INDONESIAN BANKING DEVELOPMENT:
Financial services liberalization, the regulatory framework, and financial stability

By Dwityapoetra S. Besar
Workshop On Trade In Financial Services And Development
Geneva, June 2012
Agenda

1. Indonesia’s Experience
2. Challenges Facing Indonesia’s Banking/Financial Sectors
3. Conclusions

Appendix
Indonesia is a bank-based financial system (79.5% is the share of bank’s asset). There are 121 banks with 13,453 offices. 14 largest banks hold 70% of the banking assets. There are 47 banks owned by foreigners with 45,8% of the share.
**Indonesian experience: liberalisation and crisis**

*Crisis after financial services liberalizations.* Financial liberalization is likely to have a positive effect on growth through financial development, even if it increases financial fragility.
Comparison of Banking Liberalization in ASEAN

Indonesia has relatively liberalized banking markets compared to other ASEAN countries.
Agenda

1. Overview of Indonesia’s Economic and Banking Development
2. Challenges Facing Indonesia’s Financial Sectors
3. Conclusions

Appendix
Challenges facing Indonesia’s Financial Sectors

• **Mitigate the negative impacts from financial liberalization and global financial crisis.** Financial liberalization, by giving banks and other financial intermediaries more freedom of action, can increase the opportunities to take on risk, thereby increasing financial fragility. Indonesia as an open and relatively liberalized economy could be affected by the crisis via trade and financial channels. To survive, Indonesia need to develop its economy while consider its global financial reform commitments that restricted the banks and intermediation process.

• **Improve financial sector (banks) competitiveness.** Banks conduct inefficient operations (domestic and regional). Banking market is characterized by oligopoly type of market. Financial/banking services and products are relatively limited.

• **Enhanced access to finance for all public.** Indonesia’s financial sectors are still relatively limited and concentrated in big cities. Meanwhile there has been increasing demand due to rising middle class workers.
Banking Challenges: Regional Comparison

Banking Indicators and Challenges

Banking System is sound with stable CAR, continuous credit expansion and low NPL. But some problems remains and need to be resolved.

Financial stability challenges

• The case for macroprudential policy – Fills a clear gap. The macroprudential approach provides targeted and effective policy action. But, need to study the impact and continue develop theory and policy.

• Macroprudential policy in Indonesia – An emerging framework. It helps to manage large capital inflow to Indonesia but important challenges remain:
  ▪ Difficulties to identify risks early
  ▪ Data and understanding of systemic risk and how to fight it
  ▪ Coordination between authorities in crisis management and resolution.
  ▪ Need a clear mandate in crisis prevention and management/resolution.

• Improving financial system – Necessary condition
  Indonesia banking sector is still developing and has incompetitive market.

Agenda

1. Overview of Indonesia’s Economic and Banking Development
2. Challenges Facing Indonesia’s Financial Sectors
3. Conclusions

Appendix
Summary

• Indonesia and other countries have experienced the cycle of financial liberalization, development and crisis. The successful financial liberalization should be supported by a sound financial stability infrastructure, good governance, and access to finance based on national characteristics. Strong institutions cannot be created overnight, more research effort should be focused on the design and implementation of prudential regulations and supervision especially in developing countries.

• This global financial crisis adds more aspects to be considered. There are dynamic interactions between financial liberalization, financial prudential regulation/policy, economic policy and politics. But, the most important issue is really on how we could do it gradually by considering economic development and increase international trade.

• Next challenges are to deal with global stagnation, systemic risk/crisis and contagion effects (trade and financial). Would implementing global commitments, macroprudential policy and strengthening financial sector be sufficient? It will need stronger commitments, discipline, sacrifice and real work to ensure that the problems are effectively solved.

Market view on Indonesia development. After liberalization, Indonesian rating slightly improved but dropped during the financial crisis. Now, it is an investment grade.
Indonesia’s Balance of Payments in Q1/2012 strengthened by recording a lower deficit of US$1.0 billion deficit compared to US$3.7 billion deficit in Q4/2012.
Foreign Direct Investment

- The investment realization on Quarter 1 (January - March) of 2012 is Rp 71.2 trillion consisted of Rp 19.7 trillion of Domestic Direct Investment (PMDN) and Rp 51.5 trillion of Foreign Direct Investment (FDI). It increases 32% compared to the same period in 2011.

- Although there are some uncertainties in United States of America and European economy, the investment activities in Indonesia are doing well.

