial questionnaires by nature are comprehensive is a main reason why, in our view, the SCM Agreement establishes a specified minimum period to respond to them.

15.45 Considering the "supplemental" questionnaires from this perspective, in our view, the record evidence demonstrates that these were not comprehensive questionnaires covering the spectrum of issues on which the USDOC needed information, but instead were requests for information generated by and directly related to the responses provided by the various interested parties to the initial questionnaires including, in a number of instances, restatements of questions not answered or only

---

1140 In each investigation, the USDOC issued a series of three to five supplemental questionnaires. Before us, the parties have provided evidence only in respect of the first supplemental questionnaire in each investigation. The United States submits, and China does not contest, that the second and subsequent supplemental questionnaires contained considerably fewer questions and covered fewer programmes than did the first.
1142 See, e.g., CWP First New Allegations Questionnaire to the Government of China (Exhibit US-130); CWP First New Allegations Questionnaire to Kingland (Exhibit US-131); CWP First New Allegations Questionnaire to Shuangjie (Exhibit US-132); CWP Second New Allegations Questionnaire to East Pipe (Exhibit US-133); CWP Second New Allegations Questionnaire to the Government of China (Exhibit US-134); LWR First New Allegations Questionnaire to the Government of China (Exhibit US-136); LWR First New Allegations Questionnaire to East Pipe (Exhibit US-137); LWS First New Allegations Questionnaire to the Government of China (Exhibit US-139); LWS First New Allegations Questionnaire to SSJ (Exhibit US-141); LWS First New Allegations Questionnaire to Aifudi (Exhibit US-143); OTR First New Allegations Questionnaire to GTC (Exhibit US-144); OTR First New Allegations Questionnaire to TUTRIC (Exhibit US-145); OTR First New Allegations Questionnaire to the Government of China (Exhibit US-146).
1143 See, e.g., CWP Second New Allegations Questionnaire to Kingland (Exhibit US-135).
partially answered in the initial questionnaire response. Thus, we find that none of the supplemental questionnaires was a "questionnaire" in the sense of Article 12.1.1 subject to the 30-day rule for response.

15.46 Concerning the "new allegation" questionnaires, China argues that even accepting, arguendo, that the 30-day rule in Article 12.1.1 applies only to the "full initial questionnaire", the "first" round of new allegation questionnaires issued by the USDOC in the investigations at issue qualifies as the initial questionnaire in the newly initiated "investigations" with respect to new subsidy allegations. China submits in this regard that the "first new allegation questionnaires" are indistinguishable from the "full initial questionnaires" issued at the outset of the investigation, because they neither supplement nor are related in any way to the initial questionnaires or other prior questionnaires; and because the nature of the questions and the level of detail requested in the new allegation questionnaires are similar to those of the questions in the initial questionnaires.1144

15.47 In our view this is a closer question than that in respect of the supplemental questionnaires. As the parties both recognize, the new allegation questionnaires concern newly-alleged subsidies, which were not referred to in the application for the investigation or in the initial questionnaires. As such, the kinds of information requested in the new allegation questionnaires, regarding these alleged subsidies, is essentially the same as that regarding the alleged subsidies referred to in the initial questionnaires. In other words, the kinds of information requested concerning the alleged subsidy programmes are indistinguishable as between the initial and new allegation questionnaires.1145

15.48 That said, the new allegation questionnaires did not include the full range of questions contained in the initial questionnaires (i.e., they contained no questions about the product under investigation, about company affiliations, ownership, legal structure and financial data, production processes, marketing, channels of distribution, sales and export data, etc.). To the contrary, the questions were limited to standardized information requests and/or programme-specific questions concerning the newly-alleged subsidies.1146 While these newly-alleged subsidies were unrelated to the alleged subsidies covered by the initial questionnaires, all of the newly-alleged subsidies, like those covered by the initial questionnaires, were alleged to be benefiting the same products that were the subjects of the ongoing investigations. This indicates to us that these questionnaires, which pertained

