Addendum

Processes and Control Measures in Effect in the Community

Supplement

The processes and control measures in effect in the Community, set forth in document L/3552/Add.8/Rev.1, are to be supplemented by the following denaturing processes:

The denaturing is effected in accordance with Annex III to Regulation (EEC) No. 2054/76^{1/}, as last amended by Regulation (EEC) No. 2823/78^{2/}:

1. Homogeneous addition to the products to be denatured of 1 per cent blood meal and 1 per cent non-deodorized fish-meal; the two substances must be finely ground and 80 per cent of both must be able to pass through the mesh of a No. 60 sieve of the Tyler fine series (0.246 mm. mesh) or equivalent thereof.

The blood meal must be of a type regarded in the trade as soluble and must satisfy the following conditions: when the meal is diluted in water to 10 per cent strength and the solution has been stirred for fifteen minutes and then centrifuged for another fifteen minutes at 2,000 revolutions per minute it must not deposit more than 5 per cent sediment.

2. Homogeneous addition to the products to be denatured of 1 per cent blood meal and 1 per cent non-deodorized fish solubles.

The blood meal must present the same characteristics as required in the first procedure and the fish solubles must be as fine as required in the above procedure for blood meal and fish meal.