*US$ / Rp. exchange rate of 9,180, the BI middle exchange rate as of March 30, 2012.
In Q1/2012, the financial account shifted to a surplus at US$2.2 billion from a deficit of US$1.0 billion in the Q4/2011. This surplus was mainly supported by purchases of foreign currency-denominated government securities, followed by purchases of stocks and private sector debt securities in line with positive market perceptions of the domestic economy.

Foreign portfolio investment recorded a surplus of US$3.2 billion in Q1/2012 after experienced net outflows in the last two quarters. Such a significant jumped up was especially due to large inflows in foreign currency-denominated government and corporate debt securities and domestic stocks.

This table shows the result of Panzar-Rosse (1987) using Two steps Generalized Method of Moment (Arellano Bond, 1991) with robust standard errors. The dependent variable is total revenue. The set of explanatory variables are fixed asset cost, labor cost, wholesale funding cost, bank’s deposit market. All variables are in logarithmic value. AR(2) is the p-value for the test for 2nd-order autocorrelation in the residuals. Sargan is the p-value for the Sargan test for the validity of the over-identifying restrictions. Hansen J the p-value for the Hansen test for the validity of the over-identifying restrictions. Metropolitan area is Jakarta, Banten and West Java that is most populated and active banking market. Java and Sumatra is provinces in Java and Sumatra islands excluding Jakarta, Banten and West Java. The Periphery is other provinces that are less populated and less active banking markets (See section 3.2 for further details).
Banking performance is also positive.
Stability in the banking system remains firm alongside steady improvement in credit growth

Bank Indonesia has the mandate to conduct macroprudential policy. (Indonesia FSA Act, article 40). This mandate will also be stated in Bank Indonesia Act.

In a crisis management, there is Financial Stability Coordination Committee (FSCC) (Indonesia FSA Act. Article 44)

Members of the FSCC:
- Minister of Finance
- Governor of Bank Indonesia
- Head of Board of Commissioner of Financial Services Authority
- Head of Board of Commissioner of Indonesia Deposit Insurance Agency

Financial safety nets arrangement will be regulated in the Indonesian Financial Safety Nets Act
## Financial stability issues - Macroprudential Policies for Managing Capital Flows

### The Measures

<table>
<thead>
<tr>
<th>The Measures</th>
<th>Objectives</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Minimum Holding Period</strong> on BI bills, 1 month holding period (June 2010) and 6 month holding (May 2011)</td>
<td>To “put sand in the wheels” on short-term and speculative capital inflows, and mitigate risks of sudden reversals.</td>
</tr>
<tr>
<td>Reinstall <strong>limits on short-term offshore borrowing</strong> of the banks</td>
<td>• To limit the short-term and volatile capital inflows.</td>
</tr>
<tr>
<td>• Maximum of 30% of capital</td>
<td>• To limit FX exposure of the banking system stemming from capital inflows.</td>
</tr>
<tr>
<td>• Effective end January 2011</td>
<td></td>
</tr>
<tr>
<td>Increase <strong>FX reserve requirements</strong> of the banks from 1% of FX deposits to:</td>
<td>• To strengthen FX liquidity management, thereby the resilience, of the banking system in facing increasing FX exposure stemming from capital inflows</td>
</tr>
<tr>
<td>• 5% effective March 2011</td>
<td>• Helps absorb domestic liquidity.</td>
</tr>
<tr>
<td>• 8% effective June 2011</td>
<td></td>
</tr>
</tbody>
</table>
### Financial Stability Policy - Macropudential Policies for Managing Domestic Liquidity & Credit Overheat

<table>
<thead>
<tr>
<th>The Measures</th>
<th>Objectives</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Lengthen (from weekly to monthly) auction and offer longer maturity (3, 6, 9 months) of BI bills since June 2010.</td>
<td>• To enhance the effectiveness of domestic liquidity management, including from capital inflows, by locking up to longer term and help develop domestic financial markets.</td>
</tr>
<tr>
<td>• Increase <strong>Rupiah reserve requirement</strong> from 5% to 8%, effective Nov 2010.</td>
<td>• To absorb domestic liquidity and enhance liquidity management of the banks, without exerting negative impact on lendings that are needed to stimulate growth.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>The Measures</th>
<th>Objectives</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Implement Loan to Value Ratio (LTV) for mortgage and Down Payment for Automotive loans since June 2012.</td>
<td>• To reduce excessive growth of specific consumptions loans (housing and automotive) and mitigate increasing credit risk in banking sector.</td>
</tr>
</tbody>
</table>
Overall Indonesian Financial System has been relatively stable since global crisis in 2007-08