---

1144 See, e.g., China first written submission, footnote 364; second written submission, paras. 311-313; response to Panel question 105 (first meeting).
1145 In fact, as we noted in para. 15.43, supra, the majority of "new allegation" questionnaires mainly contained the same standard information requests as in Appendix 1 and/or Appendix 2 of the questionnaires issued by the USDOC at the outset of the investigations.
1146 Furthermore, our examination of the evidence on the record indicates that the new allegation questionnaires were far less extensive than the questionnaire issued by the USDOC at the outset of the investigations. For instance, the United States submits, and China does not argue to the contrary, that: (i) in the CWP investigation, the initial questionnaire covered 28 subsidy programmes, containing at least 93 questions for the Government of China and at least 85 questions for the respondent producer, while the first new allegation questionnaire issued to these respondents covered only 1 subsidy programme and contained fewer questions than the initial questionnaire; (ii) in the LWR investigation, the initial questionnaire covered 27 subsidy programmes, containing at least 81 questions for the Government of China and 87 questions for the respondent concerned, while the new allegation questionnaire issued to all these respondents covered only 1 programme and contained fewer questions than the initial questionnaire; (iii) in the LWS investigation, the initial questionnaire covered 23 subsidy programmes, containing 66 questions for the Government of China and 63 questions for the respondent concerned, while the new allegation questionnaire issued to all these respondents covered between 7-12 subsidy programmes and contained fewer questions than the initial questionnaire; and (iv) in the OTR investigation, the initial questionnaire covered 21 subsidy programmes, containing 76 questions for the Government of China and 81 questions for the respondent concerned, while the first new allegation questionnaire issued to all these respondents covered 8-10 programmes and contained fewer questions than the initial questionnaires. (United States first written submission, footnote 632; second written submission, footnotes 411 and 413-415).
to the same allegedly subsidized products as, but whose scope was considerably more limited than, the initial questionnaires, did not pertain to entirely new countervailing duty investigations, but rather to the ongoing investigations, and thus did not constitute "questionnaires" to which the 30-day rule of Article 12.1.1 applies. We note in this regard that China raises no claim, and we make no finding, as to the WTO-consistency of adding new subsidy allegations to an investigation subsequent to initiation and the issuance of the initial (set of) questionnaire(s).

15.49 For the foregoing reasons, we find that China has not established that the USDOC acted inconsistently with the obligations of the United States under Article 12.1.1 of the SCM Agreement in providing less than 30 days for responses to the "supplemental" questionnaires and "new allegation" questionnaires in the four countervailing duty investigations at issue in the present dispute.

XVI. CHINA'S CLAIM PERTAINING TO THE USDOC'S APPLICATION OF "FACTS AVAILABLE"

A. CLAIMS OF CHINA

16.1 In respect of the provision of goods (HRS) through transactions involving trading companies, China claims that the USDOC's use of facts available in the LWR and CWP countervailing duty investigations to determine the benefit allegedly conferred on investigated producers with respect to these transactions was inconsistent with Articles 12.1 and 12.7 of the SCM Agreement.1147

B. MAIN ARGUMENTS OF THE PARTIES

1. China

16.2 China argues that the USDOC failed to give investigated producers notice of the information that was necessary for the subsidy calculations at issue, because it did not ask investigated producers about the amount and origin of the HRS they purchased from trading companies that had been produced by SOEs. Moreover, China contends, the USDOC did not give the investigated producers the opportunity to present any evidence that they would have considered relevant to the investigations, in particular, the opportunity to demonstrate that they had purchased greater percentages of privately-produced HRS from trading companies than the percentages determined by the USDOC. Therefore, China submits, the USDOC failed to comply with the "procedural and due process obligations" under Article 12.1 of the SCM Agreement. China further submits that the USDOC's failure to request investigated producers to provide such information, and the USDOC's resort instead to facts available and adverse inferences, unfairly penalized investigated producers, contrary to Article 12.1 of the SCM Agreement.1148

16.3 China also considers that the United States' use of facts available was inconsistent with Article 12.7 of the SCM Agreement. According to China, this provision limits the use of facts available to situations in which a party "refuses access to, or otherwise does not provide" necessary information and, as observed by previous panels, investigating authorities are required to request the "necessary information" before resorting to facts available.1149 China submits that the investigated

