### GROUP 3(e) - BASIC DOCUMENTATION

#### INVENTORY OF VARIABLE LEVIES AND OTHER SPECIAL CHARGES ON IMPORTS

##### Addendum

##### SWITZERLAND

#### A. Remarks

Imports of the products mentioned in the list hereinafter are subject to various charges over and above those provided for in the customs tariff.

The calculation of the ad valorem incidence of these variable charges and other special taxes is based on the data for the years 1969, 1970, 1971, 1972 and 1973<sup>1</sup>. In the following table, opposite each incidence recorded, the figures taken as a basis for the calculation, are indicated.

Where the charge varied over the period considered, the incidence has, wherever possible, been obtained by expressing the total of the sums collected during the year under the head of the charge concerned as a percentage of the total annual free-at-frontier value of the imports subject to the charge. Nevertheless, where the total of the sums collected under the head of the charge was not available in respect of a particular heading or sub-heading subject to the charge, we have had to content ourselves with using an approximate average unit charge which has been related to the average unit value of the imported product subject to the charge.

Where the products subject to the charge do not represent all the products falling within a heading or sub-heading of the customs tariff, it has not in principle been possible to extract the total value or unit value of those particular imports which are subject to the charge. In those cases, which are indicated by an asterisk in column 5, the charge has therefore had to be related to import values for the entire heading or sub-heading; in some cases the calculation of the incidence is therefore of a very approximate character.

---

<sup>1</sup>The data for 1968 were published in document COM.AG/W/68/Add.3, pages 103 - 118. The data for the years 1969, 1970, 1971 and 1972 given in the present document were published earlier in documents COM.AG/W/84/Add.2 and 5.

Lastly, it should be noted that, as in the case of customs duties, the unit amount of charges refers to gross weight, whereas the unit value of imports refers to net weight. In cases where the fact that this element has been taken into consideration could change the result of the calculation of incidence - that is to say in particular where the tare is substantial - account has been taken of this, and the amount of the charge per unit of gross weight has been increased by the percentage of tare in order to arrive at the charge per unit of net weight.

As regards the situation at 1 January 1974, it should be noted that, as from 1 September 1973, the price supplements on the principal feedgrains have been suspended temporarily in view of international market conditions for these products.

B. Ad valorem incidence of charges and other special taxes in respect of certain products falling within Chapters 1-24 of the customs tariff.