1147 Paragraph B.1(g)(viii) of the "as applied" claims in China request for establishment of the Panel; China first written submission, para. 468 (n); second written submission, para. 315 (n).
1148 China first written submission, paras. 461-463, citing to Panel Report on Argentina – Ceramic Titles, para. 6.54.
1149 Id., para. 464, citing to Panel Report on EC – Countervailing Measures on DRAM Chips, para. 7.60; Panel Report on Japan DRAMs (Korea), para. 7.381.
producers neither refused access to nor otherwise failed to provide information pertaining to the origin of the HRS they purchased from trading companies.\textsuperscript{1150}

16.4 In China's view, the United States has essentially conceded that the USDOC's use of facts available was, in fact, inconsistent with Articles 12.1 and 12.7 of the SCM Agreement.\textsuperscript{1151}

2. United States

16.5 The United States submits that the USDOC resorted to the use of facts available because, until a very late stage of the investigations, the USDOC was not presented evidence that indicated the need for information about the amount of HRS produced by SOEs that investigated producers had purchased from trading companies.\textsuperscript{1152} Thus, in order to determine the benefit conferred on the investigated producers with respect to these transactions, the USDOC relied on evidence from the records of the underlying investigations; specifically, the USDOC relied on information submitted by China. The United States adds that, before any definitive countervailing duty is levied, investigated producers would be provided the opportunity, in an assessment review, to present evidence with respect to the amount of the HRS they purchased from trading companies that was produced by SOEs. In response to questioning from the Panel, the United States clarified that it does not claim that the alleged violations of Articles 12.1 and 12.7 of the SCM Agreement would be "cured" by this subsequent collection of additional information. Rather, the United States indicates, should the Panel find that it acted inconsistently with Articles 12.1 and 12.7 of the SCM Agreement, it "would determine during implementation how to bring its measures into conformity with those obligations and take any appropriate action accordingly."\textsuperscript{1153}

C. ASSESSMENT BY THE PANEL

16.6 The United States does not explicitly assert that the USDOC's resort to facts available in the investigations at issue was WTO-consistent. Nor does the United States directly contest China's claim that the USDOC's use of facts available was inconsistent with Articles 12.1 and 12.7 of the SCM Agreement. Rather, the United States indicates, the USDOC's basis to rely on facts available was that the USDOC "was not presented evidence that indicated the need for information about the amount of HRS purchased through trading companies that came from SOEs until a very late stage of the investigations".\textsuperscript{1154}

16.7 We start our consideration of this claim by recalling that "a \textit{prima facie} case is one which, in the absence of effective refutation by the defending party, requires a panel, as a matter of law, to rule in favour of the complaining party presenting the \textit{prima facie} case".\textsuperscript{1155} Thus, notwithstanding the fact that the United States appears not to contest China's claims, we must, consistent with the approach adopted by previous panels, satisfy ourselves that China has established a \textit{prima facie} case

\textsuperscript{1150} China first written submission, paras. 464-466. China also argues that Article 6.8 of the AD Agreement provides further context for interpreting Article 12.7 of the SCM Agreement.
\textsuperscript{1151} China second written submission, para. 43.
\textsuperscript{1152} The United States further indicates that given the time-limits for completing the investigations, the USDOC could not request investigated producers to provide additional clarifying information with respect to this issue. (United States response to Panel question 109 (first meeting)).
\textsuperscript{1153} United States first written submission, paras. 493-494; response to Panel questions 108 and 109 (first meeting).
\textsuperscript{1154} See, e.g., United States response to Panel question 109 (first meeting).
\textsuperscript{1155} Appellate Body Report on \textit{EC – Hormones}, para. 104 (quoting Appellate Body Report on \textit{US – Wool Shirts and Blouses}, p. 14). In order to establish a \textit{prima facie} case, a complaining party must adduce evidence sufficient to raise a presumption that what is claimed is true. However, precisely how much and precisely what kind of evidence will be required to establish a presumption that a claim is valid will necessarily vary from case to case. (Appellate Body Report on \textit{US – Wool Shirts and Blouses}, p. 14, DSR 1997:1, at 323).
of violation.\footnote{See, e.g., Panel Reports on US – Shrimp (Ecuador), para. 7.11; US – Stainless Steel (Mexico), para. 7.52; and US – Anti-Dumping Measures on PET Bags (Thailand), para. 7.7.} We will therefore examine the arguments and evidence presented by China, in order to determine whether it has established a \textit{prima facie} case of inconsistency with Articles 12.1 and 12.7 of the SCM Agreement.

16.8 We first examine China's claim concerning the inconsistency of the United States' use of facts available with Article 12.7 of the SCM Agreement, which governs the use of facts available by an investigating authority in a countervailing duty investigation, and provides as follows:

"In cases in which any interested Member or interested party refuses access to, or otherwise does not provide, necessary information within a reasonable period or significantly impedes the investigation, preliminary and final determinations, affirmative or negative, may be made on the basis of the facts available".

16.9 Thus, pursuant to the plain language of Article 12.7 of the SCM Agreement, recourse to facts available is permissible only under the limited circumstances where an interested Member or interested party: (i) refuses access to necessary information within a reasonable period; (ii) otherwise fails to provide such information within a reasonable period; or (iii) significantly impedes the investigation. Both parties agree with our reading of Article 12.7 of the SCM Agreement.\footnote{See, e.g., United States response to Panel question 108 (first meeting); China first written submission, para. 464.} Our interpretation is also consistent with that of prior panels and Appellate Body that have considered this provision.\footnote{Appellate Body Reports on Japan – DRAMs (Korea), para. 235 and Mexico – Anti-Dumping Measures on Rice, para. 291; Panel Reports on Japan – DRAMs (Korea), para. 7.383 and EC – Countervailing Measures on DRAM Chips, para. 7.245.}

16.10 China argues that, in the LWR and CWP countervailing duty investigations, investigated producers neither refused access to nor otherwise failed to provide information regarding the origin of the HRS they purchased from trading companies, and therefore, the United States' resort to facts available was inconsistent with Article 12.7 of the SCM Agreement.

16.11 Before addressing China's claim, we will examine the relevant facts relating to the USDOC's resort to facts available in the underlying investigations, as set forth in the USDOC's determinations.\footnote{We note that the parties do not dispute the facts on the record.}

16.12 In its Issues and Decision Memoranda in both investigations, the USDOC explained that, in a "change" from its preliminary determination, it decided to treat purchases of HRS from privately-owned trading companies that in turn purchased HRS from state-owned producers/suppliers as countervailable subsidies. The USDOC also indicated that it did not, during the course of the investigation, seek information from the respondents regarding the amount of the HRS they had purchased from trading company suppliers that was produced by SOEs, and therefore that it examined the information on the record "to determine what information [was] available to calculate this amount".\footnote{Exhibits CHI-1, p. 10 and CHI-2, pp. 8-9.} In addition, in the LWR investigation, the USDOC added that it would seek this information in any future administrative review in the event that the investigation resulted in a countervailing duty order.\footnote{Exhibit CHI-2, p. 9.}
("CISA") to determine the amount of the HRS purchased by investigated producers through trading companies. In the CWP countervailing duty investigation, the USDOC noted that the Government of China had reported that SOE members of CISA accounted for approximately 71 per cent of HRS production in China in 2006. In the LWR countervailing duty investigation, China's ownership information was updated at verification: The Government of China reported that CISA members accounted for 70.81 per cent of HRS production in China in 2006. Subsequently, however, the USDOC determined that the ownership categorization of HRS producers reported by the Government of China had been developed by China's legal counsel through public sources and not collected by CISA itself as the Government of China had reported. On this basis, the USDOC considered that the Government of China had not properly disclosed how the reported ownership structures of CISA members were obtained, and as a consequence, the USDOC determined that the Government of China did not act to the best of its ability. Thus, the USDOC drew an adverse inference with respect to the ownership of HRS producers in China, and concluded on that basis that 96.1 per cent of HRS production in China was by SOEs.1162

16.14 In the CWP investigation, the USDOC relied on this figure to determine the amount of SOE-sourced HRS that investigated producers had purchased from private trading companies, and therefore, to calculate the benefit investigated producers received from these transactions.1163 1164 In the LWR investigation, however, the USDOC decided to use the production figure reported by the Government of China – that is, 70.81 per cent – to calculate the benefit allegedly conferred on investigated producers from such trading company transactions.1165 1166

1162 In both investigations, the USDOC, rather than relying on the ownership characterization of CISA's producers provided by the Government of China, instead categorized HRS producers as state-owned where (i) the evidence on the record indicated that the producer was state-owned or (ii) where the Government of China had failed to provide factual evidence supporting the classification of the company.

1164 The record indicates that, in both investigations, the USDOC also relied on this figure to determine the appropriate benchmark for establishing whether the government provision of HRS conferred a benefit. (See, e.g., Exhibits CHI-1, p. 65 and CHI-2, p. 4). We note, however, that China is not challenging this particular use of facts available by the USDOC. As we understand it, China is only challenging the USDOC’s resort to facts available in order to calculate the proportion of the producers’ purchases of HRS from trading companies that originated from SOEs.

1166 In its determination, the USDOC stated as follows:

"[...] we agree with the GOC and GWSP that we never asked the respondent companies to report these amounts. Thus, the respondents have not failed to provide requested information and no adverse inference is warranted [...] Similarly, [...] we do not find that ZZ Pipe withheld information [...] Nonetheless, in light of our decision that purchases of SOE-produced HRS from trading companies provide a countervailable subsidy, we need to quantify the amount of such HRS [...] As explained above, we are not applying [adverse facts available] to the respondent companies for their purchases through trading companies because we did not ask them to report such information. Instead, we have reviewed other non-adverse information on the record to use as a basis for determining the amount of HRS purchased from trading companies that was produced by SOEs. [Thus] we are relying on the GOC reported SOE production figure for CISA members (i.e., 70.81 per cent). Because the GOC supplied this information, we do not believe that using this amount is adverse to the respondent companies.” (Exhibit CHI-2, pp. 25-26).
Thus, our analysis of the evidence indicates that the USDOC's basis for resorting to facts available in both investigations was the same: the USDOC applied facts available for the sole reason that, during the course of the investigations, it did not request information from the investigated producers regarding the amount of SOE-sourced HRS they purchased from trading companies. Nothing on the record indicates that the investigated producers refused access to or failed to provide information about the amount of the HRS they had purchased from trading companies that was produced by SOEs. To the contrary, it is clear to us that, notwithstanding the fact that this information was deemed "necessary" to determine the benefit that investigated producers allegedly received from such trading company transactions, the USDOC never requested investigated producers to provide the information. Furthermore, there is no indication on the record, nor does the United States argue, that the USDOC considered that investigated producers "significantly impede[d]" the investigations at issue.

We have determined above that Article 12.7 of the SCM Agreement limits the circumstances under which an investigating authority may resort to facts available to those where an interested party "refuses access to, or otherwise does not provide, necessary information within a reasonable period or significantly impedes the investigation". The SCM Agreement contemplates no other possibilities; for instance, where an investigating authority, until a very late stage of the investigation, learns the need for information which it did not request during the course of the investigation and that is necessary to its final subsidization or injury determinations. As the USDOC's reliance on facts available in the present instance does not fall within the situations contemplated in Article 12.7, we find that the USDOC's use of facts available in the CWP and LWR investigations was inconsistent with Article 12.7 of the SCM Agreement.

For the reasons set forth above, we conclude that the USDOC acted inconsistently with the obligations of the United States under Article 12.7 of the SCM Agreement in applying facts available to determine the amount of the HRS investigated producers purchased from trading companies that originated from SOEs.

In the light of our findings under Article 12.7, it would not be necessary to examine, or to make additional findings concerning, China's allegation that the USDOC also acted inconsistently with the obligations of the United States under Article 12.1 of the SCM Agreement by failing to request information on the amount of HRS purchased by investigated producers from trading companies that originated from SOEs, were such a claim properly before us. We do not consider this to be the case, however, as the only references to Article 12.1 in China's request for establishment of

We observe that there is no explanation on the record as to why, in contrast to the LWR investigation, the USDOC in the CWP investigation calculated the amount of SOE-sourced HRS purchased from trading companies by using the figure of HRS production it derived from the adverse inference it drew with respect to the ownership of HRS in China. In any event, whether the USDOC merely relied on facts available or, in addition, drew adverse inferences is not germane to our resolution of China's claim. The essence of China's claim concerns the USDOC's application of facts available itself and not which information from the record the USDOC actually selected as "facts available".

It is undisputed that the information regarding the amount of HRS that investigated producers purchased from trading companies that was produced by SOEs was deemed "necessary" for purposes of determining the benefits at issue. For instance, in the LWR investigation, the USDOC stated that: "[...] in light of our decision that purchases of SOE-produced HRS from trading companies provide a countervailing subsidy, we need to quantify the amount of such HRS." (Exhibit CHI-2, p. 25). (emphasis added) In its first written submission, the United States also confirmed that "such information was necessary to determine the existence of a benefit conferred on producers of the product subject to investigation." (United States first written submission, para. 493. (emphasis added)).
the Panel concern (i) the alleged "failure to provide notice to interested parties of the information which the US authorities required to make a determination with respect to whether certain entities are 'public bodies'", an entirely separate issue, which China did not pursue in this dispute; and (ii) the alleged "failure to provide notice to interested parties of the information which the US authorities required to determine whether the simultaneous application of anti-dumping and countervailing duties results in a double remedy", addressed supra, at Section XIV.C.4.

XVII. CONCLUSIONS AND RECOMMENDATIONS

17.1 For the reasons set out above, we conclude:

(a) in respect of China's claims concerning the USDOC's determinations of financial contributions in the countervailing duty investigations at issue, that:

(i) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Article 1.1(a)(1) of the SCM Agreement in determining in the relevant investigations at issue that SOEs and SOCBs constituted "public bodies";

(ii) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Article 1.1 of the SCM Agreement by failing to determine, in the LWR, CWP, and OTR investigations, that trading companies were "entrusted" or "directed" by the government to make financial contributions to producers of the investigated products, in the form of the provision of goods;

(b) in respect of China's claims concerning the USDOC's specificity determinations in the countervailing duty investigations at issue, that:

(i) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Article 2.1(a) of the SCM Agreement by determining in the OTR investigation that lending by SOCBs to the OTR tire industry was de jure specific;

(ii) The USDOC acted inconsistently with the obligations of the United States under Article 2 of the SCM Agreement by determining that the government provision of land-use rights, in the LWS investigation, was regionally-specific;

(c) in respect of China's claims concerning the USDOC's benefit determinations in the countervailing duty investigations at issue, that:

(i) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Articles 10, 14, 19.1, 19.4 or 32.1 of the SCM Agreement or Article VI:3 of the GATT 1994 by failing to conduct a pass-through analysis in the OTR investigation to determine whether any subsidy benefits received by trading companies selling rubber inputs were passed through to the OTR producers purchasing those inputs;

(ii) The USDOC acted inconsistently with the obligations of the United States under Articles 1.1 and 14 of the SCM Agreement by failing to ensure in the OTR investigation that the methodology it used to establish the existence and amount of benefit to tire producers from their purchases of SOE-produced
inputs from trading companies did not calculate a benefit amount in excess of that conferred by the government provision of those inputs;

(iii) In the light of our findings in respect of China's claims on facts available (paragraph 17.1(f)(ii), infra), we apply judicial economy in respect of China's claims concerning the USDOC's benefit determinations in the LWR and CWP investigations regarding the provision of HRS by trading companies;

(iv) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Article 14(d) of the SCM Agreement by not "offsetting" positive benefit amounts with "negative" benefit amounts, either across different kinds of rubber or across different months of the period of investigation, in the OTR investigation; and that China thus also did not establish that the United States also thereby acted inconsistently with its obligations under Articles 10, 19.1, 19.4, or 32.1 of the SCM Agreement, or Article VI:3 of the GATT 1994;

(v) China's claims in respect of the benchmarks actually used by the USDOC to calculate the benefit from the provision of loans and land-use rights by China in the LWS, OTR and CWP investigations, respectively, fall within our terms of reference;

(vi) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Article 14(d) of the SCM Agreement by rejecting in-country private prices in China as benchmarks for HRS in the CWP and LWR investigations and for BOPP in the LWS investigation;

(vii) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Article 14(b) of the SCM Agreement by rejecting interest rates in China as benchmarks for calculating the benefit from RMB-denominated loans from SOCBs, in the CWP, LWS and OTR investigations, or that the benchmarks actually used in respect of the RMB-denominated loans were inconsistent with those obligations;

(viii) The USDOC acted inconsistently with the obligations of the United States under Article 14(b) of the SCM Agreement by using average annual interest rates as benchmarks for GTC's U.S. dollar-denominated loans from SOCBs in the OTR investigation;

(ix) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Article 14(d) of the SCM Agreement by rejecting land-use prices in China as benchmarks for government-provided land-use rights in the LWS and OTR investigations, or that the benchmarks actually used were inconsistent with those obligations;

(d) In respect of China's claims of consequential violations of Articles 10 and 32.1 of the SCM Agreement and Article VI:3 of the GATT 1994 in connection with its claims referred to at paragraphs 17.1 (a)(i) and (ii), (b)(i) and (ii), and (c)(ii), (iv), (vi), (vii), (viii) and (ix): as indicated at paragraph 13.1, we apply judicial economy.

(e) in respect of China's double remedy claims, that:
(i) The "omission" challenged by China as part of its "as such" claims with respect to double remedies falls outside our terms of reference; consequently, we also find that China's "as such" claims under Articles 10, 19.3, 19.4 and 32.1 of the SCM Agreement and Articles VI and I:1 of the GATT 1994 equally fall outside our terms of reference;

(ii) China did not establish that the United States acted inconsistently with its obligations under Articles 10, 19.3, 19.4, and 32.1 of the SCM Agreement or under Article VI:3 of GATT 1994 by reason of the USDOC's use of its NME methodology in the four anti-dumping investigations at issue and the imposition of anti-dumping duties on that basis concurrently with the imposition of countervailing duties on the same products in the four countervailing duty investigations at issue;

(iii) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Articles 12.1 and 12.8 of the SCM Agreement by failing to give the Government of China and interested parties "notice" of the information it required to evaluate the existence of a double remedy, and to inform them of the essential facts under consideration that would "form the basis" for its determination in respect of double remedies, in the four countervailing duty investigations at issue;

(iv) China did not establish that the United States acted inconsistently with its obligations under Article I:1 of GATT 1994 when, as a result of the investigations at issue, it concurrently imposed anti-dumping duties calculated under the U.S. NME methodology and countervailing duties;

(f) in respect of China's claims of procedural violations in the countervailing duty investigations at issue, that:

(i) China did not establish that the USDOC acted inconsistently with the obligations of the United States under Article 12.1.1 of the SCM Agreement by failing to provide the Government of China and investigated producers at least 30 days to respond to the "supplemental" questionnaires and "new allegation" questionnaires used in the four countervailing duty investigations at issue;

(ii) The USDOC acted inconsistently with the obligations of the United States under Article 12.7 of the SCM Agreement by applying facts available in the LWR and CWP investigations to determine the amount of HRS investigated producers purchased from trading companies that originated from SOEs; and

(iii) China's claim of violation of Article 12.1 is outside our terms of reference as it is not included in China's request for establishment of the Panel.

17.2 Under Article 3.8 of the DSU, in cases where there is infringement of the obligations assumed under a covered agreement, the action is considered prima facie to constitute a case of nullification or impairment of benefits under that agreement. Accordingly, we conclude that to the extent that the United States has acted inconsistently with certain provisions of the SCM Agreement and of the GATT 1994, it has nullified or impaired benefits accruing to China under these agreements.
17.3 Pursuant to Article 19.1 of the DSU, having found that the United States has acted inconsistently with provisions of the SCM Agreement and of the GATT 1994 as set out above, we recommend that the United States bring its measures into conformity with its obligations under those Agreements.
